## CONSTRUCTION BULLETIN

Construction Division Chief

### **Division of Materials Testing (DMT) Notification of Off-Site Fabrication of Project Materials**

DMT inspection of material fabricated off a project site cannot be provided without sufficient advance notification. This is critical for schedule-dependent materials such as structural steel and precast concrete elements.

Until more formal means of notification are developed and implemented, District and/or Construction project staff must forward paper or electronic correspondence regarding off-site fabrication of project materials such as structural steel and precast concrete to the DMT. This includes designer approved Working Drawings for permanent construction, mix designs for precast concrete elements, and paper copies from the Contractor of approved Shop Drawings, Product Data, or Working Drawings, as stated in [ECD-2020-1](#) Contractor Submittals.

Any other correspondence related to the schedule of fabrication of these materials that is available should also be forwarded to the DMT in a timely manner.

The following general email addresses are provided for your use in this regard:

#### **For Steel Fabrication**

[DOT.Steel@ct.gov](mailto:DOT.Steel@ct.gov)

#### **For Precast Fabrication**

[DOT.PrecastConcrete@ct.gov](mailto:DOT.PrecastConcrete@ct.gov)

Your assistance in this matter is appreciated. Contact information for other functions of the DMT is provided on the following page for your use.
