Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,
Diane Bullock

Subject: We need strong interim goals for the Global Warming Solutions Act

Dear DEEP Commissioner Klee:

I want to thank you for your diligent efforts to reduce Connecticut's greenhouse gas emissions, and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change. Climate change is progressing faster than scientists had predicted, and 2050 may be too late for achieving our greenhouse gas reduction goals. We need to set strong interim goals and make sure we're meeting them. I ask that you establish an interim target for the Global Warming Solutions Act, of at least a 55% reduction in carbon emissions by 2030. This will help not only the environment but also Connecticut's economy and our health.

Thank you.

-Dawn Henry

Subject: GCCC's Efforts to Minimize Climate Change

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emission rates and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states to provide leadership with aggressive efforts to minimize GHG emission rates.

I ask that you help lead the way for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically by reducing the annual GHG emission rate across the entire energy economy by 55% by the year 2030. For example California's renewable portfolio standard for utilities is 50% by 2030, Colorado's is 30% by 2020, and New York's is 50% by 2030. We need to act, and act fast, to decarbonize the energy landscape.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,
Geneva Renegar

Subject: Reduce obstacles to more renewable energy

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

With recent cuts in the state budget to programs that improve energy efficiency in CT and increase the use of renewable energy, now is the time to reduce obstacles to a clean energy future. For example, we need to have a real shared solar program and to remove the cap to virtual net metering. Now is not the time to reduce net metering, as the CES recommends. Now is the time for a variety in reforms, such as time of use electric billing, which will cost state government nothing, but will unleash the pent up demand for change by CT residents and businesses. If the state isn't going to pay for the change that needs to happen, then it needs to remove obstacles to that change.

I also ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Thank you in advance for protecting the air I breathe and Connecticut's future, Connecticut needs to do all it can to mitigate climate change and lead the way for other states. Diana Blair, Essex

Sincerely,
Diana Blair

Subject: Protecting our Climate

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

It's clear that our federal government is abandoning its role in stopping climate change. It is now up to the states and towns, as well as individuals to make the changes necessary to protect what we have. We can't just say that climate change "takes too long" and therefor not prioritize it. We are already seeing changes in weather patterns, health risks. Professionally and personally I truly appreciated the study that recently came out of UConn on sea level rise, very informative and helpful for those of us making local recommendations.

Thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I believe that with a balance of prevention and adaptive solutions we can locally work toward this improved status. I ask that you help set the tone for state action, once the state can offer ideas for sustainable local solutions, by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Subject: please keep our water clean ... help stop the use of pesticides and put pressure on our legislators to pass the bill against fracking waste

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I appreciate all that you have done but with the recent administration we, as a state, need to be more vigilant and a stronger force in protecting our environment.

Is there a way we can be more efficient? Given that the state has very little money and the environment is the most likely area to be cut, is there a way we as citizens could be empowered to enforce businesses or people from polluting? Could there be a campaign to get the citizens of our state to be more aware of the dangers of pollution? People need to be made aware of the health hazards of pollutants to themselves and the animals and birds and plants that we all need to live.

The climate change deniers need only to open their doors and windows to feel the warm air today, November the sixth !

Sincerely,

WE MUST REDUCE EMISSIONS!

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,
Nikki Colodny

Subject: Please protect our climate - set a 55% emissions reduction target

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states. We can't expect any one to save us - we need to be the change that we want in the world.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast. We have the technology to do this - now we need the political will to make it happen.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air. If we work together, we can do this. I'm calling on you to lead the way to a cleaner and greener future.

Thank you in advance, on behalf of my children, for protecting the air I breathe and Connecticut's future,

Sincerely,
Justine Quijada

Subject: Please protect our climate

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

Stanford University scientists have published plans for Connecticut, and all other states, to achieve 100% clean energy:
<<http://thesolutionsproject.org/resource/50-state-visions-infographics/>>

100% clean. No dirty fossil fuels, no dirty nuclear. 100% is what Connecticut can achieve and must quickly strive for. The state and municipal governments should be leading the way with specific goals for the government's own energy use, promote high energy efficiency in our buildings, turn around the dirty transportation grid and aim to produce clean energy with wind, water and solar. The state and municipal governments must enable plans for energy efficient commercial buildings, homeowner occupied and tenant occupied residences. Huge numbers of productive jobs would be created in all these works.

Where will CT get the money? One glaring place to start is by ending the more than seven wars the US started and is continuing to wage without end. Some of you may be surprised to learn that these off-budget wars since 2001 have cost CT taxpayers over \$100 billion. When our elected representatives demand an end to these wars and their incredible destruction and waste, we can see some of that money returned to the needs of CT residents including clean energy.

I urge you to increase your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. The federal government is currently run a crew that seems to believe the earth is flat and is circled daily by the sun and the rest of the universe. Criminal madness. It is now up to the states, the cities and the awake population.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

Please expand renewable energy projects in Connecticut and expand net metering. I want to be free of fossil fuels. My home isn't suitable for solar panels, and the same is true of many CT homes, so we need shared solar like that in neighboring states. We deserve clean and less expensive sources of power than gas and oil, and our state needs the jobs that come with developing renewables.

It's not too late in the year for you to amend some of the environmental damage that has been done to the Green Bank in the new budget. Please move CT forward to be a leader in climate responsibility. There's no reason why we can't have close to 100% renewable energy by 2035.

Thank you for your attention.

Yours, Jan van Heurck (Madison CT)

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

Thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

We've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states. In fact, data from scientific studies is being threatened, hidden, and in some cases there is a question of whether it is simply being destroyed. How can this be America?

The beauty of our system is that we have fifty states that can act somewhat independently of the federal government. This is more critical now than ever. I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Start construction on the hundreds of offshore windmills CT will need to replace Millstone.

Eliminate the experimental phase and go directly to real shared solar like works for other states.

Immediately include the CO2 equivalence of the huge methane leaks during fracking and drilling operations in all CO2 emissions graphs

Immediately eliminate the pipeline tax and stop work on all new pipelines and stop financing gas conversions.

Finance air source and ground source heat pumps instead of natural gas conversions. These will be the only heat source in the future, start NOW !

Prevent any new installations of non-reversible central air conditioners, reversible heat pumps only cost 10% more and can provide heat from renewable sources in mild weather.

Stop Global Warming NOW, or nothing else we do will matter.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,
Elizabeth Prete

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Some specific items:

Metro-North is still in a deteriorated state despite some work on overhead wires, concrete ties, and the purchase of new train cars. Turning Metro-North into a worthy railroad with average speeds of ~25% faster than now exist is critical. Fairfield County is choking on traffic.

Instead of unfunded mandates, provide capital funds to municipalities to install solar and geothermal in municipal offices, police and fire HQs, schools, and libraries. That way we have a cleaner environment, create jobs, and save the towns operating expenses.

Restore the funds cut for the green jobs bank.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,
Barry Kresch
81 Partrick Rd Westport, CT 06880-1835

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

The data I have been looking at about climate change brought on by global warming is that droughts, heat waves, floods, sea level rise is happening faster than climate models have predicted. It is important that an interim target of 55% reduction for 2030 be set. Your data shows that this economically feasible.

Subject: Keep Connecticut's Climate Change Leadership Position

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,
Ross Spiegel

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

Global warming is moving faster than scientists previously predicted. We can't assume 2050 is soon enough. We need to have a strong interim target for our Global Warming Solutions Act, specifically, at least a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a reduction of at least 55%. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Subject: Connecticut must move faster to reduce our state's carbon dioxide emissions

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

Thank you for your diligent effort to reduce Connecticut's greenhouse gas emissions, including setting interim goals for reducing Connecticut's carbon emissions. These interim goals are critically important for Connecticut residents', municipalities' and the state's progress and accountability in the battle to fight climate change.

The evidence of global heating and the consequent climate change is clear. Globally, the previous three years are the warmest on record and the first three quarters of 2017 were the second warmest on record.. Decade by decade, arctic sea ice has progressively decreased since the 1980's, increasing the heating of arctic waters and hastening the melting of the Greenland ice sheet. Sea level rise is accelerating, with levels in Long Island Sound projected to increase by almost 2 feet by 2050 according to the CT Institute for Resilience and Coastal Adaptation. There have been numerous wildfires, droughts, and intense storms this year, yet the federal government is abandoning its role in stopping climate change. It is now up to the states, municipalities and individuals to do what is necessary.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, at least a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air. California has shown that it is possible, decreasing emissions by 8% while increasing GDP by 15% since 2006.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,
William Horne

Subject: Please protect our climate

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,
Pete Govert

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your efforts to reduce Connecticut's greenhouse gas emissions and your decision to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing bold interim targets for our Global Warming Solutions Act, specifically a 100% reduction in our carbon emissions by the year 2030. We need to act, and act fast. Recent studies have shown that most scientific predictions about the effects of climate change have underestimated how fast warming will occur and how severe the negative consequences will be.

You've already seen the data projections in your meetings. Let's make those projections BOLDER and more accurate by aiming for a 100% reduction for 2030. The Solutions Project, Off Fossil Fuel campaign and Climate Mobilization has shown that we have the technology to accomplish this, we only lack brave representatives willing to active. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Subject: Please protect our climate

Dear Honorable members of the Governor's Council on Climate Change and DEEP Staff,

I want to thank you for your diligence in finding ways to reduce Connecticut's greenhouse gas emissions and your willingness to add interim targets to help with Connecticut's progress and accountability in the battle to fight climate change.

I've seen the news this year: as wildfires, droughts, and intense storms build, our federal government is abandoning its role in stopping climate change. It is now up to the states.

I ask that you help set the tone for state action by establishing a strong interim target for our Global Warming Solutions Act, specifically a 55% reduction in our carbon emissions by the year 2030. We need to act, and act fast.

You've already seen the data projections in your meetings. Let's make those projections a reality by adopting a 55% reduction for 2030. Creating this pollution reduction target will not only help mitigate climate change while we still can, it will also spur our state economy and create jobs, and improve residents' health by cleaning up our air.

Thank you in advance for protecting the air I breathe and Connecticut's future,

Sincerely,
Russell Heller
