**DWS Circular Letter #2021-19**

**TO:** Certified Operators Conducting Operating Tests  
**FROM:** Lori Mathieu, Branch Chief, Environmental Health and Drinking Water Branch  
**DATE:** March 24, 2021  
**RE:** Questionnaire on Analytical Methods Used by Certified Operators

The purpose of this Circular Letter is for the Environmental Laboratory Certification Program (ELCP) to collect information on which analytical methods certified operators are using to test for the analytes listed below at public water systems.

- Chlorine residuals
- pH
- Fluoride (artificially adjusted)
- Temperature
- Turbidity
- Color

The Environmental Laboratory Certification Program (ELCP) is collecting information on which analytical methods that certified operators are using to test for residual chlorine, pH, temperature, turbidity, fluoride and color at public water systems. Please select all the methods that are used to analyze these analytes and the instrument used for the method. You may have to assess manufacturing specifications to determine the method. If a method used is not listed, please specify the method under other method. **Please submit the requested questionnaire using the following link by May 3, 2021.**
