

Explanation

Marlborough

Map units indicate ranges in depth to bedrock (ledge) below land surface. The locations of bedrock outcrops (ledge exposed at land surface) and numerous closely spaced small outcrops were obtained from published bedrock ^{geology} and unconsolidated material maps (Snyder 1970, and O'Leary 1975). Depths to bedrock are inferred from logs of wells and test holes (Ryder and Weiss, 1971), and from well completion reports on file with the State of Connecticut Well Drilling Board.
