

DMHAS-EQMI

SPECIAL PROVIDER ALERT

February 2026

DDaP diagnosis and service code updates

EQMI has been actively working to roll out several updates to DDaP, including diagnosis and service code updates.

Diagnosis updates: All ICD-9 or older diagnosis have been end dated, except for 799.9 Diagnosis Deferred. The only available/active diagnosis are ICD-10 diagnosis that are active according to CMS. This will be an annual process each October as CMS adds, removes and updates diagnosis codes and descriptions.

Please note, if you complete regular DDaP file uploads, you may see an associated increase in errors related to invalid diagnosis. If you complete manual DDaP Data Entry and are unable to find an old code, this may be because it was end dated. To avoid and/or correct errors, work with the diagnosing provider to ensure the most up to date diagnosis is being entered.

Service Code updates: Service codes are also being updated. One of the more significant changes is that service code H0015 has historically been used for any type of IOP. We have separated the codes to align with CMS where H0015 is for SUD IOP, while S9480 is for MH IOP.

Several other code additions have been made regarding audio and visual, and audio only, Evaluation and Management services.

For a list of active diagnosis or service code updates, along with any other questions, please contact Meagan McGuire, Data and Quality Program Manager, at Meagan.McGuire@ct.gov
