
Lead Abatement in Your Home

Lead hazards have been identified in your home. Lead abatement is required to correct the lead hazards to protect you and others in your home.

Here are other ways tenants can reduce exposure to lead at home:

- Use a wet cloth with soap and water to clean surfaces
- Take shoes off at the door
- Increase hand washing
- Avoid areas that have chipping and peeling paint

If you have any questions, please contact your landlord or your local health department.
