## Section 1 Background and Emissions Summary

### 1.0 Introduction

The State of Connecticut submits this Periodic Emissions Inventory (PEI) to comply with the implementation of the 2008 Ozone National Ambient Air Quality Standard (NAAQS) in accordance with [40 CFR 51.1115\(b\)](#).<sup>1</sup> It was developed in accordance with the EPA document [Emissions Inventory Guidance for Implementation of Ozone and Particulate Matter NAAQS and Regional Haze Regulations](#).<sup>2</sup> The 2014 PEI is intended to be used to assist planning efforts and to track and monitor trends in emissions.

The PEI is comprised of emissions from all sources in Connecticut, and can be identified by their Source Classification Codes (SCCs). The EPA publishes a National Emissions Inventory (NEI) which contains emissions estimates for each SCC. For each SCC reported in this PEI, NEI data was evaluated and the values were either accepted or augmented with additional state data.

Unless otherwise noted in the source type documentation sections, emission factors were obtained from the [Compilation of Air Pollutant Emissions Factors](#) (AP-42) to calculate emissions. The United States Environmental Protection Agency (EPA) procedures have been followed in developing the emissions inventory for the State of Connecticut's SIP.

This PEI presents the 2014 emissions produced within Connecticut from the following source types:

Table 1-1: Sources Included in this Periodic Emission Inventory

Source Type	Inventory Background	Inventory Data
Stationary Point Sources	Section 2	Appendix C
Mobile Sources	Section 3	Appendices E, F, & G
Area Sources	Section 4	Appendices H & I
Biogenic Sources	Section 5	Table 5-1 & Table 5-2

#### 1.0.1 Agencies/Contacts Responsible for Inventory

The lead agency responsible for the preparation and submittal of the PEI is the CT DEEP Bureau of Air Management (The Bureau). The Bureau is directly responsible for the collection of source level activity data, emission factor determination, emissions calculations, documentation, and quality assurance. Other CT DEEP Bureaus and State Agencies contribute necessary information for the preparation of emissions estimates. The Connecticut Department of Transportation (CT DOT) provides Vehicle Miles of Travel (VMT) data, daily and seasonal adjustment factor data, and documentation of the methodology used by CT DOT to estimate VMT data for the on-road mobile source inventory. The Connecticut Department of Motor Vehicles (CT DMV) provides vehicle registry data used to determine vehicle age distribution, develop base line county level vehicle populations, and to adjust vehicle mix distributions of the vehicle fleet in Connecticut. The Connecticut Department of Labor (CT DOL) provides employment data by Standard Industrial Code (SIC) for determining source activity levels for on-road mobile source emissions inventories.

It should be noted that the PEI does not address the tracking of potential emissions offsets from shutdown sources.

The applicable points of contact for the 2014 PEI are listed below in Table 1-2:

<sup>1</sup> 40 CFR § 51.1115(b). [https://www.ecfr.gov/current/title-40/chapter-I/subchapter-C/part-51#p-51.1115\(b\)](https://www.ecfr.gov/current/title-40/chapter-I/subchapter-C/part-51#p-51.1115(b))

## 1.1 Attainment Classifications of Geographic Areas in Connecticut

This emissions inventory encompasses all counties in Connecticut and any geographic area designated by the EPA as non-attainment or classified as maintenance.

Since the NEI only tracks emissions at the county level, emissions for this PEI are similarly provided for each county. A comprehensive map of Connecticut displaying all town and county boundaries are shown on the following page in Figure 1-A.

In November 1991, the EPA designated Connecticut as not in attainment with the 1-hour ozone standard. An 8-hour ozone standard was introduced in 1997 to replace the 1-hour standard, which was completely phased out in 2005. The 8-hour non-attainment areas replaced the 1-hour non-attainment areas used in previous PEIs. The [8-hour ozone standard](#) was updated in 2008 and Connecticut was designated with two non-attainment areas: the Connecticut portion of the NY-NJ-CT Area, comprised of Fairfield, New Haven, and Middlesex counties, and the Greater Connecticut Area, which is comprised of all other counties.<sup>3,4</sup> These areas are shown in Figure 1-B.

In 2006, the EPA designated Fairfield and New Haven counties as part of the NY-NJ-CT non-attainment area for both the 1997 Annual and 2006 24-hour PM<sub>2.5</sub> NAAQs, while the rest of Connecticut was designated as being in attainment.<sup>5</sup> The EPA re-designated the Connecticut portion of the NY-NJ-CT non-attainment area as attainment with a maintenance classification for both the 1997 Annual and 2006 24-Hour PM<sub>2.5</sub> NAAQs, effective October 12, 2013. In 2012, the EPA promulgated a new Annual PM<sub>2.5</sub> NAAQS and the 1997 Annual PM<sub>2.5</sub> NAAQS and its attainment areas were revoked on October 24, 2016. All of Connecticut was designated as in attainment with no classification for the 2012 Annual PM<sub>2.5</sub> NAAQS effective April 15, 2015.<sup>6</sup> The areas associated with the 1997 and 2006 PM<sub>2.5</sub> NAAQs are shown in Figure 1-C.

In November 1991, the EPA designated three areas in Connecticut as not in attainment with the 1971 CO NAAQs. These non-attainment areas were distinguished as the Hartford-New Britain-Middletown Area, the New Haven-Meriden-Waterbury Area, and the Connecticut portion of the NY-NJ-CT Area. The EPA re-designated the Hartford-New Britain-Middletown non-attainment area as attainment effective May 14, 1996, the New Haven-Meriden-Waterbury non-attainment area as attainment effective October 5, 1998, and the Connecticut portion of the NY-NJ-CT non-attainment area as attainment effective March 10, 1999, making the entire state designated as attainment for CO.<sup>7</sup> The 1971 CO NAAQs maintenance areas are defined in Table 1-3 and are presented in Figure 1-D.

## 1.2 Emissions Summary

This PEI presents the emissions produced during the 2014 calendar year from stationary point sources, mobile sources, area sources, and biogenic sources located in each county as well as the ozone non-attainment and PM<sub>2.5</sub> attainment areas within the State of Connecticut.

Connecticut submits the annual and summer day emissions produced in each ozone non-attainment area to comply with the provisions set forth for 2008 Ozone NAAQS PEIs.<sup>9</sup> The pollutants reported are ozone precursor compounds, volatile organic compounds (VOCs) and oxides of nitrogen (NO<sub>x</sub>), as well as carbon monoxide (CO).

The definition of aggregated VOC pollutant used in this PEI excludes non-reactive VOCs, such as methane, ethane, methylene chloride, 1,1,1-trichloroethane, perchloroethylene, acetone, methyl acetate, cyclic, branched, or linear completely methylated siloxanes, and dozens of organofluorine compounds. For a comprehensive list of excluded compounds, please refer to the federal definition of VOCs in [40 CFR Part 51.100\(s\)](#).<sup>10</sup>

Connecticut also submits the annual and summer day emissions produced throughout the state and each of its counties, as well as in the two PM<sub>2.5</sub> attainment areas. The pollutants reported for annual emissions are ozone precursor compounds (VOC & NO<sub>x</sub>), CO, PM<sub>10</sub> Primary (PM<sub>10</sub>-PRI), PM<sub>2.5</sub> Primary (PM<sub>2.5</sub>-PRI), sulfur dioxide (SO<sub>2</sub>), ammonia (NH<sub>3</sub>), and lead (Pb). Only ozone precursor compounds and CO are reported for summer day emissions.

Statewide annual and summer day emissions from stationary point sources, mobile sources, area sources, and biogenic sources are respectively presented in Table 1-4 below and Table 1-6 on page 1-12. These emissions are specified by county in Table 1-5 and Table 1-7, by ozone non-attainment area on page 1-14, and by PM<sub>2.5</sub> attainment area on page 1-15.

Table 1-4: 2014 Annual Emissions of All Sources in Connecticut

County	Annual Emissions [TPY]

## Section 2 Stationary Point Sources

### 2.0 Introduction

This section documents the identification of stationary air pollution sources active in Connecticut during the 2014 calendar year. It serves to characterize the point source component of the emissions inventory by describing data collection, verification, and emissions estimation techniques. For the purpose of this emissions inventory, point sources are defined as stationary commercial or stationary industrial operations or plants that were major sources during calendar year 2014.

The CT DEEP Bureau of Air Management is responsible for compiling the point source inventory. These responsibilities include identifying which plants meet the cut-off criteria, documenting the methods used to calculate emissions from the equipment at each of these plants, and summarizing and presenting the findings. Table 2-1 and Table 2-2, below, respectively present the annual and typical high ozone summer day emissions for all point sources in each county.

## 2.1 Identification of 2014 Point Sources

Since 2009, only Title V sources, defined in [RCSA Sec. 22a-174-33](#), that have a Title V permit or that have been specifically requested to file by CT DEEP are required to submit an emissions statement.<sup>11</sup> Beginning in 2014, companies were required to submit their emissions statements electronically via CT DEEP's software application, EMIT. Emissions of the following pollutants are collected using EMIT: VOC, NO<sub>x</sub>, CO, PM<sub>10</sub> primary (PM<sub>10</sub>-PRI), PM<sub>10</sub> filterable (PM<sub>10</sub>-FIL), PM<sub>2.5</sub> primary (PM<sub>2.5</sub>-PRI), PM<sub>2.5</sub> filterable (PM<sub>2.5</sub>-FIL), PM condensable (PM-CON), SO<sub>2</sub>, NH<sub>3</sub>, and Hazardous Air Pollutants (HAPs), including lead (Pb).

The 2014 periodic stationary source inventory is based on the emissions statements, which reported the source's actual 2014 emissions signed by a corporate officer who attested to the accuracy of their calculations. Eighty sites, detailed in Table 2-3 below, submitted an emissions statement in 2014. Compliance with the emissions statement program was 100 percent from all of the companies operating under a Title V permit during this year. This state collected point inventory was supplemented by EPA 2017 Toxic Release Inventory data to obtain a more accurate point lead emission estimate.

Connecticut uses a combination of the town, premises within the town, and statewide client identification number to create a unique state facility ID that is used in EMIT.

## 2.2 Emissions Estimation Procedures

Emissions calculations should be based on the following methods, which are listed here in order of CT DEEP/EPA preference:

- 1) Continuous Emissions Monitoring Systems (CEMs) and Predictive Emissions Monitoring Systems (PEMs) that are required by statute, regulation, or Permit or Order condition. Emissions data generated by these systems shall serve as the basis for emissions reported in EMIT;
- 2) Reference method emissions testing that has been deemed by CT DEEP to be representative of current and normal operating conditions;
- 3) A facility-specific emissions factor that has either been approved by CT DEEP or is based on a material balance with supporting documentation provided to CT DEEP;
- 4) EPA-published emissions factors where available. Some of these factors are provided automatically in EMIT from WebFire based on SCCs;
- 5) Emissions factors from other industry and trade groups based on sound science. These should be discussed with CT DEEP prior to use;
- 6) Best engineering judgement.

Sites are allowed to report a rule effectiveness value for each source and pollutant when the emissions are controlled. EMIT automatically uses this rule effectiveness value to calculate emissions, unless the emissions are based upon CEM systems, the EPA tank model, or an after-control emissions factor.

Summer seasonal adjustments are included in the emissions estimates for applicable point source categories. The operating schedule for each material (SCC level), the seasonal rate of operation for the summer, and the days per week are used to determine daily emissions.

The following general equation was used to account for seasonal adjustments for point sources:

$$E_s = E_a * \frac{T_s}{D_s * W_s} * [1 - (Eff * Cap * Rule)]$$

Equation 1

Where:

- $E_s$  = seasonally adjusted emissions in pounds per day
- $E_a$  = annual uncontrolled emissions of VOC, NO<sub>x</sub>, or CO in pounds per year
- $T_s$  = throughput for Ozone as a fraction of total throughput
- $D_s$  = days of operation per week
- $W_s$  = weeks of ozone or CO season in weeks per year
- $Eff$  = control efficiency
- $Cap$  = capture efficiency
- $Rule$  = rule effectiveness

See Appendix B for sample calculations of annual and seasonal adjustments, for several common source types.

## 2.3 Emissions Summary Tables

For the 2014 PEI, Connecticut is submitting all facilities that reported their actual 2014 emissions. The following tables were prepared to display the emissions data:

Table C-1	Annual Emissions of Point Sources
Table C-2	2014 Annual Toxic Release Inventory (TRI) Supplement to Connecticut Point Source Emissions
Table C-3	Summer Day Emissions of Point Sources
Table C-4	List of Source Classification Codes and Respective EMIT Default Emission Factors
Table C-5	Facility Level of 2017 Connecticut Point Source Inventory

## 2.4 Point Source Quality Control Procedures

To ensure a high-quality point source inventory is created, point source emissions data must be regularly updated in an accurate manner. Emissions data is reported annually by verified site editors using CT DEEP's EMIT system and is then reviewed for accuracy and verified by CT DEEP staff prior to its submission to EPA.

See Appendix A for the developmental history of quality control procedures in Connecticut.

### 2.4.1 Data Entry

EMIT has a number of required data fields that must be entered in by the site editor. To ensure there is no missing data for a site, site editors are unable to save and submit their emissions unless all required fields have been completed. In addition, there are a number of EMIT validation checks to ensure that the value entered into each field is within an acceptable range. Site editors will receive an error message if an entered value falls outside of the range. To support data consistency and quality control, wherever possible, users are provided a dropdown list where they can select from a predefined set of acceptable values. EMIT automatically performs a number of validation checks while sites are completing their emissions statement, prompting editors to provide missing data and correct errant or incongruent data.

Prior to CT DEEP implementing the EMIT system, sites were required to calculate their emissions and to submit their emissions statements on paper. One of the most common errors that occurred during this process was that they miscalculated their emissions. This is no longer an issue because the EMIT system calculates emissions for users at the SCC, source, and site level each time a parameter is updated. The calculation routines used by EMIT have been thoroughly tested and shown to be correct and, together with EMIT's validation checks, help to minimize errors formerly caused by paper submission.

In addition, when sites attempt to submit their emissions statements, EMIT performs another series of quality assurance (QA) checks. Examples of validation rules that must be satisfied before a site can submit an emissions statement are as follows:

- The sum of all photochemically reactive VOC HAPs cannot exceed total VOC emissions.
- The PM<sub>10</sub> primary emissions cannot be less than the sum of the PM<sub>10</sub> filterable and PM condensable emissions.
- The PM<sub>2.5</sub> primary emissions cannot be less than the sum of the PM<sub>2.5</sub> filterable and PM condensable emissions.
- The PM<sub>10</sub> primary emissions cannot be less than the PM<sub>2.5</sub> primary emissions
- Typical summer day activity was greater than the annual activity.
- The annual activity was zero and the annual emissions were greater than zero.
- The summer day activity was zero and the summer day emissions were greater than zero.

- The seasonal activity percentage breakdown must equal 100 percent.
- A source must have at least one SCC associated to it. Emissions are calculated at the SCC level and then aggregated up to the source and finally the site level.

#### 2.4.2 Data Verification

Once emissions statements are submitted by sites, data verification is performed by CT DEEP staff to check for consistency and completeness of the reported data. QA reviews were conducted by staff via ad-hoc queries of submitted 2014 emissions statements. Companies were contacted and given the option to correct or confirm their submitted data if any of the following situations occurred:

- The PM<sub>10</sub> primary emissions for a process were greater than zero and the PM<sub>2.5</sub> primary emissions were zero.
- The VOC emissions estimates included reductions due to control equipment, but no such reductions were applied in the estimation of VOC HAP emissions.

The Enforcement Division, through their Pre-Inspection Questionnaire (PIQ) and in-person inspections, verify on-site company records regarding fuel use, solvent use, and production rate data previously submitted in the emissions statement reports.

Efforts are made throughout this process to ensure that no point source is also included in the area source inventory. Although the method varies for different categories, generally, emissions accounted for in the point source inventory must be subtracted from the total emissions estimated for their corresponding area source categories.

After CT DEEP completes its quality control, the point source data is submitted to the EPA Emissions Information System (EIS) where EPA applies its own checks. In some cases the action plan requires a response or re-submittal by emissions reporters. In 2014, no records were tagged by EPA, so no responses or re-submittals were required for this reporting year.

#### 2.4.3 Additional Quality Control Procedures

In addition to being submitted for the PEI, point source inventory data is routinely used by various groups in the CT DEEP Bureau of Air Management.

For example:

- By the permitting group to assess permit processing fees
- By the modeling group for ambient impact analysis of new point sources
- By the administrative enforcement group for state orders and notices of violation
- By the business office for Title V annual emissions fees

As errors are detected by any of these groups, the appropriate corrections are made in the point source inventory.

The last aspect of quality control involves internal measures used by point source inventory personnel. Reasonableness checks are made on important variables.

## Section 3 Mobile Sources

### 3.0 Introduction

This section documents the procedures used to estimate emissions from mobile sources active in Connecticut during the 2014 calendar year. Mobile sources are comprised of two main groups: on-road mobile sources and non-road mobile sources.

On-road mobile sources are motor vehicles (e.g. automobiles, buses, and trucks) that travel on local roads and highways. A motor vehicle is defined in [40 CFR 51.50](#) as “any self-propelled vehicle used to carry people or property on a street or highway”.<sup>12</sup> Emissions from on-road vehicles are the result of several processes, including the combustion of fuel while vehicles are starting, idling, or moving; the evaporation of fuel from the fuel system and during refueling; as well as from the wearing of brakes and tires.

Non-road mobile sources are comprised of non-road engines and non-road vehicles, which are respectively defined in [40 CFR 51.50](#) as “an internal combustion engine (including fuel system) that is not used in a motor vehicle or a vehicle used solely for competition, or that is not affected by sections [111](#) or [202](#) of the Clean Air Act” and “a vehicle that is run by a non-road engine and that is not a motor vehicle or a vehicle used solely for competition”.<sup>13</sup> These sources include vehicles, engines, and equipment used for construction, agriculture, recreation, and many other purposes. The equipment must either move under its own power or be capable of being moved from site to site. Emissions from non-road vehicles come from both exhaust and non-exhaust processes, including the combustion of fuel while vehicles are starting, idling, or moving, as well as from the evaporation of fuel from the fuel system and during refueling.

The EPA also develops and maintains approaches for estimating emissions from aircraft, commercial marine vessels, and locomotives which are documented as part of the NEI program; these source categories are respectively addressed in Subsections 3.3 through 3.5.

The annual emissions for on-road and non-road mobile sources can be found on Table 3-1 and Table 3-2, respectively. Emissions for a typical high ozone summer day can be found on Table 3-3 and Table 3-4.

<b>Connecticut</b>	<b>128,293</b>	<b>146,995</b>	<b>1,830,478</b>

<sup>14</sup> On-road refueling emissions are included in the Area Sources summary and are therefore excluded from on-road emissions.

### 3.0.1 Mobile Source Models

As directed by the [Emissions Inventory Guidance for Implementation of Ozone and Particulate Matter National Ambient Air Quality Standards \(NAAQS\) and Regional Haze Regulations](#), mobile source emissions are estimated by using the latest recommended mobile source model, the Motor Vehicle Emission Simulator (MOVES).<sup>15</sup> The original version of MOVES, MOVES2010, replaced the previous EPA on-road simulator, MOBILE6.2. While MOBILE6.2 is now obsolete, some data infrastructure is still aligned with input into MOBILE6.2. For that reason, the EPA has released tools to convert data from the MOBILE6.2 format to MOVES format; this will be further discussed in Part 3.1.1. MOVES2014 was released in October 2014 and further improved mobile source modeling by integrating the latest EPA non-road model, NONROAD2008, into MOVES. This now allows all mobile source modeling, whether it is on-road or non-road, to be performed in a single simulator. MOVES2014 has been updated twice; the most recent version, MOVES2014b, was released in August 2018 and contains improvements in modeling non-road sources. Due to the improvements in the non-road sector, the modeling efforts in this PEI have been re-run in MOVES2014b to determine a more accurate estimate of emissions in Connecticut.

The inputs for MOVES are to be developed in accordance with the latest MOVES guidance. The available guidance, [MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance: Using MOVES to Prepare Emission Inventories for State Implementation Plans and Transportation Conformity](#) (MOVES Technical Guidance), focuses on determining the appropriate inputs for MOVES and how the simulation should be run to develop representative emissions estimates for vehicles.<sup>16</sup> The MOVES Technical Guidance describes when the default MOVES inputs are appropriate or when to consider providing locally-specific MOVES inputs.

### 3.0.2 Meteorological Inputs for Mobile Sources

The meteorological inputs used in MOVES to model annual on-road and non-road mobile sources are consistent with the meteorological inputs used to create Connecticut's Motor Vehicle Emissions Budgets (MVEBs) for annual NO<sub>x</sub> and PM<sub>2.5</sub> in accordance with the [1997 annual and 2006 24-hr PM<sub>2.5</sub> NAAQS SIP](#).

The meteorological inputs used in MOVES to model summer day on-road and non-road mobile sources are consistent with the meteorological inputs used to create Connecticut's MVEBs for summer day NO<sub>x</sub> and VOCs in accordance with the 2008 Ozone SIPs. For [Southwest Connecticut](#) and for [Greater Connecticut](#)

#### 3.0.2.1 Effect of Temperature and Humidity on Ozone Formation

The only two meteorological inputs MOVES requires are temperature and humidity due to their relationship with ozone-forming pollutants. Hot, sunny days are tightly correlated with increased production of ground-level ozone from NO<sub>x</sub> and VOCs in several ways:<sup>17</sup>

- 1) Hot weather can create stagnant air conditions which causes ozone and its precursors to accumulate;
- 2) Sunlight gives energy to the photochemical reaction converting NO<sub>x</sub> and VOCs into ozone;
- 3) Higher temperatures can lead to increased evaporation of VOC emissions;
- 4) Humidity is important for estimating the correct NO<sub>x</sub> correction factor.

---

<sup>15</sup> U.S. Environmental Protection Agency. 2017. "Emissions Inventory Guidance for Implementation of Ozone and Particulate Matter National Ambient Air Quality Standards (NAAQS) and Regional Haze Regulations". Pg 27.

<sup>16</sup> U.S. Environmental Protection Agency. 2018. "MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance: Using MOVES to Prepare Emission Inventories for State Implementation Plans and Transportation Conformity". <https://nepis.epa.gov/Exe/ZyPDF.cgi/P100V7EY.PDF?Dockey=P100V7EY.PDF>

<sup>17</sup> National Weather Service. Clearing the Air on Weather and Air Quality. <https://www.weather.gov/wrn/summer-article-clearing-the-air>.

Therefore, local temperature and humidity data should be used to accurately model emissions in MOVES. These meteorological inputs are specified for zones (counties or non-attainment areas), months, and hours.

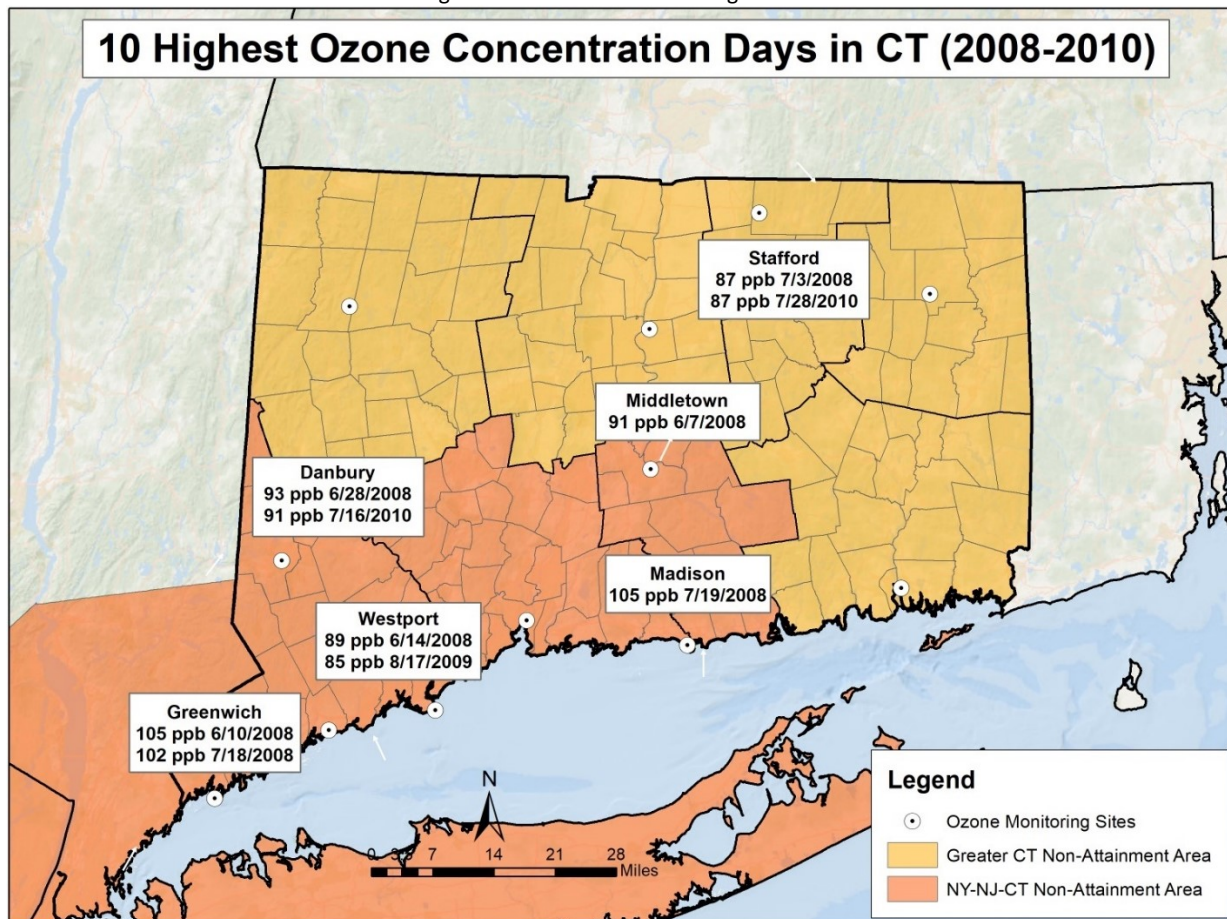

### 3.0.2.2 Annual Temperature Determination

MOVES meteorological inputs for the Mid-Atlantic Regional Air Management Association (MARAMA) annual modeling effort used the National Mobile Inventory Model (NMIM) National County Database (version NCD20090531) for 2007 analyses.<sup>18</sup> The temperature and humidity used as an input for this 2014 PEI are consistent with the 2007 NCD20090531 data. The annual MOVES input data for each county in Connecticut can be found in Table E-1 through Table E-8.

### 3.0.2.3 Ozone Summer Day Design Temperature

Temperature inputs for a typical high ozone day for Connecticut's non-attainment areas were calculated by first determining the ten highest 8-hr ozone concentrations that occurred in the entire state on unique days in the months of June through August during the three-year period (2008-2010) preceding the base year (2011). These values were obtained from the [Connecticut Department of Energy and Environmental Protection Annual Summary Information for Ozone Website](#) as shown in Figure 3-A below.

Figure 3-A: 2011 CT Ozone Design Values

<sup>18</sup> Yang, H. 2012. Development of MANE-VU Onroad Mobile Source Emissions for 2007 and 2020 using MOVES. Northeast States for Coordinated Air Use Management (NESCAUM). <https://www.nescaum.org/documents/nescaum-2007-2020-moves-modeling-tsd-20120118.pdf>.

For each of the ten highest ozone days in Figure 3-A, the maximum and minimum temperatures that occurred each day were obtained from the [National Oceanic and Atmospheric Administration \(NOAA\) Local Climatological Data Publication Website](#) for Bradley International Airport in Windsor Locks for the greater Hartford ozone non-attainment area and Igor I. Sikorsky Memorial Airport in Bridgeport for the Connecticut portion of the NY-NJ-CT ozone non-attainment area.

Table 3-5: High and Low Temperatures for the Ten Highest Ozone Concentration Days <sup>19</sup>

Date	Greater CT Bradley International Airport		CT Portion of NY-NJ-CT Igor I. Sikorsky Airport	
	Max. Temp. [°F]	Min. Temp. [°F]	Max. Temp. [°F]	Min. Temp. [°F]
June 7, 2008	93	60	86	61
June 10, 2008	98	69	96	70
June 14, 2008	88	58	84	65
June 28, 2008	90	65	86	67
July 3, 2008	90	63	87	67
July 18, 2008	93	65	92	72
July 19, 2008	94	67	92	77
August 17, 2009	94	69	91	73
July 16, 2010	93	70	87	73
July 28, 2010	90	62	87	69
<b>Average</b>	<b>92.3</b>	<b>65.8</b>	<b>89.8</b>	<b>69.4</b>

The calculated average maximum and minimum temperatures for each nonattainment area were input into EPA's [Meteorological Data Converter MOBILE6](#) tool to produce a 24-hour temperature profile for a typical high ozone day in Connecticut for each non-attainment area.

Similarly, hour-by-hour humidity profiles were obtained from the [NOAA Quality Controlled Local Climatological Data Website](#) for the same locations and days listed in Table 3-5. An average humidity value was then calculated for each hour of the day, to produce a 24-hour humidity profile for a typical high ozone day in Connecticut for each non-attainment area. These profiles can be seen in Table 3-6 and Table 3-7 on the following page.

The ozone summer day temperature and humidity profiles are input into MOVES to obtain summer day emissions estimates for each Connecticut county.

The MOVES formatted input data for the summer day run are shown for the Connecticut portion of the NY-NJ-CT Ozone Non-Attainment area in Table E-9 and for the Greater Connecticut Ozone Non-Attainment area in Table E-10.

<sup>19</sup> These values were originally collected from the NOAA data on May 4, 2016 and may have been updated.

Table 3-6: Hour by Hour Humidity Values for Ten Highest Ozone Days at Bradley Airport<sup>20</sup>

Date	Relative Humidity [%] Value by Hour of Day

### 3.1 On-Road Mobile Sources

To estimate on-road emissions in 2014, CT DEEP ran MOVES2014b for all eight Connecticut counties in inventory-mode using established annual and summer day input data. Vehicles are classified in MOVES according to thirteen source types and five Highway Performance Monitoring System (HPMS) vehicle types, as shown in Table 3-8 below. Part 3.1.1 of this subsection provides an explanation and basis for the input parameters used in MOVES2014b for this inventory.

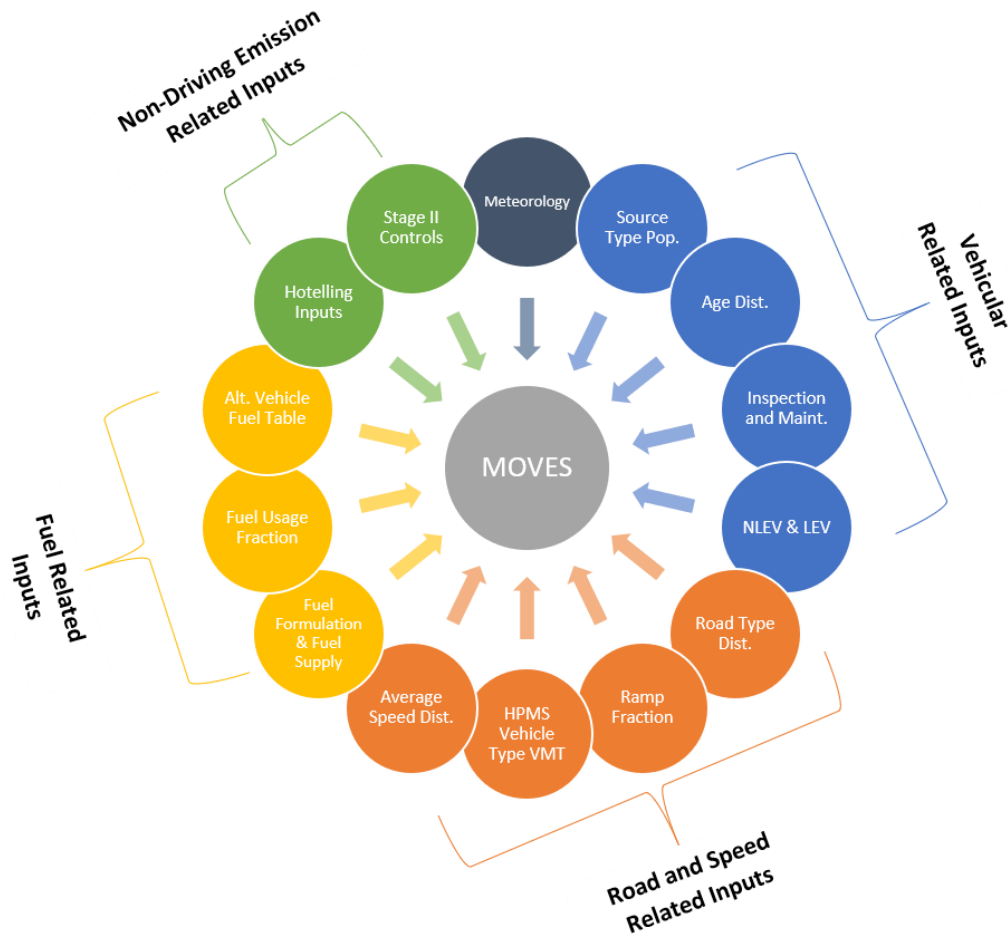

Table 3-8: Source Type and HPMS Vehicle Identification Numbers

Source Type ID	Source Type Description	HPMS Vehicle Type ID	HPMS Vehicle Type Description
11	Motorcycle	10	Motorcycles
21	Passenger Car	25	Light Duty Vehicles– Short and Long Wheelbase
31	Passenger Truck		
32	Light Commercial Truck		
41	Intercity Bus	40	Buses
42	Transit Bus		
43	School Bus		
51	Refuse Truck	50	Single Unit Trucks
52	Single Unit Short-haul Truck		
53	Single Unit Long-haul Truck		
54	Motor Home		
61	Combination Short-haul Truck	60	Combination
62	Combination Long-haul Truck		

### 3.1.1 MOVES On-Road Inputs

The following subparts provide details for on-road mobile source inputs used in MOVES2014b, as illustrated in Figure 3-B.

Figure 3-B: Visual of MOVES Inputs for On-Road Mobile Sources

These MOVES inputs can be roughly grouped by the following categories in general terms:

- **Vehicle-** This includes the age and type of vehicles, their compliance with Connecticut’s inspection and maintenance program, and emissions standards
- **Road and Speed-** This includes the type of roads and ramps, the vehicle miles traveled (by road and vehicle type), and the average speed (by road and vehicle type)
- **Fuel-** This includes fuel properties, fuel use, and alternative fuel capabilities of vehicle fleets
- **Non-Driving Emissions-** This includes emissions from parked trucks and emissions from refueling
- **Meteorology-** This includes temperature and humidity. Note these inputs are discussed in Part 3.0.2.

These inputs are defined in greater detail in the following subparts below, along with details on data sources, steps used to develop locally specific inputs, and in what cases it was appropriate to accept the default MOVES inputs.

### 3.1.1.1 Source Type Population

The *Source Type Population* MOVES input is used to represent the vehicle fleet in an area by source type. This is important because start and resting evaporative emissions are dependent on the population of vehicles in an area, not the Vehicle Miles Traveled (VMT).

There are two methods to determine the population of on-road mobile sources: analyzing registration data and mathematically estimating based on the VMT.

The population counts for source types 21, 31, and 32 were taken from an analysis of 2014 Connecticut motor vehicle registration data conducted by the EPA for the 2014 NEI. CT DEEP estimated the 2014 population for the remaining ten source types by extrapolating from the 2011 Connecticut motor vehicle registration data. The 2011 data was used because 2011 was when the most recent CT DEEP decode effort of local motor vehicle registration data was conducted.

The VMT estimation method is used to further refine the estimated population counts for the remaining ten source types. This method is outlined in [Section 4.3.1 of the MOVES Technical Guidance](#). The default VMT values for Connecticut are compared against the default 2014 vehicle population count in Connecticut. This provides a ratio of VMT to population of vehicles by source type. The local VMT values for each Connecticut county are then compared to this ratio to provide estimates for each source type in a county. If the VMT for a source type is lower in 2014 than in 2011, then the vehicle population count in 2014 is conservatively set to the population count in 2011. This is done to avoid having a population count decrease due to a decrease in VMT.

The estimated 2014 populations determined from 2011 registration data were used except in cases where the VMT estimation method yielded a greater population. This approach accounts for inaccuracies in the VMT estimation method arising from home-based lodging of interstate trucks, truck populations accumulating lower than expected VMT, etc.

Populations for 2014 were then calculated based on a ratio of Connecticut specific base and future year MOVES HPMS Vehicle Type VMT to obtain a growth factor for the HPMS Vehicle Type. Distributions of source types within an HPMS Vehicle Type were assumed to remain the same. If there was negative VMT growth between the 2011 and 2014 population, the vehicle population counts for 2014 were conservatively set to the 2011 population values instead of having population counts decrease due to VMT decreases.

Table E-11 summarizes the vehicle population inputs used for the MOVES runs.

### 3.1.1.2 Age Distribution of Vehicles by Type

The vehicle fleet is further defined by the age of vehicles. For each of the thirteen source types, vehicles are distributed into 31 age groups: one for each of the last thirty model years and a final group for all vehicles older than thirty years (model year of 1984 or earlier).

Local registration data collected on July 1, 2014 was analyzed by the EPA and CT DEEP to establish distributions for sources types 11, 21, 31, 32, and 43 in each county. The default age distributions in MOVES are used for the remaining source types (41, 42, 51, 52, 53, 54, 61, and 62) because the local registration data is either considered to be non-representative or is not readily available. Using MOVES defaults on source types 51 through 62 also maintains consistency with the typical inputs used by Connecticut for its transportation conformity analyses due to the uncertainty of heavy-duty source types in EPA national decode efforts.

The data was provided on a per county basis and the county level age was used with the county vehicle population counts to obtain a statewide age distribution input. Table E-12 summarizes the statewide age distribution input used for the MOVES runs.

### 3.1.1.3 Inspection and Maintenance Coverage

The *Inspection and Maintenance* (I/M) input reflects the characteristics and SIP requirements of Connecticut's I/M program. MOVES only calculates I/M program benefits for gasoline vehicles, so this subpart is limited to gasoline vehicles.

Connecticut's I/M program requires gasoline vehicles that have a gross vehicle weight rating (GVWR) of less than 10,000 pounds and are at least four years old (grace period) to receive an emissions test every two years. Vehicles that are greater than 25 years old (model year 1990) are exempt.

These exemptions are noted accordingly with appropriate I/M MOVES inputs. The I/M Coverage Table was adjusted to reflect the grace period exemption age plus one year to account for the misalignment between model and calendar years.

Connecticut's SIP sets a minimum I/M compliance rate of 96% and a maximum waiver rate of 1%. The compliance rate (CR) is defined as "the percentage of vehicles in the fleet covered by the I/M program that completes the I/M program and receive either a certificate of compliance or a waiver" and the waiver rate (WR) is defined as "the percentage of vehicles that fail an initial I/M test and do not pass a retest, but do receive a certificate of compliance."<sup>21</sup> For this inventory analysis, I/M compliance and waiver rates were set to the actual compliance and waiver rates observed in 2014: 99.6% and 0.2%, respectively.<sup>22</sup> These values were used along with the regulatory class coverage adjustments (RCCA), defined as the "percentages of VMT by the various regulatory weight classes within a source type", provided in [Appendix A of the MOVES Technical Guidance](#) to calculate a compliance factor (CF) for each I/M program type according to the following equation:<sup>23</sup>

$$CF = CR * (100 - WR) * RCCA * \left( \frac{1}{100} * \frac{1}{100} \right)$$

Equation II: [Compliance Factor Equation](#)<sup>24</sup>

Where:

- CF = the I/M program percentage of vehicles input into MOVES for each I/M program type according to the equation (Table 3-9 shows some calculated results)..
- CR = the percentage of vehicles in the fleet covered by the I/M program that completes the I/M program and receive either a certificate of compliance or a waiver.
- WR = the percentage of vehicles that fail an initial I/M test and do not pass a retest, but do receive a certificate of compliance
- RCCA = percentages of VMT by the various regulatory weight classes within a source type (Table 3-9 shows these values).

Note: the fractional terms  $\left( \frac{1}{100} * \frac{1}{100} \right)$  are applied to ensure dimensional consistency.

Connecticut's I/M program applies across the state so all counties use the same I/M coverage inputs.

<sup>21</sup> U.S. Environmental Protection Agency. MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance: Using MOVES to Prepare Emission Inventories for State Implementation Plans and Transportation Conformity. Pg 54-55

<sup>22</sup> de la Torre Klausmeier Consulting. August 2018. Annual Evaluation of Connecticut's Inspection/Maintenance Program 2017 Final Report. Pgs 28-29. <https://portal.ct.gov/-/media/DEEP/air/mobile/Emissions-Testing/biennialimreport20162017completepdf.pdf>

<sup>23</sup> U.S. Environmental Protection Agency. MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance. Pg 69-70.

<sup>24</sup> Environmental Protection Agency. MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance. Pg 54-55

For source types 21, 31, and 32, all vehicles model year 1996 and newer have a standardized computer system, so On-Board Diagnostic (OBD) testing (Test Standard IDs 51 & 43) is used to determine emissions.<sup>25</sup> These methods apply to all vehicles that weigh less than 10,000 pounds. Because all vehicles in these source types weigh less than 10,000 pounds, the RCCA is 100%, and therefore the compliance factor is 99.4%.

All model year 1995 and older vehicles of source type 21, 31, and 32 have different emissions test procedures based on the GVWR. Vehicles that weigh equal to or less than 8,500 pounds are tested by procedures ASM2525 (Test Standard ID 24) and the Gas Cap Pressure Leak Test (Test Standard ID 41). The RCCA for the Gas Cap Pressure Leak Test is 100% for all three source types, resulting in a compliance factor of 99.4%, but the RCCAs for ASM2525 is dependent on the source type. These values can be found in [Appendix A of the MOVES Technical Guidance](#) and are summarized with their corresponding compliance factors in Table 3-9 on the following page.

Table 3-9: Regulatory Class Coverage Adjustments and Compliance Factors for Model Year 1995 & Older Vehicles Tested via ASM2525

SourceTypeID	Source Type Name	RCCA <sup>26</sup>	CF
21	Passenger Car	100%	99.4%
31	Passenger Truck	98%	97.4%
32	Light Commercial Truck	92%	91.4%

Model year 1995 and older vehicles of source type 31 and 32 that have a GVWR between 8,501 and 10,000 pounds also receive the Pre-Condition Two-Speed Idle (PCTSI) Test (Test Standard ID 12) in addition to the previously stated tests. However, MOVES is only capable of having a single test standard assigned for a pollutant in a source type, so this part of the I/M program is not covered with the used inputs. It could be included if a separate MOVES run was conducted and by finding the difference of the values from the two runs. A second MOVES run was not performed because the emissions impact of this portion of the I/M program is seen to be minimal.

#### 3.1.1.4 NLEV and LEV Databases

The National Low Emission Vehicle (NLEV) and California Low Emission Vehicle (LEV) standards were adopted by individual states to reduce the emissions from vehicles. These standards alter the default MOVES values for certain model years, so the EPA provides states with two databases to adjust the default values accordingly.

The NLEV Program was the result of an agreement between the EPA, states in the Ozone Transport Commission (OTC), and auto manufacturers to introduce new emission standards in those states beginning with the 1999 model year before implementing them in the rest of the country beginning with the 2001 model year. The default MOVES database does not include the effects of the early program before the national implementation. To account for this, the EPA provides the NLEV database to states in the OTC that simulates the effects of the program for model years 1999 and 2000. Because Connecticut adopted the NLEV program for the 1999 model year, this database was imported to adjust the default MOVES values to represent the effects of the NLEV standards.

For the states that have adopted the California LEV program regulations, the EPA provides the California LEV database. The effects of these LEV standards are not included in the default MOVES emissions database. Connecticut implemented the California LEV standards in 2008, so CT DEEP modified the California LEV database to reflect the 2008 implementation

<sup>25</sup> U.S. Environmental Protection Agency. 2001. *On-Board Diagnostic (OBD) Regulations and Requirements: Question and Answers*. <https://nepis.epa.gov/Exe/ZyPDF.cgi/P100LW9G.PDF?Dockey=P100LW9G.PDF>

<sup>26</sup> U.S. Environmental Protection Agency. *MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance*. Pg 69-70.

year in accordance with the EPA document [Instructions for Using LEV and NLEV Inputs for MOVES2014](#) to create a Connecticut specific input.<sup>27</sup>

### 3.1.1.5 Road Type Distribution

The *Road Type Distribution* input represents the percent of VMT on each of the five road types used in MOVES, detailed in Table 3-10. MOVES requires this distribution for each vehicle type.

Table 3-10: MOVES Road Types

ID	Name	Description
1	Off-Network	All locations where the predominant activity is vehicle starts, parking and idling
2	Rural Restricted	Rural highways that can only be accessed by an on-ramp
3	Rural Unrestricted Access	All other rural roads (arterials, connectors, and local streets)
4	Urban Restricted Access	Urban highways that can only be accessed by an on-ramp
5	Urban Unrestricted Access	All other urban roads (arterials, connectors, and local streets)

These inputs are created by utilizing a statewide EPA default VMT mix of VMT fraction by the MOBILE6.2 vehicle types and locally collected statewide HPMS vehicle mix containing the fraction of the CT DOT vehicle type counts on each roadway type by functional classification. CT DOT and CT DEEP created a VMT pre-processor, called the CT DOT PERSON FORcasting Model (PERFORM), that would reconcile the two VMT mixes by properly mapping the sixteen MOBILE6.2 vehicle types to the thirteen MOVES source types. The resultant VMT mix of HPMS road type, detailed in Table 3-11, by MOVES vehicle type fraction is then input into EPA's MOVES VMT converter to calculate and format VMT by source type and road type for input into MOVES.

Table 3-11: HPMS Road Types

Rural Road ID	Urban Road ID	Road Description
11	23	Interstate
12	25	Other Freeways and Expressways
13	27	Other Principal Arterial
15	29	Minor Arterial
17	30	Major Collector
19	31	Minor Collector
21	33	Local

The following is a list of tables in Appendix E that provide context for the *Road Type Distribution* input. These tables also provide context for the *Ramp Fraction*, *HPMS Vehicle Type VMT*, and *Average Speed Distribution* inputs, which are discussed in the following subparts.

<sup>27</sup> U.S. Environmental Protection Agency. *Instructions for Using LEV and NLEV Inputs for MOVES2014*. <https://nepis.epa.gov/Exe/ZyPDF.cgi/P100KUFA.PDF?Dockey=P100KUFA.PDF>

Table E-13	HPMS RURAL TRAVEL ACTIVITY PERCENTAGES BY VEHICLE TYPE AND FUNCTIONAL SYSTEM CONNECTICUT-2010
Table E-14	HPMS URBAN TRAVEL ACTIVITY PERCENTAGES BY VEHICLE TYPE AND FUNCTIONAL SYSTEM CONNECTICUT-2010
Table E-15	MOVES Converter Input for 2014 Fraction of VMT on HPMS Road Type by MOBILE6.2 16 Vehicle Type
Table E-16	CT MOBILE6 Hour Input File
Table E-17	Average 2014 Daily HPMS VMT (miles per day) for the 14 2010+ FHWA HPMS Road Types
Table E-18	2014 HPMSBaseYearVMT Annual Vehicle Miles Traveled (VMT)
Table E-19	2014 Summer Weekday Vehicle Miles Traveled (VMT)

### 3.1.1.6 Ramp Fraction

*Ramp Fraction* indicates the percent of vehicle-hours traveled that occurs on ramps for rural restricted access roadways (Road Type ID = 2) and urban restricted access roadways (Road Type ID = 4).

These inputs are generated starting with PERFORM using forecasted VMT figures by roadway type. The county level expressway and ramp VMT are divided into urban and rural designations and input into a MOVES ramp fraction pre-processor along with average speeds for urban and rural expressways and ramps. CT DOT designed this pre-processor to calculate the percentage of urban and rural expressway Vehicle Hours of Travel that occur on ramps within each county.

### 3.1.1.7 HPMS Vehicle Type VMT

The *HPMS Vehicle Type VMT* (HPMSvType) input represents annual vehicle-miles of travel in each county in Connecticut for each of the five HPMS vehicle types. The annual input for each county input is developed from the VMT fractions for each month, day, and hour. These fractions are respectively defined by:

- the fraction of total annual VMT that occur in a given month;
- the fraction of total monthly VMT that occur on weekdays versus weekends;
- the fraction of total daily VMT that occur in a given hour.

County-level VMT totals by HPMS road type are calculated in the CT DOT PERFORM statewide travel demand model. These VMT totals are based on HPMS VMT factors that have been derived from HPMS VMT figures categorized by HPMS urban area road types. The VMT mix by HPMS road type and MOVES source type, outlined in the *Road Type Distribution* subpart above, County VMT by road type, and locally collected fraction of VMT by hour are input into the EPA MOVES VMT converter to calculate and format daily VMT figures. These daily VMT figures from PERFORM, which utilize calculated seasonal VMT factors and default weekend day adjustment factors, are then input into EPA's MOVES Annual Average Daily VMT converter to develop the annual *HPMS Vehicle Type VMT* input for each county.

### 3.1.1.8 Average Speed Distribution

The *Average Speed Distribution* input is the assignment of vehicle-hours traveled into sixteen unique speed bins in MOVES. PERFORM is used to develop these inputs, but because PERFORM was built using the data format of MOBILE6.2, an EPA convertor tool must be used to convert the PERFORM output data into a MOVES input.

Unlike MOVES, MOBILE6.2 uses only fourteen speed bins. As seen in Table 3-12, the first thirteen speed bins in each model are equivalent, whereas MOBILE6.2 speed bin 14 is split into MOVES speed bins 14, 15, and 16.

MOVES requires this information for every combination of vehicle source type, road type, and hour of the day. It is also separated by season to allow for summer, winter, and annual average adjustment factors.

Table 3-12: MOBILE6.2 and MOVES Speed Bins

Speed Bin Number		Speed [mph]		Abbr. Speed Bin Name
MOBILE6.2	MOVES	Min.	Max.	
1	1	0	2.5	2.5
2	2	2.5	7.5	5
3	3	7.5	12.5	10
4	4	12.5	17.5	15
5	5	17.5	22.5	20
6	6	22.5	27.5	25
7	7	27.5	32.5	30
8	8	32.5	37.5	35
9	9	37.5	42.5	40
10	10	42.5	47.5	45
11	11	47.5	52.5	50
12	12	52.5	57.5	55
13	13	57.5	62.5	60
14	14	62.5	67.5	65
	15	67.5	72.5	70
	16	≥72.5	-	75

### 3.1.1.9 Fuel Formulation and Fuel Supply

The *Fuel Formulation Table* defines properties, such as RVP, sulfur level, ethanol volume, etc., for each fuel. The *Fuel Supply Table* identifies the fuel formulations used in a region and the respective market share of each formulation.

The MOVES2014b default values are used to define both the fuel formulation and fuel supply values for the 2014 PEI analysis since a full local fuel property study for Connecticut was not available, as recommended in [Section 4.9.1 of the MOVES Technical Guidance](#).<sup>28</sup>

### 3.1.1.10 Fuel Usage Fraction

The default fuel usage fractions within MOVES are used for all fuel types except E-85 fuel.

[Section 4.9.2 of the MOVES Technical Guidance](#) instructs the user to specify the fraction of E-85 used compared to conventional gasoline in E-85 capable vehicles, where a fraction of zero indicates that conventional gasoline is used 100% of the time.<sup>29</sup> According to the [USDOE Alternative Fueling Station Locator](#), there were only two public E-85 stations located in Connecticut as of December 31, 2014: One in New London County and one in Fairfield County. Therefore, the use of E-85 fuel in E-85 capable vehicles in Connecticut is assumed to be negligible and the fuel usage fraction of E-85 is zero.

### 3.1.1.11 Alternative Vehicle Fuel Table

The *Alternative Vehicle Fuel Table* (AVFT) is used to define the vehicle fleet in terms of which fuels a vehicle type is capable of utilizing. Fractional values, totaling one, are specified for each vehicle type by model year. For example, if half of model

<sup>28</sup> U.S. Environmental Protection Agency. MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance: Using MOVES to Prepare Emission Inventories for State Implementation Plans and Transportation Conformity. Pg 46.

<sup>29</sup> U.S. Environmental Protection Agency. MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance: Using MOVES to Prepare Emission Inventories for State Implementation Plans and Transportation Conformity. Pg 49.

year 2014 transit buses are capable of using CNG and the other half are capable of using diesel, then the AVFT would list values of 0.5 under CNG and diesel for model year 2014 transit buses.

The purpose of the AVFT is only to define the vehicle fleet by capability, not by actual fuel usage; that is the purpose of the Fuel Usage Fraction Table. The values in the AVFT should only be modified from the default values if local data is available. Connecticut does not have local data for vehicle fleet capability, so the default data in MOVES2014b is used for each county.

#### 3.1.1.12 Hotelling Inputs

The MOVES term, *hotelling*, refers to the number of parked hours that drivers of combination trucks take during their mandatory rest periods. Hotelling modes include extended idle, diesel auxiliary power unit use, battery power, and engine-off.<sup>30</sup> MOVES hotelling inputs are used to import total hotelling hours by hour of day, day type, month, and vehicle model year.

The MOVES hotelling hours input for the 2014 PEI was based on hotelling data developed by the EPA for the [2011 NEI](#), which is more representative of Connecticut than the default hotelling hours in MOVES2014b. The default hotelling data in MOVES2014b is calculated only for rural restricted roadways in each county, whereas both rural and urban roadways are accounted for in the 2011 NEI. For instance, hotelling is known to occur in Fairfield County; yet, MOVES2014b estimates there is no hotelling within Fairfield County because there are no rural restricted roads in the county. Therefore, the values from the 2011 NEI are preferred.

Although the EPA released new hotelling data for the 2014 NEI, the 2011 NEI data is still preferred because the 2014 NEI data was deemed to be overestimated by the Multi-Jurisdictional Organization (MJO) MOVES workgroup. However, the 2011 NEI data must be adjusted to account for the difference in VMT between 2011 and 2014. A ratio for each county was used to compare the VMTs for combination trucks (2011 NEI HPMSVtypeVMT for SourceTypeID=60 to 2014 local HPMSVtypeVMT). Additionally, the use of the 2011 NEI hotelling data for the 2014 PEI also maintains consistency with the inputs used by Connecticut to develop its SIP budgets.

The hotelling activity distribution input was not changed from the MOVES2014b default.

#### 3.1.1.13 Stage II Controls

The refueling emissions information and adjustments made for Stage II refueling and controls in Connecticut are discussed in Part 4.2.4 of Section 4.

### 3.1.2 MOVES On-Road Data

Information regarding MOVES2014b run specifications, input databases, and output databases used to calculate 2014 on-road mobile source emission estimates are available upon request. This is a large download (150 MB), and the database files require the supporting MOVES database application (currently MariaDB, formerly MySQL). Send an email to [DEEP.BAM.TS@ct.gov](mailto:DEEP.BAM.TS@ct.gov) using a subject line of "MOVES 2014 ONROAD File Request". Copying [Richard.Rodrigue@ct.gov](mailto:Richard.Rodrigue@ct.gov) and [Steven.Potter@ct.gov](mailto:Steven.Potter@ct.gov) may improve the response time for your request. Instructions for accessing the files via secure file transport website (<https://sft.ct.gov/>) will be provided after we put the files on the secure file transport website.

These databases and files provide additional details beyond that provided in this document.

### 3.1.3 On-Road Mobile Sources Emissions Results

The annual and summer day emission estimates for on-road mobile sources were previously summarized by county in Table 3-1 and Table 3-3, respectively. The estimates for the entire state are summarized by sector on the following pages in Table 3-13 and Table 3-14. These emissions estimates are comprehensively shown by county and fuel type in Appendix F.

Table F-1	Annual 2014 Onroad Emissions by SCC for Fairfield County (Excluding Refueling Emissions)
Table F-2	Annual 2014 Onroad Emissions by SCC for Hartford County (Excluding Refueling Emissions)
Table F-3	Annual 2014 Onroad Emissions by SCC for Litchfield County (Excluding Refueling Emissions)
Table F-4	Annual 2014 Onroad Emissions by SCC for Middlesex County (Excluding Refueling Emissions)
Table F-5	Annual 2014 Onroad Emissions by SCC for New Haven County (Excluding Refueling Emissions)
Table F-6	Annual 2014 Onroad Emissions by SCC for New London County (Excluding Refueling Emissions)
Table F-7	Annual 2014 Onroad Emissions by SCC for Tolland County (Excluding Refueling Emissions)
Table F-8	Annual 2014 Onroad Emissions by SCC for Windham County (Excluding Refueling Emissions)
Table F-9	Summer Weekday 2014 Onroad Emissions by SCC For Fairfield County (Excluding Refueling Emissions)
Table F-10	Summer Weekday 2014 Onroad Emissions by SCC For Hartford County (Excluding Refueling Emissions)
Table F-11	Summer Weekday 2014 Onroad Emissions by SCC For Litchfield County (Excluding Refueling Emissions)
Table F-12	Summer Weekday 2014 Onroad Emissions by SCC For Middlesex County (Excluding Refueling Emissions)

## 3.2 Non-Road Mobile Sources

The following MOVES default inputs have since been refined by the EPA in 2018 to include significant improvements to non-road inventory estimations and have been included in this updated 2014 PEI:

- Non-road growth indices
  - This decreases non-road equipment populations (and thus emissions), but results vary depending on the economic sector and the base year population of Connecticut and its counties.
- Tier 4 non-road diesel engine classifications, population splits, speciation, and emission rates
  - These changes better account for emissions from large diesel engines with advanced after-treatment. The changes generally decrease future year emissions.
- Non-road diesel fuel sulfur levels
  - This will affect non-road emissions for sulfate and particulate matter.

To estimate non-road emissions in 2014, CT DEEP ran MOVES2014b for all eight Connecticut counties in inventory-mode using established annual and summer day input data. Part 3.2.1 of this subsection provides an explanation and basis for the input parameters used in MOVES2014b for this inventory.

### 3.2.1 MOVES Non-Road Inputs

The following subparts document the sources of information used to develop locally specific inputs for the MOVES2014b non-road runs.

#### 3.2.1.1 Fuel Formulation and Fuel Supply

As directed by the *Emissions Inventory Guidance for Implementation of Ozone and Particulate Matter National Ambient Air Quality Standards (NAAQS) and Regional Haze Regulations*, fuel data, including fuel formulation and fuel supply, uses MOVES2014b defaults as is similarly done with the on-road runs to ensure the validity of the results.<sup>31</sup> Further detail can be found in subpart 3.1.1.9.

#### 3.2.1.2 Population Adjustment for Recreational Marine Sources

The default MOVES2014b values for the *nrbaseyearequippopulation* input are used for all non-road sources except recreational marine sources (sourcetypesIDs 2113 through 2159). This is because the default population growth among these source types is not reflective of boating population in Connecticut. Recreational marine estimates for 2014 are obtained from CT DMV boating registration data.

As seen in Figure 3- on the next page, since reaching a peak of more than 112,000 boating registrations between 2005 and 2007, boating registration numbers in Connecticut have steadily declined by about 1,800 registrations each year to a total of 99,658 boating registrations in 2014, a decline of approximately 11% from the peak. The default MOVES2014b values increase the boating population in Connecticut, which is not representative of the local boating population, so the boating registration data is used. An analysis of the 2018 registration data was used to create an equipment population and distribution for each recreational marine source type and was scaled to the total boating population in 2014.

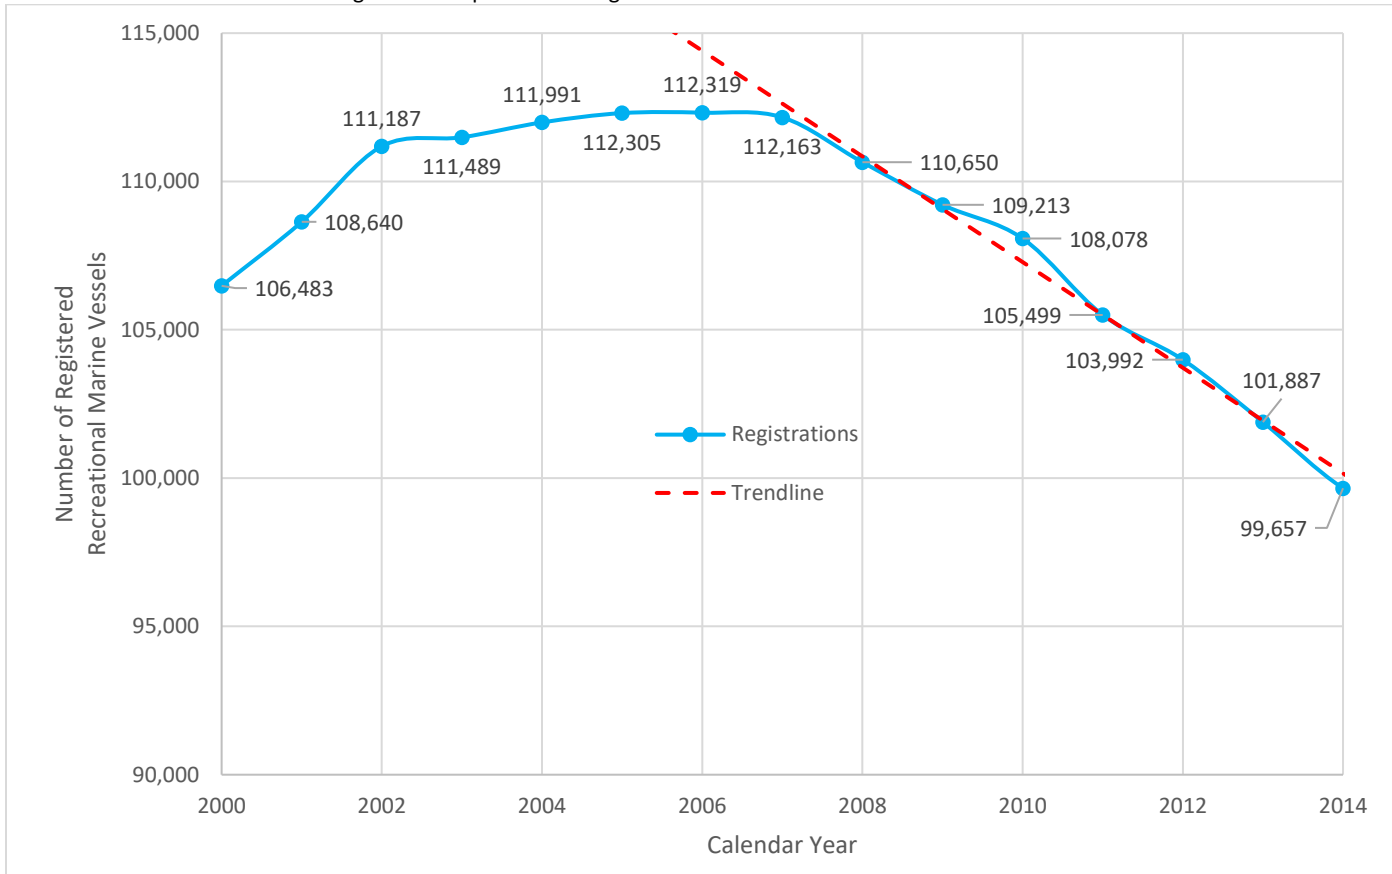

The population values of recreational marine sources used in MOVES are shown in Table G-17.

### 3.2.2 MOVES Non-Road Data

Information regarding MOVES2014b run specifications, input databases, and output databases used to calculate 2014 non-road mobile source emission estimates are available upon request. This is a large download (1 GB), and the database files require the supporting MOVES database application (currently MariaDB, formerly MySQL). Send an email to [DEEP.BAM.TS@ct.gov](mailto:DEEP.BAM.TS@ct.gov) using a subject line of "MOVES 2014 NONROAD File Request". Copying [Richard.Rodrigue@ct.gov](mailto:Richard.Rodrigue@ct.gov) and [Steven.Potter@ct.gov](mailto:Steven.Potter@ct.gov) may improve the response time for your request. Instructions for accessing the files via secure file transport website (<https://sft.ct.gov/>) will be provided after we put the files on the secure file transport website.

These databases and files provide additional details beyond that provided in this document.

### 3.2.3 Non-Road Mobile Sources Emissions Results

The annual and summer day emission estimates for non-road mobile sources were previously summarized by county in Table 3-2 and Table 3-4, respectively. The estimates for the entire state are summarized by sector on the following page in Table 3-15 and Table 3-16. These emissions estimates are comprehensively shown by county and sector in Appendix G. While aircraft, commercial marine vessels, and locomotives are discussed in the following subsections, the emissions from these sectors are included in the summary tables.

Table 3-15: 2014 Annual Non-Road Sector Emissions in Connecticut

Non-Road Sector	Annual Emissions [TPY]							
	VOC	NO <sub>x</sub>	CO	PM <sub>10</sub>	PM <sub>2.5</sub>	SO <sub>2</sub>	NH <sub>3</sub>	Lead

### 3.3 Aircraft

The aircraft sector is comprised of aircraft used for public, private, and military purposes, as well as aircraft auxiliary power units (APU) and ground support equipment (GSE), such as refueling and baggage handling vehicles. Aircraft are split into four categories: military, commercial, general aviation, and air taxis. All vehicles used for military aircraft operations are encompassed under military aircraft; commercial aircraft and air taxis are both used to transport passengers and freight; and general aviation aircraft include vehicles used for personal transportation and recreation. All aircraft and support equipment are generally defined under the following SCCs:

Table 3-17: SCCs to Define Aircraft and Support Equipment

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
22-75-00-1000	Mobile Sources	Aircraft	Military Aircraft	Total
22-75-02-0000	Mobile Sources	Aircraft	Commercial	Total
22-75-05-0011	Mobile Sources	Aircraft	General Aviation	Piston
22-75-05-0012	Mobile Sources	Aircraft	General Aviation	Turbine
22-75-06-0011	Mobile Sources	Aircraft	Air Taxi	Piston
22-75-06-0012	Mobile Sources	Aircraft	Air Taxi	Turbine
22-75-07-0000	Mobile Sources	Aircraft	Aircraft APU	Total
22-60-00-8005	Mobile Sources	Off-Highway Vehicle Gasoline	Airport GSE	Two-Stroke
22-65-00-8005	Mobile Sources	Off-Highway Vehicle Gasoline	Airport GSE	Four-Stroke
22-67-00-8005	Mobile Sources	Off-Highway Vehicle LPG	Airport GSE	Airport GSE
22-68-00-8005	Mobile Sources	Off-Highway Vehicle CNG	Airport GSE	Airport GSE
22-70-00-8005	Mobile Sources	Off-Highway Vehicle Diesel	Airport GSE	Airport GSE

While aircraft are modeled using MOVES, the associated emissions are classified in the NEI as a point source centered at an airport instead of as a non-road mobile source. In this PEI, however, aircraft emissions have been included as a component of the non-road sector. The emissions produced from aircraft exhaust, APUs, and GSE are considered to be part of an aircraft's Landing & Take-Off (LTO) cycle. The EPA provided draft estimates of the aircraft activity data for the 2014 NEI and allowed states to comment before the calculation of emissions. The EPA expressed interest in separating emissions from piston-engine and turbine-engine powered aircraft to obtain a more accurate estimate for lead. Thus, Connecticut submitted comments to identify the airports and heliports that exclusively use turbine-engine powered aircraft and to provide other updates to the activity data.

The finalized EPA estimates used in the 2014 NEI for aircraft can be found in the **2014EPA\_Airports** dataset available through the [EIS Gateway](#). Connecticut accepts these annual emissions estimates for each facility without adjustment. Connecticut does consider the estimates for small airports and heliports to be high, but these small airports and heliports do not significantly impact emissions estimates, as is evidenced by airport shutdowns and previous airport survey data. For more information on how the EPA determined these estimates, please refer to [Section 3.2 of the 2014 NEI v2 TSD](#).<sup>32</sup>

Summer ozone emissions are calculated from the annual emissions using allocation factors. These allocation factors can be determined using [airport operation records](#) in the Federal Aviation Administration (FAA) Air Traffic Activity Data System

<sup>32</sup> U.S. Environmental Protection Agency. *Airports*. 2014 National Emissions Inventory, Version 2: Technical Support Document. Pgs 3-14 to 3-16

(ATADS) and survey data.

The FAA ATADS contains operations data for airports with FAA control towers. The following airports in Connecticut have FAA control towers:

- Bradley International Airport (BDL) – Windsor Locks, CT
- Danbury Municipal Airport (DXR) – Danbury, CT
- Groton-New London Airport (GON) – Groton, CT
- Hartford-Brainard Airport (HFD) – Hartford, CT
- Igor I. Sikorsky Memorial Airport (BDR) -Stratford, CT
- Tweed-New Haven Airport (HVN) – New Haven, CT
- Waterbury-Oxford Airport (OXC) – Oxford, CT

The FAA also estimates the annual operations for thirteen Connecticut airports in their [Traffic Area Forecast \(TAF\)](#), which includes the seven aforementioned airports in the ATADS and the following six airports:

- Chester Airport (SNC) – Chester, CT
- Danielson Airport (LZD) – Killingly, CT
- Meriden-Markham Municipal Airport (MMK) -Meriden, CT
- Robertson Field (4B8) – Plainville, CT
- Simsbury Airport (4B9) – Simsbury, CT
- Windham Airport (IJD) – North Windham, CT

Because the TAF is only an estimate of annual operations and are not specified by month, the allocation factors for these six airports, and all remaining airports and heliports in Connecticut, are determined from survey data collected from the facilities for the 2005 PEI. This makes the allocation factors used in this PEI consistent with previous PEIs. For a sample calculation of how summertime emissions are calculated in the aircraft sector, please refer to Example 6 in Appendix B.

The airport operations provided by survey responses are refined as necessary to ensure there is an allocation factor for each SCC in Table 3-17. This includes augmentations like separating the general aviation operations into piston-driven and turbine-driven aircraft. Military LTO estimates are not available for MMK and LZD, so a factor of 0.25 is used for MMK and a factor of 0.7 is used for LZD; these factors are consistent with the allocation factors for all other aircraft SCCs at these airports.

Aircrafts APUs and GSE are assumed in the **2014EPA\_Airports** dataset to only exist at the thirteen airports included in the FAA TAF, but the ATADS records and survey responses do not explicitly identify APUs or GSE operations. To resolve this, the allocation factors for these SCCs at a particular airport are set to be equal to the allocation factor of the most representative type of aircraft in operation at that airport. This is because APUs and GSE are defined as components of the LTO cycle of an aircraft. For example, the most commonly used type of aircraft at BDL is commercial aircraft, so the allocation factor of 0.259 for SCC 22-75-02-0000, calculated from ATADS data, is also applied to the APU and GSE SCCs (22-75-07-0000, 22-65-008-005, 22-67-008-005, 22-68-008-005, and 22-70-008-005) at BDL. Appendix G only shows non-zero emissions. Two stroke gasoline airport ground support equipment (SCC 22-60-008-005) do not appear in Appendix G, because the SCC had no emissions in Connecticut for 2014.

The emissions resulting from aircraft in Connecticut can be found in Appendix G:

Table G-18	Annual Lead Emissions from Piston-Driven Aircraft
Table G-19	Annual Emissions of Aircraft
Table G-20	Aircraft Summer Day Allocation Factors
Table G-21	Summer Day Emissions of Aircraft

### 3.4 Commercial Marine Vessels (CMV)

Marine vessels that are used to conduct commerce or for use by the Coast Guard are classified as commercial marine vessels (CMVs) and are reported under the following SCCs:

Table 3-18: SCCs to Define Commercial Marine Vessels

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
22-80-002-100	Mobile Sources	Marine Vessels, Commercial	Diesel	Port
22-80-002-200	Mobile Sources	Marine Vessels, Commercial	Diesel	Underway
22-80-003-100	Mobile Sources	Marine Vessels, Commercial	Residual	Port
22-80-003-200	Mobile Sources	Marine Vessels, Commercial	Residual	Underway

The emissions estimates for CMVs in Connecticut presented by the EPA in the 2014 NEI are accepted without modification. For more information on how the EPA determined these estimates, please refer to [Section 4.19 of the 2014 NEI v2 TSD](#).<sup>33</sup>

The annual estimates for 2014 are presented in Table G-22 and the estimates for a typical summer day are presented in Table G-23. The summer day emissions for CMVs are calculated using a factor based on continuous activity, which corresponds to the summer day apportionment factor of 5.495 lb/day to TPY listed in Table D-2. For a sample calculation of how summer day emissions are calculated in the CMV sector, please refer to Example 4 in Appendix B.

<sup>33</sup> U.S. Environmental Protection. *Commercial Marine Vessels* Agency. 2014 National Emissions Inventory, Version 2: Technical Support Document. Pgs.4-175 to 4-207

### 3.5 Locomotives

CT DOT has ownership of roughly 1,000 miles of track. Table 3-19 below shows the [fourteen companies](#) that operated locomotives in the State of Connecticut in 2014 by SCC:

Table 3-19: Locomotive Operations in Connecticut

SCC	Locomotive Class	Company
22-85-002-006	Class I Freight <sup>†</sup>	CSX Transportation (CSXT)
22-85-002-007	Class II/III Freight	Branford Steam Railroad (BRFD)
		Central New England Railroad (CNZR)
		Connecticut Southern Railroad (CSO)
		Housatonic Railroad (HRRC)
		Naugatuck Railroad (NAUG) <sup>‡</sup>
		New England Central Railroad (NECR)
		Pan Am Railways (PAR)
		Pan Am Southern Railroad (PAS)
		Providence and Worcester Railroad (PW)
		Valley Railroad (VALE) <sup>‡</sup>
22-85-002-008	Passenger	Amtrak (AMTK)
22-85-002-009	Commuter	Shore Line East (SLE)
		Metro-North Railroad (MNCW)
22-85-002-010	Yard Locomotives	(All have Yard activity)

<sup>†</sup> Railroad classes are determined by gross revenue, of which, the Class I designation has the largest revenue criteria, followed by Class II and then Class III.

<sup>‡</sup> Denotes tourist attraction (passenger) operations, classified by the EPA as Class II/III.

The 2014 NEI estimates assign zero emissions to Class I Operations (22-85-002-006) in Connecticut due to the small scale of these operations relative to national Class I values. CT DEEP provides its own estimates for Class I Operations formulated from a base year of 2005 and EPA 2014 Class II/III freight emission estimates. 2005 data was used because a comprehensive survey was conducted that year with fuel use and track rights data collected from all rail lines in the State of Connecticut. The survey results were analyzed to apportion fuel usage to track mileage for each county, as shown in Table G-26.<sup>34</sup> The Class I values pertain only to CSXT, where Fairfield (146,415 gallons), and New Haven (111,555 gallons), respectively represent represent 3.2% and 2.4% of total statewide locomotive fuel use in 2005 (4,545,060 gallons) and 10.5% and 8.0% of total statewide freight locomotive fuel use in 2005 (1,398,920 gallons). The ratio of emissions associated with the 2005 total freight fuel use were used against EPA's 2014 Class II and III rail emission estimates to obtain proportional values the 2014 Class I emissions estimates. The results of this estimate are presented in the Table G-24 2014 annual estimates for Class I Operations (SCC 22-85-002-006).

Connecticut accepts the 2014 NEI EPA estimates for Class II/III Operations (22-85-002-007). [Section 4.20 of the 2014 NEI TSD](#) describes these emission estimates.

CT DEEP has adopted the 2017 NEI emissions for passenger and commuter SCCs for 2014 passenger and commuter rail emission estimates. Connecticut participated in rail emission estimates for the EPA's 2016 modeling platform and adopts the 2017 NEI EPA estimates for passenger trains (SCC 22-85-002-008) and commuter rail (SCC 22-85-002-009) for 2014.

<sup>34</sup> State of Connecticut, Department of Energy and Environmental Protection, Bureau of Air Management. 2009. *2005 Periodic Ozone and Carbon Monoxide Emissions Inventory*. <https://portal.ct.gov/DEEP/Air/Emissions-Inventory/Emissions-Inventory>

The 2014 NEI locomotive emissions estimates do not include estimates for passenger trains (22-85-002-008) or commuter lines (22-85-002-009). However, the EPA has included these values in the 2017 NEI. The U.S. Energy Information Administration (EIA) reported locomotive Fuel Oil and Kerosene Sales in 2014 and 2017 at 4,927,000 gallons and 4,926,000 gallons, respectively.<sup>35</sup> The ratio of these two values is approximately one suggesting that rail activity values would not need to be adjusted. The 2014 SO<sub>2</sub> emission factor is based on the nationwide adoption of 15 ppm ultra-low sulfur diesel (ULSD) fuel by the rail industry, so no sulfur specific adjustments are needed.<sup>36</sup> For more information on how the EPA determined the estimates for passenger trains and commuter lines, please refer to [Section 4.22 of the 2017 NEI TSD](#).<sup>37</sup>

Yard locomotives (22-85-002-010) emissions were zero due to the small scale of these operations. EPA 2017 emissions estimates associated with rail yard locomotives were estimated as point source emissions (point SCC 2-85-002-01) in the 2017 NEI, and even Connecticut's largest switchyard was considered too small and were estimated as zero.

The annual estimates for 2014 are presented in Table G-24 and the estimates for a typical summer day are presented in Table G-25. The summer day emissions for locomotives are calculated using a factor based on uniform activity of 24 hours a day, five days a week, which corresponds to the 7.692 lb/day to TPY summer day apportionment factor listed in Table D-2. For a sample calculation of how summertime emissions are calculated in the locomotive sector, please refer to Example 5 in Appendix B.

## Section 4 Area Sources

### 4.0 Introduction

The Area Source Inventory estimates the emissions for those source categories that are too small and/or too numerous to be handled individually in the point source inventory (e.g., residential heating units). Table 4-1 and Table 4-2 present the total of all area source emissions for annual and typical high ozone summer day by county. Table 4-3 and Table 4-4 present the annual and summer day contributions from each area source sector by county. Appendix I Table I-1 presents annual emissions (TPY) by section number within Section 4 of this document, SCC and County. Appendix Table I-2 lists the VOC, NO<sub>x</sub>, and CO emissions for a typical ozone summer day (lb/day) by section number within section 4 of this document, SCC and County. Appendix I also includes Table I-3 which defines the area source sector groups used in Tables 4-3 and 4-4.

Appendix D Table D-1 lists applicable Source Classification Codes (SCCs) for each section of this 2014 PEI together with an SCC description, the EPA data format (Data Category) and summer day allocation method. With the exception of Stage II Refueling, bulk plant and terminals, and landfill emissions, the allocation of annual emissions to summer day emissions for area source SCCs were generated based on the summer day allocation factors presented in Table D-2. These allocation factors are applied on a SCC basis. Implementation of the Table D-2 allocation factors are shown in Appendix B. Allocation factors generally remain consistent with values used in previous PEIs and follow EPA SCC mappings, however, three new SCC allocation factors were needed to complete this PEI and are discussed in Table D-3. Appendix D Tables D-3 shows the summer day allocation factor and described the logic used in setting the summer day allocation factor for the 2017 PEI. Appendix D Table D-4 and Table D-5 show EPA temporal allocation information for new processes.

Connecticut has adopted EPA's area source emissions estimates for Connecticut, contained in version 2 of EPA's 2014 NEI. Data for the Area Source section was extracted from the [2014 NEI Supporting Data and Summaries](#) link. This [parent directory](#) has links to [Nonpoint data](#) that was used for all aspects of the Area Source emissions estimates with the exception of Prescribed Burning and Wildfires, which has a separate [link](#).

For event type source categories (prescribed burning and wildfires) emissions were taken from the csv file, [2014neiv2\\_eventfires\\_countyscc.csv](#).

As part of the process of developing EPA's 2014 area source inventory, Connecticut reviewed and made corrections or enhancements where it was appropriate. Most area source categories were accepted as is. Reviews of source categories and the logic used to accept or recommend changes are documented below. Connecticut primarily reviewed source categories that were either impacted by Connecticut specific regulations or the source category had point source emissions that needed to be accounted for in the area source estimate to avoid double counting. Issues noted after the completion of the 2014 NEI are also addressed in this document, and are reflected in revised emissions estimates as described.

Documentation for the 2014 NEI is provided in the [2014 NEI v2 TSD](#). Supporting information is in various sections of the TSD. Specific information in the TSD can be most efficiently found using the section title or SCC description applicable to the area source section, whereas the detailed files supporting TSD calculations are usually better searched by SCC number. SCC information is available online and can be downloaded from EPA's [SCCs database](#). The SCC download contains many additional fields including SCC Sector and Tier information.

## 4.1 Fuel Combustion

### 4.1.1 Electric Utility Fuel Combustion

There are currently no area source electric utility SCCs, so nonpoint data for electric utility fuel combustion cannot be provided to the EPA EIS at this time. Connecticut includes smaller electric utilities in point source reporting and electric utilities are almost completely covered in the Stationary Point Sources Inventory. The smaller electric utilities that are not covered in the point inventory are listed in Table H-1. This list corresponds to facilities in the Energy Information Administration [2014 Form EIA-923 Report](#) that had an EIA-923 plant identifier but did not align to an EIS alternative identifier, such as, Integrated Planning Model (IPM) or Clean Air Markets Division (CAMD), for an EIS facility having 2014 emissions reported.<sup>38</sup> Total activity for all missing facilities was calculated to be 468.5 thousand gallons of distillate oil and 1,343 million cubic feet of natural gas. This missing electric utilities' activity data was applied to the ICI commercial combustion tool (described below), in order to include the associated emissions in the inventory.

### 4.1.2 Industrial, Commercial, and Institutional Fuel Combustion

The Industrial, Commercial, and Institutional (ICI) fuel combustion source category overlaps with point source reporting, therefore point source reconciliation, also called point source subtraction, is needed to avoid double counting of reported point emissions. The EPA recommended an activity based reconciliation rather than an emissions based reconciliation for the 2014 NEI.

ICI fuel combustion point reconciliation was implemented using a mapping to the EIA-923 report data using the EPA IPM and CAMD alternate plant identifiers to the EIA Plant identifier and the NAICS and fuel type option (Option C) described in the EPA's ICI NEMO2 ([ICI NEMO FINAL 4-2 updated.docx](#)) created to support the 2017 NEI.

EPA's IPM and CAMD alternate plant identifiers were obtained from the EPA EIS Facility Configuration Facility Alternate Identifiers report. The North American Industry Classification System (NAICS) codes were obtained from the EPA EIS Facility Configuration Facility report, and other point reporting data including activity data obtained from Connecticut's point inventory system, EMIT. The linked EIA and point reported emissions inventory data shown in Table H-2 were reviewed for proper alignment, as well as for a reasonable expectation that the complete facility would correspond to the EIA classification stated in the EIA-923 report. The EIA-923 mapped data was supplemented with a NAICS based sector assignment based on the primary NAICS assigned to the facility in EIS and the Table 6 Mapping of NAICS code to ICI sector provided in EPA's ICI NEMO. Appendix H Table H-3 shows the resulting ICI Reconciliation Sector Assignment and Assignment Method.

Three reporting facilities have two corresponding EIA 923 mappings:

- 1) EIS facility identifier 590011 DEVON POWER, LLC maps to EIA plant identifier 544 Devon Station and plant identifier 57070 GenConn Devon LLC.
- 2) EIS facility identifier 715611 C R R A / MID-CONNECTICUT maps to EIA plant identifier 54945 CT Resource Rec Authority Facility and plant identifier 563 South Meadow.
- 3) EIS facility identifier 715711 MIDDLETOWN POWER LLC maps to EIA plant identifier 562 Middletown and plant identifier 57068 GenConn Middletown LLC.

---

<sup>38</sup> U.S. Energy Information Administration. *Form EIA-923 detailed data with previous form data (EIA-906/920)*. <https://www.eia.gov/electricity/data/eia923/#:~:text=The%20survey%20Form%20EIA%2D923,2%20%2D%20fuel%20receipts%20and%20costs>

Each of these mappings represent a situation where a single emissions statement is provided for a facility having two different operating companies at the facility. Division of units at the facility is not needed because the mapped sites have the same ICI Reconciliation Sector Assignment.

Each of these mappings represent a situation where a single emissions statement is provided for a facility having two different operating companies at the facility. Division of units at the facility is not needed because the mapped sites have the same ICI Reconciliation Sector Assignment. Facilities assigned an Industrial or Commercial ICI Reconciliation Sector Assignment are applicable to ICI fuel combustion and need to be further processed into a suitable input for the EPA ICI Combustion Tool. Connecticut's EMIT point reporting emissions system requires the assignment of SCC unit of measure and material. This provides a better option for obtaining ICI combustion reconciliation data than Table 7 of the EPA's ICI NEMO, which inappropriately eliminates some SCCs when it should identify material and combustion processes. Processes having an appropriate material for ICI input, that are not related to petroleum distribution or evaporation, appear to cover the needed scope for ICI combustion point reconciliation.

A review of SCCs for the facilities assigned an Industrial or Commercial ICI Reconciliation Sector Assignment concluded that fuel consumption was reported separately from process materials (Chips fried, asphalt processed, etc.). This simplified the estimation of fuel use that could have been included under an SCC that was not explicitly associated with a fuel material and its corresponding fuel unit of measure.

The Connecticut facility specific results of the point ICI Reconciliation are shown in Table H-4 for each applicable fuel type. A statewide summary of these data by sector and fuel are provided in Table H-5. Table H-6 shows the final statewide point reconciliation activity input data results with a corresponding SCC assigned for use in the EPA's ICI Combustion Tool. This final result has 468.5 thousand gallons of distillate oil and 1,343 million cubic feet (MMCF) of natural gas removed for point reconciliation from the commercial sector to adjust electrical generation activity reported to EIA, but not reported as an emissions inventory point source. Part 4.1.1 of this section and Appendix H Table H-1 describe the calculations of the electrical generation activity reported to EIA but not reported as an emissions inventory point source.

Because the EIA only reports energy consumption down to the state-level, it is necessary to develop a procedure to allocate EIA's fuel consumption estimates (after adjustments noted in sections above) to counties. For the NEI, the procedure relies on the use of allocation factors developed from the county-level number of employees in the Industrial sector, and the county number of employees in the Commercial/Institutional sector. Industrial fuels were provided a profile, and commercial / institutional fuels were provided a different profile. Appendix H Table H-7 shows the county allocation profiles for industrial and commercial/institutional employment calculated from the ICI Combustion Tool activity output for Connecticut. ICI Combustion Tool compiled employment data for these NAICS codes from two Bureau of the Census publications— *County Business Patterns* (for private sectors), and *Census of Governments* (for public administration sectors). For more information on the developments of these profiles, please refer to [Section 4.12.3.2 of the 2014 NEI v2 TSD](#).<sup>39</sup>

The EPA ICI Combustion Tool was run to estimate activity and emissions based on the improved point reconciliation approach described above and the EPA defaults with modifications to inputs described below and explained in the individual fuel sections that follow. EIA State Energy Data System (SEDS) data series 2013F was used, with fuel-specific adjustments described in [Section 4.12.3.1 of the 2014 NEI v2 TSD](#).<sup>40</sup> Key state level inputs were as follows:

<sup>39</sup> U.S. Environmental Protection Agency. *ICI Boilers*. 2018. 2014 NEI V2 TSD. Pg. 4-114 to 4-115.

<sup>40</sup> U.S. Environmental Protection Agency. *ICI Boilers*. 2018. 2014 NEI V2 TSD. Pg. 4-110 to 4-113.

- Improved ICI Point Source Reconciliation estimates using the 2017 methodology
- ICI Distillate Boiler / Engine Split 95 / 5 for Commercial (and institutional) and 90/10 for Industrial
- ICI Distillate Sulfur 0.175%

#### 4.1.2.1 ICI Coal Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-02-001-000	Stationary Source Fuel Combustion	Industrial	Anthracite Coal	Total: All Boiler Types
21-02-002-000	Stationary Source Fuel Combustion	Industrial	Bituminous/ Subbituminous Coal	Total: All Boiler Types
21-03-001-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Anthracite Coal	Total: All Boiler Types
21-03-002-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Bituminous/ Subbituminous Coal	Total: All Boiler Types

The ICI Combustion tool outputs zero activity and zero emissions for ICI Coal Combustion. The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.1.2.2 ICI Distillate Oil Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-02-004-001	Stationary Source Fuel Combustion	Industrial	Distillate Oil	All Boiler Types
21-02-004-002	Stationary Source Fuel Combustion	Industrial	Distillate Oil	All IC Engine Types
21-03-004-001	Stationary Source Fuel Combustion	Commercial/ Institutional	Distillate Oil	Boilers
21-03-004-002	Stationary Source Fuel Combustion	Commercial/ Institutional	Distillate Oil	IC Engines

The ICI Combustion Tool outputs distillate oil activity of 8,600 E3GAL for industrial and 48,707 E3GAL for commercial/ institutional. This activity does not include point reconciliation activity totals, which were removed to avoid double counting of activity and emissions reported in the point sector. For more information on the fuel specific adjustments to EIA data, please refer to [Section 4.12.3.1 of the 2014 NEI V2 TSD](#).<sup>41</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Table I-2.

It is important to differentiate distillate fuel consumption by boilers from consumption by internal combustion engines because the associated emission factors greatly vary. An example of this emission factor variation is the emission factor for NO<sub>x</sub> used in the EPA ICI Tool for internal combustion engines, which is more than 30 times greater than the boiler NO<sub>x</sub> emission factor. EPA NOMAD regional and state discussions directed attention to properly representing distillate fuel consumption. The split of distillate oil fuel consumption of 95% by boilers and 5% by internal combustion engines for commercial and institutional SCCs used by Connecticut in 2011 was maintained, but discussions and evaluations resulted

<sup>41</sup>U.S. Environmental Protection Agency. *ICI Boilers*. 2018. 2014 NEI V2 TSD. Pg. 4-110 to 4-113.

in a higher percentage consumption for industrial SCCs (90% by boilers and 10% by internal combustion engines) than was previously assigned for Connecticut.

ICI Combustion tool updated distillate boiler/engine split national default values to 60%/40% for industrial and 95%/5% for commercial in May 31, 2017 issue of the Version 1.6 of the tool. EPA indicated that states should update these national defaults based on state specific evaluation. The evaluation of Connecticut data for 2011 supported a boiler/engine split of 95%/5% for both commercial/institutional and industrial. An evaluation for the 2014 NEI was extended to include consideration of a review of Massachusetts data to ensure a representative sample of smaller facilities were included in the inventory. The boiler engine split ratio has come up a number of times and will likely come up in the future, so the following key points are noted.

- Turbine related distillate oil consumption is excluded from consideration in determining the distillate oil boiler/engine split.
- The distillate oil boiler/engine split relates to fuel consumption percentages and not equipment population percentages.
- Fuel cost and availability, particularly natural gas availability impact the distillate oil boiler/engine split, but capital cost of the boiler provides inertial stability for short term price differences. Generally, natural gas availability reduces distillate oil boiler fuel consumption.
- Regulations that prohibit emergency generator use for non-emergency behind the meter electrical generation reduce distillate oil engine fuel consumption.

Connecticut distillate oil sulfur regulations changed from 3000 ppm (0.3%) to a low sulfur limit 500 ppm (0.05%) by weight effective July 1, 2014. The 2014 distillate oil sulfur input for the ICI combustion tool was conservatively set at an average to the regulatory sulfur limits (0.175% by weight). Table 19b-1 of [RCSA § 22a-174-19b](#), “Fuel sulfur content limitations for stationary sources”, presents the low sulfur limits that became effective in 2014.<sup>42</sup>

#### 4.1.2.3 ICI Residual Oil Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-02-005-000	Stationary Source Fuel Combustion	Industrial	Residual Oil	Total: All Boiler Types
21-03-005-000	Stationary Source Fuel Combustion	Commercial/Institutional	Residual Oil	Total: All Boiler Types

The ICI Combustion Tool outputs residual oil activity of 21.5 E3GAL for industrial and 798 E3GAL for commercial/institutional. This activity does not include the industrial sector point reconciliation activity total, which was removed to avoid double counting of activity and emissions reported in the point source inventory. For more information on the fuel specific adjustments to EIA data, please refer to [Section 4.12.3.1 of the 2014 NEI v2 TSD](#).<sup>43</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

<sup>42</sup> RCSA § 22a-174-19b. [https://eregulations.ct.gov/eRegsPortal/Browse/RCSA/Title\\_22aSubtitle\\_22a-174\\_HTML/#\\_22a-174-19b](https://eregulations.ct.gov/eRegsPortal/Browse/RCSA/Title_22aSubtitle_22a-174_HTML/#_22a-174-19b).

<sup>43</sup> U.S. Environmental Protection Agency. *ICI Boilers*. 2018. 2014 NEI V2 TSD. Pg. 4-110 to 4-113.

Table 19b-1 of [RCSA § 22a-174-19b](#), “Fuel sulfur content limitations for stationary sources”, indicates that residual oil fuel sulfur limit did not change from the 10,000 ppm limit that existed in 2011.<sup>36</sup> This value corresponds to the default value (1.00%) provided by EPA in the ICI combustion tool.

#### 4.1.2.4 ICI Natural Gas Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-02-006-000	Stationary Source Fuel Combustion	Industrial	Natural Gas	Total: Boilers and IC Engines
21-03-006-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Natural Gas	Total: Boilers and IC Engines

The ICI Combustion Tool outputs natural gas activity of 17,419 MMCF for industrial and 46,621 MMCF for commercial/institutional. This activity does not include point reconciliation activity totals, which were removed to avoid double counting of activity and emissions reported in the point sector. For more information on the fuel specific adjustments to EIA data, please refer to [Section 4.12.3.1 of the 2014 NEI TSD](#).<sup>44</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.1.2.5 ICI LPG Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-02-007-000	Stationary Source Fuel Combustion	Industrial	Liquefied Petroleum Gas (LPG)	Total: All Boiler Types
21-03-007-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Liquefied Petroleum Gas (LPG)	Total: All Combustor Types

The ICI Combustion Tool outputs LPG activity of 2,070 E3GAL for industrial and 29,208 E3GAL for commercial/institutional. This activity does not include point reconciliation activity totals, which were removed to avoid double counting of activity and emissions reported in the point sector. For more information on the fuel specific adjustments to EIA data, please refer to [Section 4.12.3.1 of the 2014 NEI v2 TSD](#).<sup>45</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

<sup>44</sup> U.S. Environmental Protection Agency. *ICI Boilers*. 2018. 2014 NEI V2 TSD. Pg. 4-110 to 4-113.

<sup>45</sup> U.S. Environmental Protection Agency. *ICI Boilers*. 2018. 2014 NEI V2 TSD. Pg. 4-110 to 4-113.

#### 4.1.2.6 ICI Wood Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-02-008-000	Stationary Source Fuel Combustion	Industrial	Wood	Total: All Boiler Types
21-03-008-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Wood	Total: All Boiler Types

The ICI Combustion Tool outputs wood combustion activity of 2,314,000 E6BTU for industrial and 867,000 E6BTU for commercial/institutional. For more information on the fuel specific adjustments to EIA data, please refer to [Section 4.12.3.1 of the 2014 NEI v2 TSD](#).<sup>46</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.1.2.7 ICI Kerosene Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-02-011-000	Stationary Source Fuel Combustion	Industrial	Kerosene	Total: All Boiler Types
21-03-011-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Kerosene	Total: All Combustor Types

The ICI Combustion Tool outputs kerosene oil activity of 1,179 E3GAL for industrial and 294 E3GAL for commercial/institutional. This activity does not include point reconciliation activity totals, which were removed to avoid double counting of activity and emissions reported in the point sector. For more information on the fuel specific adjustments to EIA data, please refer to [Section 4.12.3.1 of the 2014 NEI v2 TSD](#).<sup>47</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

### 4.1.3 Residential Fuel Combustion

#### 4.1.3.1 Residential Coal Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-04-001-000	Stationary Source Fuel Combustion	Residential	Anthracite Coal	All Boiler Types
21-04-002-000	Stationary Source Fuel Combustion	Residential	Bituminous/ Subbituminous Coal	All Boiler Types

Coal is not utilized for residential heat in Connecticut. EPA activity estimate is zero for Connecticut. Connecticut accepts the EPA Residential Coal Combustion emissions estimates. For more information on these estimates, please refer to [Section 4.13 of the 2014 NEI v2 TSD](#).<sup>48</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

<sup>46</sup> U.S. Environmental Protection Agency. *ICI Boilers*. 2018. 2014 NEI V2 TSD. Pg. 4-110 to 4-113

<sup>47</sup> U.S. Environmental Protection Agency. *ICI Boilers*. 2018. 2014 NEI V2 TSD. Pg. 4-110 to 4-113

<sup>48</sup> U.S. Environmental Protection Agency. *Residential Fuel*. 2018. 2014 NEI V2 TSD. Pg. 4-119 to 4-135

#### 4.1.3.2 Residential Distillate Oil Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-040-04-000	Stationary Source Fuel Combustion	Residential	Distillate Oil	Total Boilers and IC Engines

Connecticut accepted the EPA estimates with an adjustment to SO<sub>2</sub> emissions estimates to account for reduced sulfur limits. Effective June 30, 2014, the General Statutes of Connecticut [§16a-21a\(a\)\(2\)](#) decreased the sulfur limit of residential heating distillate oil from 0.3% (3000 ppm) to 500 ppm.<sup>49</sup> Consequently, an adjustment of SO<sub>2</sub> emissions to reflect an average sulfur limit of 1,750 ppm was applied to the EPA 2014 NEI SO<sub>2</sub> emissions estimates for SCC. 2014 NEI SO<sub>2</sub> emissions were multiplied by a factor of  $0.58\bar{3} \left( \frac{1,750 \text{ ppm}}{3,000 \text{ ppm}} \right)$ .

For more information on these estimates, please refer to [Section 4.13 of the 2014 NEI v2 TSD](#).<sup>50</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

The EPA 2014 NEI activity data for the State of Connecticut was based on EIA [SEDS](#) Distillate Fuel Oil consumption data.<sup>51</sup> This data file can be accessed [here](#). EIA Mnemonic Series Name (MSN) DFRCF (Distillate fuel oil consumed by the residential sector) were estimated at 10,071 E3BBL or 422,982 E3GAL.

The EPA county allocation shown in Table 4-5 was provided through support files found in the 2014 NEI v2 TSD sourced from the U.S. Census American Fact Finder query for Heating fuel 2014 5-year estimates.<sup>52</sup> Note that the American Fact Finder query tool has since been decommissioned and comparable data can be retrieved from <https://data.census.gov/>.

Table 4-5: County Allocation of Residential Distillate Oil and Kerosene Consumption

County	EPA County Allocation
Fairfield	23.5%
Hartford	20.8%
Litchfield	7.2%
Middlesex	6.5%
New Haven	22.2%
New London	10.1%
Tolland	5.4%
Windham	4.2%

#### 4.1.3.3 Residential Residual Oil Combustion

The Residential Residual Oil Combustion SCC (21-04-005-000) was retired and not replaced by the EPA. Therefore, there was no combustion of residual oil in the residential sector of Connecticut.

<sup>49</sup> Conn. Gen. Stat. Sec. 16a-21a. 2014. [https://www.cga.ct.gov/current/pub/chap\\_296.htm#sec\\_16a-21a](https://www.cga.ct.gov/current/pub/chap_296.htm#sec_16a-21a).

<sup>50</sup> U.S. Environmental Protection Agency. *Residential Fuel*. 2018. 2014 NEI V2 TSD. Pg. 4-119 to 4-135

<sup>52</sup> U.S. Census Bureau. Table Code B25040. 2014. [https://data.census.gov/table/ACSST5Y2017.B25040?q=B25040&g=040XX00US09\\$0500000\\_010XX00US&y=2014](https://data.census.gov/table/ACSST5Y2017.B25040?q=B25040&g=040XX00US09$0500000_010XX00US&y=2014)

#### 4.1.3.4 Residential Natural Gas Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-04-006-000	Stationary Source Fuel Combustion	Residential	Natural Gas	Total: Boilers and IC Engines

Connecticut accepts the EPA Residential Natural Gas Combustion emissions estimates. For more information on these estimates, please refer to [Section 4.13 of the 2014 NEI v2 TSD](#).<sup>53</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

The EPA 2014 NEI activity data for the State of Connecticut was based on EIA [SEDS](#) natural gas consumption data.<sup>54</sup> This data file can be accessed [here](#). EIA MSN NGRCP (Natural gas consumed by (delivered to) the residential sector) was estimated at 51,193 MMCF.

The EPA county allocation shown in Table 4-6 was provided through support files found in the 2014 NEI v2 TSD sourced from the U.S. Census American Fact Finder query for Heating fuel 2014 5-year estimates.<sup>55</sup> Note that the American Fact Finder query tool has since been decommissioned and comparable data can be retrieved from <https://data.census.gov/>.

Table 4-6: County Allocation of Residential Natural Gas Consumption

County	EPA County Allocation
Fairfield	28.0%
Hartford	35.2%
Litchfield	2.3%
Middlesex	1.9%
New Haven	27.1%
New London	3.1%
Tolland	1.4%
Windham	1.1%

#### 4.1.3.6 Residential Wood Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-04-008-100	Stationary Source Fuel Combustion	Residential	Wood	Fireplace: general
21-04-008-210	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: fireplace inserts; non-EPA certified
21-04-008-220	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: fireplace inserts; EPA certified; non-catalytic
21-04-008-230	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: fireplace inserts; EPA certified; catalytic
21-04-008-310	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: freestanding, non-EPA certified
21-04-008-320	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: freestanding, EPA certified, non-catalytic
21-04-008-330	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: freestanding, EPA certified, catalytic
21-04-008-400	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: pellet-fired, general (freestanding or FP insert)
21-04-008-510	Stationary Source Fuel Combustion	Residential	Wood	Furnace: Indoor, cordwood-fired, non-EPA certified
21-04-008-610	Stationary Source Fuel Combustion	Residential	Wood	Hydronic heater: outdoor
21-04-008-700	Stationary Source Fuel Combustion	Residential	Wood	Outdoor wood burning device, NEC (fire-pits, chimneys, etc)
21-04-009-000	Stationary Source Fuel Combustion	Residential	Firelog	Total: All Combustor Types

Connecticut accepts the EPA Residential Wood Combustion emissions estimates. For more information on these estimates, please refer to [Section 4.14 of the 2014 NEI v2 TSD](#).<sup>59</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.1.3.7 Residential Kerosene Combustion

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
21-040-11-000	Stationary Source Fuel Combustion	Residential	Kerosene	Total: All Combustor Types

Connecticut accepted the EPA kerosene combustion emissions estimates with an adjustment to SO<sub>2</sub> emissions estimates to account for reduced sulfur limits. Effective June 30, 2014, the General Statutes of Connecticut [§16a-21a\(a\)\(2\)](#) decreased the sulfur limit of residential heating distillate oil from 0.3% (3000 ppm) to 500 ppm.<sup>60</sup> Consequently, an adjustment of

<sup>59</sup> U.S. Environmental Protection Agency. *Residential Wood*. 2018. 2014 NEI V2 TSD. Pg. 4-136 to 4-147

<sup>60</sup> Conn. Gen. Stat. Sec. 16a-21a. "Sulfur content of home heating oil and off-road diesel fuel".

[https://www.cga.ct.gov/current/pub/chap\\_296.htm#sec\\_16a-21a](https://www.cga.ct.gov/current/pub/chap_296.htm#sec_16a-21a)

SO<sub>2</sub> emissions to reflect an average sulfur limit of 1,750 ppm was applied to the EPA 2014 NEI SO<sub>2</sub> emissions estimates for SCC. 2014 NEI SO<sub>2</sub> emissions were multiplied by a factor of  $0.58\bar{3} \left( \frac{1,750 \text{ ppm}}{3,000 \text{ ppm}} \right)$ .

For more information on these estimates, please refer to [Section 4.13 of the 2014 NEI v2 TSD](#).<sup>61</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I 1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

The EPA 2014 NEI activity data for the State of Connecticut was based on EIA [SEDS](#) kerosene consumption data.<sup>62</sup> This data file can be accessed [here](#). EIA MSN KSRCP (Kerosene consumed by the residential sector) were estimated at 17 E3BBL or 714 E3GAL.

The EPA county allocation previously shown in Table 4-5 was provided through support files found in the 2014 NEI v2 TSD sourced from the U.S. Census American Fact Finder query for Heating fuel 2014 5-year estimates.<sup>63</sup>

Note that the American Fact Finder query tool has since been decommissioned and comparable data can be retrieved from <https://data.census.gov/>.

## 4.2 Storage & Transport (Gasoline and Fuel Distribution)

In general terms, gasoline distribution emission estimates are broken out in the numbered section groupings or alternatively into the following “stages”:

Stage 1 gasoline distribution emissions are the emissions associated with gasoline handling excluding emissions from refueling activities. Stage I gasoline distribution includes the following gasoline emission points: 1) bulk terminals; 2) pipeline facilities; 3) bulk plants; 4) tank trucks; and 5) unloading at service stations. Emissions from Stage I gasoline distribution occur as gasoline vapors are released into the atmosphere. These Stage I processes are subject to EPA’s maximum available control technology (MACT) standards for gasoline distribution.

### 4.2.1 Bulk Plant and Terminals

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
25-01-050-120	Storage and Transport	Petroleum and Petroleum Product Storage	Bulk Terminals: All Evaporative Losses	Gasoline
25-01-055-120	Storage and Transport	Petroleum and Petroleum Product Storage	Bulk Plants: All Evaporative Losses	Gasoline

A bulk gasoline plant is defined in [40 CFR § 63.11100](#) as “any gasoline storage and distribution facility that receives gasoline by pipeline, ship or barge, or cargo tank, and subsequently loads the gasoline into gasoline cargo tanks for transport to gasoline dispensing facilities, and has a gasoline throughput of less than 20,000 gallons per day”. Similarly, a bulk gasoline terminal is defined as “any gasoline storage and distribution facility that receives gasoline by pipeline, ship or barge, or cargo tank and has a gasoline throughput of 20,000 gallons per day or greater”.<sup>64</sup>

<sup>61</sup> U.S. Environmental Protection Agency. *Residential Fuel*. 2018. 2014 NEI V2 TSD. Pg. 4-119 to 4-135

<sup>62</sup> U.S. Energy Information Administration, “Consumption”, *State Energy Data System (SEDS): 1960-2020*, (Full Consumption report CSV in Physical Units)

<sup>63</sup> U.S. Census Bureau. Table Code B25040. 2014.

<sup>64</sup> 40 CFR § 63.11100. 2011. [https://www.ecfr.gov/cgi-bin/text-idx?node=sp40.15.63.bbbbbb#se40.16.63\\_111100](https://www.ecfr.gov/cgi-bin/text-idx?node=sp40.15.63.bbbbbb#se40.16.63_111100)

This emissions inventory does not have any current bulk plant SCCs and CT DEEP does not have any knowledge of any bulk plants within Connecticut state boundaries. All bulk gasoline storage appears to be covered by bulk terminals, which almost exclusively are accounted for point sources. Reported 2014 point source bulk terminal activity and emissions are summarized in Appendix H Table H-8 and an estimate of the few missing bulk terminal emissions are presented in Appendix H Table H-9.

Bulk plant (SCC 25-01-055-120) area source emissions were set to zero for all counties and bulk terminal (SCC 25-01-050-120) were set to the Appendix H Table H-9 values. The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.2.2 Aviation Gasoline, Stage 1 and 2 Distribution

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
25-01-080-050	Storage and Transport	Petroleum and Petroleum Product Storage	Airports : Aviation Gasoline	Stage 1: Total
25-01-080-100	Storage and Transport	Petroleum and Petroleum Product Storage	Airports : Aviation Gasoline	Stage 2: Total

Table 4-8: County-Level Gasoline Consumption

County Name	County-Level AvGas Consumption [gal]	SEDS State AvGas Consumption [gal]	VOC [TPY]
Fairfield	275,266	1,092,000	1.87
Hartford	374,550	1,092,000	2.55
Litchfield	0	1,092,000	0.00
Middlesex	14,375	1,092,000	0.10
New Haven	203,985	1,092,000	1.39
New London	68,650	1,092,000	0.47
Tolland	63,761	1,092,000	0.43
Windham	91,415	1,092,000	0.62
Total	1,092,000		7.43

Connecticut accepts the EPA Stage 1 and 2 Aviation Gasoline emission estimates. For more information on these estimates, please refer to [Section 4.6 of the 2014 NEI v2 TSD](#).<sup>65</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

<sup>65</sup> U.S. Environmental Protection Agency. *Nonpoint Gasoline Distribution*. 2018. 2014 NEI V2 TSD. Pg. 4-57 to 4-64.

The EPA 2014 NEI activity data for the State of Connecticut was based on NEI v2 Supplemental Data and data from EIA SEDS.<sup>66 67</sup> Review verified VOC emissions factors were consistent with the State of Connecticut 2011 PEI documentation. Aviation Gasoline consumption estimates were consistent with the [EIA SEDS data set for Consumption](#) in years 1960-2014.

#### 4.2.3 Stage I Gasoline Distribution

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
25-01-060-051	Storage and Transport	Petroleum and Petroleum Product Storage	Gasoline Service Stations	Stage 1: Submerged Filling
25-01-060-052	Storage and Transport	Petroleum and Petroleum Product Storage	Gasoline Service Stations	Stage 1: Splash Filling
25-01-060-053	Storage and Transport	Petroleum and Petroleum Product Storage	Gasoline Service Stations	Stage 1: Balanced Submerged Filling
25-01-060-201	Storage and Transport	Petroleum and Petroleum Product Storage	Gasoline Service Stations	Underground Tank: Breathing and Emptying

Connecticut accepts EPA's Stage 1 Gasoline Distribution emissions estimates. For more information on these estimates, please refer to [Section 4.6 of the 2014 NEI v2 TSD](#).<sup>68</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

The EPA 2014 NEI activity data for the State of Connecticut was based on [EPA-453/R94-002b](#) and EIA data on [Annual Petroleum Supply](#).<sup>69, 70</sup>

#### 4.2.4 Stage II Refueling

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
22-01-00-0062	Mobile Sources	Highway Vehicles-Gasoline	Refueling	Total Spillage and Displacement
22-02-00-0062	Mobile Sources	Highway Vehicles-Diesel	Refueling	Total Spillage and Displacement

EPA provided an estimate of diesel refueling in the 2014 NEI data under SCC 22-02-00-0062. Connecticut accepts EPA's emission estimates for SCC 22-02-00-0062.

Connecticut Stage II gasoline emissions (SCC 22-01-00-0062) were estimated using the Connecticut specific MOVES run for the 2014 PEI. Reported point emissions (SCC 4-06-004-02) overlap with SCC 22-01-00-0062 emissions so point

<sup>66</sup> U.S. Environmental Protection Agency. 2014. "Stage I Gasoline Distribution for NEI v2.zip (accessible via Firefox Browser)." *2014 NEI Supporting Data- Nonpoint*. [https://gaftp.epa.gov/Air/nei/2014/doc/2014v2\\_supportingdata/nonpoint/Stage%20I%20Gasoline%20Distribution%20for%20NEI%20v2.zip](https://gaftp.epa.gov/Air/nei/2014/doc/2014v2_supportingdata/nonpoint/Stage%20I%20Gasoline%20Distribution%20for%20NEI%20v2.zip).

<sup>67</sup> U.S. Energy Information Administration, "Consumption", *State Energy Data System (SEDS): 1960-2020*, (Full Consumption report CSV in Physical Units).

<sup>68</sup> U.S. Environmental Protection Agency. *Nonpoint Gasoline Distribution*. 2018. 2014 NEI V2 TSD. Pg. 4-57 to 4-64.

<sup>69</sup> U.S. Environmental Protection Agency. 1994. *Gasoline Distribution Industry (Stage I)-Background Information for Promulgated Standards*. <https://nepis.epa.gov/Exe/ZyPDF.cgi/2000HK21.PDF?Dockey=2000HK21.PDF>.

<sup>70</sup> U.S. Department of Energy. 2014. *Petroleum and Other Liquids*. <https://www.eia.gov/petroleum/supply/annual/volume1/>.

reconciliation was applied as described in this section. Stage II refueling emissions estimates are presented below and in Appendix I. The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

The requirement for Stage II gasoline vehicle fueling controls was eliminated in Connecticut by [Public Act No. 13-120](#) on June 18, 2013 and became effective immediately.<sup>71</sup> This act immediately repealed the requirement to install and test Stage II vapor recovery systems and replaced it with language mandating the decommissioning of all Stage II systems by July 1, 2015.

Between June 18, 2013 and July 1, 2015, stations that had not removed their Stage II controls were not required to test those controls. For the 2014 PEI analysis, there were a number of stations in the process of removing their Stage II controls and stations that had Stage II controls that were not tested.

Because Stage II controls were either removed or not tested, Connecticut assigned the *refuelingVaporProgramAdjust* and *refuelingSpillProgramAdjust* inputs in the MOVES2014b countyyear table to correspond to no Stage II program (i.e. "0" for both fields) for each Connecticut county in 2014. This method to "turn-off" Stage II controls for 2014 and future modeling years is consistent with guidance provided in [Section 4.15 of the MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance](#).<sup>72</sup>

Table 4-9 contains the VOC annual and typical ozone season day emissions from Stage II gasoline vehicle fueling and Stage II diesel vehicle fueling after applying point source subtraction. Only gasoline summer day and annual refueling emissions were obtained from MOVES2014b model runs with point source subtraction applied, as the annual diesel refueling emissions estimates provided by EPA were thought to be adequate. The gasoline annual and summer day refueling emissions were obtained directly from MOVES2014b using Stage II program adjustments described above together with other MOVES inputs described in Section 3 of this document.

Table 4-10 presents the emissions reductions applied as result of point source subtraction together with the point source SCC that was used to report the emissions. Only a single point source SCC was found to have a mapping and only the gasoline SCC 22-01-00-0062 needed to be adjusted for point source emissions reported in 2014. Stage II refueling remains in Section 4 Area Sources of this document, because Stage II refueling is a fixed nonpoint source that is assigned to the Gas Stations sector, that is estimated by the mobile model (MOVES2014b) and that also needs to be combined with point data for a clear representation of the applicable tier levels.

### 4.3 Solvent Utilization

[Section 4.23 of the 2014 NEI v2 TSD](#) discusses all nonpoint solvent sources except for agricultural pesticide application, which is discussed in Part 4.4.5 of this PEI and asphalt paving, which is discussed in Part 4.3.6 of this PEI.<sup>81</sup>

SCCs in Parts 4.3.1 through 4.3.5 of this PEI were estimated using the [EPA's Solvent Tool version 1.7](#) based on employment and county level point reconciliation. The point reconciliation details are based on uncontrolled emissions and are shown in Appendix H Table H-10, Table H-11, and Table H-12. Connecticut accepts these EPA estimates after applying point reconciliation.

#### 4.3.1 Solvent – Degreasing

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
24-15-000-000	Solvent Utilization	Degreasing	All Processes/ All Industries	Total: All Solvent Types

Table 4-11: 2014 County Allocation (Degreasing Solvents)

County	SCC 24-15-000-000 County Allocation
Fairfield	25.0%
Hartford	31.4%
Litchfield	5.2%
Middlesex	5.6%
New Haven	21.2%
New London	7.3%
Tolland	2.3%
Windham	2.1%

The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

	Level 1	Level 2	Level 3	Level 4
24-20-000-000	Solvent Utilization	Dry Cleaning	All Processes	Total: All Solvent Types

<sup>81</sup> U.S. Environmental Protection Agency. *Solvents*. 2018. 2014 NEI V2 TSD. Pg. 4-242 to 4-251.

Table 4-12: County Allocations (Dry Cleaning Solvents)

County	SCC 24-20-000-000 County Allocation
Fairfield	35.4%
Hartford	19.3%
Litchfield	4.6%
Middlesex	3.6%
New Haven	20.9%
New London	11.1%
Tolland	4.2%
Windham	0.9%

County level employment for NAICS 812320 was used to allocate emissions to Connecticut counties. The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.3.3 Solvent – Graphic Arts

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
24-25-000-000	Solvent Utilization	Graphic Arts	All Processes	Total: All Solvent Types

Table 4-13: County Allocations (Graphic Arts Solvents)

County	SCC 24-25-000-000 County Allocation
Fairfield	24.5%
Hartford	36.4%
Litchfield	2.8%
Middlesex	1.5%
New Haven	22.6%
New London	4.2%
Tolland	4.2%
Windham	3.8%

The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.3.4 Solvent – Consumer & Commercial Solvent Use

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
24-60-100-000	Solvent Utilization	Miscellaneous Non-industrial: Consumer and Commercial	All Personal Care Products	Total: All Solvent Types
24-60-200-000	Solvent Utilization	Miscellaneous Non-industrial: Consumer and Commercial	All Household Products	Total: All Solvent Types
24-60-400-000	Solvent Utilization	Miscellaneous Non-industrial: Consumer and Commercial	All Automotive Aftermarket Products	Total: All Solvent Types
24-60-500-000	Solvent Utilization	Miscellaneous Non-industrial: Consumer and Commercial	All Coatings and Related Products	Total: All Solvent Types
24-60-600-000	Solvent Utilization	Miscellaneous Non-industrial: Consumer and Commercial	All Adhesives and Sealants	Total: All Solvent Types
24-60-800-000	Solvent Utilization	Miscellaneous Non-industrial: Consumer and Commercial	All FIFRA Related Products	Total: All Solvent Types
24-60-900-000	Solvent Utilization	Miscellaneous Non-industrial: Consumer and Commercial	Miscellaneous Products (Not Otherwise Covered)	Total: All Solvent Types

Table 4-14: 2014 County Allocations (Miscellaneous Non-industrial: Consumer and Commercial Solvent Utilization)

County	SCC 24-60-100-000, 24-60-200-000, 24-60-400-000, 24-60-500-000, 24-60-600-000, 24-60-800-000 and 24-60-900-000 County Allocation
Fairfield	26.2%
Hartford	25.0%
Litchfield	5.2%
Middlesex	4.6%
New Haven	24.0%
New London	7.6%
Tolland	4.2%
Windham	3.3%

County level population was used to allocate miscellaneous non-industrial: consumer and commercial solvent utilization emissions to Connecticut counties. The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.3.5 Solvent – Industrial Surface Coating & Solvent Use

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
24-01-001-000	Solvent Utilization	Surface Coating	Architectural Coatings	Total: All Solvent Types
24-01-005-000	Solvent Utilization	Surface Coating	Auto Refinishing: SIC 7532	Total: All Solvent Types

County level population was used to allocate Architectural Coatings, Traffic Markings, Industrial Maintenance Coatings and Other Special Purpose Coatings to Connecticut counties. County level employment was used to allocate other surface coating processes to Connecticut counties. The EPA tool implements county level apportionment using the following SCC to NAICS mappings to extract and process census employment data.

Table 4-16: Surface Coating Solvent Utilization SCC to NAICS Mappings in Solvent Tool Employment based County Allocations

SCC	Solvent Tool Category Name	NAICS (where / represents a wildcard value)
2401005000	Automobile Refinishing	4411//, 4412//, and 811112/
2401015000	SC: Factory Finished Wood	321///
2401020000	SC: Wood Furniture and Fixtures	337110, 337121, 337122, 337127, 337211, 337212, and 337215
2401025000	SC: Metal Furniture	337124, 337127, 337214, and 337215
2401030000	SC: Paper, Film and Foil	322220
2401040000	SC: Metal Cans	33243/
2401055000	SC: Machinery and Equipment	3331//, 3332//, 3333//, and 33341/
2401060000	SC: Appliances	3352//
2401065000	SC: Electronic and Other Electrical Coatings	331318, 331420, 331491, 335311, 335921, and 335929
2401070000	SC: Motor Vehicles	3361//, 3362//, and 3363//
2401075000	SC: Aircraft	3364//
2401080000	SC: Marine coatings	3366// and 488390
2401085000	SC: Railroads	3365//
2401090000	SC: Misc. Manufacturing	3369// and 339///

Point source subtraction is handled using the EPA Solvent tool where Point SCCs are mapped to nonpoint SCCs.

The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.3.6 Asphalt Paving – Cutback and Emulsified

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
24-61-021-000	Solvent Utilization	Miscellaneous Non-industrial: Commercial	Cutback Asphalt	Total: All Solvent Types
24-61-022-000	Solvent Utilization	Miscellaneous Non-industrial: Commercial	Emulsified Asphalt	Total: All Solvent Types

Accepted EPA estimates that the annual emissions in Connecticut from cutback and emulsified asphalt are zero. Connecticut agrees with these estimates because Connecticut effectively prohibits the usage of cutback and emulsified asphalt containing greater than 0.1% VOC during the period of May 1<sup>st</sup> through September 30<sup>th</sup> in accordance with [RCSA § 22a-174-20k](#).<sup>82</sup> For more information on these estimates, please refer to [Section 4.22 of the 2014 NEI v2 TSD](#).<sup>83</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

### 4.4 Agriculture

#### 4.4.1 Crops & Livestock Dust

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
28-01-000-003	Miscellaneous Area Sources	Agriculture Production-Crops	Agriculture-Crops	Tilling
28-05-001-000	Miscellaneous Area Sources	Agriculture Production-Livestock	Beef cattle-finishing operations on feedlots (drylots)	Dust Kicked-up by Hooves

Connecticut accepts the EPA Crops & Livestock Dust emissions estimates. For more information on these estimates, please refer to [Section 4.3 of the 2014 NEI v2 TSD](#).<sup>84</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
28-01-500-220	Miscellaneous Area Sources	Agriculture Production-Crops-as nonpoint	Agricultural Field Burning-whole field set on fire	Field Crop is Rice: Burning Techniques Not Significant
28-01-500-250	Miscellaneous Area Sources	Agriculture Production-Crops-as nonpoint	Agricultural Field Burning-whole field set on fire	Field Crop is Sugar Cane: Burning Techniques Not Significant
28-01-500-262	Miscellaneous Area Sources	Agriculture Production-Crops-as nonpoint	Agricultural Field Burning-whole field set on fire	Field Crop is Wheat: Backfire Burning
28-01-500-263	Miscellaneous Area Sources	Agriculture Production-Crops-as nonpoint	Agricultural Field Burning-whole field set on fire	DoubleCrop Winter Wheat and Cotton
28-01-500-264	Miscellaneous Area Sources	Agriculture Production-Crops-as nonpoint	Agricultural Field Burning-whole field set on fire	DoubleCrop Winter Wheat and Soybeans

Connecticut accepts the EPA agricultural field burning emissions estimates. For more information on these estimates, please refer to [Section 4.4 of the 2014 NEI v2 TSD](#).<sup>98</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

According to the Connecticut Department of Agriculture, the activity as described in the EPA Procedures document does not occur in Connecticut. Connecticut General Statutes (CGS) and Regulations of Connecticut State Agencies Section 22a-174(f) authorizes open burning of brush for agricultural purposes when a permit is obtained from the Open Burning Official for that municipal, except if prohibited by an ordinance of the municipality.

All agricultural burning that occurs in Connecticut are accounted for in this document under Section 4.9.2 Open Burning Tool.

#### 4.4.5 Pesticide

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
24-61-850-000	Solvent Utilization	Miscellaneous Non-industrial: Commercial	Pesticide Application: Agricultural	All Processes

Connecticut accepts the EPA agricultural Pesticide emissions estimates. For more information on these estimates, please refer to [Section 4.21 of the 2014 NEI v2 TSD](#).<sup>99</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

## 4.6 Oil and Gas Production

Appendix H Table H-13 provides a listing of areas source oil and gas production SCCs used in the 2014 NEI. The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

Connecticut does not have oil and gas production activity within the state, but a single oil and gas production SCC (3-10-003-07) was assigned to a natural gas distribution facility in Connecticut. This single process assignment was for source E0001 - Station Emergency Shutdown Device Natural Gas Venting at Iroquois Pipeline Operating Co facility (EIS Identifier 14621711, EIS State Identifier T028P0049C08044).

Connecticut accepts EPA's estimates for Connecticut's oil and gas production source category. EPA county level emissions estimates for Connecticut's oil and gas production source category are presented in Appendix I when emissions estimates were zero emissions for all pollutants and all counties.

## 4.7 Other Industrial Processes and Residential Charcoal Grilling

### 4.7.1 Mining and Quarrying

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
23-25-000-000	Industrial Processes	Mining and Quarrying: SIC 14	All Processes	Total

Connecticut accepts the EPA Industrial Processes–Mining and Quarrying emissions estimates.. For more information on these estimates, please refer to [Section 4.15 of the 2014 NEI v2 TSD](#).<sup>132</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

The EPA 2014 NEI activity data for the State of Connecticut was based on the U.S. Geologic Survey [2012 Minerals Yearbook](#).<sup>133</sup> The 2012 Minerals Yearbook was downloaded and reviewed for Connecticut activity. The data utilized to calculate emissions in the EPA EIS spreadsheets closely matches the data downloaded from the USGS Mineral Yearbook 2012.

State	Metal Production [Thousand Metric Tons]	Mineral Production [Thousand Metric Tons]	EPA EIA–Total Mineral Production [Thousand Metric Tons]	USGS–Mineral Yearbook 2012 [Thousand Metric Tons]
Connecticut	7,222	6,517	13,739	13,800

<sup>132</sup> U.S. Environmental Protection Agency. *Mining and Quarrying*. 2018. 2014 NEI V2 TSD. Pg. 4-147 to 4-154.

<sup>133</sup> U.S. Geologic Survey. 2012. "2012 Minerals Yearbook." Accessed July 2015. <https://www.usgs.gov/centers/nmic/mining-and-quarrying#myb>.

#### 4.7.2 Commercial Cooking

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
23-02-002-100	Industrial Processes	Food and Kindred Products: SIC 20	Commercial Cooking-Charbroiling	Conveyorized Charbroiling
23-02-002-200	Industrial Processes	Food and Kindred Products: SIC 20	Commercial Cooking-Charbroiling	Under-fired Charbroiling
23-02-003-000	Industrial Processes	Food and Kindred Products: SIC 20	Commercial Cooking-Frying	Deep Fat Frying
23-02-003-100	Industrial Processes	Food and Kindred Products: SIC 20	Commercial Cooking-Frying	Flat Griddle Frying
23-02-003-200	Industrial Processes	Food and Kindred Products: SIC 20	Commercial Cooking-Frying	Clamshell Griddle Frying

Connecticut accepts the EPA Commercial Cooking emissions estimates. For more information on these estimates, please refer to [Section 4.7 of the 2014 NEI v2 TSD](#).<sup>134</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

The EPA 2014 NEI activity data for the State of Connecticut was based on [data](#) from the U.S. Census Bureau.<sup>135</sup>

The EPA emissions factor for Commercial Cooking was based on [information](#) from the California Air Resources Board and the EPA [SPECIATE Database v4.5](#).<sup>136, 137</sup>

#### 4.7.3 Residential Charcoal Grilling

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
28-10-025-000	Miscellaneous Area Sources	Other Combustion	Residential Grilling*	Total

\*See 23-02-002-XXX for Commercial

Connecticut accepts the EPA Residential Charcoal Grilling emissions estimates. For more information on these estimates, please refer to [Section 4.17 of the 2014 NEI v2 TSD](#).<sup>138</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

<sup>134</sup> U.S. Environmental Protection Agency. *Commercial Cooking*. 2018. 2014 NEI V2 TSD. Pg. 4-64 to 4-70.

<sup>135</sup> U.S. Census Bureau. 2014. County Business Patterns (Complete County File- 14.4 mb zip file). Accessed August 2016. <https://www.census.gov/data/datasets/2014/econ/cbp/2014-cbp.html>.

<sup>136</sup> U.S. Census Bureau. 2014. County Business Patterns (Complete County File- 14.4 mb zip file). Accessed August 2016. <https://www.census.gov/data/datasets/2014/econ/cbp/2014-cbp.html>.

<sup>137</sup> U.S. Environmental Protection Agency. 2016. SPECIATE Database v4.5. [https://gaftp.epa.gov/Air/nei/2014/doc/2014v2\\_supportingdata/nonpoint/](https://gaftp.epa.gov/Air/nei/2014/doc/2014v2_supportingdata/nonpoint/).

<sup>138</sup> U.S. Environmental Protection Agency. *Residential Charcoal Grilling*. 2018. 2014 NEI V2 TSD. Pg. 4-166 to 4-170

The EPA 2014 NEI activity data for the State of Connecticut was based on data from the U.S. Census Bureau and reports from the Hearth, Patio, & Barbecue Association.<sup>139, 140, 141, 142, 143</sup>

The EPA emissions factor for Charcoal Grilling was based on South Coast Air Quality Management District Rule 1174, data from the U.S. Census Bureau, and reports from the Hearth, Patio, & Barbecue Association.<sup>144, 145, 146, 147</sup> Note that the American Fact Finder query tool has since been decommissioned and comparable data can be retrieved from <https://data.census.gov/>.

#### 4.8 Prescribed Burning and Wildfires (Events)

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
28-10-001-001	Miscellaneous Area Sources	Other Combustion-as Event	Forest Wildfires	Smoldering
28-10-001-002	Miscellaneous Area Sources	Other Combustion-as Event	Forest Wildfires	Flaming
28-11-015-001	Miscellaneous Area Sources	Other Combustion-as Event	Prescribed Forest Burning	Smoldering
28-11-015-002	Miscellaneous Area Sources	Other Combustion-as Event	Prescribed Forest Burning	Flaming

EPA provides wildlife fire estimates for the four SCCs listed above. Connecticut accepts these emissions estimates. For event type source categories (prescribed burning and wildfires) emissions were taken from the csv file, [2014nei2\\_eventfires\\_countyscc.csv](#). The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

The EPA used an improved satellite-based approach and added a distinction between grass and pasture burning processes. For wildfires and prescribed fires, EPA used 2014-specific satellite data, and collected 2014-specific ground based observational data from many state forestry agencies. For these fires, EPA also estimated the flaming and smoldering

<sup>139</sup> [https://www.epa.gov/sites/production/files/2018-07/documents/nei2014v2\\_tsd\\_05jul2018.pdf](https://www.epa.gov/sites/production/files/2018-07/documents/nei2014v2_tsd_05jul2018.pdf)

[https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS\\_13\\_5YR\\_DP04&prodType=table](https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_13_5YR_DP04&prodType=table).

<sup>147</sup> Hearth, Patio & Barbecue Association. 2011. "2011 State of the Barbecue Industry Report." Accessed 2015. <https://www.hpba.org/Resources/PressRoom/ID/79/2011-State-of-the-Hearth-Industry-Report>.

components of emissions separately and retained this delineation in the final inventory. Finally, EPA revised several HAP emissions factors based on the peer reviewed literature.

Wildfires and prescribed burns (Wildland Fires in sum, WLFs) that occur during the inventory year are included in the NEI as event sources. Emissions from these fires, as well as agricultural fires, make up the National Fire Emissions Inventory (NFEI). For the 2014 NFEI, the EPA calculated emissions from agricultural fires separately from WLF emissions as described separately in [Section 4.11 of the 2014 NEI v2 TSD](#).<sup>148</sup>

This portion of the document describes the calculation of WLF emissions portion of the 2014 NEI. Estimated emissions from wildfires and prescribed burns in the 2014 NEI (are calculated from burned area data. Input data sets are collected from State, Local and Tribal agencies and from national agencies and organizations. State, Local, and Tribal agencies that provide input data were also asked to complete the NEI Wildland Fire Inventory Database Questionnaire, which consists of a self-assessment of data completeness. Raw burned area data compiled from State, Local, and Tribal agencies and national data sources are cleaned and combined to produce a comprehensive burned area data set.

Emissions are then calculated using fire emissions models that rely on burned area as well as fuel and weather information. The resulting emissions are compiled by date and location. For purposes of emissions inventory preparation, wildland fire (WLF) is defined as “any non-structure fire that occurs in the wildland (an area in which human activity and development are essentially non-existent, except for roads, railroads, power lines, and similar transportation facilities).

Wildland fire activity is categorized by the conditions under which the fire occurs. These conditions influence important aspects of fire behavior, including smoke emissions. In the 2014 NEI, data processing is conducted differently depending on the fire type, as defined below: Wildfire (WF): “any fire started by an unplanned ignition caused by lightning; volcanoes; other acts of nature; unauthorized activity; or accidental, human-caused actions, or a prescribed fire that has developed into a wildfire.”

Prescribed (Rx) fire: “any fire intentionally ignited by management actions in accordance with applicable laws, policies, and regulations to meet specific land or resource management objectives.” Prescribed fire is one type of fuels treatment. Fuels treatments are vegetation management activities intended to modify or reduce hazardous fuels. Fuels treatments include prescribed fires, wildland fire use, and mechanical treatment.

Agricultural burning is a type of prescribed fire, specifically used on land used or intended to be used for raising crops or grazing. This is dealt with in a different section of this document. Pile burning is a type of prescribed fire in which fuels are gathered into piles before burning. In this type of burning, individual piles are ignited separately. Pile burn emissions are not currently included in the NEI due to lack of usable data and methods. EPA continues to work to develop methods for estimating emissions of this source type.

## 4.9 Waste Disposal & Recycling

### 4.9.1 Greenwaste Composting

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
26-80-003-000	Waste Disposal, Treatment, and Recovery	Composting	Greenwaste	All Processes

<sup>148</sup> U.S. Environmental Protection Agency. *Agricultural Field Burning*. 2018. 2014 NEI V2 TSD. Pg. 4-91 to 4-99.

The zip file referenced in the EPA TSD Information pertaining to Composting estimates can be found in the 2014 NEI v2 TSD [Support file](#) on Composting. This document defines EPA Greenwaste composting as including the diversion of yard waste, food waste, and other biogenic waste (not included in this estimate) from landfills to composting facilities. This source category does not include the composting of biosolids from wastewater treatment plants, manure management facilities, or backyard composting.<sup>149</sup>

Table 4-18: Food waste composting in Connecticut

State	Food Composted [Tons]	Data Year
Connecticut	4,644	2013

The EPA county allocation was based on the number of landfill employees per county under the assumption that greenwaste composting facilities are co-located with solid waste landfills. In the absence of exact employment data, a facility is given a code in the [U.S Census Bureau's 2016 County Business Patterns](#) that corresponds to a range that the number falls within for NAICS Code 562212. The EPA recommends using the midpoint of the range to assign the county allocation.<sup>150</sup>

Connecticut accepted the EPA's estimates for the greenwaste composting source category in Connecticut. The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

## 4.9.2 Open Burning Tool

### 4.9.2.1 Yard Waste – Brush and Leaves

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
26-10-000-100	Waste-Disposal, Treatment, and Recovery	Open Burning	All Categories	Yard Waste-Leaf Species Unspecified
26-10-000-400	Waste-Disposal, Treatment, and Recovery	Open Burning	All Categories	Yard Waste-Brush Species Unspecified

[Section 4.24 of the 2014 NEI v2 TSD](#) describes open burning of yard waste debris as “the purposeful burning of leaf and brush species in outdoor areas”. Emissions estimates for leaf and brush waste burning are a function of the amount of waste burned per year.<sup>151</sup>

Connecticut accepted the EPA's estimates for the open burning of brush in Connecticut. Connecticut updated county level emissions to reflect zero activity and zero emissions in Connecticut for open burning of leaf debris consistent with Connecticut regulations.

Connecticut regulates open burning under [CGS 22a-174-f](#) which requires permits for open burning to be issued prior to open burning activities in Connecticut.<sup>152</sup> Connecticut regulations forbid the burning of leaves. Connecticut regulations do

<sup>149</sup> U.S. Environmental Protection Agency. 2014. Compost Supporting Data (Document).

<sup>150</sup> U.S. Census Bureau. 2014. County Business Patterns (Complete County File- 14.4 mb zip file). Accessed August 2016.

<https://www.census.gov/data/datasets/2014/econ/cbp/2014-cbp.html>.

<sup>151</sup> U.S. Environmental Protection Agency. *Open Burning*. 2018. 2014 NEI V2 TSD. Pg. 4-251 to 4-262.

<sup>152</sup> CGS § 22a-174-f. 2011. Power of Commissioner. [https://www.cga.ct.gov/current/pub/chap\\_446c.htm#sec\\_22a-174](https://www.cga.ct.gov/current/pub/chap_446c.htm#sec_22a-174).

allow the burning of small brush. For these reasons Connecticut set the emissions from the burning of leaves to zero and accepted EPA's estimates for the burning of brush.

The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2. The leaf emissions estimates for open burning of leaves are zero, which is consistent with Connecticut regulations.

#### 4.9.2.2 Open Burning of Land Clearing Debris

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
26-10-000-500	Waste-Disposal, Treatment, and Recovery	Open Burning	All Categories	Land Clearing Debris (use 28-10-005-000 for Logging Debris Burning)

[Section 4.24 of the 2014 NEI v2 TSD](#) describes open burning of land clearing debris as “the purposeful burning of debris, such as trees, shrubs, and brush, from the clearing of land for the construction of new buildings and highways”. Emissions estimates from open burning of land clearing debris are a function of the amount of material or fuel subject to burning per year.<sup>153</sup>

Connecticut accepted the EPA's county level emissions estimates, which reflect zero activity and zero emissions in Connecticut for open burning of land clearing debris consistent with Connecticut state regulations.

Connecticut regulates open burning under [CGS 22a-174-f](#). Open burning to clear land of debris is not allowed and a permit must be issued prior to other types of open burning activities which are allowed in Connecticut.<sup>154</sup>

The nonpoint emissions estimates in Appendix I are zero for this SCC, consistent with Connecticut regulations.

#### 4.9.2.3 Household Waste

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
26-10-030-000	Waste-Disposal, Treatment, and Recovery	Open Burning	Residential	Household Waste (use 26-10-000-XXX for Yard Wastes)

[Section 4.24 of the 2014 NEI v2 TSD](#) describes open burning of residential municipal solid waste (MSW) as “the purposeful burning of MSW in outdoor areas”. EPA Emissions estimates for MSW burning are a function of the amount of waste burned annually per capita.<sup>155</sup>

Connecticut updated nonpoint county level emissions for SCC 26-10-030-000 to reflect zero activity and zero emissions for Connecticut open burning of residential municipal solid waste consistent with Connecticut state regulations.

Connecticut regulates open burning under [CGS 22a-174-f](#) Open burning for MSW is not allowed and a permit must be issued prior to other types of open burning activities which are allowed in Connecticut.<sup>156</sup>

<sup>153</sup> U.S. Environmental Protection Agency. Open Burning. 2018. 2014 NEI V2 TSD. Pg. 4-251 to 4-262.

<sup>154</sup> CGS § 22a-174-f. 2011. Power of Commissioner

<sup>155</sup> U.S. Environmental Protection Agency. Open Burning. 2018. 2014 NEI V2 TSD. Pg. 4-251 to 4-262.

<sup>156</sup> CGS § 22a-174-f. 2011. Power of Commissioner

The nonpoint emissions estimates presented in Appendix I are zero for this SCC, consistent with Connecticut state regulations.

#### 4.9.3 Publicly Owned Treatment Works (POTW)

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
26-30-020-000	Waste-Disposal, Treatment, and Recovery	Wastewater Treatment	Public Owned	Total Processed

Connecticut accepted the EPA estimates with a slight modification related to subtracting out the emissions already accounted for in the point source section. For more information on these estimates, please refer to [Section 4.25 of the 2014 NEI v2 TSD](#).<sup>157</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

Emissions per county for a given pollutant were computed by multiplying the pollutant emissions factors (lb/million gallons) by each county flow rate (million gallons). POTW point source emissions were not subtracted from the total nonpoint emissions for Connecticut.

EPA directed states to review specific SCC data for POTW point source subtraction (SCCs 5-01-007-01 through 5-01-007-81 and 5-01-007-91 through 5-01-825-99). A search of the EMIT database was conducted for these SCCs for the 2014 reporting period and five sources were identified, listed below in Table 4-19. The two sources in Litchfield were eliminated from POTW point source subtraction, because an industrial waste water point SCC rather than a POTW SCC should have been applied to those sources.

Table 4-19: POTW Point Source Subtraction Facility with Emission Unit Point Identifier

Site Name	County Name	Point Identifier	SCC
MDC /Hartford WPCF	Hartford	E0002	5-01-007-01
MDC /Hartford WPCF	Hartford	E0003	5-01-007-01
Manchester-Landfill Premises	Hartford	E0009	5-01-007-01
Kimberly-Clark Corp.	Litchfield	E0013	5-01-007-01
Kimberly-Clark Corp.	Litchfield	E0014	5-01-007-01

The total annual and summer day POTW emissions reported for 2014 emissions statement reporting are shown below. These estimates would normally have been addressed via activity adjustments in Connecticut's input to the NEI, but this did not fit in the available schedule and an emissions-based reconciliation is applied in the emissions estimates for this document. The ozone related pollutant impact is not large, but elimination of double counting of emissions is performed as a procedural element of preparing an accurate emissions inventory. The emissions presented in Appendix I reflect a subtraction of these emissions amounts or a zero value when reported point emissions are greater than the estimated nonpoint county estimate.

<sup>157</sup> U.S. Environmental Protection Agency. *Nonpoint POTWs*. 2018. 2014 NEI V2 TSD. Pg. 4-262 to 4-264.

Table 4-20: 2014 Annual POTW Emissions

County	Annual Emissions [TPY]							
	VOC	NO <sub>x</sub>	CO	PM <sub>10</sub> -PRI	PM <sub>2.5</sub> -PRI	SO <sub>2</sub>	NH <sub>3</sub>	Lead
Hartford	12.22	0	0	0	0	0	206.02	0

Table 4-21: 2014 Summer Day POTW Emissions

County	Summer Day Emissions [lb/day]		
	VOC	NO <sub>x</sub>	CO
Hartford	83.44	0	0

#### 4.9.4 Emissions Calculated by EPA's Mercury Tool – Human Cremation

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
26-20-030-001	Waste Disposal, Treatment, and Recovery	Landfills	Municipal	Dumping/Crushing/ Spreading of New Materials (working face)
26-50-000-000	Waste Disposal, Treatment, and Recovery	Scrap and Waste Materials	Scrap and Waste Materials	Total: All Processes
26-50-000-002	Waste Disposal, Treatment, and Recovery	Scrap and Waste Materials	Scrap and Waste Materials	Shredding
28-10-060-100	Miscellaneous Area Sources	Other Combustion	Cremation	Humans
28-10-060-200	Miscellaneous Area Sources	Other Combustion	Cremation	Animals
28-50-001-000	Miscellaneous Area Sources	Health Services	Dental Alloy Production	Overall Process
28-51-001-000	Miscellaneous Area Sources	Laboratories	Bench Scale Reagents	Total
28-61-000-000	Miscellaneous Area Sources	Fluorescent Lamp Breakage	Non-recycling Related Emissions	Total
28-61-000-010	Miscellaneous Area Sources	Fluorescent Lamp Breakage	Recycling Related Emissions	Total

EPA includes the following mercury emission categories under the heading of nonpoint non-combustion-related mercury sources. Landfills (working face), Switches and Relays, Fluorescent Lamp Breakage, Dental Amalgam, General Laboratory Activities, Thermostats, Thermometers, Fluorescent Lamp Recycling, and Batteries are described in [Section 4.2 of the 2014 NEI v2 TSD](#). Human and animal cremation estimates include CAPs as well as mercury and are discussed later in [Section 4.26 of the 2014 NEI v2 TSD](#).

Point source reconciliation for crematory emissions is not required for 2014 emissions estimates. While Connecticut has permitted human and animal crematories, human and animal crematory emissions were not reported in the stationary point sources inventory.

Connecticut accepts EPA emissions estimates for emissions calculated by the EPA's Mercury Tool. For more information on these estimates, please refer to [Section 4.26 of the 2014 NEI v2 TSD](#).<sup>158</sup> The annual estimates for this sector in 2014 are presented in Appendix I Table I-1 and the estimates for a typical summer day are presented in Appendix I Table I-2.

#### 4.9.5 CT Landfill Emissions Estimates

Source Classification Code	SCC Description			
	Level 1	Level 2	Level 3	Level 4
26-20-030-000	Waste Disposal, Treatment, and Recovery	Landfills	Municipal	Total

Methane (CH<sub>4</sub>) and carbon dioxide (CO<sub>2</sub>) are the primary constituents of landfill gas and are produced by anaerobic decompositions of refuse in solid waste landfills. Landfill gas also contains a very small amount of non-methane organic compounds (NMOC). This NMOC fraction contains photochemically reactive and non-reactive VOC. The [AP-42 Section 2.4](#) guidance for estimating VOC emissions from MSW landfills, released November, 1998 was used to estimate the emissions for this category (26-20-030-000-Municipal Solid Waste Landfills).<sup>159</sup>

CT DEEP created an inventory of VOC emissions from MSW landfills as an initial step in the implementation of the emissions guidelines and new source performance standards for MSW landfills (MSW landfills compliance study).<sup>160</sup> This inventory contains the following information for each landfill in Connecticut: an estimate of the waste in place; the year the landfill opened; the year it was closed if it is no longer accepting waste; whether the landfill accepted industrial hazardous waste; and the amount of NMOC emitted in 1999. The NMOC emissions estimates in the MSW landfills compliance study used the regulatory default value for total NMOC of 4,000 ppmv, expressed as hexane. This regulatory default value was developed for regulatory compliance purposes and should not be used to estimate actual emissions.

The intent of the Periodic Inventory is to estimate actual emissions. [AP-42 Section 2.4](#) lists default NMOC concentrations for the purpose of estimating actual emissions depending on the type of waste the landfill accepted. According to [AP-42](#), if no site specific data are available and the landfill is known to have co-disposed of MSW and non-resident waste, a default (NMOC) value of 2,420 ppmv as hexane, should be used to estimate actual emissions. If the landfill is known to contain only MSW or have very little organic commercial/industrial wastes, then the total NMOC value of 595 ppmv as hexane should be used. In addition, for co-disposal landfills, [AP-42](#) estimates that 85% of the NMOC is made up of photochemically reactive VOC. For non-codisposal landfills only 39% of the NMOC are made up of photochemically reactive VOC. In the MSW landfills compliance study, facilities which reported receiving industrial hazardous waste were considered co-disposal landfills. All other facilities were considered non-codisposal. The same designation will be used for this inventory. If a facility reported receiving industrial hazardous waste then a default VOC value of 2,060 ppmv as hexane was used. For all other landfills a VOC value of 235 ppmv as hexane was used.<sup>161</sup>

The amount of waste in place at each landfill was obtained from the MSW landfills compliance study. There were five landfills that reported the amount of ash in place (Hartford, New Haven, Groton, Bristol, and Shelton). In the MSW landfills

<sup>158</sup> U.S. Environmental Protection Agency. *Human Cremation*. 2018. 2014 NEI V2 TSD. Pg. 4-264 to 4-265.

<sup>159</sup> U.S. Environmental Protection Agency. 1998. AP-42 Section 2.4 Municipal Waste. 5th Edition. Vols. 2, Chapter 2: Solid Waste Disposal.

<sup>160</sup> Koschwitz, Scott. 1998. Description of Establishment of Municipal Solid Waste Landfill Inventory. Connecticut Department of Environmental Protection.

<sup>161</sup> U.S. Environmental Protection Agency. 1998. AP-42 Section 2.4 Municipal Waste. 5th Edition. Vols. 2, Chapter 2: Solid Waste Disposal. <https://www.epa.gov/sites/production/files/2020-10/documents/c02s04.pdf>.

compliance study the amount of waste in place at these five landfills included the ash.<sup>162</sup> Since ash is a nondegradable refuse, the amount of ash was subtracted from the amount of waste in place for these five landfills. The Montville SCRR Ash landfill contains only ash, therefore, the amount of waste in place was set to zero.

In 2014 there was only one landfill in Connecticut accepting MSW, the Windsor-Bloomfield landfill. This landfill stopped accepting MSW in 2015. There were 8 landfills that actively accepted construction and demolition waste but no MSW in 2014. These landfills are as follows: Avon; Canaan; Essex; Lyme; Manchester; North Stonington; Salem; Suffield. It was assumed for the purpose of estimating emissions that these 8 landfills were closed when they stopped accepting MSW.

To determine the average annual refuse acceptance rate (R) the waste in place (not including the ash) was divided by the number of years the landfill accepted waste.

It was assumed that landfills emit NMOC 365 days uniformly throughout the year.

The annual estimates for this sector in 2014 are presented in Table I-1 and the estimates for a typical summer day are presented in Table I-2.

Equations 1, 3, and 4 in [AP-42 Section 2.4](#) were combined resulting in the following equation, which was used to estimate the daily NMOC emissions from landfills in Connecticut:<sup>163</sup>

$$E_{unctrl} = (7.062 \times 10^{-9}) \times L \times R \times VOC \times (e^{(-kc)} - e^{(-kt)}) \times \left(\frac{2,000 \text{ lbs per ton}}{365 \text{ days per year}}\right)$$

**Where:**

$E_{unctrl}$  = uncontrolled mass emissions of VOC as hexane, lbs/day

$7.062 \times 10^{-9}$  = conversion factor, assuming 55% of landfill gas is CH<sub>4</sub> and 45% is CO<sub>2</sub>, N<sub>2</sub>, and other constituents, and expresses VOC as hexane

L = methane generation potential, m<sup>3</sup> CH<sub>4</sub>/Mg refuse (EPA default = 100 m<sup>3</sup>/Mg)

R = average annual refuse acceptance rate during active life Mg/yr

VOC = concentration of VOC in landfill gas, parts per million by volume (ppmv)

e = base log, unitless

k = methane generation rate constant, yr<sup>-1</sup> (EPA default = 0.04/yr)

c = time since landfill closure, yrs (c = 0 for active landfills)

t = time since the initial refuse placement, yrs

2,000 = conversion factor 2,000 pounds per ton

365 = 365 days per year of operation

A sample calculation of the daily pounds of uncontrolled VOC emissions from the Hartford Landfill is:

$$E_{unctrl} = (7.062 \times 10^{-9}) \times 100 \times 106,566 \times 19,564.25 \times (e^{(-0.04 \times 30)} - e^{(-0.04 \times 62)}) \times \left(\frac{2000}{365}\right)$$

$E_{unctrl} = 208.3$  pounds VOC per day

<sup>162</sup> Koschwitz, Scott. 1998. Description of Establishment of Municipal Solid Waste Landfill Inventory. Connecticut Department of Environmental Protection

<sup>163</sup> U.S. Environmental Protection Agency. 1998. AP-42 Section 2.4 Municipal Waste. 5th Edition. Vols. 2, Chapter 2: Solid Waste Disposal. <https://www.epa.gov/sites/production/files/2020-10/documents/c02s04.pdf>.

The emissions generated by the AP-42 equation listed above do not take into account the VOC emissions removed by control equipment. There were about eight landfills that had control equipment in use in 2014. Two of these landfills: Hartford, and Manchester are Title V sources and are required to report their after control emissions to the DEEP every year, see Table 4.9.5-1. The VOC's removed by controls were subtracted from the uncontrolled VOC emissions estimates for these two landfills. The 2014 after control emissions for the remaining six landfills were not known, so no adjustments were made to their uncontrolled emissions estimates. Most of these six landfills were inadvertently not accounted for in the 2011 PEI. These landfills are accounted for in this PEI, resulting in the VOC landfill emissions in the 2014 PEI being greater than the estimates in the 2011 PEI. Also, the 2011 PEI had incorrectly assumed that the Windsor-Bloomfield Landfill had closed in 1999. The Windsor-Bloomfield Landfill actually closed in July of 2015. The VOC emissions for this landfill in this PEI are estimated using the July 2015 closure date, thus resulting in the emissions from this landfill being greater in the 2014 PEI than the 2011 PEI.

The VOC after control emissions for the, Hartford and Manchester landfills are already accounted for in the point source section of this inventory, therefore, they will not be included in the area source inventory. The daily amount of VOC's removed by controls for these two landfills were estimated using the following equation:

$$E_{rem} = \frac{VOC_{ctrl}}{1 - EFF}$$

**Where:**

$E_{rem}$  = daily VOC emissions removed by control equipment, expressed in pounds per day

$EFF$  = VOC control efficiency

$VOC_{ctrl}$  = daily VOC emissions exiting control equipment, expressed in pounds per day

A sample calculation for the pounds of VOC removed by the control equipment at the Hartford Landfill is:

$$E_{rem} = \frac{0.126}{1 - 0.98}$$

$E_{rem} = 6.30$  lbs VOC removed per day

Table 4.9.5-2 contains the VOC annual and typical ozone season day emissions from municipal solid waste landfills. The emissions from municipal solid waste landfills occur seven days a week uniformly throughout the year. The equation used to calculate daily VOC emissions for this category is as follows:

$$E = E_{unctrl} - E_{rem}$$

**Where:**

$E$  = daily landfill VOC emissions expressed in pounds per day

$E_{unctrl}$  = daily uncontrolled VOC emissions expressed in pounds per day

$E_{rem}$  = daily VOC emissions removed by control equipment, expressed in pounds per day

A sample calculation for the Hartford landfill is:

$$E = 208.3 - 6.3$$

$E = 202.0$  lbs. of VOC per day

## Section 5 Biogenic Sources

Connecticut accepts the EPA biogenic emissions estimates as published in the 2014 NEI, which only included VOCs, NO<sub>x</sub>, and CO. For more information on these estimates, please refer to [Section 8 of the 2014 NEI v2 TSD](#).<sup>164</sup> The annual estimates for this sector in 2014 are presented in Table 5-1 and the estimates for a typical summer day are presented in Table 5-2.

County SCC-level emissions data were provided through EPA’s EIS, 2014 NEI Final V2 dataset, while the 2014 NEI Data – Data Summaries page “Biogenics” link ([2014fd\\_biogenics\\_report.xlsx](#)) data file provided county-sector emissions data. Data in the dataset was consistent with the data file, which confirmed that the unit of measure for the data file was tons.

Summer day emissions were calculated from an average daily estimate of the June, July and August emissions presented on the 2014 NEI Data – Data Summaries page “Biogenics” link ([2014fd\\_biogenics\\_report.xlsx](#)) data file. Employing the same column names from the data file, the equation used to calculate the summer day emissions becomes as follows:

$$E_i = 2000 * \frac{jun\ value_i + jul\ value_i + aug\ value_i}{days}$$

Where:

- $E_i$  = Total biogenic emissions of pollutant I in pounds per day for a county
- 2000 = Conversion factor of pounds per ton
- $jun\ value_i$  = Total biogenic emissions of pollutant I in tons for a county in the month of June.
- $jul\ value_i$  = Total biogenic emissions of pollutant I in tons for a county in the month of July.
- $aug\ value_i$  = Total biogenic emissions of pollutant I in tons for a county in the month of August.
- $days$  = Total numbers of days in the months of June, July, and August (92 days)

A sample calculation of VOC emissions in Fairfield County is shown for data from the file as follows:

$$E_i = 2000 * \frac{1566.397 + 1981.833 + 1486.607}{92\ days} = 109,453.0 \frac{lb\ VOC}{day}$$

Table 5-1: 2014 Annual Emissions of Biogenic Sources

County	Annual Emissions [TPY]		
	VOC	NO <sub>x</sub>	CO
Fairfield	7,324	64	792
Hartford	8,130	102	1,023
Litchfield	9,389	106	1,215
Middlesex	6,237	43	672

## Section 6 Quality Assurance Audit

This section is currently under internal review in conjunction with the public comment period.

## Appendices

### Appendix A Emissions Reporting History

#### A.0 Point Source List Development History

This appendix describes the development of the initial point source list from which point source emissions for the 2014 Connecticut Periodic Inventory were estimated. This appendix is included in order to demonstrate that the source list is as complete as possible.

Former section 19-508-2 of the Regulations of Connecticut State Agencies (RCSA) required new and existing stationary sources must be either registered or permitted. Subject equipment operating prior to June 1, 1972 were required to register, while equipment installed after that date needed permits to construct and operate. Companies were required to submit detailed information about their equipment on forms supplied by CT DEEP ). All taxable employers were notified of the registration and permit requirements. All municipalities, school systems and state agencies were separately notified in a second mailing. In a third mailing, Federal facilities were notified of their requirement to comply with the registration and permitting requirements of the RCSA.

The deadline for submission of the registration forms was October 1, 1972. The Engineering section of the CT DEEP Air Bureau processed the registration forms. Engineers reviewed the registration forms for completeness; assigned identification numbers (i.e., Town #, Premises #, Registration #, and Stack #); assigned special codes (i.e., National Emissions Data System (NEDS) County #, NEDS town #, Standard Industrial Class (SIC) #, Source Classification Code (SCC) #, and control equipment #); and determined stack coordinates. The data from the forms were coded onto special computer forms, key punched onto IBM cards, and entered into the database. Over 13,000 registrations were processed in this manner. The initial phase was completed by the end of 1973.

The next phase was to ensure that all facilities had submitted their applications for equipment requiring registrations and permits. The Enforcement section systematically contacted plants, which were listed in industrial directories. Screening letters, which requested basic information on the equipment and materials used at a facility, were mailed to those potential sources. Plants that responded positively to the questions in the screening letter were then sent a Preinspection Questionnaire (PIQ), which requested detailed information on the processes and materials used in the plant. Equipment requiring registration were identified and the plant was issued a notice of violation, which would be closed out only upon receipt of a completed registration form. Over 500 equipment registrations were added to the inventory through the inspection program. In succeeding years, new plants have been identified through the Connecticut Department of Labor listing of new manufacturing firms and from articles in local newspapers.

The primary method by which new equipment is added to the point source inventory is through the permit program. Approximately 100 new permits are issued each year. There is high awareness of permit requirements among the regulated community through the State Implementation Plan Revision Advisory Committee (SIPRAC) of the Connecticut Business & Industry Association (CBIA). Members of CBIA are informed about any regulatory or procedural changes with regards to air pollution.

Prior to 1990, the point source inventory was kept current through timely updates of all emissions sources. In general, plants that had an EPA class of A1 were updated annually; plants with an EPA class of A2 were updated every second year; and plants with an EPA class of B were updated every three to five years. Since 1979, updates of the point source inventory have been incorporated into the Enforcement compliance inspection process. Along with each PIQ mailed to the plant, the Enforcement Division includes update forms for the registered and permitted equipment. The plant is required to provide current data on annual fuel usage, process weight rates, solvent usage, operating hours, and seasonal rates for

summer, fall, winter and spring. During the compliance inspection, Enforcement personnel review the completed update forms with the plant personnel to ensure the accuracy and completeness of the data. The inventory group further reviews the forms for completeness, and revisions are compared with previous data. If there are apparent discrepancies, the update forms are returned to Enforcement personnel for clarification.

For plants that are inspected, Enforcement personnel calculate the total plant usage for each volatile organic compound (VOC) as listed in the PIQ. Plant usage is then adjusted for other media disposal. The total VOC from registered and permitted sources is subtracted from the adjusted total plant VOC. The balance is the actual unregistered VOC emissions. These estimates of unregistered VOC emissions are entered into a separate file, which contains basic company data, specific SCC code, and emissions in terms of tons per year.

For the 1990 base year ozone and carbon monoxide inventory development effort in 1992, source update forms were mailed to all facilities known to be active during 1990. This was done to verify which facilities in the inventory were active during 1990, and to update all data contained in the inventory that was at least two years old. For more detailed information about the 1990 inventory, please refer to the 1990 Base Year Ozone And Carbon Monoxide Emissions Inventory, created by the Planning and Standards Division of the CT DEEP Air Bureau in November 1993.

In 1993 to meet the emissions statement reporting requirements outlined in Title I, Section 182(a)(3)(b) of the 1990 Clean Air Act (CAA), the state developed and implemented an emissions statement reporting schedule. Connecticut's emissions statement program was submitted to and approved by EPA as a formal amendment to the SIP. The Department phased in the implementation of the emissions statement program beginning with the first reporting year (1993). Companies were required to file an emissions statement if the actual calendar year 1992 emissions from all sources at a plant site totaled 25 tons per year or more of VOC, NO<sub>x</sub>, or CO. This first mailing involved 156 companies. Beginning in the reporting year 2006, the reporting threshold was set to any facility that is a major source, or emitted 10 tons per year or more of actual VOC or NO<sub>x</sub>, or 25 tons per year or more of actual CO emissions in calendar year 2005. There were 135 companies involved in this mailing.

In 2009, CT DEEP rolled out a new software application, EMIT, that allowed companies to submit their emissions statements electronically via the internet and report a number of new pollutants that the previous system could not accommodate. The additional pollutants collected in 2009 were PM<sub>10</sub> filterable, PM<sub>2.5</sub> primary, PM<sub>2.5</sub> filterable, PM condensable, Ammonia and Sulfur Dioxide in lieu of Sulfur Oxides. Since there is a lack of emissions factors for PM<sub>10</sub> and PM<sub>2.5</sub> filterable and PM condensable these pollutants were often unreported. Additionally, beginning in 2009, only sites considered a major source were required to submit an emission statement.

Beginning in reporting year 2010, CT DEEP has required companies to report their HAP emissions.

The 2014 periodic stationary source inventory was based on emissions statements, which reported the source's actual 2014 emissions signed by a corporate officer who attested to the accuracy of their calculations. There were 79 sites that submitted a 2014 emissions statement. Compliance with the emissions statement program was 100 percent from all Title V companies.

## A.1 Historical Quality Control Procedures

Quality Control (QC) measures for the point source inventory were originally instituted for the 1979 Ozone SIP. Those measures consisted of three separate activities. First, a procedure was developed to update the point source inventory. Second, the data must be verified by CT DEEP personnel. Third, the data must be entered accurately.

All registered or permitted sources were required to fill out a Pre-Inspection Questionnaire (PIQ) Inventory Update form prior to a scheduled inspection. Originally, the PIQ Inventory Update form was designed to provide CT DEEP with the yearly changes in fuel use and process weights for the registered and permitted equipment at the inspected plants. In general, plants that had an EPA class of A1 (actual emissions > 100 TPY) were updated annually; plants with an EPA class of A2 (potential emissions > 100 TPY) were updated every second year; and plants with an EPA class of B (potential emissions < 100 TPY) were updated every third to fifth year.

Since 1993, the Inventory update procedure has been phased out with the implementation of our Emissions Statement Program. From the inception of the emissions statement program through the 2008 emissions statement cycle, the Bureau's SAS based system was used to process and database emissions statement submittals. In 2008, the Bureau contracted with CIBER to develop a new software application that would allow sites to report their emission statements electronically. This system is referred to as EMIT and replaces the SAS based system. Using the EMIT system, sites report their usage and process data on both a summer day and annual basis to calculate their emissions. Prior to CT DEEP implementing the EMIT system, sites were required to calculate their emissions and to submit their emission statements on paper. One of the most common errors that occurred during this process was that they miscalculated their emissions. The EMIT system allows a direct entry of an emissions value for Continuous Emissions Monitoring System (CEMS) measurements and for calculated tank emissions. Otherwise the EMIT system calculates emissions for users at the SCC, source, and site level each time a parameter is updated. The calculation routines used by EMIT have been thoroughly tested and shown to be correct and, together with EMIT's validation checks, help to remedy errors formerly created by paper submission.

## Appendix B Sample Emissions Calculations

Point emissions were calculated using the Bureau's EMIT software application. EMIT calculates Summer Day and Annual emissions based on entered activity, emission factors, and controls. EMIT does not calculate emissions when the emissions were estimate using the TANKS model or when they were derived using continuous emission monitoring (CEM). In these instances, EMIT requires the user to manually enter the emissions directly after identifying that the emissions are based upon one of these two methods.

Several basic emissions calculations are illustrated in Examples 1 to 6. The application of the Summer Day allocation factor is not needed within EMIT because the reporters address this outside of the application.

- Example 1 illustrates the use of AP-42 emissions factors to calculate Annual and Summer Day emissions for many sources, typically boilers and incinerators that do not have controls.
- Example 2 illustrates the calculation of Summer Day VOC emissions for gasoline loading facilities using the formula from [Section 5.2 of AP-42](#). This example is typical of all process sources that use emissions factors to calculate emissions. Since this source has emissions controls, rule effectiveness is also illustrated.
- Example 3. illustrates the calculation of the summer day apportionment factor and summer day emissions.
- Example 4 illustrates application of Example 3 equations in calculating Commercial Marine Vessel summer day emissions.
- Example 5 illustrates application of Example 3 equations in calculating Locomotive summer day emissions.
- Example 6 illustrates the calculation of Aircraft summer day emission using an approach similar to Example 3 equations.

## B.0 List of Equations

The seasonal adjustment for point sources ([Equation I](#)) and the MOVES ONROAD Compliance Factor ([Equation II](#)) are contained in the main body of document and are not listed or shown below.

Equation III:

$$E_a = \frac{F * EF}{2,000}$$

Equation III: Annual Actual Emissions

Equation IV:

$$E_s = F * EF * \frac{T_s}{W_s * D_s}$$

Equation IV: Seasonal Actual Emission Rate

Equation V:

$$E_s = 2,000E_a \frac{T_s}{W_s * D_s}$$

Equation V: Seasonal Actual Emission Rate (Substituting Equation III into Equation IV)

Variable	Unit	Description
$E_a$	<i>TPY</i>	Annual Actual Emissions Rate
$E_s$	$\frac{lb}{day}$	Seasonal Actual Emissions Rate
$F$	$\frac{10^3 gal}{year}$	Actual Annual Fuel Use
$EF$	$\frac{lb}{10^3 gal}$	Emissions Factor
$T_s$	$\frac{\% year}{season}$	Seasonal Rate of Use
$W_s$	$\frac{week}{season}$	Weeks of Operation in Season
$D_s$	$\frac{days\ operated}{week}$	Days of Operation per Week in Season

$$L_L = \frac{S * TVP * M_v}{R * T} = 12.46 \frac{S * TVP * M_v}{T}$$

Equation VI: Emissions from Loading Petroleum Liquid (U.S. Environmental Protection Agency 2008)

Where:

Variable	Unit	Description
$L_L$	$\frac{lb}{10^3 gal}$	Loading Loss (Emissions factor for VOCs) from Loading Petroleum
$S$	—	Saturation Factor ( <a href="#">See AP-42 Table 5.2-1</a> )
$TVP$	$psia$	True Vapor Pressure (TVP) of Liquid Loaded ( <a href="#">See AP-42 Table 7.1-3</a> )
$M_v$	$\frac{lb}{lbmol}$	Molecular Weight of Vapor ( <a href="#">See AP-42 Table 7.1-2</a> )
$R$	$\frac{psia * 10^3 gal}{lbmol * ^\circ R}$	Ideal Gas Constant ( $R^{-1} = 12.46$ )
$T$	$^\circ R$	Absolute Temperature of Bulk Liquid

## B.1 Examples

### Example 1 Fuel Burning Source

In 2013, Company A used 601,000 gallons of no. 6 fuel oil to operate their commercial boiler. The boiler is capable of producing more than 100 million BTU/hr, is normal-firing, and is not equipped with control equipment (SCC 1-03-004-01). The boiler operated every day of the week for the entire summer with a 10% seasonal rate of use. What were the daily emissions rates of NO<sub>x</sub>, CO, and VOC from this boiler during the summer of 2013?

Find:  $E_{s,NO_x}$ ,  $E_{s,CO}$ ,  $E_{s,VOC}$

To find  $E_s$ , Equation IV should be used. 
$$E_s = F * EF * \frac{T_s}{W_s * D_s}$$

Given values: 
$$F = 601,000 \frac{gal}{year} = 601 \frac{10^3 gal}{year}$$

$$T_s = 10\%$$

$$W_s = 13 \frac{weeks}{summer}$$

$$D_s = 7 \frac{days}{week}$$

Values to be found in AP-42: 
$$EF_{NO_x} = 47 \frac{lb}{10^3 gal} \text{ (AP-42 Table 1.3-1)}$$

$$EF_{CO} = 5 \frac{lb}{10^3 gal} \text{ (AP-42 Table 1.3-1)}$$

$$EF_{VOC} = 1.605 \frac{lb}{10^3 gal} \text{ (AP-42 Table 1.3-3)}$$

Solution:

$$E_{s,NO_x} = \frac{601 \frac{10^3 gal}{year} * 47 \frac{lb}{10^3 gal} * 10 \frac{\% year}{summer}}{13 \frac{weeks}{summer} * 7 \frac{days}{week}} = 31.04 \frac{lb}{day}$$

$$E_{s,CO} = \frac{601 \frac{10^3 gal}{year} * 5 \frac{lb}{10^3 gal} * 10\% \frac{year}{summer}}{13 \frac{weeks}{summer} * 7 \frac{days}{week}} = 3.30 \frac{lb}{day}$$

$$E_{s,VOC} = \frac{601 \frac{10^3 gal}{year} * 1.605 \frac{lb}{10^3 gal} * 10\% \frac{year}{summer}}{13 \frac{weeks}{summer} * 7 \frac{days}{week}} = 1.06 \frac{lb}{day}$$

Company A's boiler emitted NO<sub>x</sub>, CO, and VOCs at rates of 31.04 lb/day, 3.30 lb/day, and 1.06 lb/day, respectively, in the summer of 2013.

## Example 2 Gasoline Loading Facility

A gas station was supplied with 90 million gallons of gasoline (RVP=10) in 2012. The station is classified as a gasoline submerged loading balance service (SCC 4-06-001-41) and is equipped with a vapor recovery system which captures 98% and collects 97% of VOCs. The regulations for this type of source have been determined to have an effectiveness of 100%. This gas station does not receive shipments on Sundays and 27% of the total throughput was provided during the summer. Assuming a constant bulk temperature of 60 °F for the gasoline, what was the emissions rate of VOCs at this gas station in the summer of 2012?

Find:  $E_{s,VOC}$

To find  $E_s$ , Equation IV should be used with the control efficiency term:

$$E_s = F * EF * \frac{T_s}{W_s * D_s} * [1 - (Eff\% * Cap\% * Rule\%)]$$

Given values:  $F = 90,000,000 \frac{gal}{year} = 90,000 \frac{10^3 gal}{year}$

$$T_s = 27\%$$

$$W_s = 13 \frac{weeks}{summer}$$

$$D_s = 6 \frac{days}{week}$$

$$Eff\% = 97\%/100$$

$$Cap\% = 98\%/100$$

$$Rule\% = 100\%/100$$

The only unknown variable is  $EF_{VOC}$ . Because this is a problem on the emissions from the transportation of petroleum, Equation VI can be used to find this value.

$$EF_{VOC} = L_L = 12.46 \frac{S * TVP * M_v}{T}$$

Values to be found in AP-42:  $S = 1.00$  ([AP-42 Table 5.2-1](#))

$$TVP = 5.2 \text{ psia}$$
 ([AP-42 Table 7.1-2](#))

$$M_v = 66 \frac{lb}{lbmol}$$
 ([AP-42 Table 7.1-2](#))

Solution:  $EF_{VOC} = 12.46 \frac{lbmol * ^\circ R}{psia * 10^3 gal} \frac{1.00 * 5.2 \text{ psia} * 66 \frac{lb}{lbmol}}{(60 + 459.67) ^\circ R} = 8.23 \frac{lb}{10^3 gal}$

$$E_{s,VOC} = \frac{90,000 \frac{10^3 gal}{year} * 8.23 \frac{lb}{10^3 gal} * 27\% \frac{year}{summer}}{13 \frac{weeks}{summer} * 6 \frac{days}{week}} * [1 - (97\% * 98\% * 100\%)] = 127 \frac{lb}{day}$$

The gas station emitted approximately 127 pounds of VOCs per day of operation in the summer of 2012.

### Example 3 Summer Apportionment Factor

The summer day apportionment factor portion of Equation IV is broken out and shown below. The remaining portion of the Equation IV summer day emissions calculation is also shown below. Application of these equation are shown in Examples 4 and 5.

$$Sd_j = 2000 * \frac{Spa_j}{100 * Wps_j * Dpw_j}$$

$$E_{ij} = E_{aij} * Sd_j$$

Where:

$E_{ij}$  = Total emissions of pollutant i, in pounds per day, produced for SCCj

$E_{aij}$  = Total annual emissions of pollutant i, in tons per year, produced for SCCj Annual emissions can be found in the various Appendicies within this document.

$Sd_j$  = Summer day fraction with tons per year to pounds per day conversion included for SCCj

$Spa_j$  = Summer percentage of annual emissions, (e.g.- 25% of annual emissions when a uniform seasonal profile is expected).

$Wps_j$  = Weeks of emissions per summer (13 weeks per summer season for a uniform 24 x 7 operation)

$Dpw_j$  = Days per week (7 days per week for a 24 x 7 operation)

2000 = Conversion factor for pounds per ton

### Example 4 Commercial Marine Vessels

A sample calculation implementing the Example 3 equation for SCC 22-80-002-100 annual NO<sub>x</sub> emissions in Fairfield County from the first row of Appendix G Table G-22 is shown below. The calculated results are consistent with the summer day NO<sub>x</sub> emissions for SCC 22-80-002-100 in Fairfield County of Appendix G Table G-23.

$$Sd_j = 2000 * \frac{Spa_j}{100 * Wps_j * Dpw_j}$$

$$Sd_j = 2000 * \frac{25}{100 * 13 * 7} = 5.495$$

$$E_{ij} = E_{aij} * Sd_j$$

$$E_{ij} = 46.45 * 5.495 = 255.22 \frac{lbs}{day}$$

### Example 5 Locomotives

A sample calculation implementing the Example 5 equation for SCC 22-85-002-006 annual NO<sub>x</sub> emissions in Fairfield County from the first row of Appendix G Table G-24 is shown below. The calculated results are consistent with the summer day NO<sub>x</sub> emissions for SCC 22-85-002-006 in Fairfield County of Appendix G Table G-25.

$$Sd_j = 2000 * \frac{Spa_j}{100 * Wps_j * Dpw_j}$$

$$Sd_j = 2000 * \frac{25}{100 * 13 * 5} = 7.692$$

$$E_{ij} = Ea_{ij} * Sd_j$$

$$E_{ij} = 65.82 * 7.692 = 506.3 \frac{lb}{day}$$

### Example 6 Aircraft

Summer day emissions were calculated using a methodology similar to that previously used in earlier inventories. The LTO, seasonal adjustments, and tonnage conversions were also factored in the following equation. Note that this equation resembles that used in Example 3, 4, and 5, except that S<sub>j</sub> is a seasonal fraction instead of a S<sub>dj</sub> summer day fraction.

$$E_{ij} = Ea_{ij} * S_j * \frac{2000}{Days}$$

Where:

- $E_{ij}$  = Total emissions of pollutant *i*, in pounds per day, produced by the composite aircraft type makeup for SCC<sub>j</sub> for all LTO cycles
- $Ea_{ij}$  = Total annual emissions of pollutant *i*, in tons per year, produced by the composite aircraft type makeup for SCC<sub>j</sub> for all LTO cycles. These emissions are shown in Appendix C Table 5 under the Annual Emissions (TPY) column, where a summation of the EPA annual emissions estimate for the airport are presented in tons per year for each of the pollutants needing a summer day emissions estimate.
- $S_j$  = Summer season fraction of Landing and Take-Off Cycles for composite aircraft type makeup for SCC<sub>j</sub> (The summer season fraction represents the fraction of total annual Landing and Take-Off Cycles that occurred during the summer season for the specific source classification code (SCC<sub>j</sub>) at the airport. These fractions are shown in Appendix G Table G-20.
- 2000 = Conversion factor of pounds of ton
- $Days$  = Days in Ozone Season

A sample calculation for VOC emissions from SCC 22-75-050-012 at Bridgeport Hospital Heliport in Fairfield County can be shown using the first record in both Appendix G Table G-19 and Table G-20 as follows:

$$E_i = 0.11 * 0.16 * \frac{2000}{92 \text{ days}} = 0.38 \frac{lbs \text{ VOC}}{day}$$

Note 1: The 2014 NEI data file assigned 67.285 pounds (0.0336425 TON) to Danbury Prison FEDERAL CORRECTIONAL INSTITUTION (EIS Identifier 16720711, TRI FACILITY ID 0681WFDRLC3312P), but the current air emissions estimate for the lead emissions at the facility have been updated to 0.8 pounds. The 2014 NEI lead emissions inappropriately included lead bullets captured in the shooting range, which were corrected to being reported as "other release" rather than an air emissions release.

<b>Section 4.0</b>				
NONPOINT Section 4.1.2.1	21-02-001-000	Nonpoint	Stationary Source Fuel Combustion - Industrial - Anthracite Coal - Total: All Boiler Types	No Annual CO, VOC or NOx
NONPOINT Section 4.1.2.1	21-02-002-000	Nonpoint	Stationary Source Fuel Combustion - Industrial - Bituminous/Subbituminous Coal - Total: All Boiler Types	No Annual CO, VOC or NOx
NONPOINT Section 4.1.2.2	21-02-004-001	Nonpoint	Stationary Source Fuel Combustion - Industrial - Distillate Oil - All Boiler Types	Factor
NONPOINT Section 4.1.2.2	21-02-004-002	Nonpoint	Stationary Source Fuel Combustion - Industrial - Distillate Oil - All IC Engine Types	Factor
NONPOINT Section 4.1.2.3	21-02-005-000	Nonpoint	Stationary Source Fuel Combustion - Industrial - Residual Oil - Total: All Boiler Types	Factor

NONPOINT Section 4.1.2.4	21-02-006-000	Nonpoint	Stationary Source Fuel Combustion - Industrial - Natural Gas - Total: Boilers and IC Engines	Factor
NONPOINT Section 4.1.2.5	21-02-007-000	Nonpoint	Stationary Source Fuel Combustion - Industrial - Liquefied Petroleum Gas (LPG) - Total: All Boiler Types	Factor
NONPOINT Section 4.1.2.6	21-02-008-000	Nonpoint	Stationary Source Fuel Combustion - Industrial - Wood - Total: All Boiler Types	Factor
NONPOINT Section 4.1.2.7	21-02-011-000	Nonpoint	Stationary Source Fuel Combustion - Industrial - Kerosene - Total: All Boiler Types	Factor
NONPOINT Section 4.1.2.1	21-03-001-000	Nonpoint	Stationary Source Fuel Combustion - Commercial/Institutional - Anthracite Coal - Total: All Boiler Types	No Annual CO, VOC or NOx
NONPOINT Section 4.1.2.1	21-03-002-000	Nonpoint	Stationary Source Fuel Combustion - Commercial/Institutional - Bituminous/Subbituminous Coal - Total: All Boiler Types	No Annual CO, VOC or NOx
NONPOINT Section 4.1.2.2	21-03-004-001	Nonpoint	Stationary Source Fuel Combustion - Commercial/Institutional - Distillate Oil - Boilers	Factor
NONPOINT Section 4.1.2.2	21-03-004-002	Nonpoint	Stationary Source Fuel Combustion - Commercial/Institutional - Distillate Oil - IC Engines	Factor
NONPOINT Section 4.1.2.3	21-03-005-000	Nonpoint	Stationary Source Fuel Combustion - Commercial/Institutional - Residual Oil - Total: All Boiler Types	Factor
NONPOINT Section 4.1.2.4	21-03-006-000	Nonpoint	Stationary Source Fuel Combustion - Commercial/Institutional - Natural Gas - Total: Boilers and IC Engines	Factor
NONPOINT Section 4.1.2.5	21-03-007-000	Nonpoint	Stationary Source Fuel Combustion - Commercial/Institutional - Liquefied Petroleum Gas (LPG) - Total: All Combustor Types	Factor
NONPOINT Section 4.1.2.6	21-03-008-000	Nonpoint	Stationary Source Fuel Combustion - Commercial/Institutional - Wood - Total: All Boiler Types	Factor
NONPOINT Section 4.1.2.7	21-03-011-000	Nonpoint	Stationary Source Fuel Combustion - Commercial/Institutional - Kerosene - Total: All Combustor Types	Factor
NONPOINT Section 4.1.3.1	21-04-001-000	Nonpoint	Stationary Source Fuel Combustion - Residential - Anthracite Coal - Total: All Combustor Types	No Annual CO, VOC or NOx
NONPOINT Section 4.1.3.1	21-04-002-000	Nonpoint	Stationary Source Fuel Combustion - Residential - Bituminous/Subbituminous Coal - Total: All Combustor Types	No Annual CO, VOC or NOx

NONPOINT Section 4.1.3.2	21-04-004-000	Nonpoint	Stationary Source Fuel Combustion - Residential - Distillate Oil - Total: All Combustor Types	Factor
NONPOINT Section 4.1.3.4	21-04-006-000	Nonpoint	Stationary Source Fuel Combustion - Residential - Natural Gas - Total: All Combustor Types	Factor
NONPOINT Section 4.1.3.5	21-04-007-000	Nonpoint	Stationary Source Fuel Combustion - Residential - Liquefied Petroleum Gas (LPG) - Total: All Combustor Types	Factor
NONPOINT Section 4.1.3.6	21-04-008-100	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Fireplace: general	Factor
NONPOINT Section 4.1.3.6	21-04-008-210	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: fireplace inserts; non-EPA certified	Factor
NONPOINT Section 4.1.3.6	21-04-008-220	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: fireplace inserts; EPA certified; non-catalytic	Factor
NONPOINT Section 4.1.3.6	21-04-008-230	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: fireplace inserts; EPA certified; catalytic	Factor
NONPOINT Section 4.1.3.6	21-04-008-310	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: freestanding, non-EPA certified	Factor
NONPOINT Section 4.1.3.6	21-04-008-320	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: freestanding, EPA certified, non-catalytic	Factor
NONPOINT Section 4.1.3.6	21-04-008-330	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: freestanding, EPA certified, catalytic	Factor
NONPOINT Section 4.1.3.6	21-04-008-400	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: pellet-fired, general (freestanding or FP insert)	Factor
NONPOINT Section 4.1.3.6	21-04-008-510	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Furnace: Indoor, cordwood-fired, non-EPA certified	Factor
NONPOINT Section 4.1.3.6	21-04-008-610	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Hydronic heater: outdoor	Factor
NONPOINT Section 4.1.3.6	21-04-008-700	Nonpoint	Stationary Source Fuel Combustion - Residential - Wood - Outdoor wood burning device, NEC (fire-pits, chimneys, etc)	Factor
NONPOINT Section 4.1.3.6	21-04-009-000	Nonpoint	Stationary Source Fuel Combustion - Residential - Firelog - Total: All Combustor Types	Factor

NONPOINT Section 4.1.3.7	21-04-011-000	Nonpoint	Stationary Source Fuel Combustion - Residential - Kerosene - Total: All Heater Types	Factor
NONPOINT Section 4.2.4	22-01-00-0062	Onroad	Mobile Sources - Highway Vehicles - Gasoline - Refueling - Total Spillage and Displacement	Data
NONPOINT Section 4.2.4	22-02-00-0062	Onroad	Mobile Sources - Highway Vehicles - Diesel - Refueling - Total Spillage and Displacement	Factor
NONPOINT Section 4.5.1	22-94-000-000	Nonpoint	Mobile Sources - Paved Roads - All Paved Roads - Total: Fugitives	No Annual CO, VOC or NOx
NONPOINT Section 4.5.1	22-94-000-002	Nonpoint	Mobile Sources - Paved Roads - All Paved Roads - Total: Sanding/Salting - Fugitives	No Annual CO, VOC or NOx
NONPOINT Section 4.5.2	22-96-000-000	Nonpoint	Mobile Sources - Unpaved Roads - All Unpaved Roads - Total: Fugitives	No Annual CO, VOC or NOx
NONPOINT Section 4.7.2	23-02-002-100	Nonpoint	Industrial Processes - Food and Kindred Products: SIC 20 - Commercial Cooking - Charbroiling - Conveyorized Charbroiling	Factor
NONPOINT Section 4.7.2	23-02-002-200	Nonpoint	Industrial Processes - Food and Kindred Products: SIC 20 - Commercial Cooking - Charbroiling - Under-fired Charbroiling	Factor
NONPOINT Section 4.7.2	23-02-003-000	Nonpoint	Industrial Processes - Food and Kindred Products: SIC 20 - Commercial Cooking - Frying - Deep Fat Frying	Factor
NONPOINT Section 4.7.2	23-02-003-100	Nonpoint	Industrial Processes - Food and Kindred Products: SIC 20 - Commercial Cooking - Frying - Flat Griddle Frying	Factor
NONPOINT Section 4.7.2	23-02-003-200	Nonpoint	Industrial Processes - Food and Kindred Products: SIC 20 - Commercial Cooking - Frying - Clamshell Griddle Frying	Factor
NONPOINT Section 4.6	23-10-000-220	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - All Processes - Drill Rigs	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-000-330	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - All Processes - Artificial Lift	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-000-550	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - All Processes - Produced Water	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-000-660	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - All Processes - Hydraulic Fracturing Engines	No Annual CO, VOC or NOx

NONPOINT Section 4.6	23-10-010-100	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Crude Petroleum - Oil Well Heaters	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-010-200	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Crude Petroleum - Oil Well Tanks - Flashing & Standing/Working/Breathing	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-010-300	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Crude Petroleum - Oil Well Pneumatic Devices	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-011-000	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Total: All Processes	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-011-201	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Tank Truck/Railcar Loading: Crude Oil	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-011-501	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Fugitives: Connectors	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-011-502	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Fugitives: Flanges	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-011-503	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Fugitives: Open Ended Lines	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-011-505	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Fugitives: Valves	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-010	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Storage Tanks: Condensate	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-030	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Tank Truck/Railcar Loading: Condensate	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-100	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Gas Well Heaters	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-102	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Natural Gas Fired 2Cycle Lean Burn Compressor Engines 50 To 499 HP	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-202	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Natural Gas Fired 4Cycle Lean Burn Compressor Engines 50 To 499 HP	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-251	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Lateral Compressors 4 Cycle Lean Burn	No Annual CO, VOC or NOx

NONPOINT Section 4.6	23-10-021-300	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Gas Well Pneumatic Devices	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-302	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Natural Gas Fired 4Cycle Rich Burn Compressor Engines 50 To 499 HP	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-351	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Lateral Compressors 4 Cycle Rich Burn	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-400	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Gas Well Dehydrators	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-501	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Fugitives: Connectors	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-502	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Fugitives: Flanges	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-503	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Fugitives: Open Ended Lines	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-505	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Fugitives: Valves	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-506	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Fugitives: Other	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-021-603	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production - Gas Well Venting - Blowdowns	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-010	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Storage Tanks: Condensate	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-030	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Tank Truck/Railcar Loading: Condensate	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-100	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - CBM Well Heaters	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-102	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - CBM Fired 2Cycle Lean Burn Compressor Engines 50 To 499 HP	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-202	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - CBM Fired 4Cycle Lean Burn Compressor Engines 50 To 499 HP	No Annual CO, VOC or NOx

NONPOINT Section 4.6	23-10-023-251	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Lateral Compressors 4 Cycle Lean Burn	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-300	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Pneumatic Devices	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-302	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - CBM Fired 4Cycle Rich Burn Compressor Engines 50 To 499 HP	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-310	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Pneumatic Pumps	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-351	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Lateral Compressors 4 Cycle Rich Burn	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-400	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Dehydrators	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-511	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Fugitives: Connectors	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-512	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Fugitives: Flanges	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-513	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Fugitives: Open Ended Lines	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-515	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Fugitives: Valves	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-516	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Fugitives: Other	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-600	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - CBM Well Completion: All Processes	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-603	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - CBM Well Venting - Blowdowns	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-023-606	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - Coal Bed Methane Natural Gas - Mud Degassing	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-111-100	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Exploration - Mud Degassing	No Annual CO, VOC or NOx

NONPOINT Section 4.6	23-10-111-401	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Exploration - Oil Well Pneumatic Pumps	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-111-700	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Exploration - Oil Well Completion: All Processes	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-121-100	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Exploration - Mud Degassing	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-121-401	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Exploration - Gas Well Pneumatic Pumps	No Annual CO, VOC or NOx
NONPOINT Section 4.6	23-10-121-700	Nonpoint	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Exploration - Gas Well Completion: All Processes	No Annual CO, VOC or NOx
NONPOINT Section 4.5.3.2	23-11-010-000	Nonpoint	Industrial Processes - Construction: SIC 15 - 17 - Residential - Total	No Annual CO, VOC or NOx
NONPOINT Section 4.5.3.1	23-11-020-000	Nonpoint	Industrial Processes - Construction: SIC 15 - 17 - Industrial/Commercial/Institutional - Total	No Annual CO, VOC or NOx
NONPOINT Section 4.5.3.3	23-11-030-000	Nonpoint	Industrial Processes - Construction: SIC 15 - 17 - Road Construction - Total	No Annual CO, VOC or NOx
NONPOINT Section 4.7.1	23-25-000-000	Nonpoint	Industrial Processes - Mining and Quarrying: SIC 10 and SIC 14 - All Processes - Total	No Annual CO, VOC or NOx
NONPOINT Section 4.3.5	24-01-001-000	Nonpoint	Solvent Utilization - Surface Coating - Architectural Coatings - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-005-000	Nonpoint	Solvent Utilization - Surface Coating - Auto Refinishing: SIC 7532 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-008-000	Nonpoint	Solvent Utilization - Surface Coating - Traffic Markings - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-015-000	Nonpoint	Solvent Utilization - Surface Coating - Factory Finished Wood: SIC 2426 thru 242 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-020-000	Nonpoint	Solvent Utilization - Surface Coating - Wood Furniture: SIC 25 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-025-000	Nonpoint	Solvent Utilization - Surface Coating - Metal Furniture: SIC 25 - Total: All Solvent Types	Factor

NONPOINT Section 4.3.5	24-01-030-000	Nonpoint	Solvent Utilization - Surface Coating - Paper: SIC 26 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-040-000	Nonpoint	Solvent Utilization - Surface Coating - Metal Cans: SIC 341 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-055-000	Nonpoint	Solvent Utilization - Surface Coating - Machinery and Equipment: SIC 35 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-060-000	Nonpoint	Solvent Utilization - Surface Coating - Large Appliances: SIC 363 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-065-000	Nonpoint	Solvent Utilization - Surface Coating - Electronic and Other Electrical: SIC 36 - 363 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-070-000	Nonpoint	Solvent Utilization - Surface Coating - Motor Vehicles: SIC 371 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-075-000	Nonpoint	Solvent Utilization - Surface Coating - Aircraft: SIC 372 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-080-000	Nonpoint	Solvent Utilization - Surface Coating - Marine: SIC 373 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-085-000	Nonpoint	Solvent Utilization - Surface Coating - Railroad: SIC 374 - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-090-000	Nonpoint	Solvent Utilization - Surface Coating - Miscellaneous Manufacturing - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-100-000	Nonpoint	Solvent Utilization - Surface Coating - Industrial Maintenance Coatings - Total: All Solvent Types	Factor
NONPOINT Section 4.3.5	24-01-200-000	Nonpoint	Solvent Utilization - Surface Coating - Other Special Purpose Coatings - Total: All Solvent Types	Factor
NONPOINT Section 4.3.1	24-15-000-000	Nonpoint	Solvent Utilization - Degreasing - All Processes/All Industries - Total: All Solvent Types	Factor
NONPOINT Section 4.3.2	24-20-000-000	Nonpoint	Solvent Utilization - Dry Cleaning - All Processes - Total: All Solvent Types	Factor
NONPOINT Section 4.3.3	24-25-000-000	Nonpoint	Solvent Utilization - Graphic Arts - All Processes - Total: All Solvent Types	Factor

NONPOINT Section 4.3.4	24-60-100-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All Personal Care Products - Total: All Solvent Types	Factor
NONPOINT Section 4.3.4	24-60-200-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All Household Products - Total: All Solvent Types	Factor
NONPOINT Section 4.3.4	24-60-400-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All Automotive Aftermarket Products - Total: All Solvent Types	Factor
NONPOINT Section 4.3.4	24-60-500-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All Coatings and Related Products - Total: All Solvent Types	Factor
NONPOINT Section 4.3.4	24-60-600-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All Adhesives and Sealants - Total: All Solvent Types	Factor
NONPOINT Section 4.3.4	24-60-800-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All FIFRA Related Products - Total: All Solvent Types	Factor
NONPOINT Section 4.3.4	24-60-900-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - Miscellaneous Products (Not Otherwise Covered) - Total: All Solvent Types	Factor
NONPOINT Section 4.3.6	24-61-021-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Commercial - Cutback Asphalt - Total: All Solvent Types	No Annual CO, VOC or NOx
NONPOINT Section 4.3.6	24-61-022-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Commercial - Emulsified Asphalt - Total: All Solvent Types	No Annual CO, VOC or NOx
NONPOINT Section 4.4.5	24-61-850-000	Nonpoint	Solvent Utilization - Miscellaneous Non-industrial: Commercial - Pesticide Application: Agricultural - All Processes	Factor
NONPOINT Section 4.2.6	25-01-011-011	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Permeation	Factor
NONPOINT Section 4.2.6	25-01-011-012	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Evaporation (includes Diurnal losses)	Factor
NONPOINT Section 4.2.6	25-01-011-013	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Spillage During Transport	Factor
NONPOINT Section 4.2.6	25-01-011-014	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Refilling at the Pump - Vapor Displacement	Factor
NONPOINT Section 4.2.6	25-01-011-015	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Refilling at the Pump - Spillage	Factor

NONPOINT Section 4.2.6	25-01-012-011	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial Portable Gas Cans - Permeation	Factor
NONPOINT Section 4.2.6	25-01-012-012	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial Portable Gas Cans - Evaporation (includes Diurnal losses)	Factor
NONPOINT Section 4.2.6	25-01-012-013	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial Portable Gas Cans - Spillage During Transport	Factor
NONPOINT Section 4.2.6	25-01-012-014	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial Portable Gas Cans - Refilling at the Pump - Vapor Displacement	Factor
NONPOINT Section 4.2.6	25-01-012-015	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial Portable Gas Cans - Refilling at the Pump - Spillage	Factor
NONPOINT Section 4.2.1	25-01-050-120	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Bulk Terminals: All Evaporative Losses - Gasoline	Data
NONPOINT Section 4.2.1	25-01-055-120	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Bulk Plants: All Evaporative Losses - Gasoline	Data
NONPOINT Section 4.2.3	25-01-060-051	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Gasoline Service Stations - Stage 1: Submerged Filling	Factor
NONPOINT Section 4.2.3	25-01-060-052	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Gasoline Service Stations - Stage 1: Splash Filling	No Annual CO, VOC or NOx
NONPOINT Section 4.2.3	25-01-060-053	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Gasoline Service Stations - Stage 1: Balanced Submerged Filling	Factor
NONPOINT Section 4.2.3	25-01-060-201	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Gasoline Service Stations - Underground Tank: Breathing and Emptying	Factor
NONPOINT Section 4.2.2	25-01-080-050	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Airports : Aviation Gasoline - Stage 1: Total	Factor
NONPOINT Section 4.2.2	25-01-080-100	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Storage - Airports : Aviation Gasoline - Stage 2: Total	Factor
NONPOINT Section 4.2.5	25-05-030-120	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Transport - Truck - Gasoline	Factor
NONPOINT Section 4.2.5	25-05-040-120	Nonpoint	Storage and Transport - Petroleum and Petroleum Product Transport - Pipeline - Gasoline	Factor

NONPOINT Section 4.9.2.1	26-10-000-100	Nonpoint	Waste Disposal, Treatment, and Recovery - Open Burning - All Categories - Yard Waste - Leaf Species Unspecified	No Annual CO, VOC or NOx
NONPOINT Section 4.9.2.1	26-10-000-400	Nonpoint	Waste Disposal, Treatment, and Recovery - Open Burning - All Categories - Yard Waste - Brush Species Unspecified	Factor
NONPOINT Section 4.9.2.2	26-10-000-500	Nonpoint	Waste Disposal, Treatment, and Recovery - Open Burning - All Categories - Land Clearing Debris (use 28-10-005-000 for Logging Debris Burning)	No Annual CO, VOC or NOx
NONPOINT Section 4.9.2.3	26-10-030-000	Nonpoint	Waste Disposal, Treatment, and Recovery - Open Burning - Residential - Household Waste (use 26-10-000-xxx for Yard Wastes)	No Annual CO, VOC or NOx
NONPOINT Section 4.9.5	26-20-030-000	Nonpoint	Waste Disposal, Treatment, and Recovery - Landfills - Municipal - Total	Data
NONPOINT Section 4.9.4	26-20-030-001	Nonpoint	Waste Disposal, Treatment, and Recovery - Landfills - Municipal - Dumping/Crushing/Spreading of New Materials (working face)	No Annual CO, VOC or NOx
NONPOINT Section 4.9.3	26-30-020-000	Nonpoint	Waste Disposal, Treatment, and Recovery - Wastewater Treatment - Public Owned - Total Processed	Factor
NONPOINT Section 4.9.4	26-50-000-000	Nonpoint	Waste Disposal, Treatment, and Recovery - Scrap and Waste Materials - Scrap and Waste Materials - Total: All Processes	No Annual CO, VOC or NOx
NONPOINT Section 4.9.4	26-50-000-002	Nonpoint	Waste Disposal, Treatment, and Recovery - Scrap and Waste Materials - Scrap and Waste Materials - Shredding	No Annual CO, VOC or NOx
NONPOINT Section 4.9.1	26-80-003-000	Nonpoint	Waste Disposal, Treatment, and Recovery - Composting - 100% Green Waste (e.g., residential or municipal yard wastes) - All Processes	Factor
NONPOINT Section 4.4.1	28-01-000-003	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agriculture - Crops - Tilling	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-000	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Unspecified crop type and Burn Method	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-141	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Field Crop is Bean (red): Headfire Burning	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-150	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Field Crop is Corn: Burning Techniques Not Important	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-151	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Double Crop Winter Wheat and Corn	No Annual CO, VOC or NOx

NONPOINT Section 4.4.4	28-01-500-152	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - DoubleCrop Corn and Soybeans	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-160	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Field Crop is Cotton: Burning Techniques Not Important	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-170	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Field Crop is Grasses: Burning Techniques Not Important	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-171	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Fallow	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-220	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Field Crop is Rice: Burning Techniques Not Significant	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-250	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Field Crop is Sugar Cane: Burning Techniques Not Significant	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-262	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - Field Crop is Wheat: Backfire Burning	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-263	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - DoubleCrop Winter Wheat and Cotton	No Annual CO, VOC or NOx
NONPOINT Section 4.4.4	28-01-500-264	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Agricultural Field Burning - whole field set on fire - DoubleCrop Winter Wheat and Soybeans	No Annual CO, VOC or NOx
NONPOINT Section 4.4.3	28-01-700-099	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Crops - Fertilizer Application - Miscellaneous Fertilizers	No Annual CO, VOC or NOx
NONPOINT Section 4.4.1	28-05-001-000	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Dust kicked up by Livestock - Beef cattle - finishing operations on feedlots (drylots)	No Annual CO, VOC or NOx
NONPOINT Section 4.4.2	28-05-002-000	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Beef cattle production composite - Not Elsewhere Classified	Factor
NONPOINT Section 4.4.2	28-05-007-100	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Poultry Waste - Poultry Production - Layers with Dry Manure Management Systems: Confinement	Factor
NONPOINT Section 4.4.2	28-05-009-100	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Poultry production - broilers - Confinement	Factor
NONPOINT Section 4.4.2	28-05-018-000	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Dairy cattle composite - Not Elsewhere Classified	Factor

NONPOINT Section 4.4.2	28-05-025-000	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Swine production composite - Not Elsewhere Classified (see also 28-05-039, -047, -053)	Factor
NONPOINT Section 4.4.2	28-05-030-007	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Poultry Waste Emissions - Ducks	No Annual CO, VOC or NOx
NONPOINT Section 4.4.2	28-05-030-008	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Poultry Waste Emissions - Geese	No Annual CO, VOC or NOx
NONPOINT Section 4.4.2	28-05-035-000	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Horses and Ponies Waste Emissions - Not Elsewhere Classified	No Annual CO, VOC or NOx
NONPOINT Section 4.4.2	28-05-040-000	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Sheep and Lambs Waste Emissions - Total	No Annual CO, VOC or NOx
NONPOINT Section 4.4.2	28-05-045-000	Nonpoint	Miscellaneous Area Sources - Agriculture Production - Livestock - Goats Waste Emissions - Not Elsewhere Classified	No Annual CO, VOC or NOx
NONPOINT Section 4.8	28-10-001-001	Nonpoint	Miscellaneous Area Sources - Other Combustion - Forest Wildfires - Smoldering	Factor
NONPOINT Section 4.8	28-10-001-002	Nonpoint	Miscellaneous Area Sources - Other Combustion - Forest Wildfires - Flaming	Factor
NONPOINT Section 4.7.3	28-10-025-000	Nonpoint	Miscellaneous Area Sources - Other Combustion - Residential Grilling (see 23-02-002-xxx for Commercial) - Total	Factor
NONPOINT Section 4.9.4	28-10-060-100	Nonpoint	Miscellaneous Area Sources - Other Combustion - Cremation - Humans	Factor
NONPOINT Section 4.9.4	28-10-060-200	Nonpoint	Miscellaneous Area Sources - Other Combustion - Cremation - Animals	No Annual CO, VOC or NOx
NONPOINT Section 4.8	28-11-015-001	Nonpoint	Miscellaneous Area Sources - Other Combustion - as Event - Prescribed Forest Burning - Smoldering	Factor
NONPOINT Section 4.8	28-11-015-002	Nonpoint	Miscellaneous Area Sources - Other Combustion - as Event - Prescribed Forest Burning - Flaming	Factor
NONPOINT Section 4.9.4	28-50-001-000	Nonpoint	Miscellaneous Area Sources - Health Services - Dental Alloy Production - Overall Process	No Annual CO, VOC or NOx
NONPOINT Section 4.9.4	28-51-001-000	Nonpoint	Miscellaneous Area Sources - Laboratories - Bench Scale Reagents - Total	No Annual CO, VOC or NOx

NONPOINT Section 4.9.4	28-61-000-000	Nonpoint	Miscellaneous Area Sources - Fluorescent Lamp Breakage - Fluorescent Lamp Breakage - Non-recycling Related Emissions: Total	No Annual CO, VOC or NOx
NONPOINT Section 4.9.4	28-61-000-010	Nonpoint	Miscellaneous Area Sources - Fluorescent Lamp Breakage - Fluorescent Lamp Breakage - Recycling Related Emissions: Total	No Annual CO, VOC or NOx
<b>Section 5.0</b>				
BIOGENIC	27-01-200-000	Nonpoint	Natural Sources - Biogenic - Vegetation - Total	Data
BIOGENIC	27-01-220-000	Nonpoint	Natural Sources - Biogenic - Vegetation/Agriculture - Total	Data

Table D-2: Summer Day Allocation Factors

SCC	SCC Description				Annual Ton to Summer Pound Factor	Summer Season Adjustment Factor [%]	Days per Week	Weeks per Summer
	Level 1	Level 2	Level 3	Level 4				
21-02-004-001	Stationary Source Fuel Combustion	Industrial	Distillate Oil	All Boiler Types	6.410	25	6	13
21-02-004-002	Stationary Source Fuel Combustion	Industrial	Distillate Oil	All IC Engine Types	6.410	25	6	13
21-02-005-000	Stationary Source Fuel Combustion	Industrial	Residual Oil	Total: All Boiler Types	6.410	25	6	13
21-02-006-000	Stationary Source Fuel Combustion	Industrial	Natural Gas	Total: Boilers and IC Engines	6.410	25	6	13
21-02-007-000	Stationary Source Fuel Combustion	Industrial	Liquified Petroleum Gas (LPG)	Total: All Boiler Types	6.410	25	6	13

SCC	SCC Description				Annual Ton to Summer Pound Factor	Summer Season Adjustment Factor [%]	Days per Week	Weeks per Summer
	Level 1	Level 2	Level 3	Level 4				
21-02-008-000	Stationary Source Fuel Combustion	Industrial	Wood	Total: All Boiler Types	0	0	6	13
21-02-011-000	Stationary Source Fuel Combustion	Industrial	Kerosene	Total: All Boiler Types	6.410	25	6	13
21-03-004-001	Stationary Source Fuel Combustion	Commercial/ Institutional	Distillate Oil	Boilers	3.297	15	7	13
21-03-004-002	Stationary Source Fuel Combustion	Commercial/ Institutional	Distillate Oil	IC Engines	3.297	15	7	13
21-03-005-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Residual Oil	Total: All Boiler Types	3.297	15	7	13
21-03-006-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Natural Gas	Total: Boilers and IC Engines	3.297	15	7	13
21-03-007-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Liquified Petroleum Gas (LPG)	Total: All Combustor Types	3.297	15	7	13
21-03-008-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Wood	Total: All Boiler Types	0	0	7	13
21-03-011-000	Stationary Source Fuel Combustion	Commercial/ Institutional	Kerosene	Total: All Combustor Types	3.297	15	7	13
21-04-004-000	Stationary Source Fuel Combustion	Residential	Distillate Oil	Total: All Combustor Types	1.209	5.5	7	13

SCC	SCC Description				Annual Ton to Summer Pound Factor	Summer Season Adjustment Factor [%]	Days per Week	Weeks per Summer
	Level 1	Level 2	Level 3	Level 4				
21-04-006-000	Stationary Source Fuel Combustion	Residential	Natural Gas	Total: All Combustor Types	1.538	7	7	13
21-04-007-000	Stationary Source Fuel Combustion	Residential	Liquified Petroleum Gas (LPG)	Total: All Combustor Types	2.692	12.25	7	13
21-04-008-100	Stationary Source Fuel Combustion	Residential	Wood	Fireplace: general	0	0	7	13
21-04-008-210	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: fireplace inserts; non-EPA certified	0	0	7	13
21-04-008-220	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: fireplace inserts; EPA certified; non-catalytic	0	0	7	13
21-04-008-230	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: fireplace inserts; EPA certified; catalytic	0	0	7	13
21-04-008-310	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: freestanding, non-EPA certified	0	0	7	13
21-04-008-320	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: freestanding, EPA certified, non-catalytic	0	0	7	13
21-04-008-330	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: freestanding, EPA certified, catalytic	0	0	7	13

SCC	SCC Description				Annual Ton to Summer Pound Factor	Summer Season Adjustment Factor [%]	Days per Week	Weeks per Summer
	Level 1	Level 2	Level 3	Level 4				
21-04-008-400	Stationary Source Fuel Combustion	Residential	Wood	Woodstove: pellet-fired, general (freestanding or FP insert)	0	0	7	13
21-04-008-510	Stationary Source Fuel Combustion	Residential	Wood	Furnace: Indoor, cordwood-fired, non-EPA certified	0	0	7	13
21-04-008-610	Stationary Source Fuel Combustion	Residential	Wood	Hydronic heater: outdoor	0	0	7	13
21-04-008-700	Stationary Source Fuel Combustion	Residential	Wood	Outdoor wood burning device, NEC (fire-pits, chimeas, etc)	4.176	19	7	13
21-04-009-000	Stationary Source Fuel Combustion	Residential	Firelog	Total: All Combustor Types	0	0	7	13
21-04-011-000	Stationary Source Fuel Combustion	Residential	Kerosene	Total: All Heater Types	2.692	12.25	7	13
22-02-00-0062	Mobile Sources	Highway Vehicles - Diesel	Refueling	Total Spillage and Displacement	5.767	26.24	7	13
22-80-002-100	Mobile Sources	Marine Vessels, Commercial	Diesel	Port emissions	5.495	25	7	13
22-80-002-200	Mobile Sources	Marine Vessels, Commercial	Diesel	Underway emissions	5.495	25	7	13
22-80-003-100	Mobile Sources	Marine Vessels, Commercial	Residual	Port emissions	5.495	25	7	13

SCC	SCC Description				Annual Ton to Summer Pound Factor	Summer Season Adjustment Factor [%]	Days per Week	Weeks per Summer
	Level 1	Level 2	Level 3	Level 4				
22-80-003-200	Mobile Sources	Marine Vessels, Commercial	Residual	Underway emissions	5.495	25	7	13
22-85-002-006	Mobile Sources	Railroad Equipment	Diesel	Line Haul Locomotives: Class I Operations	7.692	25	5	13
22-85-002-007	Mobile Sources	Railroad Equipment	Diesel	Line Haul Locomotives: Class II / III Operations	7.692	25	5	13
22-85-002-008	Mobile Sources	Railroad Equipment	Diesel	Line Haul Locomotives: Passenger Trains (Amtrak)	7.692	25	5	13
22-85-002-009	Mobile Sources	Railroad Equipment	Diesel	Line Haul Locomotives: Commuter Lines	7.692	25	5	13

Table D-3: Allocation Factors for New SCCs

SCC	Annual Ton to Summer Pound Factor	Summer Season Adjustment Factor [%]	Days per Week	Weeks per Summer	Adjustment to the Summer Season Adjustment Factor Calculated in Table D-4
26-80-003-000	7.692	35	7	13	EPA greenwaste summer season calculated at 25%, which was increased to 35% to reflect a greater seasonal impact for Connecticut (a northern state). A slight increase was applied to consider the cutting accumulation and decomposition profiles for grass and leaves having increased emissions in the summer, where food waste would likely have a more uniform seasonal profile.
28-05-001-000	13.527	61.55	7	13	The EPA allotment was accepted.
28-10-025-000	10.989	50	7	13	EPA residential charcoal grilling summer season calculated at 45%, which was increased to 50% to reflect a greater seasonal impact for Connecticut (a northern state). A greater increase was not applied because current allocations in this ozone inventory focus on weekday emissions.

The above HPMS VMT has an average annual statewide daily total of 84,084,913 miles per day.

Note 1: Road Type 12 and 30 were added with the associated road descriptions and mappings were added; and the associative meaning of road types 13 and 31 were modified from what is established in NMIM and the Source Classification definitions. These additions and modified meanings are totally contained within the converter and should not be applied to any Road Type definitions other than the updated converter. Do not use the modified or added identifiers or the associated meaning provided in the table below for anything other than understanding the mapping of 2010+ FHWA HPMS Road Types to MOVES Road Types within the updated converter.

## Appendix H Area Source Calculation Support Tables

Table H-1: EIA-923 Electrical Generation Missing from Connecticut's 2014 Point Source Inventory

EIA / EPA IPM Plant Identifier	Plant Name	Operator Name	EIA Sector Number and Name	Reported Prime Mover <sup>168</sup>	AER Fuel Type <sup>169</sup>	Annual Activity	Physical Unit Label
57598	Bridge Street 1 & 2	Connecticut Mun Elec Engy Coop	1 - Electric Utility	IC	DFO	1,397	barrels
57598	Bridge Street 1 & 2	Connecticut Mun Elec Engy Coop	1 - Electric Utility	IC	RFO	0	barrels
57599	Fort Hill 1, 2, 3 & 4	Connecticut Mun Elec Engy Coop	1 - Electric Utility	IC	DFO	2,461	barrels
57601	Gary Court 1 & 2	Connecticut Mun Elec Engy Coop	1 - Electric Utility	IC	DFO	1,424	barrels
57602	Jewett City 1	Connecticut Mun Elec Engy Coop	1 - Electric Utility	IC	DFO	604	barrels
57603	LNG 1 & 2	Connecticut Mun Elec Engy Coop	1 - Electric Utility	IC	DFO	1,255	barrels
57604	Lebanon Pines 1 & 2	Connecticut Mun Elec Engy Coop	1 - Electric Utility	IC	DFO	1,439	barrels
57605	Water Treatment 1 & 2	Connecticut Mun Elec Engy Coop	1 - Electric Utility	IC	DFO	1,515	barrels
57689	Norden 1-3	Third Taxing District of Norwalk	2 - Electric Utility	IC	DFO	394	barrels
58948	Bristol Myers Squibb Wallingford	Bristol-Myers Squibb Co	1 - NAICS-22 Non-Cogen	IC	DFO	0	barrels
59415	Backus Microgrid Project	Connecticut Mun Elec Engy Coop	2 - Electric Utility	IC	DFO	665	barrels
6598	South Norwalk Electric	City of South Norwalk - (CT)	1 - Electric Utility	IC	DFO	0	barrels
58551	Dominion Bridgeport Fuel Cell, LLC	Dominion Renewable Energy	2 - NAICS-22 Non-Cogen	FC	NG	945,007	MCF
58948	Bristol Myers Squibb Wallingford	Bristol-Myers Squibb Co	2 - NAICS-22 Non-Cogen	GT	NG	392,209	MCF
59801	IBM Southbury	Bloom Energy	1 - NAICS-22 Non-Cogen	FC	NG	5,956	MCF
<b>Total of Missing Activity for Distillate Petroleum Units</b>					DFO	468.5	E3GAL <sup>170</sup>
<b>Total of Missing Activity for Natural Gas Units</b>					NG	1,343	MMCF

<sup>168</sup> FC for Fuel Cell, IC for Internal Combustion Engine, and GT for Gas Turbine

<sup>169</sup> DFO for Distillate Fuel Oil, RFO for Residual Fuel Oil, and NG for Natural Gas

<sup>170</sup> 1 barrel = 42 gallons

New Haven	117	35	MAGELLAN ENERGY VENTURES INC	1997	0.07	0.4
<b>Statewide Bulk Terminal and Bulk Plant Total</b>					<b>2.94</b>	<b>10.7</b>

<sup>‡</sup>Annual 2014 VOC emissions were reported as part of synthetic minor site wide reporting (GPLPE reporting), which does not require summer day emissions reporting. The value of 5.3 lb/day was calculated from point reported data for the facility for the latest available (1996) reporting period.

Table H-10: Connecticut Facility Reported 2014 Point Emission Data Associated with the SCC Crosswalk in the EPA's Solvent Tool Version 1.7 by Process Identifier and Point SCC

		Gas		
Fuel Combustion Industrial Residual Oil	4.1.2.3	Fuel Combustion Industrial, Commercial and Institutional Residual Oil	21-02-005-000	Stationary Source Fuel Combustion - Industrial - Residual Oil - Total: All Boiler Types
Fuel Combustion Industrial Wood	4.1.2.6	Fuel Combustion Industrial, Commercial and Institutional Wood	21-02-008-000	Stationary Source Fuel Combustion - Industrial - Wood - Total: All Boiler Types
Gas Stations - Stage I	4.2.3	Gas Stations - Stage I	25-01-060-051	Storage and Transport - Petroleum and Petroleum Product Storage - Gasoline Service Stations - Stage 1: Submerged Filling
Gas Stations - Stage I	4.2.3	Gas Stations - Stage I	25-01-060-052	Storage and Transport - Petroleum and Petroleum Product Storage - Gasoline Service Stations - Stage 1: Splash Filling
Gas Stations - Stage I	4.2.3	Gas Stations - Stage I	25-01-060-053	Storage and Transport - Petroleum and Petroleum Product Storage - Gasoline Service Stations - Stage 1: Balanced Submerged Filling
Gas Stations - Stage I	4.2.3	Gas Stations - Stage I	25-01-060-201	Storage and Transport - Petroleum and Petroleum Product Storage - Gasoline Service Stations - Underground Tank: Breathing and Emptying
Gas Stations - Stage II	4.2.4	Gas Stations - Stage II	22-01-00-0062	Mobile Sources - Highway Vehicles - Gasoline - Refueling - Total Spillage and Displacement
Gas Stations - Stage II	4.2.4	Gas Stations - Stage II	22-02-00-0062	Mobile Sources - Highway Vehicles - Diesel - Refueling - Total Spillage and Displacement
Industrial Processes - Storage and Transfer - Truck or Pipeline	4.2.5	Industrial Processes - Storage and Transfer - Truck or Pipeline	25-05-030-120	Storage and Transport - Petroleum and Petroleum Product Transport - Truck - Gasoline
Industrial Processes - Storage and Transfer - Truck or Pipeline	4.2.5	Industrial Processes - Storage and Transfer - Truck or Pipeline	25-05-040-120	Storage and Transport - Petroleum and Petroleum Product Transport - Pipeline - Gasoline
Mining and Quarrying	4.7.1	Mining and Quarrying	23-25-000-000	Industrial Processes - Mining and Quarrying: SIC 10 and SIC 14 - All Processes - Total
Municipal Landfill Emissions	4.9.5	Municipal Landfill Emissions	26-20-030-000	Waste Disposal, Treatment, and Recovery - Landfills - Municipal - Total

Table I-3: Area Source Sector Groups

Data Grouping Name	Section Number	Area Source Section Name	SCC	SCC Description
Oil and Gas Production	4.6	Oil and Gas Production	23-10-000-220	Industrial Processes - Oil and Gas Exploration and Production - All Processes - Drill Rigs
Oil and Gas Production	4.6	Oil and Gas Production	23-10-000-330	Industrial Processes - Oil and Gas Exploration and Production - All Processes - Artificial Lift
Oil and Gas Production	4.6	Oil and Gas Production	23-10-000-550	Industrial Processes - Oil and Gas Exploration and Production - All Processes - Produced Water
Oil and Gas Production	4.6	Oil and Gas Production	23-10-000-660	Industrial Processes - Oil and Gas Exploration and Production - All Processes - Hydraulic Fracturing Engines
Oil and Gas Production	4.6	Oil and Gas Production	23-10-010-100	Industrial Processes - Oil and Gas Exploration and Production - Crude Petroleum - Oil Well Heaters
Oil and Gas Production	4.6	Oil and Gas Production	23-10-010-200	Industrial Processes - Oil and Gas Exploration and Production - Crude Petroleum - Oil Well Tanks - Flashing & Standing/Working/Breathing
Oil and Gas Production	4.6	Oil and Gas Production	23-10-010-300	Industrial Processes - Oil and Gas Exploration and Production - Crude Petroleum - Oil Well Pneumatic Devices
Oil and Gas Production	4.6	Oil and Gas Production	23-10-011-000	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Total: All Processes
Oil and Gas Production	4.6	Oil and Gas Production	23-10-011-201	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Tank Truck/Railcar Loading: Crude Oil
Oil and Gas Production	4.6	Oil and Gas Production	23-10-011-501	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Fugitives: Connectors
Oil and Gas Production	4.6	Oil and Gas Production	23-10-011-502	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Fugitives: Flanges
Oil and Gas Production	4.6	Oil and Gas Production	23-10-011-503	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Fugitives: Open Ended Lines
Oil and Gas Production	4.6	Oil and Gas Production	23-10-011-505	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Oil Production - Fugitives: Valves
Oil and Gas Production	4.6	Oil and Gas Production	23-10-021-010	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Production -

Table I-3: Area Source Sector Groups

				Mud Degassing
Oil and Gas Production	4.6	Oil and Gas Production	23-10-121-401	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Exploration - Gas Well Pneumatic Pumps
Oil and Gas Production	4.6	Oil and Gas Production	23-10-121-700	Industrial Processes - Oil and Gas Exploration and Production - On-Shore Gas Exploration - Gas Well Completion: All Processes
Portable Fuel Containers Estimates	4.2.6	Portable Fuel Containers Estimates	25-01-011-011	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Permeation
Portable Fuel Containers Estimates	4.2.6	Portable Fuel Containers Estimates	25-01-011-012	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Evaporation (includes Diurnal losses)
Portable Fuel Containers Estimates	4.2.6	Portable Fuel Containers Estimates	25-01-011-013	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Spillage During Transport
Portable Fuel Containers Estimates	4.2.6	Portable Fuel Containers Estimates	25-01-011-014	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Refilling at the Pump - Vapor Displacement
Portable Fuel Containers Estimates	4.2.6	Portable Fuel Containers Estimates	25-01-011-015	Storage and Transport - Petroleum and Petroleum Product Storage - Residential Portable Gas Cans - Refilling at the Pump - Spillage
Portable Fuel Containers Estimates	4.2.6	Portable Fuel Containers Estimates	25-01-012-011	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial Portable Gas Cans - Permeation
Portable Fuel Containers Estimates	4.2.6	Portable Fuel Containers Estimates	25-01-012-012	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial Portable Gas Cans - Evaporation (includes Diurnal losses)
Portable Fuel Containers Estimates	4.2.6	Portable Fuel Containers Estimates	25-01-012-013	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial Portable Gas Cans - Spillage During Transport
Portable Fuel Containers Estimates	4.2.6	Portable Fuel Containers Estimates	25-01-012-014	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial Portable Gas Cans - Refilling at the Pump - Vapor Displacement
Portable Fuel Containers	4.2.6	Portable Fuel Containers Estimates	25-01-012-015	Storage and Transport - Petroleum and Petroleum Product Storage - Commercial

Table I-3: Area Source Sector Groups

Data Grouping Name	Section Number	Area Source Section Name	SCC	SCC Description
Estimates				Portable Gas Cans - Refilling at the Pump - Spillage
Prescribed Burning and Wildfires (Events)	4.8	Prescribed Burning and Wildfires (Events)	28-10-001-001	Miscellaneous Area Sources - Other Combustion - Forest Wildfires - Smoldering
Prescribed Burning and Wildfires (Events)	4.8	Prescribed Burning and Wildfires (Events)	28-10-001-002	Miscellaneous Area Sources - Other Combustion - Forest Wildfires - Flaming
Prescribed Burning and Wildfires (Events)	4.8	Prescribed Burning and Wildfires (Events)	28-11-015-001	Miscellaneous Area Sources - Other Combustion - as Event - Prescribed Forest Burning - Smoldering
Prescribed Burning and Wildfires (Events)	4.8	Prescribed Burning and Wildfires (Events)	28-11-015-002	Miscellaneous Area Sources - Other Combustion - as Event - Prescribed Forest Burning - Flaming
Publicly Owned Treatment Works (POTW)	4.9.3	Publicly Owned Treatment Works (POTW)	26-30-020-000	Waste Disposal, Treatment, and Recovery - Wastewater Treatment - Public Owned - Total Processed
Residential Charcoal Grilling	4.7.3	Residential Charcoal Grilling	28-10-025-000	Miscellaneous Area Sources - Other Combustion - Residential Grilling (see 23-02-002-xxx for Commercial) - Total
Residential Heating: Coal	4.1.3.1	Residential Heating: Coal	21-04-001-000	Stationary Source Fuel Combustion - Residential - Anthracite Coal - Total: All Combustor Types
Residential Heating: Coal	4.1.3.1	Residential Heating: Coal	21-04-002-000	Stationary Source Fuel Combustion - Residential - Bituminous/Subbituminous Coal - Total: All Combustor Types
Residential Heating: Distillate Oil	4.1.3.2	Residential Heating: Distillate Oil	21-04-004-000	Stationary Source Fuel Combustion - Residential - Distillate Oil - Total: All Combustor Types
Residential Heating: Kerosene	4.1.3.7	Residential Heating: Kerosene	21-04-011-000	Stationary Source Fuel Combustion - Residential - Kerosene - Total: All Heater Types
Residential Heating: LPG	4.1.3.5	Residential Heating: LPG	21-04-007-000	Stationary Source Fuel Combustion - Residential - Liquefied Petroleum Gas (LPG) - Total: All Combustor Types
Residential Heating: Natural Gas	4.1.3.4	Residential Heating: Natural Gas	21-04-006-000	Stationary Source Fuel Combustion - Residential - Natural Gas - Total: All Combustor Types
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-100	Stationary Source Fuel Combustion - Residential - Wood - Fireplace: general

Table I-3: Area Source Sector Groups

Data Grouping Name	Section Number	Area Source Section Name	SCC	SCC Description
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-210	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: fireplace inserts; non-EPA certified
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-220	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: fireplace inserts; EPA certified; non-catalytic
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-230	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: fireplace inserts; EPA certified; catalytic
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-310	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: freestanding, non-EPA certified
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-320	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: freestanding, EPA certified, non-catalytic
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-330	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: freestanding, EPA certified, catalytic
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-400	Stationary Source Fuel Combustion - Residential - Wood - Woodstove: pellet-fired, general (freestanding or FP insert)
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-510	Stationary Source Fuel Combustion - Residential - Wood - Furnace: Indoor, cordwood-fired, non-EPA certified
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-610	Stationary Source Fuel Combustion - Residential - Wood - Hydronic heater: outdoor
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-008-700	Stationary Source Fuel Combustion - Residential - Wood - Outdoor wood burning device, NEC (fire-pits, chimeas, etc)
Residential Heating: Wood	4.1.3.6	Residential Heating: Wood	21-04-009-000	Stationary Source Fuel Combustion - Residential - Firelog - Total: All Combustor Types
Road Dust	4.5.1	Paved Roads	22-94-000-000	Mobile Sources - Paved Roads - All Paved Roads - Total: Fugitives
Road Dust	4.5.1	Paved Roads	22-94-000-002	Mobile Sources - Paved Roads - All Paved Roads - Total: Sanding/Salting - Fugitives
Road Dust	4.5.2	Unpaved Roads	22-96-000-000	Mobile Sources - Unpaved Roads - All Unpaved Roads - Total: Fugitives
Solvent -	4.3.4	Solvent - Consumer &	24-60-100-	Solvent Utilization - Miscellaneous Non-

Table I-3: Area Source Sector Groups

Data Grouping Name	Section Number	Area Source Section Name	SCC	SCC Description
Consumer & Commercial Solvent Use		Commercial Solvent Use	000	industrial: Consumer and Commercial - All Personal Care Products - Total: All Solvent Types
Solvent - Consumer & Commercial Solvent Use	4.3.4	Solvent - Consumer & Commercial Solvent Use	24-60-200-000	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All Household Products - Total: All Solvent Types
Solvent - Consumer & Commercial Solvent Use	4.3.4	Solvent - Consumer & Commercial Solvent Use	24-60-400-000	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All Automotive Aftermarket Products - Total: All Solvent Types
Solvent - Consumer & Commercial Solvent Use	4.3.4	Solvent - Consumer & Commercial Solvent Use	24-60-500-000	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All Coatings and Related Products - Total: All Solvent Types
Solvent - Consumer & Commercial Solvent Use	4.3.4	Solvent - Consumer & Commercial Solvent Use	24-60-600-000	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All Adhesives and Sealants - Total: All Solvent Types
Solvent - Consumer & Commercial Solvent Use	4.3.4	Solvent - Consumer & Commercial Solvent Use	24-60-800-000	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - All FIFRA Related Products - Total: All Solvent Types
Solvent - Consumer & Commercial Solvent Use	4.3.4	Solvent - Consumer & Commercial Solvent Use	24-60-900-000	Solvent Utilization - Miscellaneous Non-industrial: Consumer and Commercial - Miscellaneous Products (Not Otherwise Covered) - Total: All Solvent Types
Solvent - Degreasing	4.3.1	Solvent - Degreasing	24-15-000-000	Solvent Utilization - Degreasing - All Processes/All Industries - Total: All Solvent Types
Solvent - Dry Cleaning	4.3.2	Solvent - Dry Cleaning	24-20-000-000	Solvent Utilization - Dry Cleaning - All Processes - Total: All Solvent Types
Solvent - Graphic Arts	4.3.3	Solvent - Graphic Arts	24-25-000-000	Solvent Utilization - Graphic Arts - All Processes - Total: All Solvent Types
Solvent - Industrial Surface Coating & Solvent Use	4.3.5	Solvent - Industrial Surface Coating & Solvent Use	24-01-001-000	Solvent Utilization - Surface Coating - Architectural Coatings - Total: All Solvent Types
Solvent - Industrial Surface Coating & Solvent Use	4.3.5	Solvent - Industrial Surface Coating & Solvent Use	24-01-005-000	Solvent Utilization - Surface Coating - Auto Refinishing: SIC 7532 - Total: All Solvent Types
Solvent - Industrial	4.3.5	Solvent - Industrial	24-01-008-	Solvent Utilization - Surface Coating - Traffic
