

# Transportation and Climate Initiative Program

## Reducing Transportation Emissions and Investing in Communities

Cap and reduce greenhouse gas (GHG) emissions and other harmful pollutants from transportation

Generate revenue to **decarbonize and modernize** transportation and create new economic opportunity

Invest in overburdened and underserved communities and **create healthier places to live**

Motor vehicles are the largest source of GHG emissions in Connecticut (38%) and the region

Governor's Council on Climate Change found transportation emissions **must be reduced 29% below 2014 levels by 2030** to meet state climate goals

Connecticut records some of the highest levels of air pollution in the region, especially along corridors

81% of voters say it's important for the state to reduce climate pollution, and to **increase clean public transportation options**

**2 out of 3 voters support the Transportation & Climate Initiative**

Transportation and Climate Initiative Program (TCI-P) is a multistate initiative to cap and reduce carbon emissions from transportation and invest in an equitable, cleaner, and more resilient transportation system. TCI would work by placing a declining "cap" on carbon pollution from gasoline and on-road diesel and require fuel suppliers to purchase "allowances" to cover the carbon content of their fuel. Allowance auctions would generate revenue to reinvest in clean transportation options and infrastructure, with a focus on communities overburdened by air pollution and underserved by the existing transportation system.
