

## **DVA COVID-19 Update: November 5, 2021**

The DVA Healthcare Center (HCC) has no COVID-19 positive Veteran Patients. We are pleased that a short suspension of indoor visits after a staff member tested COVID positive was lifted this week after all Veteran Patients and Staff subsequently tested negative for the virus. The staffer who tested positive was not a direct care provider and there was little risk of transmission to others. All masking, distancing/barriers and heightened hygienic and cleaning procedures remain in place at the HCC to mitigate the impact of COVID-19. We continue implementation for new employees of DPH's and the Governor's directives regarding mandatory vaccinations and limited allowed exceptions. Any HCC staff member granted a religious or medical COVID vaccine exemption required to provide a negative COVID PCR test each week and are subject to a weekly rapid COVID test performed during work hours at the HCC and they must wear elevated levels of PPE particularly when interacting with Veteran Patients.

The DVA Residential Facility has not had a COVID-19 positive Veteran Resident in seven months and unvaccinated Veteran Residents and all Veteran Vocational Therapeutic Program (VVTP) participants tested negative for COVID-19 earlier this week. We continue monthly testing of unvaccinated Veteran Residents and all VVTP participants with the next test scheduled for November 16th. There are no Veteran Residents in the COVID-19 positive section or the protective monitoring section of the Isolation Unit. Regular on and off Campus recreational and therapeutic activities continue for Veteran Residents including shopping, baseball games, fishing trips, theater trips, bowling, hiking and attending community based civic and Veteran Service Organization events.

Since the Pandemic began, the DVA has provided direct care to two hundred and sixty Veteran Residents and Veteran Patients at our Campus of whom seventy-five tested positive or retested positive for COVID-19 since March 2020. Of those testing positive, sixty-nine recovered from the virus. One Veteran Resident and two Veteran Patients passed away in the spring of 2020 due to COVID-19, and a Veteran Patient passed away in December 2020 and one in January 2021 from COVID-19 complications. One Veteran Patient with COVID-19 passed away in December 2020 from a non-COVID-19 related medical occurrence.

Of the seventy-seven DVA staff members contracting or re-contracting COVID-19 since the beginning of the pandemic, sixty-nine have recovered and returned to work. One staff member is recovering at home and will return to work consistent with DVA clinical protocols. The DVA vaccine initiative has been highly effective with nearly ninety-two percent of staff having received their first COVID vaccine dose and eighty-four percent being fully vaccinated. Our on Campus Vaccine clinics continue to offer initial vaccines in addition to administering COVID-19 vaccine boosters to eligible Veteran Patients, Veteran Residents, and staff along as well as Flu vaccines.
