**Notice of Exempt Modification – New Cingular Wireless PCS, LLC (AT&T)**

**74 High Street, Milford, CT - Oyster Festival 2025**

**N 41.220417**

**W 73.058889**

Dear Ms. Bachman:

AT&T intends to install a temporary cellular communications facility for service during the 2025 Milford Oyster Festival. Please accept this letter as notification pursuant to Regulations of Connecticut State Agencies § 16-50j-73, of construction that constitutes an exempt modification under R.C.S.A. § 16-50j-72(d). In accordance with R.C.S.A. § 16-50j-73, a copy of this letter is being sent to Mayor Anthony S. Giannattasio and David Sulkis, City Planner for the City of Milford as well as to the property owner.

AT&T operates under licenses issued by the Federal Communications Commission (FCC) to provide mobile communications service in New Haven County, which includes the area to be served by AT&T's proposed temporary installation. The proposed temporary facility would be installed on property owned by Southern New England Telephone (Frontier Communications).

**Proposed Temporary Facility**

The proposed temporary cell site meets the criteria set forth in R.C.S.A § 16-50j-72(d) for temporary cellular service for events of statewide significance. The site is necessary to provide additional system capacity to accommodate increased communication needs during Oyster Festival 2025. This facility may include B2, B5, B17, B14, B29, B30, B66 & n77 hardware that is 4G(LTE) and/or 5GNR capable through remote software configuration and either or both services may be turned on or off at various times.

Arrived at USPS Regional Origin Facility  
QUEENS NY DISTRIBUTION CENTER,

**2025-05-31, 8:40 AM**

Departed Post Office  
ROSCOE, NY 12776

The Milford Oyster Festival will be held in the area of Milford Harbor on August 15-16, 2025.

The temporary cell site will be located at 74 High Street in Milford on property owned by Frontier Communications. An e-mail from Frontier Communications authorizing AT&T's use of the property for this purpose is attached. Electric power will be provided by a portable PowerPro 45kVA "whisper" generator. AT&T's equipment will be deployed to the property on or around July 30th. The site will begin on-air operations on August 15th and be removed on or around August 20<sup>th</sup>.

AT&T's temporary cell site will consist of radio equipment installed in a fully self-contained vehicle referred to as a Super COLT (Cell on Light Truck). The COLT carries three integrated pneumatic masts, two of which can be extended to a height of 38 ft above ground level, while the third can be extended to a height of 59 ft above ground level. Guy lines will stabilize and support the antenna masts when extended. The proposed temporary cell site will not increase noise levels by six decibels or more.

The COLT will be fitted with (1) CCI MBA10-6F-BU-H3 and (1) Galtronics GP2406-06670 antenna at 60 feet, (2) Ericsson AIR6472 B77D antennas at 55 feet and (2) Kathrein 840-10520 antennas at 50 feet above ground level.

### Power Density Calculations

AT&T's temporary cell site will not result in a total radio frequency electromagnetic radiation power density, measured at six feet above ground level at the temporary tower location, at or above State or Federal standards. Please see attached Radio Frequency Emissions Report. The report shows that AT&T's temporary transmissions from the temporary cell site will result in a maximum cumulative percent of MPE that is calculated to be 44.04% of the FCC limit for general population / uncontrolled environments.

### Conclusion

For the foregoing reasons, AT&T respectfully requests that the Council acknowledge AT&T's Notice of Exempt Modification for the temporary cell site to be operated during the 2025 Milford Oyster Festival pursuant to R.C.S.A. § 16-50j-72(d).

Please feel free to call me at (860) 670-9068 with any questions regarding this Notice. Thank you for your consideration in this matter.

Sincerely,

*Mark Roberts*

Table 3: FCC Limits for Maximum Permissible Exposure .....	9

## 1. Introduction

The purpose of this report is to investigate compliance with applicable FCC regulations for the proposed temporary deployment of AT&T antenna arrays mounted on top of the Super COLT (Cell On Light Truck) at 50', 55', 60' AGL located on 74 High Street for the 2025 Oyster Festival in Milford, CT. the coordinates of Super Colt are 41° 13' 13.43" N, 73° 03' 31.87" W.

AT&T is proposing to deploy six (6) directional antennas on its Mini Super Colt to support its 4G LTE and 5G NR networks as well as the FirstNet National Public Safety Broadband Network ("NPSBN") during the Milford Oyster Festival celebration in Milford, CT.

This report considers the proposed antenna configuration for AT&T to calculate the resulting % Maximum Permissible Exposure (MPE) at ground level around the facility.

## 2. FCC Guidelines for Evaluating RF Radiation Exposure Limits

In 1985, the FCC established rules to regulate radio frequency (RF) exposure from FCC licensed antenna facilities. In 1996, the FCC updated these rules, which were further amended in August 1997 by OET Bulletin 65 Edition 97-01. These new rules include Maximum Permissible Exposure (MPE) limits for transmitters operating between 300 kHz and 100 GHz. The FCC MPE limits are based upon those recommended by the National Council on Radiation Protection and Measurements (NCRP), developed by the Institute of Electrical and Electronics Engineers, Inc., (IEEE) and adopted by the American National Standards Institute (ANSI).

The FCC general population/uncontrolled limits set the maximum exposure to which most people may be subjected. General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.

Public exposure to radio frequencies is regulated and enforced in units of milliwatts per square centimeter (mW/cm<sup>2</sup>). The general population exposure limits for the various frequency ranges are defined in the documents referenced in Attachment A of this report.

Higher exposure limits are permitted under the occupational/controlled exposure category, but only for persons who are exposed as a consequence of their employment and who have been made fully aware of the potential for exposure, and they must be able to exercise control over their exposure. General population/uncontrolled limits are five times more stringent than the levels that are acceptable for occupational, or radio frequency trained individuals. Attachment B contains excerpts from OET Bulletin 65 and defines the Maximum Exposure Limit.

Finally, it should be noted that the MPE limits adopted by the FCC for both general population/uncontrolled exposure and for occupational/controlled exposure incorporate a substantial margin of safety and have been established to be well below levels generally accepted as having the potential to cause adverse health effects.

### 3. RF Exposure Prediction Methods

The results displayed in the following figures were generated using the following formula as outlined in FCC bulletin OET 65:

$$\text{Power Density} = \left( \frac{GRF^2 \times \text{EIRP}}{4\pi \times R^2} \right) \times \text{Off Beam Loss}$$

Where:

EIRP = Effective Isotropic Radiated Power

R = Radial Distance =  $\sqrt{H^2 + V^2}$

H = Horizontal Distance from antenna

V = Vertical Distance from radiation center of antenna

Off Beam Loss is determined by the selected antenna patterns

GRF = Ground reflection factor of 1.6

These calculations assume that the antennas are operating at full power and 100 percent capacity, and that all antenna channels are transmitting simultaneously. Obstructions (trees, buildings, etc.) that would normally attenuate the signal are not considered. The calculations assume level terrain in the area of study and do not account for actual terrain elevations which could attenuate the signal. As a result, the calculated power density and corresponding % MPE levels reported below are much higher than the actual signal levels will be from the final installation.

The percent of MPE values presented in this report reflect levels that one may encounter from one sector of a carrier's antennas. Most carriers use 3 or 4 sectors per site with azimuths approximately 90 or 120 degrees apart, respectively; therefore, one could not be standing in the main beam of all sectors at the same time. In cases where antenna models are not uniform across all sectors, the antenna model with the highest gain was used for the calculations. This results in a conservative or "worst case" assumption for percent of MPE calculations.

#### 4. Antenna Inventory

Table 1 below outlines AT&T's proposed antenna configuration for the site. The associated data model and antenna patterns for these specific antenna models are included in Attachment C.

Operator	Sector / Azimuth	TX Freq (MHz)	Power at Antenna (Watts)	Ant Gain (dBi)	Power EIRP (Watts)	Antenna Model	Beam Width	Mech. / Elec. Tilt	Length (ft)	Antenna Centerline Height (ft)
AT&T	A / 55°	763	160	10.5	1795	84010520	72	0/6	2	50
		739	160	19	12709		5x11.6	0/6	3.4	60
		850	160	19	12709		5x9.9	0/6		
		1900	160	23.9	39275		10x5.3	0/4		
		2100	240	24.4	66101		10x4.6	0/4		
		3500	200	19.1	16257	AIR 6472	60	0/0	3	55
		3700	200	18.9	15525		72	0/0	2	50
	C / 300°	763	160	10.5	1795	GP2406-06670	39.6	0/6	2	60
		739	160	12.6	2912		33.9	0/6		
		850	160	13	3192		32.4	0/4		
		1900	160	15.5	5677		32.4	0/4		
		2100	240	15.5	8516		60	0/0	3	55
		3500	200	19.1	16257		72	0/0	2	50
		3700	200	18.9	15525		33.9	0/6	2	60

**Table 1: Proposed Antenna Inventory<sup>1,2</sup>**

<sup>1</sup> Antenna configuration is in reference to AT&T's Radio Frequency Design Sheet dated 5/5/2025.

<sup>2</sup> Transmit power assumes 0 dB of cable loss.

## 5. Calculation Results

The calculated % MPE results for the proposed antenna configuration are shown in Figure 1 below. Each frequency band and technology is calculated as well as the resulting cumulative percent of MPE. For completeness, the calculations for this analysis range from 0 feet horizontal distance (directly below the antennas) to a value of 3,000 feet horizontal distance from the site. In addition to the other worst-case scenario considerations that were previously mentioned, the power density calculations to each horizontal distance point away from the antennas was completed using a local maximum off beam antenna gain (within  $\pm 5$  degrees of the true mathematical angle) to incorporate a realistic worst-case scenario.

**Figure 1: Graph of General Population % MPE vs. Distance**

The highest percent of MPE (**44.04% of the General Population limit**) is calculated to occur at a horizontal distance of 216 feet from antennas. Please note that the percent of MPE calculations close to the site consider off beam loss, which is determined from the vertical pattern of the antennas used. Therefore, RF power density levels may increase as the distance from the site increases. At distances of approximately 450 feet and beyond, one would now be in the main beam of the antenna patterns and off beam loss is no longer considered. Beyond this point, power density levels vary based on distance from the site and the percent of MPE decreases significantly as distance from the site increases.

Table 2 below lists percent of MPE values as well as the associated parameters that were included in the calculations. As stated in Section 3, all calculations assume that the antennas are operating at 100 percent capacity, and that all antenna channels are transmitting simultaneously. Obstructions (trees, buildings etc.) that would normally attenuate the signal are not taken into account. Additionally, a six-foot height offset was considered in this analysis to account for the height of a person standing at ground level. As a result, the calculated % MPE levels are significantly higher than the actual signal levels will be from the final installation. The results presented in Figure 1 and Table 2 assume level ground from the base of the site out to the horizontal distances calculated.

Carrier	Number of Transmitters	Power out of Base Station Per Transmitter (Watts)	Antenna Height (Feet)	Distance to the Base of Antennas (Feet)	Power Density (mW/cm <sup>2</sup> )	Limit (mW/cm <sup>2</sup> )	% MPE
AT&T 5G 3500 MHz	1	200.0	55.0	216	0.012657	1.000	1.27%
AT&T 5G 3700 MHz	1	200.0	55.0	216	0.019558	1.000	1.96%
AT&T 5G 850 MHz	1	160.0	60.0	216	0.066240	0.567	11.69%
AT&T LTE 1900 MHz	1	160.0	60.0	216	0.068066	1.000	6.81%
AT&T LTE 2100 MHz	1	240.0	60.0	216	0.113214	1.000	11.32%
AT&T LTE 739 MHz	1	160.0	60.0	216	0.046373	0.493	9.41%
AT&T LTE 763 MHz	1	160.0	55.0	216	0.008065	0.509	1.59%
						<b>Total</b>	<b>44.04%</b>

**Table 2: Maximum Percent of General Population Exposure Values<sup>3</sup> <sup>4</sup>**

<sup>3</sup> Frequencies listed are representative of the operating band and are not the specific operating frequency.

<sup>4</sup> The total % MPE listed is a summation of each unrounded contribution. Therefore, summing each rounded value may not reflect the total value listed in the table.

## 6. Conclusion

The above analysis concludes that RF exposure levels from the site with AT&T's proposed antenna configuration will be well below the maximum permissible levels as outlined by the FCC in the OET Bulletin 65 Ed. 97-01. Using the conservative calculation methods and parameters detailed above, the maximum cumulative percent of MPE in consideration of all transmitters is calculated to be **44.04% of the FCC limit (General Population/Uncontrolled)**. This maximum cumulative percent of MPE value is calculated to occur 216 feet away from the site.

## 7. Statement of Certification

I certify to the best of my knowledge that the statements in this report are true and accurate. The calculations follow guidelines set forth in ANSI/IEEE Std. C95.1, ANSI/IEEE Std. C95.3, and FCC OET Bulletin 65 Edition 97-01.

## Attachment A: References

OET Bulletin 65 - Edition 97-01 - August 1997 Federal Communications Commission Office of Engineering & Technology

IEEE C95.1-2019, IEEE Standard Safety Levels With Respect to Human Exposure to Electric, Magnetic, and Electromagnetic Fields, 0 Hz to 300 GHz IEEE-SA Standards Board

IEEE C95.3-2021, IEEE Recommended Practice for Measurements and Computations of Electric, Magnetic, and Electromagnetic Fields With Respect to Human Exposure to Such Fields, 0 Hz to 300 GHz IEEE-SA Standards Board

## Attachment B: FCC Limits for Maximum Permissible Exposure (MPE)

### (A) Limits for Occupational/Controlled Exposure<sup>5</sup>

Frequency Range (MHz)	Electric Field Strength (E) (V/m)	Magnetic Field Strength (E) (A/m)	Power Density (S) (mW/cm <sup>2</sup> )	Averaging Time  E  <sup>2</sup> ,  H  <sup>2</sup> or S (minutes)
0.3-3.0	614	1.63	(100)*	6
3.0-30	1842/f	4.89/f	(900/f <sup>2</sup> )*	6
30-300	61.4	0.163	1.0	6
300-1500	-	-	f/300	6
1500-100,000	-	-	5	6

### (B) Limits for General Population/Uncontrolled Exposure<sup>6</sup>

Frequency Range (MHz)	Electric Field Strength (E) (V/m)	Magnetic Field Strength (E) (A/m)	Power Density (S) (mW/cm <sup>2</sup> )	Averaging Time  E  <sup>2</sup> ,  H  <sup>2</sup> or S (minutes)
0.3-1.34	614	1.63	(100)*	30
1.34-30	824/f	2.19/f	(180/f <sup>2</sup> )*	30
30-300	27.5	0.073	0.2	30
300-1500	-	-	f/1500	30
1500-100,000	-	-	1.0	30

f = frequency in MHz \* Plane-wave equivalent power density

**Table 3: FCC Limits for Maximum Permissible Exposure**

<sup>5</sup> Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.

<sup>6</sup> General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.

Figure 2: Graph of FCC Limits for Maximum Permissible Exposure (MPE)

## Attachment C: AT&T Mobility Antenna Model Data Sheets and Electrical Patterns

### 739 MHz

Manufacturer: Katherin  
 Model #: 840-10520  
 Frequency Band: 824-894 MHz  
 Gain: 10.8 dBi  
 Vertical Beamwidth: 36°  
 Horizontal Beamwidth: 72°  
 Polarization: ±45°  
 Size L x W x D: 23.3" x 10.6" x 6.2"

### 763 MHz

Manufacturer: CCI  
 Model #: MBA10-6F-BU-H3  
 Frequency Band: 698-806 MHz  
 Gain: 19 dBi  
 Vertical Beamwidth: 22.2°  
 Horizontal Beamwidth: 5x11.6°  
 Polarization: Dual Linear 45°  
 Size L x W x D: 40.8" x 83.0" x 11.6"

### 850 MHz

Manufacturer: CCI  
 Model #: MBA10-6F-BU-H3  
 Frequency Band: 824-896 MHz  
 Gain: 19.7 dBi  
 Vertical Beamwidth: 22.2°  
 Horizontal Beamwidth: 5x9.9°  
 Polarization: Dual Linear 45°  
 Size L x W x D: 40.8" x 83.0" x 11.6"

**1900 MHz**

Manufacturer: CCI  
 Model #: MBA10-6F-BU-H3  
 Frequency Band: 1850-1990 MHz  
 Gain: 23.9 dBi  
 Vertical Beamwidth: 11.4°  
 Horizontal Beamwidth: 10x5.3°  
 Polarization: Dual Linear 45°  
 Size L x W x D: 40.8" x 83.0" x 11.6"

**2100 MHz**

Manufacturer: CCI  
 Model #: MBA10-6F-BU-H3  
 Frequency Band: 2110-2180 MHz  
 Gain: 24.4 dBi  
 Vertical Beamwidth: 12.6°  
 Horizontal Beamwidth: 4x11.4°  
 Polarization: Dual Linear 45°  
 Size L x W x D: 40.8" x 83.0" x 11.6"

**3500/3700 MHz**

Manufacturer: ERICSSON  
 Model #: AIR 6472 B77G B77M  
 Frequency Band: 3450-3550 MHz  
 3840-3980 MHz  
 Gain: - dBi  
 Vertical Beamwidth: 87-105°  
 Horizontal Beamwidth: 60°  
 Polarization: N/A°  
 Dimensions (L x W x D): 36.3" x 15.83" x 7.4"

## Instructions

1. Please use a laser or laser-quality printer.
2. Adhere shipping label to package with tape or glue - DO NOT TAPE OVER BARCODE. Be sure all edges are secure. Self-adhesive label is recommended.
3. Place label so that it does not wrap around the edge of the package.
4. Each shipping label number is unique and can be used only once - DO NOT PHOTOCOPY.
5. Please use this shipping label on the "ship date" selected when you requested the label.
6. If a mailing receipt is required, present the article and Online e-Label Record at a Post Office for postmark.
