### LEGEND

<b>Hurricane Surge Inundation</b>	<b>Hydrographic Features</b>
Category 1	Water
Category 2	Intermittent Water
Category 3	Flats
Category 4	Rocks
	Inundated Area
<b>Transportation</b>	Marsh
Interstate Highway	Cranberry Bog
US Highways	Dam
State/Local Highways	Fish Hatchery
Local Road	Aqueduct
Railroad	Sewage Pond
Airport	Water Tank
<b>Political</b>	
Town Boundary	
State Boundary	
<b>Facility Location Key</b>	
Public Shelter	
Medical/Institutional Facility	
Mobile Home/Trailer Park	

### NOTES & SOURCES

Hurricane surge elevations were determined by the National Hurricane Center using the NY3 and PV2 SLOSH model basins, and assumed peak hurricane surge arriving at mean high water.

The hurricane surge inundation areas shown on this map depict the inundation that can be expected to result from a worst case combination of hurricane landfall location, forward speed, and direction for each hurricane category.

The source of basemap transportation features such as roads and railroads is Tele Atlas 2008. The source of other basemap features is the Connecticut DEEP.

The primary ground elevation data source was LiDAR data created by Terrapoint LLC for FEMA. That data was supplemented where needed by ground surface LiDAR data created by Terrapoint LLC for the State of Connecticut. The vertical accuracy of all LiDAR data is approximately +/- 1 foot, and the horizontal accuracy is approximately +/- 3 feet.

The horizontal projection of this map is Connecticut State Plane NAD83 feet. All elevation data was referenced to the NAVD88 vertical datum.
