Review Process for Preliminary Permit Plan Sets

This Bulletin notifies project development teams of the new Review Process for Preliminary Permit Plan Sets. The guidance has been developed so that better permit applications can be prepared in an earlier timeframe. This process will take place before designers prepare the formal permit package (Final Permit Plan Set and Applications) and forward to the Office of Environmental Planning (OEP).

The review process outline is available on the Engineering and Construction Information Resources page at the following link: See [*Review Process for Preliminary Permit Plan Sets*](#)
