Re: **PETITION NO. 1464** - The Connecticut Light and Power Company d/b/a Eversource Energy petition for a declaratory ruling, pursuant to Connecticut General Statutes §4-176 and § 16-S0k, for the proposed Rockville Upgrade Project consisting of the replacement and reconductoring of electric transmission line structures along approximately 1.2 miles of its existing No. 1606 and No. 1724 115-kilovolt transmission lines within existing Eversource electric transmission line right-of-way between Rockville Junction and Rockville Substation in Vernon, Connecticut, and related electric transmission line and substation improvements. - Amendment

Dear Ms. Bachman,

On November 18, 2020 the Connecticut Siting Council (“Council”) considered and ruled that the project presented in the subject Eversource Energy (“Eversource”) petition would not have a substantial adverse environmental effect and would not require a Certificate of Environmental Compatibility and Public Need. The Petition proposed a new structure (6713) inside Rockville Substation to alleviate tension on the existing termination structure with the installation of the new conductor.

A pre-construction soil boring discovered that the structure would impact a previously unknown brick sewer line that traverses the site and appears to be still in use. Eversource Real Estate is following up as to the owner and status of the sewer line.

As a result of this discovery, Eversource is shifting the location for the proposed structure closer to West Main Street and approximately twenty feet east off the edge of the streambank as depicted in the Attachment, Updated Map-Sheet 2.

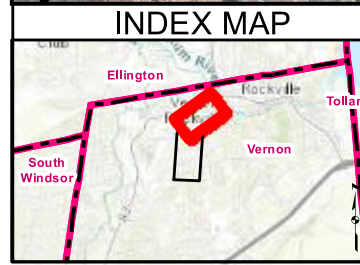

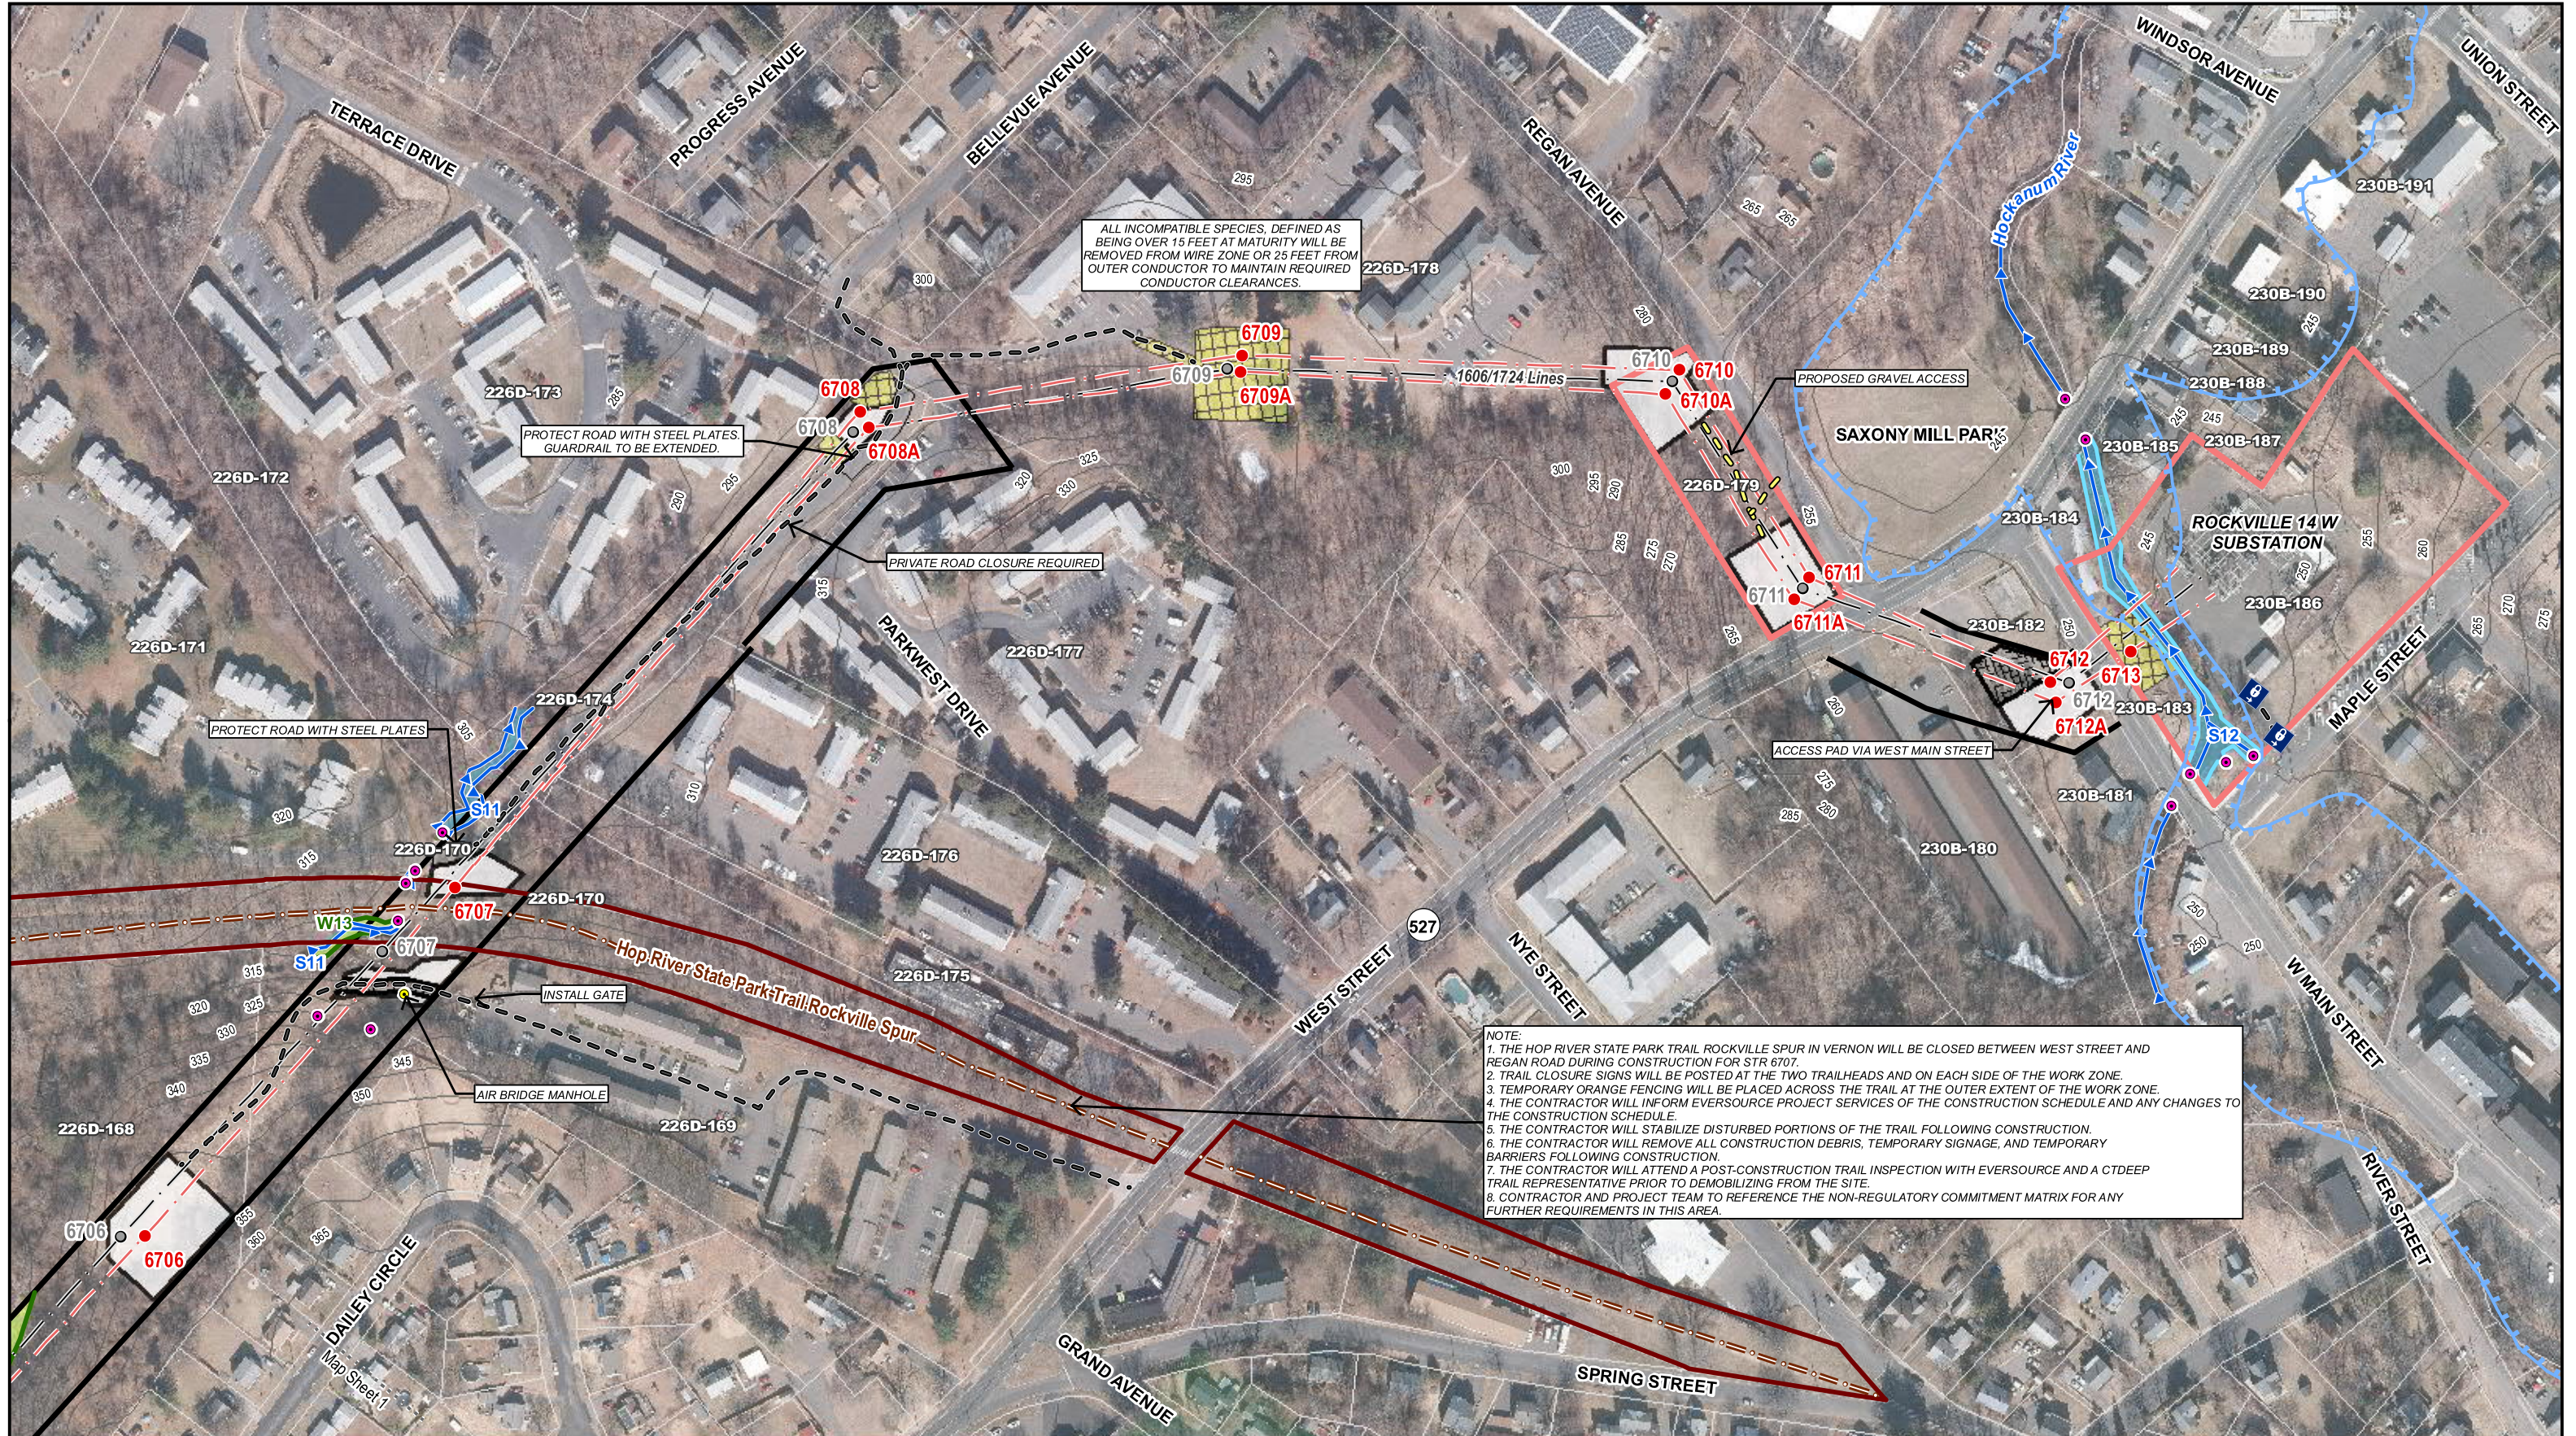

Please do not hesitate to contact me at [Kathleen.shanley@eversource.com](mailto:Kathleen.shanley@eversource.com) or at (860) 728-4517 if you have any questions or concerns.

Sincerely,

Kathleen M. Shanley  
Manager – Transmission Siting
