The purpose of this report is to summarize the results of the non-linear, P- Δ structural analysis of the antenna upgrade proposed by T-Mobile on the existing self-supporting lattice tower located in Union, Connecticut.

The host tower is a 180-ft, three legged, tapered lattice tower originally designed and manufactured by Andrew Corporation. The tower geometry and structure member sizes were obtained from the original tower design drawings prepared by Andrew; drawing no. LI-3089-01 approved November 12, 1993.

Antenna and appurtenance information were obtained from a previous structural report prepared by Centek job no.; 16179.00 dated December 4, 2017 and a T-Mobile RF Sheet.

The tower is made up of nine (9) tapered vertical steel sections consisting of A572-50 pipe legs. Diagonal lateral support bracing consists of A36 steel angle construction. The vertical tower sections are connected by bolted flange plates while the pipe legs and bracing are connected by bolted and welded gusset connections. The tower face width is 9.50-ft at the top and 26.00-ft at the bottom.

Primary Assumptions Used in the Analysis

- The tower structure's theoretical capacity not including any assessment of the condition of the tower.
- The tower carries the horizontal and vertical loads due to the weight of antennas, ice load and wind.
- Tower is properly installed and maintained.
- Tower is in plumb condition.
- Tower loading for antennas and mounts as listed in this report.
- All bolts are appropriately tightened providing the necessary connection continuity.
- All welds are fabricated with ER-70S-6 electrodes.
- All members are assumed to be as specified in the original tower design documents.
- All members are "hot dipped" galvanized in accordance with ASTM A123 and ASTM A153 Standards.
- All member protective coatings are in good condition.
- All tower members were properly designed, detailed, fabricated, installed and have been properly maintained since erection.
- Any deviation from the analyzed antenna loading will require a new analysis for verification of structural adequacy.

A n a l y s i s

The existing tower was analyzed using a comprehensive computer program entitled tnxTower. The program analyzes the tower, considering the worst case loading condition. The tower is considered as loaded by concentric forces along the tower, and the model assumes that the tower members are subjected to bending, axial, and shear forces.

The existing tower was analyzed for the controlling basic wind speed (3-second gust) with no ice and the applicable wind and ice combination to determine stresses in members as per guidelines of TIA-222-G-2005 entitled "Structural Standard for Antenna Support Structures and Antennas", the American Institute of Steel Construction (AISC) and the Manual of Steel Construction; Load and Resistance Factor Design (LRFD).

The controlling wind speed is determined by evaluating the local available wind speed data as provided in Appendix N of the CSBC¹ and the wind speed data available in the TIA-222-G-2005 Standard.

T o w e r L o a d i n g

Tower loading was determined by the basic wind speed as applied to projected surface areas with modification factors per TIA-222-G-2005, gravity loads of the tower structure and its components, and the application of 1.00" radial ice on the tower structure and its components.

|-------------------|--|---|
| Basic Wind Speed: | Tolland County; $v = 95-105$ mph (3-second gust) | [Annex B of TIA-222-G-2005] |
| | Union; $v = 97$ mph (3 second gust) | [Appendix N of the 2018 CT Building Code] |
| Load Cases: | <u>Load Case 1</u> ; 97 mph wind speed w/ no ice plus gravity load – used in calculation of tower stresses and rotation. | [Appendix N of the 2018 CT Building Code] |
| | <u>Load Case 2</u> ; 50 mph wind speed w/ 1.00" radial ice plus gravity load – used in calculation of tower stresses. | [Annex B of TIA-222-G-2005] |

¹ The 2015 International Building Code as amended by the 2018 Connecticut State Building Code (CSBC).

|---------------|-----------------|--|-------------|
| Leg (T9) | 0'-0"- 20'-0" | 57.4% | PASS |
| Diagonal (T5) | 80'-0"- 100'-0" | 78.2% | PASS |

| Deflection Criteria | Proposed (degrees) | Allowable (degrees) | Result |
|---------------------|--------------------|---------------------|-------------|
| Sway (Tilt) | 0.3267 | 0.5 | n/a |
| Twist | 0.0788 | 0.5 | n/a |
| Combined | 0.3361 | 0.5 | PASS |

Foundation and Anchors

Tower legs are connected to three (3) reinforced concrete pad and pier foundations by means of (6) 1.375" Ø, ASTM A193 Grade B7 anchor bolts per leg, embedded into the concrete foundation structure.

- The tower reactions developed from the governing Load Case were used in the verification of the foundation and anchor bolts:

| Leg Reactions | Vector | Proposed Tower Reactions |
|---------------|-------------|--------------------------|
| Leg | Shear | 38 kips |
| | Compression | 295 kips |
| | Uplift | 251 kips |
| Base | Shear | 64 kips |
| | Compression | 52 kips |

- The anchor bolts were found to be within allowable limits.

| Tower Section | Component | Stress Ratio (percentage of capacity) | Result |
|---------------|-----------|--|--------|
| Anchor Bolts | Tension | 52.5% | PASS |

- The foundation was found to be within allowable limits.

| Foundation | Design Limit | Original Design Reactions ⁽¹⁾ | Proposed Reactions | Result |
|-------------------------------|--------------|--|--------------------|--------|
| (3) Reinf. Conc. Pad and Pier | Uplift | 470.3 kips | 251 kips | PASS |
| | Compression | 569.3 kips | 295 kips | PASS |

GENERAL DESCRIPTION OF STRUCTURAL ANALYSIS PROGRAM

tnxTower, is an integrated structural analysis and design software package for Designed specifically for the telecommunications industry, tnxTower, formerly RISA Tower, automates much of the tower analysis and design required by the TIA/EIA 222 Standard.

tnxTower Features:

- tnxTower can analyze and design 3- and 4-sided guyed towers, 3- and 4-sided self-supporting towers and either round or tapered ground mounted poles with or without guys.
- The program analyzes towers using the TIA-222-G (2005) standard or any of the previous TIA/EIA standards back to RS-222 (1959). Steel design is checked using the AISC ASD 9th Edition or the AISC LRFD specifications.
- Linear and non-linear (P-delta) analyses can be used in determining displacements and forces in the structure. Wind pressures and forces are automatically calculated.
- Extensive graphics plots include material take-off, shear-moment, leg compression, displacement, twist, feed line, guy anchor and stress plots.
- tnxTower contains unique features such as True Cable behavior, hog rod take-up, foundation stiffness and much more.

Tower Input Data

The main tower is a 3x free standing tower with an overall height of 180.00 ft above the ground line.

The base of the tower is set at an elevation of 0.00 ft above the ground line.

The face width of the tower is 9.50 ft at the top and 26.00 ft at the base.

This tower is designed using the TIA-222-G standard.

The following design criteria apply:

Basic wind speed of 97 mph.

Structure Class III.

Exposure Category B.

Topographic Category 1.

Crest Height 0.00 ft.

Nominal ice thickness of 1.0000 in.

Ice thickness is considered to increase with height.

Ice density of 56 pcf.

A wind speed of 50 mph is used in combination with ice.

Temperature drop of 50 °F.

Deflections calculated using a wind speed of 60 mph.

A non-linear (P-delta) analysis was used.

Pressures are calculated at each section.

Stress ratio used in tower member design is 1.

Local bending stresses due to climbing loads, feed line supports, and appurtenance mounts are not considered.

Optimizer® Side-by-Side Dual Polarized Antenna, 1710-2200, 65deg, 18.4dBi, 1.4m, VET, 0-10deg RET

Product Description

A combination of two X-Polarized antennas in a single radome, this pair of variable tilt antennas provides exceptional suppression of all upper sidelobes at all downtilt angles. It also features a wide downtilt range. This antenna is optimized for performance across the entire frequency band (1710-2200 MHz). The antenna comes pre-connected with two antenna control units (ACU).

Features/Benefits

- Variable electrical downtilt - provides enhanced precision in controlling intercell interference. The tilt is infield adjustable 0-10 deg.
- High Suppression of all Upper Sidelobes (Typically <-20dB).
- Gain tracking – difference between AWS UL (1710-1755 MHz) and DL (2110-2155 MHz) <1dB.
- Two X-Polarised panels in a single radome.
- Azimuth horizontal beamwidth difference <4deg between AWS UL (1710-1755 MHz) and DL (2110-2155 MHz).
- Low profile for low visual impact.
- Dual polarization; Broadband design.
- Includes (2) AISG 2.0 Compatible ACU-A20-N antenna control units.
