Steven Levine
Real Estate Consultant
New Cingular Wireless, PCS, LLC
500 Enterprise Drive
Rocky Hill, CT 06067

RE: **EM-CING-125-050329** – New Cingular Wireless PCS, LLC notice of intent to modify an existing telecommunications facility located at 7 Surdan Mountain Road, Sharon, Connecticut.

Dear Mr. Levine:

At a public meeting held on April 19, 2005, the Connecticut Siting Council (Council) acknowledged your notice to modify this existing telecommunications facility, pursuant to Section 16-50j-73 of the Regulations of Connecticut State Agencies.

The proposed modifications are to be implemented as specified here and in your notice dated March 29, 2005, including the placement of all necessary equipment and shelters within the tower compound. The modifications are in compliance with the exception criteria in Section 16-50j-72 (b) of the Regulations of Connecticut State Agencies as changes to an existing facility site that would not increase tower height, extend the boundaries of the tower site, increase noise levels at the tower site boundary by six decibels, and increase the total radio frequencies electromagnetic radiation power density measured at the tower site boundary to or above the standard adopted by the State Department of Environmental Protection pursuant to General Statutes § 22a-162. This facility has also been carefully modeled to ensure that radio frequency emissions are conservatively below State and federal standards applicable to the frequencies now used on this tower.

This decision is under the exclusive jurisdiction of the Council. Any additional change to this facility will require explicit notice to this agency pursuant to Regulations of Connecticut State Agencies Section 16-50j-73. Such notice shall include all relevant information regarding the proposed change with cumulative worst-case modeling of radio frequency exposure at the closest point of uncontrolled access to the tower base, consistent with Federal Communications Commission, Office of Engineering and Technology, Bulletin 65. Any deviation from this format may result in the Council implementing enforcement proceedings pursuant to General Statutes § 16-50u including, without limitation, imposition of expenses resulting from such failure and of civil penalties in an amount not less than one thousand dollars per day for each day of construction or operation in material violation.

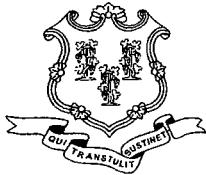

Thank you for your attention and cooperation.

Very truly yours,

Pamela B. Katz, P.E.
Chairman

PBK/cm

RE: **EM-CING-125-050329** – New Cingular Wireless PCS, LLC notice of intent to modify an existing telecommunications facility located at 7 Surdan Mountain Road, Sharon, Connecticut.

Dear Mr. Moeller:

The Connecticut Siting Council (Council) received this request to modify an existing telecommunications facility, pursuant to Regulations of Connecticut State Agencies Section 16-50j-72.

The Council will consider this item at the next meeting scheduled for April 19, 2005 at 1:30 p.m. in Hearing Room One, Ten Franklin Square, New Britain, Connecticut.

If you have any questions or comments regarding this proposal, please call me or inform the council by April 18, 2005.

Thank you for your cooperation and consideration.

Very truly yours,

S. Derek Phelps
Executive Director

**Notice of Exempt Modification – Existing LCD Telecommunications Tower Facility at 7
Surdan Mountain Road, Sharon, Connecticut**

Dear Chairman Katz and Members of the Council:

New Cingular Wireless PCS, LLC (“Cingular”) intends to install telecommunications antennas and associated equipment at an existing multicarrier telecommunications tower off Surdan Mountain Road in Sharon, Connecticut. Please accept this letter as notification to the Council, pursuant to R.C.S.A. Section 16-50j-73, of construction which constitutes an exempt modification pursuant to R.C.S.A. Section 16-50j-72(b)(2). In compliance with R.C.S.A. Section 16-50j-73, a copy of this letter is being sent to the 1st Selectman of Sharon.

Existing Facility

Cingular operates under licenses issued by the Federal Communications Commission (“FCC”) to provide cellular and PCS mobile telephone service in Litchfield County, which includes the area to be served by Cingular’s proposed installation.

The Sharon facility is located at 7 Surdan Mountain Road, which lies approximately 2.5 miles north of CT Route 4 and 1 mile west of US Highway 7. Tower coordinates (NAD 83) are N 41° 51' 43" and W 73° 23' 58".

The facility is owned and operated by Litchfield County Dispatch (“LCD”), with offices at 452 Bantam Road, Litchfield, CT 06759, under a license and easement agreement with landowner Adele Prindle.

The Sharon facility was initially approved by local authorities and has been subsequently modified

pursuant to Siting Council acknowledgment of AT&T Wireless' exempt modification¹.

Proposed Modifications

Attached to this Notice are a site location map, a site plan, the tower profile, and a structural analysis report that shows the tower is structurally capable of supporting the proposed Cingular telecommunications equipment.

The Surdan Mountain Road facility consists of an approximately 195-foot self-supporting lattice tower within a roughly 70' x 140' compound surrounded by an 8 foot-high chain link fence. A number of entities operate wireless communications equipment at the facility, including LCD itself, the CT State Police, CL&P, and Alltel.

As shown on the attached drawings and as further described below, Cingular proposes to install up to six 75"-high Kathrein AP14/17-panel antennas, or their functional equivalents, and up to 12 amplifiers at a centerline height of approximately 173 feet above ground level. Cingular also proposes to place a 12' x 20' prefabricated concrete equipment building in the existing compound at the base of the tower.

Statutory Considerations

The changes to the Sharon tower facility do not constitute a modification as defined in Connecticut General Statutes ("C.G.S.") Section 16-50i(d) because the general physical characteristics of the facility will not be significantly changed or altered. Rather, the planned changes to the facility fall squarely within those activities explicitly provided for in R.C.S.A. Section 16-50j-72(b)(2) because they will not result in any substantial adverse environmental effect.

1. The height of the overall structure will be unaffected.
2. The proposed changes will not affect the property boundaries. All new construction will take place on property licensed to LCD and within the existing fence.
3. The proposed additions will not increase the noise level at the existing facility by six decibels or more.
4. Operation of the additional antennas will not increase the total radio frequency electromagnetic radiation power density, measured at the tower base, to or above the standard adopted by the State of Connecticut and the FCC. The "worst-case" exposure calculation in accordance with FCC OET Bulletin No. 65 (1997) for a point of interest at the base of the tower in relation to the operation of the currently proposed antenna array is as follows:

¹ Pursuant to FCC and DOJ orders requiring the divestiture of AT&T Wireless' cellular network in Litchfield County as a condition of the Cingular/AT&T Wireless merger, please be advised that AT&T's facility at the site is being conveyed to Alltel and the new Cingular will have no interest therein.

Owner / Operator *	Centerline Height (feet)	Frequency (MHz)	Number of Channels	Power Per Channel (Watts)	Power Density [†] (mW/cm ²)	Standard Limits (mW/cm ²)	Percent of Limit

Ham	88	144 - 148	1	250	0.0116	0.2000	5.80
Town of Sharon	80	45.76	1	100	0.0056	0.2000	2.81
Ham	70	442.2 - 447.2	1	100	0.0073	0.2948	2.49
Total							70.07%

* Power density parameters for other entities are from LCD and Cingular's attached structural analysis.

† Please note that the standard power density equation provided by the Council in its memo of January 22, 2001 incorporates a ground reflection factor of 2.56 (i.e., the square of 1.6) as described in FCC OET Bulletin No. 65.

As the table demonstrates, the cumulative "worst-case" exposure would be approximately 70 % of the ANSI/IEEE standard, as calculated for mixed frequency sites. Total power density levels resulting from Cingular's use of the tower facility would thus be within applicable standards.

For the foregoing reasons, Cingular respectfully submits that proposed changes at the Sharon site constitute an exempt modification under R.C.S.A. Section 16-50j-72(b)(2).

Please feel free to call Tim Burks at (860) 513-7218 or Christopher Fisher, Esq. at (914) 761-1300 with questions concerning this notice. Thank you for your consideration in this matter.

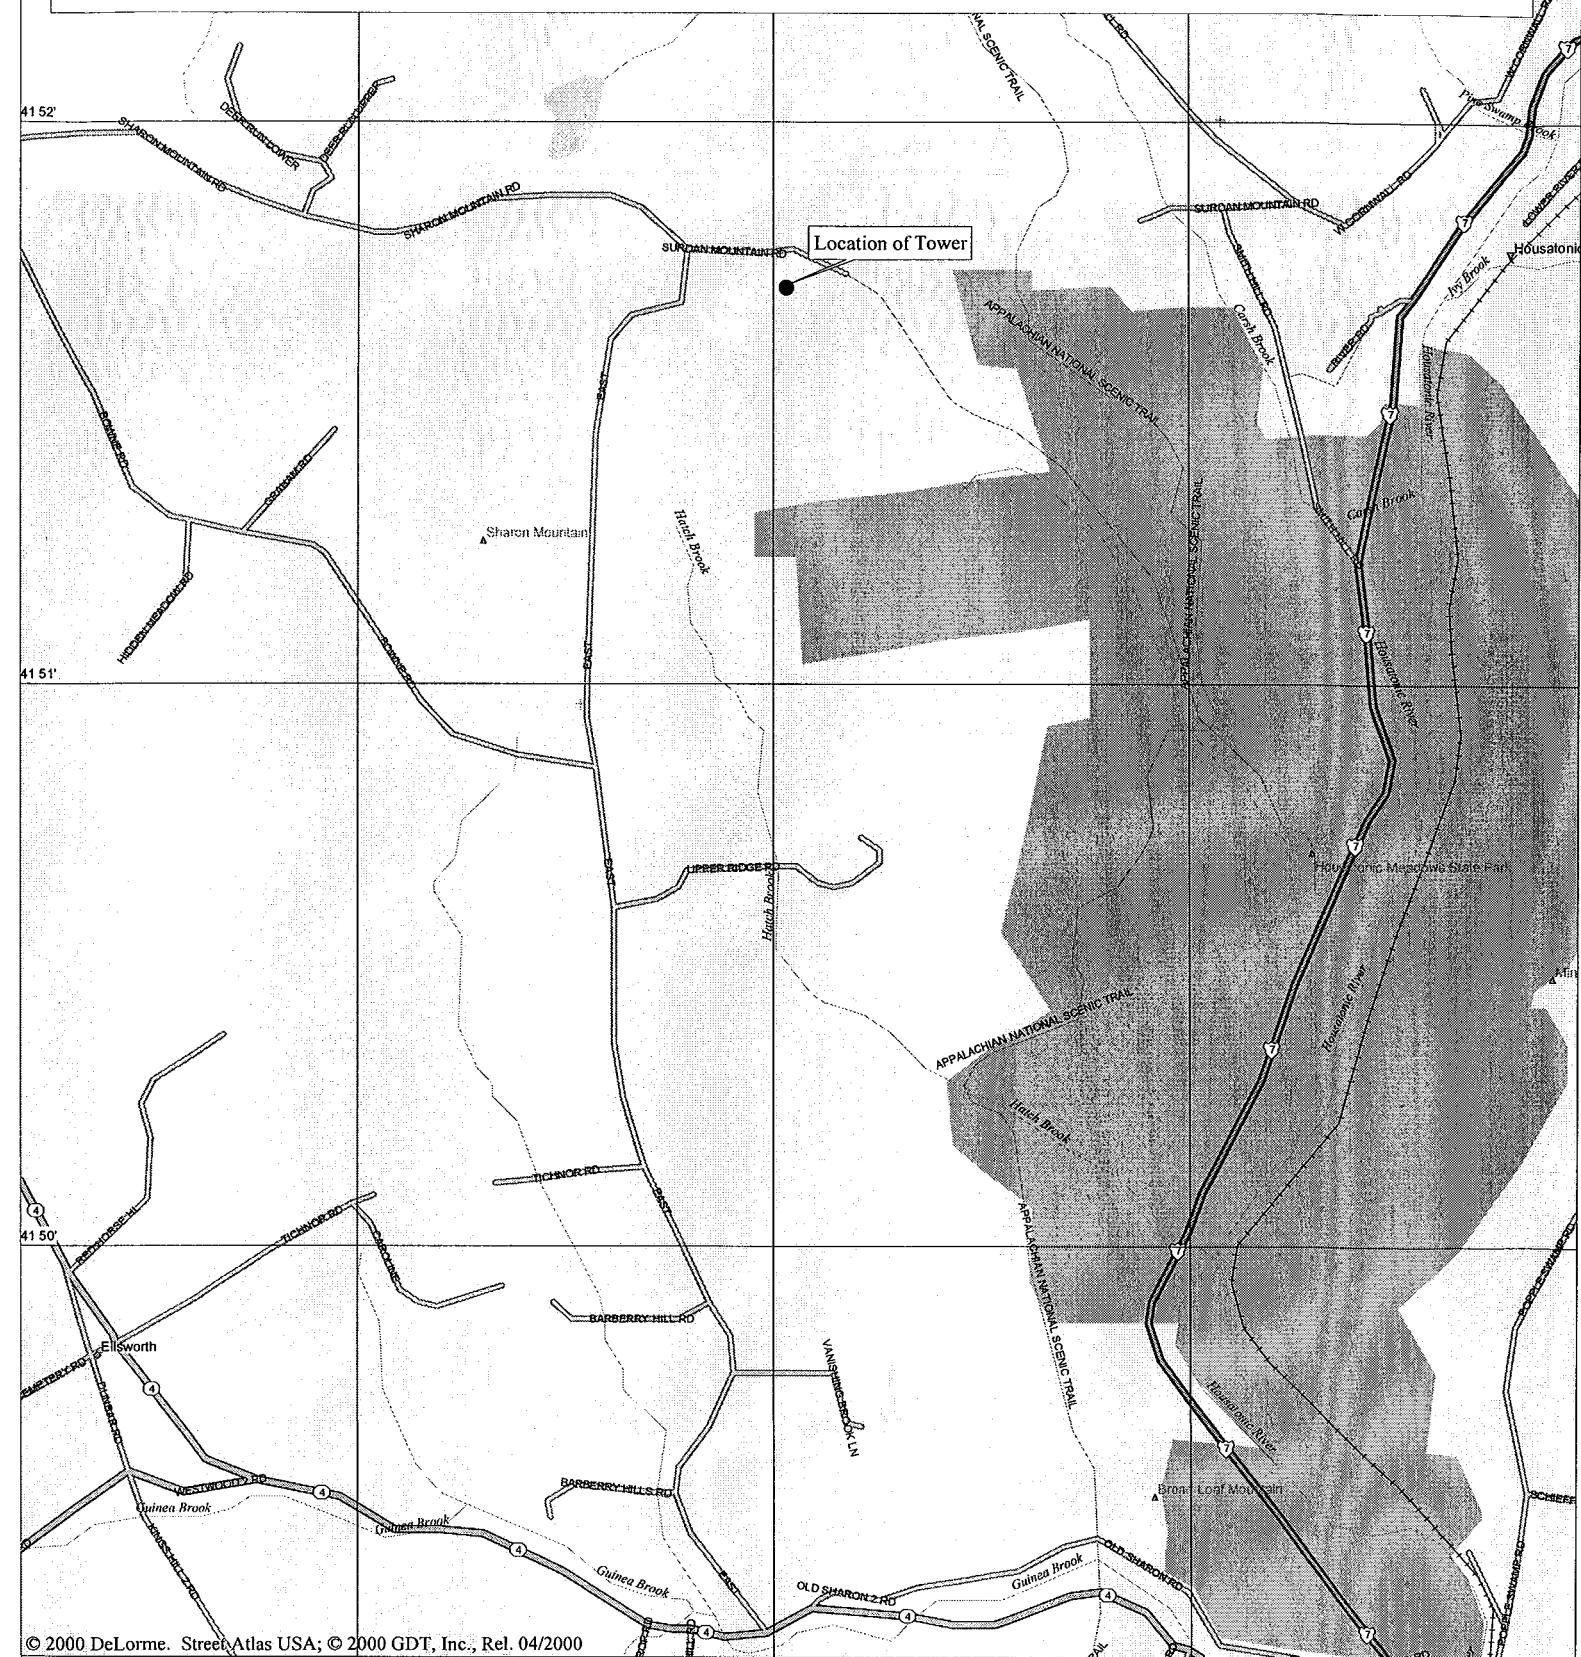

Respectfully yours,

Steven Levine
Real Estate Consultant

March 24, 2005

1. EXECUTIVE SUMMARY

This report summarizes the structural analysis of the 195' lattice tower located off Surdan Mountain Road in Sharon, Connecticut. The analysis was conducted in accordance with the TIA/EIA-222-F standard for wind velocity of 90 mph and 90 mph concurrent with ½" ice without reduction. The antenna loading considered in the analysis consists of all existing and proposed antennas, transmission lines, and ancillary items as outlined in the Introduction of this report. The proposed Cingular addition is listed below:

(6) AP14/17-880/1940/088D/ADT/XXP antennas and (6) LGP2140X TMA on sector mounts with (12) 1 5/8" coax cables	Cingular (proposed)	@ 173' elevation
---	------------------------	------------------

The results of the analysis indicate that the tower structure is in compliance with the proposed loading conditions. **The tower is considered structurally adequate under the TIA/EIA-222-F wind load specified above and the existing and proposed antenna loadings.**

This analysis is based on:

- 1) The tower structure's theoretical capacity not including any assessment of the condition of the tower.
- 2) Tower geometry, member sizes and foundation taken from Tower and Foundation report prepared by Pirod, Inc. Engineering File A-115074 signed and stamped October 14, 1998.
- 3) Soils report prepared by Dr. Clarence Welti, P.E., P.C. dated March 3, 1998
- 4) Antenna inventory as specified in section 2 and 6 of this report.
- 5) Coax cable orientation as specified in section 6 of this report.

This report is only valid as per the assumptions and data utilized in this report for antenna inventory, mounts and associated cables. The user of this report shall field verify the assumption of the antenna and mount configuration. Notify the engineer in writing immediately if any of the information in this report is found to be other than specified.

If you should have any questions, please call.

Sincerely,
URS Corporation AES

Richard A. Sambor, P.E.
Manager Facilities Design

2. INTRODUCTION

The subject tower is located off Surdan Mountain Road in Sharon, Connecticut. The structure is a self-supporting three-legged 195' steel tapered lattice tower manufactured by Pirod Incorporated.

The tower is constructed of truss legs, diagonal angle braces and horizontal angle braces. The tower members are all bolted together. The width of the tower face is 4'-6" at the top and 20'-0" at the base. The tower geometry and structure member sizes were taken from Pirod, Inc. Project File A-115074 approved October 14, 1998..

The existing structure supports several communication antennas. The inventory is summarized below:

Antenna Type	Carrier	Mount	Centerline Elevation	Cable
(1) PD-1142	LCD (existing)	Side arm mount	203'	(1) 1 5/8" coax cable
(2) PD-1110	CSP (existing)	Side arm mounts	201.5'	(2) 1 5/8" coax cables

(1) 1.2M Dish	Pagnet (existing)	Leg Mount	6'	(1) 7/8" coax cable

This structural analysis of the communications tower was performed by URS Corporation, AES for Cingular. The purpose of this analysis was to investigate the structural integrity of the existing tower with its existing and proposed antenna loads.

3. ANALYSIS METHODOLOGY AND LOADING CONDITIONS

The structural analysis was done in accordance with TIA/EIA-222-F, Structural Standard for Steel Antenna Towers and Antenna Supporting Structures, and the American Institute of Steel Construction (AISC) Manual of Steel Construction, Allowable Stress Design (ASD).

The analysis was conducted using ERI Tower 3.0. Two load conditions were evaluated as shown below which were compared to allowable stresses according to AISC and TIA/EIA.

Load Condition 1 = 90 mph Wind Load (with ice) + Ice Load + Tower Dead Load

The TIA/EIA standard permits one-third increase in allowable stresses for towers and monopoles less than 700 feet tall. For purposes of this analysis, in computing the load capacity the allowable stresses of the tower members were increased by one-third.

4. FINDINGS AND EVALUATION

The combined axial and bending stresses on the tower structure were evaluated to compare with the allowable stress in accordance with AISC. **The analysis indicates that the tower legs, diagonal members, and horizontal members have sufficient capacity to carry the existing and proposed loads.** No further analysis was conducted on the anchor bolts and foundation since the forces calculated were below the original design.

5. CONCLUSIONS

The results of the analysis indicate the tower structure is in compliance with the proposed loading conditions. **The tower structure is considered structurally adequate with the TIA/EIA-222-F wind load classification specified above and the existing and proposed antenna loading.**

Limitations/Assumptions:

This report is based on the following:

- A. Tower is properly installed and maintained.
- B. All members and their geometry are as specified in the original Project File and are in good condition.
- C. All required members are in place.
- D. All bolts are in place and are properly tightened.
- E. Tower is in plumb condition.
- F. All member protective coatings are in good condition.
- G. All tower members were properly designed, detailed, fabricated, installed, and have been properly maintained since erection.

URS is not responsible for any modifications completed prior to or hereafter in which URS is not or was not directly involved. Modifications include but are not limited to:

- A. Adding antennas
- B. Removing/replacing antennas
- C. Adding coaxial cables

URS hereby states that this document represents the entire report and that it assumes no liability for any factual changes that may occur after the date of this report. All representations, recommendations, and conclusions are based upon information contained and set forth herein. If you are aware of any information which conflicts with that which is contained herein, or you are aware of any defects arising from original design, material, fabrication, or erection deficiencies, you should disregard this report and immediately contact URS. URS disclaims all liability for any representation, recommendation, or conclusion not expressly stated herein.

Ongoing and Periodic Inspection and Maintenance:

After the Contractor has successfully completed the installation and the work has been accepted, the owner will be responsible for the ongoing and periodic inspection and maintenance of the tower.

The owner shall refer to TIA/EIA-222-F for recommendations for maintenance and inspection. The frequency of the inspection and maintenance intervals is to be determined by the owner based upon actual site and environmental conditions. It is recommended that a complete and thorough inspection of the entire tower structural system be performed at least yearly and more frequently as conditions warrant. According to TIA/EIA-222-F section 14.1, Note 1: It is recommended that the structure be inspected after severe wind and/or ice storms or other extreme loading conditions.

**Re: Notice of Exempt Modification – Existing Litchfield County Dispatch
Telecommunications Tower Facility at 7 Surdan Mountain Road, Sharon, Connecticut**

Dear Mr. Moeller:

New Cingular Wireless PCS, LLC (“Cingular”) intends to install telecommunications antennas and associated equipment at an existing multicarrier telecommunications tower at 7 Surdan Mountain Road in Sharon, Connecticut.

The facility is owned and operated by Litchfield County Dispatch under a license and easement agreement with landowner Adele Prindle.

A Notice of Exempt Modification has been filed with the Connecticut Siting Council as required by Regulations of Connecticut State Agencies (“R.C.S.A.”) Section 16-50j-73. Please accept this letter as notification to the Town of Sharon under Section 16-50j-73 of construction which constitutes an exempt modification pursuant to R.C.S.A. Section 16-50j-72(b)(2).

The attached letter fully sets forth the Cingular proposal. However, if you have any questions or require any further information on the plans for the site or the Siting Council’s procedures, please contact the undersigned or Mr. Derek Phelps, Executive Director of the Connecticut Siting Council, at (860) 827-2935.

Sincerely,

Steven Levine
Real Estate Consultant

1. EXECUTIVE SUMMARY

This report summarizes the structural analysis of the 195' lattice tower located off Surdan Mountain Road in Sharon, Connecticut. The analysis was conducted in accordance with the TIA/EIA-222-F standard for wind velocity of 90 mph and 90 mph concurrent with ½" ice without reduction. The antenna loading considered in the analysis consists of all existing and proposed antennas, transmission lines, and ancillary items as outlined in the Introduction of this report. The proposed Cingular addition is listed below:

(6) AP14/17-880/1940/088D/ADT/XXP
antennas and (6) LGP2140X TMA on
sector mounts with (12) 1 5/8" coax cables Cingular
(proposed) @ 173' elevation

The results of the analysis indicate that the tower structure is in compliance with the proposed loading conditions. **The tower is considered structurally adequate under the TIA/EIA-222-F wind load specified above and the existing and proposed antenna loadings.**

This analysis is based on:

- 1) The tower structure's theoretical capacity not including any assessment of the condition of the tower.
- 2) Tower geometry, member sizes and foundation taken from Tower and Foundation report prepared by Pirod, Inc. Engineering File A-115074 signed and stamped October 14, 1998.
- 3) Soils report prepared by Dr. Clarence Welti, P.E., P.C. dated March 3, 1998
- 4) Antenna inventory as specified in section 2 and 6 of this report.
- 5) Coax cable orientation as specified in section 6 of this report.

This report is only valid as per the assumptions and data utilized in this report for antenna inventory, mounts and associated cables. The user of this report shall field verify the assumption of the antenna and mount configuration. Notify the engineer in writing immediately if any of the information in this report is found to be other than specified.

If you should have any questions, please call.

Sincerely,
URS Corporation AES

Richard A. Sambor, P.E.
Manager Facilities Design

 CF/Book

2. INTRODUCTION

The subject tower is located off Surdan Mountain Road in Sharon, Connecticut. The structure is a self-supporting three-legged 195' steel tapered lattice tower manufactured by Pirod Incorporated.

The tower is constructed of truss legs, diagonal angle braces and horizontal angle braces. The tower members are all bolted together. The width of the tower face is 4'-6" at the top and 20'-0" at the base. The tower geometry and structure member sizes were taken from Pirod, Inc. Project File A-115074 approved October 14, 1998..

The existing structure supports several communication antennas. The inventory is summarized below:

Antenna Type	Carrier	Mount	Centerline Elevation	Cable
(1) PD-1142	LCD (existing)	Side arm mount	203'	(1) 1 5/8" coax cable
(2) PD-1110	CSP (existing)	Side arm mounts	201.5'	(2) 1 5/8" coax cables
(1) PD-201	LCD (existing)	Side arm mount	199'	(1) 1 5/8" coax cable

(2) PD-1110	CSP (existing)	Side arm mounts	188.5'	(2) 1 5/8" coax cables
(1) ANT150D6-9	NEU (existing)	Side arm mount	185'	(1) 1 5/8" coax cable
(1) DB-222	LCD (existing)	Side arm mount	185'	(1) 1 5/8" coax cable
(1) PD-220	LCD (existing)	Side arm mount	176'	(1) 1 5/8" coax cable
(1) BCD-87077	Pagnet (existing)	Side arm mount	174'	(1) 1 5/8" coax cable
(6) AP14/17-880/1940/088D/ADT/XXP (2 per sector)	Cingular (proposed)	(3) T-Frame mounts	173'	(12) 1 5/8" coax cables
(6) Ultrasite MHA (2 per sector)	Cingular (proposed)	(3) T-Frame mounts	173'	---
(1) DB-809KT4E-YP	Verizon (existing)	Side arm mount	171'	(1) 1 5/8" coax cable
(9) ALP 9212	AT&T Wireless (existing)	(3) T-Frame mounts	160'	(9) 7/8" coax cables
(1) PD-220	Verizon (existing)	Side arm mount	130'	(1) 1 5/8" coax cable
(1) PD-1142	NEU (existing)	Side arm mount	120'	(1) 1 5/8" coax cable
(1) DB-230	Verizon (existing)	Side arm mount	120'	(1) 1 5/8" coax cable
(1) PD-1142	NEU (existing)	Side arm mount	110'	(1) 1 5/8" coax cable

Antenna Type	Carrier	Mount	Centerline Elevation	Cable
(1) PA6-65AC	CSP (existing)	Leg mount	100'	(1) 1 5/8" coax cable
(1) ARX-270N	HAM (existing)	Side arm mounts	88.25'	(1) 1 5/8" coax cable
(1) PD-320	Sharon (existing)	Side arm mount	80'	(1) 1 5/8" coax cable
(1) DB-432	HAM (existing)	Leg mount	70'	(1) 1 5/8" coax cable
(1) 1.2M Dish	Verizon (existing)	Leg Mount	12'	(1) 7/8" coax cable
(1) 1.2M Dish	Pagnet (existing)	Leg Mount	9'	(1) 7/8" coax cable
(1) 1.2M Dish	Pagnet (existing)	Leg Mount	6'	(1) 7/8" coax cable

This structural analysis of the communications tower was performed by URS Corporation, AES for Cingular. The purpose of this analysis was to investigate the structural integrity of the existing tower with its existing and proposed antenna loads.

3. ANALYSIS METHODOLOGY AND LOADING CONDITIONS

The structural analysis was done in accordance with TIA/EIA-222-F, Structural Standard for Steel Antenna Towers and Antenna Supporting Structures, and the American Institute of Steel Construction (AISC) Manual of Steel Construction, Allowable Stress Design (ASD).

The analysis was conducted using ERI Tower 3.0. Two load conditions were evaluated as shown below which were compared to allowable stresses according to AISC and TIA/EIA.

Load Condition 1 = 90 mph Wind Load (with ice) + Ice Load + Tower Dead Load

The TIA/EIA standard permits one-third increase in allowable stresses for towers and monopoles less than 700 feet tall. For purposes of this analysis, in computing the load capacity the allowable stresses of the tower members were increased by one-third.

4. FINDINGS AND EVALUATION

The combined axial and bending stresses on the tower structure were evaluated to compare with the allowable stress in accordance with AISC. **The analysis indicates that the tower legs, diagonal members, and horizontal members have sufficient capacity to carry the existing and proposed loads.** No further analysis was conducted on the anchor bolts and foundation since the forces calculated were below the original design.

5. CONCLUSIONS

The results of the analysis indicate the tower structure is in compliance with the proposed loading conditions. **The tower structure is considered structurally adequate with the TIA/EIA-222-F wind load classification specified above and the existing and proposed antenna loading.**

Limitations/Assumptions:

This report is based on the following:

- A. Tower is properly installed and maintained.
- B. All members and their geometry are as specified in the original Project File and are in good condition.
- C. All required members are in place.
- D. All bolts are in place and are properly tightened.
- E. Tower is in plumb condition.
- F. All member protective coatings are in good condition.
- G. All tower members were properly designed, detailed, fabricated, installed, and have been properly maintained since erection.

URS is not responsible for any modifications completed prior to or hereafter in which URS is not or was not directly involved. Modifications include but are not limited to:

- A. Adding antennas
- B. Removing/replacing antennas
- C. Adding coaxial cables

URS hereby states that this document represents the entire report and that it assumes no liability for any factual changes that may occur after the date of this report. All representations, recommendations, and conclusions are based upon information contained and set forth herein. If you are aware of any information which conflicts with that which is contained herein, or you are aware of any defects arising from original design, material, fabrication, or erection deficiencies, you should disregard this report and immediately contact URS. URS disclaims all liability for any representation, recommendation, or conclusion not expressly stated herein.

Ongoing and Periodic Inspection and Maintenance:

After the Contractor has successfully completed the installation and the work has been accepted, the owner will be responsible for the ongoing and periodic inspection and maintenance of the tower.

The owner shall refer to TIA/EIA-222-F for recommendations for maintenance and inspection. The frequency of the inspection and maintenance intervals is to be determined by the owner based upon actual site and environmental conditions. It is recommended that a complete and thorough inspection of the entire tower structural system be performed at least yearly and more frequently as conditions warrant. According to TIA/EIA-222-F section 14.1, Note 1: It is recommended that the structure be inspected after severe wind and/or ice storms or other extreme loading conditions.

Tower Input Data

The main tower is a 3x free standing tower with an overall height of 195.00 ft above the ground line.

The base of the tower is set at an elevation of 0.00 ft above the ground line.

The face width of the tower is 4.50 ft at the top and 20.00 ft at the base.

This tower is designed using the TIA/EIA-222-F standard.

The following design criteria apply:

Basic wind speed of 90 mph.

Nominal ice thickness of 0.5000 in.

Ice density of 56 pcf.

A wind speed of 90 mph is used in combination with ice.

Temperature drop of 50 °F.

Deflections calculated using a wind speed of 90 mph.

A non-linear (P-delta) analysis was used.

Pressures are calculated at each section.

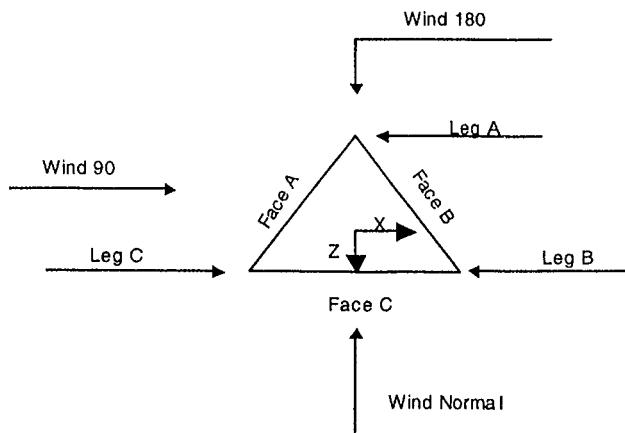

Stress ratio used in tower member design is 1.333.

Local bending stresses due to climbing loads, feedline supports, and appurtenance mounts are not considered.

Options

- | | | |
|-------------------------------------|--------------------------------------|------------------------------------|
| Consider Moments - Legs | Distribute Leg Loads As Uniform | Treat Feedline Bundles As Cylinder |
| Consider Moments - Horizontals | Assume Legs Pinned | Use ASCE 10 X-Brace Ly Rules |
| Consider Moments - Diagonals | ✓ Assume Rigid Index Plate | Calculate Redundant Bracing Forces |
| Use Moment Magnification | ✓ Use Clear Spans For Wind Area | Ignore Redundant Members in FEA |
| ✓ Use Code Stress Ratios | ✓ Use Clear Spans For KL/r | ✓ SR Leg Bolts Resist Compression |
| ✓ Use Code Safety Factors - Guys | Retension Guys To Initial Tension | All Leg Panels Have Same Allowable |
| Escalate Ice | Bypass Mast Stability Checks | Offset Girt At Foundation |
| Always Use Max Kz | Use Azimuth Dish Coefficients | ✓ Consider Feedline Torque |
| Use Special Wind Profile | Project Wind Area of Appurt. | Include Angle Block Shear Check |
| ✓ Include Bolts In Member Capacity | ✓ Autocalc Torque Arm Areas | Poles |
| ✓ Leg Bolts Are At Top Of Section | ✓ SR Members Have Cut Ends | Include Shear-Torsion Interaction |
| Secondary Horizontal Braces Leg | ✓ Sort Capacity Reports By Component | Always Use Sub-Critical Flow |
| Use Diamond Inner Bracing (4 Sided) | Triangulate Diamond Inner Bracing | Use Top Mounted Sockets |
| Add IBC .6D+W Combination | | |
