Connecticut Department of Public Health

Conclusions

- Chronic diseases and injuries are leading causes of premature death.
- Opportunities exist to address conditions like obesity and behaviors like smoking that contribute to many diseases.
- Racial/ethnic minority groups suffer from many conditions at higher rates than the state population as a whole.
- Lower-income CT residents are more likely to have risk factors for chronic disease, compared with higher-income residents
- Specific age groups such as youths/young adults and older adults are more at-risk for certain conditions.

Q & A and Discussion

- *What health issue in your community is the most important to you, and why?*
- *How can your community become a healthier place to live?*
