RE: **PETITION NO. 1470** – Cellco Partnership d/b/a Verizon Wireless, New Cingular Wireless PCS, LLC and T-Mobile Northeast, LLC joint declaratory ruling, pursuant to Connecticut General Statutes §4-176 and §16-50k, for the proposed installation of a temporary telecommunications facility and associated equipment located at Sacred Heart University, 5151 Park Avenue, Fairfield, Connecticut.

Dear Attorney Baldwin:

The Connecticut Siting Council (Council) is in receipt of your correspondence dated October 6, 2022 regarding a change to the above-referenced declaratory ruling that was issued by the Council on December 20, 2021.

Pursuant to Condition No. 1 of the Council's December 20, 2021 Declaratory Ruling, your request to replace two antennas and install three remote radio heads on the existing Alpha Sector antenna mounts is hereby approved.

This approval applies only to the project changes described in your October 6, 2022 correspondence.

Please be advised that deviations from the standards established by the Council in the Declaratory Ruling are enforceable under the provisions of Connecticut General Statutes §16-50u.

Thank you for your attention and cooperation.

Sincerely,

Melanie A. Bachman Executive Director

c: The Honorable Brenda L. Kupchick, First Selectwoman, Town of Fairfield (<u>firstselectmanffld@fairfieldct.org</u>) Service List, dated December 3, 2021

Melanie A. Bachman, Esq. Executive Director/Staff Attorney **Connecticut Siting Council 10 Franklin Square** New Britain, CT 06051

Re: Petition No. 1470 – Petition for a Declaratory Ruling on the Need to Obtain a Siting **Council Certificate for the Installation of a Temporary Telecommunications Facility** at Sacred Heart University (SHU), 5151 Park Avenue, Fairfield, Connecticut

Dear Attorney Bachman:

As you are aware, the Council approved Petition No. 1470 on December 16, 2021, subject to conditions including, but not limited to, the delegation of "any project changes" to Council staff.

The purpose of this letter is to notify you and the Council that the Cellco intends to remove two (2) existing antennas from its Alpha Sector and install two (2) MX10FIT645 antennas on the existing antenna mounts. Cellco also intends to install three (3) additional remote radio heads behind its antennas.

In support of these project changes, attached please find the following:

- Updated Stamped and Signed Mount Analysis •
- Updated Stamped and Signed Structural Analysis
- Revised C-Squared Calculated Radio Frequency Exposure Report

Boston | Hartford | New York | Providence | Stamford | Albany | Los Angeles | Miami | New London | rc.com

Melanie A. Bachman, Esq. October 6, 2022 Page 2

We respectfully request staff approval for these project changes. If you have any questions or need any additional information about this change, please contact me.

Sincerely,

Kunig mu

Kenneth C. Baldwin

RE: Site Name: TEP Number: Site Address: PLATTSVILLE RELO CT 0316498 5151 Park Avenue Fairfield, CT 06825

To Whom It May Concern:

TEP Northeast (TEP NE) has been authorized by Verizon to perform a mount analysis on the existing Verizon antenna/RRH mount to determine their capability of supporting the following loading:

- (4) MX10FIT665-CC Antennas (70.9"x12.2"x7.5" Wt. = 53 lbs. /each)
- (2) MX10FIT645-XX Antennas (70.9"x15.0"x7.4" Wt. = 53 lbs. /each)
- (4) RF4439D-25A RRH's (15.0"x15.0"x10.0" Wt. = 98 lbs. /each)
- (4) RF4440D-13A RRH's (15.0"x15.0"x8.1" Wt. = 82 lbs. /each)
- (4) RT4401-48A RRH's (13.9"x8.6"x4.2" Wt. = 19 lbs. /each)
- (1) OVP Box (28.9"x15.7"x10.3" Wt. = 32 lbs. /each)

*Proposed equipment shown in bold

Mount fabrication drawings prepared by SitePro1 P/N SNP12-3XX dated January 7, 2015 and Support Rail fabrications drawings by SitePro1 P/N HRA-12 dated July 7, 2016 were used to perform this analysis.

Mount Analysis Methods:

- This analysis was conducted in accordance with EIA/TIA-222-H, Structural Standards for Steel Antenna Towers and Antenna Supporting Structures and the International Building Code 2015 with 2018 Connecticut State Building Code.
- TEP NE considers this mount to be asymmetrical and has applied wind loads in 30 degree increments all around the mount. Per TIA-222-H and Appendix N of the Connecticut State Building Code, the max basic wind speed for this site is equal to 125 mph with a max basic wind speed with ice of 50 mph and a max ice thickness of 1.0 in. An escalated ice thickness of 1.14 in was used for this analysis.
- TEP NE considers this site to be exposure category C; tower is located near large, flat, open, terrain/grasslands.
- TEP NE considers this site to be topographic category 1; tower is located on flat terrain or the bottom of a hill or ridge.
- TEP NE considers this site to have a spectral response acceleration parameter at short periods, S_s, of 0.215 and a spectral response acceleration parameter at a period of 1 second, S₁, of 0.055.
- The mount has been analyzed with load combinations consisting of 500 lbs live load using a service wind speed of 30 mph wind on the worst case antenna. Analysis performed on each antenna pipe to determine worst case location; worst case location was antenna position 2.
- The mount has been analyzed with load combinations consisting of a 250 lbs live load in a worst case location on the mount.
- The existing mount is secured to the existing monopole with ring mounts and threaded rods. TEP NE considers the threaded rods to be the governing connection member.

Based on our evaluation, we have determined that the existing mount **<u>IS CAPABLE</u>** of supporting the proposed installation.

	Component	Controlling Load Case	Stress Ratio	Pass/Fail
Existing Mount Rating	56	LC3	67%	PASS

Reference Documents:

- Mount fabrication drawings prepared by SitePro1 P/N SNP12-3XX dated January 7, 2015.
- Support Rail Kit drawings prepared by SitePro1 P/N HRA-12 dated July 7, 2016.

This determination was based on the following limitations and assumptions:

- 1. TEP NE is not responsible for any modifications completed prior to and hereafter which TEP NE was not directly involved.
- 2. All structural members and their connections are assumed to be in good condition and are free from defects with no deterioration to its member capacities.
- 3. All antennas, coax cables and waveguide cables are assumed to be properly installed and supported as per the manufacturer's requirements.
- 4. The existing mount has been adequately secured to the tower structure per the mount manufacturer's specifications.
- 5. All components pertaining to Verizon's mount must be tightened and re-plumbed prior to the installation of new appurtenances.
- 6. TEP NE performed a localized analysis on the mount itself and not on the supporting tower structure.

Please feel free to contact our office should you have any questions.

Respectfully Submitted, TEP Northeast

ICE WEIGHT CALCULATIONS

Thickness of ice:	1.14 in.
Density of ice:	56 pcf

MX10FIT665-CC Antenna

Weight of ice based on	total radial SF area:	
Height (in):	70.9	
Width (in):	12.2	
Depth (in):	7.5	
Total weight of ice on c	bject:	127 lbs
Weight of object:	53.0	bs
Combined weight of ice	and object:	180 lbs

RF4439D-25A RRH

Weight of ice based on	total radial SF area:	
Height (in):	15.0	
Width (in):	15.0	
Depth (in):	10.0	
Total weight of ice on c	bject:	33 lbs
Weight of object:	98.0 lbs	
Combined weight of ice	and object:	131 lbs

RT4401-48A RRH

Weight of ice based on	total radial SF area:	
Height (in):	13.9	
Width (in):	8.6	
Depth (in):	4.2	
Total weight of ice on o	bject:	17 lbs
Weight of object:	19.0 lbs	
Combined weight of ice	36 lbs	

2" pipe

Per foot weight of ice:		
diameter (in):	2.38	
Per foot weight of ice on object:		5 plf

HSS 4x4

Weight of ice based on	total radial SF area:		
Height (in):		4	
Width (in):		4	
Per foot weight of ice of	n object:		9 plf

MX10FIT645-XX Antenna

Weight of ice based on total radial SF area:					
Height (in):	70.9				
Width (in):	15.0				
Depth (in):	7.4				
Total weight of ice on ob	oject:	147 lbs			
Weight of object:	53.0	lbs			
Combined weight of ice	and object:	200 lbs			

RF4440D-13A RRH

Weight of ice based on total radial SF area:					
Height (in):		15.0			
Width (in):		15.0			
Depth (in):		8.1			
Total weight of ice on ob	oject:		32 lbs		
Weight of object:		82.0	<mark>os</mark>		
Combined weight of ice and object:			114 lbs		

OVP Box

Weight of ice based on total radial SF area:						
Height (in):	28.9					
Width (in):	15.7					
Depth (in):	10.3					
Total weight of ice on ob	oject: 67 lbs					
Weight of object:	32.0 lbs					
Combined weight of ice a	and object: 99 lbs					

3-1/2" Pipe

Per foot weight of ice:	
diameter (in):	4
Per foot weight of ice on	object: 7 plf

L 4x4 Angles

Weight of ice based on t	otal radial SF area:	
Height (in):	4	
Width (in):	4	
Per foot weight of ice on	object:	9 plf

(REVISED) STRUCTURAL ANALYSIS REPORT

For

PLATTSVILLE RELO CT

5151 Park Avenue Fairfield, CT 06825

Antennas Mounted on the

Temporary Ballasted Monopole

117'-6" Temporary Ballasted Monopole

Prepared for:

118 Flanders Road Westborough, MA 01581

<u>Dated: September 12, 2022 (Rev. 2)</u> <u>November 18, 2021 (Rev.1)</u> <u>November 4, 2021</u>

Prepared by:

45 Beechwood Drive North Andover, MA 01845 (P) 978.557.5553 (F) 978.336.5586 www.nudsondesigngrouplic.com

SCOPE OF WORK:

Hudson Design Group LLC (HDG) has been authorized by Verizon to conduct a structural evaluation of the existing 117'-6" temporary ballasted monopole supporting the proposed Verizon's antennas located at elevation 121'-7" above the ground level that is being relocated to 5151 Park Avenue Fairfield, CT. This analysis is to confirm that the existing tower and base structure with the new location and loading is in conformance with the original tower analysis and drawings referenced below.

This report represents this office's findings, conclusions and recommendations pertaining to the support of Verizon's existing and proposed antennas listed below.

The following documents were used for our reference:

- Temporary Monopole Design Drawings prepared by Ambor Structures dated June 29, 2015.
- Non-Penetrating Foundation Drawings prepared by Ambor Structures dated July 16, 2015.

CONCLUSION SUMMARY:

Based on our evaluation, we have determined that the existing tower **is in conformance** with the ANSI/TIA-222-H Standard for the loading considered under the criteria listed in this report. <u>The tower structure is rated at **94.9** % - (Pole Section-L3 from EL.85.428' to EL.105.428' Controlling)</u>.

FOUNDATION SUMMARY:

Based on our evaluation, we have determined that the existing foundation <u>is in</u> <u>conformance</u> with the ANSI/TIA-222-H Standard for the loading considered under the criteria listed in this report.

 Per the Non-Penetrating Foundation Design Drawings (6) 2 ft x 2 ft x 6 ft concrete waste blocks per sector (typ. of 12 sectors, total of 72 blocks) each weighing a minimum of 3600 lbs are required to achieve its overturning capacity of 2500 ftkips.

HDG recommends the following prior to installation:

- Stripping topsoil and fill to provide a minimum 2-foot-thick layer of compacted structural fill or ³/₄inch crushed stone base course. Crushed stone (if used) should be separated from the fill subgrade and excavation sidewalls using a non-woven geotextile fabric, such as Mirafi 140N or equal, to prevent stone from punching into the fill subgrade.
- 2. Prior to placing the base course, the existing fill subgrade should be proof-rolled with multiple passes of a minimum 5-ton vibratory roller. The subgrade should be firm and unyielding. If soft or unstable areas are identified, they should be evaluated by the geotechnical engineer to evaluate suitability or to further evaluate the extent of potential over-excavation and replacement needed to achieve a stable subgrade.
- 3. Once the subgrade has been properly prepared, the base course layer can be placed to achieve design foundation elevation. If a well-graded structural fill is used, it should be placed in maximum 12-inch-thick loose lifts (for vibratory rollers) or 6-inch-thick loose lifts (large plate compactors) and compacted to at least 95% of the maximum dry density as determined by ASTM D 1557. Crushed stone, if used, should be placed in similar lift thicknesses, and chinked/compacted using multiple passes of a vibratory roller or large plate compactor.

APPURTENANCES CONFIGURATION:

VERIZON PROPOSED COAX CABLES:

Tenant	Coax Cables	Elev.	Mount
Verizon	(1) 12x24 Hybrid Cables	121'-7"	Inside Monopole

*Proposed Verizon Coax Cables shown in Bold.

ANALYSIS RESULTS SUMMARY:

Component	Max. Stress Ratio	Elev. of Component (ff)	Pass/Fail	Comments
Pole Section-L1	29.2 %	115.428 - 125.428	PASS	
Pole Section-L2	80.1 %	105.428 - 115.428	PASS	
Pole Section-L3	94.9 %	85.428 - 105.428	PASS	Controlling
Pole Section-L4	85.1 %	46.714 - 85.428	PASS	
Pole Section-L5	78.0 %	8 - 46.714	PASS	
Anchor Rods & Base Plate	59.1 %	-	PASS	

FOUNDATION COMPARISON SUMMARY:

	Design Capacity	Proposed Loading	Pass/Fail
Overturning	Overturning 2500 ft-kips		PASS

Note: HDG referenced non-penetrating foundation design drawings provided by the client and prepared by Ambor Structures dated July 16, 2015. According to design drawings the non-penetrating foundation has an overturning moment capacity of 2500 ft-kips. To achieve said capacity there is a ballast requirement of a minimum of 251,000 lbs which consists of (6) 2 ft x 2 ft x 6 ft concrete waste blocks per sector, for a total of (72) concrete waste blocks, each block should weigh a minimum of 3,600 lbs.

DESIGN CRITERIA:

1. EIA/TIA-222-H Structural Standards for Steel Antenna Towers and Antenna Supporting Structures

> County: Fairfield Ultimate Wind Speed: 125 mph (3 second gust) Structural Class: II Exposure Category: C Topographic Category: 1 Nominal Ice Thickness: 1 inch

2. Approximate height above grade to proposed antennas: 121'-7"

*Calculations and referenced documents are attached.

ASSUMPTIONS:

- 1. The appurtenances configuration is as stated in this report. All antennas, coax cables and waveguide cables are assumed to be properly installed and supported as per the manufacturer's requirements.
- 2. The temporary monopole and the non-penetrating foundation are properly constructed and maintained. All structural members and their connections are assumed to be in good condition and are free from defects with no deterioration to its member capacities.
- 3. The support mounts and platforms are not analyzed and are considered adequate to support the loading. The analysis is limited to the primary support structure itself.

SUPPORT RECOMMENDATIONS:

HDG recommends that the proposed antennas, RRHs and Junction Box be mounted on the proposed platform supported by the temporary ballasted monopole.

Tower Input Data

The tower is a monopole.

This tower is designed using the TIA-222-H standard. The following design criteria apply: Tower base elevation above sea level: 8.00 ft. Basic wind speed of 125 mph. Risk Category II. Exposure Category C. Simplified Topographic Factor Procedure for wind speed-up calculations is used. Topographic Category: 1. Crest Height: 0.00 ft. Nominal ice thickness of 1.0000 in. Ice thickness is considered to increase with height. Ice density of 56 pcf. A wind speed of 50 mph is used in combination with ice. Temperature drop of 50 °F. Deflections calculated using a wind speed of 60 mph. A non-linear (P-delta) analysis was used. Pressures are calculated at each section. Stress ratio used in pole design is 1. Local bending stresses due to climbing loads, feed line supports, and appurtenance mounts are not considered.

NWAV™ X-Pol Ten-Port Antenna

X-Pol Ten-Port 6 ft, 45° Form in Tighter, with Smart Bias Ts, 698-4200 MHz:

2 ports 698-894 MHz, 4 ports 1695-2180 MHz, and 4 ports 3400-4200 MHz

- Excellent passive intermodulation (PIM) performance reduces harmful interference.
- Fully integrated (iRETs) with independent RET control for low band and mid band
- FET configured with internal RET for 3.4-4.2 GHz and ease of future network optimization.
- Optimized CBRS vertical breamwidth to maximize EIRP and RSRP performance
- · SON-Ready array spacing supports beamforming capabilities
- Integrated Smart Bias-Ts reduce leasing costs

--

1. Introduction

The purpose of this report is to investigate compliance with applicable FCC regulations for the proposed modification of the Verizon Wireless antenna arrays on a new temporary monopole tower located at 5151 Park Avenue in Fairfield, CT. The coordinates of the tower are 41.220258 N, 73.247433 W.

This report considers the planned antenna configuration for AT&T, Verizon Wireless and T-Mobile to derive the resulting % Maximum Permissible Exposure of its proposed installation.

2. FCC Guidelines for Evaluating RF Radiation Exposure Limits

In 1985, the FCC established rules to regulate radio frequency (RF) exposure from FCC licensed antenna facilities. In 1996, the FCC updated these rules, which were further amended in August 1997 by OET Bulletin 65 Edition 97-01. These new rules include Maximum Permissible Exposure (MPE) limits for transmitters operating between 300 kHz and 100 GHz. The FCC MPE limits are based upon those recommended by the National Council on Radiation Protection and Measurements (NCRP), developed by the Institute of Electrical and Electronics Engineers, Inc., (IEEE) and adopted by the American National Standards Institute (ANSI).

The FCC general population/uncontrolled limits set the maximum exposure to which most people may be subjected. General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.

Public exposure to radio frequencies is regulated and enforced in units of milliwatts per square centimeter (mW/cm²). The general population exposure limits for the various frequency ranges are defined in the attached "FCC Limits for Maximum Permissible Exposure (MPE)" in Attachment B of this report.

Higher exposure limits are permitted under the occupational/controlled exposure category, but only for persons who are exposed as a consequence of their employment and who have been made fully aware of the potential for exposure, and they must be able to exercise control over their exposure. General population/uncontrolled limits are five times more stringent than the levels that are acceptable for occupational, or radio frequency trained individuals. Attachment B contains excerpts from OET Bulletin 65 and defines the Maximum Exposure Limit.

Finally, it should be noted that the MPE limits adopted by the FCC for both general population/uncontrolled exposure and for occupational/controlled exposure incorporate a substantial margin of safety and have been established to be well below levels generally accepted as having the potential to cause adverse health effects.

3. RF Exposure Calculation Methods

The power density calculation results were generated using the following formula as outlined in FCC bulletin OET 65, and Connecticut Siting Council recommendations:

Power Density =
$$\left(\frac{1.6^2 \times 1.64 \times \text{ERP}}{4\pi \times R^2}\right)$$
 X Off Beam Loss

Where:

ERP = Effective Radiated Power

R = Radial Distance =
$$\sqrt{(H^2 + V^2)}$$

H = Horizontal Distance from antenna

V = Vertical Distance from radiation center of antenna

Ground reflection factor of 1.6

Off Beam Loss is determined by the selected antenna pattern

These calculations assume that the antennas are operating at 100 percent capacity and power, and that all antenna channels are transmitting simultaneously. Obstructions (trees, buildings, etc.) that would normally attenuate the signal are not taken into account. The calculations assume even terrain in the area of study and do not consider actual terrain elevations which could attenuate the signal. As a result, the predicted signal levels reported below are much higher than the actual signal levels will be from the final installations.

4. Calculation Results

Table 1 below outlines the cumulative power density information for the AT&T, Verizon Wireless and T-Mobile equipment at the site. The proposed antennas are directional in nature; therefore, the majority of the RF power is focused out towards the horizon. As a result, there will be less RF power directed below the antennas relative to the horizon, and consequently lower power density levels around the base of the tower. Please refer to Attachment C for the vertical pattern of the proposed AT&T antennas. The calculated results in Table 1 include a nominal 10 dB off-beam pattern loss to account for the lower relative gain below the antennas.

Carrier	Antenna Height (Feet)	Operating Frequency (MHz)	Number of Trans.	ERP Per Transmitter (Watts)	Power Density (mw/cm ²)	Limit	% MPE
AT&T	110	763	1	3541	0.0118	0.5087	2.32%
AT&T	110	885	1	3883	0.0129	0.5900	2.19%
AT&T	110	1900	2	4562	0.0303	1.0000	3.03%
AT&T	110	2100	2	8226	0.0547	1.0000	5.47%
AT&T	110	2300	1	6747	0.0224	1.0000	2.24%
T-Mobile	90	2100	1	6153	0.0314	1.0000	3.14%
T-Mobile	90	1900	1	6013	0.0307	1.0000	3.07%
T-Mobile	90	1900	1	376	0.0019	1.0000	0.19%
T-Mobile	90	600	1	826	0.0042	0.4000	1.05%
T-Mobile	90	600	1	1652	0.0084	0.4000	2.11%
T-Mobile	90	700	1	826	0.0042	0.4667	0.90%
T-Mobile	90	2500	1	4488	0.0229	1.0000	2.29%
T-Mobile	90	2500	1	4488	0.0229	1.0000	2.29%
T-Mobile	90	2500	1	22440	0.1144	1.0000	11.44%
Verizon	121.7	3500	1	543	0.0015	1.0000	0.15%
Verizon	121.7	700	1	944	0.0025	0.4667	0.83%
Verizon	121.7	850	1	861	0.0023	0.5667	0.67%
Verizon	121.7	850	1	861	0.0023	0.5667	0.67%
Verizon	121.7	1900	1	1303	0.0035	1.0000	0.71%
Verizon	121.7	2100	1	1566	0.0042	1.0000	0.81%
						Total	45.57%

Table 1: Carrier Information

5. Conclusion

The above analysis concludes that RF exposure at ground level from the proposed site will be below the maximum power density levels as outlined by the FCC in the OET Bulletin 65 Ed. 97-01. Using conservative calculation methods, the highest expected percent of Maximum Permissible Exposure at ground level is 45.57% of the FCC General **Population/Uncontrolled limit**.

As noted previously, the calculated % MPE levels are more conservative (higher) than the actual signal levels will be from the finished modifications.

6. Statement of Certification

I certify to the best of my knowledge that the statements in this report are true and accurate. The calculations follow guidelines set forth in FCC OET Bulletin 65 Edition 97-01, ANSI/IEEE Std. C95.1 and ANSI/IEEE Std. C95.3.

Table 2: FCC Limits for M	laximum Permissible	Exposure (MPE)
---------------------------	---------------------	----------------

¹ Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure

 $^{^{2}}$ General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure
