

# Connecticut 8-Hour Ozone Exceedance Day Trends and Implemented Control Strategies

\*NOx RACT Fuel Burning Sources, Consumer Products, AIM, NOx Reductions MWC and Federal Tier 3 Motor Vehicle /Fuel Requirements

**Instructions to change this double axis chart:**

- 1) to add years to the right, go to primary axis and change fixed maximum year (hit tab button to find axis settings in chart)
- 2) to change the control strategies bar length, use the "J" column to increase distance (use PPT tab) from right. Add the current year in M2 and that should update the J column.
- 3) to line up bars again, go to secondary axis and change fixed maximum (this is hard to find, hit the tab button until axis format appears, should increase number of years)
- 4) to add more bars, just add more numbers below in the "j" column for the years
- 5) Eventually the range will have to increase to make room for the bars- this will cause the text to shift!
- 6) Eventually the exceedance day axis will have to increase too- GOOD LUCK!
