Re: Notice of Exempt Modification - Antenna Swaps
Westford- Janoski Road, Ashford, CT
Ellington- 101 Burbank Road, Ellington, CT
Vernon 2-60 Industrial Park Road, Vernon, CT North Thompsonville- Bright Meadow Road, Enfield, CT

## Dear Mr. Phelps:

Cellco Partnership d/b/a Verizon Wireless ("Cellco") currently maintains a wireless telecommunications facility at each of the above referenced locations. In its continuing effort to improve the quality and reliability of its wireless service, Cellco intends to replace and upgrade its antennas at each of these existing facility locations.

## Westford

The Council originally approved Cellco's Westford facility on September 19, 2000. Cellco now intends to modify this facility by replacing the twelve cellular antennas with six newer model cellular antennas and six PCS antennas at the same location on the tower. Attached behind Tab 1 are specifications for the existing and proposed replacement antennas as well as a structural report verifying that the Janoski Road tower can support the proposed modification.

## Ellington

The Council originally approved Cellco's Ellington facility on November 2, 2000. On November 17, 2004, the Council approved Cellco's request to replace six of its cellular antennas with six PCS antennas. Cellco now intends to modify this facility further by replacing the six cellular antennas with six newer model cellular antennas at the same location on the tower. Attached behind Tab 2 are specifications

for the existing and proposed replacement antennas as well as a structural report verifying that the Burbank Road tower can support the proposed modification.

## Vernon 2

The Council originally approved Cellco's Vernon 2 facility on November 30, 2000. On November 17, 2004, the Council approved Cellco's request to replace six of its cellular antennas with six PCS antennas. Cellco now intends to modify this facility further by replacing the six cellular antennas with six newer model cellular antennas at the same location on the tower. Attached behind Tab 3 are specifications for the existing and proposed replacement antennas as well as a structural report verifying that the Industrial Park Road tower can support the proposed modification.

## North Thompsonville

The Council originally approved Cellco's North Thompsonville facility on July 15, 1999. On March 3, 2005, the Council approved Cellco's request to replace six of its cellular antennas with six PCS antennas. Cellco now intends to modify this facility further by replacing the six cellular antennas with six newer model cellular antennas at the same location on the tower. Attached behind Tab 4 are specifications for the existing and proposed replacement antennas as well as a structural report verifying that the Bright Meadow Road tower can support the proposed modification.

Please accept this letter as notification pursuant to R.C.S.A. § 16-50j-73, for construction that constitutes an exempt modification pursuant to R.C.S.A. $\S 16-50 \mathrm{j}-$ 72(b)(2). In accordance with R.C.S.A. § 16-50j-73, a copy of this letter is being sent to the chief elected official for each of the affected municipalities.

The planned modifications to each facility falls squarely within those activities explicitly provided for in R.C.S.A. § 16-50j-72(b)(2).

1. The proposed modifications will not result in any increase in the overall height of the existing structures. Cellco's replacement antennas will be located at the same heights and locations as the existing antennas.
2. The proposed modifications will not affect associated equipment areas and will not require the extension of the site boundaries.
3. The proposed modifications will not increase noise levels at the facility by six decibels or more.

## ROBINSON \& COLE

S. Derek Phelps

August 3, 2006
Page 3
4. The proposed modifications will not result in changes to radio frequency (RF) power density levels at either facility. Therefore, no new Power Density Calculation Tables are provided.

For the foregoing reasons, Cellco respectfully submits that the proposed modifications to the each of the above-referenced telecommunications facilities constitutes an exempt modification under R.C.S.A. § 16-50j-72(b)(2).

## Product Description

The Celwave ${ }^{\circledR}$ M Maximizer series is a log periodic dipole array which uses a patent pending design to achieve a front-to-back ratio of 45 dB , the highest front-to-back ratio in the industry. Maximizers are available to cover ESMR, AMPS, PCS and DCS frequency ranges. They use Celwave's patented monolithic CELlite $®$ technology, which eliminates cable and soldered joints to reduce the possibility of inter-modulation products. The CELite technology assures high reliability and excellent repeatability of electrical characteristics. The cellular Maximizers are available in $65^{\circ}, 80^{\circ}$ and $90^{\circ}$ horizontal beamwidths and the PCS/DCS Maximizers are available in $65^{\circ}$ and $90^{\circ}$ horizontal beamwidths.

## Features/Benefits

- Monolithic construction reduces IM.
- No solder joints, high reliability.
- Surface treated components prevent galvanic corrosion.
- UV stabilized radome assures long life without radome deterioration due to UV exposure.

## Technical Features

# DETAILED STRUCTURAL ANALYSIS AND EVALUATION OF 192' SELF-SUPPORTING LATTICE TOWER FOR NEW ANTENNA ARRANGEMENT 

Janoski Road<br>Ashford, Connecticut

prepared for

Verizon Wireless 99 East River Drive
East Hartford, Connecticut 06108
prepared by

URS CORPORATION

## TABLE OF CONTENTS

## 1. EXECUTIVE SUMMARY

2. INTRODUCTION
3. ANALYSIS METHODOLOGY AND LOADING CONDITIONS
4. FINDINGS AND EVALUATION

## 5. CONCLUSIONS AND RECOMMENDATIONS

6. DRAWINGS AND DATA

- RISA TOWER INPUT / OUTPUT SUMMARY
- RISA TOWER FEEDLINE DISTRIBUTION
- RISA TOWER FEEDLINE PLAN
- RISA TOWER DETAILED OUTPUT
- ANCHOR BOLT ANALYSIS
- FOUNDATION ANALYSIS

This report summarizes the structural analysis of the existing 192' self supporting lattice tower located at Janoski Road in Ashford, Connecticut. The analysis was conducted in accordance with the 2005 Connecticut State Building Code and the TIA/EIA-222-F standard for wind velocity of 80 mph (fastest mile) and 69 mph (fastest mile) concurrent with $1 / 2^{\prime \prime}$ ice. The antenna loading considered in the analysis consists of all existing and proposed antennas, transmission lines, and ancillary items as outlined in the Introduction Section of this report. The proposed Verizon modification is as follows:

## Proposed Antenna and Mount <br> Carrier Antenna Center Elevation

Remove:
(12) existing Swedcom ALP-E-9011 antennas

Install:
(6) Celwave APL869012-42T0 antennas and
(6) Celwave APL199016-42T2 antennas on (3)
existing T-Frames with (12) existing $15 / 8$ "
coax cables
The results of the analysis indicate that the tower structure, anchor bolts, and foundation are in compliance with the proposed loading conditions. The tower is considered structurally adequate with the wind load classification specified above and all the existing and proposed antenna loading.

This analysis is based on:

1) The tower structure's theoretical capacity, not including any assessment of the condition of the tower.
2) Tower geometry and structural member sizes taken from a tower report prepared by Rohn Industries, Inc, engineering file number 34589 PH , signed and sealed December 17, 1996.
3) Antenna and mount configuration as specified on the following page of this report.

This report is only valid as per the assumptions and data utilized in this report for antenna inventory, mounts and associated cables. The user of this report shall field verify the assumption of the antenna and mount configuration as well as the physical condition of the tower and connections. Notify the engineer in writing immediately if any of the information in this report is found to be other than specified.

If you should have any questions, please call.

AA, DR, IA, CF/Book - URS

## 2. INTRODUCTION

The subject tower is located at Janoski Road in Ashford, Connecticut. The structure is a 192' self-supporting lattice tower designed and manufactured Rohn Industries, Inc.

The inventory is summarized in the table below:

| Antenna Type | Carrier | Mount | Antenna Centerline Elevation | Cable |
| :---: | :---: | :---: | :---: | :---: |
| (6) DB980H90T2E-M antennas | $\begin{gathered} \text { Sprint } \\ \text { (existing) } \end{gathered}$ | (3) T-Frames | 192' | (6) $15 / 8^{\prime \prime}$ coax cables |
| (6) Celwave APL869012-42T0 antennas (6) Celwave APL199016-42T2 antennas | Verizon (proposed) | (3) T-Frames | 180' | (12) 1 5/8" coax cables |
| (9) ALP 9212-N antennas | Nextel (existing) (existing) | (3) T-Frames | 170' | (9)15/8" coax cables |
| (3) Allgon 7250.03 antennas | $\begin{gathered} \text { Cingular } \\ \text { Blue } \\ \text { (existing) } \end{gathered}$ | Mounted to legs | 160' | (6) dead $15 / 8^{\prime \prime}$ coax cables |
| (6) DAPA 79210 antennas | T-Mobile (existing) | (3) Sidearms | 150' | (6) $1 / 2$ " coax cables |
| (9) CSS DUO14178686 antennas (9) ADC MHAs | Cingular (existing) | (3) T-Frames | 140' | (12) $15 / 8^{\prime \prime}$ coax cables |
| (1) Catrain 738449 antenna | Cingular (existing) | Sidearm | 110' | (1) $1 / 2^{n \prime}$ coax cable |

This structural analysis of the communications tower was performed by URS Corporation (URS) for Verizon Wireless. The purpose of this analysis was to investigate the structural integrity of the existing tower with its existing and proposed antenna loads. This analysis was conducted to evaluate stress on the tower and the effect of forces to the foundation of the tower resulting from existing and proposed antenna arrangements.

## 3. ANALYSIS METHODOLOGY AND LOADING CONDITIONS

The structural analysis was done in accordance with the 2005 Connecticut State Building Code, TIA/EIA-222-F-Structural Standard for Steel Antenna Towers and Antenna Supporting Structures, and the American Institute of Steel Construction (AISC) Manual of Steel Construction-Allowable Stress Design (ASD).

The analysis was conducted using RISA Tower 4.5. Two load conditions were evaluated as shown below which were compared to allowable stresses according to AISC and TIAVEIA.

Load Condition $1=80 \mathrm{mph}$ (fastest mile) Wind Load (without ice) + Tower Dead Load Load Condition $2=69 \mathrm{mph}$ (fastest mile) Wind Load (with ice) + Ice Load + Tower Dead Load

Please note that wind pressure is a function of velocity squared. Under Load Condition 2, a 25 percent reduction in wind pressure is allowed by code to account for the unlikelihood of the full wind pressure and ice load occurring at the same time. The same results may be achieved by utilizing a lower wind pressure without taking the 25 percent reduction, as shown above.

The TIA/EIA standard permits a one-third increase in allowable stresses for towers and monopoles less than 700 feet tall. For the purposes of this analysis, in computing the load capacity the allowable stresses of the tower members were increased by one-third.

## 4. FINDINGS AND EVALUATION

Stresses on the tower structure were evaluated to compare with allowable stresses in accordance with AISC. The calculated stresses under the proposed loading were within the allowable stresses. Detailed analysis and calculations for the proposed load condition are provided in section 6 of this report. The anchor bolts and foundation were also found to be within the allowable limits.

## 5. CONCLUSIONS AND RECOMMENDATIONS

The results of the analysis indicate that the tower structure, anchor bolts, and foundation are in compliance with the proposed loading conditions. The tower is structurally adequate under the wind load classification specified above and the proposed antenna loadings.

## Limitations/Assumptions:

This report is based on the following:

1. Tower inventory as listed in this report.
2. Tower is properly installed and maintained.
3. All members are as specified in the original design documents and are in good condition.
4. All required members are in place.
5. All bolts are in place and are properly tightened.
6. Tower is in plumb condition.
7. All member protective coatings are in good condition.
8. All tower members were properly designed, detailed, fabricated, and installed and have been properly maintained since erection.
9. Foundations were properly constructed to support original design loads as specified in the original design documents.
10. All coaxial cable is installed as specified in Section 6 of this report.

URS is not responsible for any modifications completed prior to or hereafter in which URS is not or was not directly involved. Modifications include but are not limited to:
A. Adding antennas
B. Removing/replacing antennas
C. Adding coaxial cables

URS hereby states that this document represents the entire report and that it assumes no liability for any factual changes that may occur after the date of this report. All representations, recommendations, and conclusions are based upon information contained and set forth herein. If you are aware of any information which conflicts with that which is contained herein, or you are aware of any defects arising from original design, material, fabrication, or erection deficiencies, you should disregard this report and immediately contact URS. URS disclaims all liability for any representation, recommendation, or conclusion not expressly stated herein.

## Ongoing and Periodic Inspection and Maintenance:

After the Contractor has successfully completed the installation and the work has been accepted, the owner will be responsible for the ongoing and periodic inspection and maintenance of the tower.

The owner shall refer to TIA/EIA-222-F for recommendations for maintenance and inspection. The frequency of the inspection and maintenance intervals is to be determined by the owner based upon actual site and environmental conditions. It is recommended that a complete and thorough inspection of the entire tower structural system be performed at least yearly and more frequently as conditions warrant. According to TIA/EIA-222-F section 14.1, Note 1: It is recommended that the structure be inspected after severe wind and/or ice storms or other extreme loading conditions.

## Tower Input Data

The main tower is a $3 x$ free standing tower with an overall height of 192.00 ft above the ground line.
The base of the tower is set at an elevation of 0.00 ft above the ground line.
The face width of the tower is 6.65 ft at the top and 25.00 ft at the base.
This tower is designed using the TIA/EIA-222-F standard.
The following design criteria apply:
Basic wind speed of 80 mph .
Nominal ice thickness of 0.5000 in .
Ice density of 56 pcf.
A wind speed of 69 mph is used in combination with ice.
Temperature drop of $50^{\circ} \mathrm{F}$.
Deflections calculated using a wind speed of 50 mph .
Weld together tower sections have flange connections.
Connections use galvanized A325 bolts, nuts and locking devices. Installation per TIA/EIA-222 and AISC
Specifications..
Tower members are "hot dipped" galvanized in accordance with ASTM A123 and ASTM A153 Standards..
Welds are fabricated with ER-70S-6 electrodes..
A non-linear (P-delta) analysis was used.
Pressures are calculated at each section.
Stress ratio used in tower member design is 1.333 .
Local bending stresses due to climbing loads, feedline supports, and appurtenance mounts are not considered.

Description
Anchor Bolt Analysis

Janoski Road

|  | Page |  |
| :--- | :--- | :--- |
| Project No. | VZ1-200 | of |
| Sheet $\frac{2}{2}$ of $\frac{3}{3}$ |  |  |
| Computed by | JEK | DateO8/01/06 |
| Checked by | Date |  |

## Anchor Bolt Area:

Gross Area of Bolt:

$$
\mathrm{A}_{\mathrm{g}}:=\frac{\pi}{4} \cdot \mathrm{D}^{2} \quad \mathrm{~A}_{\mathrm{g}}=0.785 \mathrm{in}^{2}
$$

Net Area of Bolt:

$$
\mathrm{A}_{\mathrm{n}}:=\frac{\pi}{4} \cdot\left(\mathrm{D}-\frac{0.9743 \cdot \mathrm{in}}{\mathrm{n}}\right)^{2} \quad \mathrm{~A}_{\mathrm{n}}=0.606 \mathrm{in}^{2}
$$

## Check Tensile Forces:

## Maximum Tensile Force (Gross Area):

AllowableTension :=1.33. $\left(0.33 \cdot \mathrm{~A}_{\mathrm{g}} \cdot \mathrm{F}_{\mathrm{u}}\right) \quad$ AllowableTension $=43.1 \mathrm{kips}$
Note: 1.33 increase allowed per TIA/EIA

Maximum Tensile Force (Net Area):
$\mathrm{F}_{\text {net.area }}:=1.33 \cdot\left(0.60 \cdot \mathrm{~A}_{\mathrm{n}} \cdot \mathrm{Fy}\right) \quad \mathrm{F}_{\text {net.area }}=52.7 \mathrm{kips}$
Note: 1.33 increase allowed per TIA/EIA

Applied Tension:
MaxTension := Uplift $\quad$ MaxTension $=20.9 \mathrm{kips}$

Check Stresses:
$\frac{\text { MaxTension }}{\text { AllowableTension }}=0.49$
Condition I $:=$ if $\left(\frac{\text { MaxTension }}{\mathrm{F}_{\text {net.area }}} \leq 1.00\right.$, "OK", "Overstressed" $)$
Condition $1=$ " OK "

## Check Anchor Bolt Area:

Based on the ASCE 10-97 Design of Latticed Stell Transmission Structures
Required Area:

$$
\begin{array}{ll}
\mathrm{A}_{\mathrm{s} 1}:=\frac{\text { Uplift }}{\text { Fy }}+\frac{\text { Shear }}{\mu \cdot 0.85 \cdot \mathrm{Fy}} & \mathrm{~A}_{\mathrm{s} 1}=2.5 \mathrm{in}^{2} \\
\mathrm{~A}_{\mathrm{s} 2}:=\left|\frac{\text { Shear }-(0.3 \cdot \text { Compression })}{\mu \cdot 0.85 \cdot \mathrm{Fy}}\right| & \mathrm{A}_{\mathrm{s} 2}=1.0 \mathrm{in}^{2}
\end{array}
$$

Provided Area:

$$
\begin{aligned}
& \mathrm{A}_{\text {sprovided }}:=\mathrm{A}_{\mathrm{n}} \cdot \mathrm{~N} \quad \mathrm{~A}_{\text {sprovided }}=6.1 \mathrm{in}^{2} \\
& \text { Condition2 }:=\text { if }\left(\frac{\mathrm{A}_{\text {s1 }}}{\mathrm{A}_{\text {sprovided }}} \leq 1.00, \text { "OK", "Overstressed" }\right) \quad \frac{\mathrm{A}_{\mathrm{s} 1}}{\mathrm{~A}_{\text {sprovided }}}=0.4 \\
& \text { Condition2 }=\text { "OK" } \\
& \text { Condition3 }:=\mathrm{if}\left(\frac{\mathrm{~A}_{\mathrm{s} 2}}{\mathrm{~A}_{\text {sprovided }}} \leq 1.00, \text { "OK" , "Overstressed" }\right) \\
& \text { Condition3 }=\text { "OK" }
\end{aligned}
$$

## WPA-80090/4CF

When ordering, replace "__ with connector type

## Radiation-pattern ${ }^{11}$

## Featuring upper side lobe suppression.

Radiation patterns for all antennas are measured with the antenna mounted on a fiberglass pole.

Mounting on a metal pole will typically improve the Front-toBack Ratio.

CF Denotes a Center-Fed Connector.

Amphenol Antel's Exclusive 3T (True Transmission Line Technology) Antenna Design:

- Watercut brass feedline assembly for consistent performance.
- Unique feedline design eliminates the need for conventional solder joints in the signal path.
- A non-collinear system with access to every radiating element for broad bandwidth and superior performance.
- Air as insulation for virtually no internal signal loss.

Every Amphenol Antel antenna is under a five-year limited warranty for repair or replacement.

Antenna available with center-fed connector only.

## 1. EXECUTIVE SUMMARY

This report summarizes the structural analysis of the existing 180' self supporting lattice tower located at 101 Burbank Road in Ellington, Connecticut. The analysis was conducted in accordance with the 2005 Connecticut State Building Code and the TIAJEIA-222-F standard for wind velocity of 80 mph and 69 mph concurrent with $1 / 2^{\prime \prime}$ ice. The antenna loading considered in the analysis consists of all existing and proposed antennas, transmission lines, and ancillary items as outlined in the Introduction Section of this report. The proposed Verizon modification is as follows:

| Proposed Antenna and Mount | Carrier | Antenna Center Elevation |
| :--- | :---: | :---: |
| Remove: <br> (6) existing Swedcom ALP-E-9011 antennas |  |  |
| Install: | Verizon |  |
| (6) Antel WPA-80090/4 antennas on the <br> existing T-Booms with (6) existing 15/8" coax <br> cables | (Proposed) |  |$\quad$ @ 176'-6"

The results of the analysis indicate that the tower structure, anchor bolts, and foundation are in compliance with the proposed loading conditions. The tower is considered structurally adequate with the wind load classification specified above and all the existing and proposed antenna loading.

This analysis is based on:

1) The tower structure's theoretical capacity, not including any assessment of the condition of the tower.
2) Tower geometry and structural member sizes taken from a tower report prepared by Rohn Industries, Inc, engineering file number 42895AE, dated April 3, 2000.
3) Antenna and mount configuration as specified on the following page of this report.

This report is only valid as per the assumptions and data utilized in this report for antenna inventory, mounts and associated cables. The user of this report shall field verify the assumption of the antenna and mount configuration as well as the physical condition of the tower and connections. Notify the engineer in writing immediately if any of the information in this report is found to be other than specified.

If you should have any questions, please call.

## 2. INTRODUCTION

The subject tower is located at 101 Burbank Road in Ellington, Connecticut. The structure is a 180' self-supporting lattice tower designed and manufactured Rohn Industries, Inc.

The inventory is summarized in the table below:

| Antenna TYpe | Carrier | Mount | Antenna Centerline Elevation | Cable |
| :---: | :---: | :---: | :---: | :---: |
| (1) DB222 antenna | NESM (existing) | Directly mounted | 196'-6" | (1) $11 / 4^{\prime \prime}$ coax cable |
| (1) PD220 antenna | NESM (existing) | Directly mounted | 191'-6" | (1) $11 / 4$ " coax cable |
| (9) EMS RR90-1702 antennas | T-Mobile (existing) | (3) T-Booms | $186{ }^{\prime}-6{ }^{\prime \prime}$ | (6) $15 / 8^{\prime \prime}$ coax cables |
| (6) existing Decibel DB948F85T2E-M antennas <br> (6) Antel WPA80090/4 antennas | Verizon (proposed) | (3) existing TBooms | 176'-6" | (12) 1 5/8" coax cables |
| (6) Allgon 7250.03 antennas | Cingular Blue (existing) | (3) T-Arms | $166^{\prime}-6{ }^{\prime \prime}$ | (6) dead $15 / 8^{\prime \prime}$ coax cables |
| (12) CSS DUO14178686 antennas (6) TMAs | Cingular (existing) | (3) T-Booms | $156{ }^{\prime}-6{ }^{\prime \prime}$ | (9) $15 / 8^{\prime \prime}$ coax cables |
| (1) GPS antenna | (existing) | Stand-Off | $76^{\prime}-6^{\prime \prime}$ | (1) $1 / 2^{\prime \prime}$ coax cable |
| (1) GPS antenna | (existing) | Stand-Off | $36^{\prime}-6$ "' | (1) 1/2" coax cable |

This structural analysis of the communications tower was performed by URS Corporation (URS) for Verizon Wireless. The purpose of this analysis was to investigate the structural integrity of the existing tower with its existing and proposed antenna loads. This analysis was conducted to evaluate stress on the tower and the effect of forces to the foundation of the tower resulting from existing and proposed antenna arrangements.

## 3. ANALYSIS METHODOLOGY AND LOADING CONDITIONS

The structural analysis was done in accordance with the 2005 Connecticut State Building Code, TIA/EIA-222-F-Structural Standard for Steel Antenna Towers and Antenna Supporting Structures, and the American Institute of Steel Construction (AISC) Manual of Steel Construction-Allowable Stress Design (ASD).

The analysis was conducted using RISA Tower 4.5. Two load conditions were evaluated as shown below which were compared to allowable stresses according to AISC and TIAEIA.

```
Load Condition 1 = 80 mph Wind Load (without ice) + Tower Dead Load
Load Condition 2 = 69 mph Wind Load (with ice) + Ice Load + Tower Dead Load
```

Please note that wind pressure is a function of velocity squared. Under Load Condition 2, a 25 percent reduction in wind pressure is allowed by code to account for the unlikelihood of the full wind pressure and ice load occurring at the same time. The same results may be achieved by utilizing a lower wind pressure without taking the 25 percent reduction, as shown above.

The TIA/EIA standard permits a one-third increase in allowable stresses for towers and monopoles less than 700 feet tall. For the purposes of this analysis, in computing the load capacity the allowable stresses of the tower members were increased by one-third.

## 4. FINDINGS AND EVALUATION

Stresses on the tower structure were evaluated to compare with allowable stresses in accordance with AISC. The calculated stresses under the proposed loading were within the allowable stresses. Detailed analysis and calculations for the proposed load condition are provided in section 6 of this report. The anchor bolts and foundation were also found to be within the allowable limits.

## 5. CONCLUSIONS AND RECOMMENDATIONS

The results of the analysis indicate that the tower structure, anchor bolts, and foundation are in compliance with the proposed loading conditions. The tower is structurally adequate under the wind load classification specified above and the proposed antenna loadings.

## Limitations/Assumptions:

This report is based on the following:

1. Tower inventory as listed in this report.
2. Tower is properly installed and maintained.
3. All members are as specified in the original design documents and are in good condition.
4. All required members are in place.
5. All bolts are in place and are properly tightened.
6. Tower is in plumb condition.
7. All member protective coatings are in good condition.
8. All tower members were properly designed, detailed, fabricated, and installed and have been properly maintained since erection.
9. Foundations were properly constructed to support original design loads as specified in the original design documents.
10. All coaxial cable is installed as specified in Section 6 of this report.

URS is not responsible for any modifications completed prior to or hereafter in which URS is not or was not directly involved. Modifications include but are not limited to:
A. Adding antennas
B. Removing/replacing antennas
C. Adding coaxial cables

URS hereby states that this document represents the entire report and that it assumes no liability for any factual changes that may occur after the date of this report. All representations, recommendations, and conclusions are based upon information contained and set forth herein. If you are aware of any information which conflicts with that which is contained herein, or you are aware of any defects arising from original design, material, fabrication, or erection deficiencies, you should disregard this report and immediately contact URS. URS disclaims all liability for any representation, recommendation, or conclusion not expressly stated herein.

## Ongoing and Periodic Inspection and Maintenance:

After the Contractor has successfully completed the installation and the work has been accepted, the owner will be responsible for the ongoing and periodic inspection and maintenance of the tower.

The owner shall refer to TIA/EIA-222-F for recommendations for maintenance and inspection. The frequency of the inspection and maintenance intervals is to be determined by the owner based upon actual site and environmental conditions. It is recommended that a complete and thorough inspection of the entire tower structural system be performed at least yearly and more frequently as conditions warrant. According to TIA/EIA-222-F section 14.1, Note 1: It is recommended that the structure be inspected after severe wind and/or ice storms or other extreme loading conditions.

## Tower Input Data

The main tower is a 3 x free standing tower with an overall height of 186.50 ft above the ground line.
The base of the tower is set at an elevation of 6.50 ft above the ground line.
The face width of the tower is 4.65 ft at the top and 21.00 ft at the base.
This tower is designed using the TIA/EIA-222-F standard.
The following design criteria apply:
Basic wind speed of 80 mph .
Nominal ice thickness of 0.5000 in.
Ice density of 56 pcf .
A wind speed of 69 mph is used in combination with ice.
Temperature drop of $50^{\circ} \mathrm{F}$.
Deflections calculated using a wind speed of 50 mph .
Weld together tower sections have flange connections..
Connections use galvanized A325 bolts, nuts and locking devices. Installation per TIA/EIA-222 and AISC
Specifications..
Tower members are "hot dipped" galvanized in accordance with ASTM A123 and ASTM A153 Standards.
Welds are fabricated with ER-70S-6 electrodes..
A non-linear ( P -delta) analysis was used.
Pressures are calculated at each section.
Stress ratio used in tower member design is 1.333 .
Local bending stresses due to climbing loads, feedline supports, and appurtenance mounts are not considered.

## Mechanical specifications

- Luntith

## LPA-185080/8CF

When ordering, replace "___ with connector type.

## Radiation-pattern ${ }^{1)}$

Radiation patterns for all antennas are measured with the antenna mounted on a fiberglass pole.

Mounting on a metal pole will typically improve the Front-toBack Ratio.

Amphenol Antel's Exclusive 3 T (True Transmission Line Technology)
Antenna Design:

- True log-periodic design allows for superior front-to-side characteristics to minimize sector overlap.
- Unique feedline design eliminates the need for conventional solder joints in the signal path.
- A non-collinear system with access to every radiating element for broad bandwidth and superior performance.
- Air as insulation for virtually no internal signal loss.

Every Amphenol Antel antenna is under a five-year limited warranty for repair or replacement.

Antenna available with center-fed connector only.

## 1. EXECUTIVE SUMMARY

This report summarizes the structural analysis of the 176 ' monopole located at 60 Industrial Park in Vernon, Connecticut. The analysis was conducted in accordance with the 2005 Connecticut State Building Code and the TIA/EIA-222-F standard for a wind velocity of 80 mph (fastest mile) and 69 mph (fastest mile) concurrent with $1 / 2^{n}$ ice. The antenna loading considered in the analysis consists of all existing and proposed antennas, transmission lines, and ancillary items as outlined in the Introduction Section of this report. The proposed Verizon Wireless modification is as follows:

| Proposed Antenna and Mount | Carrier | Antenna Center Elevation |
| :--- | :---: | :---: |
| Remove: <br> (6) existing Swedcom ALP-E-9011 antennas |  |  |
| Install: <br> (6) Antel LPA-185090-8CF_2 antennas on <br> existing low profile platform with (6) <br> existing 15/8" coax cables | Verizon <br> (Proposed) | @ 155' |

The results of the analysis indicate that the existing tower structure is in compliance with the proposed loading conditions. The tower and foundation are considered structurally adequate under the wind load specified above and the existing, future, and proposed antenna loadings.

This analysis is based on:

1) The tower structure's theoretical capacity not including any assessment of the condition of the tower.
2) Tower geometry, member sizes and foundation taken from Tower and Foundation reports prepared by PiROD, Inc. Engineering File No. A-116329 dated January 28, 2000.
3) Antenna and mount configuration as specified on the following page of this report.

This report is only valid as per the assumptions and data utilized in this report for antenna inventory, mounts and associated cables. The user of this report shall field verify the assumption of the antenna and mount configuration as well as the physical condition of the tower. Notify the engineer in writing immediately if any of the information in this report is found to be other than specified.

If you should have any questions, please call.
Sincerely,

$$
c c: \quad D R, A A, I A, C F / B o o k-U R S
$$

## 2. INTRODUCTION

The subject tower is located at 60 Industrial Park in Vernon, Connecticut. The structure is a 176 , monopole manufactured by PiROD Incorporated.

The tower geometry and structure member sizes were taken from the original construction drawings (PiROD Eng. File \#: A-116329) prepared by PiROD Inc., dated January 28, 2000.

The inventory is summarized in the table below:

| Antemna Type | Carrier | Mount | Centerline Elevation | Cable |
| :---: | :---: | :---: | :---: | :---: |
| (6) EMS RR90-1702DP antennas | T-Mobile (existing) | Low Profile Platform | 173' | (12) $15 / 8^{n}$ coax cables (within monopole) |
| (3) Allgon 7250.03 antennas | Cingular Blue (existing) | Flush Mounts | 165' | (6) $15 / 8^{n}$ coax cables (within monopole) |
| $\begin{gathered} \text { (6) Decibel } \\ \text { DB948F85T2E-M } \\ \text { antennas } \end{gathered}$ | Verizon (existing) | Low Profile Platform | 155' | (6) $15 / 8^{\prime \prime}$ coax cables (within monopole) |
| $\begin{aligned} & \text { (6) Antel WPA- } \\ & 80090 / 4 \mathrm{CF} \\ & \text { antennas } \\ & \hline \end{aligned}$ | Verizon (proposed) | Low Profile Platform (listed above) | 155' | (6) $15 / 8^{\prime \prime}$ coax cables (within monopole) |
| (12) Decibel DB844H90 antennas | Nextel (existing) | Low Profile Platform | $145{ }^{\prime}$ | (12) $15 / 8^{\prime \prime}$ coax cables (within monopole) |

This structural analysis of the communications tower was performed by URS Corporation (URS) for Verizon Wireless. The purpose of this analysis was to investigate the structural integrity of the existing tower with its existing and proposed antenna loads. This analysis was conducted to evaluate stress on the tower and the effect of forces to the foundation of the tower resulting from existing and proposed antenna arrangements.

## 3. ANALYSIS METHODOLOGY AND LOADING CONDITIONS

The structural analysis was done in accordance with the 2005 Connecticut State Building Code, TIA/EIA-222-F-Structural Standard for Steel Antenna Towers and Antenna Supporting Structures, and the American Institute of Steel Construction (AISC) Manual of Steel Construction-Allowable Stress Design (ASD).

The analysis was conducted using RISA Tower 4.5. Two load conditions were evaluated as shown below which were compared to allowable stresses according to AISC and TIA/EIA.

Load Condition $1=80 \mathrm{mph}($ fastest mile $)$ Wind Load (without ice) + Tower Dead Load Load Condition $2=69 \mathrm{mph}($ fastest mile Wind Load (with ice) + Ice Load + Tower Dead Load

Please note that wind pressure is a function of velocity squared. Under Load Condition 2, a 25 percent reduction in wind pressure is allowed by code to account for the unlikelihood of the full wind pressure and ice load occurring at the same time. The same results may be achieved by utilizing a lower wind pressure without taking the 25 percent reduction, as shown above.

The TIA/EIA standard permits a one-third increase in allowable stresses for towers and monopoles less than 700 feet tall. For the purposes of this analysis, in computing the load capacity the allowable stresses of the tower members were increased by one-third.

## 4. FINDINGS AND EVALUATION

Combined axial and bending stresses on the monopole structure were evaluated to compare with allowable stresses in accordance with AISC. The calculated stresses under the proposed loading were below the allowable stresses. Detailed analysis and calculations for the proposed load condition are provided in section 6 of this report. Additionally, the anchor bolts, base plate, and foundation were found to be structurally adequate.

## 5. CONCLUSIONS

The results of the analysis indicate that the tower structure is in compliance with the proposed loading conditions. The tower and its foundation are considered structurally adequate with the TIA/EIA-222-F wind load classification specified above and all the existing and proposed antenna loading.

## Limitations/Assumptions:

This report is based on the following:

1. Tower inventory as listed in this report.
2. Tower is properly installed and maintained.
3. All members are as specified in the original design documents and are in good condition.
4. All required members are in place.
5. All bolts are in place and are properly tightened.
6. Tower is in plumb condition.
7. All member protective coatings are in good condition.
8. All tower members were properly designed, detailed, fabricated, and installed and have been properly maintained since erection.
9. Foundations were properly constructed to support original design loads as specified in the original design documents.
10. All coaxial cable is installed within the monopole unless specified otherwise.

URS is not responsible for any modifications completed prior to or hereafter in which URS is not or was not directly involved. Modifications include but are not limited to:
A. Adding antennas
B. Removing/replacing antennas
C. Adding coaxial cables

URS hereby states that this document represents the entire report and that it assumes no liability for any factual changes that may occur after the date of this report. All representations, recommendations, and conclusions are based upon information contained and set forth herein. If you are aware of any information which conflicts with that which is contained herein, or you are aware of any defects arising from original design, material, fabrication, or erection deficiencies, you should disregard this report and immediately contact URS. URS disclaims all liability for any representation, recommendation, or conclusion not expressly stated herein.

## Ongoing and Periodic Inspection and Maintenance:

After the Contractor has successfully completed the installation and the work has been accepted, the owner will be responsible for the ongoing and periodic inspection and maintenance of the tower.

The owner shall refer to TIA/EIA-222-F for recommendations for maintenance and inspection. The frequency of the inspection and maintenance intervals is to be determined by the owner based upon actual site and environmental conditions. It is recommended that a complete and thorough inspection of the entire tower structural system be performed at least yearly and more frequently as conditions warrant. According to TIA/EIA-222-F section 14.1, Note 1: It is recommended that the structure be inspected after severe wind and/or ice storms or other extreme loading conditions

## TOWER DESIGN NOTES

1. Tower designed for a 80 mph basic wind in accordance with the TIAVEIA-222-F Standard.
2. Tower is also designed for a 69 mph basic wind with 0.50 in ice.
3. Deflections are based upon a 50 mph wind.
4. Weld together tower sections have flange connections.
5. Connections use galvanized A325 bolts, nuts and locking devices. Installation per TIAVEIA-222 and AISC Specifications.
6. Tower members are "hot dipped" galvanized in accordance with ASTM A123 and ASTM A153
7. Welds are fabricated with ER-70S-6 electrodes.
8. TOWER RATING: $63.2 \%$

## Tower Input Data

There is a pole section.
This tower is designed using the TIA/EIA-222-F standard.
The following design criteria apply:
Basic wind speed of 80 mph .
Nominal ice thickness of 0.5000 in.
Ice density of 56 pcf.
A wind speed of 69 mph is used in combination with ice.
Temperature drop of $50^{\circ} \mathrm{F}$.
Deflections calculated using a wind speed of 50 mph .
Weld together tower sections have flange connections..
Connections use galvanized A325 bolts, nuts and locking devices. Installation per TIA/EIA-222 and AISC
Specifications..
Tower members are "hot dipped" galvanized in accordance with ASTM A123 and ASTM A153 Standards..
Welds are fabricated with ER-70S-6 electrodes..
A non-linear (P-delta) analysis was used.
Pressures are calculated at each section.
Stress ratio used in pole design is 1.333.
Local bending stresses due to climbing loads, feedline supports, and appurtenance mounts are not considered.

## Options

## Consider Moments - Legs

Consider Moments - Horizontals
Consider Moments - Diagonals
Use Moment Magnification
$\checkmark$ Use Code Stress Ratios
$\checkmark$ Use Code Safety Factors - Guys Escalate Ice
Always Use Max Kz
Use Special Wind Profile
Include Bolts In Member Capacity
Leg Bolts Are At Top Of Section
Secondary Horizontal Braces Leg
Use Diamond Inner Bracing (4 Sided)
Add IBC. 6D +W Combination

Distribute Leg Loads As Uniform Assume Legs Pinned
$\sqrt{ }$ Assume Rigid Index Plate
Use Clear Spans For Wind Area
Use Clear Spans For KL/r
Retension Guys To Initial Tension
Bypass Mast Stability Checks
Use Azimuth Dish Coefficients
$\sqrt{ }$ Project Wind Area of Appurt. Autocalc Torque Arm Areas SR Members Have Cut Ends
$\sqrt{ }$ Sort Capacity Reports By Component Triangulate Diamond Inner Bracing

Treat Feedline Bundles As Cylinder Use ASCE 10 X-Brace Ly Rules Calculate Redundant Bracing Forces Ignore Redundant Members in FEA SR Leg Bolts Resist Compression All Leg Panels Have Same Allowable Offset Girt At Foundation
$\checkmark$ Consider Feedline Torque Include Angle Block Shear Check
ॠ\#.,
Include Shear-Torsion Interaction
Always Use Sub-Critical Flow
Use Top Mounted Sockets

## ANCHOR BOLT AND BASE PLATE ANALYSIS

## Input Data

## Tower Reactions:

| Overturning Moment: | OM $:=2250 \cdot \mathrm{ff} \cdot \mathrm{kips}$ | user input |
| :--- | :--- | :--- |
| Shear Force: | Shear $:=21 \cdot \mathrm{kips}$ | user input |
| Axial Force: | Axial $:=50 \cdot \mathrm{kips}$ | user input |

## Anchor Bolt Data:

Use ASTM A615 Grade 75

| Number of Anchor Bolts $=\mathrm{N}$ | $\mathrm{N}:=52$ | user input |
| :--- | :--- | :--- |
| Diameter of Bolt Circle: | $\mathrm{D}_{\mathrm{bc}}:=67 \mathrm{in}$ | user input |
| Bolt "Column" Distance: | $1=3 \mathrm{in}$ | user input |
| Bolt Ultimate Strength: | $\mathrm{F}_{\mathrm{u}}:=150 \cdot \mathrm{ksi}$ | user input |
| Bolt Yield Strength: | $\mathrm{Fy}:=105 \cdot \mathrm{ksi}$ | user input |
| Bolt Modulus: | $\mathrm{E}:=29000 \cdot \mathrm{ksi}$ | user input |
| Thickness Of Anchor Bolts | $\mathrm{D}:=1.25 \mathrm{in}$ | user input |
| Threads per Inch: | $\mathrm{n}:=7$ | user input |

## Base Plate Data:

Plate Yield Strength:
Base Plate Thickness:
Base Plate Diameter:
$\mathrm{D}_{\mathrm{bp}}:=73 \cdot \mathrm{in}$
$\mathrm{D}_{\text {pole }}:=60 \mathrm{in}$
user input
user input
user input
user input

Description $\qquad$ Project No. $\qquad$ Page $\qquad$ of $\qquad$ Anchor Bolt and Base Plate Analysis Computed by $\qquad$ Sheet 2 of 6
$\qquad$ Checked by $\qquad$ Date都
$\qquad$

## Geometric Layout Data:

Distance from the center of gravity of the group to bolt in question $=\mathrm{d}(\mathrm{i})$
Radius of Bolt Circle: $\quad \mathrm{R}_{\mathrm{bc}}:=\frac{\mathrm{D}_{\mathrm{bc}}}{2}$

Distance to Bolts:

$$
\mathrm{i}:=1 . . \mathrm{N}
$$

$$
\mathrm{d}_{\mathrm{i}}:=\left\lvert\, \begin{array}{lll}
\theta \leftarrow 2 \cdot \pi \cdot\left(\frac{\mathrm{i}}{\mathrm{~N}}\right) & \mathrm{d}_{1}=4.04 \mathrm{in} & \mathrm{~d}_{7}=25.08 \mathrm{in} \\
\mathrm{~d} \leftarrow \mathrm{R}_{\mathrm{bc}} \cdot \sin (\theta) & \mathrm{d}_{2}=8.02 \mathrm{in} & \mathrm{~d}_{8}=27.57 \mathrm{in} \\
& \mathrm{~d}_{3}=11.88 \mathrm{in} & \mathrm{~d}_{9}=29.66 \mathrm{in} \\
& \mathrm{~d}_{4}=15.57 \mathrm{in} & \mathrm{~d}_{10}=31.32 \mathrm{in} \\
& \mathrm{~d}_{5}=19.03 \mathrm{in} & \mathrm{~d}_{11}=32.53 \mathrm{in} \\
& \mathrm{~d}_{6}=22.21 \mathrm{in} & \text { etc. }
\end{array}\right.
$$

Critical Distances For Bending in Plate:

## Anchor Bolt Analysis:

Polar Moment of Inertia $l_{p}$ :

$$
I_{p}:=\sum_{i}\left(d_{i}\right)^{2} \quad I_{p}=2.918 \times 10^{4} \mathrm{in}^{2}
$$

Gross Area of Bolt:

$$
\mathrm{A}_{\mathrm{g}}:=\frac{\pi}{4} \cdot \mathrm{D}^{2} \quad \mathrm{~A}_{\mathrm{g}}=1.227 \mathrm{in}^{2}
$$

Net Area of Bolt:

$$
\mathrm{A}_{\mathrm{n}}:=\frac{\pi}{4} \cdot\left(\mathrm{D}-\frac{0.9743 \cdot \mathrm{in}}{\mathrm{n}}\right)^{2} \quad \mathrm{~A}_{\mathrm{n}}=0.969 \mathrm{in}^{2}
$$

Net Diameter:

$$
D_{n}:=\frac{2 \cdot \sqrt{A_{n}}}{\sqrt{\pi}} \quad D_{n}=1.11 \mathrm{in}
$$

Radius of Gyration of Bolt:

$$
\mathrm{r}:=\frac{\mathrm{D}_{\mathrm{n}}}{4}
$$

$$
\mathrm{r}=0.28 \mathrm{in}
$$

Section Modulus of Bolt:

$$
\mathrm{S}_{\mathrm{x}}:=\frac{\pi \cdot \mathrm{D}_{\mathrm{n}}^{3}}{32} \quad \mathrm{~S}_{\mathrm{x}}=0.135 \mathrm{in}^{3}
$$

## Anchor Bolt Bending Stress:

Maximum Applied Bending:

$$
\begin{array}{ll}
M_{x}:=\left(\frac{\text { Shear }}{N}\right) \cdot 1 & M_{x}=0.101 \mathrm{ft} \cdot \mathrm{kips} \\
f_{b x}:=\frac{M_{x}}{S_{x}} & f_{b x}=9.0 \mathrm{ksi}
\end{array}
$$

Allowable Bending

$$
\mathrm{F}_{\mathrm{bx}}:=1.33 \cdot 0.60 \cdot \mathrm{Fy} \quad \mathrm{~F}_{\mathrm{bx}}=83.8 \mathrm{ksi}
$$

Note: 1.33 increase allowed per TIA/EIA

Job $\quad$ 176' Monopole - Vernon, CT
Project No. $\qquad$ Sheet 4 of 6 Description Computed by $\qquad$ Date 07/27/06
$\qquad$ Checked by $\qquad$ Date $\qquad$

## Check Tensile Forces:

Allowable Tensile Force:
AllowableTension $:=1.33 \cdot\left(0.33 \cdot \mathrm{~A}_{\mathrm{g}} \cdot \mathrm{F}_{\mathrm{u}}\right) \quad$ AllowableTension $=80.8 \mathrm{kips}$
Note: 1.33 increase allowed per TIA/EIA

Maximum Tensile Force (Net Area):

$$
\mathrm{F}_{\text {net.area }}:=1.33 \cdot\left(0.60 \cdot \mathrm{~A}_{\mathrm{n}} \cdot \mathrm{Fy}\right) \quad \mathrm{F}_{\text {net.area }}=81.2 \mathrm{kips}
$$

Note: 1.33 increase allowed per TIA/EIA

Applied Tension:
MaxTension $:=\frac{\mathrm{OM} \cdot \mathrm{R}_{\mathrm{bc}}}{\mathrm{I}_{\mathrm{p}}}-\frac{\text { Axial }}{\mathrm{N}} \quad$ MaxTension $=30.0 \mathrm{kips}$

Check Stresses:

```
\(\frac{\text { MaxTension }}{\text { AllowableTension }}=0.37\)
Condition := if \(\left(\frac{\text { MaxTension }}{\mathrm{F}_{\text {net.area }}} \leq 1.00\right.\), "OK", "Overstressed" \()\)
Condition \(=\) " OK "
```

## Check Compression \& Combined Stresses (if required):

Check to see if a complete combined stress analysis is required:
Per ASCE Manual 72: "If the clearance between the base plate and concrete does not exceed two times the bolt diameter a bending stress analysis of the bolts is NOT normally required."
Set the clear space between the plate and bolt to zero and remove bending stresses if a combined stress
analysis is not required:

$$
1:=\left\lvert\, \begin{aligned}
& 1 \text { if } 1>2 \cdot \mathrm{D}_{\mathrm{n}} \\
& 0.00 \text { in otherwise }
\end{aligned} \quad \mathrm{L}=3.00\right. \text { in } \quad \mathrm{f}_{\mathrm{bx}}:=\left\{\begin{array}{l}
\mathrm{f}_{\mathrm{bx}} \text { if } \mathrm{l}>2 \cdot \mathrm{D}_{\mathrm{n}} \quad \mathrm{f}_{\mathrm{bx}}=9.0 \mathrm{ksi} \\
0.0 \mathrm{ksi} \text { otherwise }
\end{array}\right.
$$

Allowable Compressive Force:

$$
\begin{aligned}
& \mathrm{K}_{\mathrm{w}}:=0.65 \\
& \mathrm{C}_{\mathrm{c}}:=\sqrt{\frac{2 \cdot \pi^{2} \cdot \mathrm{E}}{\mathrm{Fy}}}\left[\begin{array}{l}
\left.1-\frac{\left(\frac{\mathrm{K} \cdot \mathrm{I}}{\mathrm{r}}\right)^{2}}{2 \cdot \mathrm{C}_{\mathrm{c}}^{2}}\right] \cdot \mathrm{Fy} \\
\mathrm{~F}_{\mathrm{a}}:=\mathrm{C}_{\mathrm{c}}=73.84 \\
\frac{5}{\frac{5}{3}+\frac{\mathrm{K} \cdot\left(\frac{\mathrm{~K} \cdot \mathrm{I}}{\mathrm{r}}\right)}{8 \cdot \mathrm{C}_{\mathrm{c}}}-\frac{\left(\frac{\mathrm{K} \cdot \mathrm{l}}{\mathrm{r}}\right)^{3}}{8 \cdot \mathrm{C}_{\mathrm{c}}^{3}}} \text { if } \frac{\mathrm{K} \cdot \mathrm{I}}{\mathrm{r}} \leq \mathrm{C}_{\mathrm{c}} \\
\frac{12 \cdot \pi^{2} \cdot \mathrm{E}}{23 \cdot\left(\frac{\mathrm{~K} \cdot \mathrm{I}}{\mathrm{r}}\right)^{2}} \text { if } \frac{\mathrm{K} \cdot \mathrm{I}}{\mathrm{r}}>\mathrm{C}_{\mathrm{c}}
\end{array}\right.
\end{aligned}
$$

$$
\mathrm{F}_{3}:=1.33 \cdot \mathrm{~F}_{\mathrm{a}} \quad \text { Note: } 1.33 \text { increase allowed per TIA/EIA } \quad \mathrm{F}_{\mathrm{a}}=81.7 \mathrm{ksi}
$$

Applied Compressive Force:

$$
\begin{array}{ll}
\text { MaxCompression }:=\frac{O M \cdot R_{b c}}{I_{p}}+\frac{\text { Axial }}{N} & \text { MaxCompression }=32.0 \mathrm{kips} \\
\mathrm{f}_{\mathrm{a}}:=\frac{\text { MaxCompression }}{\mathrm{A}_{\mathrm{n}}} & \mathrm{f}_{\mathrm{a}}=33.0 \mathrm{ksi}
\end{array}
$$

Check Combined Stresses:

$$
\begin{aligned}
& \frac{f_{a}}{F_{a}}+\frac{f_{b x}}{F_{b x}}=0.51 \\
& \text { Condition }:=\text { if }\left(\frac{f_{a}}{F_{a}}+\frac{f_{b x}}{F_{b x}} \leq 1.00, \text { "OK" " "Overstressed" }\right) \text { Condition = "OK" }
\end{aligned}
$$

## Base Plate Analysis:

Force from Bolt(s):

$$
\begin{array}{lll}
\mathrm{C}_{\mathrm{ip}}:=\frac{\mathrm{OM} \cdot \mathrm{~d}_{\mathrm{i}}}{\mathrm{I}_{\mathrm{p}}}+\frac{\text { Axial }}{\mathrm{N}} & \mathrm{C}_{1}=4.7 \mathrm{kips} & \mathrm{C}_{7}=24.2 \mathrm{kips} \\
& \mathrm{C}_{2}=8.4 \mathrm{kips} & \mathrm{C}_{8}=26.5 \mathrm{kips} \\
& \mathrm{C}_{3}=12.0 \mathrm{kips} & \mathrm{C}_{9}=28.4 \mathrm{kips} \\
& \mathrm{C}_{4}=15.4 \mathrm{kips} & \mathrm{C}_{10}=29.9 \mathrm{kips} \\
& \mathrm{C}_{5}=18.6 \mathrm{kips} & \mathrm{C}_{11}=31.1 \mathrm{kips} \\
\mathrm{C}_{6}=21.5 \mathrm{kips} & \text { etc. }
\end{array}
$$

## Bending Stress in Plate:

$$
\mathrm{f}_{\mathrm{bp}}:=\sum_{\mathbf{i}} \frac{6 \cdot \mathrm{C}_{\mathbf{i}} \cdot \mathrm{MA}_{\mathrm{i}}}{\text { EffectiveWidth } \text { PlateThickness }^{2}} \quad \mathrm{f}_{\mathrm{bp}}=37.4 \mathrm{ksi}
$$

Check Stresses:

$$
\frac{\mathrm{f}_{\mathrm{bp}}}{1.33 \cdot 0.75 \mathrm{Fy}_{\mathrm{bp}}}=1.04
$$

$$
\begin{aligned}
& \text { Condition: }=\operatorname{if}\left(\frac{\mathrm{f}_{\mathrm{bp}}}{1.33 \cdot 0.75 \mathrm{Fy}}<1.00, \text { "OK" , "Overstressed" }\right) \\
& \text { Condition }=\text { "Overstressed" } \quad \text { Note: Gussets are used }
\end{aligned}
$$

Gusset Spacing:

$$
\begin{array}{ll}
\text { GussetSpacing }:=\frac{\pi \cdot D_{\mathrm{bc}}}{\mathrm{~N}} & \text { GussetSpacing }=4.0 \mathrm{in} \\
\text { GussetLength }:=\frac{\mathrm{D}_{\mathrm{bp}}-D_{\text {pole }}}{2} & \text { GussetLength }=6.5 \mathrm{in} \\
\frac{\text { GussetLength }}{\text { GussetSpacing }}=1.6 &
\end{array}
$$

Revised Stress In Plate: (From Theory of Plates and Shells, by Timoshenko)

$$
f_{\mathrm{bp} 2}:=\frac{6 \cdot\left(.133 \cdot \mathrm{C}_{13}+.125 \cdot \mathrm{C}_{13}\right)}{\text { PlateThickness }^{2}} \quad \mathrm{f}_{\mathrm{bp} 2}=22.0 \mathrm{ksi}
$$

Check Revised Stresses:

$$
\frac{\mathrm{f}_{\mathrm{bp} 2}}{1.33 \cdot 0.75 \mathrm{Fy} \mathrm{y}_{\mathrm{bp}}}=0.61 \quad \text { Condition3 }:=\mathrm{if}\left(\frac{\mathrm{f}_{\mathrm{bp} 2}}{1.33 \cdot 0.75 \mathrm{Fy}_{\mathrm{bp}}}<1.00 \text {, "OK" , "Overstressed" }\right)
$$

\text { SteelAreaCheck }:=\mathrm{if}\left(\mathrm{~A}_{\text {sprov }}>\mathrm{A}_{\text {smin }}, \text { "Okay", "No Good" }\right) & \text { SteelAreaCheck }=\text { "Okay" } \\
\text { NOTE: Anchor Bolts are not accounted for in reinforcement calculation and will provide } \\
& \text { additional reinforcement to satisfy minimum requirement of steel. }
\end{array}
$$

( ACl 10.8 .4 and 10.9.1)

Bar Spacing In Pier:

$$
\mathrm{B}_{\mathrm{sPier}}:=\frac{\mathrm{d}_{\mathrm{p}} \cdot \pi}{\text { NBpier }}-\mathrm{d}_{\mathrm{bpier}}
$$

$$
\mathrm{B}_{\mathrm{sPier}}=6.6336 \mathrm{in}
$$

Diamter of Reinforcement Cage:

$$
\operatorname{Diam}_{\text {cage }}:=d_{p}-2 \cdot \mathrm{Cvr}_{\text {pier }}
$$

$$
\text { Diam }_{\text {cage }}=78 \mathrm{in}
$$

Maximum Moment in Pier:

$$
M_{p}:=\left[M_{t}+S_{t} \cdot\left(L_{p}+\frac{A_{B P}}{2}\right)\right] \cdot L F
$$

$$
M_{p}=36113.025 \text { in } \cdot \text { kips }
$$

Pier Check evaluated from outside program and results are listed below;
(defined variables)

$$
\left(f_{\mathrm{c}} f_{\mathrm{y}} \mathrm{cl} \text { Spiral }\right)=\left(\begin{array}{llll}
3 & 60 & 3 & 0
\end{array}\right)
$$

The required input is column diameter in inches, number of reinforcing bars, bar size number,

$$
\left(\begin{array}{l}
\mathrm{D} \underset{\sim M}{N} \mathrm{M}_{\mathrm{M}} \mathrm{P}_{\mathrm{u}} \mathrm{M}_{\mathrm{xu}}
\end{array}\right):=\left(\begin{array}{lllll}
84 & 34 & 9 & 50 & 36113
\end{array}\right)
$$ factored axial load in kips and moment in kip inches:

Clears any previous output:

$$
\left(\begin{array}{lll}
\phi \mathrm{P}_{\mathrm{n}}
\end{array} \phi \mathrm{M}_{\mathrm{xn}} \mathrm{f}_{\mathrm{sp}}, h_{n}\right):=\left(\begin{array}{llll}
0 & 0 & 0 & 0
\end{array}\right)
$$

$$
\left(\phi P_{\text {wh }} \phi \mathrm{M}_{\text {xan }} \mathrm{f}_{\text {fopu }} R_{n}\right):=\phi \mathrm{P}_{\mathrm{n}}\left(\mathrm{D}, \mathrm{~N}, \mathrm{n}, \mathrm{P}_{\mathrm{u}}, \mathrm{M}_{\mathrm{xu}}\right)^{\mathrm{T}}
$$

The Output is given as useable axial load in kips, moment capacity in kip inches, splicing stress in ksi, and reinforcement ratio:

$$
\left(\phi P_{\mathrm{n}} \phi \mathrm{M}_{\mathrm{xn}} \quad \mathrm{f}_{\mathrm{sp}} \rho\right)=\left(\begin{array}{llll}
91.7895 & 66295.9015 & -60 & 0.0061
\end{array}\right)
$$

Column size and reinforcement may be changed to match capacity to the applied load.

$$
\begin{array}{ll}
\text { AxialLoadCheck }:=\mathrm{if}\left(\phi \mathrm{P}_{\mathrm{n}} \geq \mathrm{P}_{\mathrm{u}}, \text { "Okay", "No Good" }\right) & \text { AxialLoadCheck }=\text { "Okay" } \\

\end{array}
$$

## DEVELOPMENT LENGTH OF PIER REINFORCEMENT

TENSION (ACI 12.2.3)
Factors for development:

| Reinforcement Location Factor | $\alpha=1.0$ |
| :--- | :--- |
| Coating Factor | $\beta:=1.0$ |
| Concrete strength Factor | $\lambda:=1.0$ |
| Reinforcement Size Factor | $\gamma_{\text {mir }}:=1.0$ |
| c: if $\left(\mathrm{CVr}_{\text {pier }}<\frac{\mathrm{B}_{\text {sPier }}}{2}, \mathrm{Cvr}_{\text {pier }}, \frac{\mathrm{B}_{\text {sPier }}}{2}\right)$ |  |

$$
\mathrm{c}=3 \mathrm{in}
$$

Spacing or Cover Dimension: $\mathrm{c}:=\mathrm{if}\left(\mathrm{Cvr}_{\mathrm{pier}}<\frac{\mathrm{B}_{\text {sPier }}}{2}, \mathrm{Cvr}_{\mathrm{pier}}, \frac{\mathrm{B}_{\text {sPier }}}{2}\right) \quad \mathrm{c}=3$ in
Transverse Reinforcement: As allowed by $\mathrm{ACl} 12.2 .4 \quad \mathrm{k}_{\mathrm{k}}:=0$

$$
\mathrm{L}_{\mathrm{db} b \mathrm{w}}:=\frac{3}{40} \cdot \frac{\mathrm{fy}}{\sqrt{\mathrm{fc} \cdot \mathrm{psi}}} \cdot \frac{\alpha \cdot \beta \cdot \gamma \cdot \lambda}{\frac{\mathrm{c}+\mathrm{k}_{\mathrm{tr}}}{\mathrm{~d}_{\mathrm{bpier}}}} \cdot \mathrm{~d}_{\mathrm{bpier}}
$$

$$
\mathrm{L}_{\mathrm{dbt}}=34.8457 \mathrm{in}
$$

Minimum Development Length: ( ACI 12.2.1)

$$
\frac{\mathrm{L}}{\mathrm{~d} b \text { mainh }}:=12 \cdot \mathrm{in}
$$

Pier reinforcement bars are standard 90 degree hooks and therefore developement in the pad is computed as follows:

$$
\mathrm{L}_{\mathrm{dh}}:=\frac{1200 \cdot \mathrm{~d}_{\text {bpier }}}{\sqrt{\frac{\mathrm{fc}}{\mathrm{psi}}}} \cdot 7
$$

$$
\mathrm{L}_{\mathrm{dh}}=17.2993 \mathrm{in}
$$

$$
\mathrm{L}_{\mathrm{db}}:=\max \left(\mathrm{L}_{\mathrm{dbt}}, \mathrm{~L}_{\mathrm{dbmin}}\right)
$$

COMPRESSION: (ACI 12.3.2)

$$
\mathrm{L}_{\mathrm{db}}=34.8457 \mathrm{in}
$$

$$
\mathrm{L}_{\mathrm{dbc} 1}:=\frac{.02 \cdot \mathrm{~d}_{\mathrm{bpier}} \cdot \mathrm{fy}}{\sqrt{\mathrm{fc} \cdot \mathrm{psi}}}
$$

$$
\mathrm{L}_{\mathrm{dbcl}}=24.7132 \mathrm{in}
$$

$$
L_{\text {wdbrainsi }}=0.0003 \cdot \frac{\mathrm{in}^{2}}{\mathrm{lb}} \cdot\left(\mathrm{~d}_{\text {bpier }} \cdot \mathrm{fy}\right)
$$

$$
\mathrm{L}_{\mathrm{dbmin}}=20.304 \mathrm{in}
$$

$$
\mathrm{L}_{\mathrm{dbc}}:=\mathrm{if}\left(\mathrm{~L}_{\mathrm{dbc} 1} \geq \mathrm{L}_{\mathrm{dbmin}}, \mathrm{~L}_{\mathrm{dbcl}}, \mathrm{~L}_{\mathrm{dbmin}}\right)
$$

$$
\mathrm{L}_{\mathrm{dbc}}=24.7132 \mathrm{in}
$$

Available Length in Pier:
$L_{\text {pier }}:=L_{p}-3 \cdot$ in
$L_{\text {pier }}=87 \mathrm{in}$
$L_{\text {piertension }}:=\operatorname{if}\left(L_{\text {pier }}>L_{\text {dbt }}\right.$, "Okay", "No Good" $)$

CF Denotes a Center-Fed Connector.

## 806-960 MHz

## WPA-80090/4CF

When ordering, replace "__ with connector type.

## Featuring upper side lobe suppression.

Radiation patterns for all antennas are measured with the antenna mounted on a fiberglass pole.

Mounting on a metal pole will typically improve the Front-toBack Ratio.

## Amphenol Antel's

 Exclusive 3T (True Transmission Line Technology)Antenna Design:

- Watercut brass feedline assembly for consistent performance.
- Unique feedline design eliminates the need for conventional solder joints in the signal path.
- A non-collinear system with access to every radiating element for broad bandwidth and superior performance
- Air as insulation for virtually no internal signal loss

Every Amphenol Antel antenna is under a five-year limited warranty for repair or replacement.

Antenna available with center-fed connector only.

- RISA TOWER INPUT / OUTPUT SUMMARY
- RISA TOWER DETAILED OUTPUT
- ANCHOR bOLT AND base plate analysis
- FOUNDATION ANALYSIS

## 1. EXECUTIVE SUMMARY

This report summarizes the structural analysis of the $147^{\prime}-6^{\prime \prime}$ monopole located at Bridge Meadow Boulevard in Enfield, Connecticut. The analysis was conducted in accordance with the 2005 Connecticut State Building Code and the TIA/EIA-222-F standard for a wind velocity of 80 mph (fastest mile) and 69 mph (fastest mile) concurrent with $1 / 2^{\prime \prime}$ ice. The antenna loading considered in the analysis consists of all existing and proposed antennas, transmission lines, and ancillary items as outlined in the Introduction Section of this report. The proposed Verizon Wireless modification is as follows:

| Proposed Antenna and Mount | Carrier | Antenna Center Elevation |
| :--- | :---: | :---: |
| Remove: <br> (6) existing Swedcom ALP-E-9011 antennas <br> Install: <br> (6) Antel WPA-80090/4CF antennas on <br> existing low profile platform with (6) <br> existing 15/8" coax cables | Verizon <br> (Proposed) | @ 137' |

The results of the analysis indicate that the existing tower structure is in compliance with the proposed loading conditions. The tower and foundation are considered structurally adequate under the wind load specified above and the existing, and proposed antenna loadings.
This analysis is based on:

1) The tower structure's theoretical capacity not including any assessment of the condition of the tower.
2) Tower geometry, member sizes and foundation taken from Tower and Foundation reports prepared by Summit Manufacturing, Inc. (Summit Job \# 3960) signed and sealed September 18, 1998.
3) Antenna and mount configuration as specified on the following page of this report.

This report is only valid as per the assumptions and data utilized in this report for antenna inventory, mounts and associated cables. The user of this report shall field verify the assumption of the antenna and mount configuration as well as the physical condition of the tower. Notify the engineer in writing immediately if any of the information in this report is found to be other than specified.

If you should have any questions, please call.

## Sincerely,

$$
c c: \quad D R, A A, I A, C F / B o o k-U R S
$$

## 2. INTRODUCTION

The subject tower is located at Bridge Meadow Boulevard in Enfield, Connecticut. The structure is a $147^{\prime}-6$ " monopole manufactured by Summit Manufacturing Incorporated.

The tower geometry and structure member sizes were taken from the original construction drawings (Summit Job \# 3960) prepared by Summit Manufacturing Inc., signed and sealed September 18, 1998.

The inventory is summarized in the table below:

| Antenna Type | Cartier | Mount | Centerine Elevation | Cable |
| :---: | :---: | :---: | :---: | :---: |
| (6) Decibel DB980H90 antennas | Sprint (existing) | Low Profile Platform | 147' | (6) $15 / 8^{\prime \prime}$ coax cables (within monopole) |
| (6) Antel WPA80090/4CF antennas | Verizon (proposed) | Low Profile Platform | 137' | (6) $15 / 8^{\prime \prime}$ coax cables (within monopole) |
| $\begin{gathered} \text { (6) Decibel } \\ \text { DB948F85T2E-M } \\ \text { antennas } \end{gathered}$ | Verizon (existing) | Low Profile Platform (listed above) | $137{ }^{\prime}$ | (6) $15 / 8^{\prime \prime}$ coax cables (within monopole) |
| (12) Decibel DB844H90 antennas | Nextel (existing) | Low Profile Platform | 127' | (12) $7 / 8^{\prime \prime}$ coax cables (within monopole) |
| (9) Allgon 7184.14 antennas | Cingular Blue (existing) | Low Profile Platform | 117' | (9) $15 / 8^{\prime \prime}$ coax cables (within monopole) |
| (1) GPS antenna | (existing) | Sidearm | 50' | (1) $1 / 2^{\prime \prime}$ coax cable (within monopole) |

This structural analysis of the communications tower was performed by URS Corporation (URS) for Verizon Wireless. The purpose of this analysis was to investigate the structural integrity of the existing tower with its existing and proposed antenna loads. This analysis was conducted to evaluate stress on the tower and the effect of forces to the foundation of the tower resulting from existing and proposed antenna arrangements.

## 3. ANALYSIS METHODOLOGY AND LOADING CONDITIONS

The structural analysis was done in accordance with the 2005 Connecticut State Building Code, TIA/EIA-222-F-Structural Standard for Steel Antenna Towers and Antenna Supporting Structures, and the American Institute of Steel Construction (AISC) Manual of Steel Construction-Allowable Stress Design (ASD).

The analysis was conducted using RISA Tower 4.5. Two load conditions were evaluated as shown below which were compared to allowable stresses according to AISC and TIA/EIA.

Load Condition $1=80 \mathrm{mph}$ (fastest mile) Wind Load (without ice) + Tower Dead Load Load Condition $2=69 \mathrm{mph}$ (fastest mile Wind Load (with ice) + Ice Load + Tower Dead Load

Please note that wind pressure is a function of velocity squared. Under Load Condition 2, a 25 percent reduction in wind pressure is allowed by code to account for the unlikelihood of the full wind pressure and ice load occurring at the same time. The same results may be achieved by utilizing a lower wind pressure without taking the 25 percent reduction, as shown above.

The TIAIEIA standard permits a one-third increase in allowable stresses for towers and monopoles less than 700 feet tall. For the purposes of this analysis, in computing the load capacity the allowable stresses of the tower members were increased by one-third.

## 4. FINDINGS AND EVALUATION

Combined axial and bending stresses on the monopole structure were evaluated to compare with allowable stresses in accordance with AISC. The calculated stresses under the proposed loading were below the allowable stresses. Detailed analysis and calculations for the proposed load condition are provided in section 6 of this report. Additionally, the anchor bolts, base plate, and foundation were found to be structurally adequate.

## 5. CONCLUSIONS

The results of the analysis indicate that the tower structure is in compliance with the proposed loading conditions. The tower and its foundation are considered structurally adequate with the TIA/EIA-222-F wind load classification specified above and all the existing and proposed antenna loading.

## Limitations/Assumptions:

This report is based on the following:

1. Tower inventory as listed in this report.
2. Tower is properly installed and maintained.
3. All members are as specified in the original design documents and are in good condition.
4. All required members are in place.
5. All bolts are in place and are properly tightened.
6. Tower is in plumb condition.
7. All member protective coatings are in good condition.
8. All tower members were properly designed, detailed, fabricated, and installed and have been properly maintained since erection.
9. Foundations were properly constructed to support original design loads as specified in the original design documents.
10. All coaxial cable is installed within the monopole unless specified otherwise.

URS is not responsible for any modifications completed prior to or hereafter in which URS is not or was not directly involved. Modifications include but are not limited to:
A. Adding antennas
B. Removing/replacing antennas
C. Adding coaxial cables

URS hereby states that this document represents the entire report and that it assumes no liability for any factual changes that may occur after the date of this report. All representations, recommendations, and conclusions are based upon information contained and set forth herein. If you are aware of any information which conflicts with that which is contained herein, or you are aware of any defects arising from original design, material, fabrication, or erection deficiencies, you should disregard this report and immediately contact URS. URS disclaims all liability for any representation, recommendation, or conclusion not expressly stated herein.

## Ongoing and Periodic Inspection and Maintenance:

After the Contractor has successfully completed the installation and the work has been accepted, the owner will be responsible for the ongoing and periodic inspection and maintenance of the tower.

The owner shall refer to TIA/EIA-222-F for recommendations for maintenance and inspection. The frequency of the inspection and maintenance intervais is to be determined by the owner based upon actual site and environmental conditions. It is recommended that a complete and thorough inspection of the entire tower structural system be performed at least yearly and more frequently as conditions warrant. According to TIAVEIA-222-F section 14.1, Note 1: It is recommended that the structure be inspected after severe wind and/or ice storms or other extreme loading conditions

## Tower Input Data

There is a pole section.
This tower is designed using the TIA/EIA-222-F standard.
The following design criteria apply:
Basic wind speed of 80 mph .
Nominal ice thickness of 0.5000 in.
Ice density of 56 pcf .
A wind speed of 69 mph is used in combination with ice.
Temperature drop of $50^{\circ} \mathrm{F}$.
Deflections calculated using a wind speed of 50 mph .
Weld together tower sections have flange connections.
Connections use galvanized A325 bolts, nuts and locking devices. Installation per TIA/EIA-222 and AISC
Specifications.
Tower members are "hot dipped" galvanized in accordance with ASTM A123 and ASTM A153 Standards..
Welds are fabricated with ER-70S-6 electrodes..
A non-linear (P-delta) analysis was used.
Pressures are calculated at each section.
Stress ratio used in pole design is 1.333.
Local bending stresses due to climbing loads, feedline supports, and appurtenance mounts are not considered.

## Options

Consider Moments - Legs
Consider Moments - Horizontals
Consider Moments - Diagonals
Use Moment Magnification
$\checkmark$ Use Code Stress Ratios
$\checkmark$ Use Code Safety Factors - Guys Escalate Ice
Always Use Max Kz
Use Special Wind Profile
Include Bolts In Member Capacity
Leg Bolts Are At Top Of Section
Secondary Horizontal Braces Leg
Use Diamond Inner Bracing (4 Sided)
Add IBC .6D+W Combination

Distribute Leg Loads As Uniform Assume Legs Pinned
$\checkmark$ Assume Rigid Index Plate Use Clear Spans For Wind Area Use Clear Spans For KL/r Retension Guys To Initial Tension Bypass Mast Stability Checks Use Azimuth Dish Coefficients
$\sqrt{ }$ Project Wind Area of Appurt. Autocalc Torque Arm Areas SR Members Have Cut Ends
$\sqrt{ }$ Sort Capacity Reports By Component Triangulate Diamond Inner Bracing

Treat Feedline Bundles As Cylinder
Use ASCE 10 X-Brace Ly Rules
Calculate Redundant Bracing Forces
Ignore Redundant Members in FEA
SR Leg Bolts Resist Compression
All Leg Panels Have Same Allowable
Offset Girt At Foundation
$\checkmark$ Consider Feedline Torque
Include Angle Block Shear Check
M.

Include Shear-Torsion Interaction
Always Use Sub-Critical Flow
Use Top Mounted Sockets

## DETAIL - ANCHOR BOLT AND PLATE

Job
147.5' Monopole - Enfield, CT

Description
Anchor Bolt and Base Plate Analysis Project No. $\qquad$
Page $\qquad$ of
$\qquad$ Computed by $\qquad$ JEK Sheet 3 of 6 Checked by $\qquad$ Date 08/01/06

## Anchor Bolt Section Properties:

Polar Moment of inertia $(\mathrm{J})$ divided by Area $(\mathrm{A})=\Sigma \mathrm{d}$

$$
\Sigma \mathrm{d}:=\left(\mathrm{d}_{1}\right)^{2} \cdot 2+\left(\mathrm{d}_{2}\right)^{2} \cdot 4+\left(\mathrm{d}_{3}\right)^{2} \cdot 4 \quad \Sigma \mathrm{~d}=4.54 \times 10^{3} \mathrm{in}^{2}
$$

Gross Area of Bolt:

$$
A_{g}:=\frac{\pi}{4} \cdot D^{2}
$$

$$
\mathrm{A}_{\mathrm{g}}=3.98 \mathrm{in}^{2}
$$

Net Area of Bolt:

$$
\mathrm{A}_{\text {net }}:=\frac{\pi}{4} \cdot\left(\mathrm{D}-\frac{0.9743 \cdot \mathrm{in}}{\mathrm{n}}\right)^{2} \quad \mathrm{~A}_{\mathrm{net}}=3.25 \mathrm{in}^{2}
$$

Net Diameter:

$$
\mathrm{D}_{\mathrm{n}}:=\frac{2 \cdot \sqrt{\mathrm{~A}_{\text {net }}}}{\sqrt{\pi}} \quad \mathrm{D}_{\mathrm{n}}=2.03 \mathrm{in}
$$

Radius of Gyration of Bolt:

$$
r:=\frac{D_{n}}{4}
$$

$$
\mathrm{r}=0.51 \mathrm{in}
$$

Section Modulus of Bolt:

$$
\mathrm{S}_{\mathrm{x}}:=\frac{\pi \cdot \mathrm{D}_{\mathrm{n}}^{3}}{32} \quad \mathrm{~S}_{\mathrm{x}}=0.83 \mathrm{in}^{3}
$$

## Anchor Bolt Bending Stress:

Maximum Applied Bending:

$$
\begin{array}{ll}
M_{x}:=\left(\frac{\text { Shear }}{N}\right) \cdot 1 & M_{x}=0.38 \mathrm{kips} \cdot \mathrm{ft} \\
\mathrm{f}_{\mathrm{bx}}:=\frac{\mathrm{M}_{\mathrm{x}}}{\mathrm{~S}_{\mathrm{x}}} & \mathrm{f}_{\mathrm{bx}}=5.45 \mathrm{ksi}
\end{array}
$$

Allowable Bending
$F_{b x}:=1.33 \cdot 0.60 \cdot \mathrm{Fy}$

$$
\mathrm{F}_{\mathrm{bx}}=59.85 \mathrm{ksi}
$$

Note: 1.33 increase allowed per TIA/EIA

## URS

## Anchor Bolt Tensile Stress Check:

Maximum Tensile Force (Gross Area):

$$
\text { AllowableTension }:=1.33 \cdot\left(0.33 \cdot \mathrm{~A}_{\mathrm{g}} \cdot \mathrm{~F}_{\mathrm{u}}\right) \quad \text { AllowableTension }=174.51 \mathrm{kips}
$$

Note: 1.33 increase allowed per TIA/EIA

## Maximum Tensile Force (Net Area):

$$
\mathrm{F}_{\text {net.area }}:=1.33 \cdot\left(0.60 \cdot \mathrm{~A}_{\text {net }} \cdot \mathrm{Fy}\right) \quad \mathrm{F}_{\text {net.area }}=194.37 \mathrm{kips}
$$

Note: 1.33 increase allowed per TIA/EIA

Maximum Applied Tension:

$$
\text { MaxTension }:=\frac{\mathrm{OM} \cdot \mathrm{~d}_{1}}{\Sigma \mathrm{~d}}-\frac{\text { Axial }}{\mathrm{N}} \quad \text { MaxTension }=128.73 \mathrm{kips}
$$

## Check Stresses:

Note: Bolts supplied are "upset bolts." Use net area for checking per AISC.
AnchorBoltStress $:=\operatorname{if}\left(F_{\text {net.area }}>\right.$ MaxTension, "Not Overstressed", "Overstressed" $)$
AnchorBoltStress $=$ "Not Overstressed"
PercentStressed $:=100 \cdot \frac{\text { MaxTension }}{F_{\text {net.area }}}$

PercentStressed $=66.23$

Note: Shear Stress is negligible

Description $\qquad$ Computed by $\qquad$ Date 08/01/06 Checked by $\qquad$ Date $\qquad$

## Check Compression \& Combined Stresses (if required):

Check to see if a complete combined stress analysis is required:
Per ASCE Manual 72: "If the clearance between the base plate and concrete does not exceed two times the bolt diameter a bending stress analysis of the bolts is NOT normally required."

Set the clear space between the plate and bolt to zero if a combined stress analysis is not required and set the bending stress to zero:

$$
\mathrm{L}:=\left|\begin{array}{l}
1 \text { if } \mathrm{I}>2 \cdot \mathrm{D}_{\mathrm{n}} \\
0.0 \text { in otherwise }
\end{array} \quad \mathrm{l}=0 \quad \quad \mathrm{f}_{\mathrm{hx}}:=\right| \begin{aligned}
& \mathrm{f}_{\mathrm{bx}} \text { if } \mathrm{l}>2 \cdot \mathrm{D}_{\mathrm{n}} \quad \mathrm{f}_{\mathrm{bx}}=0 \mathrm{ksi}, \\
& 0.0 \mathrm{ksi} \text { otherwise }
\end{aligned}
$$

Allowable Compressive Force:

$$
\mathrm{F}_{\mathrm{wh}}:=1.33 \cdot \mathrm{~F}_{\mathrm{a}} \quad \text { Note: } 1.33 \text { increase allowed per TIA/EIA } \quad \mathrm{F}_{\mathrm{a}}=59.85 \mathrm{ksi}
$$

Applied Compressive Force:

$$
\begin{array}{ll}
\text { MaxCompression }:=\frac{O M \cdot d_{1}}{\Sigma d}+\frac{\text { Axial }}{N} & \text { MaxCompression }=134.4 \mathrm{kips} \\
\mathrm{f}_{\mathrm{a}}:=\frac{\text { MaxCompression }}{\mathrm{A}_{\text {net }}} & \mathrm{f}_{\mathrm{a}}=41.38 \mathrm{ksi}
\end{array}
$$

Check Combined Stresses:
StressRatio $:=\frac{f_{a}}{F_{a}}+\frac{f_{b x}}{F_{b x}}$ StressRatio $=0.69$

Condition := if(StressRatio $\leq 1.0$, "Not Overstressed", "Overstressed")
Condition $=$ "Not Overstressed"

$$
\begin{aligned}
& \text { K } \\
& C_{c}:=\sqrt{\frac{2 \cdot \pi^{2} \cdot E}{F y}} \\
& \mathrm{C}_{\mathrm{c}}=87.36
\end{aligned}
$$

$$
\begin{aligned}
& \mathrm{F}_{\mathrm{a}}=45 \mathrm{ksi}
\end{aligned}
$$

RE: EM-VER-003-048-146-049-060803 - Cellco Partnership d/b/a Verizon Wireless notice of intent to modify existing telecommunications facilities located at Janoski Road, Ashford; 101 Burbank Road, Ellington; 60 Industrial Park Road, Vernon; and Bright Meadow Road, Enfield, Connecticut.

## Dear Attorney Baldwin:

At a public meeting held on August 31, 2006, the Connecticut Siting Council (Council) acknowledged your notice to modify these existing telecommunications facilities, pursuant to Section 16-50j-73 of the Regulations of Connecticut State Agencies.

The proposed modifications are to be implemented as specified here and in your notice dated August 3, 2006, including the placement of all necessary equipment and shelters within the tower compounds. The modifications are in compliance with the exception criteria in Section 16-50j-72 (b) of the Regulations of Connecticut State Agencies as changes to existing facility sites that would not increase tower heights, extend the boundaries of the tower sites, increase noise levels at the tower site boundaries by six decibels, and increase the total radio frequencies electromagnetic radiation power densities measured at the tower site boundaries to or above the standard adopted by the State Department of Environmental Protection pursuant to General Statutes § 22a-162. These facilities have also been carefully modeled to ensure that radio frequency emissions are conservatively below State and federal standards applicable to the frequencies now used on these towers.

This decision is under the exclusive jurisdiction of the Council. Please be advised that the validity of this action shall expire one year from the date of this letter. Any additional change to any of these facilities will require explicit notice to this agency pursuant to Regulations of Connecticut State Agencies Section 16-50j73. Such notice shall include all relevant information regarding the proposed change with cumulative worstcase modeling of radio frequency exposure at the closest point of uncontrolled access to the tower base, consistent with Federal Communications Commission, Office of Engineering and Technology, Bulletin 65. Any deviation from this format may result in the Council implementing enforcement proceedings pursuant to General Statutes § $16-50 \mathrm{u}$ including, without limitation, imposition of expenses resulting from such failure and of civil penalties in an amount not less than one thousand dollars per day for each day of construction or operation in material violation.

Thank you for your attention and cooperation.

RE: EM-VER-003-048-146-049-060803 - Cellco Partnership d/b/a Verizon Wireless notice of intent to modify existing telecommunications facilities located at Janoski Road, Ashford; 101 Burbank Road, Ellington; 60 Industrial Park Road, Vernon; and Bright Meadow Road, Enfield, Connecticut.

Dear Mr. Fletcher:
The Connecticut Siting Council (Council) received this request to modify an existing telecommunications facility, pursuant to Regulations of Connecticut State Agencies Section 16-50j-72.

The Council will consider this item at the next meeting scheduled for August 31, 2006 at 1:30 p.m. in Hearing Room One, Ten Franklin Square, New Britain, Connecticut.

If you have any questions or comments regarding this proposal, please call me or inform the council by August 30, 2006.

Thank you for your cooperation and consideration.
