Rev. 5/2005 printed on recycled paper

Introduction

This revised (January 2005) native tree and shrub availability list is designed to assist homeowners, landscapers and conservation organizations in locating **native** planting stock for wildlife habitat enhancement. It was compiled from a mail survey of Connecticut's registered nurseries. Of the respondents, many indicated that they have native trees or shrubs in stock or would obtain them by special order. Although some of the listed nurseries are strictly wholesalers, trees and shrubs can be ordered from them through your local nursery or garden center. Present this publication to your local retailer and request if plants can be ordered for you.

Every plant is native to some location. When a plant is grown outside of its original location, it is usually classified as a non-native plant. For example, a Norway maple (*Acer platanoides*) is a native tree in Norway, but in the United States it is a non-native that now comprises a large segment of the street trees in our cities and suburbs. Some non-native plants are invasive and they aggressively compete with native plants. Norway maple is a listed non-native invasive tree, which when planted in suburban or rural areas it may eventually spread to adjacent woodlots, thus occupying space where native trees and shrubs would grow. The adaptability and vigor of the Norway maple is undeniable; however, if a disease or insect infestation occurs in a monoculture, a large die-off may occur. Planting different species is a good buffer against disease and insect infestations.

By their very nature, native plants have adapted to the climate of the area, making them naturally hardy. Wildlife have evolved using them for food, cover and shelter. Proper selection, care and placement of trees and shrubs can produce a landscape that is both visually attractive and beneficial to wildlife.

Landscaping with native plants may require gathering more information. Native plant descriptions, flowering and fruiting periods, site requirements and wildlife habitat values may be found in the references below.

The following is a list of suggested native trees and shrubs. Look up the species in which you are interested and write down the numbers from the column on the right. Cross-reference the numbers with the nurseries listed on pages 7-9. These numbers indicate which nurseries have that tree or shrub in stock. **Bold** numbers indicate that the nursery can special order the plant.

Connecticut's State Tree: White Oak (Quercus alba), also known as the Charter Oak

Description:

This deciduous tree grows up to 75-100 feet tall. It has grayish white bark and evenly lobed leaves, and it grows on a variety of site conditions. White oak produces acorns, which are highly preferred by deer, turkeys and squirrels.

Connecticut's State Flower: Mountain Laurel (Kalmia latifolia)

Description:

This evergreen shrub grows from 2 to 20 feet tall. It usually grows in the understory and typically in drier soils. Mountain laurel produces showy flowers in early summer, with colors ranging from white to red. The shrub is propagated widely by the nursery industry; many cultivars have been developed by Dr. Richard Jaynes of Broken Arrow Nursery in Hamden.
