Info: To minimize the creation of duplicates and aid in the identification of existing duplicates, please initially search for your patient using the first two letters of the first and last name and the date of birth.

Once you are on the Patient Search screen:

- Enter your search criteria
- Click on the Search button to find any matching patients

Possible search criteria:

- First 2 letters of first and last names (John Smith = Jo & Sm)
- Patient date of birth
- Other identifier (see Identifier Type drop down)
- Patient ID

You should perform searches a few different ways to find the patient. Using less characters will give you a larger result, which could be helpful if the patient has a hyphenated last name or a misspelling. You want to make sure you thoroughly search for patients to avoid creating duplicate patients.
