Building 64640  
Cardno ATC Project 61.22573.0020 Task 20071

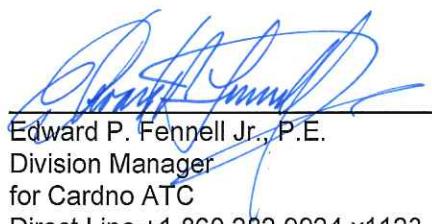

Dear Mr. Sanders:

Please find enclosed the Asbestos Inspection Report for the Duplex Residence at Seaside Regional Center located in Waterford, Connecticut.

Should you have any questions concerning this report, do not hesitate to contact me at 860 282-9924 ext. 1123.

Sincerely,

**Cardno ATC**

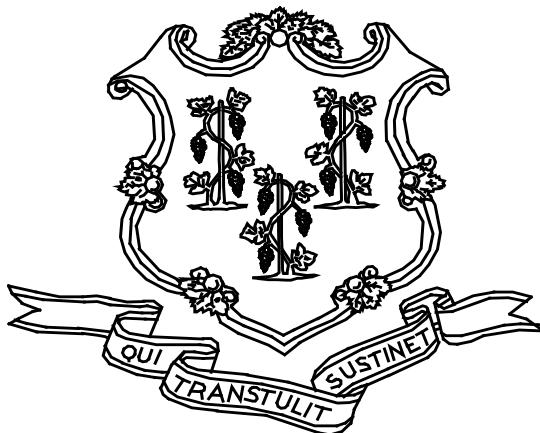

Edward P. Fennell Jr., P.E.

APPENDIX A            LICENSE AND CERTIFICATION

APPENDIX B            DRAWINGS

## **1.0 INTRODUCTION**

Cardno ATC (ATC) of East Hartford, Connecticut was retained by the State of Connecticut, Department of Administrative Services, Division of Construction Services (CTDCS) to conduct a limited inspection to identify asbestos-containing materials (ACM) at the Duplex Residence, Seaside Regional Center, Waterford, Connecticut. The purpose of the investigation was to test suspect materials prior to renovation activities.

The inspection was conducted by Mr. Stanley Szelag and Mr. Willie L. Thompson III on October 9, 2014. Mr. Szelag and Mr. Thompson are State of Connecticut Department of Public Health (CTDPH) licensed asbestos inspectors (CTDPH license number 000493 and 000673 respectively). The survey was performed as a walk-through visual inspection, combined with the collection and analysis of bulk samples.

## **2.0 ASBESTOS-CONTAINING MATERIALS SURVEY**

Materials which were considered suspect ACM included: wall and ceiling plaster skim and base coats and scratch coat, floor tile and associated mastic, sheet flooring and associated adhesives, pipe and pipe fitting insulation, gypsum board, joint compound, ceramic wall and floor tile grout and setting compound, window and door caulking, window glazing, sink undercoat, flue cement, damp proofing, roofing materials and miscellaneous caulking and adhesives.

### **2.1 ASBESTOS BULK SAMPLE COLLECTION/ANALYSIS PROCEDURE**

Building materials considered suspect ACM were inspected and assessed using the methods presented in the United States Environmental Protection Agency AHERA regulations (40 CFR Part 763) and NESHAP regulations (40 CFR Part 61).

ATC collected bulk samples of building materials utilizing a sampling strategy that correlated with 40 CFR 763.86 as follows:

- (a) *Surfacing materials.* An accredited inspector shall collect, in a statistically random manner that is representative of the homogeneous area, bulk samples from each homogeneous area of friable surfacing material that is not assumed to be ACM, and shall collect the samples as follows:
  - (1) At least three bulk samples shall be collected from each homogeneous area that is 1,000 ft<sup>2</sup> or less, except as provided in 40 CFR Part 763.87(c)(2).
  - (2) At least five bulk samples shall be collected from each homogeneous area that is greater than 1,000 ft<sup>2</sup> but less than or equal to 5,000 ft<sup>2</sup>, except as provided in 40 CFR Part 763.87(c)(2).
  - (3) At least seven bulk samples shall be collected from each homogeneous area that is greater than 5,000 ft<sup>2</sup>, except as provided in 40 CFR Part 763.87(c)(2).

- (b) *Thermal system insulation.*
- (1) Except as provided in paragraphs (b)(2) through (4) of this section and 40 CFR Part 763.87(c), an accredited inspector shall collect, in a randomly distributed manner, at least three bulk samples from each homogeneous area of thermal system insulation that is not assumed to be ACM.
  - (2) Collect at least one bulk sample from each homogeneous area of patched thermal system insulation that is not assumed to be ACM if the patched section is less than 6 linear or square feet.
  - (3) In a manner sufficient to determine whether the material is ACM or not ACM, collect bulk samples from each insulated mechanical system that is not assumed to be ACM where cement or plaster is used on fittings such as tees, elbows, or valves, except as provided under 40 CFR Part 763.87(c)(2).
  - (4) Bulk samples are not required to be collected from any homogeneous area where the accredited inspector has determined that the thermal system insulation is fiberglass, foam glass, rubber, or other non-ACM.
- (c) *Miscellaneous materials.* In a manner sufficient to determine whether material is ACM or not ACM, an accredited inspector shall collect bulk samples from each homogeneous area of friable or non-friable miscellaneous material that is not assumed to be ACM.

The bulk samples collected during the survey were analyzed by EMSL Analytical, Inc. (NVLAP Lab Code 101048-9) located in New York, New York. The bulk samples were analyzed by Polarized Light Microscopy (PLM) with dispersion staining via EPA 600/R-93/116 and/or EPA 600/M4-82-020 Method(s). Utilizing PLM, the microscopist is able to identify and distinguish between asbestos group minerals and other fibrous materials such as cellulose, mineral wool, fiberglass, or synthetic fibers. The quantities of each of these substances is estimated based on the procedures defined in the above-cited reference and are reported as a percentage.

The EPA recognizes the following as asbestos: Chrysotile, Crocidolite, Amosite, Tremolite, Actinolite, and Anthophyllite. To be classified as ACM, the material must be determined to contain greater than one percent (1%) asbestos. In order to consider a material to be non-ACM, all samples of a homogeneous type of material that are collected must be analyzed and all results must indicate the material to contain less than 1% asbestos by weight.

### **3.0 ASBESTOS-CONTAINING MATERIALS**

The results of PLM laboratory analysis indicated that the following materials are asbestos-containing material (ACM). ACM are those materials that contain greater than 1% asbestos, and are as follows:

- Sheet Flooring Top Layer
- Sink Undercoating Rose
- Air Cell and Mag Pipe Insulation
- Mudded Pipe Fitting Insulation
- Flue Cement
- Window Caulking
- Store Room Window Caulk
- Perimeter Roof Flashing

- Gable Slate Tar

The remaining materials which were sampled and tested were found to contain no detectable amounts of asbestos. Specifically, the following materials were determined to be non-ACM:

- Wall Plaster - Skim Coat
- Wall Plaster - Base Coat
- Ceiling Plaster - Skim Coat
- Ceiling Plaster - Base Coat
- Wall Plaster - Scratch Coat
- Ceiling Plaster - Scratch Coat
- Gypsum Board
- Joint Compound
- Ceramic Floor Tile Setting Compound and Grout
- Ceramic Wall Tile Setting Compound and Grout
- Stair Tread and Associated Adhesive
- Sheet Flooring Bottom Layer
- Brown Floor Covering and Associated Adhesive
- Paper Under Brown Floor Covering
- 2'x2' Ceiling Tile
- Loose Insulation
- Door Frame Caulking
- Window Glazing
- Metal Window Glazing
- Gable Tar Paper
- Exterior Damp Proofing

Refer to Section 6.0, Bulk Sample Summary of Suspect Materials, for all suspect materials that were identified and sampled.

#### **4.0 DISCUSSION AND RECOMMENDATIONS**

EPA regulations require the removal of Regulated Asbestos-Containing Materials (RACM) prior to renovation or demolition activities. RACM is defined as (a) Friable ACM, (b) Category I non-friable ACM that has become friable, (c) Category I non-friable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading, or (d) Category II non-friable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation activities. The CTDPH defines "asbestos abatement" as removal, encapsulation, enclosure, renovation, repair, demolition, or other disturbance of ACM but does not include activities which are related to (A) the removal or repair of asbestos cement pipe and are performed by employees of a water company as defined in section 25-32a, or (B) the removal of non-friable ACM found exterior to a building or structure other than material defined as RACM in 40 CFR 61, the National Emission Standards for Hazardous Air Pollutants (NESHAP). Based upon these definitions, ACM identified in the building requires removal prior to renovation, demolition, or disturbance. The State of Connecticut, Department of Energy and Environmental Protection (CTDEEP) regulations require the proper disposal of all ACM, regardless of categorization.

## **5.0 LIMITATIONS**

As with all such assessments, the results of the sampling represent conditions found on the date of the survey and may not represent conditions found at other times. Additionally, this assessment was limited with respect to the specific parameters indicated above and should not be construed to be a comprehensive evaluation or a definitive representation of conditions within the facility. The information presented in this report is intended to be used as a guide to evaluate the need for further investigation or the need for modifications to the processes or procedures surveyed.

4. The employer's copy is for persons who must  
 demonstrate current licensure/certification in order  
 to retain employment or privileges. The employer's  
 card is to be presented to the employer and kept by  
 them as a part of your personnel file. Only one copy  
 of this card can be supplied to you.

**INSTRUCTIONS:**

1. Detach and slip each of the cards on this form.
2. Display the large card in a prominent place in your office or place of business.
3. The wallet card is for you to carry on your person. If you do not wish to carry  
 the wallet card, place it in a secure place.
