^aIncludes Asian/Pacific Islander legacy cases.

^eIncludes hemophilia, blood transfusion, and persons (171 cases) who were exposed perinatally but were aged >13 at most recent year.

^fPersons who have most recent viral load test result <200 copies/ml between 01/01/2015 through 12/31/2015 are considered as HIV viral suppression.

^gThe overall population is overestimated because cases are only followed up for 11 months after 12/31/2015. CDC suggests that every case should be followed up at least 18 months to collect death certificate information.
