RE: **EM-VER-137-070619** - Cellco Partnership d/b/a Verizon Wireless notice of intent to modify an existing telecommunications facility located at 86 Voluntown Road, Stonington, Connecticut.

Dear Attorney Baldwin:

At a public meeting held on July 3, 2007, the Connecticut Siting Council (Council) acknowledged your notice to modify this existing telecommunications facility, pursuant to Section 16-50j-73 of the Regulations of Connecticut State Agencies.

The proposed modifications are to be implemented as specified here and in your notice dated June 19, 2007, including the placement of all necessary equipment and shelters within the tower compound. The modifications are in compliance with the exception criteria in Section 16-50j-72 (b) of the Regulations of Connecticut State Agencies as changes to an existing facility site that would not increase tower height, extend the boundaries of the tower site, increase noise levels at the tower site boundary by six decibels, and increase the total radio frequencies electromagnetic radiation power density measured at the tower site boundary to or above the standard adopted by the State Department of Environmental Protection pursuant to General Statutes § 22a-162. This facility has also been carefully modeled to ensure that radio frequency emissions are conservatively below State and federal standards applicable to the frequencies now used on this tower.

This decision is under the exclusive jurisdiction of the Council. Please be advised that the validity of this action shall expire one year from the date of this letter. Any additional change to this facility will require explicit notice to this agency pursuant to Regulations of Connecticut State Agencies Section 16-50j-73. Such notice shall include all relevant information regarding the proposed change with cumulative worst-case modeling of radio frequency exposure at the closest point of uncontrolled access to the tower base, consistent with Federal Communications Commission, Office of Engineering and Technology, Bulletin 65. Any deviation from this format may result in the Council implementing enforcement proceedings pursuant to General Statutes § 16-50u including, without limitation, imposition of expenses resulting from such failure and of civil penalties in an amount not less than one thousand dollars per day for each day of construction or operation in material violation.

Thank you for your attention and cooperation.

Very truly yours,

A handwritten signature in black ink, appearing to read "Daniel F. Caruso".

RE: **EM-VER-137-070619** - Cellco Partnership d/b/a Verizon Wireless notice of intent to modify an existing telecommunications facility located at 86 Voluntown Road, Stonington, Connecticut.

Dear Mr. Brown:

The Connecticut Siting Council (Council) received this request to modify an existing telecommunications facility, pursuant to Regulations of Connecticut State Agencies Section 16-50j-72.

The Council will consider this item at the next meeting scheduled for Tuesday, July 3, 2007 at 1:30 p.m. in Hearing Room One, Ten Franklin Square, New Britain, Connecticut.

If you have any questions or comments regarding this proposal, please call me or inform the Council by June 28, 2007.

Thank you for your cooperation and consideration.

Very truly yours,

S. Derek Phelps
Executive Director

SDP/MP/laf

**Re: Notice of Exempt Modification
Voluntown Road, Stonington, Connecticut**

Dear Mr. Phelps:

Cellco Partnership d/b/a Verizon Wireless ("Cellco") intends to install antennas on the existing 196-foot self-supporting monopole tower owned by Sprint Nextel off Voluntown Road in Stonington, Connecticut. Please accept this letter as notification pursuant to R.C.S.A. § 16-50j-73, for construction that constitutes an exempt modification pursuant to R.C.S.A. § 16-50j-72(b)(2). In accordance with R.C.S.A. § 16-50j-73, and pursuant to Siting Council directive a copy of this letter is being sent to Stonington First Selectman, William S. Brown and to Blackrock Properties II LLC, owner of the property on which the tower is located.

The Sprint Nextel facility consists of a 196-foot self-supporting monopole tower capable of supporting multiple carriers within a fenced compound off Voluntown Road in Stonington. This tower is currently shared by Sprint at the 193-foot level; Nextel at the 180-foot level; T-Mobile at the 165-foot level; and AT&T at the 150-foot level. Cellco intends to install twelve (12) panel-type antennas (six (6) cellular and six (6) PCS) at the 140-foot level on the tower and place a 12' x 30' equipment shelter on a raised steel platform over the existing Sprint Nextel shelter and AT&T equipment all located at the base of the tower within the existing fenced compound. Attached behind Tab 1 are Project Plans for the proposed Cellco facility.

The planned modifications to the Stonington facility fall squarely within those activities explicitly provided for in R.C.S.A. § 16-50j-72(b)(2).

S. Derek Phelps

June 19, 2007

Page 2

1. The proposed modification will not increase the overall height of the existing tower. Cellco's antennas will be mounted with their centerline at the 140-foot level on the 196-foot tower.

2. The proposed installation of a 12' x 30' equipment shelter will not require an extension of the fenced compound or leased area.

3. The proposed installation will not increase the noise levels at the facility by six decibels or more.

4. The operation of the antennas will not increase radio frequency (RF) power density levels at the facility to a level at or above the Federal Communications Commission (FCC) adopted safety standard. The cumulative worst-case RF power density calculations for existing and Cellco antennas would be 16.33% of the FCC standard. A copy of cumulative power density calculations table is attached behind Tab 2.

Also attached, behind Tab 3, is a Structural Analysis Report confirming that the existing tower can support the existing and proposed antennas and associated equipment.

For the foregoing reasons, Cellco respectfully submits that the proposed antenna installation at the facility constitutes an exempt modification under R.C.S.A. § 16-50j-72(b)(2).

Sincerely,

Kenneth C. Baldwin

Prepared pursuant to EIA/TIA-222-F June 1996 Structural Standards for Steel Antenna Towers and Antenna Supporting Structures

TABLE OF CONTENTS

EXECUTIVE SUMMARY.....	3
Conclusions	
Recommendations	
APPURTEINANCE LISTING.....	4
RESULTS.....	5
GENERAL COMMENTS.....	6
LIMITATIONS.....	6
POLE PROFILE.....	7
APPENDIX.....	8

EXECUTIVE SUMMARY

At the request of SBA Network Services, FDH Engineering performed a revised structural analysis of the monopole located in Stonington, CT to determine whether the tower is structurally adequate to support both the existing and proposed loads, pursuant to the *TIA/EIA-222-F* standards. Information pertaining to the existing/proposed antenna loading, current tower geometry, and member sizes was obtained from Valmont Engineering (Order No. 17507-98) original design drawings dated September 20, 2005, and SBA Network Services.

The *basic design wind speed* per *TIA/EIA-222-F* standards is 85 MPH without ice and 74 MPH with $\frac{1}{2}$ " radial ice.

Conclusions

With the existing and proposed antennas from Verizon place at 140 ft., the tower meets the requirements of the *TIA/EIA-222-F* standards. Furthermore, provided the foundation was constructed per the original foundation drawings (see Valmont Drawing No. 17507-S-01), the foundation should be adequate to support both the proposed and existing loading. For a more detailed description of the analysis of the tower, see the **Results** section of this report.

Our structural analysis has been performed assuming all information provided to FDH is accurate (i.e., the steel data, tower layout, current antenna loading, and proposed antenna loading) and that the tower will be properly erected and maintained per the original design drawings.

Recommendations

To ensure the requirements of the *TIA/EIA-222-F* standards are met with the existing and proposed loading in place, we have the following recommendations:

1. The proposed coax lines may be installed outside the pole's shaft in a single row.
2. The proposed loading should be installed on a low profile platform.

APPURTEINANCE LISTING

The proposed and existing antennas with their corresponding cables/coax lines are shown in **Table 1**. *If the actual layout determined in the field deviates from this layout, FDH should be contacted to perform a revised analysis.*

Table 1 – Appurtenance Loading

Existing Loading:

No.	Centerline Elevation (ft)	Coax and Lines ¹	Carrier	Description
1-6	193	(6) 1-5/8"	Sprint	(6) Decibel DB980H90E-M
7-15	180	(9) 1-5/8"	Nextel	(9) Swedcom ALP9212
16-21	165	(12) 1-5/8"	T-Mobile	(6) EMS RV65-18-XXDPL2 + (6) TMA's
22-27	150	(12) 1-5/8"	AT&T	(6) Allgon 7184 + (6) TMA's
—	30	—	Sprint	(1) GPS

1 Coax lines installed inside pole's shaft, unless otherwise stated.

Proposed Loading:

No.	Centerline Elevation (ft)	Coax and Lines	Carrier	Description
1-12	140	(12) 1-5/8"	Verizon	(6) Antel RWA-80014 (6) Antel LPA-185063/8CF

RESULTS

Based on information obtained from the original design drawings, the yield strength of steel for individual members was as follows:

Table 2 - Material Strength

Member Type	Yield Strength
Tower Shaft Sections	65 ksi
Base Plate	60 ksi
Anchor Bolts	75 ksi

Table 3 displays the ratio (as a percentage) of actual force in the member to their allowable capacities. Values greater than 100% indicate locations where the maximum force in the member exceeds its allowable capacity. *Note: Capacities up to 105% are considered acceptable.* **Table 4** displays the maximum foundation reactions.

If the assumptions outlined in this report differ from actual field conditions, FDH should be contacted to perform a revised analysis. Furthermore, as no information pertaining to the allowable twist and sway requirements for the existing or proposed appurtenances was provided, deflection and rotation were not taken into consideration when performing this analysis.

See the **Appendix** for detailed modeling information.

**Table 3 – Summary of Working Percentage of Structural Components
(85 MPH without ice)**

Member Type	Elevation (ft.)	Existing and Proposed Loading Max. % Allowable Stress
Section 1	155 to 195	70%
Section 2	120 to 155	78%
Section 3	75 to 120	85%
Section 4	40 to 75	81%
Section 5	0 to 40	86%
Base Plate		OK
Anchor Bolts		OK

Table 4 – Maximum Base Reactions

Base Reactions	Linear (w/o ice)	Non-Linear (w/o ice)
Axial	52 k	52 k
Shear	41 k	41 k
Moment	4,658 k-ft	4,794 k-ft

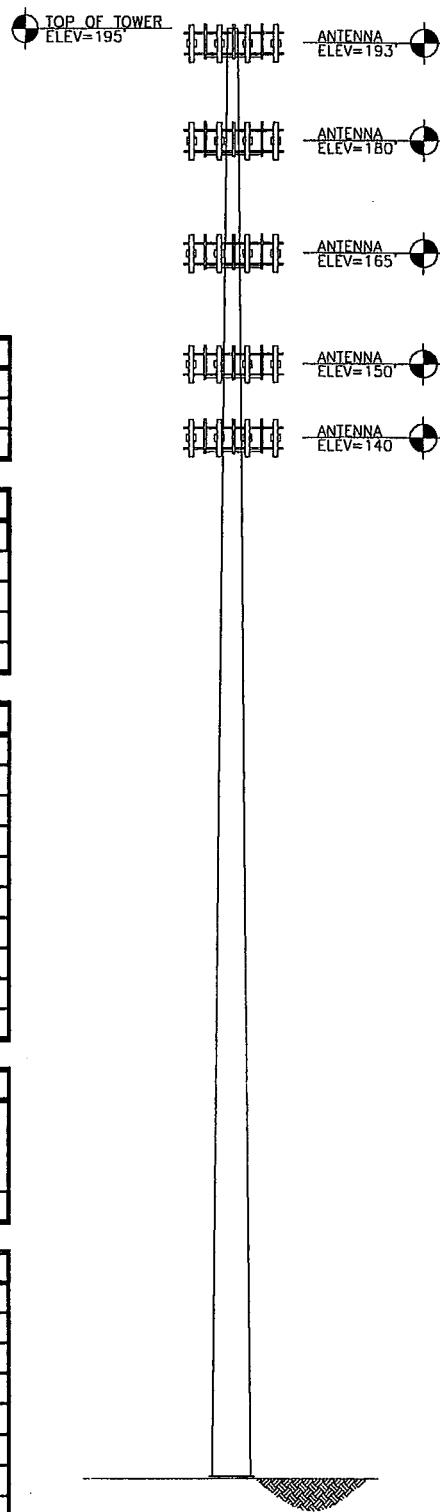

GENERAL COMMENTS

This engineering analysis is based upon the theoretical capacity of the structure. It is not a condition assessment of the tower and its foundation. It is the responsibility of SBA to verify that the tower modeled and analyzed is the correct structure (with accurate antenna loading information) modeled. If there are substantial modifications to be made or the assumptions made in this analysis are not accurate, FDH Engineering should be notified immediately to perform a revised analysis.

LIMITATIONS

All opinions and conclusions are considered accurate to a reasonable degree of engineering certainty based upon the evidence available at the time of this report. All opinions and conclusions are subject to revision based upon receipt of new or additional/updated information. All services are provided exercising a level of care and diligence equivalent to the standard and care of our profession. No other warranty or guarantee, expressed or implied, is offered. Our services are confidential in nature and we will not release this report to any other party without the client's consent. The use of this engineering work is limited to the express purpose for which it was commissioned and it may not be reused, copied, or distributed for any other purpose without the written consent of FDH Engineering, Inc.

(c) 2000 FDH Engineering Inc. Raleigh, North Carolina

***** Data File...:190'Pole\Ante.txt Job No.:07-0210E Engineer:PEL

Description :194.6-FT --Stonington East, CT

Design.....:85 MPH Without Radial Ice

Owner.....:SBA Network Services

Analyzing Method: Finite Element Method

Shaft Segments ---- FORCES AND MOMENTS:

Load Case 1: Basic Wind Velocity = 85 MPH.

Wind Force ($F=qz*Gh*[Cf*Ae+sum(Ca*Aa)]$) <= $2*qz*Gh*Ag$, where Ag is total area of pole.

Segment Elev. (ft)	Wind Forces (Kips)	[----Cumulative Forces----]		[----Moments (Ft-Kips)----]			
		Axial Forces (Kips)	From Ant/ Arm	From Shaft	From Wind	P-Delta Effects	Total Moment

FDH Engineering Inc. Monopole Design Program

Version 1.0 (8-2000) 14-Feb-2007

(c) 2000 FDH Engineering Inc. Raleigh, North Carolina

Data File...:190'Pole\Ante.txt Job No.:07-0210E Engineer:PEL

Description :194.6-FT --Stonington East, CT

Design.....:50 MPH Without Radial Ice

Owner.....:SBA Network Services

Analyzing Method: Finite Element Method

Shaft Segments --- FORCES AND MOMENTS:

Load Case 1: Basic Wind Velocity = 50 MPH.

Wind Force ($F=qz*Gh*[Cf*Ae+sum(Ca*Aa)]$) <= $2*qz*Gh*Ag$, where Ag is total area of pole.

Segment Elev. (ft)	[----Cumulative Forces----]		[----Moments (Ft-Kips)-----]
