RE: SNET Cellular, Inc. - Notice Pursuant to Regulations of State Agencies 16-50j-73 of Intent to Modify Exempt Towers and Associated Equipment operated by SNET Cellular, Inc., located in Hartford, South Windsor, Waterbury, Westport, Milford, Brandford, Middlefield, Guilford, Stamford, Old Saybrook, Canton, Enfield, Waterford, Newtown, Haddam, and Glastonbury, Connecticut.

Dear Attorney Tyrrell:

At a meeting held on April 24, 1989, the Connecticut Siting Council acknowledged your notice of intent to modify exempt towers and associated equipment owned by SNET Cellular, Inc., located in Hartford, South Windsor, Waterbury, Westport, Milford, Brandford, Middlefield, Guilford, Stamford, Old Saybrook, Canton, Enfield, Waterford, Newtown, Haddam, and Glastonbury, Connecticut, pursuant to Section 16-50j-73 of the Regulations of State Agencies (RSA).

As proposed in your notice dated April 5, 1989, the modification is in compliance with the exception criteria specified in RSA 16-50j-72 for changes to an existing facility site that do not increase the tower height, extend the boundaries of the tower site, increase noise levels at the tower site boundary by 6 decibels, and add radio frequency sending or receiving capability which increases the total radio frequency electromagnetic radiation power density measured at the tower site boundary to or above the standard adopted by the State Department of Environmental Protection pursuant to Section 22a-162 of the Connecticut General Statutes.

The Council is pleased to note that the shared use of an existing tower meets the Council's long-time goal and the public interest to avoid proliferation of additional tower structures.

Very truly yours,

Gloria Dibble Pond/R

Dear Mr. Modzelesky:

In re Notice of Intent to Modify
Exempt Towers by SNET Cellular, Inc.,
dated April 5 and 14, 1989.

Attached are the responses of SNET Cellular, Inc. to the questions addressed by the Connecticut Siting Council in its letter dated April 19, 1989 to the Company.

Very truly yours,

Donald R. Chapman

Question 1. For each of the existing towers in Hartford, South Windsor, Middlefield, Guilford, Stamford, Old Saybrook, Waterbury, Westport, Milford, Branford, Canton, Enfield, Waterford, Newtown, Haddam, Glastonbury, Harwinton and Lebanon:

Question a): Identify the owner, operator, and use of the tower;

Question d): Identify the maximum height (AMSL) the new antennas would extend to.

Response a) and d):

Site	Owner	Operator	Use	Maximum Height (AMSL) of Proposed Antennas
Hartford	SNET Cellular, Inc. (SCI)	SCI	Cellular Service	403 Feet
South Windsor	SCI	SCI	Cellular Service	497 Feet
Middlefield	SCI	SCI	Cellular Service	865 Feet
Guilford	SCI	SCI	Cellular Service	249 Feet
Old Saybrook	SCI	SCI	Cellular Service	327 Feet
Waterbury	SCI	SCI	Cellular Service	989 Feet
Westport	SCI	SCI	Cellular Service	369 Feet
Milford	SCI	SCI	Cellular Service	192 Feet
Branford	SCI	SCI	Cellular Service	399 Feet
Canton	SCI	SCI	Cellular Service	953 Feet
Enfield	SCI	SCI	Cellular Service	325 Feet
Waterford	SCI	SCI	Cellular Service	261 Feet
Newtown	SCI	SCI	Cellular Service	597 Feet
Haddam	SCI	SCI	Cellular Service	511 Feet
Glastonbury	Southern New England Telephone (SNET)	SNET/SCI	Telephone Service Cellular Service	1009 Feet
Harwinton	SNET	SNET/SCI	Tel. Svc/Cell. Svc.	1222 Feet
Lebanon	SNET	SNET/SCI	Tel. Svc/Cell. Svc.	792 Feet
Stamford	SNET	SNET/SCI	Tel. Svc/Cell. Svc.	254 Feet

Question b): Identify any construction of equipment buildings or other site alterations necessary for the proposed action.

Response b): No construction or site alteration is necessary or will be performed at any of the eighteen (18) locations.

Question c): Identify the need for and type of reinforcement necessary for the existing towers to accommodate the new antennas.

Response c): No reinforcement is necessary or will be performed at any of the eighteen (18) locations.

Question 2. For the State Police tower in Wilton:

Question a): Discuss the extent of the reasons for the deterioration of the existing monopole.

Response a): An evaluation of the existing 2 foot in diameter monopole performed by the State Police consultant, TCAS, on August 24, 1987 revealed that the top of the monopole is bent. This bending indicates a structural weakness in the metal. While TCAS did not identify the cause of the bend in this evaluation, it is our engineering judgement that the bending is a result of the excess load at the top of the tower caused by an existing ground plane antenna mounted at 180 feet (the top of the monopole).

Question b): Discuss why a lattice replacement tower and not a monopole replacement tower is being sought.

Response b): A lattice replacement tower is being sought in order to accomodate the present and planned needs of the State Police, SNET Cellular, Inc., the Fairfield County Chief of Police Assoc., Inc., the State Department of Health Services and the State Department of Education. A lattice tower is required as the State Police plan in the future, to place an 8 foot and a 6 foot parabolic antenna at the top of the 180 foot tower, the State Department of Education plans to install an 8 foot parabolic antenna and a 6 foot array antenna on the tower and the Department of Health Services plans to install a 10 foot double dipole antenna. A monopole tower would not provide adequate stability for these antennas due to the natural movement (twist and sway) of a monopole.

Question c): Excluding the proposed installation of cellular antenna by SCI, discuss if a replacement of this tower by a lattice tower is necessary to safely accommodate the existing State Police antenna and equipment.

Response c): No, if the only purpose were to replace the tower to accommodate the existing State Police antenna and equipment.

Question d): Discuss if the existing tower could be replaced with a new monopole of stronger design to accommodate the existing State Police antenna and equipment.

Response d): Yes, if the only purpose were to replace the tower to accommodate the existing State Police antenna and equipment.

Question e): Discuss if the existing tower could be replaced with a new monopole of stronger design to accommodate the State Police antenna and equipment, and SCI's proposed cellular antenna.

Response e): No. See answer to b. (page 1).

Question f): Describe the dimensions of the existing equipment building and the proposed equipment building replacement.

Response f): The existing equipment building is approximately 8 feet by 16 feet. The proposed equipment building designed to house all present and future needs of the State Police, SNET Cellular, Inc., the Fairfield County Chief of Police Assoc. Inc., the State Department of Health Services and the State Department of Education will be approximately 24 feet by 41 feet. In addition an emergency generator room of approximately 10 feet by 17 feet will be appended. The existing building will be removed.

Question g): Identify the maximum height (AMSL) SCI's antennas would extend to.

Response g): The ground elevation of the tower is 370 feet AMSL. SCI's antennas will be placed between the 135 foot to 165 foot levels of the 180 foot Tower. The maximum height that SCI's antennas will extend to is, therefore, 535 feet AMSL.

RE: Intent to Modify Exempt Towers and Associated Equipment

Dear Mr. Chapman:

The Council is in receipt of your notices of intent to modify exempt towers and associated equipment, dated April 5, and April 14, 1989. In order to clarify your proposed actions, please respond to the following interrogatories as soon as possible, but no later than April 21, 1989. These actions are on the Council's agenda for April 24, 1989.

1. For each of the existing towers in Hartford, South Windsor, Middlefield, Guilford, Stamford, Old Saybrook, Waterbury, Westport, Milford, Branford, Canton, Enfield, Waterford, Newtown, Haddam, Glastonbury, Harwinton, and Lebanon:

    a) Identify the owner, operator, and use of the tower;
    b) Identify any construction of equipment buildings or other site alterations necessary for the proposed action;
    c) Identify the need for and type of reinforcement necessary for the existing towers to accommodate the new antennas; and
    d) Identify the maximum height (AMSL) the new antennas would extend to.

2. For the State Police tower in Wilton:

    a) Discuss the extent of the reasons for the deteriaration of the existing monopole;
    b) Discuss why a lattice replacement tower and not a monopole replacement tower is being sought;
    c) Excluding the proposed installation of cellular antenna by SCI, discuss if a replacement of this tower by a lattice tower is necessary to safely accommodate the existing State Police antenna and equipment;

d) Discuss if the existing tower could be replaced with a new monopole of stronger design to accommodate the existing State Police antenna and equipment;
e) Discuss if the existing tower could be replaced with a new monopole of stronger design to accommodate the State Police antenna and equipment, and SCI's proposed cellular antenna;
f) Describe the dimensions of the existing equipment building and the proposed equipment building replacement; and
g) Identify the maximum height (AMSL) SCI's antennas would extend to.

Very truly yours,

Stanley J. Modzelesky
Executive Assistant

New Britain, Connecticut 06051

Dear Honorable Chairperson Pond:

Enclosed please find a Notice of Intent to modify Exempt Towers and Associated Equipment for facilities operated by SNET Cellular, Inc. (SNET). SNET proposes to add an antenna on each of the sixteen (16) sites to be used in providing its Message Alert Service. Message Alert Service is an enhanced communications service which allows SNET's voice mail users the option of having the Message Alert software signal the user that a message is waiting in the user's voice mail box.

Attached is a page for each location detailing the required information per site. As will be shown in the attachments, the proposed additions meet all the necessary criteria established in Regulations 16-50j-72(b)(2) and are thus an exempt facility pursuant to Regulation 16-50j-73.

Sincerely,

Peter J. Tyrrell

Connecticut Siting Council Application

SNET Cellular, Inc.

As required by the Public Utility Environmental Standards Act, Section 16-50L (b), a copy of this application has been sent, by messenger or certified mail, to:

Honorable Carrie Saxon Perry, Mayor, City of Hartford,
Municipal Building, 550 Main Street, Hartford, Connecticut 06103

Honorable Edward F. Havens, Mayor, Town of South Windsor,
Town Hall, 1540 Sullivan Ave., South Windsor, Connecticut 06074

Honorable Joseph J. Santopietro, Mayor, City of Waterbury,
City Hall, 236 Grand Street, Waterbury, Connecticut 06702

Honorable Martha S. Hauhuth, First Selectwoman, City of Westport
Town Hall, 110 Myrtle Avenue, Westport, Connecticut 06881

Honorable Alberta C. Jagoe, Mayor, Town of Milford,
City Hall, West River Street, Milford, Connecticut 06460

Honorable Judy E. Gott, First Selectwoman, Town of Branford,
Town Hall, 1019 Main Street, P.O. Box 150, Branford, Connecticut 06405

Honorable James R. Blois, First Selectman, Town of Middlefield
Town Administration Building, P.O. Box 179, 393 Jackson Hill Road,
Middlefield, Connecticut 06455

Honorable Frank V. Larkins, Jr., First Selectman, Town of Guilford,
Town Hall, 31 Park Street, Guilford, Connecticut 06437

Honorable Thom Serrani, Mayor, City of Stamford,
Stamford Government Center, 888 Washington Blvd., P.O. Box 10152,
Stamford, Connecticut 06904-2152

Honorable Barbara J. Maynard, First Selectwoman, Town of Old Saybrook,
302 Main Street, P.O. Box 618, Old Saybrook, Connecticut 06475

Honorable Mary Eichhorn-Fletcher, First Selectwoman, Town of Canton,
4 Market Street, P.O. Box 168, Collinsville, Connecticut 06022

Honorable Adam Pierz, Mayor, Town of Enfield,
820 Enfield Street, Enfield, Connecticut 06082

Honorable Lawrence J. Bettencourt, First Selectman, Town of Waterford,
Town Hall, 15 Rope Ferry Road, Waterford, Connecticut 06385

Honorable Roderick J. Mackenzie, First Selectman, Town of Newtown,
Edmond Town Hall, 45 Main Street, Newtown, Connecticut 06470

Honorable Jane W. Blau, First Selectwoman, Town of Haddam,
Town Office Building, 30 Field Park Drive, Haddam, Connecticut 06438

Honorable Sonya F. Googins, Town Council Chairman, Town of Glastonbury,
2155 Main Street, Glastonbury, Connecticut 06033

GUILFORD

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located on Tanner Marsh Road, Guilford, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	82	158.27	0.09970	0.12185	0.02215

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

OLD SAYBROOK

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located at 170 Ingham Hill Road, Old Saybrook, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	160	160.25	0.09846	0.12034	0.02188

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

NEWTOWN

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located off Fairfield Drive, Newtown, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	430	160.25	0.09846	0.12034	0.02188

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

HARTFORD

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility by the addition of a message alert service antenna. The site is located on Mountain Street, Hartford, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in illiwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	286	110.82	0.20589	0.25165	0.04576

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

SOUTH WINDSOR

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility by the addition of a message alert service antenna. The site is located at 391 Niederwerfer Road, South Windsor, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	400	90.26	0.31041	0.37939	0.06898

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. The additional antenna does not materially change the nature or appearance of the facility. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

WATERBURY

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located on Farmdale Drive, Waterbury, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	824	158.27	0.10095	0.12338	0.02243

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

WESTPORT

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located at 180A Bayberry Lane, Westport, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	252	110.03	0.20887	0.25529	0.04642

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

MILFORD

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located at 438 Bridgeport Avenue, Milford, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	75	109.46	0.21105	0.25795	0.04690

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

BRANFORD

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located at 405 Brushy Plain Road, Branford, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	232	159.31	0.09962	0.12176	0.02214

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

MIDDLEFIELD

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located on Kikapoo Road, Middlefield, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	774	86.83	0.33536	0.40988	0.07452

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

STAMFORD

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility by the addition of a message alert service antenna. The site is located at 555 Main Street, Stamford, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Sidewalk (boundary)	10	250.80	0.04020	0.04913	0.00893

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower' height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

CANTON

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located at 4 Hoffmann Road, Canton, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	786	161.81	0.09658	0.11804	0.02146

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

ENFIELD

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located on Town Farm Road, Enfield, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	157	161.25	0.09725	0.11886	0.02161

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

WATERFORD

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located on Miner Lane, Waterford, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	94	160.25	0.09846	0.12034	0.02188

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower' height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

HADDAM

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located on 139 Morris Hubbard Road, Haddam Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	344	159.25	0.09970	0.12185	0.02215

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower's height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.

GLASTONBURY

Pursuant to Section 16-50i(a)(5) of the Connecticut General Statutes and Section 16-50j-72(b)(2), as amended, of the Regulations of Connecticut State Agencies, SNET Cellular, Inc., a company which provides cellular radio telecommunications service in the State of Connecticut, hereby notifies the Connecticut Siting Council that it intends to modify an existing telecommunications facility operated by it, by the addition of a message alert service antenna. The site is located on Birch Mountain Road, Glastonbury, Connecticut.

DISCUSSION

The proposed additional antenna will be located near the top of the tower, adjacent to the existing cellular antennas. The proposed antenna will not increase the overall height of the existing tower.

The maximum power density of the cellular and message alert facility is set forth below. The levels shown indicate the total power density in milliwatts per square centimeter. Power density levels are indicated for all cellular antennas measured simultaneously (existing), as well as for all cellular antennas and the proposed additional antenna (proposed), measured simultaneously.

LOCATION NAME	LOCATION HEIGHT AMSL FT.	DISTANCE TO ANTENNA FEET	EXISTING POWER DENSITY mW/cm2	PROPOSED POWER DENSITY mW/cm2	INCREASE IN POWER DENSITY mW/cm2
Cell Site Fence (boundary)	864	132.38	0.14429	0.17636	0.03207

The current Connecticut (and ANSI) power density level standard for non-ionizing radiation in the cellular frequency bands is 2.933 milliwatts/cm2. The level demonstrated in this case is well below the standard levels.

The proposed addition does not constitute a "modification" of an existing facility as defined in Connecticut General Statutes, Section 16-50i(d). This is because there is no change in the tower' height. There is no extension of the boundaries of the tower site. There will be no increase in noise levels at the tower's boundary by six decibels or more. This addition will not have a substantially adverse environmental effect.

For the reasons discussed above, SNET Cellular, Inc. requests the Council to acknowledge that the Notice of Modification meets the Council's exemption criteria.
