

Northeast Regional State Wildlife Action Plan Actions

Regional Action Recommendation	Lexicon CMP Action Categories
<i>For continued participation in NEAFWA, the NEFWDTC, the RCN Program, other regional partnerships and collaborations, regional shared information resources, and future CSWG projects:</i>	
Continue the collaborative biodiversity conservation work of the northeastern states, including the Regional Conservation Needs Program, Regional Species of Greatest Conservation Need, and the Northeast Fish and Wildlife Diversity Technical Committee. ○ <i>Measure:</i> Number of regional conservation projects	6.5 Conservation planning (Planning the management of sites, species, or thematic conservation projects) 8.0 Basic research and status monitoring (Collecting, managing, and analyzing data; creating information; collecting, managing, analyzing, and co-applying knowledge about conservation factors) 8.2 Evaluation, effectiveness measures, and learning (assessing, learning, and summarizing the results of learning about the effectiveness of conservation work) 9.2 Training and individual skill development (Enhancing knowledge, skills, and information exchange for practitioners, stakeholders, and other relevant individuals) 10.2 External support and organizational development (Creating or providing support [financial or non-financial] and building capacity for conservation partners) 10.3 Alliance and partnership development (Forming, facilitating, and maintaining partnerships, alliances, and networks of organizations) 10.4 Conservation funding (Raising and providing funds for conservation work)
Develop and maintain interagency collaborations and enhanced coordination among organizations and agencies to protect and manage SGCN and RSGCN.	6.5 Conservation planning (Planning the management of sites, species, or thematic conservation projects) 8.0 Basic research and status monitoring (Collecting, managing and analyzing data; creating information;

○ <i>Measure:</i> Number of interagency collaborations incorporating SGCN and RSGCN needs into planning documents	collecting, managing, analyzing and co-applying knowledge about conservation factors) 8.2 Evaluation, effectiveness measures, and learning (Assessing, learning and summarizing the results of learning about the effectiveness of conservation work) 9.2 Training and individual skill development (Enhancing knowledge, skills and information exchange for practitioners, stakeholders, and other relevant individuals) 10.2 External support and organizational development (Creating or providing support [financial or non-financial] and building capacity for conservation partners) 10.3 Alliance and partnership development (Forming, facilitating and maintaining partnerships, alliances and networks of organizations) 10.4 Conservation funding (Raising and providing funds for conservation work)
Implement existing collaborative natural resource plans including _____. ○ <i>Measure:</i> Number of implementation actions conserving SGCN and RSGCN habitats or populations.	<i>Implementation of actions would be categorized individually. For the collaborative aspect:</i> 10.2 External support and organizational development (Creating or providing support [financial or non-financial] and building capacity for conservation partners) 10.3 Alliance and partnership development (Forming, facilitating and maintaining partnerships, alliances and networks of organizations)
Support and contribute to centralized data collection and management by creating, updating, and/or maintaining data compilation analysis and tools at multiple scales (local, statewide, regional, national, and international) ○ <i>Measure:</i> Number of collaborative databases or datasets	8.1 Basic research and status monitoring (Collecting, managing and analyzing data) 9.2 Training and individual skill development (Enhancing knowledge, skills and information exchange for practitioners, stakeholders, and other relevant individuals)

○ <i>Measure</i>: Number of users	10.3.4 Knowledge exchange (Exchanging knowledge in a professional context)
<i>For integrating wildlife health:</i>	
Recognize the importance of wildlife health and its role in supporting <i>resilient</i> wildlife populations and incorporate wildlife health into management plans.	6.5 Conservation planning (Planning the management of sites, species, or thematic conservation projects) 7.2 Create or amend policies, guidelines, or best practices
Work with academic and other partners to address emerging diseases through surveillance and research, including determining causes of death and/or population declines in species of greatest conservation need.	2.1.4 Manage wildlife health in the wild 8.1 Basic research and status monitoring (Collecting, managing and analyzing data)
Develop agency-specific morbidity and mortality event protocols and emergency disease outbreak and response protocols, including appropriate biosecurity measures, to better respond and address morbidity/mortality events and emergency disease outbreaks, as necessary.	7.2 Create or amend policies, guidelines, or best practices 8.1.5 Literature search and analysis (Compiling and analyzing existing or remote sensing data) 8.2 Evaluation, effectiveness measures, and learning (Assessing, learning and summarizing the results of learning about the effectiveness of conservation work) 9.2 Training and individual skill development (Enhancing knowledge, skills and information exchange for practitioners, stakeholders, and other relevant individuals)
Work collaboratively and cooperatively with adjacent state fish and wildlife agencies, regional fish and wildlife associations, national fish and wildlife associations and agencies,	6.5 Conservation planning (Planning the management of sites, species, or thematic conservation projects) 8.0 Basic research and status monitoring (Collecting, managing and analyzing data; creating information;
