Project: Greenskies Clean Energy LLC, 5 Megawatt AC Photovoltaic Electric Generating Facility "Mulnite Solar" on a 32 Acre Site along Wapping, Rockville and Barber Hill Roads in East Windsor, Connecticut  
NDDDB Determination No. 202010288 (Previous NDDDB No. 201908948)

Dear Jeffery Shamas,

I have reviewed Natural Diversity Data Base maps and files regarding the Greenskies Clean Energy LLC, 5 Megawatt AC Photovoltaic Electric Generating Facility "Mulnite Solar" on a 32 Acre Site along Wapping, Rockville and Barber Hill Roads in East Windsor, Connecticut. In our NDDDB Preliminary Assessment No. 201908948 dated August 20, 2019 we identified known extant populations of State Endangered, Threatened and State Special Concern Species that occur within or close to the boundaries of this project.

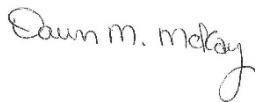

I received the Memorandum from VHB dated August 26, 2020 which outlined rare species investigations at this project site. I do not anticipate negative impacts to the State-listed species (RCSA Sec. 26-306) since only one state listed species, state special concern brown thrasher, was found on the subject property but the suitable habitat for this species is not part of the project footprint. The result of this review does not preclude the possibility that listed species may be encountered on site and that additional action may be necessary to remain in compliance with certain state permits.

This determination is good for two years. Please re-submit an NDDDB Request for Review if the scope of work changes or if work has not begun by October 22, 2022.

Natural Diversity Data Base information includes all information regarding critical biological resources available to us at the time of the request. This information is a compilation of data collected over the years by the Department of Energy and Environmental Protection's Natural History Survey and cooperating units of DEEP, private conservation groups and the scientific community. This information is not necessarily the result of comprehensive or site-specific field investigations. Consultations with the Data Base should not be substitutes for on-site surveys required for environmental assessments. Current research projects and new contributors continue to identify additional populations of species and locations of habitats of concern, as well as, enhance existing data. Such new information is incorporated into the Data Base as it becomes available. The result of this review does not preclude the possibility that listed species may be encountered on site and that additional action may be necessary to remain in compliance with certain state permits.

Please contact me if you have further questions at (860) 424-3592, or [dawn.mckay@ct.gov](mailto:dawn.mckay@ct.gov). Thank you for consulting the Natural Diversity Data Base.

Sincerely,

Dawn M. McKay
