The study collected information on average daily travel behavior of representative group of residents in the state of Connecticut including how they travel, where they go, why they travel, and how long it takes. Additionally, the study collected household and person level demographic information.

How are the statistics compiled?

The statistics were generated using travel survey data from the 2016 Connecticut Statewide Transportation Study. All statistics reported are based on weighting analysis to match characteristics of CT residents from the 2009-2013 American Community Survey.

What else should I know about the statistics reported?

Where appropriate, imputed, or logically estimated, values are utilized to supplement the collected data from the survey. As with any survey, the statistics are subject to error and bias.
