

SAY NO to Another Power Plant in the South End

NuPower, a company based in Easton, CT, would like to build a 7-story (over 70-foot tall) tower of 21 fuel cells at 600 Iranistan Avenue.

The site is close to neighborhood schools, residential areas, the university and Seaside Park. It would look similar to one section of the plant at right.

The plant would be fueled by natural gas and would emit unacceptable levels of noise, CO₂, methane, nitrous oxide and other pollutants, leading to higher rates of asthma in our community. It would also contribute hundreds of thousands of tons of the same green house gases that cause global warming.

Fuel cells convert natural gas to highly explosive hydrogen gas. An accident, while unlikely, would devastate our community and shutdown transportation on both the railroad, I-95 and at street level.

Nupower and its partners have been denied once by Connecticut's Siting Council due to health and safety concerns, but they are back.

What do South End residents get in return? NOTHING.

Your opinion in this matter is urgently needed!

Please fill in your name and address in the box below and voice your opposition.

I, DALTON M. GHETTI (name) live at
334 MIDLAND ST (address),

Bridgeport, Connecticut, and am opposed to the construction of a power plant at 600 Iranistan Avenue.
