

Uncertainty Action Levels:

The following is a guide for criteria weights, the "action level uncertainty" column is an action level; net weight is required for items at or above the lowest listed weight. Note 1: that there are cases where the prosecution state that they do not need direct weight; in these cases it is acceptable for the analyst to annotate this in the case file and not take direct weights. Note 2: direct weight is required on all federal cases. If, based on the nature of a case, there is a strong possibility of it turning from State to Federal the analyst should take and report direct weights for the substances/criteria weight listed below. This may be applicable for cases where the substance was shipped via US Mail or by FEDEX or equivalent, or if indicated by information provided by the case provider.
