**PUBLIC WATER SYSTEMS ANNUAL COMPLIANCE REPORT
FOR CALENDAR YEAR 2021**

July 2022

PUBLIC WATER SYSTEMS ANNUAL COMPLIANCE REPORT FOR CALENDAR YEAR 2021

CONNECTICUT DEPARTMENT OF PUBLIC HEALTH DRINKING WATER SECTION

PURPOSE

Section 1414 of Safe Drinking Water Act (SDWA) requires each state or primacy agency to submit an annual report of SDWA violations to the Environmental Protection Agency (EPA) Administrator and make the report readily available to the general public. This report contains a summary of all public water system violation data from Calendar Year 2021 and is intended to satisfy this reporting requirement.

THE DRINKING WATER PROGRAM: AN OVERVIEW

The EPA established the Public Water System Supervision (PWSS) Program under the authority of the 1974 SDWA. Under the SDWA and the 1986 Amendments, EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs) and the Maximum Residual Disinfectant Levels (MRDLs). For some regulations, EPA establishes a Treatment Technique (TT) in lieu of an MCL to control unacceptable levels of contaminants in water. The Agency also regulates how often public water systems (PWSs) monitor their water for contaminants and report the monitoring results to the states or EPA. Generally, the larger the population served by a water system, the more frequent the monitoring and reporting (M&R) requirements. In addition, EPA requires PWSs to monitor for unregulated contaminants to provide data for future regulatory development. Finally, EPA requires PWSs to notify their consumers when they have violated these regulations. The 1996 Amendments to the SDWA require consumer notification to include a clear and understandable explanation of the nature of the violation, its potential adverse health effects, steps that the PWS is undertaking to correct the violation and the possibility of alternative water supplies during the violation. The SDWA applies to the 50 states, the District of Columbia, Indian Lands, Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands.

The SDWA allows states, tribes, and territories to seek EPA approval to administer their own PWSS Programs. The authority to run a PWSS Program is called primacy. For a state to receive primacy, EPA must determine that the state meets certain requirements laid out in the SDWA and the federal regulations, including the adoption of drinking water regulations that are at least as stringent as the federal regulations and a demonstration that they can enforce the program requirements.

CONNECTICUT'S ROLE

The Connecticut Department of Public Health (DPH) is the State's lead agency in all matters related to the purity and adequacy of drinking water. Connecticut's primacy status, granted by the EPA, allows DPH to implement and enforce provisions of the SDWA through State statutes and regulations. The Drinking Water Section (DWS) is part of DPH's Environmental Health and Drinking Water Branch and administers the statewide drinking water program associated with the SDWA.

Each quarter, the DWS submits data to EPA's Safe Drinking Water Information System (SDWIS/FED), a database maintained by EPA. The data submitted includes, but is not limited to, PWS inventory information, the incidence of Maximum Contaminant Level (MCL), Maximum Residual Disinfectant Level (MRDL),

Monitoring, and Treatment Technique violations; and information on enforcement activity related to these violations.

Section 1414(c)(3) of the SDWA requires states to provide EPA with an annual report of violations of the primary drinking water standards. This report provides the numbers of violations in each of six categories: MCLs, MRDLs, treatment techniques, variances and exemptions, significant monitoring violations, and significant consumer notification violations. Data reported to and retrieved from SDWIS/State form the basis of this report. This document comprises the DWS's annual report which must be made available to the public and submitted to EPA. This report covers the Calendar Year 2021.

PUBLIC WATER SYSTEMS IN CONNECTICUT

The DWS has regulatory oversight of approximately 2434 PWS throughout Connecticut, in 2021. These PWS fall into three categories. Community PWS, of which there were 501 in 2021, serve at least 25 year-round residents. In Connecticut, approximately 79% of the state's population of over 3.5 million people obtains their drinking water from community water systems. Non-transient non-community PWS, of which there were 505 in 2021, serve at least 25 of the same individuals, other than year-round residents, for more than six months per year. Examples of non-transient non-community PWS are schools, day care centers, and factories. Finally, in 2021, there were 1428 transient non-community PWS in Connecticut which provide drinking water to transient populations that visit places such as restaurants and campgrounds.

Over two-thirds of the population served by community PWS are supplied by surface water sources with groundwater sources supplying the remaining community PWS population. A majority of the non-community PWS rely on groundwater while nine purchase their water from larger community systems supplied by surface water.

REGULATION OF CONTAMINANTS

Public water systems are required to routinely monitor and test their drinking water. Community PWS monitor and test for all regulated microbiological, chemical and radionuclide contaminants. Non-transient non-community PWS monitor and test for all regulated microbiological and chemical contaminants. Transient non-community PWS are required to monitor and test for microbiological contaminants and two chemical contaminants (nitrate and nitrite). EPA sets a national limit or standard known as the Maximum Contaminant Level ("MCL") for each regulated contaminant. The MCL represents the maximum permissible level of a contaminant in the water.

Public water systems are required to routinely submit the results of their water quality tests to the DWS. The water quality data is then entered into a data system called the Safe Drinking Water Information System (SDWIS/State) which helps DWS staff determine PWS compliance with all applicable MCLs, treatment technique requirements and monitoring requirements. Failure to report the results of the water quality monitoring testing constitute significant monitoring and reporting violations.

EPA also establishes minimum treatment techniques for certain contaminants and indicators. This report includes violations of treatment technique standards under the Revised Total Coliform Rule, the Surface Water Rules, the Disinfectants and Disinfection By-Products Rules, the Ground Water Rule and the Lead and Copper Rule. A violation of a treatment technique means a failure to meet operational standards for a specific rule.

The DWS takes additional formal enforcement action when necessary to ensure that water systems return to compliance as soon as possible. These additional formal enforcement actions include administrative orders and consent orders.

CALENDAR YEAR 2021 REPORT OF PUBLIC WATER SYSTEM VIOLATIONS

This annual violation report includes four types of violations. The first section focuses on MCL violations. The second section summarizes treatment technique violations. The third section details significant monitoring violations which are defined by EPA as a PWS's failure to collect a required sample or submit a required water quality test result to the DWS. The fourth section deals with the failure to comply with reporting requirements such as those required by the Consumer Confidence Report Rule and the Public Notification Rule.

When a PWS has a violation, the DWS provides technical assistance to the PWS to ensure that it implements all of the appropriate actions necessary to address the violation. Actions, including additional monitoring, public notification, and any necessary corrective actions, such as the installation of appropriate treatment are considered on a case-by-case basis.

For Calendar Year 2021, the DPH issued 35 formal enforcement actions to PWS. The actions taken included: 24 Administrative Orders and 11 Consent Orders. These formal enforcement actions were issued to PWS that incurred significant maximum contaminant level violations, lead exceedances, treatment technique violations and monitoring and reporting violations. DWS did not collect civil penalties in 2021. The civil penalty policy and process are being redeveloped in accordance with CGS 25-32e which was recently amended.

Connecticut does not have any PWS that have been granted a variance or an exception; therefore, there were no violations in Calendar Year 2021 that were related to variances or exceptions.

The goal of the DWS is to oversee the return of PWS to compliance as quickly as possible. The DWS remains committed to continuing its positive working relationship with the PWS for the express purpose of protecting public health by providing technical assistance to achieve compliance. The DWS has developed an enforcement escalation policy and procedure to ensure proper steps are being taken by PWS to achieve compliance. This policy and procedure are currently being reviewed for approval.

REPORT EXPLANATION

The majority of PWS with violations are small systems serving populations of less than 1,000 people. Small PWS are the most frequent violators of Federal and State drinking water requirements. This is commonly due to financial and managerial inadequacies. The DWS devotes considerable time and effort to helping small community and non-community PWS understand and comply with their mandated requirements.

The attached tables present data on PWS violations in Calendar Year 2021. Table A provides an overall summary of the four types of violations incurred in Calendar Year 2021. Table B lists all individual MCL violations; Table C lists treatment technique violations; Table D lists all significant monitoring and reporting violations; Table E lists public notification violations; and Table F concludes with consumer confidence reporting violations. The definitions appended to Table A provide further explanation of the terms used in the report and tables.

MCL Violations: (Table B)

For Calendar Year 2021, the DWS issued a total of 6 violations to 6 PWS for MCL violations.

Microbiological: Approximately 50% of all MCL violations in Calendar Year 2021 were for microbiological contamination of public water supplies. Three (3) PWS were issued a total of 3 E. coli MCL violations. Two (2) PWS were non-community water system and one (1) was a community

system. An E. Coli MCL violation occurs when E. coli bacteria is detected in the system's water. E. coli bacteria are generally not harmful themselves, but their presence in drinking water indicates the possible presence of sewage or animal waste. All three (3) of the E. Coli MCLs have returned to compliance.

The RTCR requires a PWS to perform a detailed assessment of the sanitary integrity of the water system in an effort to identify and correct sanitary deficiencies and report the results of the assessment to the DPH. Public water systems must notify customers that E. coli bacteria have been found in the water within 24 hours of discovery, and DWS policy states that the system request that its customers boil their water until the source is free of contamination and perform appropriate interim measures. Formal enforcement actions in the form of a Departmental Administrative Order are issued to ensure appropriate steps are taken to address these violations.

Chemicals: In calendar year 2021, there were 2 MCLs violations for regulated chemicals (inorganic chemical, organic chemicals and pesticides, herbicides, and PCBs). Long-term exposure to these chemicals can pose serious risk to public health. Additionally, infants can become ill if exposed to high levels of nitrate for a short period of time. Regulated contaminants can occur naturally in the ground or can also be the result of releases to the ground from commercial and industrial processes or improper disposal of hazardous waste. Both MCL violations were for Nitrate and both have returned to compliance.

Radionuclides: In calendar 2021, there were no MCLs violation for Radionuclides. Most radionuclides are naturally occurring, although drinking water sources can also become contaminated by human-made nuclear materials. Most drinking water sources have very low levels of radioactive contaminants ("radionuclides"), which are not considered to be a public health concern.

Disinfection By-Products: In calendar year 2021, there was 1 MCL violation of disinfection by-products. The system has returned to compliance. In many cases, water needs to be disinfected to inactivate (or kill) microbial pathogens such as Giardia. However, disinfectants like chlorine can react with naturally occurring materials in the water to form byproducts such as Trihalomethanes, Haloacetic acids, Chlorite and Bromate. These byproducts, if consumed in excess of EPA's standard over many years, may lead to increased health risks.

When a PWS exceeds an MCL it must notify its customers of the violation within 30 days or 24 hours for an acute MCL violation. A PWS must take corrective actions in response to the acute MCL violation. Such corrective actions include identification and removal of the suspected source of contamination, replacing the contaminated source of supply with a better protected source or by identifying and installing treatment specifically designed to reduce the level of the contaminant in the water. The DWS provides engineering technical review and subsequent approval of all proposed treatment prior to installation. Compliance can be achieved when subsequent samples are below the MCL or the running annual average is below the MCL. However, corrective actions must still be completed.

Treatment Technique Violations: (Table C)

For some regulations, the EPA establishes treatment techniques (TTs) in lieu of an MCL to control unacceptable levels of certain contaminants or maintain adequate levels of treatment. For example, treatment techniques have been established for viruses, some bacteria, and turbidity.

Revised Total Coliform Rule: The RTCR established Treatment Technique requirements in which a PWS must perform an assessment of the sanitary integrity of the water system in an effort to identify and correct sanitary deficiencies and report the results of the assessment to the DPH. Forty (40) PWS incurred 40 treatment technique violations for failing to complete a Level 1 Assessment. Of the 40

PWS, 4 were community water systems and 36 were non-community water systems. Twenty-four (24) of the PWS have returned to compliance. The Drinking Water Section continues to work with the remaining 16 systems to verify that the Level 1 assessments are completed.

In calendar year 2021, 19 PWS incurred 25 treatment technique violations for failure to complete a Level 2 Assessment. Of the 19 PWS, 7 were community water systems and 11 were non-community water systems. Seventeen (17) of the violations have returned to compliance. The DWS continues to work with the PWS for remaining 8 violations to verify that the Level 2 assessments are completed. It should be noted that of the 8 remaining violations that haven't completed their Level 2 Assessments none of them are related to an E. coli MCL.

There were 6 water systems that incurred a treatment technique violation for failure to correct a sanitary defect on time. There were 6 treatment technique violations and 5 of the violations have returned to compliance. DWS continues to provide technical assistance to the remaining system to return the violation to compliance.

The RTCR also requires seasonal systems to perform start-up procedures prior to serving water to the public at the beginning of each operating season. A seasonal system is defined as a non-community water system that is not operated as a public water system on a year-round basis and starts up at the beginning and shuts down by depressurizing and dewatering all or a portion of its distribution system at the end of each operating season. In calendar year 2021, 10 PWS incurred 10 treatment technique violations for failure to perform start-up procedures prior to serving water to the public. Six (6) systems have returned to compliance. The DWS issues Consent Orders to repeat offenders requiring the start-up procedures to be performed prior to their next required start-up or civil penalties may be accessed.

Lead and Copper Rule: The Lead and Copper Rule established action levels that require additional corrective actions and monitoring to be completed when triggered. Since 2016, the DWS has been issuing Administrative Orders to all water systems that exceed the lead action level. The orders require the water systems to perform all required actions well in advance of the regulatory deadlines in order to return the systems to compliance as soon as possible.

Two (2) PWS received 2 treatment technique violations for failure to propose optimal corrosion control treatment following a lead and copper rule exceedance in 2021. Of the 2 PWS, 1 was community water systems and 1 was non-community water system. Both of the systems remain out of compliance and further enforcement actions will be used to address the non-compliance.

Ground Water Rule: The GWR defines significant deficiencies as defects in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage, or distribution system that the State determines to be causing, or have the potential for causing, the introduction of contamination into the water delivered to consumers. When a significant deficiency is identified, the PWS must correct it or be in compliance with a corrective action plan within 120 days. Failure to meet the 120-day deadline or be in compliance with a corrective action plan results in a treatment technique violation.

In calendar year 2021, there were 0 PWS that incurred a treatment technique violation for failing to correct significant deficiencies.

The GWR also established a treatment technique violation for failure to maintain 4-log disinfection treatment of viruses. In calendar year 2021, 1 water system incurred 2 treatment technique violations for failure to maintain 4-log disinfection treatment of viruses. The system has returned to compliance.

Significant Monitoring and Reporting Violations: (Table D)

A PWS has specific routine monitoring and reporting requirements to verify that the levels of contaminants present in the water do not exceed the MCLs or MRDLs. When a PWS fails to comply with these requirements, a public health risk may be created due to the absence of test results where the quality of the system's water cannot be determined. For calendar year 2021, the DWS issued a total of 994 violations to 356 PWS for failure to monitor and report water quality test results. 607 of these violations have been returned to compliance. The DWS continues to work with the systems that remain out of compliance to ensure that public notification is delivered and monitoring is resumed as soon as possible. Individual letters are sent to water systems that failed to comply with the annual nitrate and nitrite monitoring requirements requesting them to monitor within 30 days of receiving the violation letter in order to return to compliance as soon as possible.

The total number of monitoring and reporting violation in 2021 indicates a significant reduction in these violations since 2019. In calendar year 2019, the DWS issued 2,980 violations and in calendar year 2020, the DWS issued 1,564 violations. This is a 67% and 36% reduction from the 2019 and 2020 total monitoring and reporting violations, respectively. The significant reduction in the total number of monitoring and reporting violations can be attributed to the near statewide implementation of the use of the Compliance Monitoring Data Portal (CMDP) and the hard work of staff in the Rule Implementation Unit and Enforcement & Data Management Unit.

Lead Consumer Notification: The Lead and Copper Rule requires public water systems to provide a notice of the individual lead tap monitoring results to the occupants of the residence or business where a compliance sample was collected. In calendar year 2021, the DWS issued 340 violations to 211 public water systems. Seventy-five (75) of the PWS were community water systems and 136 were non-community water systems. Two Hundred Thirty-Nine (239) of these violations have been returned to compliance. The DWS continues to work with the systems that remain out of compliance to ensure that the consumer notices are delivered as soon as possible.

Through online monitoring schedules, direct technical assistance and other enforcement strategies, the DWS continues to work to reduce the number of monitoring and reporting and treatment technique violations issued to PWS every year.

Public Notification Violations: (Table E)

The Public Notification Rule requires all PWS to notify their consumers any time a PWS violated a primary drinking water regulation or has a situation posing a risk to public health. Notices must be provided to all persons served (not just billing consumers). For calendar year 2021, the DWS issued 797 violations to 469 PWS for failure to comply with public notification requirements related to maximum contaminant level and/or monitoring and reporting violations. Two Hundred Ninety-Two (292) of these violations have been returned to compliance. The DWS continues to work with the systems that remain out of compliance to ensure that any missing public notification requirements are completed as soon as possible. Public Notifications are also addressed during a PWS Sanitary Survey to help a PWS to return to compliance or prevent a Public Notification Rule violation.

Consumer Confidence Report Violations: (Table F)

Every community water system is required to deliver to its customers an annual water quality report. This report includes educational material and provides information on the source water, the levels of any detected contaminants, and compliance with drinking water regulations. For calendar year 2021, the DWS issued 42 violations to 42 community public water systems for failure to submit copies of their 2020 Consumer Confidence Report to the DWS. Fourteen (14) of these violations have been returned to compliance. The DWS continues to work with the systems that remain out of compliance to ensure that any missing Consumer Confidence Reports are delivered as soon as possible.

CONCLUSION

The annual “Public Water Systems Compliance Report, Calendar Year 2021” documents the number of systems in Connecticut that incurred violations for MCL exceedances, treatment technique requirements, monitoring and reporting requirements, and public notification requirements. Where a violation occurred, the DWS acted promptly to ensure that the PWS addressed the problem and returned to compliance as quickly as possible. Further enforcement actions were taken against PWS that did not take corrective action to resolve their violations.

Our mission is to protect public health by ensuring the purity and adequacy of drinking water, now and in the future. The Section’s enforcement actions and technical assistance efforts are two of the strategies employed by the DWS to achieve our mission. On behalf of the DPH, the DWS will continue to capitalize on opportunities to promote compliance among the State’s public drinking water systems to achieve this mission.

PUBLIC WATER SYSTEMS VIOLATION REPORT
CONNECTICUT DEPARTMENT OF PUBLIC HEALTH DRINKING WATER SECTION

TABLE A

January 1, 2021 to December 31, 2021

DEFINITIONS FOR TABLE A

<i>Inorganic Contaminants:</i>	Non-carbon-based compounds such as metals, nitrates, asbestos. These contaminants are naturally occurring in some water but can get into water through farming, chemical manufacturing, and other human activities. EPA has established MCLs for 15 inorganic contaminants.
<i>Lead and Copper Rule:</i>	This rule established national limits on lead and copper in drinking water. Lead and copper corrosion pose various health risks when ingested at any level, and can enter drinking water from household pipes and plumbing fixtures. States report violations of the Lead and Copper Rule in the following four categories: <i>Failure to perform initial lead and copper tap M/R:</i> System did not meet initial lead and copper testing requirements, or failed to report the results of those tests. <i>Failure to perform follow-up or routine lead and copper tap M/R:</i> System did not meet follow-up or routine lead and copper tap testing requirements, or failed to report the results. <i>Failure to provide public education:</i> System did not provide required public education about reducing or avoiding lead intake from water.
<i>Maximum Contaminant Level (MCL):</i>	The highest amount of a contaminant that EPA allows in drinking water. MCLs ensure that drinking water does not pose either a short-term or long-term health risk. MCLs are defined in milligrams per liter (parts per million) unless otherwise specified.
<i>Monitoring and Reporting:</i>	EPA specifies which water testing methods the water systems must use, and sets schedules for the frequency of testing. A water system that does not follow EPA's schedule or methodology is in violation. States must report monitoring violations that are significant as determined by the EPA Administrator and in consultation with the States. For purposes of this report, significant monitoring violations are major violations and they occur when no samples are taken or no results are reported during a compliance period. A major monitoring violation for the surface treatment rule occurs when at least 90% of the required samples are not taken or results are not reported during the compliance period. A major monitoring violation of the Lead and Copper Rule is defined as failure to submit the associated report and failure to collect one or more of the required routine or follow-up samples, or failure to submit one or more reports associated with the collection of these samples, will be a significant monitoring violation.
<i>Organic Contaminants:</i>	Carbon-based compounds, such as industrial solvents and pesticides. These contaminants generally get into water through runoff from cropland or discharge from factories. EPA has set legal limits on 54 organic contaminants that are to be reported.
<i>Radionuclides:</i>	Radioactive particles which can occur naturally in water or result from human activity. EPA has set legal limits on four radionuclides: Combined radium-226/228, Gross Alpha Particle activity (including radium-226 but excluding radon and uranium), Uranium, and beta particle/photon emitters.
<i>RTC:</i>	Return to Compliance indicates that a system has returned to compliance with monitoring and reporting requirements or is operating below the established Maximum Contaminant Level for the analyte indicated following a violation.
<i>Total Coliform Rule:</i>	The Total Coliform Rule establishes regulations for microbiological contaminants in drinking water. These contaminants can cause short-term health problems. If no samples are collected during the one month compliance period, a significant monitoring violation occurs. States are to report four categories of violations: <i>Acute MCL violation:</i> System found fecal coliform or E. coli, potentially harmful bacteria, in its water, thereby violat <i>Non-acute MCL violation:</i> System found total coliform in samples of its water at a frequency or at a level that violates the rule. For systems collecting fewer than 40 samples per month, more than one positive sample for total coliform is a violation. For systems collecting 40 or more samples per month, more than 5% of the samples positive for total coliform is a violation. <i>Major routine and follow-up monitoring:</i> System did not perform any monitoring.
<i>Treatment Techniques:</i>	A water disinfection process that EPA requires instead of an MCL for contaminants that laboratories cannot adequately measure. Failure to meet other operational and system requirements under the Surface Water Treatment and the Lead and Copper Rules have also been included in this category of violation for purposes of this report.
<i>Violation:</i>	Violation: A failure to meet any state or federal drinking water regulation.
