## Notes:

<sup>&</sup>lt;sup>1</sup> Based on available topographic data, all fill for Alternative 1 would be placed above the 100-year flood elevation of approximately 28 ft. There is an apparent discrepancy between the FEMA-mapped boundary of the 100-year floodplain and areas where existing ground elevations are above the 100-year flood elevation; consequently a portion of Alternative 1 is shown within the mapped boundary. This discrepancy will be addressed during alternative refinement.

<sup>&</sup>lt;sup>2</sup>Construction cost estimates do not include wetland mitigation, utility relocation, or property acquisition costs.
