Re: **Notice of Exempt Modification – Facility Modification
295 (a/k/a 297) North Street, Plymouth, Connecticut**

Dear Attorney Bachman:

Cellco Partnership d/b/a Verizon Wireless (“Cellco”) currently maintains an existing wireless telecommunications facility at the above-referenced property address (the “Property”). The facility consists of antennas and remote radio heads attached to a tower and related equipment on the ground, near the base of the tower. The tower was approved by the Town of Plymouth in October 1999. Cellco’s shared use of the tower was approved by the Council in October 2003 (EM-VER-111-031001). A copy of the Town approval and Cellco’s 2003 approval are included in [Attachment 1](#).

Cellco now intends to modify its facility by replacing all of its existing antennas with three (3) new Samsung MT6407-77A antennas and six (6) new MX06FRO660-03 antennas and installing six (6) remote radio heads (“RRHs”) on its existing antenna platform. A set of project plans showing Cellco’s proposed facility modifications and new antennas and RRHs specifications are included in [Attachment 2](#).

Please accept this letter as notification pursuant to R.C.S.A. § 16-50j-73, for construction that constitutes an exempt modification pursuant to R.C.S.A. § 16-50j-72(b)(2). In accordance with R.C.S.A. § 16-50j-73, a copy of this letter is being sent to Plymouth’s Chief Elected Official and Land Use Officer.

Melanie A. Bachman, Esq.
August 12, 2021
Page 2

The planned modifications to the facility fall squarely within those activities explicitly provided for in R.C.S.A. § 16-50j-72(b)(2).

1. The proposed modifications will not result in an increase in the height of the existing tower. The replacement antennas and RRHs will be installed on Cellco's existing antenna platform.
2. The proposed modifications will not involve any change to ground-mounted equipment and, therefore, will not require the extension of the site boundary.
3. The proposed modifications will not increase noise levels at the facility by six decibels or more, or to levels that exceed state and local criteria.
4. The installation of Cellco's new antennas will not increase radio frequency (RF) emissions at the facility to a level at or above the Federal Communications Commission (FCC) safety standard. A cumulative general power density table for Cellco's modified facility is included in Attachment 3. The modified facility will be capable of providing Cellco's 5G wireless service.
5. The proposed modifications will not cause a change or alteration in the physical or environmental characteristics of the site.
6. According to the attached Structural Analysis ("SA") and Mount Analysis ("MA"), the existing tower, tower foundation and antenna platform, with certain modifications, can support Cellco's proposed modifications. Copies of the SA and MA are included in Attachment 4.

A copy of the parcel map and Property owner information is included in Attachment 5. A Certificate of Mailing verifying that this filing was sent to municipal officials and the property owner is included in Attachment 6.

For the foregoing reasons, Cellco respectfully submits that the proposed modifications to the above-referenced telecommunications facility constitutes an exempt modification under R.C.S.A. § 16-50j-72(b)(2).

PLANNING & ZONING PUBLIC HEARING
SEPTEMBER 9, 1999

The Public Hearing was called to order at 7:03 p.m. by Chairman Steven Panasuk.

ATTENDANCE - Gaye Zukauskas, Andrew Dolecki, Bill Kuehn-Town Planner, Patrick Herzing (entered at 7:08), Pat Pierzanowski-Recording & Office Secretary and Steven Panasuk-Chairman. In the audience was Anthony A. Lorenzetti, PE, Director of Public Works.

Chairman Steve Panasuk went over the procedures to be followed for the public hearings.

①. **North Street – Telecommunication Tower Special Permit – SBA Communications, Inc.**
 – Mr. Kuehn read the legal notice into the record for all 4 public hearings. Mr. Tom Flynn, Zoning Consultant with SBA represented the applicants. He gave the Commissioners each a package of materials pertaining to this application. He explained that this is a 195' tall monopole on North Street, which will be capable of handling up to 5 PCS type antennae. The site plan poses very little impact. They lease the land and build a tower. Sprint PCS and Nextel will be on this antenna. There will be a pole, a parking area and a fenced in area. It will be manned by someone periodically possibly 2 times a month. There will be electricity and telephone but no water, sewer or septic. There is another antenna on this piece of property. It is a wooded piece of property, fairly isolated and not visible from the surrounding area. The pole will be 213 feet from the house. The utilities will be underground. There will be no landscaping because it is in the woods. As any antennae are proposed, they will have to come to the Commission for approvals, etc. Mr. Flynn showed the Commission a sketch of the pole. It is taller and stockier than the existing pole, which cannot accommodate these carriers. The antenna will not be lit or striped because it is not required by the Siting Council. It is made of galvanized steel and once it hits the air will turn to a grayish brown. Mr. Flynn went over the frequency, power and area coverage. They comply with FCC Regulations regarding electro magnetic radiation and it will not interfere with TVs, radios or telephones. To summarize, it is not within 200 feet of a residence. It is not lit. It is made of galvanized steel and will be dull gray so doesn't need to be painted. There will be no signage or advertising. The pole is suitable to hold up to 5 carriers. It meets all the setbacks. All carriers will have to come to the Commission for special permit approvals. It will be fenced and secure. Complies with all non-interference as per FCC regulations. The utilities will be underground. Monopoles have no history of failings. If they did fail, they would twist and fold or knuckle into itself. **FOR** – no one. **AGAINST** – no one. **FOR NOR AGAINST** – Scott Magnano of Scott Road asked how high the existing pole is. It is 185'. Discussion was had. **MOTION:** Gaye Zukauskas made a motion to continue the public hearing for 297 North Street, SBA, Inc. to our next scheduled meeting to be determined. Patrick Herzing seconded. **VOTE:** A. Dolecki – Aye, G. Zukauskas – Aye, P. Herzing – Aye and Chairman Panasuk so voted.

2. **58 Lakeside Dr. – RA-2 Residence Expansion Special Permit – Casey** – Chris Casey represented himself. They want to take off an addition and put on a new addition using the same footprint. They have already received a variance from ZBA to increase lot coverage. Asked that an A-2 survey be waived. Mr. Kuehn passed around a picture of the property. The addition will be going up. **FOR** – No one. **AGAINST** – No one. **FOR NOR AGAINST** – No one. Discussion was had. **MOTION:** Patrick Herzing made a motion to close the public hearing for 58 Lakeside Dr. Gaye Zukauskas seconded. **VOTE:** A. Dolecki – Aye, G. Zukauskas – Aye, P. Herzing – Aye and Chairman Panasuk so voted. **MOTION:** Gaye Zukauskas made a motion to grant the applicant a special permit for 58 Lakeside Drive. The applicants will get all the permits

RE: **EM-VER-111-031001** - Cellco Partnership d/b/a Verizon Wireless notice of intent to modify an existing telecommunications facility located at 297 North Street, Plymouth, Connecticut.

Dear Attorney Baldwin:

At a public meeting held on October 14, 2003, the Connecticut Siting Council (Council) acknowledged your notice to modify this existing telecommunications facility, pursuant to Section 16-50j-73 of the Regulations of Connecticut State Agencies with the condition that the modifications recommended in the Structural Analysis Report prepared by Daniel Blakeman (dated September 9, 2003) be implemented as part of the antenna installation.

The proposed modifications are to be implemented as specified here and in your notice dated October 1, 2003. The modifications are in compliance with the exception criteria in Section 16-50j-72 (b) of the Regulations of Connecticut State Agencies as changes to an existing facility site that would not increase tower height, extend the boundaries of the tower site, increase noise levels at the tower site boundary by six decibels, and increase the total radio frequencies electromagnetic radiation power density measured at the tower site boundary to or above the standard adopted by the State Department of Environmental Protection pursuant to General Statutes § 22a-162. This facility has also been carefully modeled to ensure that radio frequency emissions are conservatively below State and federal standards applicable to the frequencies now used on this tower.

This decision is under the exclusive jurisdiction of the Council. Any additional change to this facility will require explicit notice to this agency pursuant to Regulations of Connecticut State Agencies Section 16-50j-73. Such notice shall include all relevant information regarding the proposed change with cumulative worst-case modeling of radio frequency exposure at the closest point of uncontrolled access to the tower base, consistent with Federal Communications Commission, Office of Engineering and Technology, Bulletin 65. Any deviation from this format may result in the Council implementing enforcement proceedings pursuant to General Statutes § 16-50u including, without limitation, imposition of expenses resulting from such failure and of civil penalties in an amount not less than one thousand dollars per day for each day of construction or operation in material violation.

Thank you for your attention and cooperation.

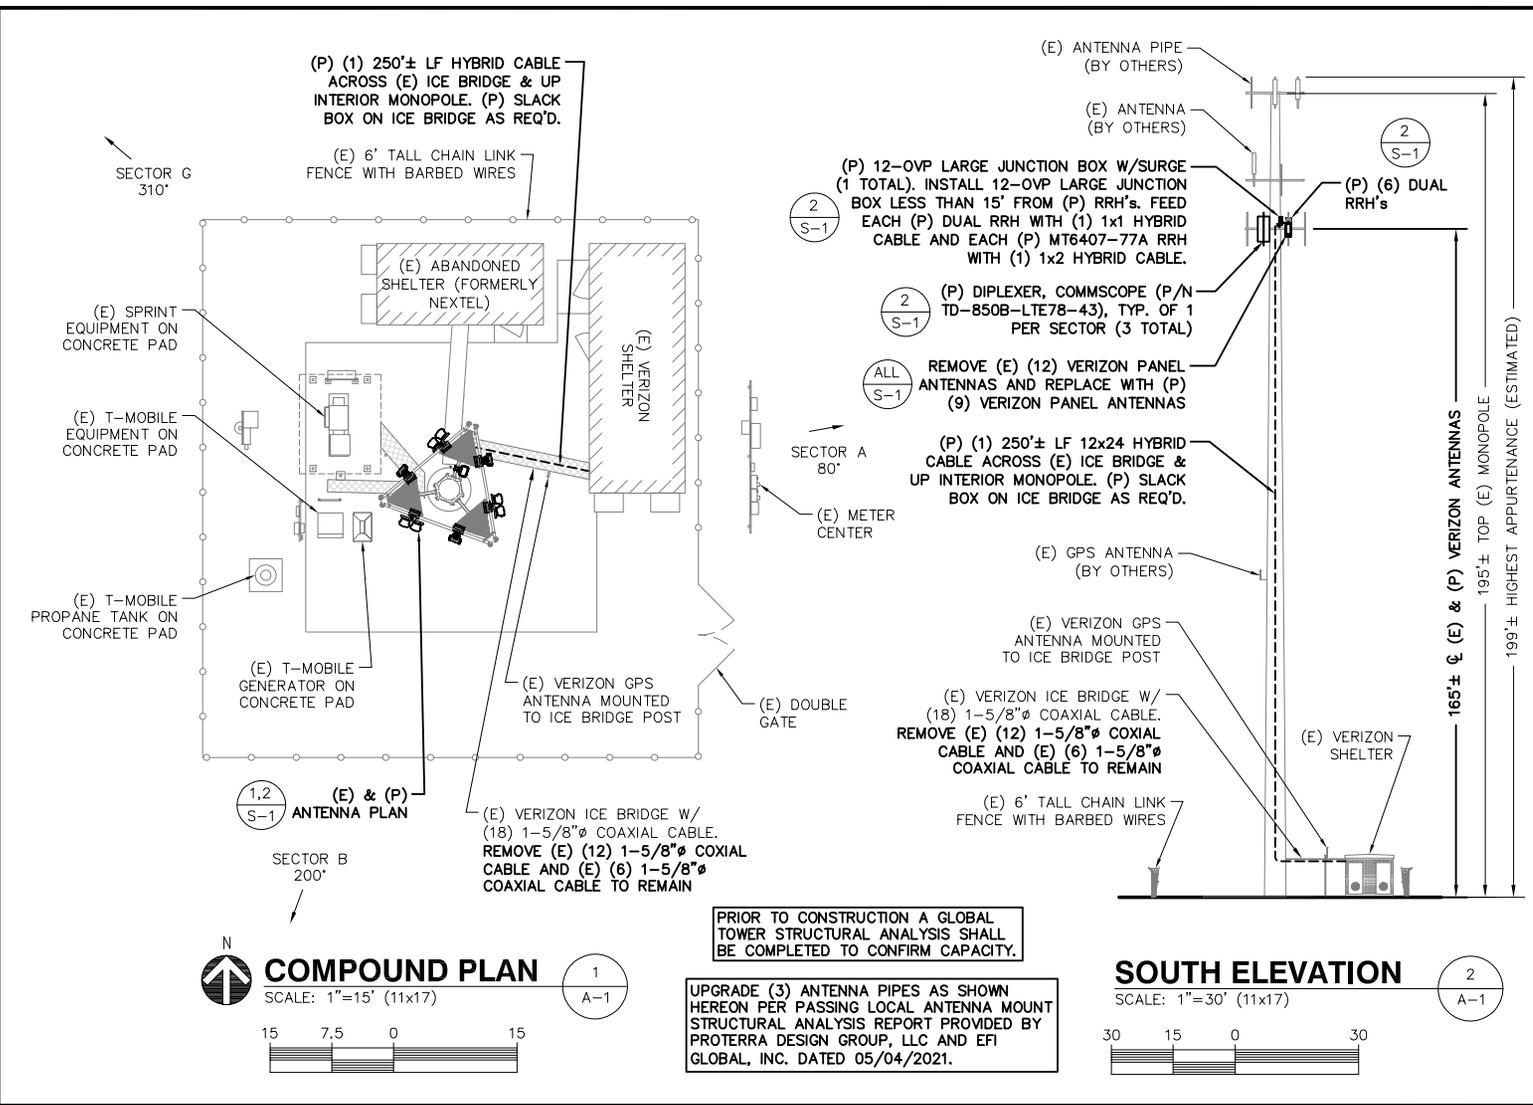

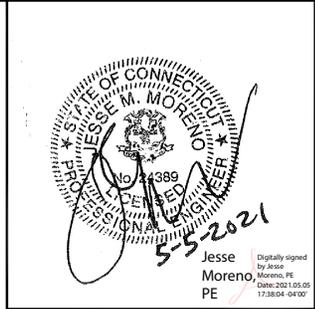

Very truly yours,

SAMSUNG C-Band 64T64R Massive MIMO Radio

for High Capacity and Wide Coverage

Samsung C-Band 64T64R Massive MIMO Radio enables mobile operators to increase coverage range, boost data speeds and ultimately offer enriched 5G experiences to users in the U.S..

Model Code : MT6407-77A

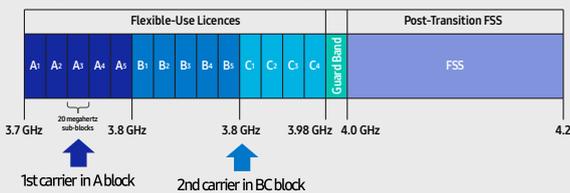

Points of Differentiation

Wide Bandwidth

With capability to support up to 2 CC carrier configuration, Samsung C-Band massive MIMO Radio supports 200 MHz bandwidth in the C-Band spectrum.

Samsung C-Band massive MIMO Radio covers the entire C-Band 280 MHz spectrum, so it can meet the operator's needs in current A block and future B/C blocks

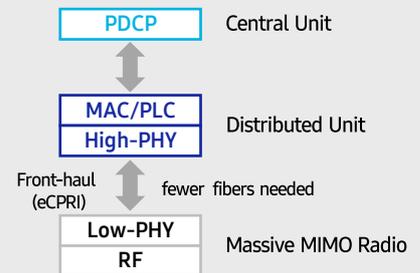

C-Band spectrum supported by Massive MIMO Radio

Future Proof Product

Samsung C-Band 64T64R Massive MIMO radio supports not only CPRI but also eCPRI as front-haul interface.

It enables operators can cut down on OPEX/CAPEX by reducing front-haul bandwidth through low layer split and using ethernet based higher efficient line.

Enhanced Performance

C-Band massive MIMO Radio creates sharp beams and extends networks' coverage on the critical mid-band spectrum using a large number of antenna elements and high output power to boost data speeds.

This helps operators reduce their CAPEX as they now need less products to cover the same area than before.

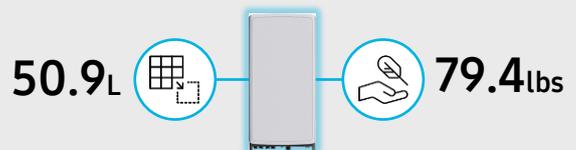

Furthermore, as C-Band massive MIMO Radio supports MU-MIMO (Multi-user MIMO), it enables to increase user throughput by minimizing interference.

Well Matched Design

Samsung C-Band Massive MIMO radio utilizes 64 antennas, supports up to 280MHz bandwidth, and delivers a 200W output power. despite the above advanced performance, the Radio has a compact size of 50.9L and 79.4lbs. This makes it easy to install the Radio.

It is designed to look solid and compact, with a low profile appearance so that, when installed, harmonizes well with the surrounding environment.

- Integrated Smart Bias-Ts reduce leasing costs

NWAV™

Fast Roll-Off antennas increase data throughput without compromising coverage

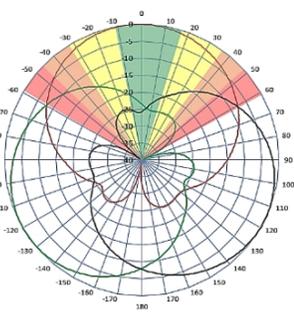

The horizontal beam produced by Fast Roll-Off (FRO) technology increases the Signal to Interference & Noise Ratio (SINR) by eliminating overlap between sectors.

Non-FRO antenna

Large traditional antenna pattern overlap creates harmful interference.

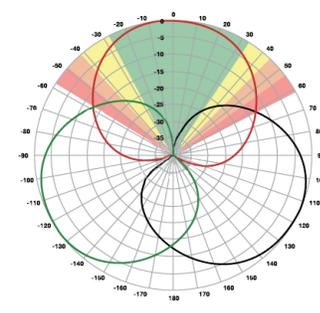

JMA's FRO antenna pattern minimizes overlap, thereby minimizing interference.

JMA FRO antenna

Excellent	>18	>4.5	333+%	8-10

Fair	10-15	2-3.3	160%	4-6
Poor	<10	<2	0%	1-3

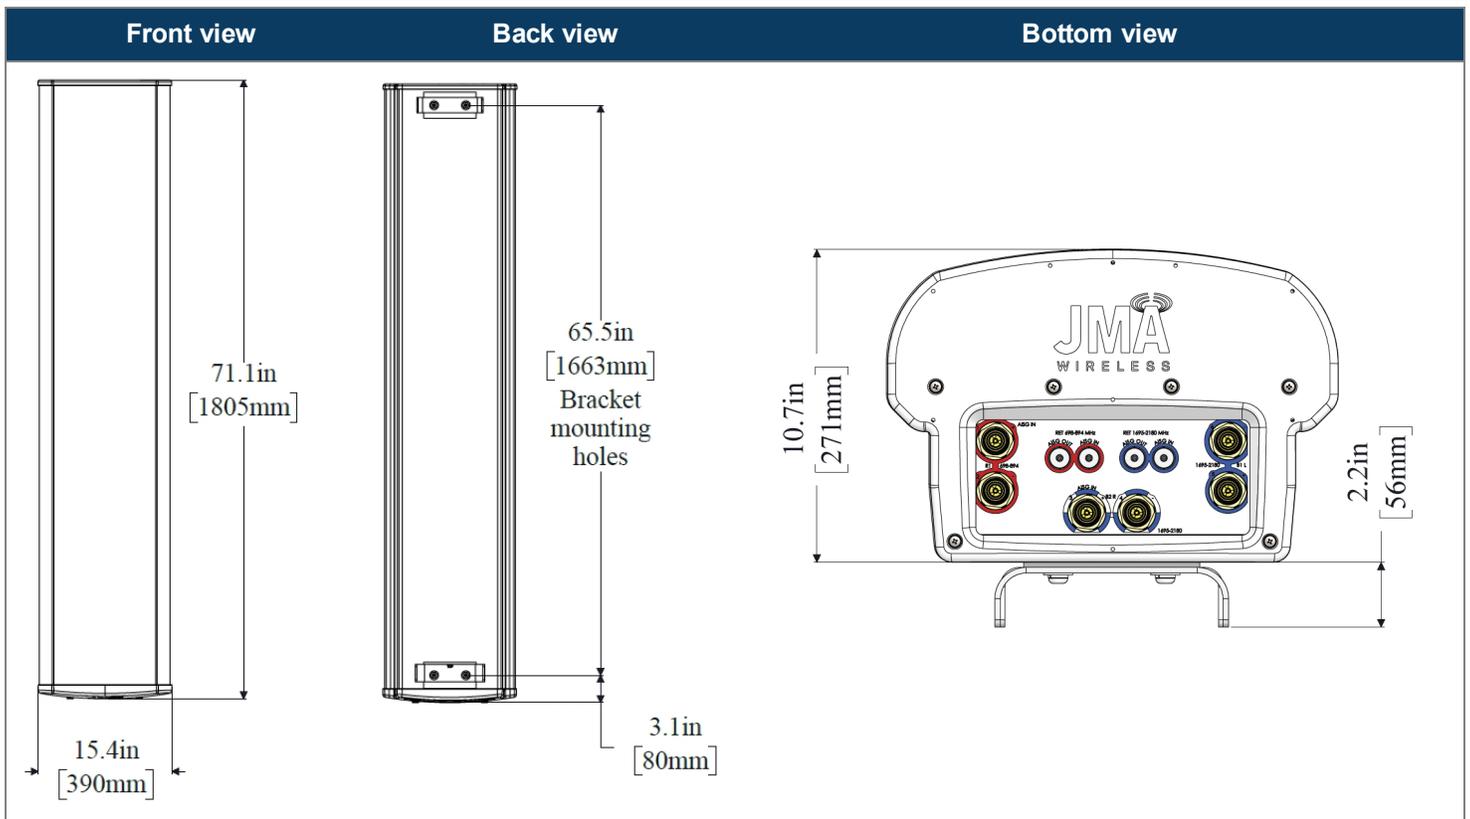

The LTE radio automatically selects the best throughput based on measured SINR.

Verizon Wireless Designation: Site Name: Plymouth NW CT

Site Data: 297 North Adams Street, Plymouth, CT 06782
Latitude 41.691330, Longitude -73.050368

We are pleased to submit this “**Mount Structural Analysis Report – Rev.1**” to determine the structural capacity of the antenna mount utilized by Verizon Wireless at the above referenced site.

The purpose of the analysis is to determine acceptability of the mount stress level for the changes proposed by Verizon Wireless. Under the following load case we have determined the mount to have:

Existing + Proposed Equipment **Adequate Capacity with Mods (61.4%)**
Note: See Analysis Criteria for loading configuration

The analysis has been performed in accordance with TIA-222-G Standard and the 2018 Connecticut State Building Code (2015 IBC).

We appreciate the opportunity of providing our continuing professional services to you. If you have any questions or need further assistance on this or any other projects, please give us a call.

Sketch for Mount Analysis	ProTerra Design Group, LLC

2.1) Analysis Method

Risa-3D, a commercially available analysis software package, was used to create a three-dimensional model of the mount and calculate member stresses for various loading cases. Selected output from the analysis is included in the Appendix.

2.2) Analysis Conditions and Assumptions

The mount was built and installed in accordance with the manufacturer’s specifications. The mount has been maintained and will be maintained in accordance with the manufacturer’s specifications. All structural members and connections of the mount are in good condition and can achieve theoretical strength.

The configuration of antennas is as specified in “1) Analysis Criteria”.

The analysis was performed for the subject mount only. It does not include an evaluation of the other mounts or the tower, which should be analyzed by others.

The evaluation does not include any antenna rigging loads. The equipment should not be rigged using the subject antenna mount as the support.

The analysis includes a minimum 250 lbf maintenance point load at the worst-case location on the mount, as well as a minimum 250 lbf maintenance point load at each antenna location in conjunction with a 30 mph wind load.

Any steel grating represented in this model is for loading purposes only and it is not considered to provide any structural restraint or support.

Member sizes per the mount sketch, mount photographs and assumed based on our experience with similar structures. Please refer to calculation output in the appendix of this report for sizes and lengths assumed.

All member connections are assumed to have been designed to meet or exceed the load carrying capacity of the connected member unless otherwise specified in this report.

ProTerra Design Group, LLC must be notified immediately if any of these assumptions are discovered to be incorrect. The results of this analysis may be affected if any of the assumptions are not valid or have been made in error.

The analysis results are shown on the table below.

Table 3.1 – Mount Component Stresses vs. Capacity

Component	% Capacity	Pass / Fail
Grating Angle		Pass
Antenna Mount Pipe		Pass
Base Perimeter Pipe		Pass
Main Support Tube		Pass
Bracing Tube		Pass
Platform Base Connection Plates		Pass

Platform Mount: The existing platform mount **will have adequate** capacity for the proposed changes by Verizon, **once the proposed modifications are completed as listed below and per the Mount sketch (SK-1) prepared by ProTerra Design Group, LLC, dated 12/21/2020.** For the code specified load combinations and as a maximum, the mount members are stressed to of their structural capacity.

Note: The proposed modifications are-

- 1. The Dual antenna should be mounted on an 8' long 2.5 STD pipe at each sector, a total of three (3) pipes.**
- 2. One (1) 4' long 2.0 STD pipe should be attached to the platform standoff tube to mount the OVP box.**
