

Connecticut Department of Public Health Radon Program

List of Qualified Radon Mitigation Professionals

The CT Department of Public Health (CT DPH) is required under Connecticut General Statute §19a-14b, to “maintain a list of companies or individuals that are included in current lists of national radon proficiency programs.”

The following list contains the names of individuals holding the Radon Mitigation Specialist certification from one of the two national certifying agencies for radon professionals: (1) The [National Radon Proficiency Program](#) (AARST-NRPP) or (2) the [National Radon Safety Board](#) (NRSB). In addition, these companies or individuals are registered as Home Improvement Contractors with the Connecticut Department of Consumer Protection (CT DCP).

The CT DPH cannot be responsible for the knowledge or experience of these individuals or companies, nor for their fees or business practices. Inclusion on this list does not constitute an endorsement or a recommendation of the individuals or companies. People are encouraged to take normal consumer precautions before selecting a professional and be certain that the selected professional obtains all necessary building permits before proceeding with any work. Radon mitigation companies must utilize licensed electricians, plumbers, salespersons, and other professionals for all applicable components of the work rendered. Consumers may verify a license for individuals and businesses at the [State of CT e-Licensing](#) website.

Overview of Radon Mitigation Professionals Who Perform Radon Services in Connecticut

Under the Connecticut Home Improvement Act, an individual and/or business is required to register with the CT DCP if they are contracting with a consumer to perform work on residential property.

1. Individuals who enter contracts with CT consumers to perform radon mitigation must be registered as Home Improvement Contractors (HIC) with the CT DCP. Any other individual who solicits and procures business for the company must be registered as a salesperson with the CT DCP.
 - Individuals who perform radon mitigation for **water** require a CT DCP Plumbing & Piping contractor license. A HIC registration is *not* required for a licensed P-1, P-3, or J-1 plumbing contractor who **ONLY** performs radon mitigation for water.
2. Companies offering to perform radon mitigation in Connecticut for air and/or water **must also** employ an individual who is nationally certified in radon mitigation by NRPP or NRSB. Contractors performing mitigation are working under the direction of the nationally certified individual.
3. Get a signed, detailed, and fully executed contract before any work begins. Keep a copy. By law, all home improvement contracts must be in writing, include all details of the job, and bear the contractor's name and registration number.

Overview of Radon in Air Mitigation Techniques

If you have confirmed your radon in air level to be 4 picocuries per liter (pCi/L) or higher based on the average of two tests, the U.S. EPA suggests that your home be fixed. The most common radon mitigation system is sub-slab suction (Sub-Slab Depressurization), which prevents radon from entering your home by drawing the radon from below the house and venting it through a pipe to the air above the house where it is quickly diluted. The cost of fixing a home generally ranges from \$800 to \$2500, with an average cost of \$1,500. Refer to the U.S. EPA document, [Consumer's Guide to Radon Reduction](#), for more information on radon mitigation systems.

Overview of Radon in Water Mitigation Techniques

If you have tested your private well and have confirmed your radon in water level to be 5,000 pCi/L or higher based on the average of two water samples, CT DPH recommends that your home be fixed. There are two options used to reduce radon levels in water: (1) the granular activated carbon (GAC) system and (2) the aeration system. Refer to the [“Radon in Your Well Water”](#) fact sheet for CT guidance on radon in private well water.

ⁱ The Department has published this list as required by Conn. Gen. Stat. § 19a-14b(b), which is set forth below:

Sec. 19a-14b. Radon mitigators, diagnosticians and testing companies. Regulations. (a) For the purposes of this section and sections 20-420 and 20-432, the following terms shall have the following meanings unless the context clearly denotes otherwise:

(1) “Radon diagnosis” means evaluating buildings found to have levels of radon gas that are higher than the guidelines promulgated by this state or the United States Environmental Protection Agency and recommending appropriate remedies to eliminate radon.

(2) “Radon mitigation” means taking steps including, but not limited to, installing ventilation systems, sealing entry routes for radon gas and installing subslab depressurization systems to reduce radon levels in buildings.

(3) “Analytical measurement service providers” means companies or individuals that have their own analysis capability for radon measurement but may or may not offer measurement services directly to the public.

(4) “Residential measurement service providers” means individuals that offer services that include, but are not limited to, detector placement and home inspection and consultation but do not have their own analysis capability and utilize the services of an analytical measurement service provider for their detector analysis.

(5) “Residential mitigation service providers” means individuals that offer services that include, but are not limited to, radon diagnosis or radon mitigation.

(b) The Department of Public Health shall maintain a list of companies or individuals that are included in current lists of national radon proficiency programs that have been approved by the Commissioner of Public Health.
