Project Overview

- The State of Connecticut Department of Social Services (The Department) commissioned GreatBlue Research to conduct the 2021 PCMH+ Person-Centered Primary Care Measure (PCPCM) Survey with Provider Services utilizing telephonic and digital survey methodologies from September 9, 2021 to December 6, 2021. The sample universe consisted of adults and children enrolled in the HUSKY Health Program who were contacted in efforts to complete 5,838 surveys.
- The 2021 PCMH+ PCPCM Member Survey with Provider Services included the following areas of investigation:
 - PCMH+ Member satisfaction with Primary Care experience
 - Health care over the last 12 months
 - Member demographic information
- The primary goals of the research were to build an understanding of member opinions and perceptions as they pertain to care received from their Primary Care Provider, and enable Community Health Network of CT, Inc. (“CHNCT”) to identify near-term opportunities for improvement of Member Satisfaction with Provider Services.
- GreatBlue Research utilized the Person-Centered Primary Care Measure, or PCPCM, developed by the Larry A. Green Center, in order to achieve these goals. The PCPCM is a survey of primary care quality that focuses on the patient’s access to care, relationship with the physician, and ability to reach health outcome goals.
- Upon receipt of the survey instrument and a random sample list of members, GreatBlue call center and senior staff completed all remaining facets of the 2021 PCMH+ PCPCM Member Satisfaction Survey with Provider Services. These tasks included the following: survey programming, researcher training, survey pre-testing, full-scale fielding (telephone calls and digital collection), coding, data entry, editing, validation, verification, computer analysis, analysis and report writing.

Research Methodology Snapshot - Adult

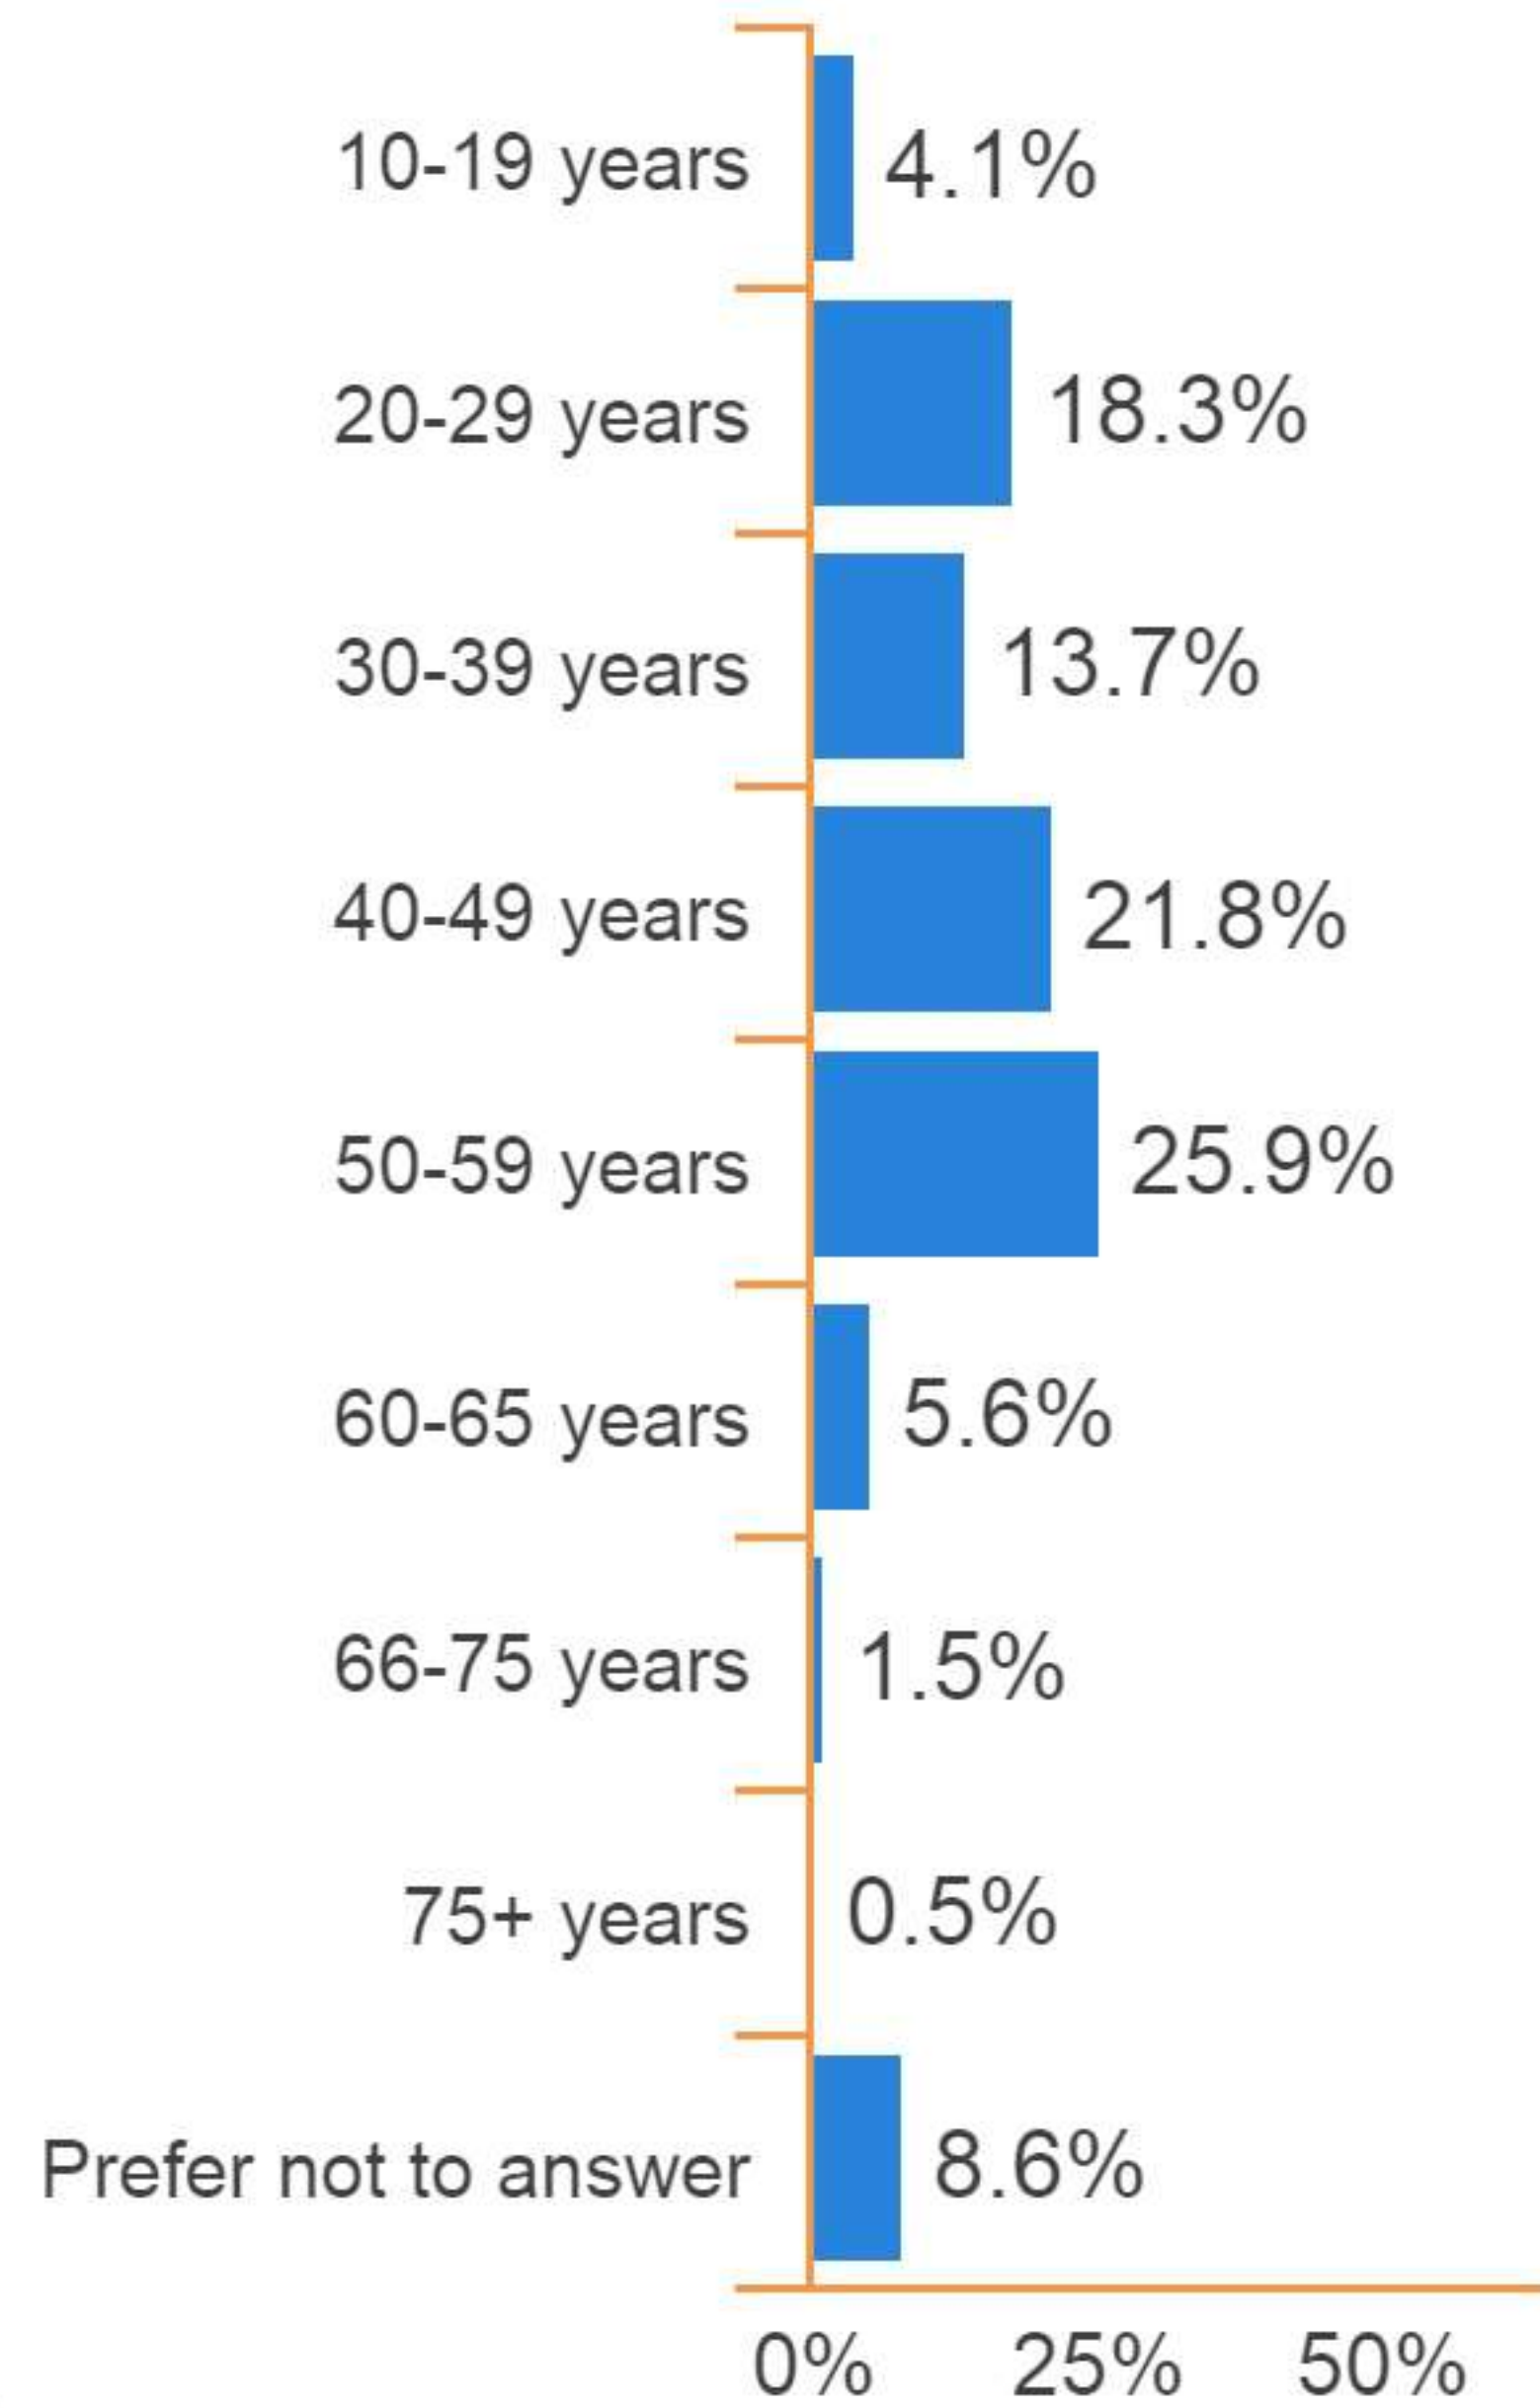

Methodology Telephone / Digital	No. of Completes 197	No. of Questions 20*	Incentive None	Sample Provided by CHNCT
Target HUSKY Members attributed to Southwest Community Health Center	Quality Assurance Dual-level**	Margin of Error +/- 6.8%	Confidence Level 95%	Research Dates Sept 9 - Dec 6, 2021

* This represents the total possible number of questions; not all respondents will answer all questions based on skip patterns and other instrument bias.

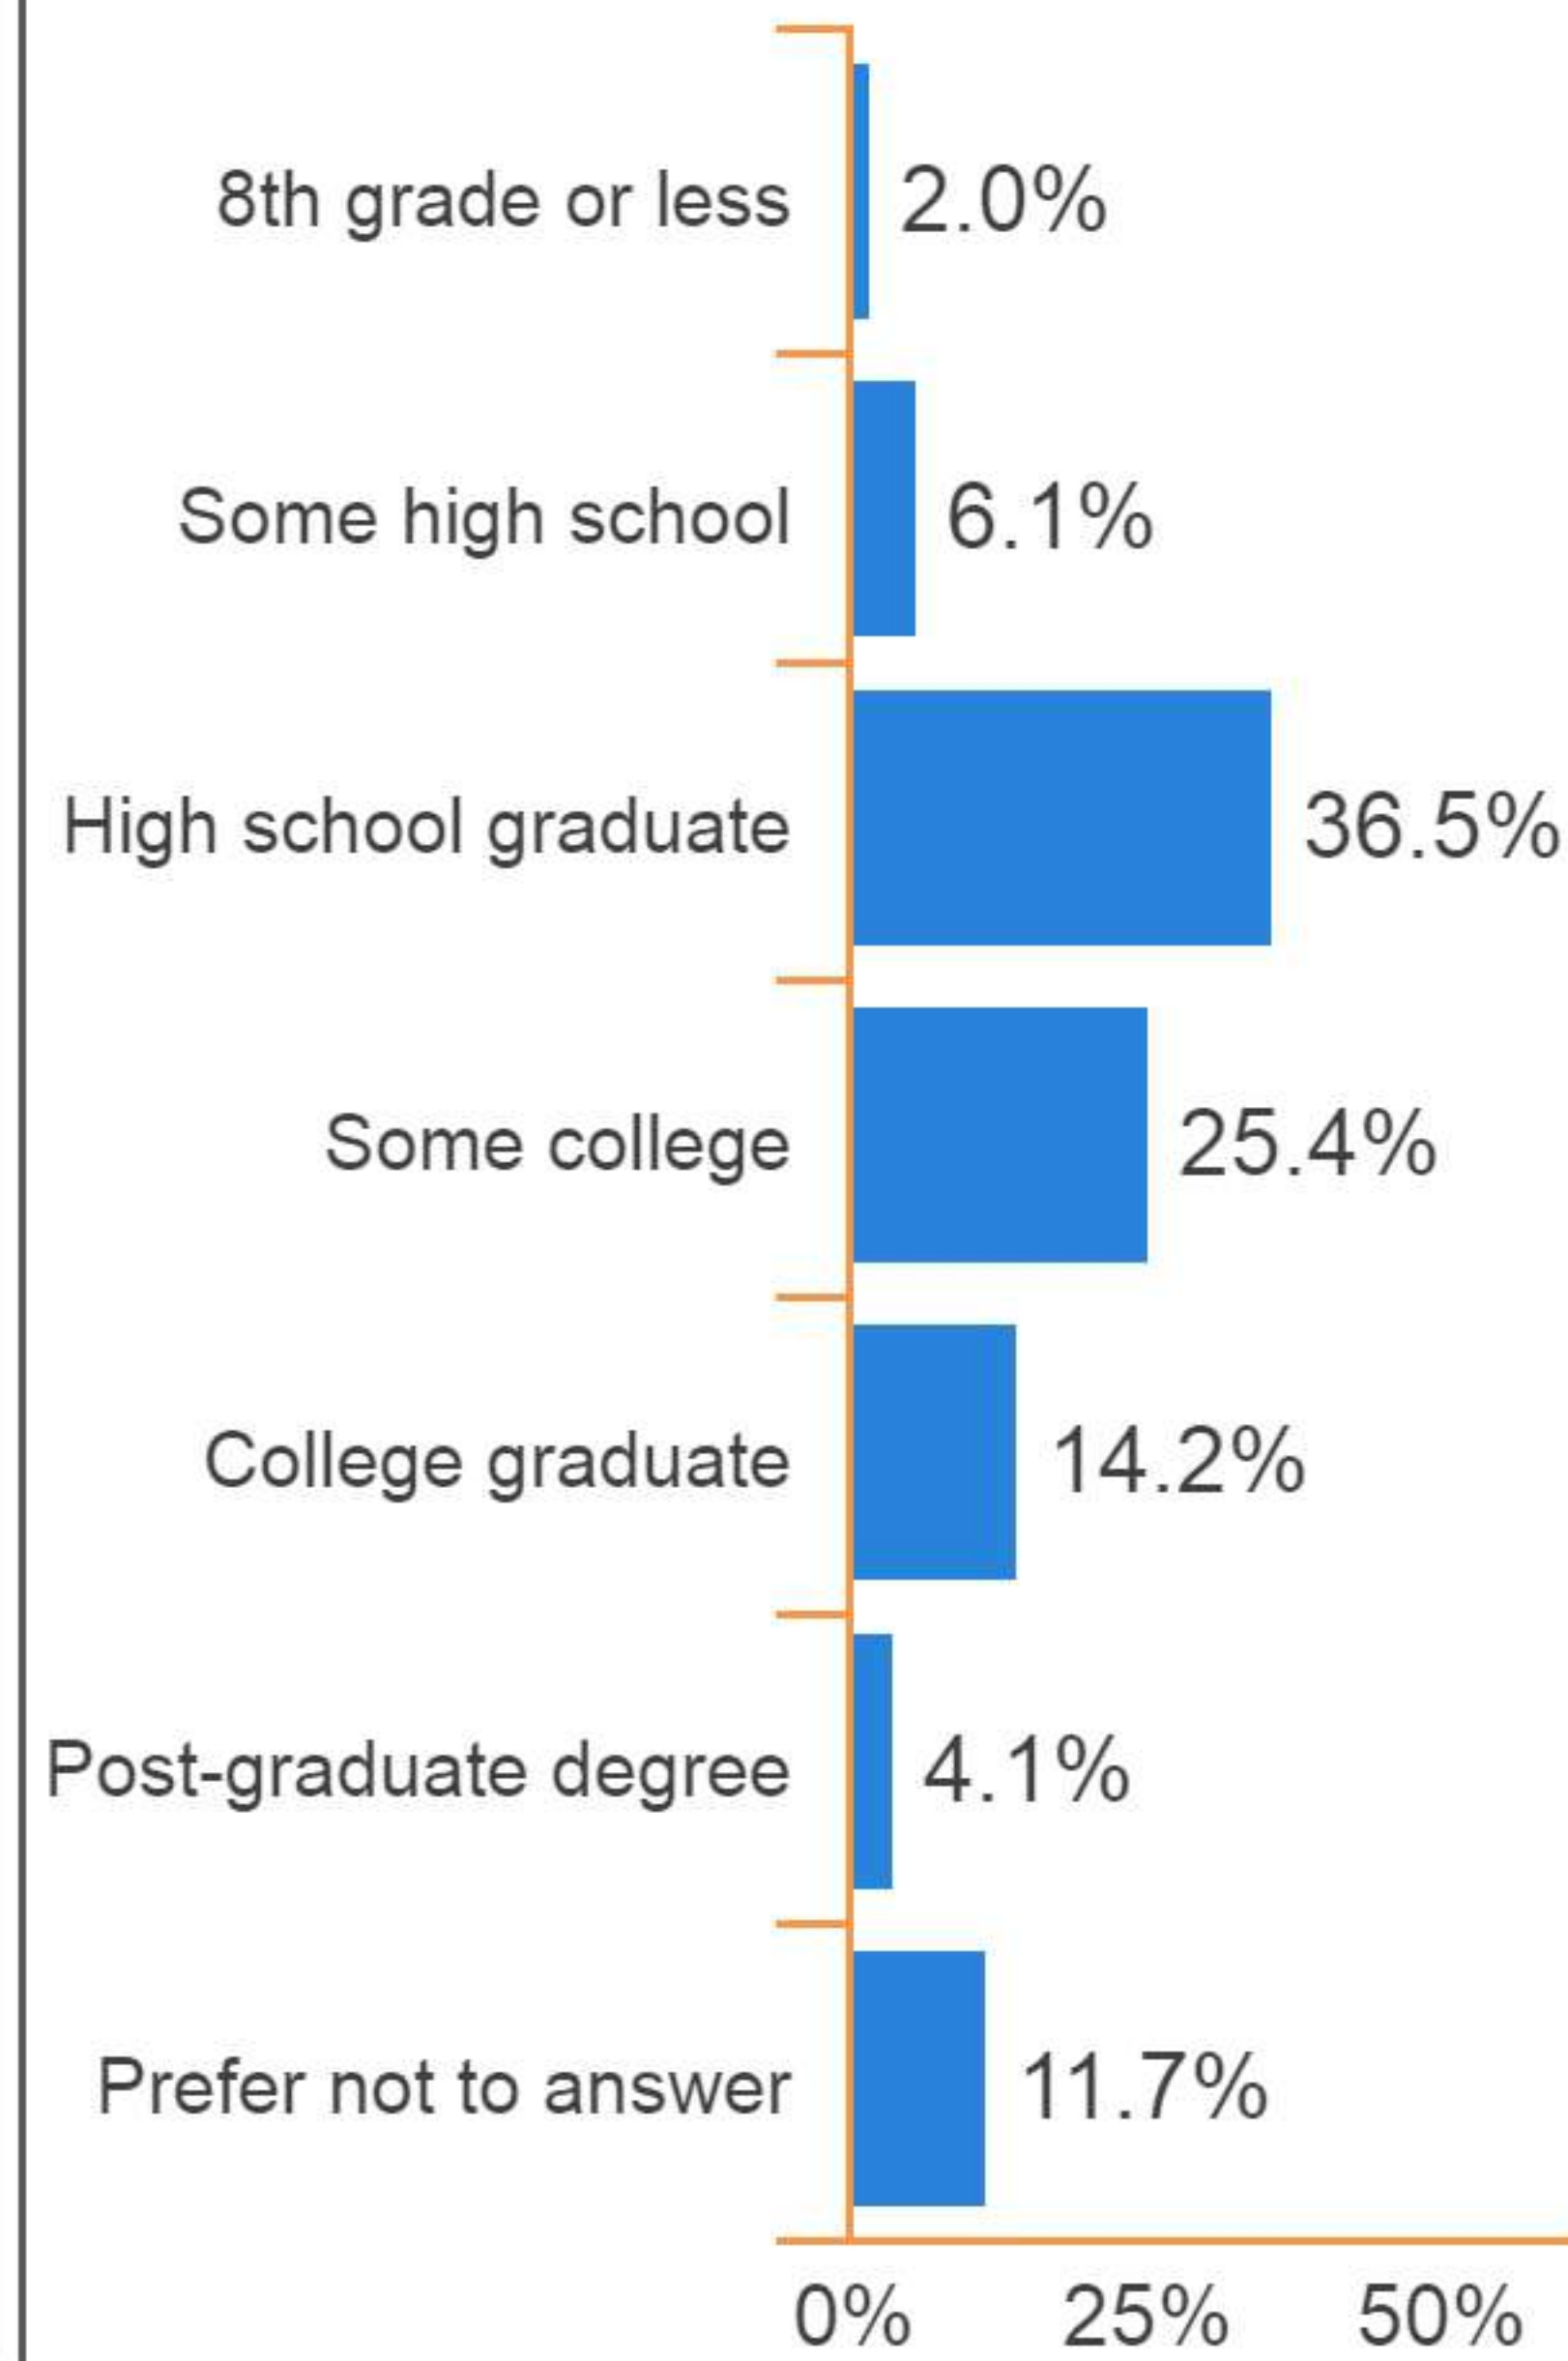

** Supervisory personnel, in addition to computer-aided interviewing platform, ensure the integrity of the data is accurate.

Aggregate Data (Provided Separately)

Key Study Findings - Adult

- Adult survey respondents attributed to Southwest Community Health Center provided lower ratings for seven (7) of eleven (11) characteristics rated in the PCPCM survey as compared to the adult composite, resulting in an overall average score of 81.8%.
- The highest rated characteristic among Southwest Community Health Center respondents was recorded for “my practice is able to provide most of my care” (88.3%), while the lowest rated characteristic was “my doctor and I have been through a lot together” (74.1%).
- Adult survey respondents ages 66-75 and 75+ (100.0% each) provided the highest overall average rating, while respondents ages 60-65 provided the lowest average rating (76.0%).
- Men (83.7%) provided a higher average rating as compared to women (80.6%).
- Those respondents identifying as Hispanic (85.8%) provided the highest overall average rating, while those respondents identifying as Asian provided the lowest average rating (61.8%).

Key Study Findings - Adult

- Survey respondents with an education level of 8th grade or less (95.5%) provided the highest overall average rating, while respondents with some high school education provided the lowest average rating (75.8%).
- Adult survey respondents who have been with Southwest Community Health Center for 10 years or more (83.3%) provided the highest overall average rating, while respondents who have been with Southwest Community Health Center for 1-4 years provided the lowest average rating (82.1%).
- Adult survey respondents with three (3) visits to Southwest Community Health Center within the past year (87.7%) provided the highest overall average rating, while respondents that have not been to their medical provider within the past year provided the lowest average rating (73.1%).

Key Study Findings - Child

- Child survey respondents attributed to Southwest Community Health Center provided lower ratings for all eleven (11) characteristics rated in the PCPCM survey as compared to the child composite, resulting in an overall average score of 82.3%.
- The highest rated characteristic among Southwest Community Health Center respondents was recorded for “my practice is able to provide most of my care” (90.2%), while the lowest rated characteristic was “my doctor and I have been through a lot together” (62.7%).
- Southwest Community Health Center child respondents less than 1 year old (90.9%) provided the highest overall average rating, while respondents 10-19 years old provided the lowest average rating (81.1%).
- Boys attributed to Southwest Community Health Center (83.3%) provided a slightly higher average rating as compared to girls (81.9%).
- Caucasian respondents (86.4%) provided the highest overall average rating, while those respondents identifying as an “other” ethnicity provided the lowest average rating (75.5%).

Key Study Findings - Child

- Child survey respondents who have been with Southwest Community Health Center for 5-9 years (85.3%) provided the highest overall average rating, while respondents who have been with Southwest Community Health Center for less than 1 year provided the lowest average rating (75.6%).
- Child survey respondents with five (5) visits to Southwest Community Health Center within the past year (93.3%) provided the highest overall average rating, while respondents who have not visited their medical provider within the past year provided the lowest average rating (77.1%).
