Notes:

The April 1, 2020 Census count released in the 2020 Census State Redistricting Data (Public Law 94-171) Summary File was used as the base population for each town. The change in population for the three months between April 1, 2020 and July 1, 2020 was estimated by calculating the “natural increase” in population (i.e., births minus deaths) for each town using the provisional 2020 birth and death files. During the three-month period, Connecticut had 9,420 births and 11,924 deaths resulting in a natural increase of -2,496 residents. The estimated three-month population change was added to the base April 1, 2020 population for each town to calculate the July 1, 2020 population estimate.

Net migration also affects population change and has been estimated in the past using migration patterns from previous years. During the first few months of the COVID-19 pandemic, Connecticut experienced atypical in-migration limiting the applicability of historical data. Alternative sources for migration estimates are not available at the town-level and do not explicitly cover the three-month period of April 1 to July 1. As such, the official state and town estimates provided here do not account for migration between April 1, 2020 and July 1, 2020.

These town population estimates count incarcerated individuals in their place of incarceration, consistent with the U.S. Census Bureau’s decision to maintain its practice of counting prisoners at the correctional facility. While Connecticut passed legislation in 2021 that requires the reallocation of most incarcerated persons to their place of residence prior to incarceration, this reallocation is limited to the purposes of determining state legislative and municipal voting districts. The Census Bureau will not make any changes to the official decennial census counts as a result of state legislative redistricting and therefore Census products based on Decennial 2020 Census data will count prisoners in their place of incarceration.
