Petition No. 1416
Bloom Energy Corporation
Home Depot, 89 Interstate Park Drive
Southington, Connecticut

Interrogatories – Set I

1. Please provide a detailed Site Plan of the proposed facility, including but not limited to, the dimensions and locations of the proposed fuel cell facility, concrete pads, cabinets, fence design, bollards (if applicable) and utility connections.

Response: Please see the attached site plan with dimensions and locations of the proposed fuel cell facility, concrete pads, cabinets, fence design, bollards and utility connections.

2. Regarding the sound study provided as Exhibit 6 of the Petition, how close does a building have to be to be considered under Scenario 1?

Response: The building would need to be adjacent to the fuel cell or within about 6 feet to be considered under Scenario 1. As explained in more detail below, the provided model is a worst case scenario and actual sound pressure at the site is expected to be less than presented in the model.

3. Would Bloom install the sound dampening material mentioned on page 8 of the Petition? If so, what would be the predicted sound emissions levels from the facility at the nearest property boundaries with the sound dampening material in place?

Response: The sound dampening material would be installed by Bloom on site during the construction of the fuel cell. This material has been used elsewhere by Bloom and is expected lower the noise output by as much as 3 dBA. The predicted noise levels without the noise dampening materials 61.7 dBA and with the materials would be about 58.7 dBA.

4. Section IV Notice and Consultation on Page 10 of the filing references notice to municipal officials. Other than what was provided in the petition, did the Town offer any comments regarding the proposed project?

Response: The only response from the Town was the one included in the petition as Exhibit 8.

5. Is the project interconnection required to be reviewed by ISO-NE?

Response: Yes, ISO-NE will review the proposed project. Per the ISO-NE planning procedure PP5-1, Bloom must submit a completed generator notification form to IS-NE's reliability committee.

6. Was the project selected for the LREC/ZREC program?

Response: Yes, the project was selected for the LREC program.

7. Will fuel cell operation/emergency training be conducted with Town of Southington emergency responders?

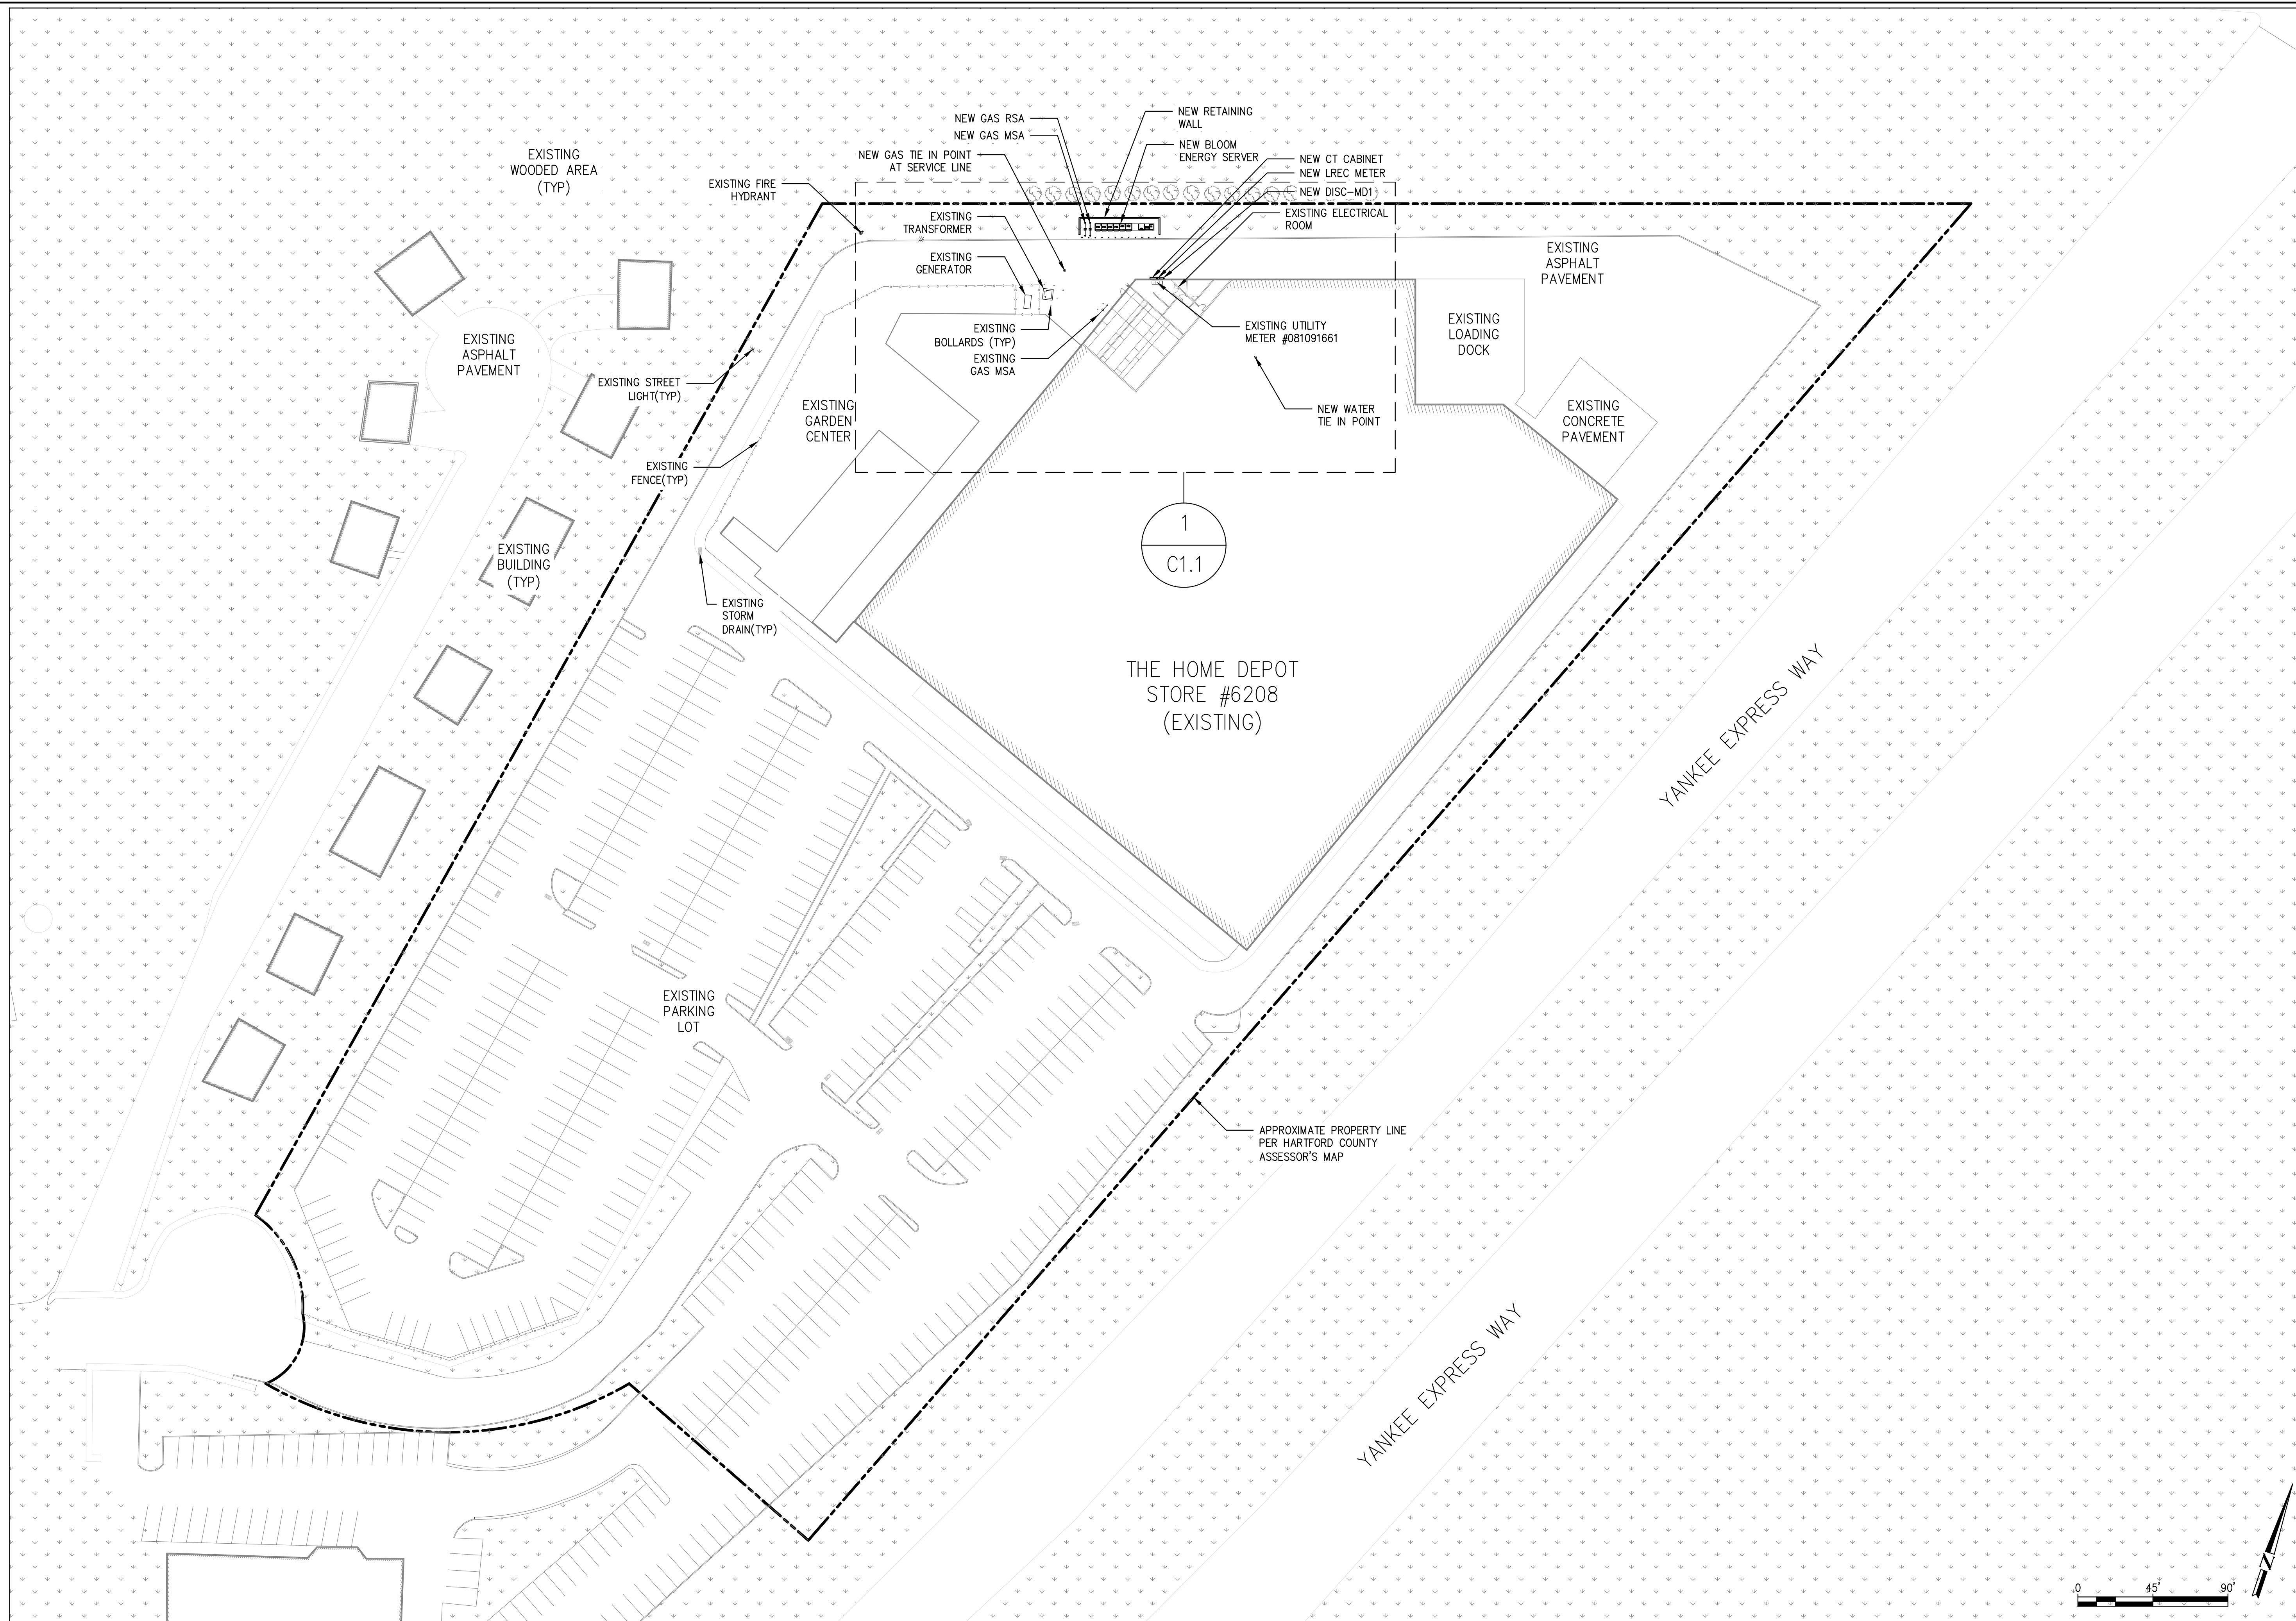

Response: Yes, as part of the building permit application review process the Southington Fire Marshal will review the project. During this review, Bloom will provide any on-site training requested by local officials.

8. Please identify the media to be used for pipe cleaning procedures at the proposed facility in accordance with Connecticut General Statutes § 16-50ii as referenced on Petition page 4.

Response: The media to be used for the pipe cleaning procedures at the proposed facility will be nitrogen.

9. Does Bloom intend to reach out to the Southington Fire Marshal regarding natural gas pipe cleaning procedures prior to submission of a pipe cleaning plan/protocol?

Response: Yes, Bloom will coordinate with the Southington Fire Marshal regarding the installation and pipe cleaning procedures prior to execution of the pipe cleaning protocol.
