

Cancer Incidence in Connecticut by Town of Residence 1998

State of Connecticut
Department of Public Health
Connecticut Tumor Registry
410 Capitol Avenue, MS# 13TMR
P.O. Box 340308
Hartford, CT 06134-0308

September, 2001

TABLE OF CONTENTS

Introduction	3
Crude incidence rates for all invasive cancers, by town	
Males	5
Females	13
Numbers of cancers for selected common sites (types), by town, Excluding lymphomas	
Males	21
Females	35
Non-Hodgkin's lymphoma, by town, males and females	50

INTRODUCTION

This report is an update of "Cancer Incidence in Connecticut by Town of Residence, 1997." This report provides data for cancers diagnosed in 1998. As in the previous report, the numbers of cancers shown in this report are invasive cancers, and do not include non-invasive (non-malignant) cancers. The sole exception is for bladder, for which cancers coded as "in situ" are counted as invasive, because of well-known problems in the accuracy of coding of these cancers. This procedure is also followed in reports from the National Cancer Institute.

Data on numbers of cancers for certain small towns are subject to errors due to problems with addresses of patients. For some patients, the only address available is a post-office box number, which may not be the actual town of residence. The cancer rate may appear to be high in a town with a post office and may appear to be low in an adjacent town without a post office. This occurs, for example, in the Voluntown-Griswold area. Data for the towns of Canaan and North Canaan were combined, due to problems in the coding of town of residence in this area.

Crude incidence rates by town are the number of cancers diagnosed in 1998 divided by the estimated total population of the state for each sex. For this report, the population estimates from the Year 2000 Census were used; these data only recently became available, and were not used in the previous report (with data for 1997).

Numbers of cancers diagnosed in a given year among residence of many towns are small and may fluctuate considerably from year to year. The lower and upper confidence limits (95%) on the rate provide an indication of the statistical variability. Confidence limits are not shown for towns with no cancers or only one cancer.

Apparent variation in incidence rates among towns may reflect differences in the population characteristics such as age and socioeconomic status (often described by education and/or income level). Rapid changes in screening rates for certain cancers (such as breast and prostate) can result in rapid changes in incidence (number of cancers) and incidence rates, and screening rates may vary by region of the state. These issues are considered in several publications from the Connecticut Tumor Registry, as listed on the internet website of the Department of Public Health (www.state.ct.us/dph).

CRUDE INCIDENCE RATES PER 100,000 IN 1998: ALL INVASIVE CANCERS,
