

Durham Draft Construction Schedule.

Project construction is anticipated to begin in Summer 2024 pending regulatory approvals. Initial work would involve the installation of erosion and sediment control measures, including installation of sediment basins. A temporary staging area would be located in the field south or west of the Project. Formal construction notice to proceed would be anticipated in Summer 2024, with delivery of equipment likely commencing in late Summer 2024. As each discrete area of installation is completed, the ground surface would be stabilized, although best management practices will remain in place until final stabilization occurs. Final installation of array equipment and landscaping/screening measures would be anticipated in the Winter of 2024. Final site stabilization, testing, and commissioning would be expected to be completed in the late Fall of 2024. Construction activities would be expected to occur Monday through Saturday between the hours of 7:00 a.m. and 3:30 p.m. The Construction Sequence for the Project begins by defining a weekly qualified inspector, emergency contact, and tentative schedule of all inspections, as well as holding a pre-construction meeting with representation from the general contractor, site contractor, CTDEEP, Town of Durham, the engineer of record, the conservation district, and the qualified inspector. Upon achieving completion of construction and final site stabilization, the engineer of record would investigate the Site and all temporary erosion controls shall be removed. Prior to construction, a health and safety plan would be finalized by the contractor and would address not only the specific characteristics of the Project site and the Project, but also will reflect the nature of the surrounding land uses. A Storm Water Pollution Control Plan (SWPCP) would also be developed and implemented by the project civil engineer that will include regular inspection of erosion control measures to prevent sedimentation or water quality impact. The Stormwater Management Report provides Erosion and Sedimentation Control Best Management Practices – Maintenance/Evaluation Checklists for Construction Practices and Long-Term Practices.
