Environmental Protection

Notice of Correction of Clerical Error

February 23, 2026

RE: General Permit for Water Resource Construction Activities

On June 4, 2024, the Department of Energy and Environmental Protection issued the General Permit for Water Resource Construction Activities. It has come to the Department's attention that the general permit contains a clerical error in Section 3(a)(10) on page 10. Specifically, reference to a certain type of authorized activity was omitted in this provision. Pursuant to the Department's Rules of Practice, this clerical error is corrected to clarify the existing requirements established in that provision through the insertion of additional text. Section 3(a)(10) is copied below with the added text underlined:

> Any activity for which an authorization has been granted under a Department of Army (US Army Corps of Engineers) General Permit, Self-Verification, or non-reporting activity, provided: 1) the commissioner has granted a section 401 water quality certification for such Department of the Army General Permit, 2) the activity is consistent with the section 401 water quality certification granted by the commissioner for such Department of the Army General Permit, and 3) the conditions of Section 3(b) of this general permit have been satisfied. The issuance of a provisional permit or authorization by the Army Corps of Engineers for an activity does not satisfy the requirements for authorization under this general permit.

All license terms and conditions of the license remain in full force and effect.

Sincerely,

Brian P. Thompson, Director
Land and Water Resources Division
Bureau of Water Protection & Land Reuse
