Dr. Joe Webb Peoples, Director
Conn. Geol. & Natural History Survey
Box 128, Wesleyan Station
Middletown, CT. 06457

Dear Joe:

Enclosed find map of the Hartford South quadrangle showing bedrock outcrops and 0-10 feet to bedrock prepared by John Byrnes.

Jack left this map with me on Friday to look at with the understanding that, since the map was prepared under your program, I would send it to you for your disposition.

When you have determined that the map can be released, I would like to have it so that it can be combined with data in this office to prepare a map showing depth to bedrock for publication in the MF series of Survey publications. I would propose that the authorship of such a map be Elinor H. Handman and John Byrnes, if that is agreeable to you.

Also enclosed for your information is a preliminary copy of "Map showing Drainage Areas, Hampden Quadrangle, Massachusetts - Connecticut". We are sending this map to Washington (Reston) today for review and Director's approval.

Sincerely yours,

Robert B. Ryder

Encls.
