Re: **EM-VER-156-150130 – Cellco Partnership d/b/a Verizon Wireless
668 Jones Hill Road, West Haven, Connecticut**

Dear Ms. Bachman:

On March 2, 2015, the Siting Council acknowledged receipt of Cellco's notice of intent to modify its telecommunications facility at 668 Jones Hill Road in West Haven, Connecticut. The modifications involved the replacement of three antennas.

As a condition of the acknowledgement, Cellco was required to provide the Council with a letter stating that it had complied with the recommendations made in the structural report attached to that filing. Attached is a Professional Engineer's Tower Modification Certification letter verifying that the installation was completed according to that structural report.

If you have any questions please do not hesitate to contact me.

Sincerely,

Kenneth C. Baldwin

Re: Tower Modification Certification

Project: Verizon West Haven SW
668 Jones Hill Road, West Haven, CT

Tower Owner: American Tower
3500 Regency Parkway, Suite 100 Cary, NC 27518

Engineer: American Tower
3500 Regency Parkway, Suite 100 Cary, NC 27518

Centek Project No.: 15003.062

CSC Exempt Mod Reference No.: EM-VER-156a-150130

Dear Mr. Parks,

We are providing this "Tower Modification Certification" with regard to the structural components at the above referenced project.

The following are the basis for substantiating compliance with the Structural Analysis Report (ATC site number 243036) prepared by American Tower on 12/22/14 (**See note below**):

- Review of the American Tower Corporation Structural Analysis dated 12/22/2014.
- Field observations by Centek Engineering personnel on 10/28/15 of the completed upgrade

NOTE: The Modifications on page 1 of the above referenced Structural Analysis Report prepared by ATC on 12/22/14 were not installed. The referenced modifications were required to accommodate the proposed AT&T installation per the mod design prepared by ATC on 06/10/14. AT&T's equipment was not installed at the time of the above referenced site visit. An independent structural analysis was prepared by Centek Engineering, Inc. without the aforementioned AT&T equipment and modifications. The results indicated the tower is structurally adequate to support the Verizon antenna upgrade without the modifications. The modifications will however need to be completed prior to AT&T's equipment installation.

Based on the above stated the tower will exceed 100 Percent of the post construction structural rating. The work under this Contract has been reviewed and found, to the Engineer's best knowledge, information and belief, to be completed in general compliance with the documents referenced above. This certification is not a review of the adequacy or effectiveness of the modification/reinforcement solution.

Sincerely,

Carlo F. Centore, PE
Principal - Structural
