

Find Bid Data

AASHTOWare Project Role User Guide

The **Find Bid Data** screen enables the user to gather bid data from proposals stored in the system and determine bid prices based upon selected parameters. Find and filter historical data for different items by entering values in the **Find Bid Data** fields or search criteria in the **Main** quick find search box. Filter functions in the header provide item specific search results while the main search field provides general results based upon the entered criteria. The drop-down filter function can also be used to narrow search results further by time and work type.

Find Bid Data – Bid Item Search

Some or all the header filter fields can be used when researching historical item bid data. Cost estimating recommends starting with a more general search; then drilling down with additional filters. Use the steps below to begin an item bid history search:

1. Ensure that Spec Book 11 (1) is selected.
2. Enter desired Item number or a portion of the item description (2).
3. Default filter and sort is bid letting date in descending order.

Various other filter and sorting options are available. See Example below:

4. Let Date Range (1), Quantity Range (2) and Contractor Bid Rank (3)
5. Unit Price Range and District may also be used to further filter the results
