## CONNECTICUT PREGNANCY RISK ASSESSMENT MONITORING SYSTEM (PRAMS)

## 2016 Data Report

MARCH 2019

WORKING TO MAKE CONNECTICUT BABIES AND MOTHERS HEALTHIER

## Acknowledgements

We would like thank all of the women who participated in the Connecticut PRAMS survey, without whom this report would not have been possible.

Thanks also to the following for their continued contributions to the project:

80 Connecticut PRAMS Project Staff:

Jennifer Morin, MPH, Epidemiologist: Principal Investigator, Project Director/Coordinator, and Analyst

Lisa Budris, MS, MPH, Epidemiologist: Data Manager

Tabitha Fox, Technical Writer: Data Manager

Laura Hayes, PhD, Epidemiologist: Monthly birth record sampling

Karyn Backus, MPH, Epidemiologist: Monthly birth record sampling

- 80 Connecticut DPH Office of Vital Records
- 80 CDC PRAMS Team, especially Brenda Le, Connecticut PRAMS Project Manager
- 80 Connecticut PRAMS Steering Committee

Additional thanks to Wyoming PRAMS for the use of their annual data report template.

**Funding for Connecticut PRAMS:** Connecticut PRAMS is supported by funding from the Centers for Disease Control and Prevention (CDC) (Grant # 6U01DP006193) and the Health Resources and Services Administration (HRSA) (Grant # H18MC00007). The contents of this publication are solely the responsibility of the authors and do not necessarily represent the views of the CDC or HRSA.

## Introduction

The Connecticut Pregnancy Risk Assessment Monitoring System (PRAMS) is a surveillance project of the Connecticut Department of Public Health (DPH) conducted in collaboration with the Centers for Disease Control and Prevention (CDC). Connecticut PRAMS is an ongoing population-based survey that collects data on maternal health, behaviors, and experiences before, during and shortly after pregnancy.

PRAMS provides data not available from other sources. The data gathered through the surveys are used to inform, develop, and evaluate maternal and infant health programs and policies in Connecticut. Additionally, the data are used to track Connecticut's progress toward national and state maternal and infant health objectives.

Connecticut was awarded the PRAMS grant in 2011 and began collecting data in 2013. For more information about Connecticut PRAMS, please visit: <u>http://www.ct.gov/dph/ctprams</u>.

### Methodology

Each month, birth certificate information is used to generate a list of Connecticut women who have delivered a live born infant in-state within the past two to six months. From this list, approximately 200 women per month are randomly selected to participate in the survey.

Addressing racial and ethnic disparities is an overarching priority for programs within the Connecticut DPH. Women from certain racial and ethnic groups are sampled at a higher rate because some groups experience more pregnancy-related problems. Oversampling ensures that an adequate number of responses are attained to allow for meaningful analyses to investigate disparities in perinatal indicators. Connecticut's sample is stratified into four categories based on maternal race/ethnicity: Non-Hispanic Black, Non-Hispanic White, Non-Hispanic Other Races, and Hispanic.

Women selected for PRAMS receive up to three mailed paper survey staggered over a six week period. If there is no response to survey mailings, women are contacted and interviewed by telephone. The mail and telephone surveys are available in English and Spanish. Data collection procedures and instruments are standardized by CDC to allow comparisons between states.

For a more detailed description of the PRAMS methodology, please visit the CDC PRAMS webpage at <u>www.cdc.gov/prams/methodology.htm</u>.

#### Data in this Report

Data collected from sampled mothers are weighted to represent the cohort of Connecticut resident women who delivered a live born infant in 2016. Caution is advised when interpreting and generalizing results to all pregnancies as only those with a live birth were included in the survey. This excludes women who had a pregnancy that ended in fetal death, abortion, or miscarriage.

Periodically, the PRAMS questionnaire is revised to address emerging issues. 2016 is the first year the PRAMS Phase 8 survey was used, which included new topics such as e-cigarette and hookah use, expanded safe sleep questions, receipt of 17P shots, use of fertility treatments, and baby-friendly hospital practices.

This report contains results for each question in the 2016 Connecticut PRAMS survey. Demographic characteristics of the mothers who completed the survey and results to each question with their 95% confidence intervals (95% CI) are presented. All estimates in this report were calculated using weighted PRAMS data, whereas the sample size presented is unweighted. Responses with less than 5 observations are suppressed. The weighted response rate for 2016 was 60.0%.

> I always appreciate all the people, agencies, state programs, working for women's health in Connecticut for their wonderful job, thank u for everything.

> I want to thank the health department and the hospital. Several times during my pregnancy I was told I had depression and was given very good help.

Awesome packet, thank you for including me and my experience.

~ CT PRAMS Moms

## Table of Contents

| Maternal Characteristics of Connecticut PRAMS Respondents | 5  |
|---|----|
| Insurance Status  | 6  |
| Preconception Health                                      | 8  |
