Project Overview

- The State of Connecticut Department of Social Services (The Department) commissioned GreatBlue Research to conduct the 2021 PCMH+ Person-Centered Primary Care Measure (PCPCM) Survey with Provider Services utilizing telephonic and digital survey methodologies from September 9, 2021 to December 6, 2021. The sample universe consisted of adults and children enrolled in the HUSKY Health Program who were contacted in efforts to complete 5,838 surveys.
- The 2021 PCMH+ PCPCM Member Survey with Provider Services included the following areas of investigation:
 - PCMH+ Member satisfaction with Primary Care experience
 - Health care over the last 12 months
 - Member demographic information
- The primary goals of the research were to build an understanding of member opinions and perceptions as they pertain to care received from their Primary Care Provider, and enable Community Health Network of CT, Inc. (“CHNCT”) to identify near-term opportunities for improvement of Member Satisfaction with Provider Services.
- GreatBlue Research utilized the Person-Centered Primary Care Measure, or PCPCM, developed by the Larry A. Green Center, in order to achieve these goals. The PCPCM is a survey of primary care quality that focuses on the patient’s access to care, relationship with the physician, and ability to reach health outcome goals.
- Upon receipt of the survey instrument and a random sample list of members, GreatBlue call center and senior staff completed all remaining facets of the 2021 PCMH+ PCPCM Member Satisfaction Survey with Provider Services. These tasks included the following: survey programming, researcher training, survey pre-testing, full-scale fielding (telephone calls and digital collection), coding, data entry, editing, validation, verification, computer analysis, analysis and report writing.

Research Methodology Snapshot - Adult

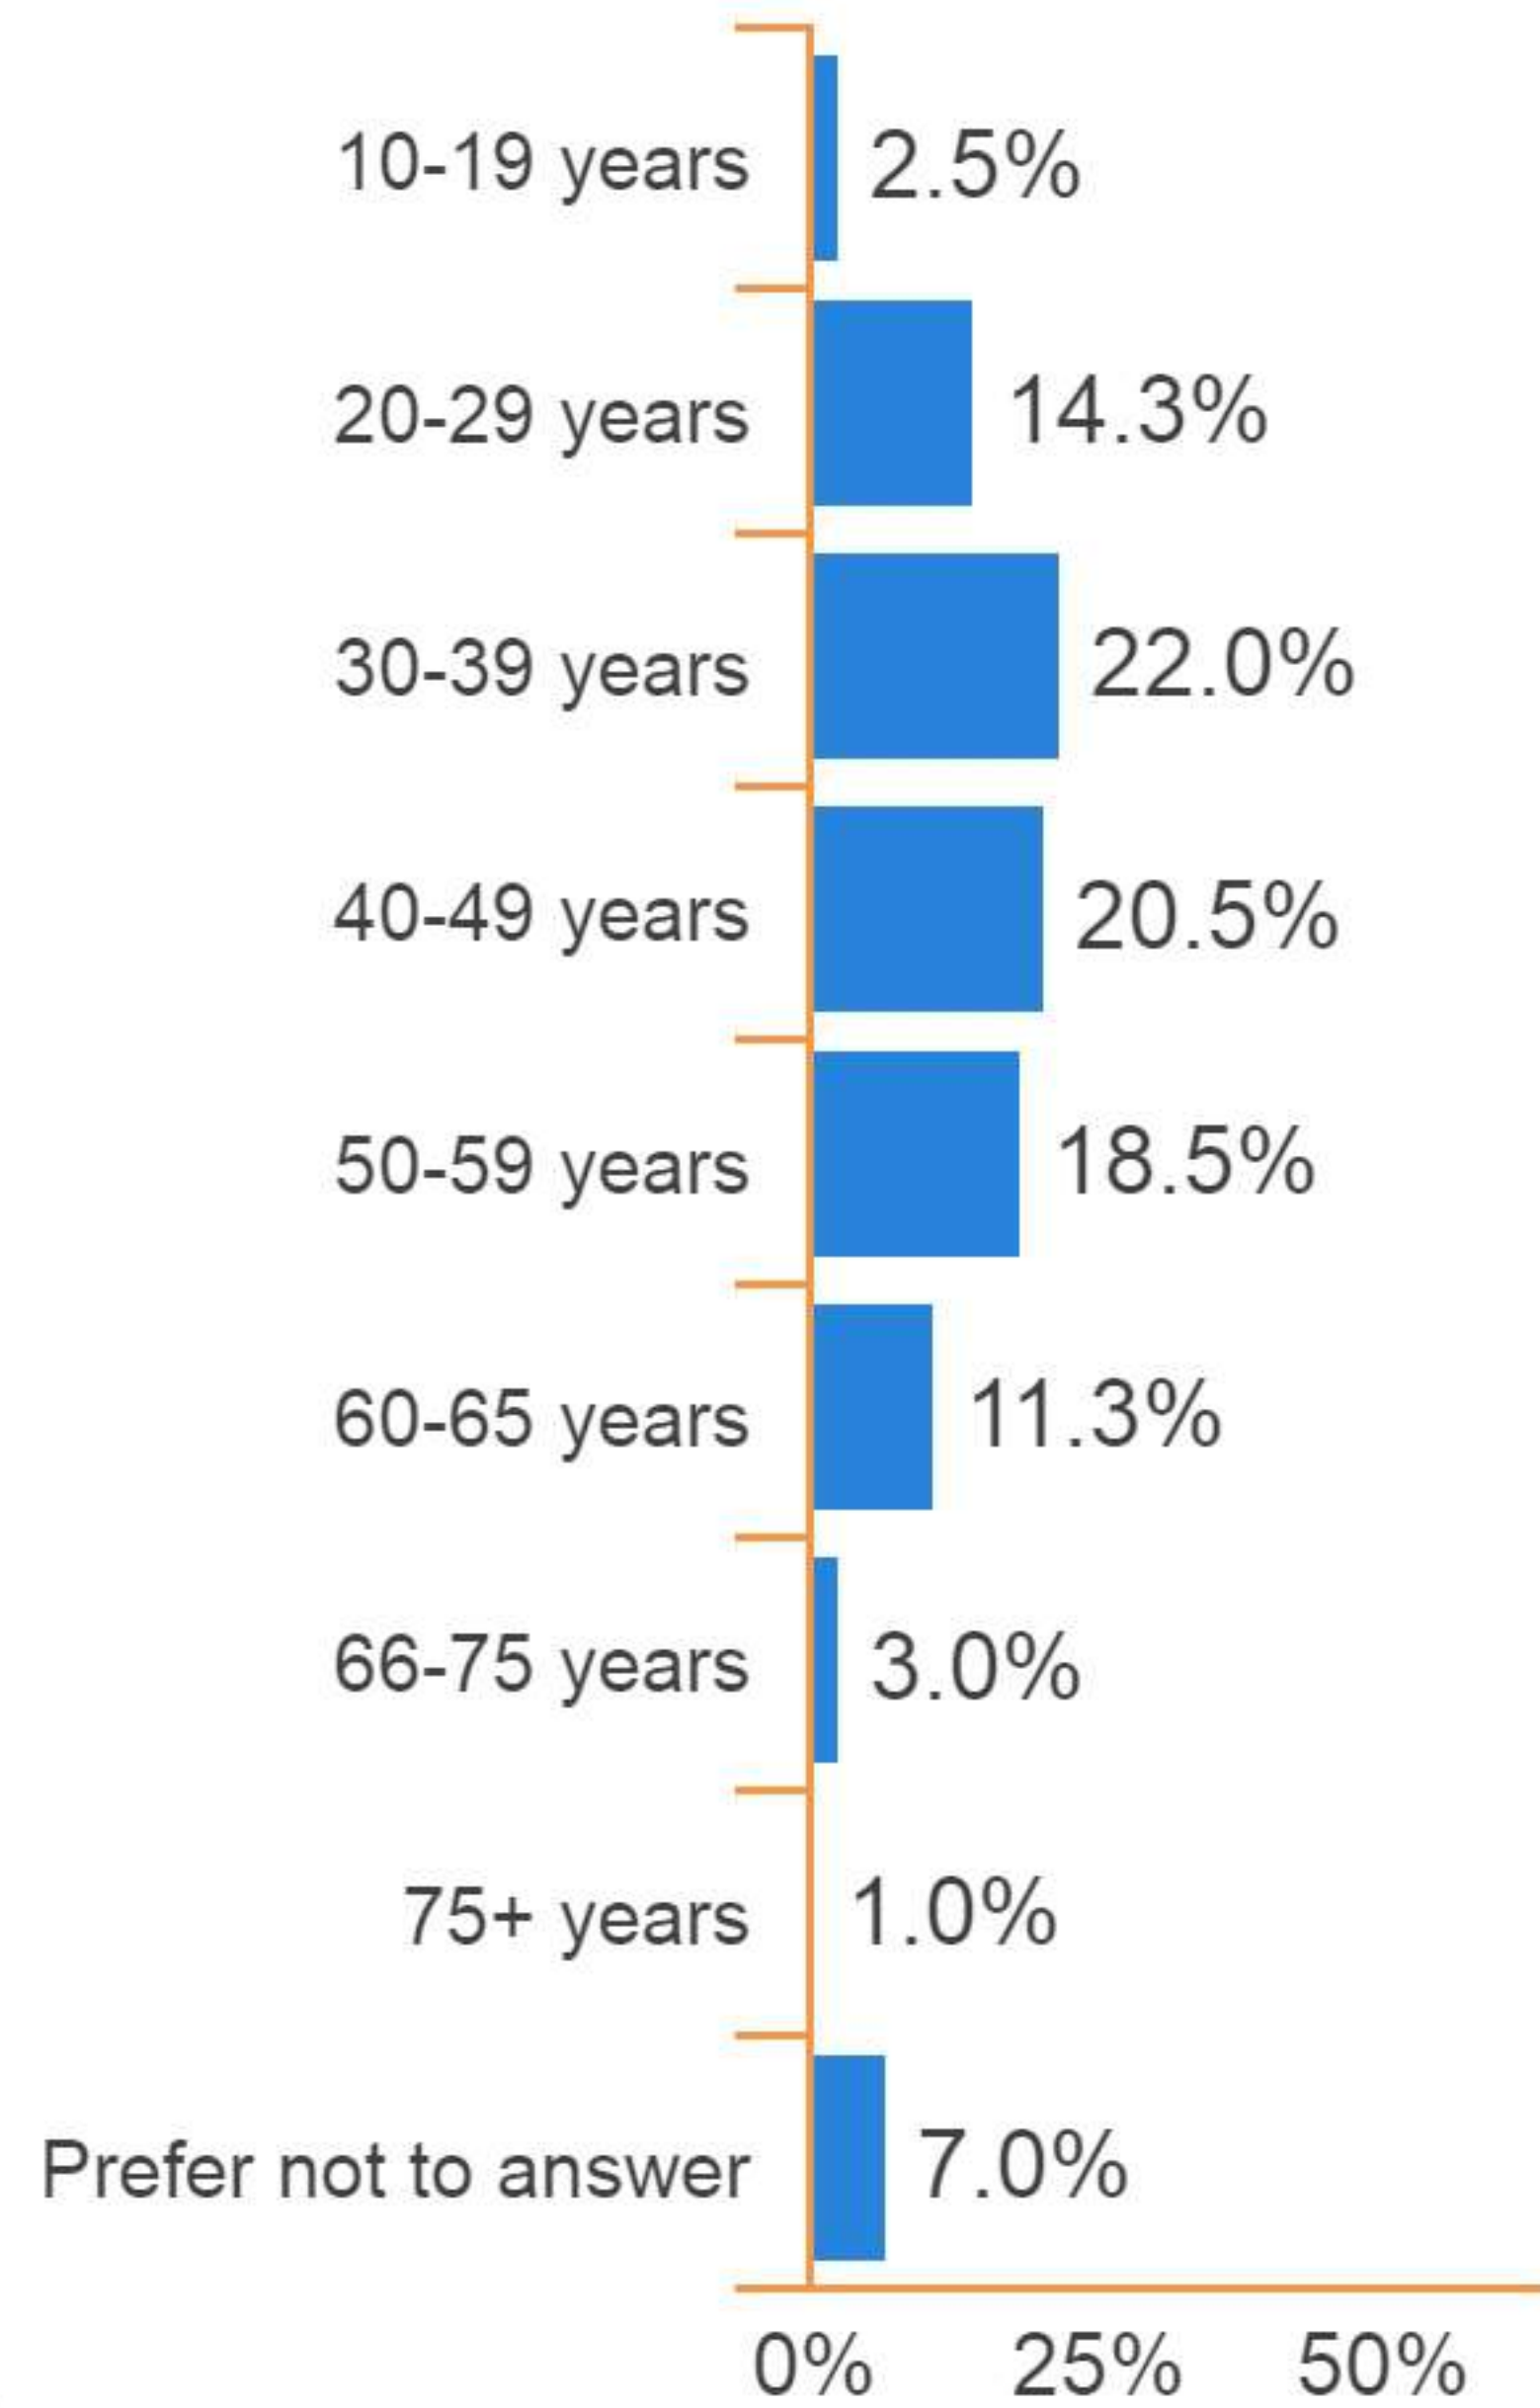

Methodology Telephone / Digital	No. of Completes 400	No. of Questions 20*	Incentive None	Sample Provided by CHNCT
Target HUSKY Members attributed to the Cornell Scott - Hill Health Center	Quality Assurance Dual-level**	Margin of Error +/- 4.8%	Confidence Level 95%	Research Dates Sept 9 - Dec 6, 2021

* This represents the total possible number of questions; not all respondents will answer all questions based on skip patterns and other instrument bias.

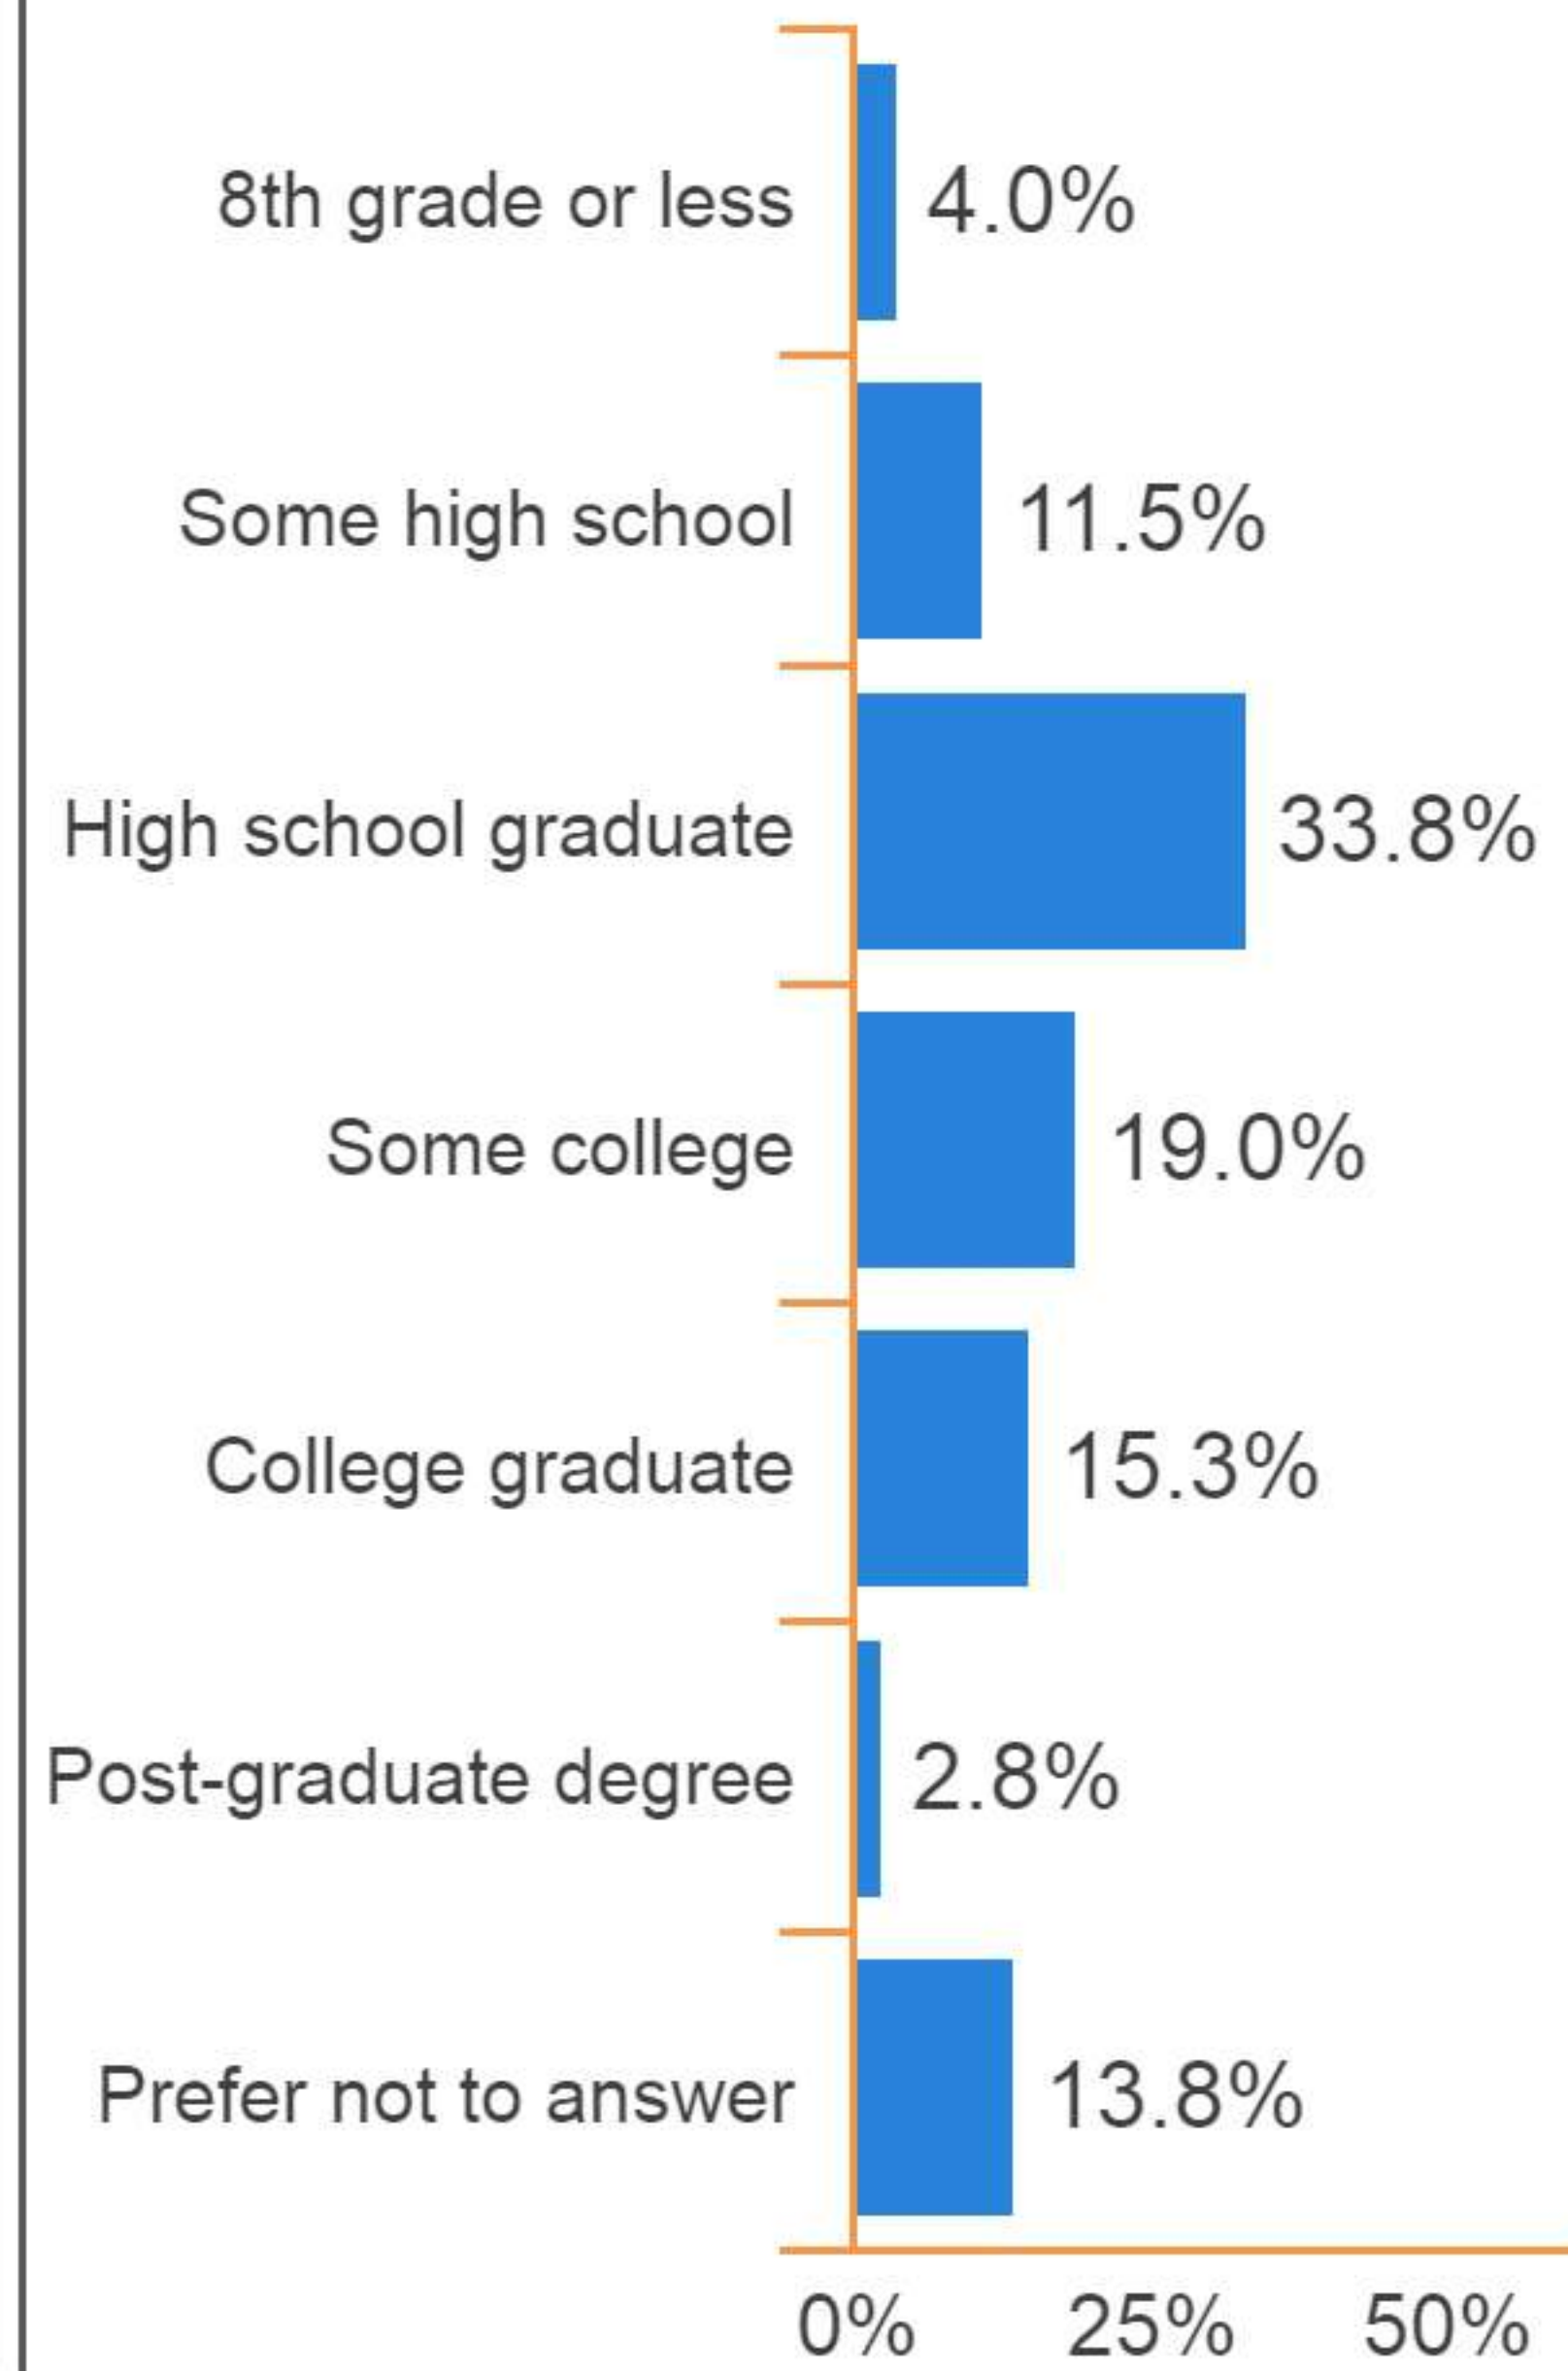

** Supervisory personnel, in addition to computer-aided interviewing platform, ensure the integrity of the data is accurate.

Key Study Findings - Adult

- Adult survey respondents attributed to the Cornell Scott-Hill Health Center provided higher ratings for nine (9) of eleven (11) characteristics rated in the PCPCM survey as compared to the adult composite, resulting in an overall average score of 83.2%.
- The highest rated characteristic among Cornell Scott-Hill Health Center respondents was recorded for “in caring for me, my doctor considers all factors that affect my health” (91.3%), while the lowest rated characteristic was “my doctor and I have been through a lot together” (64.3%).
- Adult survey respondents ages 75+ (93.2%) provided the highest overall average rating, while respondents ages 40-49 provided the lowest average rating (79.9%).
- Men who participated in the survey (83.4%) provided a slightly higher average rating as compared to women (82.8%).
- Those respondents identifying as Asian (92.6%) provided the highest overall average rating, while respondents identifying as an “other” ethnicity provided the lowest average rating (80.2%).

Key Study Findings - Adult

- Survey respondents with some high school education (90.5%) provided the highest overall average rating, while respondents with a post-graduate degree provided the lowest average rating (74.4%).
- Adult survey respondents who have been with Cornell Scott-Hill Health Center for 5-9 years (85.6%) provided the highest overall average rating, while respondents who have been with Cornell Scott-Hill Health Center for less than 1 year provided the lowest average rating (77.8%).
- Adult survey respondents with three (3) visits to the Cornell Scott-Hill Health Center within the past year (87.8%) provided the highest overall average rating, while respondents with five (5) visits within the past year provided the lowest average rating (73.3%).

Key Study Findings - Child

- Child survey respondents attributed to the Cornell Scott-Hill Health Center provided higher ratings for all of eleven (11) characteristics rated in the PCPCM survey as compared to the child composite, resulting in an overall average score of 89.0%.
- The highest rated characteristic among Cornell Scott-Hill Health Center respondents was recorded for “my practice makes it easy for me to get care” (95.5%), while the lowest rated characteristic was “my doctor and I have been through a lot together” (74.7%).
- Cornell Scott-Hill Health Center child respondents 1-4 years old (91.3%) provided the highest overall average rating, while respondents ages 5-9 provided the lowest average rating (83.6%).
- Girls attributed to the Cornell Scott-Hill Health Center (89.9%) provided a higher average rating as compared to boys (88.5%).
- Hispanic respondents (92.5%) provided the highest overall average rating, while Asian respondents provided the lowest average rating (80.3%).

Key Study Findings - Child

- Child survey respondents who have been with the Cornell Scott-Hill Health Center for 10 years or more (93.8%) provided the highest overall average rating, while respondents who have been with the Cornell Scott-Hill Health Center for 1-4 years provided the lowest average rating (84.6%).
- Child survey respondents with six (6) or more visits to the Cornell Scott-Hill Health Center within the past year (94.7%) provided the highest overall average rating, while respondents with three (3) visits to their medical provider within the past year provided the lowest average rating (82.8%).
