RE: **EM-CLEARWIRE-034-100318** – Clear Wireless LLC notice of intent to modify an existing telecommunications facility located at 45 Newtown Road, Danbury, Connecticut.

Dear Attorney Regan:

The Connecticut Siting Council (Council) hereby acknowledges your notice to modify this existing telecommunications facility, pursuant to Section 16-50j-73 of the Regulations of Connecticut State Agencies.

The proposed modifications are to be implemented as specified here and in your notice dated March 18, 2010, including the placement of all necessary equipment and shelters within the tower compound. The modifications are in compliance with the exception criteria in Section 16-50j-72 (b) of the Regulations of Connecticut State Agencies as changes to an existing facility site that would not increase tower height, extend the boundaries of the tower site, increase noise levels at the tower site boundary by six decibels, and increase the total radio frequencies electromagnetic radiation power density measured at the tower site boundary to or above the standard adopted by the State Department of Environmental Protection pursuant to General Statutes § 22a-162. This facility has also been carefully modeled to ensure that radio frequency emissions are conservatively below State and federal standards applicable to the frequencies now used on this tower.

This decision is under the exclusive jurisdiction of the Council. Please be advised that the validity of this action shall expire one year from the date of this letter. Any additional change to this facility will require explicit notice to this agency pursuant to Regulations of Connecticut State Agencies Section 16-50j-73. Such notice shall include all relevant information regarding the proposed change with cumulative worst-case modeling of radio frequency exposure at the closest point of uncontrolled access to the tower base, consistent with Federal Communications Commission, Office of Engineering and Technology, Bulletin 65. Any deviation from this format may result in the Council implementing enforcement proceedings pursuant to General Statutes § 16-50u including, without limitation, imposition of expenses resulting from such failure and of civil penalties in an amount not less than one thousand dollars per day for each day of construction or operation in material violation.

Thank you for your attention and cooperation.

Very truly yours,

S. Derek Phelps
Executive Director

Re: EM-Clearwire-034-100318
Clearwire Corporation
Notice of Intent to modify an existing telecommunications facility
located at 45 Newtown Road, Danbury

Dear Chairman Caruso and Members of the Council:

I write in response to correspondence to me dated March 22, 2010 from S. Derek Phelps, Executive Director, requesting the City's comments regarding the above mentioned proposal. I respectfully request that the Council's consider the following:

1. In October 2009, the Siting Council approved a tower modification for this site to allow MetroPCS, New York, LLC to increase the tower height to 110 feet and add its antennae at 108 feet. The approved 14 foot extension to the previously existing 96 foot tower permitted carriers at 78 feet, 88 feet, 96 feet, and MetroPCS at 108 feet. A condition of that approval required submission of a letter "signed by a professional engineer duly licensed in Connecticut...certifying that the structural modifications have been completed and that the tower is within 100% of its structural capacity." The Council may wish to determine if it is in receipt of the required letter.
2. The current application by Clearwire is to replace antennae and add antenna and a microwave dish at 78 feet. In support of its request, Clearwire included information in its application indicating the tower extension as "proposed." The Council may wish to request clarification as to whether the tower was modified as approved and if so, as indicated above, a post-construction structural certification should be submitted. The Council may wish to require the Clearwire application, including the supporting structural analysis, to reflect actual conditions.
3. The structural analysis prepared by Structural Components for Clearwire dated March 4, 2010 was based on TIA-222-F. The structural analysis for MetroPCS dated October 6, 2009, also prepared by Structural Components, was based on TIA-222-G as the design standard. As we understand, standard "G" provides, among other things, for structural analysis based on greater wind speed and ice accumulation. Since Clearwire is proposing additional antennae, it certainly seems that the utilization of the more stringent design standard would afford greater protection to those in the vicinity of the tower as well as a more conservative analysis.

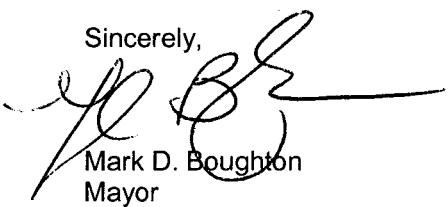

4. I am concerned that the applicant has not sufficiently demonstrated that the structural integrity of the tower will not be compromised by the addition of its equipment. This concern is based on various applicants using different design standards. To exacerbate this particular concern, there are two reports from the same firm using different design standards to substantiate the different applications. The Council may wish to seek to clarify and consolidate the information submitted as it pertains to the same tower.

5. I also bring to your attention the handwritten notation on the bottom of p. 7 of the Engineered Endeavors Inc. report which states "existing base pl fails". The Council may wish to seek clarification of this notation.

6. On a clerical note, the City notes that several documents for Clearwire utilize different address locations. The Council may wish to request that Clearwire review the address location and verify same.

I respectfully request that the Council require the applicant to provide any assurances it deems necessary to address the matters mentioned above and ensure the structural integrity and safety of the tower. Thank you for your consideration of the City's concerns and attention to this matter.

Sincerely,

Mark D. Boughton
Mayor

RE: Clear Wireless, LLC – Notice of Exempt Modification

Dear Mr. Caruso:

On behalf of Clear Wireless, LLC, enclosed for filing you will find an original and five (5) copies of a "*Notice of Exempt Modification*" regarding a site located at 48 Newtown Road, Danbury. The \$625.00 filing fee is also enclosed.

I would appreciate it if you could please date stamp the copy of this transmittal letter and return it to the courier delivering this package.

If you have any questions, please feel free to contact me.

Very truly yours,

BROWN RUDNICK LLP

In re:

Clear Wireless LLC's Notice to Make an Exempt Modification to an Existing Facility at : **EXEMPT MODIFICATION NO. 1**
45 Newtown Road, Danbury, Connecticut. : March 18, 2010

NOTICE OF EXEMPT MODIFICATION

ORIGINAL

Pursuant to Conn. Agencies Regs. §§ 16-50j-73 and 16-50j-72(b), Clear Wireless LLC (“Clearwire”) hereby gives notice to the Connecticut Siting Council (“Council”) and the City of Danbury of Clearwire’s intent to make an exempt modification to a monopole tower (the “Tower”) at 45 Newtown Road in Danbury, Connecticut. Specifically, Clearwire plans to remove and replace 3 antennas, add 3 Samsung Remote Radio Heads and add 2 Dragonwave dishes required for backhaul. Under the Council’s regulations (Conn. Agencies Regs. § 16-50j-72(b)), Clearwire’s plans do not constitute a modification subject to the Council’s review because Clearwire will not change the height of the tower, will not extend the boundaries of the compound, will not increase the noise levels at the site, and will not increase the total radio frequency electromagnetic radiation power density at the site to levels above applicable standards.

Clearwire is currently developing a 4G wireless broadband network to provide high-speed wireless data and VoIP service within the State of Connecticut. Clearwire’s 4G service leverages its WiMAX technology to enable enhanced wireless data communications. In order to accomplish the upgrade at this site, Clearwire plans to remove and replace 3 antennas, add 3 Remote Radio Heads, add 2 dishes and install additional WiMAX-related electronic equipment at the base of the Tower.

The Tower is a 110-foot (including the 10-foot extension) monopole tower located at 45 Newtown Road in Danbury, Connecticut (latitude 41° 23' 12", longitude -73° 25' 29.53"). The Tower is owned by 48 Newtown Road Corporation. Multiple carriers are currently located on the

Tower. Presently, Sprint Nextel Corporation (“Sprint”) has 12 CDMA antennas spread over three sectors with an antenna centerline at 78 feet. Sprint’s base station equipment is located adjacent to the base of the Tower. A site plan with the Tower specifications is attached.¹

Clearwire plans to remove and replace 3 existing antennas with 3 WiMAX antennas (one per sector). Clearwire also plans to add 3 Remote Radio Heads and 2 Dragonwave dishes. The new antennas, Remote Radio Heads and Dragonwave dishes will have the same centerline as the existing antennas – 78 feet. Six cables, 5/16” in diameter, will run to the new WiMAX antennas (two per panel). Additionally, 2 cables, 1/2” in diameter, will run to the new Dragonwave dishes (one per dish). To confirm that the Tower can support these changes, Clearwire commissioned Structural Components, LLC to perform a structural analysis of the Tower (attached). According to the structural analysis dated March 4, 2010, “... with the proposed loading ... and the existing loads, the tower and foundations satisfy the structural strength requirements...” (Page 1, Structural Analysis).

Clearwire will install its WiMAX equipment cabinet within the existing equipment building which is located within the existing compound. The dimensions of Clearwire’s equipment cabinet are as follows: 30-inches by 31-inches by 76-inches. Hence, no increase in the size of the boundaries of the site is necessary. Excluding brief, minor, construction-related noise during the addition of the antennas, Dragonwave dishes and the installation of the equipment cabinets, the proposed changes to the Tower will not increase noise levels at the site.

The addition of the new WiMAX antennas, Remote Radio Heads and Dragonwave dishes will not adversely impact the health and safety of the surrounding community or the people

¹ Please disregard the references to MetroPCS’s proposed installation. MetroPCS’s installation was previously approved under Petition No. 917.

working on the Tower. The total radio frequency exposure measured around the Tower will be well below the National Council on Radiation Protection and Measurements' ("NCRP") standard adopted by the Federal Communications Commission ("FCC"). The worst-case power density analysis for the antennas, measured at the base of the Tower, indicates that the proposed antennas will emit .000833% of the NCRP's standard for maximum permissible exposure. A cumulative power density analysis indicates that together, all of the antennas on the Tower will emit 55.42% of the NCRP's standard for maximum permissible exposure. Therefore, the power density levels will be well below the FCC mandated radio frequency exposure limits in all locations around the Tower, even with extremely conservative assumptions. The power density analysis is attached.

In conclusion, Clearwire's proposed plan to remove 3 existing antennas and install 3 WiMAX antennas, add 3 Remote Radio Heads, add 2 Dragonwave dishes and install WiMAX associated base station equipment does not constitute a modification subject to the Council's jurisdiction because Clearwire will not increase the height of the Tower, will not extend the boundaries of the site, will not increase the noise levels at the site, and the total radio frequency electromagnetic radiation power density will stay within all applicable standards. *See Conn. Agencies Regs. § 16-50j-72.*

To: HPC
From: Julius De La Cruz – Radio Frequency Engineer
Cc: Micah Hawthorne
Subject: Power Density Report for CT-BDR0018
Date: March 12, 2010

1. Introduction:

This report is the result of Electromagnetic Field Intensities (EMF – Power Densities) study for the Clearwire broadband antenna installation on a self-support tower at 48 Newton Road, Danbury, CT 06810. This study incorporates the most conservative consideration for determining the practical combined worst case power density levels that would be theoretically encountered from locations surrounding the transmitting location:

2: Discussion:

The following assumptions were used in the calculations:

- 1) The emissions from Clearwire transmitters are in the (2496 – 2690) Frequency Band
- 2) The emissions from the Clearwire microwave dishes are in the 11 GHz Frequency Band
- 3) The model number for Clearwire antenna is Kathrein 840-10054
- 4) The model number for the microwave dish is Dragonwave A-ANT-28G-2-C
- 5) The Clearwire panel antenna centerline is 78 feet.
- 6) The Clearwire microwave dish centerline is 78 feet.
- 7) The Maximum Transmit Power from any Clearwire panel antenna is 251 Watts Effective Isotropic Radiated Power (EIRP) assuming 2 channels per sector.
- 8) The Maximum Transmit Power from any Clearwire microwave dish is 346 Watts Effective Isotropic Radiated Power (EIRP) assuming 1 channel per dish.
- 9) All antennas are simultaneously transmitting and receiving 24 hours per day.
- 10) The average ground level of the studied area does not change significantly with respect to the transmitting location.

Equations given in “FCC OET Bulletin 65, Edition 97-01” were used with the above information to perform the calculations.

3: Conclusion:

Based on the above worst case assumptions, the power density calculation from the Clearwire antenna installation on a self-support tower at 48 Newton Road, Danbury, CT 06810 is 0.0000083 mW/cm². This value represents 0.000833% of the Maximum Permissible Exposure (MPE) standard of 1 milliwatt per square centimeter (mW/cm²) set forth in the FCC/ANSI/IEEE C95.1-1991. Furthermore, the proposed antenna location for Clearwire will not interfere with existing public safety communications, AM or FM radio broadcasts, TV, Police Communications, HAM Radio communications or any other signals in the area.

The combined Power Density from all other carriers is 55.42%. The combined Power Density for this site is 55.420833% of the M.P.E. standard.

Re: Structural Analysis Report
Structure: 110' Monopole
Site Address: 48 Newtown Road, Danbury, CT
Site Name: Danbury South
Site Number: NY6314
SC Number: 100048
Status: Passes

Dear Mr. Falivene:

Per your request, Structural Components, LLC, has completed a structural analysis of the modified 110' Monopole named Danbury South, located in Danbury, Fairfield County, Connecticut, to verify the tower's compliance to the TIA-222-F Structural Standard for Steel Antenna Towers and Antenna Supporting Structures for the proposed antenna additions.

We are pleased to inform you that with the proposed loading for Sprint/Nextel at 78.0 feet and the existing loads, the tower and foundations satisfy the structural strength requirements of the TIA-222-F standard using a 85 mph fastest-mile basic wind speed with no ice and a 74 mph fastest-mile basic wind speed with 1/2" ice. Please refer to the following report for detailed loading descriptions.

Please refer to the following structural analysis report, which gives complete details of the analysis including data used, assumptions made, loading considered, and results.

We trust you find this report satisfactory. Please do not hesitate to contact us if you should have any questions or concerns.

Best Regards,
Structural Components LLC

Lee Maggart
Structural Engineering Dept.

Michael T. DeBoer P.E.

Expires: 01/31/2011

1 INTRODUCTION

Structural Components, LLC, has structurally analyzed the following tower at the request of Joe Falivene of URS Corporation, to determine whether the tower complies with applicable building codes and design standards for the proposed loading configuration.

Tower Information	
Type	Monopole
Height	110ft

Site Information	
Site Name	Danbury South
Site Number	NY6314
Street Address / Lat. & Long.	48 Newton Rd.
County	Fairfield
City, State	Danbury, CT

The analysis was performed using RISATower v5.4, a structural analysis program developed by Risa Technologies, LLC specifically for the communication tower industry.

Information about the tower was provided by URS Corporation. Structural Components, LLC visited the site on 09/09/2009 to perform a tower and antenna mapping.

2 INFORMATION USED IN THE ANALYSIS

The following information was either provided to us or gathered by us for use in the structural analysis.

Data	Document	Author	Date	File
Tower	Structural Analysis Tower Mapping Modification Drawings	Engineered Endeavors, Inc. Structural Components, LLC Structural Components, LLC	07/07/2009 09/09/2009 02/16/2010	15947-E01 090239 100014
Existing Loading	Structural Analysis Tower Mapping	Engineered Endeavors, Inc. Structural Components, LLC	07/07/2009 09/09/2009	15947-E01 090239
Proposed Loading	Email	URS Corporation	02/19/2010	---
Foundation	Structural Analysis	Engineered Endeavors, Inc	07/07/2009	15947-E01
Soils	Structural Analysis	Engineered Endeavors, Inc	07/07/2009	15947-E01

The following assumptions were made in order to complete the analysis. These assumptions must be checked. If they do not accurately represent the existing or proposed tower, foundation, soil, and loading conditions, we must be notified so that we can make the appropriate changes to our analysis, conclusions, and recommendations.

1. The tower and foundation are constructed as shown in the provided drawings, previous structural analysis reports, mapping reports, photos, and/or other documents.
2. All information obtained during the 09/09/2009 site visit performed by Structural Components, LLC takes precedence over conflicting information in the provided documents.
3. The tower and foundation are in good condition with no corrosion or damage and there have been no fatiguing issues with the base plate, anchor rods, or pole which may reduce the towers carrying capacity.
4. The tower and foundation have not been modified except as indicated in the provided information or in this report.
5. The existing foundation has been designed and installed in accordance with applicable building codes and standards for the original design loading.

3 DESIGN STANDARD

The tower analysis was performed in accordance with the following design criteria.

Standard:	TIA-222-F <i>Structural Standards for Steel Antenna Towers and Antenna Supporting Structures</i>
Building Code:	2006 International Building Code
Design Basic Wind Speed without Ice:	85 mph fastest-mile
Design Basic Wind Speed with Ice:	74 mph fastest-mile
Ice Thickness:	1/2" radial

4 APPURTENCES

The following antennas, mounts, transmission lines, and other appurtenances were considered for the structural analysis.

Elev. (ft) (1)	Appurtenance	Line ⁽²⁾	Notes
108.0	(3) Kathrein 800-10504 (3) Kathrein 742-351 (3) T-Arms	(12) 1-5/8"	MetroPCS
98.0	(6) 7770 Panel Antennas (6) TMA's (1) LP Platform w/ Hand Rails	(12) 1-5/8"	AT&T Existing
88.0	(6) 948F85T2E-M (6) 48" x 12" x 3" Panel Antennas (1) LP Platform w/ Hand Rails	(12) 1-5/8"	Verizon Existing
78.0	(9) Decibel DB844H90-XY (1) LP Profile Platform	(12) 1-1/4"	Sprint/Nextel Existing
78.0	(3) Kathrein 840 10054 (3) Samsung DAP Head (2) Dragonwave A-ANT-28G-2-C Dish Antennas	(6) 5/16" (2) 1/2"	Sprint/Nextel Proposed

Notes:

1. Elevations reference centerline of panel, yagi, and dish antennas, and base of whip antennas, in relation to the steel base of the tower.
2. Proposed lines to be placed inside of pole. See mapping report for existing coax line placement.

5 RESULTS

5.1 TOWER MEMBER STRESS LEVELS

The tower has the following stress ratios in its structural members.

Elev. (ft)	Member	Ratio
0 - 110	Pole	0.89
0	Base Plate	0.72
0	Anchor Bolt	0.80

Stress ratio (SR) criteria:

SR \leq 1.00 is completely within code limits.

SR > 1.00 is outside acceptable tolerance of code limits and requires structural modifications.

5.2 FOUNDATION REACTIONS

The reactions listed below are for the full design wind speed loading without ice listed in section 3.

Reaction Type	Original Design Magnitude	Current Analysis Magnitude	Foundation Status
Moment (kip - feet)	2281	1348	Passes
Shear (kips)	28.7	18.4	
Axial (kips)	31.5	22.4	

The existing foundation was also examined with the current loading scenario and found to be structurally adequate.

5.3 TOWER DEFLECTION

The deflections are listed below for critical tower elevations using the serviceability wind speed listed in section 3.

Elev. (ft)	Displacement (in)	Sway (deg)	Twist (deg)
108	24.204	1.8698	0.0032
98	20.297	1.8545	0.0029
88	16.499	1.7853	0.0025
78	12.961	1.6326	0.0021

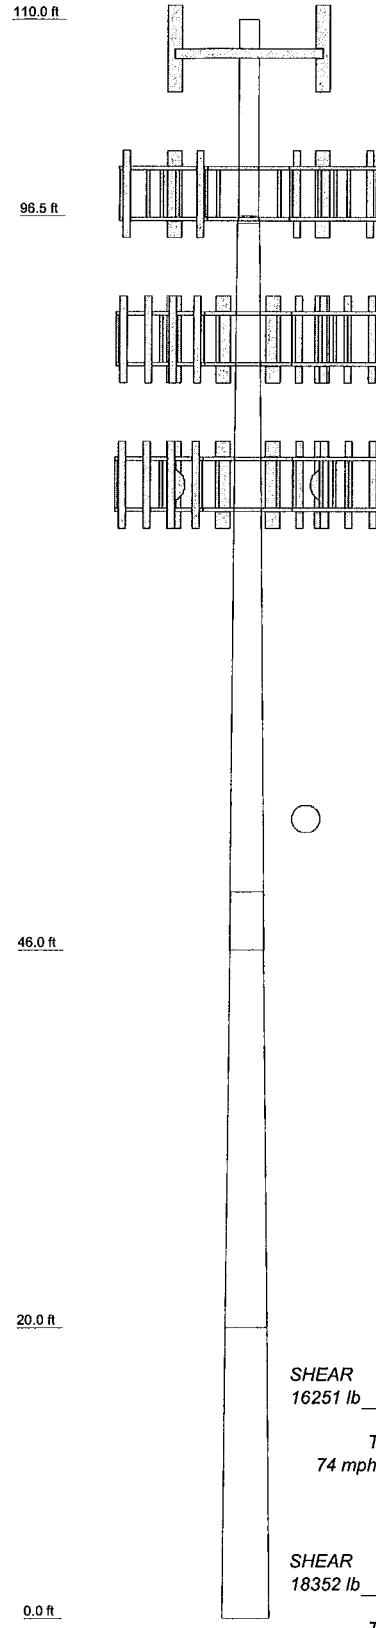

6 CONCLUSIONS

With the proposed loadings listed in section 4, the tower and foundation satisfy the structural strength requirements of the standards and codes listed in section 3. **No structural modifications are required at this time.**

Client: URS	Drawn by: LBM	App'd:
Code: TIA/EIA-222-F	Date: 03/04/10	Scale: NTS
Path:		Dwg No. E-1

RISATower Structural Components, LLC 1617 Pearl Street, Unit A Boulder, CO 80302 Phone: 866.386.7622 FAX: 720.489.3764	Job	100048	Page
	Project	Danbury Tower Extension	Date
	Client	URS	Designed by LBM

Tower Input Data

There is a pole section.

This tower is designed using the TIA/EIA-222-F standard.

The following design criteria apply:

- Tower is located in Fairfield County, Connecticut.
- Basic wind speed of 85 mph.
- Nominal ice thickness of 0.5000 in.
- Ice density of 56 pcf.
- A wind speed of 74 mph is used in combination with ice.
- Temperature drop of 50 °F.
- Deflections calculated using a wind speed of 50 mph.
- Proposed 14ft tall extension..
- Bottom 20ft reinforced with three sides SWITCHBLADE..
- A non-linear (P-delta) analysis was used.
- Pressures are calculated at each section.
- Stress ratio used in pole design is 1.333.
- Local bending stresses due to climbing loads, feedline supports, and appurtenance mounts are not considered.

Options

Consider Moments - Legs	Distribute Leg Loads As Uniform	Treat Feedline Bundles As Cylinder
Consider Moments - Horizontals	Assume Legs Pinned	Use ASCE 10 X-Brace Ly Rules
Consider Moments - Diagonals	✓ Assume Rigid Index Plate	Calculate Redundant Bracing Forces
Use Moment Magnification	✓ Use Clear Spans For Wind Area	Ignore Redundant Members in FEA
✓ Use Code Stress Ratios	✓ Use Clear Spans For KL/r	SR Leg Bolts Resist Compression
✓ Use Code Safety Factors - Guys	Retension Guys To Initial Tension	✓ All Leg Panels Have Same Allowable
Escalate Ice	✓ Bypass Mast Stability Checks	Offset Girt At Foundation
Always Use Max Kz	✓ Use Azimuth Dish Coefficients	✓ Consider Feedline Torque
Use Special Wind Profile	✓ Project Wind Area of Appurt.	Include Angle Block Shear Check
✓ Include Bolts In Member Capacity	✓ Autocalc Torque Arm Areas	Poles
✓ Leg Bolts Are At Top Of Section	SR Members Have Cut Ends	✓ Include Shear-Torsion Interaction
Secondary Horizontal Braces Leg	Sort Capacity Reports By Component	Always Use Sub-Critical Flow
Use Diamond Inner Bracing (4 Sided)	Triangulate Diamond Inner Bracing	Use Top Mounted Sockets
Add IBC .6D+W Combination

APPENDIX B

Data Provided for Analysis

3 DESIGN STANDARD

The tower analysis was performed in accordance with the following design criteria.

Standard:	TIA-222-G <i>Structural Standard for Antenna Supporting Structures and Antennas</i> 2006 International Building Code
Building Code:	
Design Basic Wind Speed without Ice:	100 mph 3-second gust
Design Basic Wind Speed with Ice:	50 mph 3-second gust
Ice Thickness:	3/4" radial
Structure Class:	II
Exposure Category:	C
Topographic Category:	1

4 APPURTENANCES

The following antennas, mounts, transmission lines, and other appurtenances were considered for the structural analysis.

Elev. (ft) ⁽¹⁾	Appurtenance	Line ⁽²⁾	Notes
108.0	(3) Kathrein 800-10504 (3) Kathrein 742-351 (3) T-Arms	(12) 1-5/8"	MetroPCS Proposed
98.0	(6) 7770 Panel Antennas (6) TMA's (1) LP Platform w/ Hand Rails	(12) 1-5/8" ⁽³⁾	AT&T Existing
88.0	(6) 948F85T2E-M (6) 48" x 12" x 3" Panel Antennas (1) LP Platform w/ Hand Rails	(12) 1-5/8"	Verizon Existing
78.0 ⁽⁴⁾	(6) RR90-11-00DBL (3) KMW AM-XWM17-65-00T (3) KMW TMA's (1) 2ft Diameter Dish (1) LP Profile Platform	(12) 1-1/4" ⁽³⁾ Replace with list below	Sprint/Nextel Existing

Notes:

1. Elevations reference centerline of panel, yagi, and dish antennas, and base of whip antennas, in relation to the steel base of the tower.
2. Proposed lines to be strapped to the tower in (2) sets of (6) lines.
3. There are (12) existing 1-5/8" lines exposed up to 98.0ft for AT&T and (6) 1-1/4" lines exposed up to 78.0ft for Sprint. The lines are stacked with a maximum loading condition of (3) 1-5/8" lines fully exposed to the wind without shielding from either other lines or the pole up to 98.0ft.
4. The loading for Sprint at 78.0ft represents the loading as listed on the information provided by EEI dated 07/09/2009 and exceeds the existing loading at 78.0ft as listed in the 09/09/2009 mapping report. Sprint Nextel Loading

- (9) Decibel DB844H90-XY (existing)
- (3) Kathrein 840 10054 (proposed)
- (3) Samsung DAP Head (proposed)
- (2) Dragonwave A-ANT-28G-2-C Dish Antennas (proposed)
- (12) 1-1/4" Coax, (existing)
- (2) 1/2" Coax, (6) 5/16" Coax (proposed)
- (1) Low Profile Platform (existing)

TOTAL TUBE WEIGHT								8684.	POUNDS	
POLE SHAFT LENGTH								110.00	FEET	

AISC constants are used for stress reductions.

Tube sections have 18 sides

Internal bend radius = 4. X T

Tube diameters are measured flat to flat.

AISC Tube Shape Coefficient of 1.000 is applied.

Slip joint length factor is 1.500 times the inner tube diameter.

An additional length of 6.00 inches is added to the joint.

<p>GENERAL NOTES:</p> <ol style="list-style-type: none"> THE MODIFICATIONS OUTLINED IN THESE DOCUMENTS WERE DESIGNED IN ACCORDANCE WITH THE TIA-222-G TOWER & ROD PLANS, SECTIONS, AND DETAILS ARE NOT TO BE SCALED FOR DETERMINATION OF QUANTITIES, LENGTHS, OR FT OF MATERIALS. UNLESS NOTED OTHERWISE = U.N.O. ALL WORK ON THESE DRAWINGS SHALL BE PERFORMED BY A QUALIFIED CONTRACTOR WITH A MINIMUM OF 5 YEARS OF PAST TOWER EXPERIENCE AND SHALL FOLLOW THE DICTATES OF GOOD CONSTRUCTION PRACTICE WITH WORKING KNOWLEDGE OF THE TIA CODE "STRUCTURAL STANDARD FOR ANTENNA SUPPORTING STRUCTURES AND ANTENNAS". ALL WORK SHALL BE DONE IN ACCORDANCE WITH ALL FEDERAL, STATE AND LOCAL CODES AND OSHA SAFETY REGULATIONS AND PERFORMED UNDER NORMAL WEATHER CONDITIONS WITH WINDS NOT IN EXCESS OF 20 MPH. CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONS TO PROTECT ALL EXISTING EQUIPMENT, ANTENNAS, TIA AND STRUCTURES. THE CONTRACTOR IS ALSO RESPONSIBLE FOR THE PROTECTION OF WORKERS, PUBLIC AND PRIVATE PROPERTY DURING CONSTRUCTION UP UNTIL COMPLETION OF ALL MEASUREMENTS AT THE SITE BEFORE ORDERING ANY MATERIALS OR DOING ANY WORK. NO EXTRA CHARGE FOR COMPENSATIONS SHALL BE ALLOWED DUE TO DIFFERENCE BETWEEN ACTUAL DIMENSIONS AND DIMENSIONS INDICATED ON THE CONSTRUCTION DRAWINGS. ANY SUCH DISCREPANCY IN THE DIMENSION WHICH MAY BE FOUND SHALL BE SUBMITTED TO THE OWNER/CLIENT FOR CONSIDERATIONS BEFORE THE CONTRACTOR PROCEEDS WITH THE WORK IN THE AFFECTED AREA. ANY SUBSTITUTIONS MUST CONFORM TO THE REQUIREMENTS OF THESE NOTES AND SPECIFICATIONS, AND SHOULD BE SIMILAR TO THOSE SHOWN. ALL SUBSTITUTIONS SHALL BE SUBMITTED TO THE ENGINEER OF RECORD FOR REVIEW AND APPROVAL PRIOR TO FABRICATION. CONTRACTOR'S PROPOSED INSTALLATION SHALL NOT INTERFERE, NOR DENY ACCESS TO ANY EXISTING OPERATIONAL AND SAFETY EQUIPMENT. CONTRACTOR SHALL PROMPTLY REMOVE ANY AND ALL DEBRIS FROM SITE AND RESTORE AS BEST AS POSSIBLE TO PRECONSTRUCTION CONDITION INCLUDING BUT NOT LIMITED TO ANY DIVETS ON ROADWAY OR SURROUNDING AREA. DIGITAL PHOTOGRAPHS SHALL BE TAKEN OF SITE ACCESS, COMPOUND AND TOWER PRIOR TO CONSTRUCTION, DURING CONSTRUCTION AND POST CONSTRUCTION INCLUDING BUT NOT LIMITED TO ALL REINFORCED AREAS. CLOSE-OUT REPORT SHALL FOLLOW WITHIN 3 BUSINESS DAYS. 																						
<p>PARTS FABRICATION / SHOP DRAWINGS:</p> <ol style="list-style-type: none"> ALL PARTS INCLUDED IN THESE DRAWINGS ARE MANUFACTURED AND OR SUPPLIED BY STRUCTURAL COMPONENTS, LLC. PARTS FROM OTHER MANUFACTURER'S ARE NOT TO BE USED UNLESS OTHERWISE APPROVED BY THE STRUCTURAL ENGINEER. ALL FABRICATION / SHOP DRAWINGS ARE TO BE REVIEWED FOR COMPLIANCE TO THE STRUCTURAL DRAWINGS AND SIGNED OFF BY THE STRUCTURAL ENGINEER PRIOR TO FABRICATION. 																						
<p>STRUCTURAL STEEL:</p> <ol style="list-style-type: none"> STRUCTURAL STEEL SHALL BE DETAILED, FABRICATED, AND ERECTED IN ACCORDANCE WITH AISC SPECIFICATIONS FOR STRUCTURAL STEEL BUILDINGS - 2005, THE "CODE OF STANDARD PRACTICE", 2005, AND CHAPTER 4 OF THE TIA CODE. PRE-QUALIFIED STRUCTURAL STEEL SHALL CONFORM TO THE FOLLOWING MINIMUM GRADES: <table border="1"> <tr> <td>PLATES</td> <td>ASTM A37-80, (FY = 50 KSI)</td> </tr> <tr> <td>STEEL PIPE</td> <td>ASTM A520 GR. B, (FY = 46 KSI)</td> </tr> </table> <ol style="list-style-type: none"> SEE TABLE 5-1 OF THE TIA CODE FOR ADDITIONAL SHAPES AND STANDARDS THAT ARE NOT LISTED ABOVE. NON PRE-QUALIFIED STRUCTURAL STEEL SHALL CONFORM TO THE FOLLOWING STANDARDS AS PER THE TIA CODE. <ul style="list-style-type: none"> THE CARBON EQUIVALENT OF STEEL SHALL NOT EXCEED 0.65 PER SECTION 5-4.2 OF THE TIA CODE ELONGATION OF STEEL SHALL NOT BE LESS THAN 18% TEST REPORTS SHALL BE IN ACCORDANCE WITH ASTM A6 OR A568 TOLERFANCES SHALL BE IN ACCORDANCE WITH ASTM A6 FIELD CUT EDGES; EXCEPT DRILLED HOLES, SHALL BE GROUND SMOOTH. 				PLATES	ASTM A37-80, (FY = 50 KSI)	STEEL PIPE	ASTM A520 GR. B, (FY = 46 KSI)															
PLATES	ASTM A37-80, (FY = 50 KSI)																					
STEEL PIPE	ASTM A520 GR. B, (FY = 46 KSI)																					
<p>CORROSION CONTROL:</p> <ol style="list-style-type: none"> ALL MEMBERS SHALL HAVE CORROSION CONTROL AS OUTLINED IN THE TIA CODE AND STATED BELOW: <ul style="list-style-type: none"> STEEL MEMBERS SHALL BE HOT DIPPED GALVANIZED PER ASTM A123 FASTENERS AND HARDWARE SHALL BE HOT DIPPED GALVANIZED PER ASTM A153 OR ASTM B695 CLASS 50 (A490 BOLTS SHALL NOT BE HOT DIPPED GALVANIZED) ALL REPAIRS SHALL BE PROTECTED IN ACCORDANCE WITH ASTM A780 ALL FIELD CUT SURFACES SHALL BE REPAIRED WITH (2) COATS OF A 95% ZINC RICH PAINT PER ASTM A780 (ZRC PREFERRED). CONNECTIONS OF STRUCTURAL STEEL MEMBERS SHALL BE MADE USING SPECIFIED HIGH STRENGTH ASTM A325 OR A490 BOLTS WITH THREADS EXCLUDED IN SHEAR PLANE. FASTENERS SHALL BE INSTALLED IN PROPERLY ALIGNED HOLES. ALL BOLTS AT EVERY CONNECTION SHALL BE INSTALLED SNUG FIT UNTIL THE SECTION IS FULLY COMPACTED AND THEN TIGHTENED FURTHER BY AISC - "TURN OF THE NUT", TIGHTENING SHALL PROGRESS SYSTEMATICALLY. BOLT LENGTHS UP TO AND INCLUDING FOUR DIAMETERS SHALL BE TENSIONED $\frac{1}{2}$ TURN BEYOND SNUG FIT. ALL BOLTED CONNECTIONS SHALL USE LOCK WASHERS. 																						
<p>WELDS:</p> <ol style="list-style-type: none"> ALL WELDING TO BE PERFORMED BY AWS CERTIFIED WELDERS AND CONDUCTED IN ACCORDANCE WITH AISC AND AWS WELDING CODE - STEEL A36 DI.1(D1.M) 2006 SPECIFICATIONS AND RECOMMENDATIONS ALL FIELD WELDS SHALL BE PERFORMED BY SMAW OR FCAW PROCESSES ONLY AND USE THE FOLLOWING ELECTRODE SPECIFICATIONS <ul style="list-style-type: none"> FILLER METAL TIE-IN < 55 KSI <ul style="list-style-type: none"> 0 SMAW - 7015-X, 7016-X, 7018-X, OR 7028-X 0 FCAW - E70T-X, OR E70T-XM ALL FILLER METAL YIELD > 55 KSI <ul style="list-style-type: none"> 0 SMAW - 8015-X, 8016-X, OR 8018-X 0 FCAW - E80T-X, OR E80T-XM ALL FULLER METAL IS ASSUMED TO BE \leq 55 KSI UNLESS WELD CALLOUT SPECIFIES OTHERWISE ALL STRUCTURAL DRAWINGS FOR ALL FIELD WELD SIZES AND TYPES. PRIOR TO FIELD WELDING GALVANIZED MATERIAL, CONTRACTOR SHALL GRIND OFF GALVANIZING 1/2" BEYOND ALL FIELD WELD SURFACES. REFER TO DETAILED WELDING SPECIFICATION AND GUIDELINE BY STRUCTURAL COMPONENTS PRIOR TO COMMENCEMENT OF WORK. 																						
<p>TOLERANCES:</p> <ol style="list-style-type: none"> CONSTRUCTION OF TOWERS SHALL MEET ALL OF THE TOLERANCE REQUIREMENTS AS OUTLINE IN CHAPTER 13.3 OF THE TIA CODE 																						
<p>GROUT:</p> <ol style="list-style-type: none"> ALL CROWD BENEATH COLUMN, BASE PLATES SHALL BE NON-SHRINK, NON-METALLIC, "FIVE-STAR", OR EQUAL. EXPOSED GROUT, SUCH AS AT MACHINERY BASE PLATES SHALL BE NON-SHRINK, (NON-METALLIC, "FIVE-STAR", OR EQUAL). 																						
<p>STRUCTURAL ERECTION AND BRACING REQUIREMENTS:</p> <ol style="list-style-type: none"> THE STRUCTURAL DRAWINGS ILLUSTRATE THE COMPLETED STRUCTURE WITH ALL ELEMENTS IN THEIR FINAL POSITIONS, PROPERLY SUPPORTED AND BRACED. THE CONTRACTOR, IN THE PROPER SEQUENCE, SHALL PROVIDE SHORING AND BRACING AS MAY BE REQUIRED DURING CONSTRUCTION TO ACHIEVE THE FINAL COMPLETED STRUCTURE. OBSERVATION VISITS TO THE SITE BY THE STRUCTURAL ENGINEER SHALL NOT INCLUDE INSPECTION OF THE SHORING AND BRACING ELEMENTS. THE CONTRACTOR IS RESPONSIBLE FOR THE DESIGN AND EXECUTION OF ALL MISCELLANEOUS SHORING, BRACING, TEMPORARY SUPPORTS, GUYING, ETC. NECESSARY TO PROVIDE A COMPLETE AND STABLE STRUCTURE AS SHOWN ON THESE DRAWINGS. CONTRACTORS PROPOSED INSTALLATION SHALL NOT INTERFERE, NOR DENY ACCESS TO ANY EXISTING OPERATIONAL AND SAFETY EQUIPMENT. 																						
<p>PAINT:</p> <ol style="list-style-type: none"> AS REQUIRED, CLEAN AND PAINT PROPOSED STEEL ACCORDING TO FAA ADVISORY CIRCULAR AC 70/746D-1K. 																						
<p>PROTECTIVE GROUNDING:</p> <ol style="list-style-type: none"> GROUNDING OF THE TOWER SHALL BE IN ACCORDANCE WITH CHAPTER 10 OF THE TIA CODE 																						
<p>MAPPING:</p> <ol style="list-style-type: none"> FIELD MAPPING SHALL BE IN ACCORDANCE WITH CHAPTER 14 OF THE TIA CODE CONTRACTOR SHALL THOROUGHLY INSPECT AND SURVEY EXISTING STRUCTURE TO VERIFY DIMENSIONS, ELEVATIONS, FRAMING, ETC. WHICH AFFECT THE WORK SHOWN ON THE DRAWINGS. REPORT ANY VARIATIONS OR DISCREPANCIES TO THE STRUCTURAL ENGINEER BEFORE PROCEEDING. 																						
<p>Maintenance:</p> <ol style="list-style-type: none"> A CONTINUOUS INSPECTION OF THE STRUCTURE SHALL BE COMPLETED PER TIA RECOMMENDATIONS AS OUTLINED IN CHAPTER 14 OF THE TIA CODE. ANY DEFECTS SHALL BE REPORTED TO ENSURE THE STRUCTURAL INTEGRITY FOR THE LIFE OF THE STRUCTURE. 																						
<p>AJAX BOLTS:</p> <ol style="list-style-type: none"> AJAX BOLTS USED FOR STRUCTURAL CONNECTIONS SHALL BE AJAX 'ONESIDE' PCB.8 W/ SLEEVE AND SHALL BE THE SIZE AS SPECIFIED ON THE STRUCTURAL DRAWINGS. ALL AJAX BOLTS SHALL BE INSTALLED AS PER THE MANUFACTURER'S SPECIFICATIONS. ALL AJAX BOLTS SHALL RUST PROOF GALVANIZED. AJAX BOLTS SHALL BE INSTALLED IN PROPERLY ALIGNED HOLES. 																						
<p>DYWDAG REINFORCING BARS:</p> <ol style="list-style-type: none"> ALL DETAILING, FABRICATION, AND PLACEMENT OF DYWDAG REINFORCING STEEL SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S SPECIFICATIONS. REINFORCING BARS SHALL BE DEFORMED AND HAVE A MINIMUM ULTIMATE BREAKING STRENGTH OF 150 KSI. DYWDAG BARS SHALL BE EQUAL TO THE SIZE AS INDICATED ON THE STRUCTURAL DRAWINGS. ALL COUPLERS, NUTS AND LOCK NUTS USED WITH DYWDAG REINFORCING BARS SHALL BE OF THE APPROPRIATE SIZE AND PITCH TO MATCH THE CORRESPONDING BAR SIZE AND SHALL BE MANUFACTURED BY DYWDAG SYSTEMS INTERNATIONAL. ALL BARS AND PARTS ARE TO BE HOT DIPPED GALVANIZED. WELDING OF DYWDAG BARS IS STRICTLY PROHIBITED.

NOTE: BASE TERMINATION CONFIGURATION AND QUANTITY MAY VARY; SEE SHEET S-1 FOR EXACT CONFIGURATION AND SHEET F-1 FOR EXACT LOCATION.

TOP OF FOUNDATION TO BOTTOM EDGE OF SWITCHBLADE 8"- 12"
(DEPENDING ON THICKNESS OF GROUT AND BASE PLATE)

2-3/4" ANCHOR ROD
 $F_u = 115 \text{ ksi}$

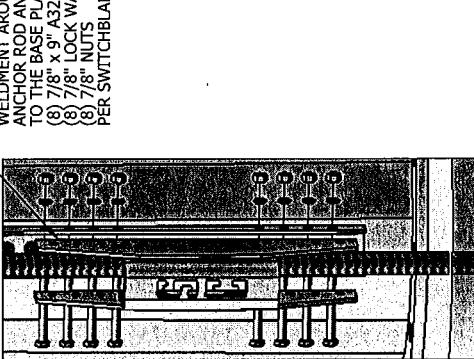

USE SIKADUR 32 LPL OR EQUIVALENT (1800 PSI BOND STRENGTH) TO BOND ANCHOR ROD TO FOUNDATION.
ROD TO FOUNDATION.
FOLLOW MANUFACTURERS INSTALLATION INSTRUCTIONS.

NOTE: IF CORE DEPTH EXCEEDS 7' 0" HOLD TOP OF ANCHOR ROD AT 5' ABOVE FOUNDATION.
ENSURE BOTTOM OF CORE IS FILLED WITH EPOXY BY INSTALLING EPOXY BEFORE SETTING ROD.

SWITCHBLADE FOUNDATION DETAIL

- ANCHOR ROD INSTALLATION NOTES:
 1. HOLES SHALL BE FREE OF DEBRIS AND MOISTURE.
 2. REFER TO MANUFACTURERS INSTRUCTIONS FOR ALLOWABLE INSTALLATION TEMPERATURE RANGE FOR SIKADUR.
 3. AFTER CORING IS COMPLETE, COMPLETE TAPE DROPS WITH PHOTOS FOR EACH HOLE. INSTALL ROD INTO HOLE TO ENSURE NO OBSTRUCTIONS, REMOVE, INSTALL EPOXY AND REINSTALL ROD.
 APPROXIMATE EPOXY AMOUNTS BASED ON 3" Ø CORE AND 2-3/4" Ø ROD: 7' CORE = 0.85 GAL/AR.
 REFER TO GN-1 FOR ADDITIONAL NOTES.
