Connecticut Department of Public Health Fact Sheet Tobacco Control Program | February 2024

2022 E-Cigarette Use Among Adults

Key Facts

- Results from the 2022 Behavioral Risk Factor Surveillance System estimate that approximately 141,600 or 5.6% of Connecticut adults, aged 18 years or older, used ecigarettes or other electronic vapor products some days or every day (i.e., current ecigarette use)
- Men (6.6%) were significantly more likely than women (4.6%) to have currently used e-cigarettes
- Current e-cigarette use was significantly higher among adults who reported having any type of disability, such as with their hearing, vision, self-care, mobility, independence, or mental health (7.4%), than it was among those who had no disabilities (4.9%)
- Adults with a college degree (2.8%) were significantly less likely than their counterparts with lower levels of education (7.2%) to have used e-cigarettes some days or every day
- Current e-cigarette use was significantly higher among adults under the age of 35 (13.4%) than it was among their older peers (2.7%)
- Adults who identify as lesbian, gay, bisexual, or transgender (10.5%) were two times more likely to have currently used e-cigarettes than were straight adults (5.2%)
