Dear Attorney Schwartzman:

The Connecticut Siting Council (Council) is in receipt of your letter dated December 23, 2014, submitted on behalf of T-Mobile, requesting an extension of time to submit a notice of completion of construction and associated post modification inspection reports for the above-referenced exempt modifications.

The Council hereby grants a 60-day extension of time to submit a notice of completion of construction and associated post modification inspection reports for the above-referenced exempt modifications to March 2, 2015.

This extension is granted with the understanding that the Council will be notified should T-Mobile need additional time beyond 60 days to submit a notice of completion and associated post modification inspection reports or decide not to proceed with construction.

Thank you for your attention to this matter.

Sincerely,

A handwritten signature in black ink, appearing to read "Melanie A. Bachman". The signature is fluid and cursive, with a long horizontal stroke at the end.

**Re: T-Mobile Exempt Modification Compliance Filings  
Connecticut Siting Council Audit Letter dated November 3, 2014  
Request For Extension of Time**

Dear Attorney Bachman:

T-Mobile Northeast, LLC ("T-Mobile") respectfully requests a 60-day extension of time to March 2, 2015 to respond to the Council's request, dated November 3, 2014, for exempt modification compliance data. The attached spreadsheet provides a list of the sites for which T-Mobile seeks a requested extension.

T-Mobile is actively compiling all of the requested information but needs additional time to provide the necessary documentation.

Please do not hesitate to let me know if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Rachel A. Schwartzman".

RE: **EM-T-MOBILE-135-130318** - T-Mobile Northeast LLC notice of intent to modify an existing telecommunications facility located at 555 Main Street, Stamford, Connecticut.

Dear Attorney Kohler:

At a public meeting held by the Connecticut Siting Council (Council) on August 21, 2014, the Council considered and denied your request to waive the filing fee for the above mentioned exempt modification which decision expired on April 9, 2014.

Please resubmit your request to modify the above referenced existing telecommunications facility in compliance with the exception criteria in Section 16-50j-72 (b) of the Regulations of Connecticut State Agencies.

Thank you for your attention to this matter.

Sincerely,

Robert Stein  
Chairman

**Re: Notice of Exempt Modification  
Crown/T-Mobile co-location  
T-Mobile Site ID CT11410A  
555 Main Street, Stamford CT**

*EM-T-MOBILE-135-130318*

Dear Attorney Bachman:

This office represents T-Mobile Northeast LLC ("T-Mobile") and has been retained to file exempt modification filings with the Connecticut Siting Council on its behalf.

On March 15, 2013 T-Mobile filed a notice of exempt modification to modify a telecommunication facility pursuant to R.C.S.A. § 16-50j-73. The Council issued an acknowledgment on April 9, 2103. T-Mobile was unable to complete construction prior to the expiration of the one year time frame and hereby requests that the Council reconsider and acknowledge the notice of exempt modification for an additional year. T-Mobile represents that the proposal contained in its March 15, 2013 filing remains unchanged, and that according to the Council's database, no other carrier has filed for co-location on this facility since the date of T-Mobile's acknowledgement.

Please accept this letter as notification of construction which constitutes an exempt modification pursuant to R.C.S.A. § 16-50j-72(b)(2). In accordance with R.C.S.A. § 16-50j-73, a copy of this letter is being sent to the Mayor David Martin, and the property owner, Southern New England Telephone Company.

To recap the proposal provided in the March 15, 2013 filing.

- The existing Stamford Facility consists of a rooftop mounted tower facility, which extends to a height of approximately 235' 10" AGL, including the existing T-Mobile antennas.

August 13, 2014  
Site ID CT11410A  
Page 2

- T-Mobile plans to replace 3 antenna mounted on the rooftop tower facility at a centerline of 210' 10", will replace 3 antenna mounted on the rooftop tower facility at a centerline of 205' 10", and will add 3 tower mounted amplifiers ("TMAs") at a height of 205' 10".
- Finally, T-Mobile will add 2 equipment cabinets to the rooftop equipment compound, remove 3 existing cabinets from the same area and run fiber conduit along existing coaxial cabling.
- The existing rooftop tower facility is structurally capable of supporting T-Mobile's proposed use, as indicated in the Structural Analysis Report dated February 28, 2013. The planned modifications to the Stamford Facility fall squarely within those activities explicitly provided for in R.C.S.A. § 16-50j-72(b)(2).

1 . The proposed modification will not increase the height of the tower. T-Mobile's replacement antennas will be installed at the 210'10" and 205' 10" foot level. The enclosed plans confirm that the proposed modification will not increase the height of the rooftop facility.

2 . The installation of the T-Mobile replacement equipment in the existing equipment room, as reflected on the attached plans, will not require an extension of the site boundaries. T-Mobile's proposed equipment will be located entirely within the existing equipment area.

3 . The proposed modification to the Facility will not increase the noise levels at the existing facility by six decibels or more.

4 . The operation of the replacement antennas will not increase the total radio frequency (RF) power density, measured at the base of the tower, to a level at or above the applicable standard. According to a Radio Frequency Emissions Analysis Report prepared by EBI dated August 14, 2012 T-Mobile's operations would add 0.257% of the FCC Standard. Therefore, the calculated "worst case" power density for the planned combined operation at the site including all of the proposed antennas would be 11.457% of the FCC Standard as calculated for a mixed frequency site.

As this exempt modification request has been fully vetted by Council staff, T-Mobile would be grateful if the exempt modification filing fee would be waived for this acknowledgement reissue.

For the foregoing reasons, T-Mobile respectfully submits that the proposed replacement antennas and equipment at the Stamford Facility constitutes an exempt modification under R.C.S.A. § 16-50j-72(b)(2).

Julie D. Kohler, Esq.  
Cohen and Wolf, P.C.  
1115 Broad Street  
Bridgeport, CT 06604

RE: **EM-T-MOBILE-135-130318** – T-Mobile Northeast LLC notice of intent to modify an existing telecommunications facility located at 555 Main Street, Stamford, Connecticut.

Dear Attorney Kohler:

The Connecticut Siting Council (Council) hereby acknowledges your notice to modify this existing telecommunications facility, pursuant to Section 16-50j-73 of the Regulations of Connecticut State Agencies with the following conditions:

- The proposed coax shall be installed in accordance with the recommendations made in the Structural Analysis Report prepared by GDP Group dated February 28, 2013 and stamped by John Kabak;
- Within 45 days following completion of the antenna installation, T-Mobile shall provide documentation certified by a professional engineer that its installation complied with the recommendation of the structural analysis;
- Any deviation from the proposed modification as specified in this notice and supporting materials with Council shall render this acknowledgement invalid;
- Any material changes to this modification as proposed shall require the filing of a new notice with the Council;
- Within 45 days after completion of construction, the Council shall be notified in writing that construction has been completed;
- The validity of this action shall expire one year from the date of this letter; and
- The applicant may file a request for an extension of time beyond the one year deadline provided that such request is submitted to the Council not less than 60 days prior to the expiration;

The proposed modifications including the placement of all necessary equipment and shelters within the tower compound are to be implemented as specified here and in your notice dated March 15, 2013. The modifications are in compliance with the exception criteria in Section 16-50j-72 (b) of the Regulations of Connecticut State Agencies as changes to an existing facility site that would not increase tower height, extend the boundaries of the tower site, increase noise levels at the tower site boundary by six decibels, and increase the total radio frequencies electromagnetic radiation power density measured at the tower site boundary to or above the standard adopted by the State Department of Environmental Protection pursuant to General Statutes § 22a-162. This facility has also been carefully modeled to ensure that radio frequency emissions are conservatively below State and federal standards applicable to the frequencies now used on this tower.

This decision is under the exclusive jurisdiction of the Council. Please be advised that the validity of this action shall expire one year from the date of this letter. Any additional change to this facility will require explicit notice to this agency pursuant to Regulations of Connecticut State Agencies Section 16-50j-73. Such notice shall include all relevant information regarding the proposed change with cumulative worst-case modeling of radio frequency exposure at the closest point of uncontrolled access to the tower base, consistent with Federal Communications Commission, Office of Engineering and Technology, Bulletin 65. Thank you for your attention and cooperation.

Very truly yours,

Linda Roberts  
Executive Director

**ORIGINAL**

March 15, 2013

Ms. Linda Roberts,  
Executive Director  
Connecticut Siting Council  
Ten Franklin Square  
New Britain, CT 06051

**Re: Notice of Exempt Modification  
AT&T/T-Mobile co-location  
T-Mobile Site ID CT11410A  
555 Main Street, Stamford CT**

Dear Ms. Roberts:

This office represents T-Mobile Northeast LLC ("T-Mobile") and has been retained to file exempt modification filings with the Connecticut Siting Council on its behalf.

In this case, AT&T owns the existing rooftop telecommunications tower and related facility at 555 Main Street, Stamford Connecticut (latitude 41.03.14; longitude -73.32.09). T-Mobile intends to replace six antennas and add related equipment at this existing rooftop tower facility in Stamford ("Stamford Facility"). Please accept this letter as notification, pursuant to R.C.S.A. § 16-50j-73, of construction which constitutes an exempt modification pursuant to R.C.S.A. § 16-50j-72(b)(2). In accordance with R.C.S.A. § 16-50j-73, a copy of this letter is being sent to the Mayor Michael Pavia, and the property owner, Southern New England Telephone Company.

The existing Stamford Facility consists of a rooftop mounted tower facility, which extends to a height of approximately 235' 10" AGL, including the existing T-Mobile antennas. T-Mobile plans to replace 3 antenna mounted on the rooftop tower facility at a centerline of 210' 10", will replace 3 antenna mounted on the rooftop tower facility at a centerline of 205' 10", and will add 3 tower mounted amplifiers ("TMAs") at a height of 205' 10". Finally, T-Mobile will add 2 equipment cabinets to the rooftop equipment compound, remove 3 existing cabinets from the same area and run fiber conduit along existing coaxial cabling. (See the plans revised to April 27, 2012 attached hereto as Exhibit A). The existing rooftop tower facility is structurally capable of supporting T-Mobile's proposed use, as indicated in the Structural Analysis Report dated February 28, 2013 and attached hereto as Exhibit B.

March 15, 2013  
Site ID CT11410A  
Page 2

The planned modifications to the Stamford Facility fall squarely within those activities explicitly provided for in R.C.S.A. § 16-50j-72(b)(2).

1. The proposed modification will not increase the height of the tower. T-Mobile's replacement antennas will be installed at the 210'10" and 205' 10" foot level. The enclosed plans confirm that the proposed modification will not increase the height of the rooftop facility.
2. The installation of the T-Mobile replacement equipment in the existing equipment room, as reflected on the attached plans, will not require an extension of the site boundaries. T-Mobile's proposed equipment will be located entirely within the existing equipment area.
3. The proposed modification to the Facility will not increase the noise levels at the existing facility by six decibels or more.
4. The operation of the replacement antennas will not increase the total radio frequency (RF) power density, measured at the base of the tower, to a level at or above the applicable standard. According to a Radio Frequency Emissions Analysis Report prepared by EBI dated August 14, 2012 T-Mobile's operations would add 0.257% of the FCC Standard. Therefore, the calculated "worst case" power density for the planned combined operation at the site including all of the proposed antennas would be 11.457% of the FCC Standard as calculated for a mixed frequency site as evidenced by the engineering exhibit attached hereto as Exhibit C.

For the foregoing reasons, T-Mobile respectfully submits that the proposed replacement antennas and equipment at the Stamford Facility constitutes an exempt modification under R.C.S.A. § 16-50j-72(b)(2).

Sincerely,

  
Julie D. Kohler, Esq.

125' Modified Self Support Tower

Mr. Thomas Wilson,

GPD is pleased to submit this Structural Analysis Report to determine the structural integrity of the aforementioned tower. The purpose of the analysis is to determine the suitability of the tower with the existing and proposed loading configuration detailed in the analysis report.

#### Analysis Results

Tower Stress Level with Proposed Equipment: 93.8% Pass

We at GPD appreciate the opportunity of providing our continuing professional services to you and HPC Development. If you have any questions or need further assistance on this or any other projects please do not hesitate to call.

Respectfully submitted,

John N. Kabak, P.E.  
Connecticut #: PEN.0028336

## SUMMARY & RESULTS

The purpose of this analysis was to verify whether the existing structure is capable of carrying the proposed loading configuration as specified by T-Mobile to AT&T Towers. This report was commissioned by Mr. Thomas Wilson of AT&T Towers.

No foundation or geotechnical information was available or provided for this report. Therefore, the in place capacity of the foundation could not be verified. A more thorough and accurate assessment of foundation capacity will require a site specific geotechnical report and foundation information.

Insufficient information regarding the frame that connects the tower to the building was available or provided for this report. Therefore, the in place capacity of the frame could not be verified. A more thorough and accurate assessment of the mounting frame capacity will require a tower mapping.

Modifications designed by MEI Project #: CT02786-11V0, dated 7/28/11 were found to be ineffective and were not considered in this analysis.

**The proposed coax shall be placed next to the existing coax on tower face C in order for the results of this analysis to be valid. See Appendix C for more details.**

### TOWER SUMMARY AND RESULTS

Member	Capacity	Results

### ANALYSIS METHOD

tnxTower (Version 6.0.4.0), a commercially available software program, was used to create a three-dimensional model of the tower and calculate primary member stresses for various dead, live, wind, and ice load cases. Selected output from the analysis is included in Appendix B. The following table details the information provided to complete this structural analysis. This analysis is solely based on this information and is being completed without the benefit of a GPD detailed site visit.

### DOCUMENTS PROVIDED

Document	Remarks	Source
Site Lease Application	T-Mobile Application, dated 7/19/12	Siterra
Tower Design	Not Provided	N/A
Foundation Design	Not Provided	N/A
Geotechnical Report	Not Provided	N/A
Previous Structural Analysis	MEI Project #: CT02786-11V0, dated 7/28/11	Siterra
Modification Drawings	MEI Project #: CT02786-11V0, dated 7/28/11	Siterra

## ASSUMPTIONS

This structural analysis is based on the theoretical capacity of the members and is not a condition assessment of the tower. This analysis is from information supplied, and therefore, its results are based on and are as accurate as that supplied data. GPD has made no independent determination, nor is it required to, of its accuracy. The following assumptions were made for this structural analysis.

1. The tower member sizes and shapes are considered accurate as supplied. The material grade is as per data supplied and/or as assumed and as stated in the materials section.
2. The antenna configuration is as supplied and/or as modeled in the analysis. It is assumed to be complete and accurate. All antennas, mounts, coax and waveguides are assumed to be properly installed and supported as per manufacturer requirements.
3. Some assumptions are made regarding antennas and mount sizes and their projected areas based on best interpretation of data supplied and of best knowledge of antenna type and industry practice.
4. All mounts, if applicable, are considered adequate to support the loading. No actual analysis of the mount(s) is performed. This analysis is limited to analyzing the tower only.
5. The soil parameters are as per data supplied or as assumed and stated in the calculations. If no data is available, the foundation system is not verified. In the case of absent foundation data, it is the tower owner's responsibility to insure that the foundation system is adequate to support the structure with its new reactions.
6. The tower and structures have been properly maintained in accordance with TIA Standards and/or with manufacturer's specifications.
7. All welds and connections are assumed to develop at least the member capacity unless determined otherwise and explicitly stated in this report.
8. Modifications designed by MEI Project #: CT02786-11V0, dated 7/28/11 were found to be ineffective and were not considered in this analysis.
9. Loading interpreted from photos is accurate to  $\pm 5'$  AGL, antenna size accurate to  $\pm 3.3$  sf, and coax equal to the number of existing antennas without reserve.
10. All existing loading was obtained from the previous structural analysis by MEI Project #: CT02786-11V0, dated 7/28/11, site photos, the provided Site Lease Application, and is assumed to be accurate.
11. Tower Leg A is assumed to be at an azimuth of  $315^\circ$  based on satellite imagery.
12. The proposed coax shall be placed next to the existing coax on tower face C in order for the results of this analysis to be valid.
13. The existing T-Mobile loading elevations found in site photos and the Site Lease Application were found to vary from the elevations listed within the previous structural analysis by MEI Project #: CT02786-11V0, dated 7/28/11. The existing and proposed elevations have been modeled based on elevations listed within site photos and the Site Lease Application.

If any of these assumptions are not valid or have been made in error, this analysis may be affected, and GPD Group should be allowed to review any new information to determine its effect on the structural integrity of the tower.

## DISCLAIMER OF WARRANTIES

GPD GROUP has not performed a site visit to the tower to verify the member sizes or antenna/coax loading. If the existing conditions are not as represented on the tower elevation contained in this report, we should be contacted immediately to evaluate the significance of the discrepancy. This is not a condition assessment of the tower or foundation. This report does not replace a full tower inspection. The tower and foundations are assumed to have been properly fabricated, erected, maintained, in good condition, twist free, and plumb.

The engineering services rendered by GPD GROUP in connection with this Structural Analysis are limited to a computer analysis of the tower structure and theoretical capacity of its main structural members. All tower components have been assumed to only resist dead loads when no other loads are applied. No allowance was made for any damaged, bent, missing, loose, or rusted members (above and below ground). No allowance was made for loose bolts or cracked welds.

GPD GROUP does not analyze the fabrication of the structure (including welding). It is not possible to have all the very detailed information needed to perform a thorough analysis of every structural sub-component and connection of an existing tower. GPD GROUP provides a limited scope of service in that we cannot verify the adequacy of every weld, plate connection detail, etc. The purpose of this report is to assess the feasibility of adding appurtenances usually accompanied by transmission lines to the structure.

It is the owner's responsibility to determine the amount of ice accumulation in excess of the specified code recommended amount, if any, that should be considered in the structural analysis.

The attached sketches are a schematic representation of the analyzed tower. If any material is fabricated from these sketches, the contractor shall be responsible for field verifying the existing conditions, proper fit, and clearance in the field. Any mentions of structural modifications are reasonable estimates and should not be used as a precise construction document. Precise modification drawings are obtainable from GPD GROUP, but are beyond the scope of this report.

Miscellaneous items such as antenna mounts, etc., have not been designed or detailed as a part of our work. We recommend that material of adequate size and strength be purchased from a reputable tower manufacturer.

GPD GROUP makes no warranties, expressed and/or implied, in connection with this report and disclaims any liability arising from material, fabrication, and erection of this tower. GPD GROUP will not be responsible whatsoever for, or on account of, consequential or incidental damages sustained by any person, firm, or organization as a result of any data or conclusions contained in this report. The maximum liability of GPD GROUP pursuant to this report will be limited to the total fee received for preparation of this report.

## Tower Input Data

The main tower is a 4x free standing tower with an overall height of 231.50 ft above the ground line.

The base of the tower is set at an elevation of 106.50 ft above the ground line.

The face width of the tower is 5.60 ft at the top and 13.58 ft at the base.

This tower is designed using the TIA/EIA-222-F standard.

The following design criteria apply:

Tower is located in Fairfield County, Connecticut.

Basic wind speed of 85 mph.

Nominal ice thickness of 0.7500 in.

Ice thickness is considered to increase with height.

Ice density of 56 pcf.

A wind speed of 37 mph is used in combination with ice.

Temperature drop of 50 °F.

Deflections calculated using a wind speed of 50 mph.

Pressures are calculated at each section.

Stress ratio used in tower member design is 1.333.

Local bending stresses due to climbing loads, feedline supports, and appurtenance mounts are not considered.

**TOWER DESIGN NOTES**

1. Tower is located in Fairfield County, Connecticut.
2. Tower designed for a 85 mph basic wind in accordance with the TIA/EIA-222-F Standard.
3. Tower is also designed for a 37 mph basic wind with 0.75 in ice. Ice is considered to increase in thickness with height.
4. Deflections are based upon a 50 mph wind.
5. TOWER RATING: 93.8%

RADIO FREQUENCY EMISSIONS ANALYSIS REPORT  
EVALUATION OF HUMAN EXPOSURE POTENTIAL  
TO NON-IONIZING EMISSIONS

T-Mobile Existing Facility

Site ID: CT11410A

Stamford Downtown  
555 Main Street  
Stamford, CT 06901

**August 14, 2012**

August 14, 2012

T-Mobile USA  
Attn: Jason Overbey, RF Manager  
35 Griffin Road South  
Bloomfield, CT 06002

Re: Emissions Values for Site CT11410A – Stamford Downtown

EBI Consulting was directed to analyze the proposed T-Mobile facility located at 555 Main Street, Stamford, CT, for the purpose of determining whether the emissions from the Proposed T-Mobile Antenna Installation located on this property are within specified federal limits.

All information used in this report was analyzed as a percentage of current Maximum Permissible Exposure (% MPE) as listed in the FCC OET Bulletin 65 Edition 97-01 and ANSI/IEEE Std C95.1. The FCC regulates Maximum Permissible Exposure in units of microwatts per square centimeter ( $\mu\text{W}/\text{cm}^2$ ). The number of  $\mu\text{W}/\text{cm}^2$  calculated at each sample point is called the power density. The exposure limit for power density varies depending upon the frequencies being utilized. Wireless Carriers and Paging Services use different frequency bands each with different exposure limits, therefore it is necessary to report results and limits in terms of percent MPE rather than power density.

All results were compared to the FCC (Federal Communications Commission) radio frequency exposure rules, 47 CFR 1.1307(b)(1) – (b)(3), to determine compliance with the Maximum Permissible Exposure (MPE) limits for General Population/Uncontrolled environments as defined below.

General population/uncontrolled exposure limits apply to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Therefore, members of the general public would always be considered under this category when exposure is not employment related, for example, in the case of a telecommunications tower that exposes persons in a nearby residential area.

Public exposure to radio frequencies is regulated and enforced in units of microwatts per square centimeter ( $\mu\text{W}/\text{cm}^2$ ). The general population exposure limit for the cellular band is  $567 \mu\text{W}/\text{cm}^2$ , and the general population exposure limit for the PCS band is  $1000 \mu\text{W}/\text{cm}^2$ . Because each carrier will be using different frequency bands, and each frequency band has different exposure limits, it is necessary to report percent of MPE rather than power density.

Occupational/controlled exposure limits apply to situations in which persons are exposed as a consequence of their employment and in which those persons who are exposed have been made fully aware of the potential for exposure and can exercise control over their exposure. Occupational/controlled exposure limits also apply where exposure is of a transient nature as a result of incidental passage through a location where exposure levels may be above general population/uncontrolled limits (see below), as long as the exposed person has been made fully aware of the potential for exposure and can exercise control over his or her exposure by leaving the area or by some other appropriate means.

Additional details can be found in FCC OET 65.

## CALCULATIONS

Calculations were done for the proposed T-Mobile Wireless antenna facility located at 555 Main Street, Stamford, CT, using the equipment information listed below. All calculations were performed per the specifications under FCC OET 65. Since T-Mobile is proposing highly focused directional panel antennas, which project most of the emitted energy out toward the horizon, the actual antenna pattern gain value in the direction of the sample area was used. For this report the sample point is a 6 foot person standing at the base of the tower

For all calculations, all equipment was calculated using the following assumptions:

- 1) 2 GSM channels (1940.000 MHz—to 1950.000 MHz) were considered for each sector of the proposed installation.
- 2) 2 UMTS channels (2110.000 MHz to 2120.000 MHz / 2140.000 MHz to 2145.000 MHz) were considered for each sector of the proposed installation
- 3) 2 LTE channels (2110.000 MHz to 2120.000 MHz / 2140.000 MHz to 2145.000 MHz) were considered for each sector of the proposed installation
- 4) All radios at the proposed installation were considered to be running at full power and were uncombined in their RF transmissions paths per carrier prescribed configuration. Per FCC OET Bulletin No. 65 - Edition 97-01 recommendations to achieve the maximum anticipated value at each sample point, all power levels emitting from the proposed antenna installation are increased by a factor of 2.56 to account for possible in-phase reflections from the surrounding environment. This is rarely the case, and if so, is never continuous.
- 5) For the following calculations the sample point was the top of a six foot person standing at the base of the tower. The actual gain in this direction was used per the manufactures supplied specifications.
- 6) The antenna used in this modeling is the Ericsson AIR21 for LTE, UMTS and GSM. This is based on feedback from the carrier with regards to anticipated antenna selection. This antenna has a 15.6 dBd gain value at its main lobe. Actual antenna gain values were used for all calculations as per the manufacturers specifications

- 7) The antenna mounting height centerlines of the proposed antennas are **210.83 feet and 205.83 feet** above ground level (AGL)
- 8) Emissions values for additional carriers were taken from the Connecticut Siting Council active database. Values in this database are provided by the individual carriers themselves.

All calculation were done with respect to uncontrolled / general public threshold limits

Site Composite MPE %	
Carrier	MPE %
T-Mobile	0.257%
AT&T	4.750%
Winstar	0.710%
PageNet	1.440%
Broadcast Video	4.300%
Total Site MPE %	11.457%

## Summary

All calculations performed for this analysis yielded results that were well within the allowable limits for general public exposure to RF Emissions.

The anticipated Maximum Composite contributions from the T-Mobile facility are **0.257% (0.086% from each sector)** of the allowable FCC established general public limit considering all three sectors simultaneously.

The anticipated composite MPE value for this site assuming all carriers present is **11.457%** of the allowable FCC established general public limit. This is based upon values listed in the Connecticut Siting Council database for existing carrier emissions

FCC guidelines state that if a site is found to be out of compliance (over allowable thresholds), that carriers over a 5% contribution to the composite value will require measures to bring the site into compliance. For this facility, the composite values calculated were within the allowable 100% threshold standard per the federal government
