It should be noted that counts reflect hospitalizations not persons. For example, a patient admitted to a hospital on two separate occasions in 2002 would be counted twice in these data. Another limitation of the data is the fact that it is an administrative data set. It contains diagnoses and procedures based on ICD-9-CM codes. The literature contains many reports on the validity and reliability of hospital discharge data with clinical conditions emphasizing discrepancies between ICD-9-CM codes and clinical data.

Appendix 2A. ICD-10 Coding for Selected Causes of Death, 1999-2001

Cause of Death	ICD-10 Code
All Causes	A00.0 – Y89.9
All Cancers	C00 – C97
Diabetes Mellitus	E10 – E14
Cardiovascular Disease Deaths	I00-I78
Diseases of the Heart	I00 – I09, I11, I13, I20 – I51
Coronary Heart Disease	I11, I20-I25
Congestive Heart Failure	I50.0
Essential Hypertension & Hypertensive Renal Disease	I10, I12
Cerebrovascular Disease	I60 – I69
Atherosclerosis	I71
Chronic Lower Respiratory Diseases	J40 – J47
Unintentional Injuries	V01 – X59, Y85 – Y86

Source: World Health Organization. 1977. *Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death, based on the recommendations of the Ninth Revision Conference, 1975 (ICD-9).* Geneva: World Health Organization.

Appendix 2B. ICD-9 Coding for Selected Causes of Death, 1989-1998

Cause of Death	ICD-9 Code
All Causes	1-E999
Cardiovascular Disease Deaths	390-459
Diseases of the Heart	390-398,402,404-429
Coronary Heart Disease	402, 410-414, 429.2
Congestive Heart Failure	428.0
Hypertension without Renal Disease	401, 403
Cerebrovascular Disease	430-438
Atherosclerosis	440

Source: World Health Organization. 1992. *Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death, based on the recommendations of the Tenth Revision Conference, 1992 (ICD-10)* Geneva: World Health Organization.

Appendix 2C. ICD9-CM Coding for Selected Causes of Hospitalizations

Cause of Hospitalization	ICD-9 Code
Circulatory	390-459
Coronary Heart Disease	402, 410-414, 429.2
Congestive Heart Failure	428
Cerebrovascular Disease	430-4, 438-438

Appendix 3A. Glossary of Statistical Terms

Age-adjusted Mortality Rates (AAMR) and Age-adjusted Hospitalization Rates (AAHR) are used to compare relative mortality and hospitalization risk, respectively, across groups and over time. They are not actual measures of risk but rather an index of risk. They are weighted statistical averages of the age-specific rates, in which the weights represent the fixed population proportions by age (Murphy 2000). The age-adjusted rates in these tables were computed by the direct method. The 1940 and 2000 U.S. standard million population distributions are shown below:

Age group	1940	2000
0-4	80,057	69,136
5-9	81,151	72,533
10-14	89,209	73,032
15-19	93,665	72,169
20-24	88,002	66,477
25-29	84,280	64,529
30-34	77,787	71,044
35-39	72,501	80,762
40-44	66,744	81,851
45-49	62,696	72,118
50-54	55,116	62,716
55-59	44,559	48,454
60-64	36,129	38,793
65-69	28,519	34,264
70-74	19,519	31,773
75-79	11,423	26,999
80-84	5,878	17,842
85+	2,765	15,508
Total	1,000,000	1,000,000

Age standardization is a technique that allows for the comparison of death rates in two or more populations. The National Center for Health Statistics (NCHS) used the 1940 standard million population in reporting national mortality statistics for over 50 years. Implementation of the new year 2000 population standard began with deaths occurring in 1999. Age-adjustment based on the year 2000 standard often results in age-adjusted death rates that are larger than those based on the 1940 standard. The new standard affects trends in age-adjusted death rates for certain causes of death and decreases race and ethnicity differentials in age-adjusted death rates (Anderson and Rosenberg 1998).

Cause-of-death classification Mortality statistics for this report were compiled in accordance with the World Health Organization (WHO) regulations, which specify that member nations classify causes of death by the current Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death. Deaths for the 1989-1998 period were classified by the Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death, Ninth Revision of the International Classification of Diseases [ICD-9] (World Health Organization 1977). Deaths for the 1999-2002 period

0597
09/15/08

were classified according to the Tenth Revision of the International Classification of Diseases [ICD-10] (World Health Organization 1992).

Healthy People 2000 and ***Healthy People 2010*** are part of a national strategy addressing the prevention of major chronic illnesses, injuries, and infectious diseases. They are the product of an effort, involving expert working groups, a consortium of national organizations, all state health departments, and the Institute of Medicine of the National Academy of Sciences to set health objectives for the nation. After extensive national and regional hearings were conducted with a period of public review and comment, the health objectives were published in 1990 as *Healthy People 2000—National Health Promotion and Disease Prevention Objectives.* It established national objectives and served as the basis for the development of state and community plans. *Healthy People 2010* provides a comprehensive view of the nation's health in 2000, and establishes national goals and targets to be achieved by 2010, and monitors progress over time.

Hispanic origin refers to people whose origins are from Spain, the Spanish-speaking countries of Central America, South America, and the Caribbean, or persons of Hispanic origin identifying themselves as Spanish, Spanish-American, Hispanic, Hispano, or Latino. Since 1988, the Connecticut death certificate has had a separate line item for Hispanic ethnicity. Individuals identified as "Hispanic" can be of any race, and are also counted in the race breakdown as either "white," "black," "Asian or Pacific Islander," "American Indian," or other.

International Classification of Diseases (ICD-9, ICD-10) has been the internationally accepted coding system for determining cause of death since the early 1900s. It is periodically revised. The ninth revision (ICD-9) was in use from 1975 through 1998. Beginning with 1999 deaths, the tenth revision (ICD-10) is being used.

Preliminary estimates of the comparability of ICD-9 to ICD-10 have been published and indicate that the discontinuity in trends from 1998 to 1999 for some leading causes of death (septicemia, influenza and pneumonia, Alzheimer's disease, nephritis, nephrotic syndrome, and nephrosis) is substantial (Anderson, Minino, Hoyert, et al. 2001).

International Classification of Diseases, Clinical Modification (ICD-9-CM) is a coding system recommended for use in all clinical settings to describe procedures and diagnoses. It is required for reporting diagnoses and diseases to all U.S. Public Health Service and Department of Health and Human Services programs, including Medicare and Medicaid. The foundation of the ICD-9-CM is the *International Classification of Diseases, 9th Revision* published by the World Health Organization.

Population bases for computing rates are taken from the U.S. Census Bureau *Estimates of the population of states by age, sex, race, and Hispanic origin.* These data are estimates of the population of Connecticut by 5-year age groups (age 0 to 4, 5 to 9,...85 and over), sex (male, female), modified race (white; black; Native American including Alaska Natives; Asian and Pacific Islander) and Hispanic origin (Hispanic, non-Hispanic) for each year, July 1, 1999 through July 1, 2002.

Race refers to a population of individuals identified from a common history, nationality, or geographical place. Race is widely considered a valid scientific category, but not a valid biological or genetic category (Lewontin, 1995; Gould 1981). Available scientific evidence indicates that racial and ethnic

0598
09/15/08

classifications do not capture biological distinctiveness, and that there is more genetic variation within racial groups than there is between racial groups (Williams, Lavizzo-Mourey, and Warren 1994; American Anthropological Association 1998). Contemporary race divisions result from historical events and circumstances and reflect current social realities. Thus, racial categories may be viewed more accurately as proxies for social and economic conditions that put individuals at higher risk for certain disease conditions.

Data are reported for two racial groups in Connecticut: white, non-Hispanic and black, non-Hispanic. Individuals identified as "Hispanic" can be of any race.

Socioeconomic position refers to a person's social and economic place in a society, and is operationalized or measured by characteristics such as per capita or household income, educational attainment, or occupation. Historically, lower socioeconomic position has been strongly correlated with less favorable health outcomes such as higher death and premature mortality rates from all causes; conversely, persons of higher socioeconomic position do better on most measures of health status.

Years of potential life lost (YPLL) represents the number of years of potential life lost by each death before a predetermined end point (e.g., 65 or 75 years of age). Whereas the crude and adjusted death rates are heavily influenced by the large number of deaths among the elderly, the YPLL measure provides a picture of premature mortality by weighting deaths that occur at younger ages more heavily than those occurring at older ages. It thereby emphasizes different causes of death. Age-adjusted YPLLs are calculated using the methodology of Romeder and McWhinnie (1977).

Appendix 3B. Glossary of Medical Terms

Atherosclerosis: A disease that affects the arteries, particularly those supplying the heart, the brain, the aorta, and the lower extremities. Atherosclerosis underlies the occurrence of heart attacks, many strokes, peripheral arterial disease, and ruptures of the aorta. **Source:** Centers for Disease Control and Prevention. 2006. *A Public Health Action Plan to Prevent Heart Disease and Stroke, Appendix A.* Retrieved 1/2/2007: http://www.cdc.gov/dhdsp/library/action_plan/full_appendix_a.htm

Cardiovascular Diseases (CVD): Diseases of the circulatory system, which include acute myocardial infarction, ischemic heart disease, valvular heart disease, peripheral vascular disease, arrhythmias, high blood pressure and stroke. **Source:** World Health Organization Collaborating Centre on Surveillance of Cardiovascular Diseases. *The Growing Burden of Heart Disease and Stroke.* (n.d.). Retrieved 1/2/2006: http://www.cvdinfobase.ca/cvdbook/En/Glossary.htm

Coronary Heart Disease (CHD): A form of heart disease resulting from impaired circulation in one or more coronary arteries. Common clinical manifestations of CHD include chest pain (angina pectoris) or heart attack." **Source:** Centers for Disease Control and Prevention. 2006. Retrieved 1/2/2007: http://www.cdc.gov/dhdsp/library/action_plan/full_appendix_a.htm

Cerebrovascular Disease: A disease of one or more blood vessels in the brain, which often results in the sudden development of a focal neurologic deficit, or stroke. Stroke, or a "brain attack" is the most severe clinical manifestation of cerebrovascular disease. **Source:** World Health Organization Collaborating Centre on Surveillance of Cardiovascular Diseases. *The Growing Burden of Heart Disease and Stroke.* Retrieved 1/2/2006: http://www.cvdinfobase.ca/cvdbook/En/Glossary.htm

Congestive Heart Failure: The inability of the heart to maintain adequate pumping function, which can be caused by a number of factors, such as untreated hypertension, heart attacks, or infections. Heart failure increases the risk for other cardiovascular disease events and often results in physical disability. Congestive Heart Failure is commonly referred to as "heart failure." **Sources:** World Health Organization Collaborating Centre on Surveillance of Cardiovascular Diseases. *The Growing Burden of Heart Disease and Stroke.* Retrieved 1/2/2006: http://www.cvdinfobase.ca/cvdbook/En/Glossary.htm;
The Cleveland Clinic Information Center. 2004. *Hypertension Glossary.* Retrieved 1/3/2007: http://www.clevelandclinic.org/health/health-info/docs/3800/3846.asp?index=12273;
Centers for Disease Control and Prevention. 2006. *A Public Health Action Plan to Prevent Heart Disease and Stroke, Appendix A.* Retrieved 1/2/2007: http://www.cdc.gov/dhdsp/library/action_plan/full_appendix_a.htm.

Coronary Artery Bypass Graft: Commonly referred to as "CABG" (pronounced "cabbage"). CABG is the most commonly performed "open heart" operation in the United States, and is a procedure to bypass blockages or obstructions of the coronary arteries, which cause chest pain or "angina." The majority of people report relief of their symptoms of angina after surgery. Symptoms may recur, and a small percentage of people will require repeat surgery, typically 10 or more years after the original operation. **Source:** The Society of Thoracic Surgeons. 2006. *What is Coronary Artery Bypass Grafting (CABG)?* Retrieved 1/3/2007: http://www.sts.org/sections/patientinformation/adultcardiacsurgery/cabg/

Diabetes (or diabetes mellitus): A metabolic disorder that results from the body's insufficient production or utilization of insulin. The most common types of diabetes includes "Type 1 diabetes," formerly known as "juvenile diabetes," and "Type 2 diabetes," formerly known as "adult-onset diabetes." Long-term effects of diabetes include cardiovascular complications. **Source:** Centers for Disease Control and Prevention. 2006. *A Public Health Action Plan to Prevent Heart Disease and Stroke, Appendix A.* Retrieved 1/2/2007: http://www.cdc.gov/dhdsp/library/action_plan/full_appendix_a.htm

Dyslipidemia: A disorder of lipoprotein metabolism, such as an overproduction or deficiency of lipoprotein. Dyslipidemia is often manifested by elevated levels of total cholesterol, the "bad" or low-density lipoprotein (LDL) cholesterol, and the triglyceride concentrations, as well as decreased levels of the "good" or high-density lipoprotein (HDL) cholesterol concentration in the blood. **Source:** MedicineNet.com. *Definition of Dyslipidemia.* Retrieved 1/3/2007: http://www.medterms.com/script/main/art.asp?articlekey=33979

Essential Hypertension: "high blood pressure that does not have an apparent cause — The vast majority (95 percent) of high blood pressure is essential hypertension." **Source:** The Cleveland Clinic Information Center. 2004. Hypertension Glossary. Retrieved 1/3/2007: http://www.clevelandclinic.org/health/health-info/docs/3800/3846.asp?index=12273

Heart Failure: See Congestive Heart Failure.

Hemorrhagic Stroke: Hemorrhagic stroke involves bleeding within the brain that damages nearby brain tissue. A common cause of hemorrhagic stroke is the bursting of an aneurysm (a weak spot in an artery wall). Hemorrhagic stroke is often associated with high blood pressure. About 20% of all strokes are hemorrhagic. **Source:** MedlinePlus. 2006. *Hemmorhagic Stroke.* Retrieved 1/2/2007: http://www.nlm.nih.gov/medlineplus/ency/article/000761.htm

High Blood Cholesterol: Cholesterol is a substance found in all cells of the body; it is carried in lipoproteins, made of fat (lipid) on the inside and proteins on the outside. Low-density lipoprotein (LDL) cholesterol is sometimes called "bad cholesterol" because it leads to a buildup of cholesterol in arteries. The higher the LDL level in the blood, the greater one's chance of getting heart disease. The buildup of cholesterol in the arteries is called plaque, which over time causes the narrowing of the arteries, or "atherosclerosis." Some plaques can burst, releasing fat and cholesterol into the bloodstream, which may cause the blood to clot and block the flow of blood. This blockage can cause angina or a heart attack. Lowering one's cholesterol level decreases the chance of having a plaque burst and a subsequent heart attack. Lowering cholesterol may also slow down, reduce, or even stop plaque from building up. **Source:** National Heart, Lung and Blood Institute. 2006. *What is Cholesterol? What is High Blood Cholesterol?* Retrieved 1/3/2007: http://www.nhlbi.nih.gov/health/dci/Diseases/Hbc/HBC_WhatIs.html

High Blood Pressure: A condition in which the pressure in the arterial circulation system is greater than clinically recommended, that is, a systolic pressure greater than or equal to 140 mm Hg or a diastolic pressure greater than or equal to 90 mm Hg. High blood pressure is associated with increased risk for heart disease, stroke, and chronic kidney disease. **Source:** Centers for Disease Control and Prevention. 2006. *A Public Health Action Plan to Prevent Heart Disease and Stroke, Appendix A.* Retrieved 1/2/2007: http://www.cdc.gov/dhdsp/library/action_plan/full_appendix_a.htm

Hypertensive Heart Disease: An abnormality in the structure and function of the heart caused by long-standing high blood pressure. A common, clinical manifestation of hypertensive heart disease is heart failure. **Source:** Centers for Disease Control and Prevention. 2006. *A Public Health Action Plan to Prevent Heart Disease and Stroke, Appendix A.* Retrieved 1/2/2007: http://www.cdc.gov/dhdsp/library/action_plan/full_appendix_a.htm

Ischemic Heart Disease: A condition in which heart muscle is damaged or works inefficiently because of an absence or deficiency of its blood supply. Ischemic heart disease is most often caused by atherosclerosis, and includes angina pectoris, acute myocardial infarction, chronic ischemic heart disease, and sudden death. **Source:** World Health Organization Collaborating Centre on Surveillance of Cardiovascular Diseases. *The Growing Burden of Heart Disease and Stroke.* Retrieved 1/2/2006: http://www.cvdinfobase.ca/cvdbook/En/Glossary.htm

0602
09/15/08

Ischemic Stroke: The most common type of stroke that occurs when too little blood reaches an area of the brain usually due to a clot that has blocked a blood vessel. An ischemic stroke can sometimes lead to a brain hemorrhage. About 80% of strokes are ischemic strokes, **Source:** MedlinePlus. 2006. *Hemmorhagic Stroke.* Retrieved 1/2/2007: http://www.nlm.nih.gov/medlineplus/ency/article/000761.htm

Obesity: Defined in terms of body mass index (BMI), and calculated as body weight in kilograms (1 kg = 2.2 lbs) divided by height in meters (1 m = 39.37 in) squared. Adults with a BMI of greater than or equal to 30.0 kg/m2 are considered "obese," and those with a BMI of 25–29.9 kg/m2 are considered "overweight." **Source:** Centers for Disease Control and Prevention. 2006. *A Public Health Action Plan to Prevent Heart Disease and Stroke, Appendix A.* Retrieved 1/2/2007: http://www.cdc.gov/dhdsp/library/action_plan/full_appendix_a.htm

Classification of Overweight and Obesity in Adults According to BMI.
Obesity is classified as BMI $\geq$ 30 kg/m^2.

Classification	BMI (kg/m^2)	Risk of Health Problems
Underweight	< 18.5	Low (but risk of other clinical problems increased)
Normal range	18.5-24.9	Average
Overweight	25.0-29.9	Mildly increased
Obese	**≥ 30.0**	
Class I	30.0-34.9	Moderate
Class II	35.0-39.9	Severe
Class III	≥ 40.0	Very severe
Note that these values are age-independent and correspond to the same degree of fatness across different populations.		

Source: World Health Organization Collaborating Centre on Surveillance of Cardiovascular Diseases. *The Growing Burden of Heart Disease and Stroke.* Retrieved 1/2/2006: http://www.cvdinfobase.ca/cvdbook/En/Glossary.htm

Percutaneous Transluminal Coronary Angioplasty: Coronary angioplasty is a medical procedure that restores blood flow through a narrowed or blocked artery in the heart (coronary artery). The coronary arteries can become narrowed and blocked due to buildup of a material called plaque on the inner walls, which reduces the flow of blood through the artery and can lead, over time, to coronary artery disease and heart attack. During an angioplasty procedure, a balloon or other device is threaded through a blood vessel in the arm or groin up to the site of a narrowing or blockage. The balloon is then inflated to push the plaque outward against the wall of the artery, which widens the artery and restores the blood flow. Coronary angioplasty is currently a common medical procedure with more than 1 million done in the United States every year. **Sources:** National Heart, Lung and Blood Institute. 2006. *What Is Coronary Angioplasty?* Retrieved 1/3/2007: http://www.nhlbi.nih.gov/health/dci/Diseases/Angioplasty/Angioplasty_WhatIs.html

Mayoclinic.com. 2006. *Coronary angioplasty and stenting: Opening clogged heart arteries.* Retrieved 1/3/2007: http://www.mayoclinic.com/health/angioplasty/HQ00485

Serum (Blood) Lipids: Cholesterol and triglycerides are two forms of lipid, or fat in the body. Patients with elevated triglyceride levels typically have other major risk factors for heart disease (obesity, diabetes, and/or high blood pressure), but no study has yet proven that high triglyceride levels are an independent risk factor for heart disease. Recent evidence strongly suggests that an elevated triglyceride level is a significant risk factor for cardiac disease - especially when it is elevated as part of the "metabolic syndrome X." **Source:** About: Heart Disease. *Cholesterol and Triglycerides*. Retrieved 1/3/2007: http://heartdisease.about.com/cs/cholesterol/a/choltri.htm

Stroke: The most common clinical manifestation of cerebrovascular disease. Stroke describes an interruption of the blood supply in the brain that results in damaged brain tissue. It can be caused by clots or by bleeding in the brain from a ruptured blood vessel or a significant injury. **Source:** The Cleveland Clinic Information Center. 2004. *Hypertension Glossary*. Retrieved 1/3/2007: http://www.clevelandclinic.org/health/health-info/docs/3800/3846.asp?index=12273

Valvular Surgery: A surgical procedure consisting of two types: 1) **Valve repair surgery**, which involves repair to a faulty heart valve, typically without the use of artificial parts, and 2) **Valve replacement surgery**, which involves complete replacement of the native valve, and is used if valve repair is not considered a good option. The replacement valve can either be mechanical or biological. Although mechanical valves are durable and can last a lifetime, persons receiving valve replacement require lifelong treatment with a blood-thinning medication, which help prevent clots from forming on the mechanical valve. Biologic (or tissue) valves are made of human or animal tissue. They traditionally needed to be replaced after about 10 years, but newer valves have been shown to last as long as 17 years. **Source:** Cleveland Clinic. 2005. *Heart Valve Surgery*. Retrieved 1/3/2007: http://www.clevelandclinic.org/heartcenter/pub/guide/disease/valve/valvetreatment.htm

Preface

The *Connecticut Diabetes Prevention and Control Plan* is the product of the combined knowledge, commitment, and collaboration of over seventy partners. The Advisory Council and its Executive Committee serve as the primary leadership that directed the development of the recommendations set forth in this plan.

This plan strives to address the needs of people already diagnosed with diabetes in order to prevent complications. It also addresses the prevention or delay of diabetes in high-risk individuals with pre-diabetes.

Diabetes Advisory Council

Christian D. Andresen, DPH

William Behan, RN, BS, DPH

Louise Butcher*, American Diabetes Association

Nanette Char*, Char Consulting

Marian Evans, MD, Bridgeport Health and Social Services

Jennifer Granger, MPH, CT Primary Care Association

Toni Nathaniel Harp, CT State Senator

Lewis Head, Health Educator, Mashantucket Pequot Tribal Nation

Margaret M. Hynes, PhD, MPH, DPH

Betty C. Jung, RN, MPH, CHES, DPH

Molly Kirschner, RD, CDE, CD-N, Juvenile Diabetes Research Foundation

Cynthia Kozak, RD, MPH, CDE, DPH

Jeffrey Palmer, OD, CT Association of Optometrists

William A. Petit, Jr.*, MD, FACP, FACE, Joslin Diabetes Center at the Hospital of Central Connecticut

Karana M. Pierre, DPM, Optimus Healthcare

Richard Roy*, CT State Representative

Katherine Schneider, MD, MPhil., Middlesex Health System

Eleanor Seiler*, MD, Anthem

Warren Wollschlager, DPH

* *Member of the Executive Committee*

Acknowledgements: *We would like to acknowledge the contributions of the work group members for their time and expertise. Their dedication to this process has made this plan possible. The work group members are listed alphabetically on the following pages.*

Special thanks to:

- *Nancy Prevost, Connecticut Department of Public Health (DPH) for her assistance in editing and formatting this state plan.*
- *Consultants, Holt, Wexler & Farnam, LLP*

Note: Members of the work groups and the DPH recognize the need to involve as many organizations and programs across the state as possible to ensure the success of the Connecticut Diabetes Prevention and Control Plan. To assist interested individuals, programs, and organizations in locating initiatives with which to partner, the group developed a resource list which can be found in Appendix D. The list includes programs sponsored by the Department of Public Health and those sponsored by community and private organizations. While the list provides a good sample of programs in Connecticut, it does not provide information on all programs in the state. Omission of a program should not be construed as judgment on the usefulness of the program.

EXECUTIVE SUMMARY

Mission: *"The Connecticut Diabetes Prevention and Control Plan is to create an environment for change in which a comprehensive system of care and prevention will reduce or delay the onset of diabetes and its complications, and enhance the quality of life for people affected by diabetes. Successful implementation of the Plan will bring about measurable improvement in the quality of life for people with diabetes and prediabetes, resulting in healthier communities."*— Diabetes Advisory Council[1]

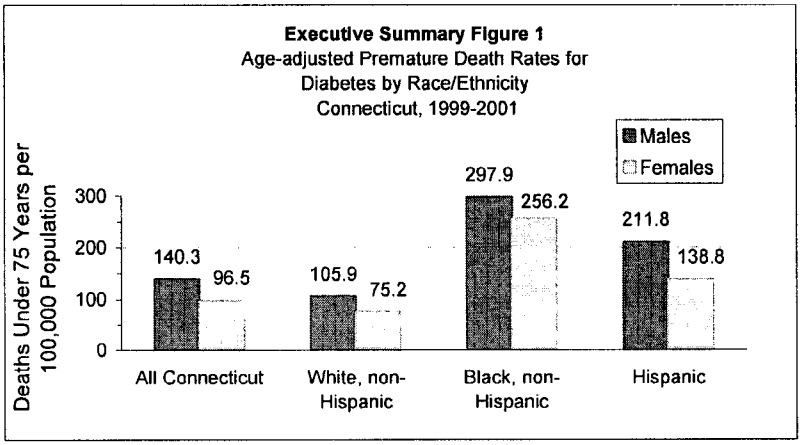
Diabetes is a chronic metabolic disorder characterized by elevated levels of blood sugar which over time can ravage the body causing eye disease, kidney disease, nerve disease, and cardiovascular disease. An estimated 6.2% of Connecticut adults (163,000 people) have diagnosed diabetes (2003-05 data) with an additional 70,000 people with undiagnosed diabetes. According to the Centers for Disease Control and Prevention, diabetes cost Connecticut an estimated **$1.7 billion in direct and indirect costs in 2003**. In 2005, the Connecticut Department of Public Health reported that approximately $77 million was billed for hospitalizations due to diabetes as a principal diagnosis in 2002. In addition, almost $39 million was billed for hospitalizations related to diabetes with a lower extremity amputation

Healthy People 2010, the national agenda for disease prevention and health promotion, calls for efforts to reduce the diabetes prevalence rate to 2.5% by the year 2010. Currently, the Connecticut rate is 6.2%. Closing that gap will prove increasingly difficult because Connecticut's population is growing older, specific high-risk groups for diabetes are increasing, and Connecticut's population tends to be increasingly overweight and sedentary. To address this public health issue, the Connecticut Diabetes Prevention and Control Program convened experts in five major topic areas: preventing diabetes, education/awareness, access/policy, disease management, and surveillance. The program is to promote Connecticut meeting the HP2010 goal to lower the prevalence rate by at least 0.5 percent by 2010. Priorities in implementing the plan include:

1. Develop support for efforts to ensure all persons with diabetes particularly those who are Medicaid eligible are enrolled and receiving medically appropriate preventive care and treatment, including podiatric and diabetes self-management education.

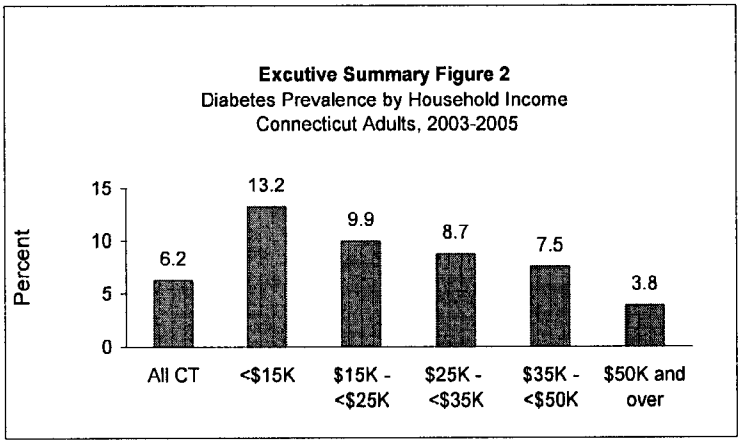
2. Develop a plan to seek legislative support for programs to provide free or low cost access to education, care and treatment for uninsured of underinsured people with diabetes.

Plan Development. The Connecticut Department of Public Health established a Connecticut Diabetes Partnership to identify how care and prevention systems could combat diabetes as a growing public health issue in our state. The Advisory Council and five work groups came together to form the Connecticut Diabetes Partnership and develop this Diabetes Prevention and Control Plan. The purpose of this plan is to help residents delay or prevent the onset of diabetes, reduce diabetes-related complications, and enhance the quality of life for people affected by diabetes.



The Diabetes Advisory Council organized five work groups (Access and Policy, Education and Awareness, Disease Management, Prevention, and Surveillance) and assembled a wide range of experts and representatives from across all aspects of the disease: people with diabetes, health care providers, community health centers/clinics, hospitals, health maintenance organizations, visiting nursing associations, public health representatives, health care professionals, American Diabetes and Heart associations, managed care organizations, insurance groups, state representatives, and community and special interest groups. The five work groups analyzed policy, epidemiological data, and existing resources, and used the information as the basis to develop goals, objectives, strategies, and action steps. Work groups completed their tasks over a five-month period and submitted their recommendations to the Connecticut Diabetes Advisory Council for refinement and final approval.

Background. Diabetes occurs when the body produces no insulin at all (type 1 diabetes) or when the body produces insulin but does not use it properly (type 2 diabetes). Similar symptoms exist for both types of diabetes. High blood sugar (hyperglycemia) can cause: blurry vision, excessive thirst, frequent urination, feeling very hungry or tired, and/or unintended weight loss. Many of these symptoms can be overlooked as temporary consequences of lifestyle. In fact, many people live with symptoms for several years prior to a diagnosis of type 2 diabetes. The long term consequences of hyperglycemia include eye disease, kidney disease (nephropathy), nerve disease (neuropathy), and a significant increase for cardiovascular disease (heart attack and stroke). Diabetes can not be cured. Ultimately, untreated or poorly controlled diabetes can lead to death due to these complications. Annual medical costs for a person with diabetes average about $13,000 (five times more per year than persons without diabetes).[ii]



An estimated 6.2% of the Connecticut adult population or approximately 163,000 adults age 18 years and older have been diagnosed with diabetes (2003-05 data). The Centers for Disease Control and Prevention (CDC) estimates that about 30% of all diabetes cases are undiagnosed,

partly because symptoms develop gradually. An additional 70,000 Connecticut adults are estimated to have undiagnosed diabetes. Thus a total of 233,000 of Connecticut residents are estimated to have diagnosed or undiagnosed diabetes.

Diabetes disproportionately affects certain ethnic groups as well as those of lower socioeconomic status. Figures 1 and 2 below illustrate the socio demographic disparities associated with diabetes.

The cornerstones of diabetes care include rigorous monitoring and control of blood sugar, blood pressure, and cholesterol to decrease diabetes complications. Recent research has also shown with lifestyle changes, diabetes can even be prevented or delayed before it begins in high-risk individuals with a condition known as pre-diabetes.

Major Goals of the Plan. Preventing and managing diabetes are influenced by numerous factors including: lifestyle, such as food choices, exercise habits, and access to health care. To address these factors, the Connecticut Diabetes Partnership work groups developed specific recommendations and strategies for the *Connecticut Diabetes Prevention and Control Plan.* The

organization of the work groups is supported by the Chronic Care Model (See Figure 2. Connecticut's Chronic Care Model p. 50). The *Connecticut Diabetes Control and Prevention Plan* follows the Chronic Care Model, which incorporates both prevention and care elements from a variety of perspectives, including the individual, the health care provider, health care systems, and the community. All are intended to improve outcomes and reduce costs.

- The ***Prevention Work Group*** developed strategies to reverse pre-diabetes and to prevent or delay the progression of pre-diabetes to type 2 diabetes.
- The ***Disease Management Work Group*** developed strategies to: improve how health care providers diagnose and monitor diabetes; improve communication among health care providers and patients; clarify measurement of clinical outcomes; increase self-management practices among people with diabetes; increase screening for pre-diabetes and diabetes; and improve reporting of diabetes diagnoses.
- The ***Education and Awareness Work Group*** developed strategies for: people with diabetes who must manage and control diabetes; for health care providers to increase their knowledge and to increase participation in education programs; and for the general public to increase awareness about the symptoms, impact, and options related to diabetes.
- The ***Access and Policy Work Group*** developed strategies to: integrate and increase access to the various elements of successful care, including prevention, treatment, supplies, equipment, medication, diabetes self-management education, and nutrition therapy and to support the medical care system and communities in these efforts.
- The ***Surveillance Work Group*** developed strategies to capture and share relevant information about trends in diabetes statistics.

While this plan focuses on programs and policies to address diabetes we recognize the importance of stem cell research as an avenue to finding a cure for (type 1) diabetes.[iii]

The full set of recommendations and strategies is shown in Executive Summary Table 1, beginning on p. vi.

2007 Work Plan. Of the final recommendations, the Diabetes Advisory Council selected two priorities for implementation in 2007:

I. *The access and policy goal is to ensure that comprehensive diabetes care i.e., preventive care, treatment, supplies, equipment, diabetes self-management education, medical nutrition therapy, and medications are offered, available and affordable across the public and private sectors to every citizen in Connecticut in need.* Specific strategies include: 1) support efforts to ensure that all Medicaid-eligible persons with diabetes are enrolled and receiving medically appropriate preventive care and treatment, in their community when possible,

including podiatric care and diabetes education services; and 2) develop a plan to seek legislative support for a program with community clinics, hospitals, and other health care providers to provide free or low cost access to preventive education and care, and treatment for uninsured and underinsured persons with diabetes.

II. *The education and awareness goal is to ensure that all people with diabetes, those at risk for diabetes, and their health care providers all have current knowledge and can apply evidence based guidelines.* Specific strategies include: 1) make available training curricula options for patient education; 2) train non-Certified Diabetes Educators (CDEs) to augment traditional education programs; 3) partner with grocery stores, libraries, and other public places to make diabetes, nutrition, and general better health information available; and 4) to engage HMOs to standardize diabetes education programs benefit availability.

Monitoring. During each year of the plan, the Connecticut Department of Public Health (CT DPH) and the Diabetes Advisory Council will prepare a report on the previous year's activities and results. Data will be collected and tabulated each year by the Diabetes Prevention and Control Program staff, and a report will be prepared by CT DPH and the Diabetes Advisory Council to update funding agencies, partnering health care organizations, and concerned citizens on the plan's progress. Based upon information in the annual report, the CT DPH in conjunction with the Diabetes Advisory Council will create an action plan for the subsequent year. The action plan will clearly state the objectives and the recommended strategies to achieve those objectives in the next calendar year. To fully implement the recommendations of *Connecticut's Diabetes Prevention and Control Plan*, a diverse group of funding sources, from state and federal government to private foundations, must be recruited.

Conclusion: Through this five year prevention and control plan – with careful attention to results of programs, initiatives and collaborative support of various public and private entities - the Connecticut Diabetes Partnership has made a commitment to lower the Connecticut diabetes prevalence rate from 6.2% to 5.7%, and to improving the quality of life for Connecticut residents with diabetes and pre-diabetes resulting in a healthier community.

Executive Summary Table 1 **RECOMMENDED GOALS AND STRATEGIES**

Prevention

Objective 1	By 2012, reduce by .5% the prevalence of type 2 diabetes by preventing or delaying the progression of pre-diabetes to diabetes.
Strategies	1. Increase awareness of providers and people with pre-diabetes of the potential to prevent diabetes onset through lifestyle change. 2. Develop and promote pre-diabetes screening programs accessible to all at risk Connecticut residents with referrals to health care providers as appropriate. 3. Deliver cost-effective pre-diabetes interventions as efficiently as possible. 4. Change Connecticut's health system to support healthy lifestyles for residents of all ages. 5. Engage community organizations to ensure that messages about lifestyle modification are delivered in culturally relevant and positive ways. 6. Support interventions promoted by other programs, such as the CT DPH Obesity Program, that include modifications to school lunch programs to provide healthy school nutrition environments.

Disease Management

Objective 1	By 2012, increase by 50% the number of Connecticut physicians and other health care providers who use ADA and other evidence-based guidelines to diagnose and monitor pre-diabetes and diabetes as measured by the number of physicians recognized by the ADA.
Strategies	1. Promote adoption and integration of ADA and other evidence-based guidelines into clinical practice to support early diabetes diagnosis and use of ABC (A1c, blood pressure, cholesterol) values. 2. Develop a pay-for-performance system that rewards physicians and patients for adhering to guidelines. 3. Engage employers in encouraging and supporting more managed care organizations to offer incentives.
Objective 2	By 2012, improve patient care by increasing the number of health care providers using electronic medical records or disease registries by 10% to establish a statewide health data exchange, increase outreach, and improve communication among providers.
Strategies	1. Develop effective communication vehicles to demonstrate the value of reporting clinical outcomes to providers using evidenced based literature, peer-to-peer outreach and other means. Show providers how such clinical outcomes, reporting through incentive programs, or other vehicles can be valuable for their patients, their practices and others. 2. Work collaboratively with managed care organizations to identify the current communication barriers for effective disease management. With MCOs, promote a process to simplify referrals and communication linkages that will create administrative efficiencies. 3. Promote integrative processes among health plans to link diagnosis, treatment plans and education plans thus promoting communication among those who are providing services to persons with diabetes.
Objective 3	By 2012, establish a system of process and outcome measurement used by all health care providers on the patient care team.
Strategies	1. Adopt evidence-based guidelines as evaluation benchmarks for clinical outcomes (e.g., A1c control, blood pressure control, lipid level controls, and smoking cessation). Highlight and communicate recommendations in these guidelines for provider accountability in monitoring clinical care. 2. Use a quality assurance process to assess outcomes (e.g., behavioral/functional outcomes, impact of education, outreach, effects on caregivers and family members with chronic disease, end of life care and impact on mental health). 3. Encourage employers to provide meaningful financial incentives for employees and their providers to reach established benchmarks.

0616
09/15/08

Objective 4	By 2012, increase by 5% the percentage of adults age 18 and older who are conducting comprehensive self-management to control their dise
Strategies	1. Assess current disparities and create plans to remove identified disparities through culturally-focused diabetes care. 2. Involve community leaders in creating community health initiatives. 3. Train health care professionals, para-professionals and lay health workers in the community health setting on diabetes prevention, care and management. 4. Create a standard self-management education program that is simple and user friendly and that involves a program for health care literacy that is language appropriate and culturally sensitive. 5. Foster patient responsibility for diabetes care by adopting and promoting self-management education programs that engage the patient, and provide patient financial incentives and personalized nutrition guides and exercise plans. 6. Engage employers to work with managed care organizations in supporting the importance of simple, barrier-free self-management education. 7. Support interventions promoted by other programs such as the Department of Public Health's Obesity Program that include modifications to companies, restaurants, the workplace and school lunch programs to provide healthy nutrition environments.
Objective 5	By 2012, increase by 10% the proportion of at risk individuals who are screened for diabetes and pre-diabetes using evidence-based guidelin
Strategy	1. Promote new and enhanced screening programs in varied settings. 2. Promote increased use in clinical practice of ADA and other evidence-based criteria for diabetes diagnosis and pre-diabetes.
Objective 6	By 2012, increase by 10% the proportion of health care providers who adopt a uniform system of reporting, including the coding of diabetes diagnoses.
Strategy	1. Promote and support standardized coding and reporting tools and processes for providers. 2. Promote linkage of diagnosis plans with education plans.
	Education & Awareness
Objective 1	By 2012, increase by 5%, the proportion of people with diabetes participating in diabetes self-management education programs in order to learn about controlling their diabetes.
Strategies	1. Make available training curricula options for patient education. 2. Create partnerships with hospitals, CHCs, volunteer health organizations, CADH, AHA, and local health departments to ensure staff has information relevant to care through education resources added to organizational newsletters (hospitals, CT DPH, etc.) and Web sites. 3. Train non-CDEs, including school nurses, medical assistants, certified nurse aides, peer-to-peer educators, faith organization members, senior center staff, local health department educators, and lay persons as referral resources, to augment traditional education programs. 4. Engage HMOs to standardize access to education programs by taking advantage of Connecticut law that requires diabetes education for persons with diabetes. 5. Partner with grocery stores, libraries, senior centers, town halls, and other public places to make diabetes, nutrition, and general health information available. 6. Make people with pre-diabetes aware of the potential to prevent diabetes onset through lifestyle change. 7. Outreach to leaders of large group practices to encourage their members' physicians to refer to diabetes education programs.

0617
09/15/08

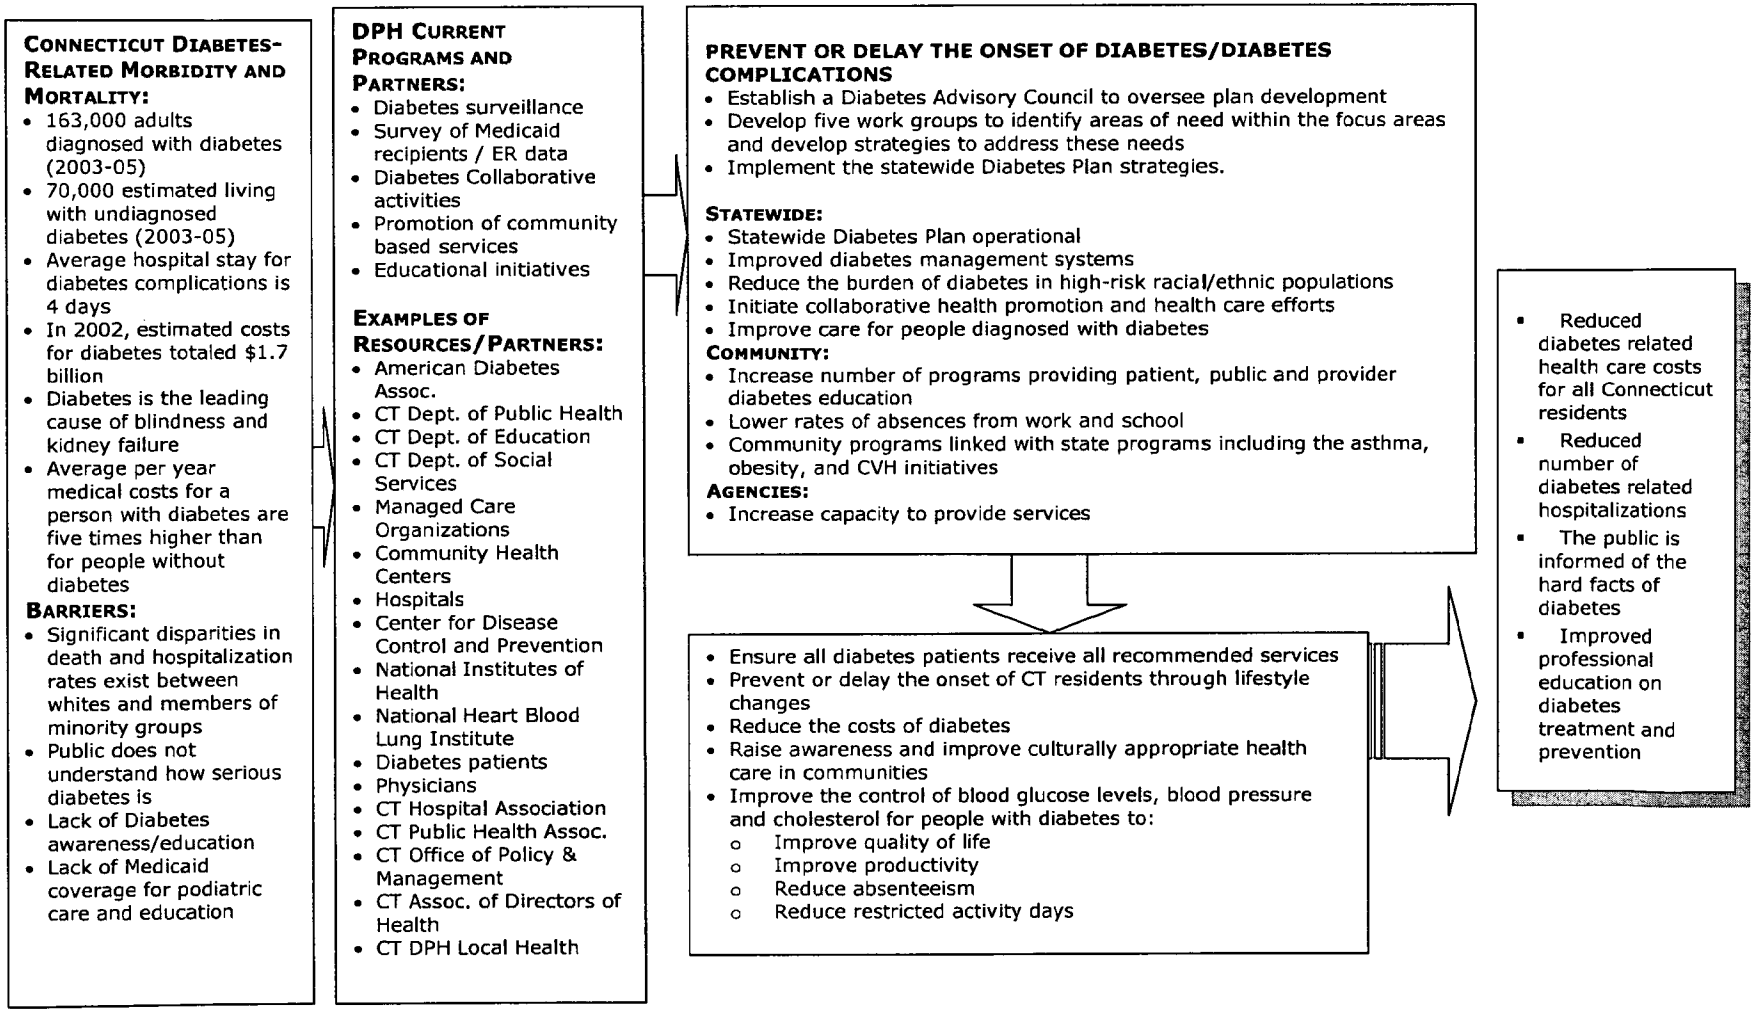
Objective 2	By 2012, increase by 10% the number of providers who participate in continuing education programs focused on diabetes.
Strategies	1. Expand physician participation in professional education programs by encouraging insurers and pharmaceutical companies to offer scholarships for doctors to attend the national scientific sessions or diabetes post graduate conferences and providing materials on these programs to physicians' office staff. 2. Conduct ongoing professional education with a curriculum that incorporates best practices and prevention (e.g., Grand Rounds, CMEs, etc.) for physicians involved in providing diabetes services. 3. Engage hospital and clinic administrators to foster mentoring or peer education to change physician behavior and to support the increased number of, and enrollment in, patient education programs; engage medical directors from MCOs and PHOs to encourage their members to receive regular diabetes education. 4. Make providers and people with pre-diabetes aware of the potential to prevent diabetes onset through lifestyle change. 5. Promote the use of relevant billing and reimbursement codes for screening, education and treatment
Objective 3	By 2012, improve public awareness of the impact of diabetes by increasing by 10% the number of partnerships with community organizations such as schools, libraries, the media, town halls, and other public places.
Strategies	1. Engage schools, libraries, senior centers, town halls and other public places, workplaces, faith-based and community-based organizations to share information on the risks, burden, and impact of diabetes, and on the availability of screenings. 2. Train non-CDEs to provide accurate information on signs and symptoms of diabetes, and to refer people to formal education programs; develop a proficiency measure for community and peer diabetes health educators. 3. Launch an information campaign drawing on partnerships, existing programs, and national campaigns to highlight the rapid rise in diabetes diagnoses; connect with a public figure to promote the message. 4. Engage community organizations to ensure that messages about lifestyle modification are delivered in culturally relevant and positive ways.

Access and Policy

Objective 1	By 2012, increase by 5% the proportion of people who receive comprehensive diabetes care, i.e., diabetes preventive care, treatment, supplies, equipment, medication, education and medical nutrition therapy.
Strategies: Universal	1. Demonstrate the cost-effectiveness of diabetes education programs and promote a partnership among CT DPH, private groups, and public groups to implement universal diabetes education. 2. Engage the state legislature to appropriate funds for pilot programs to spread the message about diabetes, both how to prevent it, and how to treat it. 3. Secure commitment of the health care delivery system to the Diabetes Bill of Rights, and expand the definition of those covered under the Diabetes Bill of Rights. 4. Encourage diabetes-friendly policies at employers and schools. 5. Determine how to find people at high-risk for diabetes and deliver cost-effective interventions as efficiently as possible.
Strategies: For Persons with Insurance Coverage	1. Encourage insurers to cover diabetes preventive care, treatment, supplies, education, and treatment with co-payments that do not exceed 25% of the covered item's total cost, and include diabetes education and medical nutrition therapy as a reimbursable service across insurance programs. 2. Work to change Federal ERISA provisions to require self-insured employers to cover diabetes supplies, education, and treatment, and adopt the ADA Diabetes Bill of Rights to guide insurance regulation in Connecticut.

0618
09/15/08

	3. Develop "Report Cards" for insurance plans on 1) what is covered and 2) on A1c levels including rates for flu shots, foot exams, and eye exams. (HEDIS /NCQA Measures)
Strategies: For persons covered under Medicaid	Support efforts to ensure all Medicaid eligible persons with diabetes are enrolled and receiving medically appropriate care and treatment, in their community when possible, including podiatric care and diabetes education services.
Strategies: For the Uninsured	1. Pilot a program with appropriate legislative and private foundation support to provide lab tests, supplies, medicines, and education for uninsured people with diabetes through a variety of providers and settings. 2. Develop and seek legislative support for a program with community clinics, hospitals, and other health care providers to provide free or low cost access to preventive education and care, and treatment for uninsured or underinsured persons with diabetes. 3. Expand use of Patient Access Programs sponsored by major pharmaceutical companies.
Objective 2	By 2012, increase by 5% the number of diabetes education services and disease management supports for people with diabetes.
Strategies	1. Assess diabetes public health infrastructure to determine system gaps and develop policies that encourage the development of strong, efficient networks of providers by engaging legislators and insurers to make them aware of the barriers that exist to proper care. 2. Develop improved capacity to address the behavioral causes of poor diabetes patient outcomes, including defining and addressing reimbursement issues that may inhibit access to psychologists' services. 3. Address shortages of specialists with focus on diabetes by expanding the number of nurse practitioners and physician assistants that specialize in diabetes care through educational incentives and policy development to support creation of teams of connected diabetes professionals. 4. Expand the role of licensed health care professionals to provide more diabetes care including more frequent follow-up. 5. Publish HEDIS measures related to diabetes for health plans; develop benchmarks on diabetes measures to inform policy; develop mandated reporting of specific diabetes-related measures by hospitals and other health providers.



Surveillance

Objective 1	By 2012, increase by 5% the number of hits to the diabetes surveillance Web page as a means of increasing accessibility to the diabetes prevalence, morbidity and mortality data.
Strategies	1. Develop partnerships with large centers, registries, community-based organizations, CHCs, occupational health services, and use academia to assist in research and data collection projects. 2. Identify other data sources and data-collecting agencies to meet with state planning groups to determine how best to create data sharing networks. 3. Provide technical assistance on how to collect data to organizations that provide diabetes services. 4. Provide resources to community-based organizations to gather data about diabetes services. 5. Conduct surveillance of priority subpopulations, as limited resources allow, and make information resources available to non-DPH organizations as appropriate. 6. Disseminate available diabetes surveillance data to the general public through the CT DPH Web site and other appropriate venues.

Comprehensive System of Diabetes Care and Prevention

"The mission of the *Connecticut Diabetes Prevention and Control Plan* is to create an environment for change in which a comprehensive system of diabetes care and prevention will reduce or delay the onset of diabetes and its complications, and enhance the quality of life for people affected by diabetes. Successful implementation of the plan will bring about measurable improvement in the quality of life for people with diabetes and pre-diabetes, resulting in healthier communities."—Advisory Council

0620
09/15/08

1. DEFINING DIABETES

a. Characteristics of Diabetes

What is Diabetes?

Diabetes, as defined by the American Diabetes Association (ADA), is a group of diseases characterized by high levels of blood glucose resulting from defects in insulin secretion, insulin action, or both. The consequences of these elevated blood sugars can result in serious complications which pose a severe public health concern in Connecticut.

Types 1 and 2
- Type 1 accounts for 5 to 10% of all diabetes cases
- Type 2 accounts for 90-95% of all cases of diabetes

Types of Diabetes

Type 1 diabetes is an auto-immune disease which destroys the beta cells of the pancreas which normally produce insulin. Therefore, the person with type 1 diabetes must take multiple daily insulin injections. Type 1 accounts for 5-10% of diabetes cases.

Type 2 is the most common type of diabetes accounting for 90-95% of cases. This occurs when the body fails to make enough insulin or properly use it. Aspects of type 2 diabetes include:

Risk factors for Type 2
- Overweight
- Family member with diabetes
- High blood pressure/cholesterol
- Gestational diabetes
- Being African American, Native American, Asian or Pacific Islander, Hispanic American
- Pre-diabetes

- Gradual onset often with few or no symptoms.
- Some people with type 2 diabetes can control their blood sugars through meal planning and exercise. Others will need medication, including insulin.
- The majority of people with type 2 diabetes are over age 40; however, it is becoming increasingly more common among children and young adults.
- Risk factors for type 2 diabetes include: being overweight (defined as a body mass index over 25 kg/m2), having a family member with diabetes, having high blood pressure or cholesterol, having a history of gestational diabetes or delivering a baby over 9 pounds, being African American, Hispanic, Native American, Asian or Pacific Islander, and/or having pre-diabetes as described below.

Gestational diabetes is a form of diabetes that occurs in 4-8% of pregnancies. Gestational diabetes usually requires treatment only during pregnancy but puts the mother at high-risk for later development of diabetes. Treatment involves meal planning, physical activity, and in some cases insulin. Treatment helps to normalize maternal blood sugars and prevent complications in the infant, including low blood sugar at birth and larger size (greater than 9 lbs.). Risk factors

for gestational diabetes include being overweight, being an ethnic minority, and having a family history of diabetes.

Pre-diabetes is a condition in which a person's blood sugar levels are higher than normal, but are not high enough to be considered diabetes. People with pre-diabetes do not often exhibit any symptoms. They are, however, at greater risk for developing diabetes and having a heart attack or stroke. Diagnosis of pre-diabetes is a fasting blood sugar equal to or greater than 100 mg/dL, but less than 126 mg/dL or a two-hour blood sugar of 140-199 mg/dL after a 75 gram glucose challenge. Research conducted on people with pre-diabetes in the Diabetes Prevention Program at National Institutes of Health demonstrated that 5-7% weight loss could prevent or delay diabetes.

Diabetes **can be prevented or delayed** – a 5-7% weight loss could prevent or delay diabetes

Symptoms and Diagnosis

Symptoms of high blood sugar may include frequent thirst (polydipsea) and urination (polyuria), unexplained weight loss, fatigue, cuts that are slow to heal, frequent infections, tingling or numbness in the feet, legs or fingers, and blurred vision. Frequently though, no symptoms are present, and diabetes often goes undetected. Meanwhile, the damaging effects of high blood sugar are beginning.

The diagnosis of diabetes is made when symptoms are present and there is a random blood sugar greater than or equal to 200 mg/dL, or when a fasting blood sugar is greater than or equal to 126 mg/dL. These results should be confirmed by repeat testing on a different day. Alternately, diabetes can be diagnosed with a two-hour post-load blood sugar greater than or equal to 200 mg/dL during an oral glucose tolerance test using 75 grams of glucose.

Effects of Diabetes

The chronic effects of high blood glucose are associated with long-term damage to various organs, especially the eyes, kidneys, nerves, and blood vessels. The potential long term complications of diabetes can include kidney failure, loss of vision, amputation (usually of the lower extremities), stroke, heart disease, complications of pregnancy, and gum disease. Research has also shown depression to be twice as prevalent among persons with diabetes than nondiabetic controls[iv] and is associated with poor diabetes outcomes in quality of life,[v] disability,[vi] blood sugar control,[vii] long-term complications,[viii] mortality,[ix] and healthcare costs[x]. There are also acute or

Diabetic Retinopathy

immediate concerns associated with diabetes. These include hypoglycemia, diabetic ketoacidosis, and hyperglycemic hyperosmolar states.

b. Diabetes as a Self-Managed Disease

Research has shown that good blood sugar control can help avoid many complications associated with diabetes. The *Diabetes Control and Complications Trial* conducted with individuals with type 1 diabetes, and the *United Kingdom Prospective Diabetes Study* of people with type 2 diabetes, among others, have demonstrated that achieving good blood sugar control can decrease complications.

Treatment of diabetes varies with the type of diabetes, but there are many similarities. It is very much a self-managed disease. Successful management requires knowledge, skills and a willingness to modify behaviors related to food intake and physical activity, as well as blood sugar monitoring, medication adherence, and frequent medical follow-up.

2. THE CONNECTICUT DIABETES PARTNERSHIP

The MISSION of the Connecticut Diabetes Partnership is to create an environment for change in which a comprehensive system of prevention and care will prevent or delay the onset of diabetes, reduce its complications when diabetes is diagnosed, and enhance the quality of life for people affected by diabetes. Successful implementation of the plan will bring about measurable improvement in the quality of life for people with diabetes and pre-diabetes, resulting in healthier communities.

The Connecticut Department of Public Health (CT DPH) continues to respond to the changing demographics of its residents and the accompanying health issues that confront them. Increasingly, diabetes has become a topic of concern for the Commissioner of Public Health, the public health sector, health care providers, health insurers, families, and employers. Increased incidence and costs, both financial and psychological, associated with this chronic disease have raised the awareness for the need of a better system to prevent or delay the onset of diabetes and reduce its complications.

The CT DPH recognizes that the increasing prevalence of diabetes is a serious health issue for Connecticut. To better address the epidemic and to embark upon a statewide diabetes public health plan, Commissioner J. Robert Galvin, M.D., M.P.H., asked key individuals to provide guidance and recommendations to the Connecticut Diabetes Prevention and Control Program (CT DPCP), directing them to:

- An estimated 233,000 CT adults have diabetes but 70,000 of these are undiagnosed
- The diabetes prevalence among the Black population in CT is 10%, compared to 6.2% in CT overall
- Lower income adults are more likely to have diabetes than those with higher incomes

- Provide expert advice on emerging diabetes issues affecting care, treatment, and quality of life for people with diabetes or at risk for diabetes;
- Describe the burden of diabetes in Connecticut;
- Set diabetes priorities;
- Improve policy and legislative efforts; and
- Design and implement a diabetes plan, and influence the strategic planning of the CT DPCP.

Statewide Resources

The Connecticut Department of Public Health's Diabetes Prevention and Control Program (CT DPCP) operates within the AIDS and Chronic Diseases Section of the Public Health Initiatives Branch. The CT DPCP is primarily funded by the Centers for Disease Control and Prevention (CDC), Division of Diabetes Translation. The goal of the CDC program is to reduce the burden

of diabetes in the United States. It works to achieve this goal by combining support for public health oriented diabetes prevention and control programs and translating diabetes research findings into widespread clinical and public health practice. The mission of this division is, "To eliminate the preventable burden of diabetes through leadership, research, programs and policies that translate science into practice." CDC is guided by the *Ten Essentials of Public Health Service* (see Appendix C).

The goals of the C DPCP are to improve care for people diagnosed with diabetes, initiate health promotion efforts in collaboration with other chronic disease programs, and reduce the burden of diabetes for people in high-risk racial and ethnic populations in Connecticut. The implementation of a statewide plan focuses on the Chronic Care Model and creative linkages among state initiatives (e.g., AIDS, asthma, cancer, diabetes, heart disease and stroke, obesity). To achieve a statewide Diabetes Prevention and Control Plan, CT DPH acknowledges the need to convene stakeholders, develop a common plan, and provide an ongoing forum for improvement to diabetes prevention and control.

The CT DPCP serves as a statewide resource for diabetes programs and information while providing a forum for stakeholders statewide. Significant efforts are made by the CT DPCP to reach out to providers of diabetes care and work with partners in managed care, health service delivery, and media to effect change within community-based programs, and increase health information communication. CT DPH maintains a diabetes surveillance system to continuously monitor and assess the burden of diabetes and to assist in the evaluation of programs. The CT DPCP collaborates on various projects such as quality improvement initiatives at community health centers, efforts to increase the number of bilingual certified diabetes educators, promotion of influenza and pneumoccal vaccinations, eye exams, foot exams and A1c testing (3 month average of blood sugars), and providing professional education for health care providers.[xi] The current effort undertaken by the CT DPCP was to convene stakeholders to develop and implement a statewide diabetes plan.

Connecticut Success Stories

The following are examples of successful programs in Connecticut. It is the intent of the plan to engage and build upon these programs and others like them to realize the plan goals and recommendations.

- Currently the American Diabetes Association (ADA) recognizes 26 diabetes education programs across the state. Each program meets rigorous standards to achieve this designation; all offer both group educational classes and one-to-one counseling for diabetes. Some include on-site services of endocrinology, podiatry and optometry.

- *Learning and Diabetes: A Resource Guide for Connecticut Schools and Families* was developed through cooperation with key organizations and individuals committed to improving diabetes care for school children. It has been distributed to school nurses throughout the state and is posted on the Connecticut Department of Education Web site.
- *Bridgeport Mayor's Diabetes Awareness Initiative:* This city-wide program has brought together partners from the public and private sectors. The initiative consists of series of educational sessions at various locations around the city, coaching sessions, "dancing for diabetes" programs, and various media campaigns. Data is being collected on the impact on diabetes control.
- *World Without Limits Diabetes Health Fair* at the First Cathedral in Bloomfield, Connecticut is a faith-based initiative that has attracted over 1,000 African Americans each year. The event features screenings, informational presentations, diabetes product information, and entertainment. One of the outgrowths of this program is the "Each One, Teach One" Diabetes Support Group for African Americans held at the Urban League.
- Health Resources Services Administration's *Health Disparities Diabetes Collaborative:* Seven community health centers in Connecticut participate in the diabetes collaborative, which was developed to improve the way care is delivered. It is based on the Chronic Care Model, and through system redesign, the programs have been able to achieve remarkable improvements in diabetes metabolic control.
- *Robert Wood Johnson Advancing Diabetes Self-Management Program* at Community Health Center Inc., Middletown, CT: Over 500 patients have been enrolled in a program focusing on self-management goal setting and achievement to improve their diabetes control.
- *The American Diabetes Association Expo*: This annual event held in Hartford, Connecticut has grown to attract over 2,000 attendees. The day-long program features cooking demonstrations, screenings, diabetes product information, and informational presentations.
- *Partners Reducing the Effects of Diabetes*: *Initiatives through Collaboration and Teamwork* at the Yale Griffin Prevention Research Center. This project strives to develop strategies to prevent and reduce diabetes and diabetes complications among residents in New Haven and Bridgeport. It is a faith-based project tailored toward low-income African American residents. Project strategies include training community health advisors to promote good health.
- *Amigos en Salud* is a program at Hartford Hospital in which "Promotoras" (community-based lay health educators), specifically trained in behavior change strategies and diabetes, have formed partnerships with patients and help them design and implement changes that are consistent with their cultural beliefs and lifestyle.

The Background and Process

Responding to the rise in prevalence of diabetes in Connecticut and to a request by the Centers for Disease Control and Prevention (CDC), the Connecticut Department of Public Health (CT DPH) convened a diverse group of stakeholders to form the Diabetes Advisory Council in December 2005 to oversee creation of the state diabetes plan. The Advisory Council created an executive committee to manage work groups and to report on the groups' progress. Each member of the Executive Committee was assigned as co-chair of one of the five work groups.

DPH then sent invitations to individuals representing health care delivery, health insurance, government, business, education, and community organizations to serve on the work groups that would be responsible for identifying the barriers to effective diabetes prevention and control in Connecticut, and for creating the strategies to overcome those barriers. The work groups were convened at a large meeting of the planning partners on January 31, 2006. At that meeting, the planning partners were briefed on the current state of diabetes in Connecticut, and they selected the work group(s) to which they felt they could best contribute.

During early 2006, the five work groups—Access and Policy, Disease Management, Education and Awareness, Surveillance, and Prevention—met regularly to refine problem statements, to review research, and to determine the methods that would be most effective in combating diabetes in Connecticut. By early May 2006, each work group had a comprehensive list of the problems that existed in its work area and a set of recommendations to address each problem. All five work groups were reconvened on May 10, 2006 to brief one another on their accomplishments and to make their recommendations to create the Diabetes Prevention and Control Plan. In addition, the planning partners decided on a specific set of action steps to take in the first year of plan execution to produce meaningful success soon after the plan's release. Each work group had a specific focus.

- The *Access and Policy Work Group* was assigned the task of identifying and communicating the barriers that prevent people with diabetes and those at risk for diabetes from receiving the care or education they need to manage their health. The group then devised strategies to overcome those barriers.
- The *Disease Management Work Group* had the task of determining what problems inhibited effective diabetes management and creating recommendations to solve those problems.
- The *Education and Awareness Work Group* was responsible for identifying the gaps in diabetes self-management education, professional education and in general public awareness and for determining the best ways to bridge those gaps.
- The Diabetes Data and Surveillance Work Group of the Connecticut Department of Public Health was responsible for the *Surveillance* section of the plan. The group described the

barriers that still exist to accurate data gathering and sharing, and created recommendations to reduce those barriers.

- The *Prevention Work Group* was responsible for recommending strategies for primary prevention of diabetes in people with pre-diabetes. As planning progressed, primary prevention emerged as an issue that each work group's charge touched upon but did not explicitly address. Mindful that Connecticut's Diabetes and Prevention Control Plan was intended to reduce the incidence of diabetes, as well as, to reduce complications of diabetes among those living with the disease, the combined planning group decided to convene a prevention work group with representatives from the other four work groups. The recommendations coming from this work group are included in the plan.

Achieving the Goals

The *Connecticut Diabetes Prevention and Control Plan* has goals in two broad areas: the care system and care outcomes. While systems improvement is the structural change that the plan seeks, improvement in care outcomes is the ultimate goal of that structural change. Accordingly, the intended impacts of the plan can be organized under two categories: 1) comprehensive system of care and prevention, and 2) improved quality of life. For the purposes of this plan, comprehensive diabetes care is defined as a comprehensive system of care and prevention that includes diabetes preventive care, treatment, supplies, equipment, medication, diabetes self-management education, and medical nutrition therapy, that is offered, available and affordable across the public and private sectors to every citizen of Connecticut in need.

Many of the recommendations involve community groups and local jurisdictions. The National Public Health Performance Standards Program (NPHPSP) has developed *10 Essential Public Health Services* that should be provided in all communities. Consideration was given to the *10 Essential Public Health Services* in the development of the plan. These are included in the Appendix as a reference (see Appendix C).

Healthy People 2010 objectives for diabetes (Appendix B) were used to identify ways to address problems specific to Connecticut and to develop measurable outcome statements.

3. CONNECTICUT, ITS POPULATION AND DIABETES

Introduction

Connecticut is the southernmost New England state, bordered by Massachusetts to the north, Long Island Sound to the south, Rhode Island to the east, and New York to the west. Much of Connecticut's population lives in the larger cities along the coastal plain and in the river valley of the Connecticut River, which bisects the state from north to south. Connecticut is characterized by high social and economic contrast and racial and ethnic diversity. It is the third smallest in area, but fourth most densely populated state in the U.S.; about 88% of its population lives in urban areas.[xii]

Whether in terms of health status, income, poverty, racial composition, or almost any other factor, statewide averages for Connecticut often are misleading. Striking disparities appear across town lines, among racial and ethnic groups, and among urban and rural populations. These differences have engendered the concept of "two Connecticuts,"[xiii] one for people who live in the wealthiest state in the nation, and the other for those living in some of the most severe and concentrated pockets of poverty in the U.S. Recently the notion of "five Connecticuts" based on disparate social and economic factors has been proposed.[xiv]

The overall health of Connecticut's people varies dramatically among its wealthiest and poorest communities. Connecticut's population is changing, and the demographic changes are reflected in both numbers and patterns of diabetes and evolving needs for health care and support services. Disparities in diabetes prevalence, treatment, clinical outcomes, and mortality were fundamental considerations in the development of the *Connecticut Diabetes Prevention and Control Plan.*

CONNECTICUT'S PEOPLE

The Aging of the Population

Diabetes prevalence increases with age. Connecticut's population is older, on average, compared to the U. S. population as a whole. Older adults are the fastest growing segment of our population. Between 1990 and 2000, the median age of Connecticut residents increased from 34.4 years to 37.4 years, or 2.1 years older than the national median age.[xv] During the same period, the number of people 65 years of age and older grew by more than 24,000 (Table 1).

Shifts in Racial and Ethnic Composition

Diabetes rates and patterns vary demographically. From 1990 to 2000, the number and proportion of White persons in Connecticut decreased, whereas minority populations increased,

in some cases by 50% or more (Table 1). Connecticut's population is still predominately White (81.6%) and non-Hispanic (90.6%); however, the racial and ethnic composition is dramatically different in the state's largest cities. Racial and ethnic minorities account for 72% of the population in Hartford, 57% in New Haven, and 55% in Bridgeport, and Hispanics (of any race) represent 41%, 21%, and 32%, respectively, of the population in these three cities.[xvi]

Hispanics are now the largest minority group in Connecticut and the United States, with the trend expected to continue.

Table 1 Population Changes for Certain Groups: Connecticut, 1990 to 2000

Population Group	1990		2000		Change from 1990 to 2000	
	Number	% of Total	Number	% of Total	Number	%
Total Population (all races and ages)	3,287,116	100	3,405,565	100	118,449	3.6
White	2,859,353	87.0	2,780,355	81.6	-78,988	-2.8
African American - Black	274,269	8.3	309,843	9.1	35,574	13.0
Asian American/Pacific Islander	50,698	1.5	83,679	2.5	32,981	65.1
American Indian/Alaskan Native	6,654	0.2	9,639	0.3	2,985	44.9
Hispanic/Latino (any race)	213,116	6.5	320,323	9.4	107,207	50.3
Older adults (65+ years of age)	445,907	13.6	470,183	13.8	24,276	5.4

Source: U.S. Census Bureau, 2000

Social and Economic Characteristics

Education Level: Compared to the American population as a whole, Connecticut residents have achieved higher levels of education (Table 2). In 2000, 84% of state residents 25 years of age and older were high school graduates or higher, 31% had completed a bachelor's degree or more, and less than 6% had less than a 9th grade education. In contrast, in the cities of Hartford and Bridgeport, only 61% and 65% of residents, respectively, were high school graduates, only about 12% had a baccalaureate degree or higher, and 17% and 15%, respectively had less than a 9th grade education.

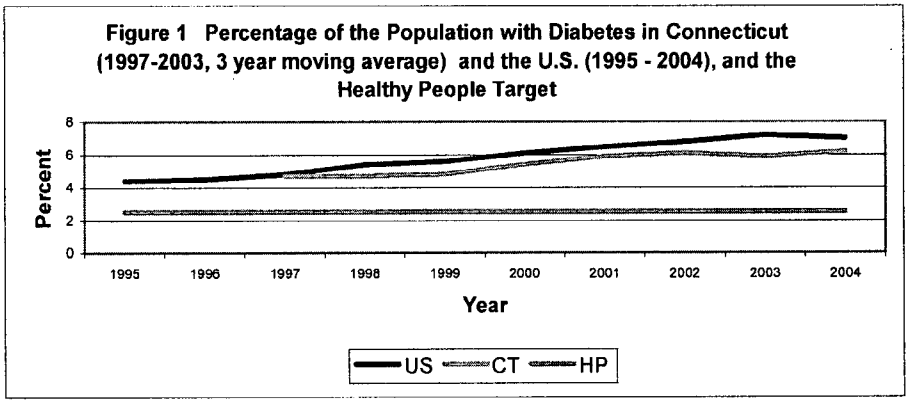
Table 2: Changes in Selected Social and Economic Characteristics: Connecticut, 1990 and 2000 and United States, 2000

Characteristic	Connecticut		U.S.
	1990[xviii]	2000[xix]	(2000)[xvii]
Less than 9th grade education (age 25+)	8.4%	5.8%	7.5%
High school graduates (age 25+)	79.2%	84.0%	80.4%
Bachelor's degree or higher	27.2%	31.4%	24.4%
Speak language other than English	15.2%	18.3%	17.9%
Do not speak English "very well"	6.0%	7.4%	8.1%
Per capita income PP [7PP]	$20,198	$28,766	$21,587
Persons living below poverty level TPTP[xx]	6.6%	7.6%	12.4%

Source: U.S. Census Bureau, 2000

Language Spoken at Home

In 2000, nearly one in five Connecticut residents over 5 years of age spoke a language other than English, and more than 7% did not speak English "very well" (Table 2). In Hartford and Bridgeport, more than 40% of the population spoke a language other than English, and more than one in five of them spoke English less than "very well." People with a poor ability to read, write, and speak English often have a poor understanding of medical information and advice. As a result, they are more likely to engage in risky behaviors like smoking, they are less likely to access health services, such as screenings for diabetes, and they end up with poor health outcomes, compared to people with high English literacy.



4. BURDEN OF DIABETES IN CONNECTICUT

Prevalence

An estimated 6.2% of the Connecticut adult population, or approximately 163,000 adults 18 years and older, have diagnosed diabetes (2003-2005 data) compared with about 7% of the U.S. population.[xxi, xxii] The Centers for Disease Control and Prevention (CDC) estimates that about 30% of all diabetes cases are undiagnosed, partly because symptoms develop gradually and severe symptoms may only occur after several years.[xxiii] An additional 70,000 Connecticut adults are estimated to have undiagnosed diabetes. Thus, a total of 233,000 Connecticut residents are estimated to have either diagnosed or undiagnosed diabetes. Prevalence estimates reported below refer to diagnosed cases of diabetes.

National survey data suggest that diabetes has continuously increased since the mid-1990s.[xxiv] The national Behavioral Risk Factor Surveillance System (BRFSS) survey estimated adult diabetes prevalence at 4.4% in 1995, 6.1% in 2000, and 7% in 2004. The prevalence of diabetes in Connecticut has gradually increased since 1999. Diabetes prevalence in the Connecticut adult population was 4.8% in 1998-2000 and 6.2% in 2003-2005.[xxv] The U.S. *Healthy People 2010* target for diabetes prevalence is 2.5%.

Figure 1 Percentage of the Population with Diabetes in Connecticut (1997-2003, 3 year moving average) and the U.S. (1995 - 2004), and the Healthy People Target

Sources: US Department of Health and Human Services, 1990; 2000; Centers for Disease Control and Prevention, 2005; Connecticut Department of Public Health, 2005.

Prevalence by Age, Race/Ethnicity and Household Income

Diabetes prevalence rates vary by age, race/ethnicity, and household income levels. Prevalence increases by age with Connecticut adults aged 60 and over having the highest rates and adults aged 18 to 29 having the lowest rates of diabetes (Figure 2). Among subpopulation groups, Black adults have significantly higher prevalence than White and Hispanic adults ($p<.05$) [Figure 3]. Lower-income adults are also more likely to have diagnosed diabetes than are higher-income adults in Connecticut (Figure 4). [xxvi]

The prevalence of diabetes in Connecticut and the United States is likely to increase for a few reasons. First, large segments of both populations are aging. Second, the fastest-growing segment of the U.S. and Connecticut populations include Hispanic Americans and other minority groups, who are considered at higher risk for diabetes nationwide. Finally, Americans are increasingly overweight and sedentary. According to recent estimates, the prevalence of diabetes in the United States is predicted to reach 8.9% of the population by 2025.[xxvii]

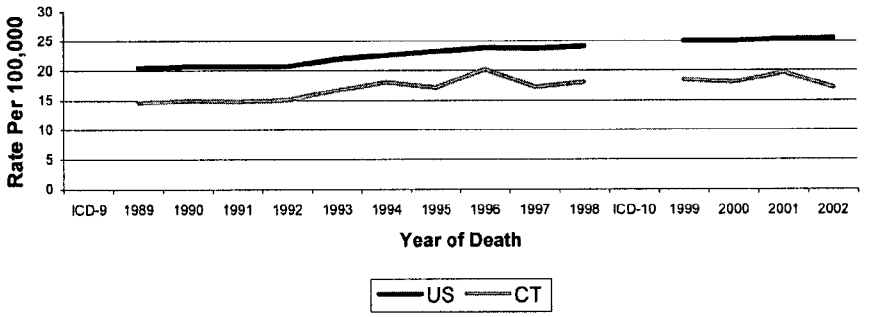
Source for Figures 2, 3, 4: Connecticut Department of Public Health. 2006.



Mortality

Diabetes is the seventh leading cause of death in Connecticut. Most people with diabetes die from related complications rather than directly from the disease itself; therefore, examination of diabetes as the underlying cause of death alone does not accurately represent its extensive contribution to overall mortality. While diabetes was the underlying or "primary" cause of deaths for 674 residents in 2002, it was listed as a primary or secondary ("diabetes-related") cause of death for 2,771 Connecticut residents.[xxviii] National data suggest that diabetes is underreported on death certificates.[xxix]

Trends in Mortality

Age-adjusted death and premature mortality rates due to diabetes increased significantly in Connecticut during the 1990s ($p<.001$).[xxx] This increase mirrors a similar trend nationwide.[xxxi] Age-adjusted diabetes mortality rates for Connecticut residents have been consistently lower than comparable national rates (Figure 5). Diabetes-related mortality rates for Connecticut residents did not change significantly during the 1990s.[xxxii]

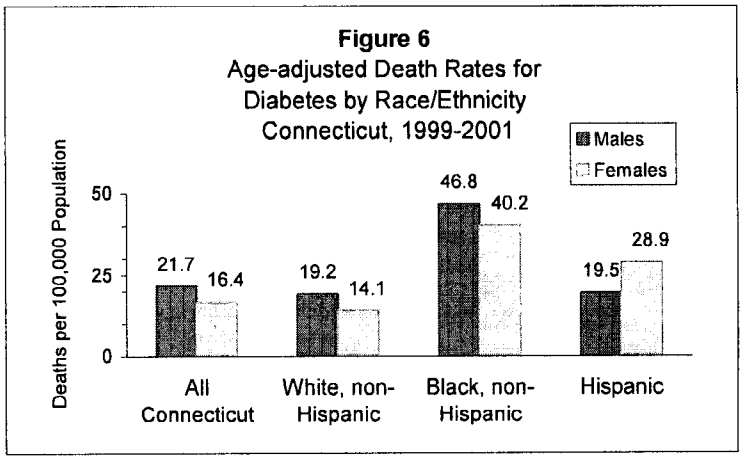


Figure 5 US and Connecticut Age-Adjusted Diabetes Mortality Rates, 1989-2002

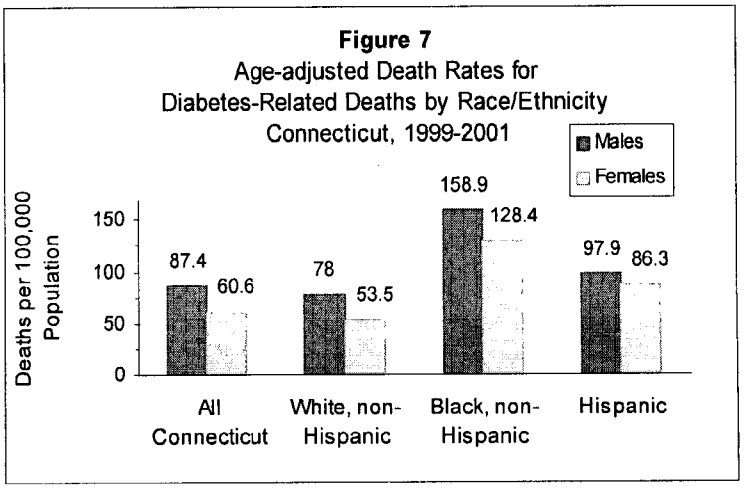
Sources: Centers for Disease Control and Prevention; Connecticut Department of Public Health, 2005.
Note: Cause-of-death coding changed from ICD-9 to ICD-10 in 1999.

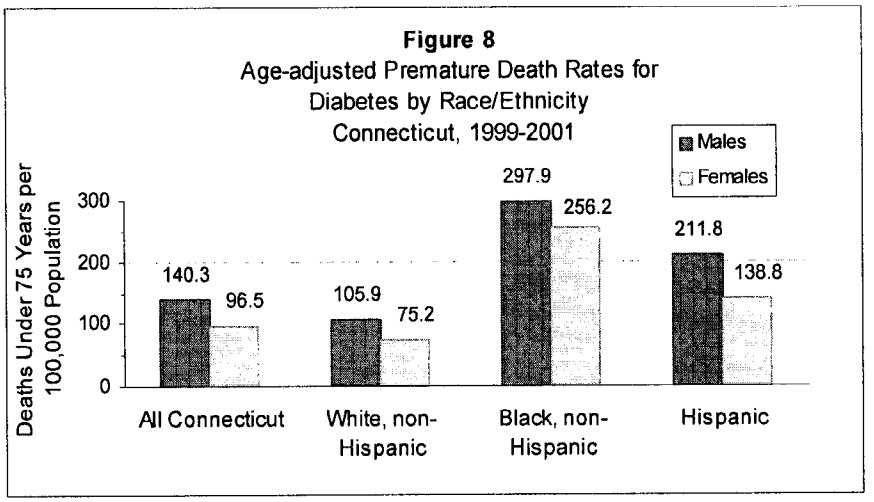


Diabetes Mortality by Gender, Race, and Ethnicity

Connecticut male residents have significantly higher mortality rates from both diabetes and diabetes-related causes than do Connecticut females ($p<.01$ for both comparisons) [Figures 6 and 7].[xxxiii] These findings are consistent with national data showing slightly higher diabetes mortality rates among males.

Of all subpopulation groups, Black (non-Hispanic) males and females have the highest mortality rates due to diabetes and diabetes-related causes and significantly higher mortality than the respective White (non-Hispanic) and Hispanic populations. Black males have 2.4 times the risk of death due to diabetes and twice the risk of diabetes-related deaths compared with White males ($p<.01$ for both comparisons). Black females have 2.9 times the risk of death due to diabetes and 2.4 times the risk of diabetes-related deaths compared with White females ($p<.01$ for both comparisons) [Figures 6 and 7].[xxxiv]

The diabetes and diabetes-related mortality rates of Hispanic males are not significantly different than the respective rates for White males. Hispanic females have twice the risk of diabetes death ($p<.01$) and 1.6 times the risk of diabetes-related



Source for figures 6, 7: Amadeo and Mueller, Connecticut Department of Public Health, 2005

death (p<.01) rates compared with White females (Figures 6 and 7).[xxxv]

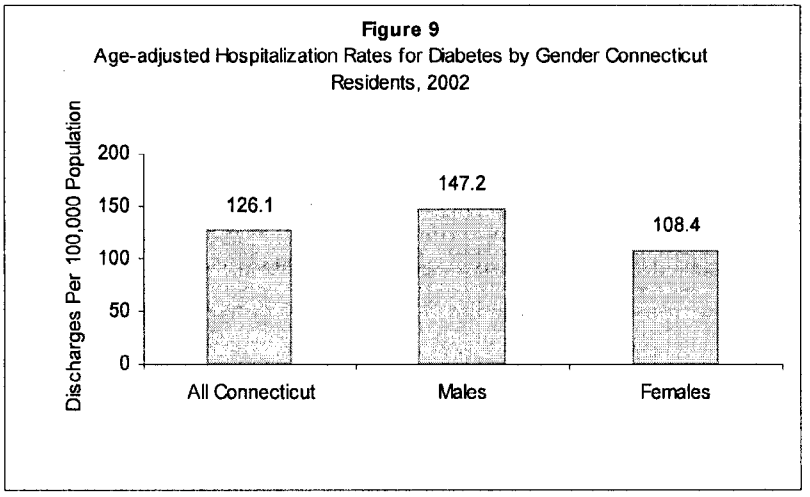
Premature Mortality by Gender, Race, and Ethnicity

Premature mortality, defined as the "years of potential life lost before age 75," emphasizes deaths that occur at younger ages. For example, a person who dies at age 45 is considered to have lost 30 years of life, and a person who dies at 70 is considered to have lost 5 years of life.[xxxvi]

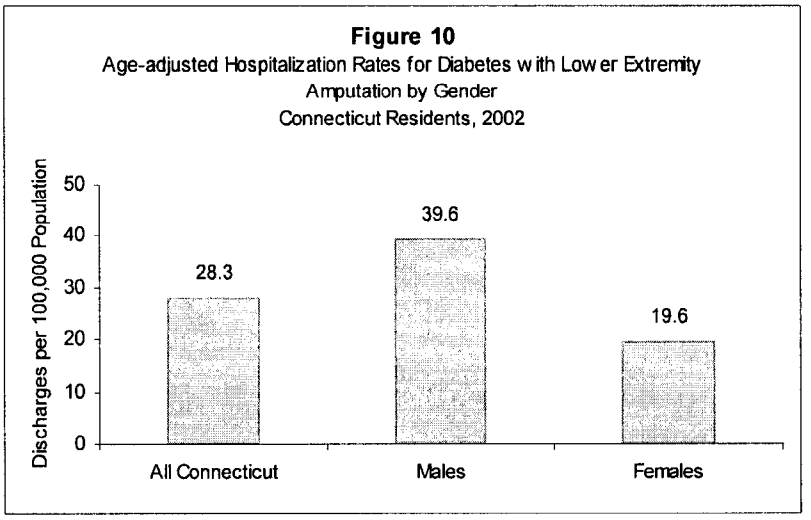
Premature mortality (to age 75) due to diabetes is significantly higher among Black (non-Hispanic) males and females compared with the respective White (non-Hispanic) and Hispanic populations (p<.01 for both comparisons). Black males have 2.8 times the risk of premature death due to diabetes compared with White males. Black females have 3.4 times the risk of premature death due to diabetes compared with White females (Figure 8).[xxxvii]

Source: Amadeo and Mueller, Connecticut Department of Public Health, 2005.

Hispanic females have 1.8 times the risk of premature death due to diabetes compared with White females, but this difference is not statistically significant. Hispanic males have twice the risk of premature death due to diabetes compared with White males (p<.01), and this difference is statistically significant (Figure 8).[xxxviii]



Morbidity

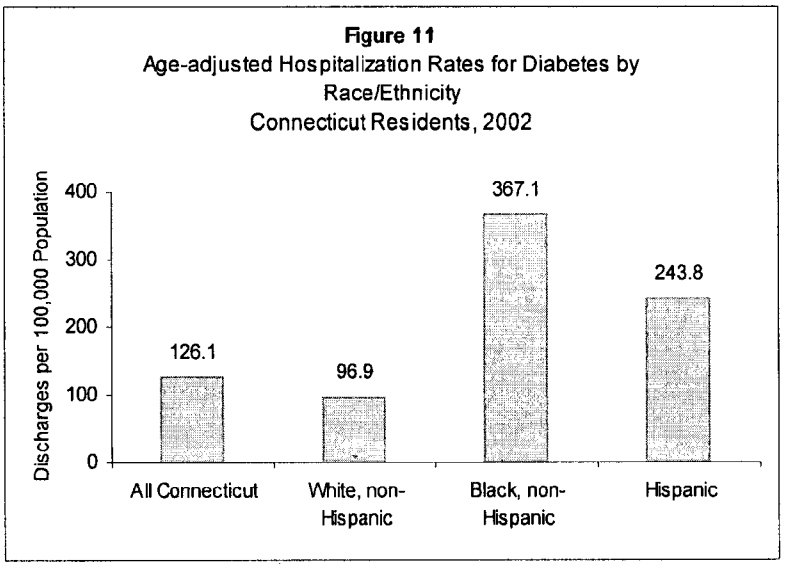


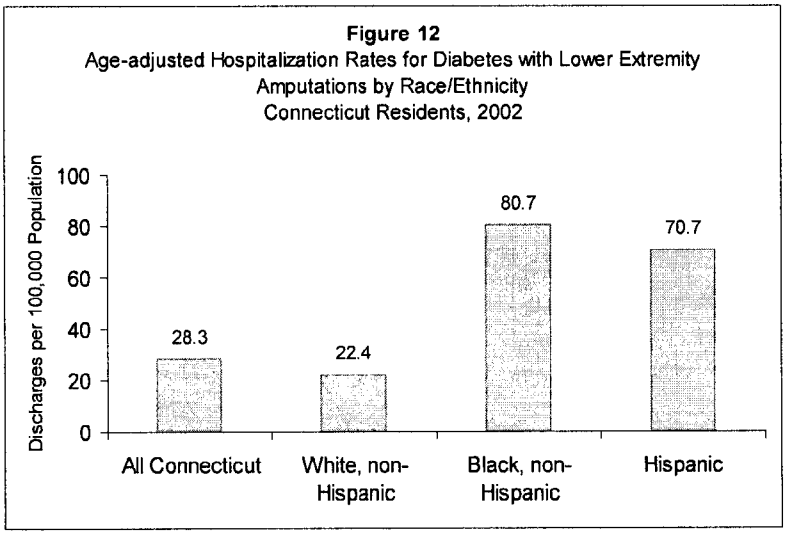
Lack of timely, appropriate medical care may contribute to the complications of diabetes, such as lower extremity amputations, end-stage renal disease, and blindness. For people living with diabetes, the impact of this disease may extend over many years. Cardiovascular disease and lower extremity amputations are significantly more likely to occur in patients with diabetes. For example, national data show that the risk of hospitalization from cardiovascular disease is two to four times higher for women with diabetes than women without the disease. Those hospitalized with diabetes are 28 times more likely to have an amputation than those without the disease.[xxxix]

Multiple hospitalizations are common among persons with diabetes. Nearly one-third are hospitalized two or more times in the same year due to complications associated with diabetes. Low-income people with diabetes are more likely to experience multiple hospitalizations. About 30% of all diabetes patients who are hospitalized are re-hospitalized in a one-year period.[xl]

Hospitalization Rates by Gender

Connecticut males are significantly more likely to be hospitalized for diabetes and lower-extremity amputations compared with Connecticut females ($p<.05$ for both comparisons). Connecticut males have 1.4 times the rate of hospitalization for diabetes and twice the rate of lower-extremity amputations compared with Connecticut females (Figures 9 and





Source: Connecticut Department of Public Health, Hospital Discharge and Abstract Billing Data Base, 2005

10).[xli]

Hospitalization Rates by Race and Ethnicity

Black (non-Hispanic) and Hispanic Connecticut residents have significantly higher rates of hospitalizations for diabetes and for lower-extremity amputations than do White (non-Hispanic) residents ($p<.05$ for both comparisons). Black residents have 3.8 times the rate of diabetes hospitalizations and 3.6 times the rate of lower extremity amputations due to diabetes compared with White residents. Hispanics have 2.5 times the rate of diabetes hospitalizations and 3.2 times the rate of lower-extremity amputations due to diabetes compared with White (non-Hispanic) residents ($p<.05$ for both comparisons) [Figures 11

Source for figures 11,12: Connecticut Department of Public Health, Hospital Discharge and Abstract Billing Data Base, 2005.

and 12].[xlii]

Economic Costs

The cost of diabetes in Connecticut was estimated at $1.7 billion in 2003.[xliii] This estimate includes direct (medical) costs and indirect costs associated with lost productivity from illness and premature death. Diabetes can accrue enormous indirect costs. It is a major cause of disability and the ability to live independently. It can severely affect the quality of life for individuals and families.

Approximately $77 million was billed for hospitalizations in Connecticut due to diabetes as a principal diagnosis in 2002. Almost $39 million was billed for hospitalizations related to diabetes with a lower extremity amputation.[xliv]

Risk Factors for Diabetes

Risk factors for diabetes are classified as non-modifiable and modifiable factors. Non-modifiable risk factors include increasing age over 45 years; having a parent, brother or sister with diabetes; having a family background that is African American/Black, American Indian, Asian American, Pacific Islander, or Hispanic/Latino; and having had gestational diabetes, or giving birth to at least one baby weighing more than nine pounds. Modifiable risk factors include overweight or obesity; a blood pressure of 140/90 or higher; HDL cholesterol of 35 mg/dL or lower; triglyceride levels of 250 mg/dL or higher; and lack of physical activity.[xlv] Obesity is considered the chief modifiable risk factor for diabetes. People who are 20% or more above their desired weight have four times the risk of developing diabetes compared with those of normal weight.[xlvi]

Lower socioeconomic status has been consistently linked to higher prevalence of type 2 diabetes.[xlvii, xlviii, xlix] Low-income persons are less likely than higher-income persons to have an adequate diet, sufficient physical activity, and access to medical care, factors known to affect progression of the disease.

Table 1. Modifiable and Non-modifiable Risk Factors for Diabetes

Modifiable	Non-Modifiable
• Overweight or obesity	• Increasing age over 45 years
• Blood pressure of ≥ 140/90 mmHg	• Family history
• HDL cholesterol ≤ 35 mg/dL	• Black, Hispanic, Asian, Pacific Islander, American Indian family background
• Triglyceride levels of ≥ 250 mg/dL	• History of gestational diabetes
• Lack of physical activity	• Having given birth to a baby > 9 lbs.

Overweight and Obesity as Modifiable Risk Factors

Body mass index (BMI), or weight adjusted for height, is a widely used screening method for obesity. Medical guidelines identify normal/desirable weight as a BMI under 25, overweight as a BMI of 25 to 29.9, and obese as a BMI of 30 or more.[l] People who are overweight are at much greater risk of developing type 2 diabetes than are normal weight individuals. Being overweight puts added pressure on the body's ability to properly control blood sugar, therefore making it much more likely for diabetes to develop. Almost 90% of people with type 2 diabetes are overweight.[li] Obesity is a metabolic disorder, which can be explained by a combination of hereditary and environmental factors. High calorie diets along with less physical activity have contributed to the obesity epidemic.[lii] Abdominal obesity has been found to place individuals at higher risk for health problems, including high blood pressure, high blood cholesterol, high triglycerides, diabetes, and heart disease.[liii]

Approximately 20% of Connecticut adults are obese, about 37% are overweight, and 43% are normal or desired weight.[liv] Lower-income adults are more likely to be obese than higher-income adults (Figure 13).[lv] Black females are more likely to be

obese compared with White and Hispanic females ($p<.05$ for both comparisons). There are no significant differences in obesity among Connecticut adult males by race or Hispanic ethnicity (Figure 14).[lvi]

Access to Health care

Access to health care is key to the prevention, treatment, and management of heart disease and stroke. People without health insurance are less likely than others to have a usual source of care, to receive preventive health care services, and appropriate medical management of chronic conditions. About 9% of Connecticut adults aged 18 and over do not have health insurance compared with almost 15% of adults nationwide. Hispanic adults in Connecticut are least likely to report having health insurance (about 31%), followed by Black adults (14%), and White adults (6%). Comparable national figures show that about 31% of Hispanic adults, 19% of Black adults, and 12% of White adults nationwide reported having no health insurance (Figure 15).[lvii] The health status of the entire Connecticut population is compromised when large numbers of residents are uninsured, and it imposes a significant additional financial burden on our state.

Figure 15
Connecticut and US adults with no health insurance, 2005

Source: Centers for Disease Control &Prevention, BRFSS Survey, 2006.

Targeting High-Risk Populations

Black and lower-income adults in Connecticut have higher prevalence rates of diagnosed diabetes compared with non-Black and higher-income adults, respectively. Black and Hispanic Connecticut residents experience higher rates of premature mortality due to

diabetes and higher rates of hospitalization due to diabetes and lower-extremity amputations. They are significantly less likely than White residents to have health insurance, and thus access to preventive health care services. Targeted public health interventions that address the risk factors for the development of diabetes, timely diagnosis of the disease, as well as appropriate preventive care for those with diagnosed diabetes are warranted for the Connecticut Black, Hispanic, and low-income populations.

GOAL: *Connecticut residents with pre-diabetes will have their pre-diabetes reversed or their progression to diabetes significantly slowed with an overall goal to reduce or prolong conversion to type 2 diabetes.*

Identified Problems:

- Inappropriate or insufficient education related to lifestyle change (including meal planning and physical activity) to prevent or decrease the risk of advancing from pre-diabetes to diabetes.
- Insufficient capacity to provide diabetes prevention education and intervention to all people in Connecticut with pre-diabetes.
- Public and private policies, insurance re-imbursement in particular, are obstacles to appropriate diabetes preventive care.
- There is a lack of knowledge among health care providers of how to screen for and treat pre-diabetes and how to code for pre-diabetes.

Rationale:

Overview

Results from the federal Diabetes Prevention Program (DPP) pilot indicate diabetes can be prevented or delayed in people with pre-diabetes who participate in intensive behavioral interventions to decrease their risk of progressing to diabetes.

The American Diabetes Association defines pre-diabetes as a metabolic disorder characterized by plasma glucose levels that are abnormally high but not sufficiently high for a diagnosis of diabetes. There are two methods to diagnose pre-diabetes: the Fasting Plasma Glucose (FPG) test and the Oral Glucose Tolerance Test (OGTT). Glucose levels equal to or greater than 100mg/dL, but less than 126 mg/dL in the FPG signal impaired fasting glucose (IFG) and are diagnostic for pre-diabetes. Random glucose levels greater than 140 mg/dL, but less than 200 mg/dL signal impaired glucose tolerance (IGT) and are also diagnostic for pre-diabetes.[lviii] The National Diabetes Education Program (NDEP) further suggests using the two-hour OGTT to screen for pre-diabetes because it is more sensitive than the FPG test, detecting people who might not be detected by the FPG test.

Obesity and lack of exercise contribute to developing diabetes, and are extremely common among Connecticut's residents. The widespread nature of behavioral risk factors for diabetes makes the task of selecting a group on which to focus prevention efforts difficult. The medical community describes the metabolic syndrome (abdominal obesity, dyslipidemia, elevated blood pressure, insulin resistance, etc.) as an intermediate state between normal metabolism and the cascade of events that lead to diabetes. Targeting people with the metabolic syndrome would have the greatest impact in averting diabetes in the greatest number of people. Yet, ill-defined guidelines for diagnosing the syndrome combined with the number of people believed to have the metabolic syndrome currently make such interventions impractical. The Prevention Work Group of the *Connecticut Diabetes Prevention and Control Plan* focused most of its efforts on people who meet the ADA criteria for pre-diabetes. Even though the committee recognized that it could not fully address the problem of the metabolic syndrome, it did devise recommendations for public information campaigns to alert at risk people of the need to be tested for diabetes and to change their behavior, and healthy people of the need to remain vigilant in preserving their health.

In the DPP, moderate weight loss (5-7%), increased physical exercise, and healthier food choices, when combined in a comprehensive program of health maintenance, were adequate to prevent or delay diabetes. An example of a prevention program that is successfully being implemented in Connecticut is the Diabetes Prevention Program at the

Hill Health Center. The Hill Health Center is one of five community health centers in the nation selected to be part of the Bureau of Primary Health Care Diabetes Prevention Pilot. The system of care was redesigned through implementation of the Care Model. This allowed for organizational intervention by identifying individuals at risk for the development of diabetes, and assisting them to achieve and sustain a 7% weight loss and an increase in physical activity of >150 minutes/week (for example, 30 minutes/day, 5 days/week).

PREVENTION OBJECTIVE 1: By 2012, reduce by 0.5% the prevalence of type 2 diabetes by preventing the progression of pre-diabetes to diabetes.

How this objective will be measured:

- Data source: BRFSS
- Baseline value: 6.2%
- Target value: 5.7%

Recommended Strategies

- Increase awareness of providers and people with pre-diabetes of the potential to prevent diabetes onset through lifestyle change.
- Develop and promote pre-diabetes screening programs accessible to all at risk Connecticut residents with referrals to health care providers as appropriate.
- Deliver cost-effective pre-diabetes interventions as efficiently as possible.
- Change Connecticut's health system to support healthy lifestyles for residents of all ages.
- Engage community organizations to ensure that messages about lifestyle modification are delivered in culturally relevant and positive ways.
- Support interventions promoted by other programs, such as the CT DPH Obesity Program, that include modifications to school lunch and physical education programs to provide healthy school environments.

GOAL: *Connecticut health care providers adopt the widespread use of disease management practices in the treatment of diabetes.*

Identified Problems

- Evidenced based practices (American Diabetes Association and American Association of Clinical Endocrinology) are not consistently applied.
- Lack of process/clinical outcomes measurement, evaluation and management.
- Lack of collaborative practice models that include physicians and support service providers.
- Lack of a routine reporting feedback loop.
- Insufficient patient self-management education.
- Many people with diabetes are undetected and many patients with diagnosed diabetes are lost to follow-up.

Rationale:

Overview

Disease management is the delivery of quality care to those with chronic disease. An effective disease management program helps the person living with diabetes to understand their disease and the importance of their role as part of their own care and treatment team. Disease management may be the most significant factor in improving adherence, health outcomes, quality of life, and productivity. This translates into more efficient use of health care resources.

To ensure a common understanding of what disease management is, the work group agreed to adopt the Disease Management Association of America's definition of disease management. Disease management is a system of coordinated health care interventions and communications for populations with conditions in which patient self-care efforts are significant. Disease management includes:

- Support of the physician or practitioner/patient relationship and plan of care;
- Emphasis of prevention of exacerbations and complications utilizing evidence-based practice guidelines and patient empowerment strategies;
- Evaluation of clinical, humanistic, and economic outcomes on an on-going basis with the goal of improving overall health while using health care resources efficiently.

Full service disease management programs include the following six components:

1. Population identification processes;
2. Evidence-based practice guidelines;
3. Collaborative practice models to include physician and support-service providers;
4. Patient self-management education (may include primary prevention, behavior modification programs, and compliance/surveillance);
5. Process and outcomes measurement, evaluation, and management; and
6. Routine reporting/feedback loop (may include communication with patient, physician, health plan and ancillary providers, and practice profiling). [lix]

Disease Management Best Practices

Best practices for diabetes management are those clinical strategies that research studies have shown to be effective in improving the health status of individuals with this chronic disease. Given the limited time providers have to interact with patients, interventions must be based upon the most up-to-date knowledge. Adoption of best practices helps to ensure that all patients receive comparable treatment, and helps to increase the number of patients with positive care outcomes.

DISEASE MANAGEMENT OBJECTIVE 1: Best Practices: By 2012, increase by 50% the number of Connecticut physicians who use ADA and other evidence based guidelines to diagnose and monitor pre-diabetes and diabetes as measured by the number of physicians recognized by the ADA.

Recommended Strategies

- Promote adoption and integration of ADA and other evidence-based guidelines into clinical practice to support early diabetes diagnosis and use of ABC (A1c, blood pressure, cholesterol) values.
- Develop a pay-for-performance system that rewards physicians and patients for adhering to guidelines. [lx]
- Engage employers in encouraging and supporting more managed care organizations to offer incentives.

How this objective will be measured:

- Data source: ADA
- Baseline value: 34 Physicians (2006)
- Target value: 51 physicians

Effective Communication in a Comprehensive System of Diabetes Care

Disease registries and effective communication among providers and patients will help to reduce duplicated efforts and to improve outcomes. With increasing specialization of health care, it is possible that not all members of a patient's health care team have access to the same information. Discrepancies or deficiencies in knowledge about a specific patient could result in providers pursuing conflicting management approaches. Sharing information and maintaining regular communication will minimize the risks of treatment errors.

Note: EHEALTH Connecticut is a multi-stakeholder statewide data project that is currently being funded by the Department of Public Health and other sources. The

purpose of this project is to develop a system to compile health data, similar to proposed common disease registries, to facilitate the *real time* access to patient data to provide optimal care. Although currently not in place, the hope is that this project will be used for the care of persons living with chronic diseases such as diabetes.

DISEASE MANAGEMENT OBJECTIVE 2: Effective Communication in a Comprehensive System of Diabetes Care: By 2012, improve patient care by increasing the number of health care providers using Electronic Medical Records (EMRs) or disease registries by 10% to establish a statewide health data exchange, increase outreach and improve communication among providers.

Recommended Strategies

- Develop effective communication vehicles to demonstrate the value of reporting clinical outcomes to providers using evidenced based literature, peer-to-peer outreach and other means. Show providers how such clinical outcomes, reporting through incentive programs, or other vehicles can be valuable for their patients, their practices and others.

How this objective will be measured:
Periodic survey of physicians in Connecticut

- Data source: Survey response regarding number of health care providers using EMR/registries
- Baseline value: To be determined
- Target value: 10% over baseline

* Baseline value to be determined during first year of plan implementation

- Work collaboratively with managed care organizations to identify the current communication barriers for effective disease management. With MCOs, promote a process to simplify referrals and communication linkages that will create administrative efficiencies.
- Promote integrative processes among health plans to link diagnosis, treatment plans and education plans thus promoting communication among those who are providing services to persons with diabetes.

Measuring Clinical Outcomes

Measuring clinical outcomes provides data that individual providers can use to improve their own practices and that insurers can use to reward providers whose patients demonstrate clinical outcomes that evidence based research has shown to improve health status.

DISEASE MANAGEMENT OBJECTIVE 3: Measuring Clinical Outcomes: By 2012, establish a system of process and outcome measurement used by all health care providers on the patient care team.

Recommended Strategies

- Adopt evidence-based guidelines as evaluation benchmarks for clinical outcomes (e.g., A1c control, blood pressure control, lipid level controls, and smoking cessation). Highlight and communicate recommendations in these guidelines for provider accountability in monitoring clinical care.
- Use a quality assurance process to assess outcomes (e.g., behavioral/functional outcomes, impact of education, outreach, effects on caregivers and family members with chronic disease, end of life care and impact on mental health).
- Encourage employers to provide meaningful financial incentives for employees and their providers to reach established benchmarks.

How this objective will be measured:

Data source, Baseline and target values to be determined during first year of plan implementation

Self-Management

It is not realistic or cost-effective to require providers to be responsible for all aspects of diabetes care at all times. To maintain good control and to maintain or improve their health, people with diabetes must be involved in their own treatment programs. Greater patient understanding and adherence to treatment recommendations allows providers to assist more patients, especially those whose disease is more complex. Although this is important for all patients with diabetes, it may be more challenging for underserved populations due to additional complexities including language barriers, unsafe neighborhoods for walking, limited budgets for healthy food and medical supplies, access to dental care and other challenges.

DISEASE MANAGEMENT OBJECTIVE 4: Self-Management: By 2012, increase by 5% the percentage of adults age 18 and older with diabetes who are conducting comprehensive self-management to control their disease.

Recommended Strategies

- Assess current disparities and create plans to remove identified disparities through culturally-focused diabetes care.
- Involve community leaders in creating community health initiatives.
- Train health care professionals, including dental professionals, para-professionals and lay health workers in the community health setting on diabetes prevention, care and management.
- Create a standard self-management education program that is simple and user friendly and that involves a program for health care literacy that is language appropriate and culturally sensitive.
- Foster patient responsibility for diabetes care by promoting self-management education programs that engage the patient and provide patient financial incentives and personalized nutrition guides and exercise plans.
- Engage employers to work with managed care organizations in supporting the importance of simple, barrier-free self-management education.
- Support interventions promoted by other programs such as the Department of Public Health's Obesity Program that include modifications to companies, restaurants, the workplace, and school lunch programs to provide healthy nutrition environments.
- Collaborate with the Department of Public Health's Office of Oral Public Health to promote the integration of oral health and periodontal disease management into diabetes disease management practices including annual dental exams and the systemic effects of periodontal disease on people with diabetes.

How this objective will be measured:

- Data Source: BRFSS- class attendance and daily self monitoring of blood glucose
- Baseline: class attendance=47.7%, daily self monitoring=67.7%
- Target: Add 5% to each baseline

Screening and Follow-up

In some cases, people do not know they are at risk for diabetes. Screening services to diagnose diabetes or pre-diabetes can be helpful to motivate people to change risky behaviors. Often, however, a screened individual is lost to follow-up, or there are reporting problems that hamper providers and insurers from tracking diagnosed patients. Improved screening and proper disease reporting will reduce the number of individuals who are unaware of their increased risk and will improve follow-up for those who have been identified.

DISEASE MANAGEMENT OBJECTIVE 5: Screening: By 2012, increase by 10%, the proportion of at risk individuals who are screened for diabetes and pre-diabetes using evidence-based guidelines.

Recommended Strategies

- Promote new and enhanced screening programs in varied settings.
- Promote increased use in clinical practice of ADA and other evidence-based criteria for diabetes and pre-diabetes diagnosis.

How this objective will be measured:

Data source, Baseline and target values to be determined during first year of plan implementation

Reporting

A routine reporting/feedback loop is an important component of disease management. This includes communication with the patients, the health care provider, ancillary providers, and the health plan.

DISEASE MANAGEMENT OBJECTIVE 6: Reporting: By 2012, increase by 10% the proportion of providers who adopt a uniform system of reporting including the coding of diabetes diagnoses.

Recommended Strategy

- Promote and support standardized reporting tools and processes across providers.

How this objective will be measured:

Baseline and target values to be determined during first year of plan implementation

- Promote linkage of diagnosis plans with education plans.

GOAL: *To ensure that all people with diabetes and at risk for diabetes and their health care providers all have current knowledge and can apply evidence-based guidelines.*

Identified Problems:

- The general public is unaware of:
  - Behaviors and risk factors that lead to diabetes and the seriousness of diabetes diagnosis
  - Economic and quality of life burden that diabetes imposes on the state of Connecticut
- Many primary care providers have not received adequate up-to-date professional education.

Rationale:

Overview

The treatment of diabetes has advanced rapidly in the last decade. Since the Diabetes Control and Complications Trial, the United Kingdom Prospective Diabetes Study, and other landmark studies showing tight control decreases diabetes complications, new medications, new insulin delivery mechanisms, and new treatment regimens have been

developed. Staying current with these advances is difficult for the primary care provider, as well as for the person with diabetes.

Diabetes Self-Management Education (DSME)

Diabetes is a chronic disease that requires the patient to learn how to manage their disease (self-management). Although the health care provider role is important for prescribing medication, monitoring lab results, and following up with patients, the patient must take on the majority of diabetes management including blood glucose monitoring, nutrition choices, and physical activity. Learning and applying these skills is critical to diabetes self-management. They are the primary determinants of diabetes-related health outcomes. Positive clinical outcomes are only possible if patients receive and internalize effective disease management education.

EDUCATION AND AWARENESS OBJECTIVE 1: Patient Education: By 2012, Increase by 5% the proportion of people with diabetes participating in diabetes self-management education programs in order to learn about controlling their diabetes.

Recommended Strategies

For Patients with Diabetes:

- Make available training curricula options for patient education.
- Create partnerships with hospitals, Community Health Centers (CHCs), volunteer health organizations, Connecticut Association of Directors of Health (CADH), American Heart Association (AHA), and local health departments to ensure staff has information relevant to care through education resources added to organizational newsletters (hospitals, CT DPH, etc.) and Web sites.
- Train non-Certified Diabetes Educators (CDE), including school nurses, medical assistants, certified nurse aides, peer-to-peer educators, faith organization members, senior center staff, local health department educators, and lay persons as referral resources, to augment traditional education programs.
- Engage Health Maintenance Organizations (HMO) to standardize access to education programs by taking advantage of Connecticut law that requires diabetes education for persons with diabetes.

How this objective will be measured:

- Data source: BRFSS
- Baseline value: 47.7%
- Target value: 52.7%

- Partner with grocery stores, libraries, senior centers, town halls, and other public places to make diabetes, nutrition, and general health information available.
- Outreach to leaders of large group practices to encourage their members' physicians to refer to diabetes education programs.
- Make people with pre-diabetes aware of the potential to prevent diabetes onset through lifestyle change.

For Education of Primary Care Providers:

Often best practices have changed since health professionals have completed their training. Therefore, professional education is critical to ensure that providers are treating their patients according to the most recent standards. Given the long lag between when best practices are approved by national organizations, and when individual providers regularly make use of best practices, professional education is an essential tool to improve clinical outcomes in people with diabetes.

EDUCATION AND AWARENESS OBJECTIVE 2: Professional Education: Increase by 10% the number of providers who participate in continuing education programs focused on diabetes.

Recommended Strategies

- Expand physician participation in professional education programs by encouraging insurers and pharmaceutical companies to offer scholarships for doctors to attend the national scientific sessions or diabetes post graduate conferences and providing materials on these programs to doctor office staff.

How this objective will be measured:

Data source, Baseline and target values to be determined during first year of plan implementation

- Conduct ongoing professional education with a curriculum that incorporates best practices and prevention (e.g., Grand Rounds, continuing medical education [CMEs], etc.) for physicians involved in providing diabetes services.
- Engage hospital and clinic administrators to foster mentoring or peer education to change physician behavior and to support the increased number of, and enrollment in, patient education programs; engage medical directors from Managed Care Organizations and Physicians Health Organizations to encourage their members to receive regular diabetes education.

- Promote the use of relevant billing and reimbursement codes for screening, education, and treatment.

General Awareness

Effective disease management through patient and professional education will reduce costs and improve outcomes in people with diabetes, but to make substantial reductions in new diabetes cases, an effective information campaign for the at risk public is needed. Increased public awareness of the dangers of diabetes, and just as importantly, of the methods to reduce the risk of developing diabetes, has the potential to save many lives in Connecticut. Per person costs of public information campaigns are much lower than per person costs for disease management, so an effective public education campaign makes good economic sense as well as good public health sense.

EDUCATION AND AWARENESS OBJECTIVE 3: Public Awareness: By 2012, improve public awareness of the impact of diabetes by increasing by 10% the number of partnerships with community organizations such as schools, libraries, media, town halls and other public places.

Recommended Strategies

How this objective will be measured:

Data source, Baseline and target values to be determined during first year of plan implementation

- Engage schools, libraries, senior centers, town halls and other public places, workplaces, faith-based and community-based organizations to share information on the risks, burden, and impact of diabetes, and on the availability of screenings.
- Train non-CDEs to provide accurate information on signs and symptoms of diabetes and to refer people to formal education programs; develop a proficiency measure for community and peer diabetes health educators.
- Launch an information campaign drawing on partnerships, existing programs, and national campaigns to highlight the rapid rise in diabetes diagnoses; connect with a public figure to promote the message.
- Engage community organizations to ensure that messages about lifestyle modification are delivered in culturally relevant and positive ways.

8. ACCESS AND POLICY: ASSURING ACCESS TO TREATMENT

Access & Policy Workgroup

Julie Wagner, PhD	University of Connecticut Health Center
Jeffrey Yale, DPM	Griffin Hospital

GOAL: *Comprehensive diabetes care, i.e., diabetes preventive care, treatment, supplies, equipment, medication, diabetes self-management education, and medical nutrition therapy is offered, available and affordable across the public and private sectors to every citizen in Connecticut in need.*

Identified Problems:

- Many people with diagnosed or undiagnosed diabetes do not have regular access to preventive education, care, and medications (e.g., the uninsured, underinsured, migrant workers and employees of companies that are self insured).
- Insufficient capacity in our medical care system and communities to prevent and treat diabetes (e.g., insufficient numbers of specialists and certified diabetes educators).

Rationale:

Overview

The Connecticut Diabetes Bill of Rights states all Connecticut based health insurance policies must cover diabetes medications, supplies, and education. People with an insurance policy not based in Connecticut, those on Medicaid, and those without insurance at all, however, are not afforded these rights. Consequently, their access to comprehensive diabetes care is often compromised.

Accessible Services

Making diabetes services accessible will increase the number of people who receive effective disease management or preventive training. Increased accessibility, in turn, will yield better outcomes in patients with diabetes and help to prevent additional cases thereby decreasing complications and the social and economic impact of this disease.

ACCESS AND POLICY OBJECTIVE 1: Accessible Services/Comprehensive Diabetes Care: By 2012, increase by 5% the proportion of people who receive comprehensive diabetes care, i.e., diabetes preventive care, treatment, supplies, equipment, medication, diabetes self-management education, and medical nutrition therapy.

Recommended Strategies

Universal

- Demonstrate the cost-effectiveness of diabetes education programs and promote a partnership among CT DPH, private groups, and public groups to implement diabetes education.
- Engage the state legislature to appropriate funds for pilot programs to spread the message about diabetes, both how to prevent it, and how to treat it.
- Secure commitment of the health care delivery system to the Diabetes Bill of Rights, and expand the definition of those covered under the Diabetes Bill of Rights.
- Encourage diabetes-friendly policies at businesses and schools.
- Determine how to find people at high-risk for diabetes and deliver cost-effective interventions as efficiently as possible.

How this objective will be measured:

- Data source: BRFSS
- Baseline value: Seeing health care professional 86%, obtaining foot exam 72%, getting dilated eye exam 78%, self monitoring blood sugar: 68%, attending class: 47.7%
- Target value: Plus 5%

For Persons with Insurance Coverage

- Encourage insurers to cover diabetes preventive care, treatment, supplies, education, and treatment with co-payments that do not exceed 25% of the covered item's total cost, and include diabetes education and medical nutrition therapy as a reimbursable service across insurance programs.
- Work to change Federal ERISA provisions to require self-insured employers to cover diabetes supplies, education, and treatment, and adopt the ADA Diabetes Bill of Rights to guide insurance regulation in Connecticut.
- Develop "Report Cards" for insurance plans on 1) what is covered and 2) on A1c levels and rates for flu shots, foot exams, and eye exams. (HEDIS /NCQA Measures).

For Persons Covered under Medicaid

- Support efforts to ensure all Medicaid eligible persons with diabetes are enrolled and receiving medically appropriate care and treatment, in their community when possible, including podiatric care and diabetes education services.

Uninsured

- Pilot a program with appropriate legislative and private foundation support to provide lab tests, supplies, medicines, and education for uninsured people with diabetes through a variety of providers and settings.
- Develop and seek legislative support for a program with community clinics, hospitals, and other health care providers to provide free or low cost access to preventive education and care, and treatment for uninsured or underinsured persons with diabetes.
- Expand use of patient access programs sponsored by major pharmaceutical companies.

Public Health Infrastructure

With the exception of those recommendations dealing with education for the general public, all the other recommendations within this plan rely upon increased capacity in the diabetes care system. Education services, disease management support, and insurance coverage must be in place to allow the community-level efforts to be effective. Increased capacity will result in better outcomes when diabetic emergencies arise and will help to prevent such emergencies and even diabetes onset.

ACCESS AND POLICY OBJECTIVE 2: Public Health Infrastructure: By 2012, increase by 5% the number of diabetes education services, disease management supports, and insurance coverage for people with diabetes.

Recommended Strategies

- Assess diabetes public health infrastructure to determine system gaps and develop policies that encourage the development of strong, efficient networks of providers by engaging legislators and insurers to make them aware of the barriers that exist to proper care.

How this objective will be measured:*

- Data source: Delphi technique using key informants
- Baseline and target values to be determined during first year of plan implementation

- Develop improved capacity to address the behavioral causes of poor diabetes patient outcomes, including defining and addressing reimbursement issues that may inhibit access to psychologists' services.
- Address shortages of specialists with focus on diabetes by expanding the number of nurse practitioners and physician assistants that specialize in diabetes care through educational incentives and policy development to support creation of teams of connected diabetes professionals.
- Expand the role of licensed health care professionals to provide more diabetes care including more frequent follow-up.

- Publish HEDIS measures related to diabetes for health plans; develop benchmarks on diabetes measures to inform policy; and develop mandated reporting of specific diabetes-related measures by hospitals and other health providers.

GOAL: *Diabetes surveillance data are available to all state partners and the general public.*

Identified Problems:

- Inadequate data on racial, ethnic, and economic disparities.

- Incomplete information on sub populations within the state including town-specific and race/ethnic group specific data on diabetes.
- Inadequate information sharing with statewide partners.

Rationale:

Public health interventions addressing the burden of diabetes in Connecticut can be effectively implemented when those populations most affected by the disease are identified through surveillance efforts. The dissemination of diabetes surveillance data can enhance statewide efforts to assess the needs of population subgroups, and form the basis for monitoring progress and evaluating the effectiveness of interventions.

SURVEILLANCE OBJECTIVE 1: Increase Hits to Web Page: By 2012, increase by 5% the number of hits to the Diabetes Surveillance Web page as a means of increasing the accessibility to diabetes prevalence, morbidity and mortality data.

Recommended Strategies

- Develop partnerships with a variety of organizations collecting and/or using health risk and health outcome information on diabetes.
- Identify other data sources and data-collecting agencies to meet with state planning groups to determine how best to create data sharing networks.
- Provide technical assistance on how to collect data to organizations that provide diabetes services.
- Provide resources to community-based organizations to gather data about diabetes services.
- Conduct surveillance of priority subpopulations, as limited resources allow, and make information resources available to non-DPH as appropriate.

How this objective will be measured:

- Data source: Connecticut vital records, mortality files, BRFSS, YRBS, Connecticut Hospital Discharge Abstract Billing Data Base
- Baseline value: Seventy-five hits a month to the Diabetes Surveillance Web page.
- Target value: Seventy-nine hits a month to the Diabetes Surveillance Web page.

- Disseminate available diabetes surveillance data to the general public through the CT DPH Web site and other appropriate venues.

10. CROSS-CUTTING ISSUES

The planning partners have agreed on the adoption of The Chronic Care Model as an approach for diabetes care in Connecticut. Developed in 1993 by Edward Wagner, MD, MPH at the Robert Wood Johnson Foundation to address deficiencies in the process that care for chronically ill patients, the model's goal is to transform health care from a system that is essentially reactive (responding mainly when a person is sick) to one that is proactive with the goal of keeping the person as healthy as possible.

The Chronic Care Model is founded on the belief that chronically ill patients can become successful self-managers when provided with adequate education and planned, informative structured primary care visits. The six elements of the model are described below.

The Chronic Care Model Recommends Six Health System Improvements to improve health outcomes in people with chronic diseases: (See Figure I following.)

1) **The Community** - Resources and Policies: Encourage patients to participate in effective community programs and work with community organizations to develop programs to fill in gaps in the care system; advocate for policies to improve patient care.

2) **Health System** - Organization of Health Care: Support improvement at all levels of health organizations; promote comprehensive system change; encourage open handling of errors and quality problems to improve care; provide incentives based on quality of care and adherence to guidelines; develop agreements between organizations to ease cooperation in health care delivery.

3) **Self-Management Support** Emphasize patients' central role in managing their health and connect them with appropriate internal and community resources to provide on-going self-management support; use effective self-management support strategies that include assessment, goal-setting, action planning, problem-solving and follow-up.

4) **Delivery System Design**: Define roles and distribute tasks among team members and use planned interactions to support evidence-based care; provide clinical case management for complex patients and ensure regular follow-up by the care team for all patients; deliver care that patients understand and that fits with their cultural background.

5) **Decision Support**: Use evidence-based guidelines in daily clinical practice and educate patients in evidence-based guidelines to encourage their participation; use proven provider education methods; integrate specialist expertise with primary care to ensure patients receive comprehensive care.

6) **Clinical Information Systems:** Support individual patient care planning and provide timely reminders to patients and providers. Identify subpopulations to receive pre-emptive care. Establish a disease registry and distribute information to patients and providers to coordinate care. Using disease registries, monitor performance of providers and of the whole care system.

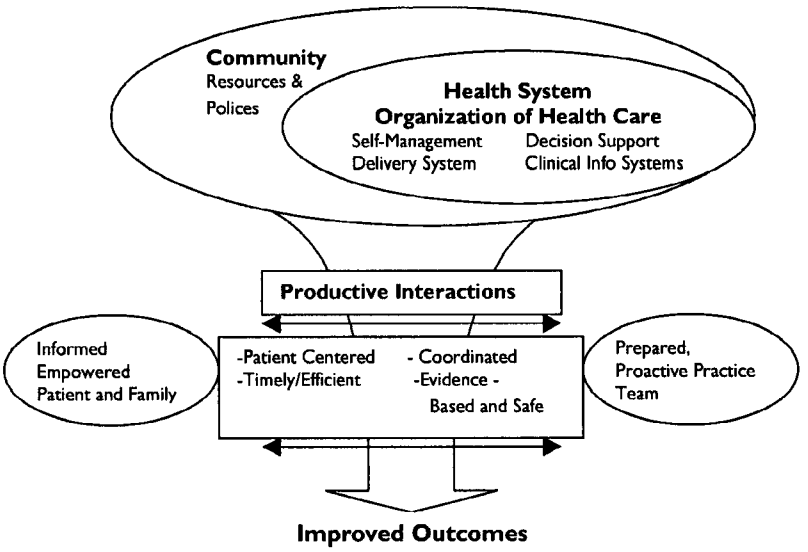

Figure I. Wagner Model of Chronic Care
For more detail on the model see:
http://www.improvingchroniccare.org/change/model/components.html.

A Chronic Care Model Approach for Connecticut

The Connecticut planning partners worked with the Robert Wood Johnson Chronic Care Model and recommend the following elements that should be part of Connecticut's Chronic Disease Model: (See Figure 2. CT's adaptation of the RWJ Wagner Model p.50)

- **Productive Interactions among Patients and Provider Teams:** Communication should be regular and useful. Providers should communicate in ways that are easy for patients to understand, and patients should use time with providers to ask questions and make certain their providers understand their needs.
- **Regular Assessment of Patients:** Patients should receive laboratory testing and face-to-face meetings with providers according to best practice guidelines.

- **Development of Treatment Plans** that consider cultural, linguistic, psychosocial, and physiological needs of the patient.
- **Systematic Application of Proven Therapies:** Providers integrate accepted best practices into their clinical practices.
- **Sustained Follow-up for Treatment Adherence:** Patient compliance with disease management protocols is one of the best ways to reduce costs and improve outcomes.
- **User Friendly Delivery System:** Patients are more likely to be compliant with their treatment programs when they are treated with respect, and when accessing needed services is easy.
- **Scheduling of Appointments:** managed care organizations and providers communicate to allow scheduling of all related appointments in one day. The current fragmentation of services is a barrier to many seeking care.
- **Get Managed Care Organizations to Recognize Barriers:** In some cases, payers may not be aware of the steps they can take to improve chronic disease management.
- **Address Payment Issues:** In some cases, insurance does not cover a service or treatment necessary to proper chronic disease management.
- **Set Up Communication Protocols:** Regular communication among patients, providers, and payers will help to eliminate some of the misunderstanding that can hamper good care.
- **Accepted/Uniform Provider Responsibilities:** Best practices should be in place for all providers in the state and provider responsibilities should be standardized for all payer organizations.
- **Multi-Pronged Case Finding Approach:** Develop multiple surveillance strategies to document chronic disease cases because not all patients access care the same way.

The system proposed by the planning partners will allow for comprehensive care of Connecticut residents living with chronic diseases. The benefits of putting Connecticut's Chronic Care Model into practice include decreased sick days, lowered health care costs, and higher quality of life for people living with chronic disease.

Significant barriers still exist, both to establishing Connecticut's Chronic Care Model, and to stopping the rise in chronic disease burden. The planning partners recognize the following as the most important challenges in the area of chronic disease prevention and control:

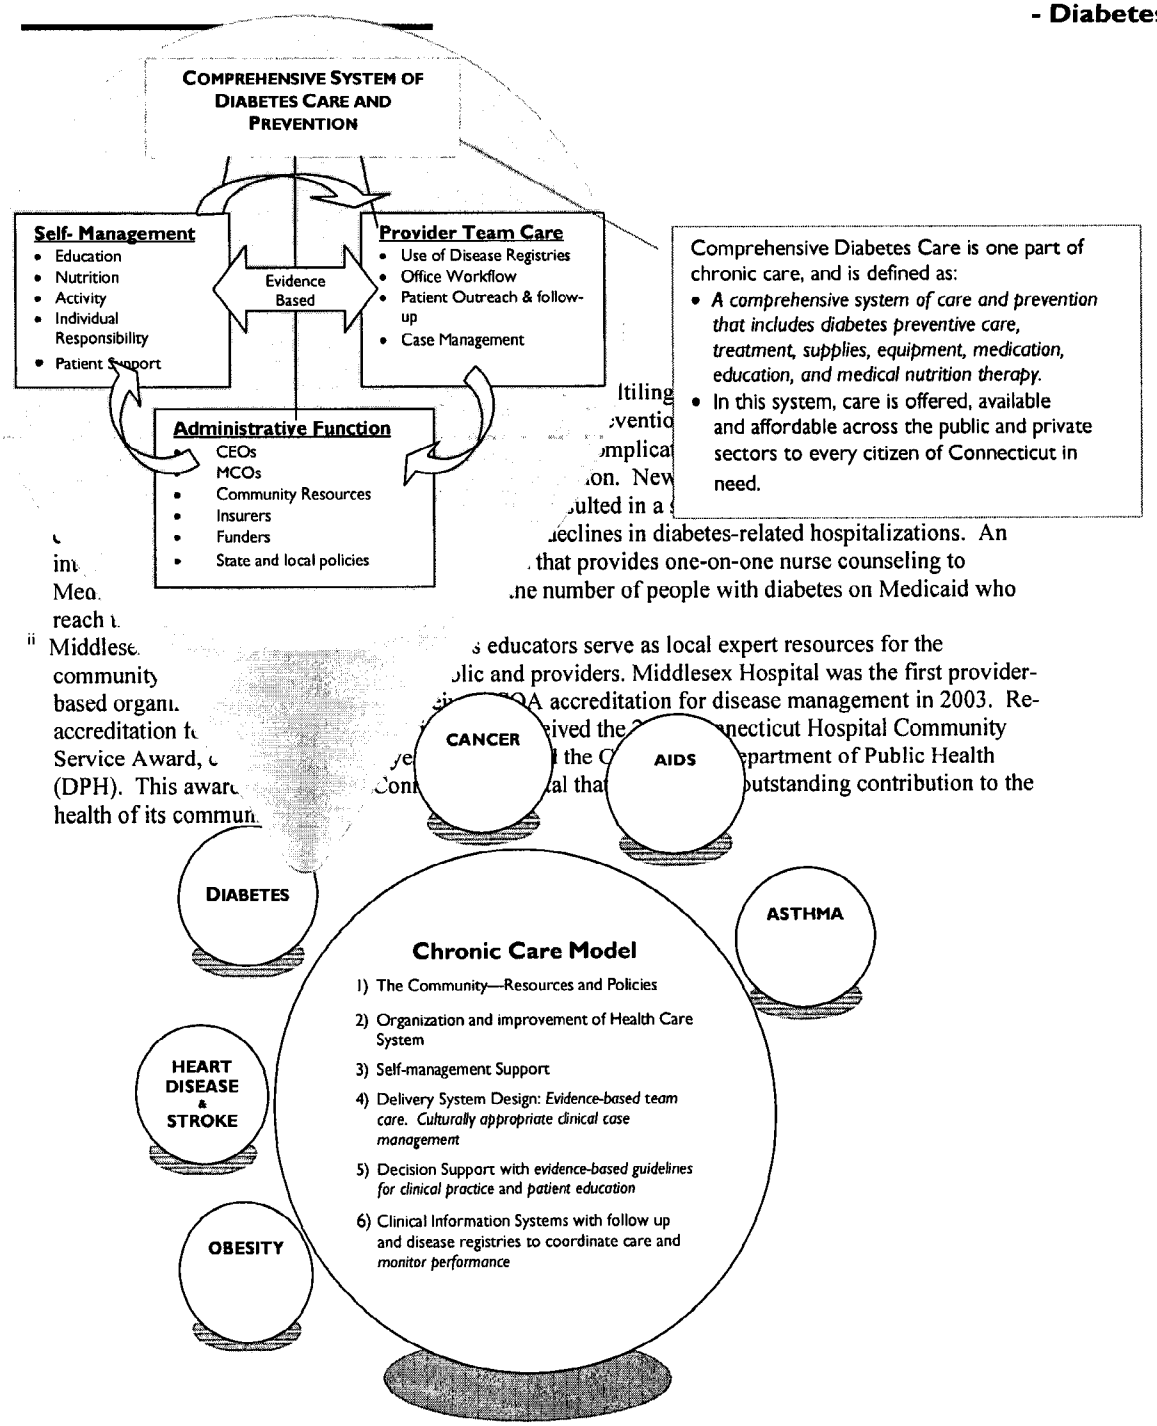
- **Preventing Chronic Disease:** Often, there are many people at risk for chronic disease but they do not realize it. Even those individuals who are aware of the risk may not know what steps they can take to improve their health.
- **Academic Detailing/Provider Attention:** There is too often a lag between when best practices are recommended and when providers begin using them in their daily clinical practice. Using academic detailing, peer-reviewed research, and peer-to-peer interactions will accelerate the pace of best practice adoption.
- **Systemic Change/Creating a User-Friendly System:** A simple system will increase compliance among patients and providers. Frustration with the current system can lead those who need care to abandon their search for care.
- **Insurance/Ensuring Access to Services:** All insurers must agree to provide a level of coverage for chronic disease services that is sufficient to maintaining good health. Basic covered services should be invariant among insurers.
- **Disparities:** There are substantial differences in care outcomes among patients from different racial/ethnic groups and different socioeconomic backgrounds. Public assistance must provide a minimum level of coverage to ensure that all people have access to needed services.
- **Coding Issues:** Though disease coding has become standardized, some providers still do not fill out forms such as death certificates with sufficient detail. Improving reporting will allow public health officials to have an accurate picture of chronic diseases in the state.
- **Referral/Follow-up/Tracking/Monitoring Patients:** Many diagnosed patients are lost to the care system and do not receive the treatment they need. Linking chronic disease efforts to community groups will expand the ability of the care system to retain patients.

Diabetes Care in a Chronic Care Model

- Middlesex Center for Chronic Care Management incorporates all care managers in a central, integrated program model that includes diabetes education and disease management programs in practice and infrastructure to improve care of chronic conditions.

A successful example of the application of the chronic care model is The Middlesex Center for Chronic Care Management.[i] This program and others like it demonstrate the Chronic Care Model conscientiously applied results in significant cost savings and improved health outcomes. The disease management program includes case managers who assist the referred populations with congestive heart failure, smoking behaviors, asthma, and diabetes in varied aspects of living with a chronic condition.[ii] Patients receive a one-to-one initial assessment appointment for education, medication adherence, blood sugar monitoring, and assessment of barriers. These include, but are not limited to, out of pocket expenses,

such as, co-pay, impact of "not preferred" products, health literacy issues, and psychosocial issues, including a screening for depression.



Patients enrolled in disease management programs are offered follow-up based on agreed upon self-management goals. This includes additional appointments and telephone contact to assess progress. The integration of chronic disease management programs allows the patient exponential benefit as people generally have co-morbid conditions. For instance, a patient with diabetes, hospitalized with an acute asthma exacerbation, and referred to the asthma program, is able to work with a smoking intervention counselor, attend a diabetes education group class, and work with a registered dietician to avoid weight gain associated with giving up smoking. All these services are "under one roof," which provides the patient participating in one program ease and comfort when accessing additional services.

Outcomes in the Middlesex Chronic Care Model

- % of patients with A1C<9: Before enrollment 38%, six months after enrollment 79%.
- % of patients reporting daily foot self-care goes from 49% to 98%
- % of patients reporting a physician foot exam in past year goes from 75% to 100%
- % of patients reporting a dilated retinal exam in past year goes from 41% to 87%
- $71,000 in avoided hospital costs in one year

Measured outcomes have included better disease control in patients with diabetes. Some recent specific outcomes for the diabetes disease management program (this is for patients referred for active case management not just education) are included in the outcomes box.

Connecticut's Comprehensive Public Health System
Model for Chronic Care
- Diabetes

Comprehensive Diabetes Care is one part of chronic care, and is defined as:

- *A comprehensive system of care and prevention that includes diabetes preventive care, treatment, supplies, equipment, medication, education, and medical nutrition therapy.*
- In this system, care is offered, available and affordable across the public and private sectors to every citizen of Connecticut in need.

11. IMPLEMENTATION AND FUNDING

a. Phase I - The Plan for 2007

During the May 10, 2006 meeting, the combined work groups evaluated the recommendations of all five work groups to select outcomes and strategies to pursue for the first year of plan execution. The group agreed on the need for the Plan to yield significant results during its first year of execution to attract additional funding to diabetes prevention and control efforts in Connecticut. Two outcomes and strategies have been selected as the foundation for the 2007 Diabetes Work Plan. Please note that the order in which these objectives and strategies are listed should **not** be taken as an indication of which order the planning group intends them to be accomplished. They should be pursued simultaneously during the first year:

Access and Policy Objective 1: Accessible Services/Comprehensive Diabetes Care:
By 2012, increase by 5% the proportion of people who receive comprehensive diabetes care; i.e., diabetes preventive care, treatment, supplies, equipment, medication, diabetes self-management education, and medical nutrition therapy.

Recommended Strategies

- Support efforts to ensure that all Medicaid-eligible persons with diabetes are enrolled and receiving medically appropriate preventive care and treatment, in their community when possible, including podiatric care and diabetes self-management education services.
- Develop a plan to seek legislative support for a program with community clinics, hospitals, and other health care providers to provide free or low cost access to preventive education and care, and treatment for uninsured and underinsured persons with diabetes.

Education and Awareness Objective 1: Patient Education: By 2012, increase by 5% the proportion of people with diabetes participating in diabetes self-management education programs in order to learn about controlling their diabetes.

Recommended Strategies

- Make available training curricula options for patient education.
- Train non-CDEs to augment traditional education programs.
- Partner with grocery stores, libraries, and other public places to make diabetes, nutrition, and general better health information available.
- Engage HMOs to standardize access to education programs.

b. Phase II – 2008 to 2011

Annual Reports on Progress

During each year of the plan, the CT DPH and the Diabetes Advisory Council will prepare a report that describes the activities undertaken in the previous year and the results of those activities. The reports may be used in support of funding applications and in media campaigns publicizing the activities and successes of the Diabetes Prevention and Control Plan.

Action Steps for the Subsequent Year

Based upon information in the annual report, the CT DPH in conjunction with the Diabetes Advisory Council will create an action plan for the subsequent year. The action plan will clearly state the objectives and the recommended strategies to realize those objectives in the next calendar year. The action plan will also include specific steps to be taken with specific groups and individuals to forward the plan's goals.

c. Funding

To fully implement the recommendations of Connecticut's Diabetes Prevention and Control Plan, a diverse group of funding agencies, from state and federal government to private foundations, must be recruited. In 2007 diabetes control efforts in the state received $111,000 from the state government in salary, fringe and indirect costs, and $280,000 from the CDC. While government provides a useful starting point for diabetes prevention and control efforts, additional funding sources will be needed to realize a comprehensive system of diabetes care and prevention. The list of philanthropic organizations included in the appendix provides examples of funders in Connecticut and in the nation that have a history of contributing funds to public health initiatives, or whose mission of furthering the health of the public makes them likely supporters of public health projects. The list is not intended to be comprehensive, however, it is meant to be used as a resource for organizations seeking funding to implement diabetes activities.

d. Evaluation

DPH and its partners will be responsible for measuring progress towards each of the results in the previous section. While some of the results can be measured by the CT DPH epidemiology section, others, such as numbers of doctors achieving ADA recognition, will be monitored by Connecticut CT DPH partners. All data collected will be tabulated each year by the Diabetes Prevention and Control Program staff and a report will be prepared by CT DPH and the Diabetes Advisory Council to update funding agencies, partner health care organizations, and concerned citizens on the plan's progress.

Using information contained in the evaluation report, CT DPH and the DAC will plan future activities and adjust expectations as needed.

12. APPENDICES

Appendix A: Action Steps

Within many of the strategies, the work groups developed a number of specific action steps. The action steps, taken together, form a suggested means of putting a given strategy into practice. To assist with plan execution, the recommended action steps are listed below, introduced by the strategy to which they pertain. Only those strategies for which action steps have been developed are listed. Year one strategies are presented first; the remaining strategies are listed by issue area, in priority order, as determined by the work group (note: no strategies are listed for Surveillance as this work group's tasks are defined by the CT DPH):

Year 1

- Train non-CDEs to augment traditional education programs.
  - Work with health professionals and para-professionals operating in faith-based initiatives, schools, senior centers, local health departments, health care offices, and other venues.
  - Train peer-to-peer and lay people as referral resources and educators.
- Partner with grocery stores, libraries, and other public places to make diabetes, nutrition, and physical activity information available.
  - Use local newspaper circulars to distribute nutrition messages.
  - Print diabetes information on grocery bags.
- Engage HMOs to standardize access to education programs.
  - Take advantage of Connecticut educational requirements for people with diabetes to ensure that people with diabetes receive the required education.

Action Steps Beyond Year 1

Managing Diabetes Care and Prevention

1. Promote adoption of ADA and other evidence-based guidelines by providers to support an early diagnosis and provide good care through.
   - Promotion of ADA guidelines for diagnosis, ABC values (A1c, blood pressure, cholesterol) and other aspects of clinical care.
   - Expand access to eye and foot exams, flu shots, and A1c testing in all health care settings.
   - Promote smoking cessation as an evidence-based guideline.

2. Develop a pay-for-performance system that rewards physicians and patients for adhering to guidelines.
   - Engage employers in convincing MCOs to offer incentives.
   - Implement economically feasible recommendations.

3. Increase the number of health care providers using an electronic medical record or disease registry to establish a statewide health data exchange to increase outreach and improve communication among providers.
   - Communicate to providers the value of reporting clinical outcomes.
   - Work with MCOs to identify communication barriers for effective disease management.

4. Adopt evidence-based guidelines as evaluation benchmarks for clinical outcomes (e.g., A1c control, blood pressure control, lipid levels control, smoking cessation).
   - Make explicit the financial benefits for payers and providers who evaluate outcomes.

5. Assess current disparities and create plans to remove those disparities through culturally-focused diabetes care.
   - Create culturally-focused diabetes care guidelines and programs.
   - Involve community leaders in creating community health initiatives.
   - Provide culturally appropriate diabetes training in health care offices.
   - Train lay health workers in the community setting.
   - Encourage programs to increase the numbers of allied health professionals.
   - Partner with community health centers/other agencies to continue to improve diabetes outreach and care.

09/15/08 0679

Fostering Self-Management

1. Provide a self-management education program that is simple and user friendly and that involves a program for health care literacy that is language appropriate and culturally sensitive.
   - Create program for health care literacy.
   - Assess provider language/cultural competency.
   - Adopt standardized written materials.
2. Foster patient responsibility for diabetes care by adopting self-management education programs that engage the patient and provide patient financial incentives and personalized nutrition guides and exercise plans.
   - Promote self-management education program that engages the patient.
   - Encourage the use of personalized nutrition guides and exercise plans for people with diabetes using existing planning tools.
3. Engage employers in conveying the importance of simple, barrier-free self-management education to MCOs.
   - Create employee financial incentives to increase patient responsibility.

Linking Systems for Efficacy and Quality

1. Promote the adoption of ADA and other evidence-based criteria for diabetes diagnosis and pre-diabetes diagnosis, and link diagnosis plans with education plans.
   - Create a system to identify patient care needs post-diagnosis.
   - Link diagnosis plans with education plans.
2. Create partnerships with hospitals, CHCs, volunteer health organizations, CADH, AHA, and local health departments to ensure staff has information relevant to care through education resources added to organizational newsletters (hospitals, CT DPH, etc.) and Web sites.
   - Add education resources to organizational newsletters (hospitals, CT DPH, etc.) and Web sites.
   - Ensure staff has information relevant to patient care.
3. Train non-CDEs, including school nurses, peer-to-peer educators, faith organization members, senior center staff, local health department educators, and lay persons as referral resources, to augment traditional education programs.
   - Train health professionals operating in faith-based initiatives, schools, senior centers, local health departments.
   - Use peer-to-peer and lay people as referral resources and educators.
4. Increase the number of physicians who refer their patients to diabetes education programs by targeting the presidents of large group practices to encourage their member physicians to participate in education.
   - Outreach the presidents/chief medical officers of large group practices to encourage their member physicians to participate in education.

0680
09/15/08

5. Expand physician participation in professional education.
   - Encourage insurers and pharmaceutical companies to offer scholarships for health care providers to attend the national ADA or diabetes post-graduate conferences.
   - Provide materials on programs to doctor office staff.

6. Conduct ongoing professional education with a curriculum that incorporates best practices and prevention (e.g., Grand Rounds, CMEs, etc.) for physicians involved in providing diabetes services, and encourage financial incentives, and doctors who champion the benefits of education programs to other physicians.
   - Provider training for physicians with a curriculum that incorporates best practices (e.g., Grand Rounds, CMEs, etc.).
   - Education of team of clinicians involved in providing diabetes services.
   - Expand physicians' awareness of prevention programs.
   - On-going messages to MDs about education programs.
   - Identify doctors to champion the benefits of education programs to other physicians.

7. Engage hospital and clinic administrators to foster mentoring or peer education to change physician behavior and to support the increased number of, and enrollment in, patient education programs; engage medical directors from MCOs and PHOs to encourage their members to receive regular diabetes education.
   - Engage medical directors from MCOs and PHOs to encourage their members to receive regular diabetes education.
   - Engage hospital administrators to support the increased number of patient education programs and the increased enrollment in those programs.

Information That Is Accurate and Moves People to Action

1. Engage schools, public places, workplaces, faith-based and community-based organizations to share information on the risks, burden, and impact of diabetes, and on the availability of screenings:
   - Increase the number of community and faith-based organizations that provide diabetes education and refer at risk people to curricula and programs.
   - Support workplaces in offering healthy office food and exercise opportunities.
   - Recommend screenings at local YMCAs and other community groups to find people who should be referred for further testing and education.
   - Partner with grass roots and community organizations to share information on diabetes.
   - Trained non-CDEs can provide education at community health fairs.

0681
09/15/08

2. Use local health departments and other venues to train additional non-CDEs to provide accurate information on signs and symptoms of diabetes, and to refer people to formal education programs, and develop a competency for community and peer diabetes health educators:
   - Training of non-CDEs to deliver accurate diabetes information.
   - Advocate with local health departments to provide education through the Preventive Services Block Grant and other means.
   - Expand capacity to educate the population by developing education programs for the community.

3. Launch an information campaign drawing on partnerships, existing programs, and national campaigns to highlight the rapid rise in diabetes diagnoses; connect with a public figure to promote the message:
   - Adapt national media campaigns to CT's needs.
   - Adapt ADA education campaigns.
   - Use allied health professionals and existing programs.
   - Expand distribution of the statewide diabetes newsletter.
   - Form partnerships with hospitals and CHCs.
   - Engage local media/community access.
   - Expand prevention efforts.
   - Radio: NPR (e.g., the Faith Middleton Show)
   - Connect with public figures (e.g., CT State Representative Toni Harp and CT State Representative Richard Roy).

Appendix B: Healthy People 2010 Diabetes Specific Objectives

1-9 Reduce hospitalization rates for three ambulatory care-sensitive conditions–pediatric asthma, uncontrolled diabetes, and immunization-preventable pneumonia and influenza.

4-7 Reduce kidney failure due to diabetes.

4-8 (Developmental) Increase the proportion of persons with type 1 or type 2 diabetes and proteinuria who receive recommended medical therapy to reduce progression to chronic renal insufficiency.

5-1 Increase the proportion of persons with diabetes who receive formal diabetes education.

5-2 Prevent diabetes.

5-3 Reduce the overall rate of diabetes that is clinically diagnosed.

5-4 Increase the proportion of adults with diabetes whose condition has been diagnosed.

5-5 Reduce the diabetes death rate.

5-6 Reduce diabetes-related deaths among persons with diabetes.

5-7 Reduce deaths from cardiovascular disease in persons with diabetes.

5-8 (Developmental) Decrease the proportion of pregnant women with gestational diabetes.

5-9 (Developmental) Reduce the frequency of foot ulcers in persons with diabetes.

5-10 Reduce the rate of lower extremity amputations in persons with diabetes.

5-11 (Developmental) Increase the proportion of persons with diabetes who obtain an annual urinary microalbumin measurement.

5-12 Increase the proportion of adults with diabetes who have a glycosylated hemoglobin measurement at least once a year.

5-13 Increase the proportion of adults with diabetes who have an annual dilated eye examination.

5-14 Increase the proportion of adults with diabetes who have at least an annual foot examination.

5-15 Increase the proportion of persons with diabetes who have at least an annual dental examination.

5-16 Increase the proportion of adults with diabetes who take aspirin at least 15 times per month.

5-17 Increase the proportion of adults with diabetes who perform self blood-glucose monitoring at least once daily.

7-11 Increase the proportion of local health departments that have established culturally appropriate and linguistically competent community health promotion and disease prevention programs.

12-9 Reduce the proportion of adults with high blood pressure.

12-10 Increase the proportion of adults with high blood pressure whose blood pressure is under control.

12-11 Increase the proportion of adults with high blood pressure who are taking action (for example, losing weight, increasing physical activity, and reducing sodium intake) to help control their blood pressure.

14-29 Increase the proportion of adults who are vaccinated annually against influenza and ever vaccinated against pneumococcal disease.

19-1 Increase the proportion of adults who are at a healthy weight.

19-2 Reduce the proportion of adults who are obese.

19-17 Increase the proportion of physician office visits made by patients with a diagnosis of cardiovascular disease, diabetes, or hyperlipidemia that include counseling or education related to diet and

nutrition.

22-1 Reduce the proportion of adults who engage in no leisure-time physical activity.

28-5 (Developmental) Reduce visual impairment due to diabetic retinopathy.

Appendix C: The 10 Essentials of Public Health

1. **Monitor Health Status to Identify and Solve Community Health Problems**: This service includes accurate diagnosis of the community's health status; identification of threats to health and assessment of health service needs; timely collection, analysis, and publication of information on access, utilization, costs, and outcomes of personal health services; attention to the vital statistics and health status of specific-groups that are at higher risk than the total population; and collaboration to manage integrated information systems with private providers and health benefit plans.
2. **Diagnose and Investigate Health Problems and Health Hazards in the Community**: This service includes epidemiologic identification of emerging health threats; public health laboratory capability using modern technology to conduct rapid screening and high volume testing; active infectious disease epidemiology programs; and technical capacity for epidemiologic investigation of disease outbreaks and patterns of chronic disease and injury.
3. **Inform, Educate, and Empower People about Health Issues**: This service involves social marketing and targeted media public communication; providing accessible health information resources at community levels; active collaboration with personal health care providers to reinforce health promotion messages and programs; and joint health education programs with schools, churches, and worksites.
4. **Mobilize Community Partnerships and Action to Identify and Solve Health Problems**: This service involves convening and facilitating community groups and associations, including those not typically considered to be health-related, in undertaking defined preventive, screening, rehabilitation, and support programs; and skilled coalition-building ability in order to draw upon the full range of potential human and material resources in the cause of community health.
5. **Develop Policies and Plans that Support Individual and Community Health Efforts**: This service requires leadership development at all levels of public health; systematic community-level and state-level planning for health improvement in all jurisdictions; development and tracking of measurable health objectives as a part of continuous quality improvement strategies; joint evaluation with the medical health

care system to define consistent policy regarding prevention and treatment services; and development of codes, regulations, and legislation to guide the practice of public health.

6. **Enforce Laws and Regulations that Protect Health and Ensure Safety**: This service involves full enforcement of sanitary codes, especially in the food industry; full protection of drinking water supplies; enforcement of clean air standards; timely follow-up of hazards, preventable injuries, and exposure-related diseases identified in occupational and community settings; monitoring quality of medical services (e.g., laboratory, nursing homes, and home health care); and timely review of new drug, biologic, and medical device applications.

7. **Link People to Needed Personal Health Services and Assure the Provision of Health care when Otherwise Unavailable**: This service (often referred to as "outreach" or "enabling" services) includes assuring effective entry for socially disadvantaged people into a coordinated system of clinical care; culturally and linguistically appropriate materials and staff to assure linkage to services for special population groups; ongoing "care management"; transportation services; targeted health information to high-risk population groups; and technical assistance for effective worksite health promotion/disease prevention programs.

8. **Assure a Competent Public and Personal Health care Workforce**: This service includes education and training for personnel to meet the needs for public and personal health service; efficient processes for licensure of professionals and certification of facilities with regular verification and inspection follow-up; adoption of continuous quality improvement and life-long learning within all licensure and certification programs; active partnerships with professional training programs to assure community-relevant learning experiences for all students; and continuing education in management and leadership development programs for those charged with administrative/executive roles.

9. **Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services**: This service calls for ongoing evaluation of health programs, based on analysis of health status and service utilization data, to assess program effectiveness and to provide information necessary for allocating resources and reshaping programs.

10. **Research for New Insights and Innovative Solutions to Health Problems**: This service includes continuous linkage with appropriate institutions of higher learning and research and an internal capacity to mount timely epidemiologic and economic analyses and conduct needed health services research.

Appendix D: Resources (note: these lists are sample programs for reference and do not represent an exhaustive listing)

DPH Programs

Name	Purpose/Activities	Areas Served	Phone
Improving Quality of Diabetes Care in Community Health Centers (CHC)	Plan to improve quality of care in the CHCs participating in the diabetes collaborative.	Connecticut (CHCs involved in the diabetes collaborative)	For information on all CT DPH sponsored diabetes programs, please call 860-509-7802
Development of the Statewide Diabetes Prevention and Control Plan	To collaborate with partners to develop a comprehensive diabetes prevention and control plan for Connecticut.	Connecticut	
State Agency Worksite Wellness	To bring diabetes prevention, awareness, and education to the employees of state agencies	Connecticut (selected state agencies)	
Improving Diabetes Self-Management Skills	To improve access to information on diabetes management services through the ADA Expo and incentives.	Connecticut (ADA recognized education centers, CT Expo Center)	
Diabetes Workforce Enhancement	Increase health education skills and cultural competency of the non-certified diabetes educator (CDE) workforce by developing curriculum. Improve diabetes knowledge in health care professional work force	Connecticut	
Diabetes Advisory Committee	To gather input, increase leverage of resources, expand reach into partners, and develop advisory council to provide direction to develop and implement the CT DPCP.	Statewide	

Quality Assurance

Name	Purpose/Activities	Areas Served	Phone
CT Policy & Economic Council (CPEC)	Provides program evaluation for communities and local government in CT.	Statewide	860-571-7500
CT Health Policy Project	Research and education to improve access to health care in CT.	Statewide	203-562-1636
Qualidigm	Consulting and research company focused on improving the quality and safety of health care.	Statewide	860-632-2008

ADA Recognized Diabetes Education Programs

Facility	Program Name	Town	Phone
William W. Backus Hospital	Diabetes Self-Management Education Program	Norwich	860-892-6906
Bridgeport Hospital	Diabetes Education Program	Bridgeport	203-384-4723
Hospital of Central CT/ Joslin Diabetes Center affiliate	Know Diabetes, Know Yourself And Outpatient Diabetes Self-Management Program	Southington	860-224-5672
Bristol Hospital	The Diabetes Education and Self-Management Outpatient Program at Bristol Hospital Wellness Center	Bristol	860-582-9355
Charlotte Hungerford Hospital	Hungerford Diabetes Center	Torrington	860-489-0661
Day Kimball Hospital	Diabetes Self-Management Education Program	Plainfield	860-928-4344
Day Kimball Hospital	Diabetes A Self-Management Outpatient Education	Putnam	860-928-6541 x2593
Diabetes Resource Center	Diabetes Self-Management Education Program	Watertown	860-274-6254
Hartford Hospital	Diabetes LifeCare Outpatient Adult and Diabetes in Pregnancy Self-Management Education	Hartford	860-545-3526
Eastern Connecticut Health Network, Inc.	Manchester Memorial Hospital Diabetes Self-Management Education Program	Manchester	860-647-6824
Hartford Hospital	Diabetes LifeCare Outpatient Adult & Diabetes in Pregnancy Self-management Education Programs	Hartford	860-545-3526
Ivery & Dudley, Inc.	Northwest Connecticut Diabetes Center	Winsted	860-379-4772
Two programs: Lawrence & Memorial Hospital Joslin Diabetes Ctr. affiliate	Know Diabetes, Know Yourself And Outpatient Diabetes Self-Management Program	New London Mystic	860-444-4737 x2124 860-245-0565
Middlesex Hospital	Diabetes Self-Management Education Program	Middletown	860-358-8840
MidState Medical Center	The Diabetes Center Outpatient Self-Management Program	Meriden	203-630-5364
Hospital of Central CT/ Joslin Center for Diabetes	Know Diabetes, Know Yourself And Outpatient Diabetes Self-Management Program	New Britain	860-224-5672
Hospital of Central CT/ Joslin Center for Diabetes	Know Diabetes, Know Yourself And Outpatient Diabetes Self-Management Program	Southington	860-224-5672
New Milford Hospital	Diabetes Education Program	New Milford	860-350-7263
Norwalk Hospital	Diabetes Outpatient Self-Management Education Program	Norwalk	203-852-2181
Phoenix Internal Medicine Assoc.	Central Connecticut Diabetes Center	Waterbury	203-754-5504
St. Francis Hospital & Medical Center	Diabetes Care Center	Hartford	860-714-4402
Hospital of Saint Raphael	Diabetes Health care Program	New Haven	203-789-3355

Stamford Hospital Health System	Diabetes Management Program	Stamford	203-325-7286
VA Health care System, VA CT	Diabetes Self-management Education Program	West Haven	203-932-5711 x 5189
University of Connecticut Health Center	Diabetes Outpatient Self-Management Education Program	Farmington	860-679-2273
Windham Community Memorial Hosp.	Hatch Hospital Corp. Diabetes Education Program	Willimantic	860-456-6727

Community-Based Organizations (note: these lists are sample programs for reference and do not represent an exhaustive listing)

Name	Purpose/Activities	Areas Served	Phone
Hispanic Health Council	Six Centers of Excellence provide service in their areas of expertise. Education, prevention, and community/bilingual/multicultural support to address current Latino health issues.	Hartford	860-527-0856
Bristol Community Organization	Programs focus on the young, the disabled, the elderly, economically disadvantaged. Head Start, homemaking/care service for disabled, etc.	Greater Bristol	860-584-2725
Urban League of Greater Hartford	Focuses on African Americans and other groups. Education, community health, employment training services to help urban people become self-sufficient.	Greater Hartford	860-527-0147
New Haven Family Alliance	Provides services and resources to help families become self-reliant.	Downtown New Haven	203-782-3110
CT Association for United Spanish Action (CAUSA)	Group of Latino service organizations. Provides education, health, elderly services, HIV/AIDS support to the communities it serves.	Statewide	860-424-0077
Sickness Prevention Achieved through Regional Collaboration (SPARC)	Works with community organizations and health care providers to identify people in need of medical services, coordinate existing health services, and develop programs to expand access to health care services.	Fairfield, Litchfield, Hartford, and Tolland Counties	860-435-2896
Hill Health Corporation Diabetes Prevention Team	Provides health services (primary care, dental, laboratory, nursing, etc.) to underserved populations.	Greater New Haven	203-503-3087
Thames Valley Council for Community Action (TVCCA)	Works through community organizations (churches, municipal entities, educational institutions) to provide social services to the economically disadvantaged.	Southeastern Connecticut	860-889-1365

AmeriCares Free Clinics	Provides free medical care to economically disadvantaged working families.	Danbury, Bridgeport, Norwalk areas	800-486-4357
Khmer Health Advocates Inc. National Cambodian American Health Initiative (NCAHI)	Seeks to improve access to health care and disease management education for Cambodian Americans living with diabetes.	Connecticut	860-561-3345
CT AHEC System	Provides information on health careers and works to remove health care disparities with programs to increase minority representation in the health professions.	Four regional offices located around the state	860-679-7968

Disease Management Programs (note: these lists are sample programs for reference and do not represent an exhaustive listing)

Name	Purpose/Activities	Areas Served	Phone
Aetna Healthy Outlook	Insurer disease management program	Connecticut	
Anthem Healthy Solutions for Chronic Diseases	Insurer disease management program	Connecticut	
ConnectiCare DiabetiCare	Insurer disease management program	Connecticut	800-390-3522
Cigna Well Aware Program	Insurer disease management program	Connecticut	800-882-4462
Delphi Diabetes Manager	Electronic management system for physicians to track their diabetic patients' management programs.	Connecticut	860-687-4700
St. Vincent's Diabetes Initiative	Blood testing, education, nutrition counseling, exercise counseling, newsletters.	Connecticut, Greater Bridgeport	877-255-7847

Support Groups (note: most of the hospitals in the previous section also offer support groups)

Name	Purpose/Activities	Areas Served	Phone
Home and Community Health Services	Diabetes education and support group.	Enfield, Connecticut	860-763-7600
Groton Board of Education	A school-based health center offering diabetes support groups.	Groton, Connecticut	860-572-2100
Town of Manchester Health Department	Diabetes support groups.	Manchester, Connecticut	860-647-3173
Norwich Senior Center	Diabetes support groups.	Norwich, Connecticut	860-889-5960

09/15/08
0689

Estuary Council of Seniors	Diabetes support groups.	Old Saybrook Connecticut	860-388-1611
Haven Health Center of Rocky Hill	Diabetes support groups	Rocky Hill, Connecticut	860-529-2521
Stamford Health System Staying Well Program	Diabetes education and support groups.	Stamford, Connecticut	877-233-9355
Poquonock Family Resource Center	Community diabetes support and education groups.	Windsor, Connecticut	860-687-2070

Community Foundations in Connecticut (note: these lists are sample programs for reference and do not represent an exhaustive listing)

Name	Purpose/Activities	Areas Served	Phone
Branford Community Foundation	Grants for education, health, cultural projects in the city of Branford	Branford ONLY	203-481-0661
Greater Bridgeport Area Foundation	Grants for the arts, community/economic development, education, health/human services	Greater Bridgeport	203-334-7511
Community Foundation for Greater New Haven	Grants for projects to benefit undeserved populations: racial/ethnic minorities, women, children, etc.	Greater New Haven	203-777-2386
Community Foundation of Greater New Britain	Grants for improvement projects in the areas it serves.	Berlin, New Britain, Plainville, Southington	860-229-6018
Community Foundation of Northeast Connecticut	Grants for projects to benefit the underserved in Windham County.	Windham County	860-423-4373
Community Foundation of Northwest Connecticut	Grants to non-profits for community improvement: education, health, culture, etc.	Litchfield County	860-489-0026
Community Foundation of Southeastern Connecticut	Awards grants to strengthen educational, cultural, health, social service, other charitable organizations.	Southeastern Connecticut	860-442-3572
Connecticut Community Foundation	Awards grants to non-profits.	Naugatuck Valley and Litchfield Hills	203-753-1315
Eastern Connecticut Community Foundation	Provides grant support to non-profits for educational, health, cultural endeavors.	Eastern Connecticut	860-887-3303
Fairfield County Community Foundation	Strategic grant-making to respond to community needs.	Fairfield County	203-834-9393
Hartford Foundation for Public Giving	Brings together people and organizations to find solutions to pressing problems. Makes grants to	Hartford County	860-548-1888

	support worthy projects in education, health, culture, etc.		
Main Street Community Foundation	Provides grant support to local organizations.	Bristol, Burlington, Plainville, Plymouth, Southington, Wolcott	860-583-6363
New Canaan Community Foundation	Provides grant support to local organizations.	New Canaan Area	203-966-0231

Health Foundations Operating in Connecticut (note: these lists are sample programs for reference and do not represent an exhaustive listing)

Name	Purpose/Activities	Areas Served
Boehringer-Ingleheim Cares Foundation	Grants for research and educational programs. Provides free pharmaceuticals to those in need.	National
Bayer Foundation	Grants for projects in health and human services.	Connecticut
Pfizer Foundation	Grants and direct aid to improve access to pharmaceuticals.	National, based in CT
CIGNA Foundation	Grants in health and human services, education, community and civic affairs, the arts.	National, office in CT
Bristol-Myers Squibb Foundation	Grants to non-profits.	Connecticut
ConnectiCare Foundation	Grants to public and community health projects.	Connecticut
Anthem Foundation	Grants to expand health care access for the underserved.	Connecticut
Universal Health Care Foundation of CT	Funds projects that support its mission to ensure that quality health care is available to all Connecticut residents.	Connecticut
Connecticut Health Foundation	Funds programs to improve access to children's mental health services, reduce racial / ethnic health disparities, expand access to oral health services.	Connecticut
Connecticut Pharmacists Foundation	Makes grants for programs to support pharmacy outreach, education, and to support new pharmaceutical developments	Connecticut
Aetna Foundation	Funds grants in health, arts, culture, and education.	National, based in CT

Other Foundations (note: These lists are sample programs for reference and do not represent an exhaustive listing.)

Name	Purpose/Activities	Areas Served
Daphne Seybolt Culpeper Memorial Foundation, Inc	Grants for health, culture, and other projects.	Fairfield County
Louis H. Aborn Foundation	Grant-making foundation.	Fairfield County
Kurt Berliner Foundation	Grant-making foundation.	Fairfield County
Bondi Foundation	Grant-making foundation.	Fairfield County
Ensworth Charitable Foundation	Grants for health/welfare, housing/economic development, family service, and education projects.	Hartford and contiguous surrounding towns
First County Bank Foundation, Inc.	Grants to non-profits that support community and economic development or children/youth/families	Lower Fairfield County
Fischbach Foundation, Inc	Grant-making foundation.	Connecticut
R. S. Gernon Trust	Grants for art, health, culture projects.	Norwich only
The Gryphon Fund	Grant-making foundation.	Hartford area
George J. and Jessica Harris Foundation	Grant-making foundation	Connecticut
James H. Napier Foundation	Grants in health, education.	Meriden Area
Robert & Margaret Patricelli Family Foundation	Funds annual campaigns, general/operating support, program development, research.	Connecticut
Vain and Harry Fish Foundation, Inc	Has given substantial funding to the Juvenile Diabetes Research Foundation	New York
George A. and Grace L. Long Foundation	Grant-making foundation	Connecticut

13. END NOTES

[1] The Commissioner of the Department of Public Health appointed the Advisory Council members. The Advisory Council created an Executive Committee to manage the work groups and to report on the groups' progress. Each member of the Executive Committee was assigned to co-chair one of the five work groups.

[1] National statistics reveal that in 2002 a person with diabetes spent an average of $13,243 on health care compared to $2,560 for his or her counterpart without diabetes. http://www.medscape.com/viewarticle/450150_3

[1] Note: Pay for performance is a practice that has been proven to work in some circumstances. However, there are views that find this practice counter productive.

[1] For example, in Oregon, efforts to make low-literacy and multilingual educational materials available as well as a campaign to assist community groups prepare prevention resource guides have resulted in significant increases in general public awareness of the complications of diabetes and in the number of adults with diabetes who receive formal diabetes education. New York's efforts to provide consistent and culturally appropriate education materials have resulted in a significant decline in serious diabetes complications like lower extremity amputation and declines in diabetes-related hospitalizations. An intensive disease management program in Indiana that provides one-on-one nurse counseling to Medicaid recipients has substantially increased the number of people with diabetes on Medicaid who reach their goals.

[1] Middlesex Hospital's care managers/diabetes educators serve as local expert resources for the community providing education to the public and providers. Middlesex Hospital was the first provider-based organization in the country to receive NCQA accreditation for disease management in 2003. Re-accreditation for disease management in 2006. Received the 2006 Connecticut Hospital Community Service Award, co-sponsored each year by CHA and the Connecticut Department of Public Health (DPH). This award recognizes a Connecticut hospital that has made an outstanding contribution to the health of its community.

I. Executive Summary

The health care services provided in the Waterbury area appear to be fragmented, competitive and in financial distress. Although utilization of inpatient and outpatient services is high -- profit margins remain low at both St. Mary's Hospital and the Waterbury Hospital. Access to care is not yet impacted; however, the long-term viability of the health care delivery system is at risk -- presenting an opportunity to restructure and develop an efficient and responsive health care delivery system. After an extensive review of data in this investigation, some of the findings are:

- Saint Mary's Hospital's financial measures indicate that the hospital is insolvent.
- Data suggest that the financial viability of the health system is more sustainable with one hospital and one outpatient system of care.
- Duplication of services is competitive and costly and limits profitability.
- A merger of St. Mary's Hospital and Waterbury Hospital is an option; however, many major issues exist.
- A planned closure of St. Mary's Hospital may be a viable solution providing a pre-determined integration plan is in place.
- Utilization data demonstrate a consistent and steady demand for inpatient and outpatient services will continue in the community.
- A comprehensive primary care system needs to be developed to respond to the immediate need for access which will ultimately improve the hospitals' financial viability and the health status of the community. Data suggest a lack of primary care services exists forcing individuals to utilize the Emergency Department as their health care provider.
- Behavioral health services must be expanded in a comprehensive and cohesive manner.

The financial hardship that St. Mary's Hospital (SMH) and the Waterbury Hospital (WH) struggle with is mostly a result of an economically challenged city. Waterbury experiences a higher rate of uninsured and unemployed compared to the state as a whole and has a lower per capita income. Socioeconomics and demographics play a significant role in the financial condition of hospitals since they rely on philanthropic donations and the balance of government and non-government reimbursement to offset losses.

Additionally, financial hardship can be created when two hospitals are located in close proximity to each other. The expenses related to marketing, advertising, recruitment and retention are increased as each hospital is competing for the most qualified employees and the most profitable patients. Related to the expenses of competition – is duplication. The duplication that exists in the outpatient market results in the thinning out of profitable services so neither organization can leverage the profit. These costs are in addition to those targeted at competing hospitals located in the secondary market. Also

related to competition is the lack of negotiating power the hospitals face during the contracting phase with managed care organizations. Typically the commercial discounts are greater in an area served by two hospitals which decreases the reimbursement from the most lucrative payer source.

This investigation conducted by the Office of Health Care Access (OHCA) was initiated to assess the viability of the health care delivery system in the Waterbury area. Several state agencies have been periodically meeting and discussing the information that OHCA has been collecting. The other state agencies involved are: Department of Public Health (DPH), Department of Social Services (DSS), Office of Policy and Management (OPM), and the Connecticut Health and Educational Facilities Authority (CHEFA).

The purpose of this investigation was to study the socioeconomic factors, utilization of hospitals services and a review of the financial condition of SMH and WH and the impact these factors have on ensuring sustainable access to hospital care in the Waterbury area. Both hospitals have reported negative operating margins for the past two years and have not experienced a strong fiscal year in some time. For Fiscal Year 2006, SMH reported a Total Margin of 0.4% and an Operating Margin of (3.7)%; and WH reported a Total Margin of (2.4)% and an Operating Margin of (3.7)%.

The distressed financial condition of both hospitals, although more severe with SMH, has restricted access to capital for facilities improvement and renovation projects. Both of the hospitals' facilities are aging, they lack sufficient parking, and increasing the capacity to meet demand for services in the Emergency Departments and patient floors has become cost-prohibitive. Thus, occupancy rates are high in many service lines and yet beds, although within licensed bed count, cannot be added.

According to FY06 audited financial statements, St. Mary's Hospital has enough cash to pay one (1) day of its short-term commitments and is taking longer than normal to pay its creditors. Although Waterbury Hospital has more cash on hand and is paying its creditors earlier than prior years, both hospitals are exhibiting the classic symptoms of financial distress.

Each of the findings mentioned above will be further discussed in the Discussion and Conclusions section of this report. All data used in this report can be found in the Findings of Fact section and the Attachments.

II. Summary of Findings

This investigation thoroughly reviewed the socio-economic characteristics, the utilization of services, and the financial challenges of St. Mary's Hospital and the Waterbury Hospital. A detailed analysis of these factors is contained in Attachment A of this report. This summary is provided as an overview of the key factors that contribute to the on-going financial losses of the hospitals.

Socio-economic Characteristics:

Although there are seven towns that best define the "Waterbury Area" included in the investigation, a significant portion of residents who rely on and access St. Mary's Hospital and the Waterbury Hospital for health care services live in the towns of Waterbury, Naugatuck or Watertown. This area consists mostly of:

- young adults who may be full-time students, single, unemployed or have no permanent full-time jobs and therefore, likely to be uninsured;
- a disproportionate share of residents who are over 75 years old and live in the city of Waterbury who maybe inclined to suffer from chronic diseases that need management;
- minorities that have high hospitalization and uninsured rates;
- residents who are less likely to have a college degree or higher, to be skilled professionals or employed;
- a labor force that has a comparably higher tendency to work in service, production, transportation and material moving industries that are seasonal, temporary or part-time in nature;
- people who earn less than the statewide average per capita or household income;
- a population that has a high incidence of hospitalizations that could have been prevented if residents had adequate access to community health services; and
- a federally medically and primary care underserved population.

Utilization:

Utilization data collected in this investigation demonstrated an active use of inpatient and outpatient health care services. There was no significant decline in utilization which in other circumstances would be a reason for a deterioration of financial stability – the Waterbury hospitals show steady volume. This data is summarized for FY 2006 for SMH and WH combined:

- 27,562 Inpatient discharges (remained steady for the past 3 years)
- 116,644 Emergency Department visits (slight increase over the past 3 years)
- 91,684 Medical and Behavioral Health Clinic visits (overall no increase)
- 245,638 Other "outpatient" visits (i.e., surgery, radiology, etc.)

Fundamental system issues exist so although there is steady utilization of services, it is difficult to assess the necessary "size" of the health care system. The Emergency Departments show a higher utilization than typical – probably related to the lack of alternatives available; and each hospital stated the difficulty of discharging certain patients due to an inability to transfer patients to the next level of care.

Combined, the hospital system in the Waterbury area has 704 inpatient beds and 68 bassinets. Over a three-year period, the two hospitals gradually increased the number of staffed beds to 447 or 62% of licensed beds and 68 bassinets. Most of the beds (72% or 323) are for medical/surgical and critical care, 62 beds are for OB/GYN care, 42 beds for psychiatry and 36 beds for pediatric care. Based on the demographic profile of the area, there is excess demand for medical/surgical, critical care and psychiatric beds and insufficient demand for OB/GYN and pediatric beds. Although the high demand have resulted in rather high average occupancy rates (approximately 80%) over the year, the two hospitals have been limited in how many additional beds they can staff because of space constraints, capital costs, staffing shortages or difficulty with discharging patients to the appropriate level of care to a different facility (i.e., skilled nursing, rehabilitation).

Medical care is about one-half of the inpatient care the hospitals provide, surgical and maternity/pediatric care make up one-quarter each and behavioral health care is 5%. While over the three-year period the number of patients discharged increased by only 1%, patient days grew by 5%. With the increases in volumes, the cost of providing care per discharge in the area rose by 20% but growth in revenue did not keep pace with the cost as would be expected, rather loss per discharge more than doubled. Although both hospitals were incurring losses in all inpatient care service lines, larger losses were associated with behavioral health and surgical care. In FY 2006, the loss per discharge (both hospitals combined) in each service line was $2,834 for behavioral health, $1,871 for surgical care, $794 for maternity/pediatrics care and $127 medical care. But loss per service line per discharge varied between the two hospitals, the losses for medical, behavioral health and maternity/pediatric care were lower at St. Mary's Hospital, while the loss per discharge associated with surgical care was lower at Waterbury Hospital. However, some of the differences are explained by what each hospital includes in its components of costs.

The two hospitals combined have 73 Emergency Department (ED) beds and both experience the "boarding" of patients that require admission to an inpatient unit. The hospitals state that staffing, space constraints, and the lack of access to capital constrain their ability to improve through-put of patients in their respective EDs. Approximately 14% of ED visits in the area result in an inpatient admission and like the state and nation account for about one-half of all discharges. As in the case of inpatient services, both hospitals provide ED services at a loss per case.

In the area of medical and dental outpatient care, an affiliate of St. Mary's Hospital provides these services at a loss per visit despite high volumes. An affiliate of Waterbury Hospital provides some outpatient and HIV treatment services and records high volumes but was unable to provide cost data for evaluation. Affiliates of both hospitals also provide outpatient behavioral health clinic services; however, the Waterbury Hospital provides 90% of these services. Loss per visit is almost the same for both facilities, but visits per case to the St. Mary's Hospital behavioral health clinic are three times the visits made to the Waterbury Hospital clinic.

Other outpatient services such as one-day surgery, radiology/imaging, laboratory, gastroenterology and other services are the most profitable services both hospitals provide although the cost at Waterbury Hospital is 1.5 times the cost at St. Mary's Hospital.

The financial instability of both hospitals is not a result of low utilization. The hospitals' combined inpatient discharges for FY06 are 27,562; however, on average the hospitals combined lose $899 per case. In surgical cases, typically a profitable service, the combined hospital loss per case is $1,871. The utilization of the emergency departments is higher than that of the state average which is indicative of a lack of alternative primary health care services. In FY06, the two hospitals reported 116,644 visits to their EDs. This presents a fiscal challenge when 42% of their patients are covered by Medicaid and 10% are uninsured. Of the patients that were treated and discharged (not admitted) from the ED, the hospitals lose a combined $28 per case. This amount of loss per case for such a large volume is difficult to offset since they realize losses in their inpatient services and they have a relatively low reimbursement rate from commercial payers.

Hospital Payer Mix:

When all services are combined (inpatient and outpatient) for both hospitals, commercial payers are the dominant primary payer in the Waterbury Area accounting for 41% of total patient volume. Medicare accounts for 30%, Medicaid for 23% and the uninsured for 4% (Table 1). In fact, commercial payers are the leading primary payer (46%) in the sole profitable areas of service for the hospitals in the "other outpatient services" category, which include medical clinics, one-day surgery, radiology, laboratory, gastroenterology and all other services except ED and outpatient psychiatry. The payer mix varies between services and hospitals. EDs in the area have an unfavorable payer mix with over one-half of their patient volume being either Medicaid-covered or uninsured and an annually declining share of commercially-covered patients. Although both hospitals provide care to a large portion of uninsured patients (9% for St. Mary's Hospital and 11% for Waterbury Hospital), St. Mary's Hospital treats a disproportionate share (49%) of Medicaid patients in the ED. The payer mix presented in Table 1 is highly correlated to the demographic profile outlined in Section 3.0 of Attachment A.

Table 1: Waterbury Area Hospitals Payer Mix by Department, FYs 2004 - 2006

Services	Primary Payer	St. Mary's (%)			Waterbury (%)			Waterbury Area Hospitals (%)

Financial Indicators:

There is no single financial measure that, by itself, indicates the financial health of or the financial difficulty faced by a hospital. Important indicators to consider are the utilization of services, the payer mix, reimbursement, profit/loss of services, the ability the hospital has to meet its short-term obligations and its access to capital in order to continue to improve facilities and equipment. For consecutive years, both hospitals experienced negative operating margins, also a signal of financial distress.

St. Mary's Hospital's financial performance has deteriorated in the past three (3) years its low current assets to current liabilities ratio, 0.8 in FY06, put the hospital at a higher risk for technical insolvency (below 10th percentile). To improve cash flow, the hospital

shortened the average time it took to collect revenues from billed patients by ten days down to 38 days but that was not enough to improve the average time it took to pay creditors, that increased by a day to 72 days (Table 2).

Waterbury Hospital has experienced deterioration in its cash flows as well. The hospital's days of cash on hand have reduced from 42 days to 20 days, which is below state and national medians. It took the hospital seven days more to collect revenues from billed patients on average, but it paid its creditors five days earlier than it did the year before. Waterbury Hospital is at very low risk of technical insolvency since its current assets to current liabilities ratio in FY06 was 2.03 which is above the median for the state and nation (Table 2).

A serious concern for both hospitals is the difficulties they will have in financing future debt for capital projects. In order for any hospital to maintain standards of care and to remain competitive, they need to be able to invest in aging facilities, upgrade to advanced technologies, and expand or renovate to meet patient demands.

Table 2. Financial Indicators of St. Mary's Hospital and Waterbury Hospital (FY 2004 – 2006)

	St. Mary's Hospital			Waterbury Hospital		
Financial Statistics	**2006**	**2005**	**2004**	**2006**	**2005**	**2004**

Source: *Annual Report on the Financial Status of Connecticut's Short Term Acute Care Hospitals for Fiscal Year 2005, the hospitals' Audited Financial Statements &*data submitted by the hospitals in response to the investigation.*

Current Ratio: the Current Ratio is the most widely used measure of liquidity. The value of the Current Ratio measures the number of dollars held in current assets per dollar of current liabilities. From an evaluation perspective, high values for the Current Ratio imply a good ability to pay short term obligations and thus a low probability of technical insolvency. Nationally, Current Ratios fluctuate around 2.0.

System of Care

The infrastructure that provides access to outpatient primary care and behavioral health services overall appears to be fragmented and at capacity. The lack of access to primary health care is demonstrated by the high utilization of emergency departments and the high incidence of hospitalizations that could have been prevented if residents had adequate access to preventive community services (Attachment A). The clinics that each

hospital operates and the Federally Qualified Health Center in Waterbury also appear to be at capacity. Additionally, there is a serious concern with the ability for clinic patients to access specialty care since the majority of physicians do not accept many Medicaid patients.

In continued research regarding access to pediatric inpatient psychiatric services (Attachment E), it was recommended that Region 5 (Waterbury being part of) expand inpatient beds as well as develop a Psychiatric Residential Treatment Facility (PRTF). The lack of availability of different levels of care is creating long delays to transfer behavioral health patients to other providers and typically those referrals are out of the region.

Office of Health Care Access

Report of Investigative Proceedings

Subject Title:	**An Investigation to review utilization and capacity of acute care general hospital services provided in the "Waterbury Area"**
Docket Number:	**06-3070-VST**
Statutory Reference:	**Section 19a-633 of the Connecticut General Statutes**
Proceeding Date:	**December 19, 2006**
Presiding Officer:	**Cristine A. Vogel**
Date of OHCA Report:	**May 23, 2007**

Cristine A. Vogel
Commissioner
Office of Health Care Access

Findings of Fact

1. Saint Mary's Hospital ("SMH") is an acute care hospital located at 56 Franklin, Waterbury, Connecticut. SMH's total license capacity is 379 beds and bassinets.

2. Waterbury Hospital ("WH") is an acute care hospital located at 64 Robbins Street in Waterbury, Connecticut. WH's total licensed bed capacity is 393 beds and bassinets.

3. On May 25, 2006, the Office of Health Care Access (OHCA) pursuant to Connecticut General Statutes (C.G.S.) Section 19a-633 initiated an investigation to review utilization and capacity of acute care general hospital services provided in the "Waterbury Area." The general acute care hospitals located in the city of Waterbury are St. Mary's Hospital and The Waterbury Hospital.

4. **Table 1: Financial Performance of St. Mary's and Waterbury Hospitals (FYs 2004 – 2006)**

Financial Indicators	St. Mary's Hospital			Waterbury Hospital		
	FY 2004	FY 2005	FY 2006	FY 2004	FY 2005	FY 2006

Source: *Audited Financial Statements.*

[1] Loss or gain from reimbursement of patient services from government and non-government payers.

[2] Difference between revenue obtained from direct patient care and funds from other sources and expenses.

[3] Measures profitability and is the ratio of loss or gain per unit total operating revenue.

[4] Measures profitability and is the ratio of total operating and non-operating revenue loss or surplus to total operating revenue.

5. The investigation reviews current availability and utilization of, and demand for hospital services, system capacity and the challenges these two hospitals face in meeting demands from the community they serve. This involves an evaluation of:
   - the socio-economic make-up of the community that relies on services of the hospitals, implications on the hospitals' patient payer-mix and the effect of reimbursements on hospital operations and future plans;
   - current utilization and future demand for all hospital services including inpatient, emergency department, primary care clinics, outpatient psychiatric care and ancillary outpatient services in the area; and
   - challenges that exist in the market in general and their impact on the hospitals' operations.

6. OHCA determined that the following seven towns most frequently access health care services at "SMH" and "WH": Middlebury, Naugatuck, Prospect, Southbury, Waterbury, Watertown and Wolcott.

Table 2: Other Connecticut hospitals' percentage share of discharges originating from the seven selected towns, FYs 2003-2005

*Includes the other 23 hospitals, which individually did not discharge a significant share of patients from the seven towns.

7. According to Census 2000 data, approximately 208,861 residents live in the "Waterbury Area" as defined in Fact 6.

8. A significant portion of residents who rely on services provided by SMH and WH live in Waterbury, Naugatuck or Watertown and the socio-economics of this population is described as follows:

- young adults who may be full-time students, single, unemployed or have no permanent full-time jobs and therefore likely to be uninsured;
- a disproportionate share of residents who are over 75 years old live in the city of Waterbury who maybe inclined to suffer from chronic diseases that need management.
- minorities that have high hospitalization and uninsured rates;
- residents less likely to have a college degree or higher, to be skilled professionals or employed;
- a labor force that has a comparably higher tendency to work in service, production, transportation and material moving industries that are seasonal, temporary or part-time in nature;
- people who earn less than the statewide average per capita or household income;
- a population that has a high incidence of hospitalizations that could have been prevented if residents had adequate access to community health services; and
- a federally medically and primary care underserved population.

9. In November 2005, the Primary Care Office of the Connecticut Department of Public Health designated the city of Waterbury as a medically and a primary care underserved area under federal laws.

10.

Table 3: Licensed and Staffed Acute Care Beds in Waterbury Area by Service Line, FYs 2004 - 2006

Service Line	Licensed Beds	Staffed Beds					Share of Staffed Beds	
		FY 2006	FY 2005	FY 2004	% of Licensed Beds Staffed in FY 2006	% of All Staffed Beds in FY 2006	St. Mary's Hospital	Waterbury Hospital

Total	**(899)**	**(549)**	**(386)**	**(612)**	64	42	57

[1] The combined per case gain/loss is sum of total revenue for the two hospitals minus the sum of their total costs divided by sum of discharges from both hospitals.

Table 14: Waterbury Area Hospital Emergency Department Gain or Loss Per Treated & Discharged Visit, FYs 2004 - 2006

	Gain or Loss Per Discharge/Visit ($)[1]			
Hospital	FY 2006	FY 2005	FY 2004	3 yr Average
St. Mary's	(22)	(15)	24	(5)
Waterbury[2]	(36)	(29)	(30)	(32)
Waterbury Area Hospitals	**(28)**	**(21)**	**(1)**	**(17)**

[1] For each cell, the combined per case gain/loss is sum of net revenues for the two hospitals minus the sum of total costs for the two divided by sum of discharges from both hospitals.

21. SMH and WH jointly contracted with The Chartis Group, LLC to conduct an assessment and financial review to present options of integration of the two hospitals. The table below summarizes the costs associated with the different Levels:

Table 15: Projected Costs Associated with Levels of Integration.

	Level One ("Millions")	**Level Two** ("Millions")	**Level Three** ("Millions"
A. Affiliation Costs	$ 12.0	$ 17.0	$ 25.0
B. Technical Costs	$ 12.2	$ 12.2	$ 12.2
C. Facilities Costs	$ 1.0	$ 3.9	$ 62.2
	$ 25.2	**$ 33.1**	**$ 99.4**

Level 1: Administrative and Operational Support Integration only
Level 2: Limited Clinical Integration and Level 1
Level 3: Full Administrative and Clinical Integration

22. According to The Chartis Group presentation, all levels of integration show a positive financial gain 5 years out. There would be a significant spend down or depletion of WH cash reserves to facilitate the affiliation. Therefore, WH would be at risk of violating some of its bond covenants and possibly alter its credit profile and its future access to capital.

23. According to The Chartis Group presentation, SMH and WH have internal issues that would need to be addressed, such as: Catholic and Secular organizations, WH has a unionized workforce, SMH liabilities, and a general cultural divide between the two organizations.

24. StayWell Health Center is a federally-qualified health center located in Waterbury, Connecticut, and provides primary care, dental and behavioral health services.

25. In fiscal year 2006, StayWell provided 55,687 visits, a rate of growth of 275% When compared to fiscal year 2000.

26. According to StayWell's letter to the agency, the organization struggles with staffing. "With the shortage in qualified nurses, we are frequently competing for staff. We have seen this to be the case for physicians also. Hiring culturally competent staff is always a struggle and then unfortunately added to the existing community shortages. Ultimately, staffing shortages impact access to care when special outreach services or walk-in hours need to be suspended due to inadequate staff to assign."

27. According to StayWell's letter, "We have difficulty getting access to Specialists who are not interested in seeing our patients. The low reimbursement rates for Title 18 and Title 19 for non-community health care providers has a trickle down effect on our patients."

28. According to a recent telephone conversation held between Commissioner Vogel and Donald Thompson of StayWell, in general StayWell Health Center's growth is limited by the space it occupies.

29. Connecticut has experienced 6 mergers; one closure of a small rural community hospital; one acquisition and conversion of a small non-profit to the state's only for-profit hospital; and the construction of a new children's hospital and a 94-bed community hospital (both results of mergers).

30. After reviewing the closures and mergers, it was apparent that each circumstance was different depending upon the financial strengths and weakness of the hospitals involved. In all of the mergers (in the cities of Bridgeport, Hartford and Meriden) one hospital was financially capable of absorbing the debt of the less viable; and in no circumstances was the State of Connecticut financially responsible for merger/closure activity.

31. The "Report of the Region 5 Pediatric Inpatient Psychiatric Services Implementation Group" examined the previous report regarding the current situation of inpatient services available for children & adolescents and offered recommendations to address the need and capacity for such services.

32. Region 5 has six acute care hospitals (Charlotte Hungerford, New Milford, Sharon, Danbury, St. Mary's and Waterbury) but has only five inpatient beds to serve the area and no free-standing psychiatric hospital.

33. The five inpatient beds for adolescent behavioral health services are located at Waterbury Hospital.

34. The Implementation Group recommends an additional 20 to 30 inpatient psychiatric beds are required in Region 5.

35. The data indicate that the majority of discharges are from the areas of Waterbury (27%), Danbury (11%), and Torrington (8%).

36. The Implementation Group recommends to establish 15 – 25 Psychiatric Residential Treatment Facility beds in Region 5.

IV. Discussion and Conclusion

The main purpose and intent of the processes undertaken by OHCA under the Investigative Proceeding of Docket Number 06-30760-INV was to gather and analyze pertinent data and facts regarding the utilization, capacity and demand, and the challenges to meet these demands in the Waterbury area. The financial condition of both SMH and WH were critical to this assessment. The following is a discussion of the results of the analysis and OHCA's conclusions. All conclusions are independent of Certificate of Need decisions and any review and issuance of CHEFA bonds. Any coordination of services must proceed in full conformance with the antitrust laws.

Throughout this investigation it became evident, either through data or by comments of those involved, that having two hospitals within the city of Waterbury is a root cause for the financial hardship experienced by both hospitals. As a community served by one hospital and one outpatient services system the financial stability of the remaining hospital would return through:

- Improved commercial payer rates
- Improved payer mix of patients
- Reduced expenses related to marketing/advertising/recruitment
- Reduced expenses in duplicative services
- Gain a competitive advantage over hospitals located in the secondary markets

Ideally this one inpatient/outpatient system would further develop an integrated and comprehensive primary care and behavioral health care system with the overriding goal to improve the health status of the community and reduce the number of ED visits and unnecessary hospitalizations.

There has been much discussion regarding the state's Medicaid reimbursement being a lead factor in the financial deterioration since a large portion of the patients are covered by Medicaid. A brief review of the percentage of Medicaid inpatient discharges from other hospitals located in similar markets shows that St. Mary's is the third highest Medicaid inpatient provider and Waterbury Hospital is within the state's average. As Table 1 demonstrates, it is difficult to directly correlate the percentage of inpatients by payer source to profit margins. Payer mix is a strong variable in a hospital's financial condition, but other operational factors play a significant role as well. The patient mix for ED discharges for St. Mary's is 49% and for Waterbury Hospital is 34% (comparable data for other hospitals is not available).

Table 1. FY06 Inpatient Discharge Patient Mix by Payer Source; Total Discharges, Total Profit Margin and Operating Profit Margin

Hospital	Medicare	Medicaid	Private	Uninsured	Total Discharges	Total Margin	Operating Margin
Bridgeport	34%	25%	38%	2%	19,574	4.1%	1.4%
St. Vincent's	46%	14%	35%	5%	19,672	9.4%	3.8%
Hartford	38%	18%	41%	3%	39,323	2.4%	0.0%
St. Francis	41%	20%	37%	2%	31,647	1.0%	-0.1%
Yale-New Haven	28%	25%	44%	2%	50,354	3.9%	2.1%
St. Raphael	53%	13%	33%	1%	25,354	-2.1%	-2.6%
Stamford	35%	16%	46%	4%	17,003	6.1%	5.1%
New Britain	41%	21%	35%	3%	18,585	4.3%	3.3%
St. Mary's	42%	23%	33%	2%	12,718	0.4%	-3.7%
Waterbury	45%	18%	35%	2%	15,000	-2.4%	-3.6%
Statewide	40%	17%	39%	3%	423,051	2.5%	0.6%

Source: OHCA Discharge Database and FY06 Financial Audited Statements (profit margins are hospital only)

Although any improvement to any of the payer reimbursement will benefit the two hospitals – it alone will not address the fundamental issues of fragmentation, duplication, competition and the ability to improve access to capital.

Recently the hospitals have engaged in discussions on the matter of integrating or consolidating services. They jointly contracted a consultant and shared some of the findings as part of this investigation. The consultant's analysis explored the potential options and the costs associated with each option. Realizing that "Level 1 Integration of Administrative and Operational Support Only" would be the most achievable first step, it offers limited long-term sustainability, costs an estimated $25 million, would continue the two-hospital campus with different organizational cultures, and it would have difficulties differentiating itself in the marketplace. The other levels of integration begin to consolidate services and structurally become one hospital with two locations. The costs rise significantly with these options from approximately $33 to $100 million; however, they begin to realize the benefits of a merged entity.

These figures are only estimates; however, they provide insight to the real costs of integration. In other mergers that have occurred in Connecticut (Attachment D), typically one of the hospitals involved was financially capable of absorbing the debt of the less viable hospital and the associated costs of the merger. Of concern is the inability of the hospitals to fund the potential integration.

This situation differs from other mergers in the state because both hospitals are in financial distress and utilization of services remains active. If a merger were to occur, Waterbury Hospital would be responsible to absorb any liabilities and debt of St. Mary's Hospital and that will further weaken the stability of Waterbury Hospital. The hospitals

are aware of some services that can be consolidated (termination of services from one hospital and transferring the patients to the remaining program may require Certificate of Need approval). Such services may include neurology, certain surgical procedures, orthopedics, cardiology, maternity, neonatology, the on-call system for the coverage of two EDs, trauma services, and ancillary services (i.e., laundry, laboratory, pathology, etc.). A slow and deliberate closure of St. Mary's Hospital may also be a viable option.

In conclusion, St, Mary's Hospital's financial measures indicate that the hospital is insolvent. The annual infusion of state funding, although enabling continued access for patients, does not address nor resolve the fundamental system issues that are creating the on-going losses. St. Mary's Hospital should be responsible for providing adequately for its employees during this transition and fully fund the pension obligation. In the event of a closure or merger, the remaining hospital will be able to absorb some of the volume; however, it will need to reconfigure and possibly expand the inpatient services. Removing the competition and duplication in the profitable outpatient market is critical to be able to flow funds back into the remaining hospital system to ensure sustainability.

The infrastructure for primary care and behavioral health care services needs to be re-designed and a comprehensive and integrated system developed. Ideally, a system of care that involves the hospital, the community health centers, community providers and school-based clinics will serve the population well. Additionally, the community may benefit from a workforce development plan as the system begins to reshape the health care delivery system.

St. Mary's Hospital, the Waterbury Hospital and the state agencies were actively involved in this investigatory process. Both hospitals are committed to providing high quality patient care and continue discussions regarding how to best sustain access and return financial stability to the delivery system of the Waterbury community.

1.0 Introduction

On May 25, 2006, the Office of Health Care Access (OHCA) pursuant to Connecticut General Statutes (C.G.S.) Section 19a-633 (Appendix A), initiated an investigation to review utilization and capacity of acute care general hospital services provided in the "Waterbury Area." The general acute care hospitals located in the city of Waterbury are St. Mary's Hospital and The Waterbury Hospital.

The investigation stemmed from concerns about the long-term viability of either or both hospitals, and their ability to provide and maintain needed health care services in the communities they serve vis-à-vis their financial performance in the last two fiscal years (FY) (Table 1). In addition to providing acute inpatient care, the hospitals serve as a safety net for residents of the area who do not have access to or cannot afford primary care. Based on the hospitals audited financial statements, both hospitals are operating at a loss from direct patient care; the hospitals' expenses exceed revenue from direct patient care and other operating revenue; inadequate funds obtained from philanthropic or non-philanthropic sources not directly related to patient care; as well as other issues discussed in this report.

Table 1: Financial Performance of St. Mary's and Waterbury Hospitals (FYs 2004 – 2006)

Financial Indicators	St. Mary's Hospital			Waterbury Hospital		
	FY 2004	FY 2005	FY 2006	FY 2004	FY 2005	FY 2006
Operating Loss/Gain[1]	$6,306,000	$(15,270,000)	$(9,694,000)	$(448,506)	$(2,431,845)	$(5,262,405)
Excess of Revenue over Expenses[2]	$11,480,000	$(6,581,000)	$(6,197,000)	$2,275,334	$(30,448)	$(2,479,026)
Operating Margin[3]	4.2%	(10.02)%	(4.7)%	(0.2)%	(1.2)%	(2.2)%
Total Margin[4]	7.68%	(4.3)%	(3.0)%	1.2%	(0.01)%	(1.1)%

Source: *Audited Financial Statements.*

[1] Loss or gain from reimbursement of patient services from government and non-government payers.

[2] Difference between revenue obtained from direct patient care and funds from other sources and expenses.

[3] Measures profitability and is the ratio of loss or gain per unit total operating revenue.

[4] Measures profitability and is the ratio of total operating and non-operating revenue loss or surplus to total operating revenue.

The investigation reviews current availability and utilization of, and demand for hospital services, system capacity and the challenges these two hospitals face in meeting demands from the community they serve. This involves an evaluation of:

- the socio-economic make-up of the community that relies on services of the hospitals, implications on the hospitals' patient payer-mix and the effect of reimbursements on hospital operations and future plans;
- current utilization and future demand for all hospital services including inpatient, emergency department, primary care clinics, outpatient psychiatric care and ancillary outpatient services in the area; and
- challenges that exist in the market in general and their impact on the hospitals' operations.

On the basis of this investigative proceeding, OHCA will make recommendations for ensuring continued availability and access to health care for the area.

2.0 Determining the towns of the "Waterbury Area"

The towns a hospital provides services to make up its primary and secondary service areas. Primary service area towns are either a significant portion of the hospital's patient base or most residents from the towns access services at the hospital; and the secondary service area consists of all other towns whose residents access the hospital's services at a steady but lower rate. This investigation determines which towns will be most adversely impacted if one of the two hospitals or both are unable to provide services. Therefore, to determine which towns rely significantly on health care services that the two hospitals provide, OHCA first included towns that comprise the top 70% of each of the two hospitals' acute care inpatient discharges. Based on this definition, OHCA identified Waterbury and Naugatuck for St. Mary's Hospital and these same towns and an additional two, Watertown and Southbury, for the Waterbury Hospital (Table 2).

Table 2: Towns of Origin for St. Mary's Hospital and Waterbury Hospital Top Seventy Percent Discharges (FY 2003 – 2005)

	St. Mary's Hospital			Waterbury Hospital		
Patient Town	Discharges	% of Hospital Total	Cum % Total	Discharges	% of Hospital Total	Cum % Total
Waterbury	21,903	60.2	60.2	20,818	46.1	46.1
Naugatuck	3,693	10.2	70.4	4,685	10.4	56.5
Watertown	n/a	n/a	n/a	4,610	10.2	66.7
Southbury	n/a	n/a	n/a	2,588	5.7	72.4

Source: *Office of Health Care Access Acute Care Discharge Database*

Other towns were included if the combined share of patients originating from that town for the two hospitals exceeded 70%, demonstrating a significant reliance of the town on the health care system in Waterbury. Middlebury, Prospect and Wolcott became part of the group because the two hospitals account for about three-quarters of discharges originating from each town, bringing the number of towns in the "Waterbury Area" to seven, namely Middlebury, Naugatuck, Prospect, Southbury, Waterbury, Watertown and Wolcott (Table 3).

Table 3: Percent of Patients from Selected Towns Discharged from St. Mary's Hospital and Waterbury Hospital (FY 2003-2005)

Patient Town	St. Mary's Hospital % Share	Waterbury Hospital % Share	Combined % Share
Middlebury	21.5%	53.5%	75.0%
Naugatuck	32.5%	41.2%	73.7%
Prospect	35.7%	37.4%	73.1%
Southbury	7.7%	34.9%	42.6%
Waterbury	44.6%	42.4%	87.0%
Watertown	20.3%	62.7%	83.0%
Wolcott	41.2%	30.7%	71.9%

Source: *Office of Health Care Access Acute Care Discharge Database*

Patients residing in the seven towns included make up over 80% of each hospital's discharges. Although residents of those towns migrate to nearby hospitals to receive care most utilize the Waterbury hospitals more than any other single hospital (Table 4). Patient migration to access care in other areas depends on factors such as patient preference, patient ability to travel and physician referral patterns. Out-migration from local areas also occurs because certain treatment modalities or physician specialists are available outside the Waterbury area.

Table 4: Other Connecticut hospitals' percentage share of discharges originating from the seven selected towns, FYs 2003-2005

Acute Care Hospital	Middlebury %	Naugatuck %	Prospect %	Southbury %	Waterbury %	Watertown %	Wolcott %	% of Hospital Total

Source: *Office of Health Care Access Acute Care Discharge Database*

*Includes the other 23 hospitals, which individually did not discharge a significant share of patients from the seven towns.

3.0 Socio-economic profile of the Waterbury Area

Socio-economic status, that is age, gender, race or ethnicity, educational attainment, employment status and income and physician availability, are well-documented joint indicators of health status, need for health care services, timeliness of heath care treatment, and ability to pay for health care services. Therefore, this section examines the social and economic characteristics of the Waterbury area population for insight into the type of services needed, the ability to pay for and the ease of access to health care services. The section also provides information on the inherent patient payer mix experienced by both hospitals.

A. Population and age distribution

According to Census 2000, there are approximately 208,861 residents in the Waterbury area, which is 6% of the state's population. About 51.4% of the area's residents live in Waterbury, 14.8% in Naugatuck and 10.4% in Watertown and a combined 23.4% in Southbury, Wolcott, Prospect and Middlebury (Table 5).

Table 5: Population and Age Distribution of the Waterbury Area

Patient Town	0-19	20-44	45-64	65-74	75+	2000 Population	% of Total
Middlebury	26.0%	28.0%	29.3%	8.0%	8.4%	6,451	3.1%
Naugatuck	29.1%	38.1%	21.0%	5.4%	6.3%	30,989	14.8%
Prospect	26.9%	33.7%	26.0%	6.8%	6.3%	8,707	4.2%

Connecticut	**27.1%**	**35.8%**	**23.1%**	**6.7%**	**7.0%**	**3,405,565**	

Source: *U.S. Census Bureau Census 2000*

Some age characteristics of this area are:

- Children under 19 years old are overrepresented in Naugatuck although there is no significant difference between children's share of the area and state population.
- Naugatuck and Waterbury residents, representing almost two-thirds of the area, have a relatively larger share of 20 to 44-year olds. According to OHCA research, 19 to 29 year-olds are four times as likely to be uninsured because they may be full-time students, single, unemployed or have no permanent full-time jobs. This means they are less likely to have health insurance coverage through an employer, are too old to receive coverage from a parent who has coverage through an employer and are ineligible for Medicaid.[1]
- Fewer adults in the 45 to 64 age range, a group that is likely to be employed and insured, compared to the state.[2] In Waterbury, there are only 19.7% in this age range compared to 23.1% in the state.
- Waterbury, representing about one-half of the area, has relatively more residents over 75 years than the state, 8.2% versus 7.0%. This age group has the highest potential to suffer from chronic diseases, experiences greater disease acuity and tend to have higher hospitalization rates than the general population and therefore costs more to treat.[3] Older residents are also less mobile and tend to access care in the local area.

B. Gender mix

The gender mix provides information on the types and volume of services the area needs. The gender mix of the area is similar to that of the state with slightly more women than men, although Southbury, Waterbury, Watertown have relatively more women than average (Table 6). Generally younger women tend to require hospitalization 2.5 times as more frequently as their male counterparts due to pregnancies and childbirth, but this disparity narrows, as women get older. In fact, even at age 65 and over when hospitalizations are 2.6 times the rate for the general population, men tend to require acute care at a higher rate than women of the same age cohort.[4]

Table 6: Gender Mix of Waterbury Area

Patient Town	Males	Females	Males %	Females %
Middlebury	3,127	3,324	48.5	51.5
Naugatuck	15,069	15,920	48.6	51.4
Prospect	4,255	4,452	48.9	51.1
Southbury	8,633	9,934	46.5	53.5

C. Racial composition

Research shows that minorities[5], especially Blacks and Hispanics or Latinos, are hospitalized at rates disproportionate to their share of the population than Whites.[6] Hispanics or Latinos are also 3.5 times as likely to be uninsured as all races in the state.[7] Six of the towns in the area are predominantly White compared to the state in general, but because Waterbury, which is about one-half of the area, has a significantly large minority population, mostly Hispanics and Blacks, the area has almost 1.5 times more minorities than the state (Table 7).

Table 7: Racial and Ethnic Distribution of Residents in the Waterbury Area

			Minorities			
Patient Town	Total Population	% White Alone	% Hispanic/ Latino (of any race)	% Black Alone	% Asian Alone	% Other races excluding Hispanics/ Latinos

D. Educational attainment

In general, higher educational attainment enhances employment prospects and the chances of gaining employment with an employer who provides health insurance coverage for eligible employees, especially for skilled labor. In the Waterbury area, fewer residents 25 years and over graduated from high school or have a college degree than the state in general, 78.9% compared to 84.0%. The residents are also 1.5 times less likely to have a bachelor's degree or higher (Table 8).

Table 8: Educational Attainment of the Waterbury Area 25 Years and Over Population

Patient Town	Population 25 Years and Over	% High School Graduate or Higher	% with a Bachelor's Degree or Higher

Connecticut	2,295,617	84.0	31.4

Source: *U.S. Census Bureau Census 2000*

E. Employment status and occupation

There are also fewer residents of the Waterbury area in the civilian labor force relative to the state, 49.3% versus 51.6%. The area total is lower mainly because only 46.4% of the city of Waterbury's residents are in the labor force (Table 9). Regardless, the city also has the highest unemployment rate, over 1.5 times the rate for the state, 8.6% versus 5.3%. This means potentially more people in the area are unable to afford needed health care services.

Table 9: Employment Status of Waterbury Area 16 Years and Over Civilian Labor Force

		Population 16 Years and Over		
Patient Town	Population	% in Civilian Labor Force	% of Civilian Labor Force Employed	% of Civilian Labor Force Unemployed
Middlebury	6,451	52.9	97.5	2.5

Connecticut	**3,405,565**	**51.6**	**94.7**	**5.6**

Source: *U.S. Census Bureau Census 2000*

Only 56.1% residents of the area are in "management and professional' and "sales and office" occupations compared to 65.6% of the state as a whole (Table 10). These occupations tend to be higher paying and permanent full-time positions, which increase the likelihood of being able to afford and/or qualify for employer-sponsored health insurance (ESI) coverage. Instead, area residents, especially those residing in Waterbury, have a comparatively higher tendency to be in "service" and "production, transportation and material moving," occupations that are seasonal, temporary or part-time in nature which lessen residents' ability to qualify for or to afford ESI when offered.

Table 10: Occupations of Waterbury Area 16 Years and Over Civilian Labor Force

Patient Town	% Management, Professional & Related Occupations	% in Service	% in Sales & Office	% in Farming, Fishing, Forestry	% in Construction, Extraction, Maintenance	% in Production, Transportation, Material Moving

F. Per capita and average household incomes

Higher individual or family incomes are linked to greater ability and willingness to spend on needed health care services. Per capita and average household incomes are the proxies for measuring what an individual or a family can afford. For most towns in the Waterbury area, both amounts are below the state average, resulting in a low average for the area in general, $28,505 versus the state's $31,816 and $76,939 compared to $82,601 (Table 11).

Table 11: Per Capita and Average Household Income for Waterbury Area Residents

Patient Town	Per Capita Income ($)	Median Household Income ($)	Average Household Income ($)

G. Estimated rate and number of uninsured

The "estimated" uninsured rate for Waterbury area residents based on the OHCA 2006 Household Survey is over 1.5 times the rate for the state, that is, 9.8% compared to 6.4% (Table 12).

Table 12: Estimated rate and number of uninsured in Waterbury Area, 2006

Uninsured Rate (%)			Estimated Number of Uninsured		
Lower	Estimate[1]	Upper	Lower	Estimate[1]	Upper
5.9	**9.8**	13.7	12,688	**21,034**	28,380

Source: *CT Office of Health Care Access 2006 Household Survey and U.S. Census Bureau 2005 Population Estimates*

[1] The estimated uninsured rate will fall within the given lower and upper boundaries 95% of the time if the survey were repeated 100 times. The estimated rate of uninsured for the state is 6.4%.

H. Rate of preventable hospitalization

Preventable hospitalizations (PH) are acute care admissions that would not have occurred, if patients had received "timely and effective primary care and medical management."[8] Such conditions include asthma, angina, bacterial pneumonia, chronic obstructive pulmonary disease, congestive heart failure, dehydration, diabetes, hypertension, low birth weight, lower extremity amputation, pediatric gastroenteritis, perforated appendix and urinary infection. Based on a methodology developed by the federal Agency for Healthcare Research and Quality (AHRQ), the Waterbury area has a relatively higher incidence of PH than the state for children and adults, 1.9 versus 1.2 and 1.5 versus 1.2 per 1,000 of the respective population (Table 13). For both age groups, the city of Waterbury had the highest incidence of PH, which was also twice the state rate.

Table 13: Ambulatory Care Sensitive Condition* Discharges per 1,000 population, FYs 2000 – 2004

Patient Town	Children (0-17)	Adults (18+)
Middlebury	2	1.3

I. Primary care physicians per 1,000 of area population

There is a recognized link between receiving primary care and improved health status. Payers of health care services broadly define primary care physicians (PCP) to include family or general practice physicians, pediatricians, internists, nurse practitioners, physician assistants and naturopathic physicians. These PCPs, including being trained to treat a wide range of diseases, maintain comprehensive records of patients, refer patients to specialists, coordinate care provided to patients by specialists and facilities, and manage patients' chronic health conditions. Ideally, a PCP should be a patient's first contact in a health care system. But generally, these PCPs are not distributed evenly between communities in the state and across the nation. In November 2005, the Primary Care Office of Connecticut Department of Public Health (DPH) designated the city of Waterbury as a medically and a primary care underserved area under federal law as an initial step to improving access to primary health care in the area.[9]

4.0 Hospital services utilization, payer reimbursement and mix

This section discusses the utilization of hospital services in the Waterbury area and identifies the payers of those services. This includes a discussion of acute care inpatient bed capacity, availability and utilization; emergency department use; outpatient psychiatric and other outpatient services utilization; and payer mix in these areas of operation. Unless otherwise stated, the two hospitals provided all the data for this section in response to OHCA's preliminary questions for the investigation; FY 2006 data are annualized.

A. Inpatient bed capacity, occupancy and availability

The "size" or "capacity" of inpatient services is the average number of inpatient beds a hospital staffs. Occupancy is the average number of staffed beds in use by midnight census throughout the year. The Department of Public Health (DPH) has licensed the two hospitals in the Waterbury area to operate a maximum of 704 beds and 68 bassinets. But over the last three years, the hospitals have gradually increased staffed beds to make available 63% or 447 beds in FY 2006 (Table 15). As a rule of thumb, hospitals obtain bed licenses to their maximum allowable capacity and staff beds based on demand and ability to staff them adequately.

Including critical care beds, about 70% of staffed beds in the area are medical or surgical. According to the two hospitals, in the last year, both have experienced increases in volumes associated with those beds, raising their medical/surgical occupancy rates to over 86% and ICU beds to over 80% for most of the year. Over a three-year period ending in FY 2006, both hospitals gradually added to the number of beds staffed for those services to bring the total to 323 (Table 15, see Appendices 1 and 2 for hospital details). But they staffed psychiatric beds at the same level in three consecutive years although they report occupancy at over 80%.

Table 15: Licensed and Staffed Acute Care Beds in Waterbury Area by Service Line, FYs 2004 - 2006

		Staffed Beds					Share of Staffed Beds	
Service Line	Licensed Beds	FY 2006	FY 2005	FY 2004	% of Licensed Beds Staffed in FY 2006	% of All Staffed Beds in FY 2006	St. Mary's Hospital	Waterbury Hospital
Medical/Surgical	479	260	257	249	54%	58%	40%	60%
OB/GYN	64	62	63	63	97%	14%	50%	50%
Psychiatry	50	42	42	42	84%	9%	29%	71%
Critical Care	75	63	55	55	84%	14%	68%	32%
Pediatric	36	20	20	20	56%	4%	50%	50%
Total Beds	704	447	437	429	63%	100%	45%	55%
Total Bassinets	68	68	68	68	100%	n/a	47%	53%

The high demands for medical/surgical, critical care and psychiatric beds are from:

- Growing demand for monitored beds at both hospitals due to an aging population with more complex medical conditions that require higher intensity nursing care;
- Systemic issues caused by difficulty in discharging patients to either extended care facilities or other next level of care resources. Delayed discharge of patients to step down

care because of insufficient availability of the next level of care in the community for both elderly and behavioral health patients; and

- Waterbury Hospital is the only provider of hospital inpatient behavioral health care to adolescents in mental health Region 5[10].

Both hospitals' ability to increase staffed beds to accommodate rising demand for medical, surgical and critical care beds is limited by factors either unique to the individual hospital or widespread in the hospital industry. Some limitations, which continue to exist, include:

- A decommissioned 27-bed unit at St. Mary's Hospital;
- Conversion of semi-private rooms to single occupancy rooms stemming from need to provide privacy and isolation for patients that require it at both hospitals.
- Physical plant constraints including aging building and inefficient configuration of nursing units;
- Restricted access to capital for renovating decommissioned units or converting administrative space to clinical space;
- Difficulty in recruiting additional and retaining existing staff; and
- Regulatory challenges.

In FY 2006, both St. Mary's Hospital and Waterbury Hospital held staffing levels for OB/GYN and pediatric beds consistent with prior years even though both hospitals continue to report low occupancy for the beds.

Based on the area towns identified, which constitutes over 80% of the hospitals' discharges, the area seems to have relatively more staffed medical and surgical acute care beds available per 100,000 of the population than the state as a whole, that is 209 versus 186 per 100, 000 (Table 16). Although psychiatric beds seem sufficient for the area, Waterbury is the sole provider of behavioral health care for residents less than 18 years old in Region 5 and the hospital has assigned five beds to the age group, already deemed inadequate for the region.[11]

Table 16: Licensed and Staffed Acute Care Bed Availability in the Waterbury Area by Service Line, FYs 2004 - 2006

			Waterbury Area			
Service Line	Licensed Beds	FY 2006 Staffed beds	Census 2000 Population	Licensed Bed Availability per 100,000	Staffed Bed Availability per 100,000	CT Staffed Bed Availability per 100,000*

[1] Adults over 17 years old. Beds include critical care beds.
[2] Females over 17 years old.
[3] Ages 5 and over.
[4] Population under 18 years old (54,088) minus discharges reported for (5) below.
[5] Bassinets for both nursery and NICU. Population is three-year average number of discharges reported by the two hospitals for discharges assigned Diagnosis Related Group (DRGs) 385-391in the OHCA Acute Care Discharge Database.

B. Acute care inpatient utilization by service type

This section provides an overview of the inpatient (IP) services that Waterbury area residents utilized over the three-year period ending in FY 2006. It combines utilization at both hospitals to better assess the needs of the community overall.

Inpatient medical care is almost one-half of the services the two hospitals provide; surgical and maternity/pediatrics care each account for about one-quarter; and behavioral health is 5%. The two hospitals started a joint advance cardiac services program over a year ago, which generated an increase in volume that was offset by a decline in behavioral health care. The combined inpatient services provided grew by 2% although maternity/pediatric care accessed declined by 3% in FY 2005 (Table 17, see Appendices 3 and 4 for hospital details). The overall increase in discharges in the area was no different from state level increases. Annualized volumes for FY 2006 indicate a significant drop in behavioral health discharges (11%) while discharges for other services will be close to their FY 2005 levels altogether resulting in a 1% decline in inpatient care utilization for the area.

Table 17: Waterbury Area Hospitals Acute Care Discharges by Service Line, FYs 2004 - 2006

	Discharges				% Change		
Service Line	FY 2006	FY 2005	FY 2004	3-Yr Average	06/05	05/04	06/04
Medical	12,546	12,563	12,055	**12,388**	0	4	4
Surgical	7,548	7,527	7,352	**7,476**	0	2	3
Behavioral Health	1,538	1,721	1,650	**1,636**	-11	4	-7
Maternity/Pediatrics	5,930	5,942	6,118	**5,997**	0	-3	-3
Total	**27,562**	**27,753**	**27,175**	**27,497**	**-1**	**2**	**1**

By the end of FY 2006, although total medical and surgical discharges are expected to remain the same and behavioral health and maternity/pediatric days to reduce, the hospitals anticipate 3% and 10% increases in medical and surgical patient days respectively. The result is a net increase in patient days of 4% for the year and 5% over the three-year period (Table 18, see Appendices 5 and 6 for hospital details).

Table 18: Waterbury Area Hospitals Acute Care Days by Service Line, FYs 2004 - 2006

	Acute Care Days				% Change		
Service Line	FY 2006	FY 2005	FY 2004	3-Yr Average	06/05	05/04	06/04
Medical	63,472	61,732	58,829	**61,344**	3	5	7
Surgical	39,926	36,345	37,832	**38,034**	10	-4	5
Behavioral Health	11,206	11,893	11,364	**11,488**	-6	5	-1
Maternity/Pediatrics	15,802	15,969	15,980	**15,917**	-1	0	-1
Total	**130,406**	**125,939**	**124,005**	**126,783**	**4**	**2**	**5**

Costs per discharge for all services are rising at both hospitals. Inpatient medical care cost per discharge was higher at Waterbury Hospital while inpatient surgical care cost per discharge was higher at St. Mary's Hospital. But by the end of FY 2006, the costs for both services at the hospitals were almost similar, $8,302 and $15,269 at St. Mary's Hospital versus $8,323 and $15,236 at Waterbury Hospital (Table 19). The converging unit cost for those service lines is better illustrated by the patient resource usage indicator or case mix index which was higher in FY 2003 for Waterbury Hospital but reduced for the hospital for two consecutive years to become almost equivalent to St. Mary's Hospital in FY 2005, 1.3534 versus 1.3577 respectively (for hospital details see Appendix 7). On the other hand, cost per discharge for behavioral health and maternity/pediatric inpatient care continue to be lower at St. Mary's Hospital. Generally, some of the variations in cost are attributable to what is included in cost, which tend to vary from hospital to hospital.

Table 19: Waterbury Area Hospitals Acute Care Cost[1] Per Discharge by Service Line, FYs 2004 - 2006

	St. Mary's Hospital ($)				Waterbury Hospital ($)			
Service Line	FY 2006	FY 2005	FY 2004	3-yr Average	FY 2006	FY 2005	FY 2004	3-yr Average
Medical	8,302	7,043	6,189	**7,211**	8,323	7,779	6,926	**7,676**
Surgical	15,269	12,874	12,391	**13,507**	15,236	12,843	11,776	**13,311**
Behavioral Health	7,303	6,612	5,999	**6,648**	9,376	8,059	7,620	**8,301**
Maternity/Pediatrics	3,095	3,980	3,662	**3,553**	4,260	3,548	3,581	**3,773**
Total	**8,817**	**7,998**	**7,305**	**8,058**	**9,590**	**8,227**	7,527	**8,433**

[1] There may be a variation in the components of cost between hospitals.

Medical care, which showed a gain of $62 per case in FY 2005 is projected to convert to a loss of $127 per case in FY 2006; behavioral health care although not the most expensive service to provide, lost the hospitals the most money per discharge, at a loss of $1,805 per case in FY 2005 and is expected to almost double to $2,834 per case in FY 2006 (Table 20, see Appendices 8 and 9 for hospital details). Despite sporadic growth in surgical care, losses per case for the service continue to rise. Based on annualized figures, loss per case for all services will grow by 64% by the end of FY 2006.

Table 20: Waterbury Area Hospitals Acute Care Gain or Loss per Discharge or Case by Service Line, FYs 2004 - 2006

	Gain or Loss Per Discharge/Case ($)[1]				% Change		
Service Line	FY 2006	FY 2005	FY 2004	3-yr Average	06/05	05/04	06/04
Medical	(127)	62	322	**82**	-306	-81	353
Surgical	(1,871)	(1,112)	(850)	**(1,282)**	68	31	55
Behavioral Health	(2,834)	(1,805)	(1,472)	**(2,015)**	57	23	48
Maternity/Pediatrics	(794)	(765)	(927)	**(830)**	4	-18	-17
Total	**(899)**	**(549)**	**(386)**	**(612)**	64	42	57

[1] The combined per case gain/loss is sum of total revenue for the two hospitals minus the sum of their total costs divided by sum of discharges from both hospitals.

C. Emergency Department utilization

Emergency Departments (ED) are an essential part of a health care system as they serve as the safety net for communities. For vulnerable populations, they can also be the primary mode of access to health care in general.

Between the two hospitals, the Waterbury area has 73 ED beds (Table 21); St. Mary's Hospital recently added eight of beds in response to continuous growth in volumes. Both hospitals experience "boarding" in the ED where patients wait over 12 hours for admission to an inpatient bed or transferred to mostly psychiatric facilities, throughout the year. Longer wait times and boarding occur mostly for medical/surgical, telemetry and psychiatric patients despite improvements in patient flow processes. The wait for inpatient admits is mostly related to staffing constraints or physical limitations to increase available beds.

Table 21: Waterbury Area Hospitals Emergency Department Beds, 2006

St. Mary's Hospital		Waterbury Hospital	
Description	Beds	Description	Beds
Treatment Room	24	Acute ER	21
Trauma room	2	Prompt Care	5
Behavioral Health	5	Behavioral Health	4
Urgi-care room	7	Surge (for high census & boarders)	5
Total	**38**	**Total**	**35**

Area residents recorded an average of 115,300 ED visits or 552 visits per 1,000 of their population per year (Table 22) which is over 1.3 times the average rate for the state and the nation,[12] an average that continues to rise from year to year. The high utilization rate may be associated with insufficient availability of primary care services in the area; increased demand on EDs to provide primary care after hours coverage; admission of physician referred patients through the ED because of limited capacity to accommodate direct admit patients; and increased patient disease acuity from lack of ongoing preventive care or management.

Table 22: Waterbury Area Hospital Emergency Department Utilization, FYs 2004 - 2006

Hospital		FY 2006	FY 2005	FY 2004	3-yr Average

	Treated & Admitted	**17,114**	**16,303**	**15,656**	**16,358**
	All ED Visits	**116,644**	**116,974**	**112,281**	**115,300**
ED Utilization Per 1,000		538	560	538	552

When a patient visits an ED, the patient is either "treated and discharged" or "treated and admitted" to inpatient care or transferred to other types of health care institutions. In the Waterbury area, an average of 16,358 or 14% of ED visits result in an acute care admission, which is similar to 15% in the state. Also similar to the state, inpatients admitted through the ED at the two hospitals have increased from one-third of all acute care inpatients in FY 2004 to one-half in FY 2006. In both instances, admissions through the ED have effectively replaced physician referrals as the primary source of admissions to acute care.

Some of the top ten primary reasons for ED visits for the "treated and discharged" probably could have been taken care of in a doctor's office or a primary care center providing one was available at onset of symptoms (for details see Appendices 10 and 11). The top ten primary reasons Waterbury area hospitals admitted ED patients to inpatient care were mostly cardiac, respiratory or infection related (for details see Appendix 12).

On average, Waterbury Hospital cost per ED per visit is almost 1.5 times St. Mary's cost (Table 23). According to the hospitals, the difference is in the items each hospital includes in its cost structure. For example, in this case St. Mary's Hospital excludes ED-related physician cost but accounts for it in the cost structure of its for-profit affiliate, the Franklin Medical Group, PC. Waterbury Hospital's cost structure also includes the cost of medical liability.

Table 23: Waterbury Area Hospital Emergency Department Cost[1] Per Treated and Discharged Visit, FYs 2004 - 2006

	Average Cost per Visit ($)			
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average
St. Mary's	290	290	242	274
Waterbury	484	454	444	460
Waterbury Area Hospitals	**374**	**364**	**335**	**358**

[1] There may be a variation in the components of cost between hospitals.

Similar to inpatient care services, both hospitals provide emergency services at a loss per visit; the three-year combined average loss was $17 per "treated and discharged" visit (Table 24). The losses are increasing from year to year. Waterbury Hospital experienced the higher losses per visit than St. Mary's Hospital.

Table 24: Waterbury Area Hospital Emergency Department Gain or Loss Per Treated & Discharged Visit, FYs 2004 - 2006

	Gain or Loss Per Discharge/Visit ($)[1]			
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average
St. Mary's	(22)	(15)	24	(5)
Waterbury[2]	(36)	(29)	(30)	(32)
Waterbury Area Hospitals	**(28)**	**(21)**	**(1)**	**(17)**

[1] For each cell, the combined per case gain/loss is sum of net revenues for the two hospitals minus the sum of total costs for the two divided by sum of discharges from both hospitals.

D. Outpatient services utilization

Outpatient (OP) services the two hospitals provide in the area include medical and dental clinics; behavioral health care and other OP care such as one-day surgery, radiology, laboratory, gastroenterology and other services.

i. Medical clinic utilization

Affiliates of each hospital own and operate the medical outpatient clinics for both hospitals.

Franklin Medical Group, PC (FMG) a for-profit entity, provides adult primary care in its Family Health Center, pediatric primary care in its Children's Health Center and dental care in the Dental Health Center for St. Mary's Hospital. On average, FMG records 47,996 visits per year at the three clinics combined (Table 25). In the last three years, area residents made the largest number of visits in FY 2005 at 50,174, but this dropped by 6% by the end of FY 2006.

Table 25: St. Mary's Hospital Medical Clinic Visits by Service Line, FYs 2004 - 2006

	Visits				% Change		
Clinic Service	FY 2006	FY 2005	FY 2004	3-yr Average	06/05	05/04	06/04
Family Health	21,830	25,313	22,927	**23,357**	-14	10	-5
Children's Health	17,732	18,146	17,524	**17,801**	-2	4	1
Dental	7,460	6,715	6,342	**6,839**	11	6	15
Total	**47,022**	**50,174**	**46,793**	**47,996**	-6	7	0

While visits to the clinics will drop in FY 2006, cost per visit will rise in each clinic to an average $132 for all clinics (Table 26). Except for dental care, cost per visit at each of the other two clinics was lowest at the three-year peak volumes.

Table 26: St. Mary's Hospital Clinics Cost per Visit by Service, FYs 2004 - 2006

	Cost Per Visit ($)				% Change		
Clinic Service	FY 2006	FY 2005	FY 2004	3-yr Average	06/05	05/04	06/04
Family Health	140	117	125	**127**	20	-7	11
Children's Health	138	122	144	**134**	13	-15	-5
Dental	94	79	57	**78**	20	38	39
Total	**132**	**113**	**123**	**123**	16	-8	7

From year to year, FMG operated the three clinics at a loss per visit; by the end of FY 2006, loss per visit will increase by 10% to $77 (Table 27).

Table 27: St. Mary's Hospital Clinics Gain or Loss per Visit by Service, FYs 2004 - 2006

	Gain/Loss Per Discharge/Case ($)				% Change		
Clinic Service	FY 2006	FY 2005	FY 2004	3-yr Average	06/05	05/04	06/04
Family Health	(93)	(89)	(89)	(90)	4	0	4
Children's Health	(69)	(55)	(79)	(67)	25	-31	-15
Dental	(51)	(40)	(35)	(42)	28	12	30
Total	**(77)**	**(70)**	**(78)**	**(75)**	10	-11	-2

Greater Waterbury Network, Inc owns Chase Outpatient Center and the HIV clinic; but the Greater Waterbury Management Resources, Inc. and Alliance Medical Group, PC operate the two clinics on behalf of Waterbury Hospital. The outpatient center provides primary care, neurology, orthopedics, podiatry and urology services and the other provides HIV-related medical services and counseling to the Waterbury area.

Together the two clinics record an average of 10,895 visits per year and the number of visits is expected to grow by 24% by the end of FY 2006 and 5% in the three-year period (Table 28).

Table 28: Waterbury Hospital Clinic Visits by Service Line, FYs 2004 – 2006

	Visits				% Change		
Clinic Service	FY 2006	FY 2005	FY 2004	3-yr Average	06/05	05/04	06/04
Chase Outpatient Center	10,712	8,581	10,806	**10,033**	25	-21	-1
HIV	1,138	997	451	**862**	14	121	60
Total	**11,850**	**9,578**	**11,257**	**10,895**	24	-15	5

The Waterbury Hospital only provided revenue data for the two clinics because cost at service line level is not available; as a result, OHCA is unable to determine gain or loss per visit at this time.

ii. Behavioral health services utilization

Patients in need of behavioral health care who receive adequate and continuous outpatient care have a reduced tendency to require emergency or inpatient care; therefore, there is a community benefit associated with providing outpatient psychiatric care. The FMG provides adult behavioral and substance abuse care for St. Mary's Hospital, while Behavioral Health of Waterbury Hospital Mental Health Outpatient Services and Behavioral Health of Waterbury Hospital Mental Addiction Services, both owned by Waterbury Hospital, provide psychiatry and addiction treatment for adolescents and children (ten years and older), adults and geriatrics.

Over the three-year period, the psychiatric clinics operated by or on behalf of the two hospitals experienced some decline in number of cases and visits, the facilities treated an average of 12,344 cases in 33,536 visits or 3 visits per case (Table 29). Although Waterbury Hospital clinics treated the overwhelming majority, on average, St. Mary's cases visited the clinics three times as often.

Table 29: Waterbury Area Hospitals Outpatient Psychiatric Cases, Visits and Average Visits per Case, FYs 2004 - 2006

	Number of Cases				% Change		
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average	06/05	05/04	06/04
St. Mary's	1,026	929	816	**924**	10	14	26
Waterbury	10,978	11,428	11,854	**11,420**	-4	-4	-7
Waterbury Area	**12,004**	**12,357**	**12,670**	**12,344**	-3	-2	-5
	Number of Visits				% Change		
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average	06/05	05/04	06/04
St. Mary's	6,712	5,898	3,731	**5,447**	14	58	80
Waterbury	26,100	28,601	29,566	**28,089**	-9	-3	-12
Waterbury Area	**32,812**	**34,499**	**33,297**	**33,536**	-5	4	-1
	Average Visits/Case						
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average			
St. Mary's	7	6	5	**6**			
Waterbury	2	3	2	**2**			
Waterbury Area	**3**	**3**	**3**	**3**			

The three-year average costs per visit to psychiatric clinics were similar, $161 for St. Mary's and $162 for Waterbury (Table 30). Prior to FY 2006, the cost of an outpatient psychiatric clinic visit at St. Mary's Hospital was at least 1.5 times higher than one at Waterbury Hospital, but in FY 2006 there was substantial decline in the cost at St. Mary's. Cost per case is higher at St. Mary's Hospital because of relatively more frequent of visits per case (Table 29). Generally, some of the variations in cost are attributable to what is included in cost; components of cost tend to vary from hospital to hospital especially in cases where affiliates provide the service on behalf of the hospital.

Table 30: Waterbury Area Hospitals Outpatient Psychiatric Cost Per Case or Visit, FYs 2004 - 2006

	Cost Per Case ($)[1]			
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average
St. Mary's	1,625	2,427	2,276	**950**
Waterbury	669	686	638	**398**
	Cost Per Visit ($)[1]			
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average
St. Mary's	248	382	498	**161**
Waterbury	281	274	256	**162**

[1] There may be a variation in the components of cost between hospitals.

Each hospital's affiliate provides outpatient psychiatric services at a loss per case; the average combined losses over the three-year period was $328 with most of the losses occurring at St. Mary's Hospital, because the hospital had higher average number of visits and per unit cost (Table 31). Losses per visit for the hospitals converge in FY 2006 at $115 for St. Mary's and $113 for Waterbury.

Table 31: Waterbury Area Hospital Outpatient Psychiatric Gain or Loss Per Case and Visit, FYs 2004 - 2006

	Gain or Loss Per Case ($)[1]				% Change		
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average	06/05	05/04	06/04
St. Mary's	(755)	(915)	(1,586)	**(1,053)**	7	-12	-7
Waterbury	(268)	(251)	(287)	**(269)**	3	-19	-16
Waterbury Area	**(310)**	**(301)**	**(370)**	**(328)**	-3	19	-13
	Gain or Loss Per Visit ($)[1]						
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average			
St. Mary's	(115)	(144)	(347)	**(179)**	12	-13	-2
Waterbury	(113)	(100)	(115)	**(109)**	5	-23	-20
Waterbury Area	**(113)**	**(108)**	**(141)**	**(121)**	-5	23	-17

[1] Combined per case gain/loss is sum of total net revenue for the two hospitals minus the sum of their total costs divided by sum of cases or visits from both hospitals.

iii. Other outpatient services utilization

Other outpatient services utilization based on data received from the two hospitals consist of services such as one-day surgery, radiology, laboratory, gastroenterology and other services. Ownership structures vary between hospitals and private practice physicians so the data may not be consistent or necessarily comparable.

In the three-year period combined other OP services declined by 6% (Table 32).

Table 32: Waterbury Area Hospitals Other Outpatient Utilization, FYs 2004 – 2006

	Visits				% Change		
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average	06/05	05/04	06/04
St. Mary's	135,516	131,538	141,478	136,177	3	-7	-4
Waterbury	110,122	111,971	119,728	113,940	-2	-6	-8
Waterbury Area	**245,638**	**243,509**	**261,206**	**250,118**	1	-7	-6
Utilization Per 1,000	1,176	1,166	1,251	1,198			

Other OP services cost per visit at Waterbury was 1.5 times St. Mary's, although this may vary from service to service (Table 33).

Table 33: Waterbury Area Hospital Other Outpatient Cost Per Visit, FYs 2004 - 2006

	Cost Per Visit ($)			
Hospital	FY	FY 2005	FY 2004	3-yr Average
St. Mary's	224	230	214	223
Waterbury	363	354	320	345
Waterbury Area	**286**	**287**	**263**	**278**

[1] There may be a variation in the components of cost between hospitals.

Despite the declining volumes, both hospitals made some gains per case providing other outpatient services. The two hospitals made experienced gains per visit for three consecutive years with most of the gains occurring at St. Mary's Hospital, (Table 34)

Table 34: Waterbury Area Hospitals Other Outpatient Gain or Loss Per Visit, FYs 2004 - 2006

	Gain or Loss Per Visit ($)[1]			
Hospital	FY 2006	FY 2005	FY 2004	3-yr Average
St. Mary's	25	13	32	23
Waterbury[2]	16	15	15	15
Waterbury Area Hospitals	**21**	**14**	**24**	**20**

[1] The combined per case gain/loss is sum of total revenue for the two hospitals minus the sum of their total costs divided by sum of discharges from both hospitals.

D. Payer reimbursement and mix

Hospital profitability relies significantly on a balance between patients covered by commercial/private insurance, government sponsored programs, such as Medicare, Medicaid or state or local programs in Connecticut such as State-Administered General Assistance (SAGA), and self-pay or uninsured patients. The driving force behind the gain or loss per case is the source of reimbursement.

Federal and state governments predetermine payment rates for Medicare and Medicaid patients, while hospitals negotiate reimbursement rates with private and commercial payers. In general, Medicaid rates do not fully cover cost while private or commercial programs traditionally reimburse at or above costs, depending on how the negotiated rates favor the hospitals.

In the Waterbury area, Medicare and private payers reimburse slightly above cost but reimbursement rates have been declining from year to year (Table 35). Currently, the two payers reimburse the two hospitals just enough to offset each other's underpayments. In FY 2005, Medicaid reimbursed less than one-half of St. Mary's Hospital's cost and less than 80% of Waterbury Hospital's.

Table 35: Waterbury Area Hospitals Primary Payer Payment to Cost, FYs 2003 - 2005

	St. Mary's Hospital			Waterbury Hospital			Connecticut		
	FY03	FY04	FY05	FY03	FY04	FY05	FY03	FY04	FY05
Ratio of cost to charges	0.44	0.44	0.47	0.42	0.36	0.34	0.49	0.46	0.44
Medicare payment to cost	1.03	1.12	1.03	0.89	0.95	0.96	0.97	0.97	0.97
Medicaid payment to cost	0.85	0.80	0.47	0.68	0.82	0.79	0.73	0.73	0.72

Source: *Office of Health Care Access Hospital Financial Stability Reports for multiple years*

i. Hospital payer mix

Commercial payers are the dominant primary payer in the Waterbury Area accounting for 41% of total patient volume all services combined. Medicare accounts for 30%, Medicaid for almost one-quarter and self-pay or the uninsured for 4% (Table 36). In fact, commercial payers are the leading primary payer (46%) in the sole profitable areas of service for the hospitals; other outpatient services, which include one-day surgery, radiology, laboratory, gastroenterology and all other services except ED and outpatient psychiatry. The payer mix varies between services and hospitals. EDs in the area have an unfavorable payer-mix with over one-half of their patient volume being either Medicaid-covered or self-pay or uninsured and an annually declining share of commercially-covered patients. Although both hospitals provide care to a large portion of uninsured patients, 9% for St. Mary's Hospital and 11% for Waterbury Hospital, St. Mary's Hospital treats a disproportionate share (49%) of Medicaid patients in the ED. The payer mix presented in Table 36 is directly and highly correlated to the demographic profile outlined in Section 3.0.

Table 36: Waterbury Area Hospitals Payer Mix by Department, FYs 2004 - 2006

Services	Primary Payer	St. Mary's (%)			Waterbury (%)			Waterbury Area Hospitals (%)

ii. Medical clinics payer mix

Based on a three-year average, four of every five visits to St. Mary's Hospital medical clinics were Medicaid covered or self-pay or uninsured, 14% of the visits were commercially-covered and 7% were covered by Medicare (Table 37). An overwhelming majority of visits to the Children's Health and Dental clinics were Medicaid covered, while family health has seen a sharp rise in self-pay or uninsured visits for family health care.

Table 37: St. Mary's Hospital's Outpatient Medical Clinics Payer Mix, FYs 2004 - 2006

		St. Mary's Hospital			
Clinic Services	Primary Payer	FY 2006	FY 2005	FY 2004	3-Yr Average
Family Health	Medicare	17%	14%	13%	14%
	Medicaid	58%	69%	73%	69%
	Commercial	11%	12%	10%	11%
	Self-pay	14%	5%	4%	6%
	Total	**100%**	**100%**	**100%**	**100%**
Children's Health	Medicare	0%	0%	0%	0%
	Medicaid	86%	83%	83%	83%
	Commercial	11%	15%	15%	14%
	Self-pay	3%	2%	2%	2%
	Total	**100%**	**100%**	**100%**	**100%**
Dental	Medicare	0%	0%	0%	0%
	Medicaid	96%	66%	66%	73%
	Commercial	3%	28%	28%	22%
	Self-pay	1%	6%	6%	5%
	Total	**100%**	**100%**	**100%**	**100%**
Clinic Total	**Medicare**	**6%**	**7%**	**7%**	**7%**
	Medicaid	**78%**	**73%**	**76%**	**75%**

5.0 Financial status of the hospitals at the end of FY 2006

Although by the end of FY 2006 St. Mary's Hospital decreased its operating losses, it continued to operate at a deficit, (3.7%) in FY 2006 compared to (10.02%) in FY 2005, (Table 1). Operating loss, for Waterbury Hospital more than tripled from the year before. For both hospitals, expenses continue to exceed revenues and since patient care is the primary source of operating revenue, the cost and the payer mix are critical to the bottom line.

Revenue from government payers (Medicare and Medicaid) to the two hospitals have dropped to 59% in FY 2006 while costs for patients covered by these payers continue to account for about 64% the costs of providing care (Table 39). Government underpayments to the hospitals are augmented by little or no revenues from self-pay patients who account for 2% of the cost of care. Revenues from patients covered by commercial and workers compensation payers although more than cover the costs of caring for those patients (about 41% versus 35% respectively) is still insufficient to make up for the deficit from government payers.

Source: *Annual Report on the Financial Status of Connecticut's Short Term Acute Care Hospitals for Fiscal Year 2005, the hospitals' Audited Financial Statements 6 & *data submitted by the hospitals in response to the investigation.*

For consecutive years both hospitals experienced negative operating margins, a sign of financial distress. This is more apparent with St. Mary's Hospital whose rather low current liabilities to current asset ratio, 0.8 in FY 2006, put the hospital at a higher risk for technical insolvency[13]. The hospital's cash flow position worsened with the amount of cash on hand to meet its short-term obligations during the year dropping from three days in FY 2005 to one day in FY 2006. The median number of days of cash on hand for the state and the nation in FY 2005 were 37.6 and 25.8 days respectively and an increasing trend is more favorable. To improve cash flow, the hospital shortened the average time it took to collect revenues from billed patients by ten days down to 38 days but that was not enough to improve the average time it took to pay creditors, which increased by one day up to 72 days.

Over the last three years, Waterbury Hospital has experienced deterioration in its cash flows; the hospital's days of cash on hand have reduced from 42 days to 20 days, which is below state and national medians. This may relate to the fact that it took the hospital seven days more to collect revenues from billed patients on average, and it paid its creditors five days earlier than the year prior. However, Waterbury Hospital is at very low risk of technical insolvency indicated by its current assets to current liabilities ratio in FY 2006 of 2.03 which is above the median for the state and nation.

C.G.S. §19a-633

Investigative powers. The commissioner or any agent authorized by him to conduct any inquiry, investigation or hearing under the provisions of this chapter, shall have power to administer oaths and take testimony under oath relative to the matter of inquiry or investigation. At any hearing ordered by the office, the commissioner or such agent having authority by law to issue such process may subpoena witnesses and require the production of records, papers and documents pertinent to such inquiry. If any person disobeys such process or, having appeared in obedience thereto, refuses to answer any pertinent question put to him by the commissioner or his authorized agent or to produce any records and papers pursuant thereto, the commissioner or his agent may apply to the superior court for the judicial district of Hartford or for the judicial district wherein the person resides or wherein the business has been conducted, or to any judge of said court if the same is not in session, setting forth such disobedience to process or refusal to answer, and said court or such judge shall cite such person to appear before said court or such judge to answer such question or to produce such records and papers.

State of Connecticut

THE CHARTIS GROUP, LLC. REPORT

Docket Number 06-30760-VST

Cristine A. Vogel
Commissioner
Office of Health Care Access

St. Mary's Hospital (SMH) and Waterbury Hospital (WH) jointly contracted with The Chartis Group, LLC. to conduct a market overview, a financial review and community needs assessment and present options in the planning efforts to integrate the hospitals.

The consultants projected the financial impact of different levels of possible integration:

Level 1: Administrative and Operational Support Integration only
Level 2: Limited Clinical Integration and Level 1
Level 3: Full Administrative and Clinical Integration

The consultant's model included integration expenses that would be necessary depending on the level of integration required. In summary, these expenses related to cost associated with:

A. Integration Costs: consulting and legal fees, public relations costs, reduction in workforce severance, etc.

B. IT Platform Alignment: Cerner rollout to SMH, fiber optic cable linkage, PACs, telecommunication system integration, etc.

C. Facility Renovation: Emergency Department, inpatient unit expansion, outpatient facilities, etc.

With the assumptions above, the consultants then estimated costs for each level of integration over 5 years:

	Level One ("Millions")	**Level Two** ("Millions")	**Level Three** ("Millions"
A. Affiliation Costs	$ 12.0	$ 17.0	$ 25.0
B. Technical Costs	$ 12.2	$ 12.2	$ 12.2
C. Facilities Costs	$ 1.0	$ 3.9	$ 62.2
	$ 25.2	**$ 33.1**	**$ 99.4**

All levels of integration show a positive financial gain 5 years out. There would be a significant spend down or depletion of Waterbury Hospital cash reserves to facilitate the affiliation. Therefore, WH would be at risk of violating some of its bond covenants and possibly alter its credit profile and its future access to capital.

Summary of Consultant's report:

- SMH is cash flow negative, has a drained balance sheet and is outside its Bond Covenants
- WH has a stronger Balance Sheet but faces income and cash flow challenges that will make it increasingly difficult to fund future capital requirements
- According to the report, it may take more than 10 years to get to the point where the combined entity could afford to build a new combined hospital
- A closer affiliation between WH and SMH can yield significant cost savings opportunity and long term financial benefit to the region's health care delivery system
- While full clinical integration (Level 3) might be too costly in the near term, Level 1 and Level 2 can provide ample net cash flow to stabilize operations and position the delivery system to move toward full clinical integration in the future
- SMH and WH have internal issues that would need to be addressed, such as: Catholic and Secular organizations, WH has a unionized workforce, SMH liabilities, and a general cultural divide between the two organizations.

Attachment C

StayWell
HEALTH CENTER

December 11, 2006

Cristine A. Vogel, Commissioner
State of Connecticut, Office of Health Care Access
410 Capitol Avenue, MS #13HCA
P.O. Box 340308
Hartford, CT 06134-0308

Dear Commissioner Vogel:

Thank you for inviting StayWell Health Center to respond to the recent Draft Study that was completed on the two hospitals in Waterbury. We agree that there are some concerns with the structure of healthcare that impact our community. StayWell is committed to being a part of the solution so that our patients and our community can continue to have quality care that is accessible.

In the past, StayWell has partnered with both hospitals in many successful projects. Most recently we have been working on an integrated network of services for uninsured adults that includes enrollment in Pharmacy Assistance Programs, Linkage with Primary Care, Medicaid Eligibility Screening, Application Assistance and the pursuit of an Electronic Health Record.

However, we want to alert you to the many barriers to providing services that StayWell contends with because they will not make it easy to resolve the community-based issues of access that the Study discusses.

- We have difficulty getting access to Specialists who are not interested in seeing our patients. The low reimbursement rates for Title 18 and Title 19 for non-community health center providers has a trickle down effect on our patients. Not only is this barrier influenced by low reimbursement rates, but when patients have delayed care they become more complicated to manage and pose a greater malpractice risk. At StayWell, we repeatedly encounter patients who have suffered poorer outcomes either due to the lack of specialty access or due to a delay in seeking/receiving primary care because they were uninsured.

- StayWell has a base of $1 million in federal support through HRSA. Other community health centers on average are funded at a significantly higher amount. Federal support has not kept pace with the rapid growth in its client base that StayWell has experienced. In fiscal year 2000, StayWell provided 14,856 health care visits. Six years later, in fiscal year 2006, we provided 55,687 visits, a growth of 275%. StayWell employs 110 health professionals to care for these patients.

80 Phoenix Avenue ✝ Waterbury, CT 06702 ✝ Tel: (203) 756-8021 ✝ Fax: (203) 596-9038

- StayWell does receive funding from the State of Connecticut to assist with providing services to the uninsured. StayWell receives approximately $118,000 from the Department of Public Health on an annual basis to cover costs associated with the uninsured in the Adult Medicine and Dental Departments. This has been reduced over the years with a loss of over $100,000 to cover the costs of Pediatric uninsured services a few years ago. With our uninsured rate rising to 20% of all patient visits, this loss has been a struggle. Again, it is our understanding that our DPH funding for services to the uninsured is much lower than our colleagues throughout the State of Connecticut.

- There are commonalities in the struggles that our healthcare organizations face on a daily basis, primarily staffing. With the shortage in qualified nurses, we are frequently competing for staff. We have seen this to be the case for physicians also. Hiring culturally competent staff is always a struggle and then unfortunately added to the existing community shortages. Ultimately, staffing shortages impact access to care when special outreach services or walk-in hours need to be suspended due to inadequate staff to assign.

Thank you in advance for your consideration of the above-mentioned concerns that must be taken into account when designing a solution. Again, we look forward to continued conversation that will result in a solution for our patients and community.

Respectfully submitted,

Donald J. Thompson, MPS
President/CEO

HOSPITAL CLOSURES AND MERGERS

IN CONNECTICUT

Docket Number 06-30760-VST

Cristine A. Vogel
Commissioner
Office of Health Care Access

In 1990 Connecticut had 36 acute care general hospitals – today there are 30. The state has experienced the similar national trend with the decreasing number of acute care hospitals. The primary drivers of these closures and mergers are related to reimbursement, competition and shifting population demographics.

After reviewing the state's closures and mergers, it was apparent that each circumstance was different depending upon the financial strengths and weaknesses of the hospitals involved. In all of the mergers (in the cities of Bridgeport, Hartford and Meriden) one hospital was financially capable of absorbing the debt of the less viable hospital; and in no circumstances was the State of Connecticut financially responsible for the merger or closure activity.

Connecticut has experienced 6 mergers; one closure of a small rural community hospital; one acquisition and conversion of a small non-profit to the state's only for-profit hospital. The construction of a new children's hospital and a 94-bed community hospital were both results of mergers. Table 1 provides an overview of the closure and merger activity.

Table 1. Hospital Closures and Mergers in Connecticut

Year	Activity	Surviving Entity	Number of Licensed Acute-Care Hospitals
1990			36
1991	Meriden-Wallingford Hospital merges with WWII Memorial Hospital to form Veterans Memorial Medical Center	Veterans Memorial Medical Center	35
1993	Park City Hospital merges with Bridgeport Hospital	Bridgeport Hospital	34
1995	Mount Sinai Hospital merges with Saint Francis Hospital and Medical Center	Saint Francis Hospital and Medical Center	33
1996	Connecticut Children's Medical Center opens (consolidating services previously provided at three hospitals - Hartford, John Dempsey and Newington Children's Hospital) and succeeding Newington Children's Hospital	Connecticut Children's Medical Center	33
1997	Bankruptcy of Winsted Hospital	Winsted Health Center	32
1998	MidState Medical Center opens as successor to Veterans Memorial Medical Center	MidState Medical Center as successor to VMMC	32
1998	Saint Joseph's Hospital merges with Stamford Hospital	Stamford Hospital	31
2002	Not-for-profit Sharon Hospital acquired by for-profit Essent Healthcare (CT's first for-profit acute care hospital)	Sharon Hospital	31
2006	New Britain Hospital merges with Bradley Memorial Hospital	The Hospital for Central Connecticut	30

The one merger that closely resembles the circumstances with St. Mary's Hospital and the Waterbury Hospital would be the merger of Park City Hospital and Bridgeport Hospital. Below is a brief summary of facts:

Merger of Park City Hospital and Bridgeport Hospital

On March 30, 1993, OHCA issued a decision which authorized the merger of Park City Hospital into Bridgeport Hospital, with Bridgeport Hospital being the surviving entity.

The projects total capital expenditure was $14,327,000 plus $1,561,000 in capitalized financing, for a total capital expenditure of $15,888,000. The $14,388,000 Park City Hospital expenditure component was financed through CHEFA revenue bonds and the remaining $1,000,000 was equity-financed from internally generated funds.

Park City Hospital's Reasons for Merging:

- financial condition was negatively impacted by low and declining utilization of inpatient services
- inability to compete on services
- unable to renegotiate outstanding loan obligations or obtain new sources of capital
- reported long term debt payable of $810,777 and total assets of $23,547,109

Outcome of merger:

- Park City Hospital converted to an inpatient/outpatient rehabilitation center that provided inpatient psychiatric services (eventually relocated to Bridgeport Hospital)
- Park City Hospital's emergency services were replaced with primary care/walk-in center
- all acute care services provided at Park City Hospital (with the exception of ambulatory surgery) would be provided at Bridgeport Hospital site
- the merger resulted in the termination of 194 acute care beds

STATE OF CONNECTICUT

Report of the Region 5 Pediatric Inpatient Psychiatric Services Implementation Group

March 2007

Prepared for:

Cristine A. Vogel, Commissioner
Office of Health Care Access

I. Background

In January 2006, the *Report of the Committee to Examine Hospital Inpatient Behavioral Health Bed Capacity for Children* was issued. The report was prepared in response to Public Act 05-280, "An Act Concerning the Expenditures of the Department of Social Services." The report examined the challenges faced by the 31 acute care hospitals in Connecticut in providing inpatient behavioral health services to pediatric[1] patients, particularly in Mental Health Region 5 (Region 5). Currently, statewide only four of the hospitals have inpatient psychiatric units for children (ages 0 to 12) and six for adolescents (ages 13 to 17). Although not all hospitals have inpatient pediatric behavioral health services, hospitals attempt to accommodate these pediatric patients either in other units within the hospital or transfer them to other facilities for inpatient care.

The committee was to focus on the existing situation in Region 5 which has six acute care hospitals, Charlotte Hungerford, New Milford, Sharon, Danbury, St. Mary's and Waterbury, but only five beds for adolescent behavioral health patients at Waterbury Hospital and none at all for children in any of the hospitals (see Table 1). Also, there are no freestanding psychiatric hospitals in the region. According to the committee's report, in 2004, at least 200 the pediatric patients from the region had to access needed acute inpatient psychiatric care outside the region.

Table 1: CT acute care pediatric behavioral health beds, FY 2004

Source: *Report of the Committee to Examine Hospital Inpatient Behavioral Health Bed Capacity for Children, Table 2, page 10.*

[1] Hospitals swing beds between the two age groups on as needed basis.

[2] Physical capacity is 23 beds.

[3] Survey was not administered to hospital.

[4] CT Department of Children and Families (DCF) provided the information; the facility has 12 additional sub-acute care beds.

[1] Under 18 years old.

In accordance with Public Act 05-280, the committee's report contains recommendations concerning the expansion of licensed hospital psychiatric inpatient bed capacity for children in Region 5. These recommendations are:

1. *Increase the number of acute care general hospital and/or psychiatric hospital beds and Psychiatric Residential Treatment Facility (PRTF) beds for children and adolescents in Region 5 based on the process outlined in Recommendation # 2.*

2. *The commissioner or designee of the Office of Health Care Access (OHCA) will convene an implementation group including the six general hospitals in Region 5, other behavioral health service providers to Region 5 residents under the age of 18, and representatives of state agencies for input on the appropriate number and location of beds. Execution of the group's proposal(s) will be subject to Certificate of Need (CON) authorization.*

To fulfill these recommendations, the Office of Health Care Access established an Implementation Group consisting of representatives of the six general hospitals in the region and of the Department of Children and Families (DCF), the Department of Social Services, Wellspring Foundation, the Child Guidance Clinic of Waterbury and the Northwest Center for Family Services and Mental Health (see Attachment 1).

The Implementation Group, which met three times during the summer and autumn, reviewed the most current pediatric inpatient behavioral health utilization data available to develop recommendations for the region. This report presents the recommendations about the appropriate number and locations of acute care, PRTF and emergency crisis stabilization beds needed in the region to facilitate patient access and transfer to appropriate levels of care and reflects the opinion of the majority of the group.

II. Implementation Group Recommendations and Rationale

Recommendation 1: Any Certificate of Need application for adding to behavioral health pediatric beds in Region 5 must include a plan for coordinating proposed additions with existing community-based services.

The overriding concern of the group is that an evaluation to establish the appropriate number of acute care beds should be system-based and not done in a vacuum. The behavioral health system includes emergency, acute and step down levels of care, all of which needed to be evaluated concurrently and any changes to be implemented should be coordinated with existing community-based services.

Recommendation 2: An additional 20 to 30 acute care general hospital and/or psychiatric hospital beds are required in Region 5. In order to provide developmentally appropriate care for children and adolescents, the additional beds should be allocated to two discrete units, one for children (up to 12 years old) and one for adolescents (13 – 18 years old).

According to the Committee's January 2006 report, there are 2.1 acute care pediatric behavioral health beds available per 10,000 residents under age 18 in Connecticut, but only 0.3 per 10,000 for the same age cohort in Region 5 (see Table 2). This demonstrates that Region 5 has substantially lower number of beds available for its pediatric population than the state in general. As a result, hospitals in the region admit children needing inpatient behavioral health services to general pediatric and adolescent units and adolescents to adult psychiatric and medical/surgical units; and the remaining are transferred or referred to hospitals located elsewhere in Connecticut or out-of-state. Currently, about one-half of the pediatric patients transferred out-of-state for behavioral health services are from Region 5. Area hospitals transferred one-third of pediatric patients from the region to other acute care providers in Connecticut for acute behavioral health treatment.

Table 2: Pediatric acute care behavioral health bed availability

Geographical Location	Regions	Acute Care Beds*	Share	Bed per 10,000 of child population
Southwest	1	44	25%	2.6
South Central	2	49	28%	2.6
Eastern	3	25	14%	2.6
North Central	4	52	30%	2.2
Northwest	5	5	3%	0.3
Statewide		**175**	**100%**	**2.1**

Source: *Report of the Committee to Examine Hospital Inpatient Behavioral Health Bed Capacity for Children, Table 3, page 11.*

* Includes beds in acute care psychiatric units and freestanding psychiatric hospitals.

Patients receiving behavioral health treatment benefit most when their families are involved. Hence, additional acute care beds should be located in the region to improve families' ability to participate in care. In the absence of a state adopted standard bed need methodology, the group applied the statewide standard of 2.1 beds per 10,000 to the pediatric population of Region 5, of 149,927 based on Census 2000, to determine the maximum number of beds the area needs. Based on this methodology, there should be up to 31 beds in total in the region, or about 26 new beds given that five already exist in Waterbury. According to the experts in the group, a 10 to 15-bed unit is the most efficient and clinically appropriate size for an acute care behavioral health unit. The treatment of children and adolescents in the same milieu is developmentally inappropriate and may be counter-therapeutic. Consequently, the group recommends establishing two discrete units in the region, with a combined capacity of 20 to 30 new acute beds.

Recommendation 3: Locate any additional acute care pediatric psychiatric units in one of the three major population centers in Region 5; Danbury, Torrington and Waterbury.

Region 5 is a geographically large and diverse area that consists of 43 cities and towns. Table 3 is an analysis of acute care hospital Region 5 pediatric behavioral health discharges by town of origin. The data indicate that the majority of discharges and their associated patient days are from three metropolitan areas, Waterbury (27% and 33%), Torrington (8% and 12%) and Danbury (11% and 7%). In order to enhance access to acute programs, the group recommends the location of any additional programs in one of the three metropolitan areas.

Table 3: Region 5 Average Annual Acute Care Pediatric Behavioral Health[1] Discharges and Days by Town of Origin: SFYs 2004 - 2006q1-q3

	Children Ages 0 - 12	Adolescents Ages 13 - 17	Ages 0 - 17
Town of Origin	Discharges = 86	Discharges = 234	Discharges = 320
Waterbury	35%	24%	27%
Danbury	16%	9%	11%
Naugatuck	6%	7%	7%
Torrington	11%	7%	8%
Cheshire	5%	6%	6%
All other towns in region[2]	27%	48%	42%
Total	100%	100%	100%
Town of Origin	Patient Days = 1,777	Patient Days = 2,053	Patient Days = 3,830
Waterbury	47%	21%	33%
Torrington	15%	9%	12%
Cheshire	6%	10%	8%
Naugatuck	4%	10%	7%
Danbury	9%	5%	7%
All other towns in region[2]	20%	46%	34%
Total	100%	100%	100%

Source: *CT Office of Health Care Access Acute Care Discharge Database*

[1]Acute care hospitals' behavioral health discharges assigned Diagnosis Related Group (DRG) 424 to 437 or 521 to 523.

[2]For this purpose, discharges and patient days for the other 37 towns in the region were not significant individually.

Recommendation 4: Establish fifteen to twenty five Psychiatric Residential Treatment Facility (PRTF) beds in Region 5. These beds should be located in proximity to existing beds or as part of the establishment of a new program or facility, which includes acute beds.

Psychiatric residential treatment facilities (PRTFs) provide inpatient psychiatric care to Medicaid-covered patients under 21 years old. PRFTs facilitate acute care hospitals' patient "throughput" to ease system gridlock and "boarding" in the EDs.

In SFY 2004, over one-half (or 167) of acute care inpatient transfers to another type of institution were Medicaid beneficiaries who might have been better served by a step down level of care at facilities such as a PRTF or community-based alternatives;[2] this is an average of 14 patients per month. According to data from the Connecticut Behavioral Health Partnership (CT BHP) at four points in time for each month between September and November of 2006, on average 9.1 patients from the region were placed in mostly non-area PRTFs (Table 4). The highest number of patients placed within a month during the period was 11.5.

Table 4: Region 5 PRTF average admissions from September to November 2006

Region 5 Hospitals	Average # in all PRTFs	Average # in Wellspring	Average # in Non-Area PRTFs
Danbury	0.7	0.1	0.7
Charlotte Hungerford	4.0	1.5	3.0
Waterbury	4.5	2.0	3.4
St.Mary's			
Total	**9.1**	**3.6**	**7.1**

Source: Department of Social Services Region 5 hospital and PRTF admits under the CT BHP between September and November 2006 taken at four points in time per month.

Within a month, an average of 1.5 patients awaited placement in a PRTF. The highest number of patients who awaited placement in the three-month period was 2.0.

In all, there was an average of 10.6 PRTF placements needed in the region during the three months. The highest number of placement needed within a month was 12.75. This means, between 50 and 60 percent of the region's acute care pediatric patients admitted during the period, required placement in a PRTF after acute care. The need for a PRTF level of care has increased with Wellspring's decision to discontinue its PRTF service in November 2006.

[2] *Report of the Committee to Examine Hospital Inpatient Behavioral Health Bed Capacity for Children*. Submitted to the Connecticut General Assembly. January 2006. Ibid.

Emergency Crisis Stabilization Beds

In evaluating the needs of the region, the group discussed the feasibility of establishing emergency crisis stabilization beds (ESC) as part of the continuum of care. ECS beds are used for managing demand spikes, extended patient observation and minimizing "boarding" or patients waiting in the ED for more than 23 hours before admission to an inpatient bed or discharged to the community. Based on the committee's report, in FY 2004, hospitals in Region 5 evaluated 660 children and adolescents with a behavioral health diagnosis in the ED before transferring them to inpatient acute care. As many as one-quarter of those patients, waited in the ED for over 23 hours before the inpatient admission (see Table 3); [3] that is, an average of 15 boarders per month.

Table 3: Number of pediatric behavioral health patients evaluated in Region 5 Emergency Departments and length of stay in hours prior to inpatient admission, FY 2004

	Ages 0 - 12		Ages 13 - 17		Ages 0 - 17	
	≤ 23 hours	> 23 hours	≤ 23 hours	> 23 hours	≤ 23 hours	> 23 hours
Charlotte Hungerford	56	6	149	32	205	38
Danbury	27	0	122	6	149	6
New Milford	2	0	8	0	10	0
Sharon	0	0	2	0	2	0
St. Mary's	0	56	0	74	0	130
Waterbury	35	4	77	3	112	7
Total	**120**	**66**	**358**	**115**	**478**	**181**

Source: *Report of the Committee to Examine Hospital Inpatient Behavioral Health Bed Capacity for Children.* Submitted to the Connecticut General Assembly. January 2006. Table 6, page 15.
[1] One adolescent outlier spent 170 hours in ED.

Assuming an average stay of 48 hours in the ED for those boarders, then the average daily census is one. According to information provided by DSS, a hospital based ED affiliated crisis unit is only economically viable if it serves more than 800 to 1,000 pediatric patients per year with an average overnight census of three or more patients. Therefore, currently there is not sufficient need to sustain a hospital based crisis stabilization unit in the region. The additional acute care and PRTF beds will be enough to handle potential demand spikes and extended stays, thus eliminate boarding.

Region 5 Pediatric Inpatient Psychiatric Services Implementation Workgroup

The membership of the Region 5 Pediatric Inpatient Psychiatric Services Implementation Workgroup included the following persons:

1. Susan Cole, Director of Certification, Financial Analysis and Forecasting & Chair	Office of Health Care Access
2. Mark Schaefer, Ph.D., Director, Medical Policy and Behavioral Health, Medical Care Administration	Department of Social Services
3. Karen Andersson	Department of Children and Families
4. Peter Johnson, Ph.D.	Department of Children and Families
5. Dr. Charles Herrick, Medical Director, Inpatient Psychiatric Services	Danbury Hospital
6. Dr. Steven Singer, Chief of Psychiatry	Charlotte Hungerford Hospital
7. Thomas Narducci, LCSW	Charlotte Hungerford Hospital
8. Maureen Salerno, Director of Social Work	New Milford Hospital
9. Jena Brebbia, LCSW	Sharon Hospital
10. Dr. Peter Jacoby, Chairman of Emergency Services Department	St. Mary's Hospital
11. Doreen Elnitsky, Administrative Director, Behavioral Health	Waterbury Hospital
12. Tom Czarkosky, Manager, Child & Adolescent Behavioral Health Services	Waterbury Hospital
13. Gary Steck, Executive Director	Child Guidance Clinic of Waterbury
14. Herb Hall	Wellspring Foundation, Inc.
15. Donna Campbell	Northwest Center for Family Services and Mental Health

Staff to the Implementation Group

1. Olga Armah, Associate Research Analyst, Research and Evaluation	Office of Health Care Access
2. Steven Lazarus, Associate Health Care Analyst, Certification, Financial Analysis and Forecasting	Office of Health Care Access

The People Who Care When People Need Care - Since 1947

CAMPION Ambulance Service, Inc.

15 West Dover Street, Waterbury, CT 06706

Business: (203) 753-5055 · Administration: (203) 753-9953 · Fax: (203) 754-3237

September 8, 2008

Office of Health Care Access
Commissioner Cristine Vogel
410 Capital Avenue
MS# 13HCA, P.O. Box 340308
Hartford, CT 06134

Dear Commissioner Vogel:

Campion Ambulance Service strongly supports and advocates for the continuation of the current level of services provided by the Heart Center of Greater Waterbury. I see the continuation of this level of services as vital to the high quality of prehospital care provided by our organization as well as every other Emergency Medical Service operating in the greater Waterbury region.

The Heart Center of Greater Waterbury provides much needed services to the residents of our community which in turn prevents the necessity to travel longer distances to obtain the same services. These type transports are unnecessarily stressful to our patients and our personnel. They are increasingly stressful and prolonged when conditions for transport are less than optimal, such as during inclement weather or during road construction projects. Additionally these transports take resources and personnel away from our primary serviced area. This creates operational inefficiencies within our service areas which over time lead to higher operational costs. The revenue derived from these transports in most cases is not a direct offset of these higher operational costs. Historically Campion Ambulance Service has always provided transports to patients needing this level of transport regardless of a patient's ability to pay for service.

Advancements in technology have greatly improved the delivery of emergency medical services to the citizens of our community. One such advancement is the ability to transmit via the cellular network exact data about the condition of our patient well in advance of arrival in the emergency department. This invaluable information regarding a patient's electrocardiogram, blood pressure and other information has led to an exceptional performance in the period of time from which a patient calls for help to the delivery of definitive care. These recent investments in technology and commitment to the quality of care delivered will be lost if the Heart Center of Greater Waterbury ceases to exist.

This situation cannot be allowed to happen in a community that currently enjoys the same high quality as other urban areas in our state. Such an action would have a dramatically negative effect on the quality of life in the Greater Waterbury community.

Sincerely,

William Campion Jr.

William Campion Jr. BS,RN,EMT-P
President, CEO

John H. Tobin

Occupational History:

February 2, 1987 to present:	President – Greater Waterbury Health Network, Inc.
	The current corporate structure consists of a holding Company, Greater Waterbury Health Network, Inc. and several affiliates and subsidiaries: The Waterbury Hospital (acute care), VNA Health at Home, Inc. (home health care), Access Rehab (outpatient rehabilitation), Greater Waterbury Imaging Center (ambulatory imaging), Children's Center (on-site day care for employees' children), Greater Waterbury Management Resources (physician practice management) and Alliance Medical Group (multi-specialty group practice). The Network is also 50% owner of the Harold Leever Regional Cancer Center (radiation and medical oncology services) and the Heart Center of Greater Waterbury (management services for WH/STM cardiac program)
	The President of the Network is responsible to the Board of Directors of the Network for all activities within that Board's scope of authority. Responsibilities include safeguarding the assets of the Network and overseeing the activities and development of the subsidiary corporations.
	The President serves as a member (Incorporator) of Great Waterbury Health Network, Inc. and the Board of Trustees of The Waterbury Hospital.
January 20, 1986 to Present	President – The Waterbury Hospital
	The President is responsible to the Board of Trustees of the Hospital for all activities within that Board's authority including compliance with all applicable laws and regulations, accreditation, organization and management of administrative functions, management and safeguarding the Hospital's assets, management support for the Hospital's patient care and education programs.
September 1980 to January	Director of Administrative Services/Chief Operating Officer – The Waterbury Hospital
June 1976 to January 1986	Assistant Administrator – The Waterbury Hospital
July 1975 to July 1976	Administrative Assistant – The Waterbury Hospital

January 1975 to June 1975	Administrative Resident – The Griffin Hospital
October 1972 to September 1974	Administrative Extern – The Waterbury Hospital

---

Significant Experiences and Accomplishments:

Only management representative, other than the CEO, to participate in the special Board committee which led to the 1984 reorganization of The Waterbury Hospital.

Responsible for the creation of a physician hospital organization in the early 1980's. This organization remains the Hospital's main managed care vehicle.

Became President and CEO of The Waterbury Hospital just prior to a four-month nurses' strike. First two years of administration involved resolving the strike and its aftermath, restoring the institution to a stable operation, and rebuilding the management team.

Instituted first major physical plant renovations since 1970's. Accessory developments were the first capital campaign since the late 1960's, and the re-establishment of an active capital development program. Balance of the project was financed through the organization's first tax-exempt bond issue since the early 1970's.

Revamped strategic planning process to provide for a significantly greater board and medical staff involvement. First iteration of this planning process focused on organizational change. Major outcomes were:

(a) Experimenting with product line/centers of excellence (orthopaedics, laser surgery, and others).
(b) Institution of total quality management program which recently resulted in Waterbury Hospital's receiving the Connecticut Award for Excellence.
(c) The development of this organization's first information systems strategic plan.

Developed an outpatient-imaging center as a Hospital/medical staff joint venture. Successfully unbundled project when it became necessary to do so.

Performed this community's fist health needs assessment with St. Mary's Hospital, which led to creation of Harold Leever Regional Cancer Center, a joint venture with St. Mary's Hospital . Construction of this freestanding facility currently in planning stages. Strategic Plan for Behavioral Health services included completion of a new inpatient unit that opened in 1977.

Initiated strategy of developing a hospital affiliated primary care physician's practice. Currently have an MSO and have an active multi-specialty and primary care practices.

Reengineering of the Hospital (1996-1998) resulted in approximately $10 million in savings.

Achieved Level II Trauma Center status for Waterbury Hospital in 1995.

Major renovation and expansion of the Emergency Department in 1998.

Completed construction of the Reed Ambulatory Surgery Center, a seven operating suite surgical facility in 2002. This is the first new construction on the hospital campus since 1972.

A partnership with St. Mary's Hospital resulted in the construction of the Harold Leever Regional Cancer Center, a full service facility housing radiation oncology suites, medical oncology physicians offices and support facilities in October 2002

A partnership with St. Mary's Hospital relating to the expansion of cardiology services (to include angioplasty and open heart surgery) the Greater Waterbury Health Center.

Recently completed the first phase of the replacement of the Hospital's clinical information system, a $25 million, 3-5 year project.

Professional Memberships:

EXECUTIVE SUMMARY

Healthcare executive with more than 20 years experience as CEO of hospital and health systems. Recognized as a turnaround specialist with proven skills in expense reduction, revenue generation, productivity enhancement, quality improvement, physician integration, team building, and system development.

PROFESSIONAL EXPERIENCE

CROSIER CONSULTING, LLC
Wilmington, North Carolina
A consulting entity providing interim executive services to hospitals in crisis, needing to manage significant change, or successfully mount a complex turnaround. 2005-Present

CATHOLIC HEALTH SERVICES OF LONG ISLAND, New York
ST.CHARLES HOSPITAL
Port Jefferson, New York
St. Charles is a 289 bed general acute hospital located in a competitive market on the North Shore of Long Island, with centers of excellence in orthopedics, rehabilitation, and maternity. Recruited by the System CEO to orchestrate a comprehensive turnaround of an institution in serious trouble. 2001-2004

PRESIDENT & CEO
- Managed within budget each year, and ahead of the turnaround plan.
- Reversed severe losses from $25.8 million to a $500,000 gain, before System overhead, in less than three years, a 211% improvement. Regained a positive EBITDA less than two years.
- Produced tightest staffing ratios of Catholic Health Service's five hospitals.
- Returned physician satisfaction and confidence to positive levels.
- Grew patient satisfaction from the lowest to one of the highest in the 12 hospital Long Island Health Network(Press Ganey, 92nd percentile).
- Negotiated a difficult nursing contract without taking a strike. Additionally, employees rejected a fierce Local 1199 organizing campaign.
- Strengthened weak emergency services. Recruited entirely new physician team. Only ER on Long Island known to be staffed totally by ER residency trained physicians. Moved patient satisfaction from mediocre to #1 on Long Island.
- Installed comprehensive and sophisticated root cause analysis system that improved clinical outcomes, reduced outliers, near misses, and sentinel events.
- Reduced $54 million supply budget by $7 million per year even in the face of rising volumes & acuity.

- Introduced several new clinical services to enhance revenue stream.
- Championed broad corporate identity program to repair image and increase brand recognition.
- Instilled a sense of optimism, pride, accountability, & entrepreneurialism to a once demoralized management team, physician cadre, and employee corps.
- Made dramatic gains in thru-put and process improvement through the introduction of Malcom Baldrige philosophies, axioms, and techniques.

PROVENA HEALTH SYSTEM
Frankfort, Illinois
Provena Health, is a $1.2B IDS, with 7 owned hospitals, 2 additional in joint ventures, 17 LTC centers, and several related companies serving the greater Chicago area and Central Illinois.

PROVENA HOSPITALS
PRESIDENT
Comprehensive responsibility for operations and performances of all system hospitals. Recruited to pilot needed turn around of all nine hospitals. 2000 to 2001

- Reversed losses from $13M in FY 99 to profit of $12M in FY 2000, a 208% improvement. Improved bottom line another 110% in FY 2001.
- Dramatically improved "systemness" in attitude, strategic planning, and in pursuit of savings.
- Drove collaborative managed care product design, pricing strategies, and rate negotiations with carriers.
- Chaired Value & Excellence Committee; booked $50M in savings first year.
- Documented significant improvement in morbidity and mortality, mostly through better documentation, coding and key DRG best practice efforts.
- Substantially improved care management and utilization.
- Initiated dramatic new strategic direction to alter course of two at-risk hospitals.
- Centralized managed care operations and re-negotiated contracts, netting over $2M in rate improvements.
- Retooled division-wide clinical engineering capturing $1.2M in savings.
- Negotiated clinical alliance with Loyola University Health System; setting up joint centers of excellence, shared physician recruiting, remote cooperative quaternary clinics, etc.

CONEMAUGH HEALTH SYSTEM
CHIEF EXECUTIVE OFFICER
Johnstown, Pennsylvania
Assembled an integrated health system (1034 beds), anchored by Memorial Medical Center and serving a four county region of South Central Pennsylvania. Operating units include 4 acute care hospitals, 1 additional in JV, sub acute services, 2 nursing homes, assisted living center, freestanding comprehensive rehabilitation hospital, employed physician group of PCP's, faculty, and

specialists, a PHO, and multiple related for-profit businesses. System net revenue was $235M. 21,700 admissions with 707,000 outpatient visits. 4,350 employees with a total of 527 physicians residing on system medical staffs. The education mission (allied health education, and school of nursing) brought 250 students to the main campus annually.

- Strategically positioned Conemaugh to compete with aggressive entry of University of Pittsburgh, Allegheny, and Geisinger Health Systems by creating Conemaugh Health System, a regional IDS that earned $4.3M in net revenue in FY 98.
- Increased net revenue by 85% and increased EBITDA by 56% to $28M annually.
- Turned a sagging 47% market share into a dominant position of 73%.
- Created a $28M not-for-profit taxable organization, Conemaugh Health Initiatives, to hold employed physicians and serve as a vessel to hold for-profit ventures.
- Struck a unique Favored Nation Clause with Highmark (market leading Blue Cross/Blue Shield carrier), introduced PPO and RAPPO products into the region.
- Recruited 55 boarded physicians into the area; a key in reducing out migration.
- Expanded market into fourth county by striking a joint venture with Bon Secours Health System.
- Initiated open-heart program, and soon reached 600 cases per year. Earned HCIA's Top 100 Heart Programs.
- Crafted unique canonical arrangement to bring Good Samaritan Medical Center into System while preserving their Catholic identity & carisms.

SERVANTCOR HEALTH SYSTEM
COVENANT MEDICAL CENTER
PRESIDENT AND CHIEF EXECUTIVE OFFICER
Champaign,Illinois
Covenant was the anchor of the ServantCor Health System, now Provena Health. It was a 262 bed regional medical center offering select specialty services with strong centers of excellence in open-heart, neonatology, rehabilitation, nephrology, and psychiatry. Clinical teaching site for the University of Illinois, College of Medicine with a medical staff of 310. Major accomplishments shoring up operating performance, escorting three other general acute hospitals out of the over bedded market. Began as third in market, captured 1st position. 1982 – 1989.

ALLINA HEALTH SYSTEM
UNITED & CHILDREN'S HOSPITALS
VICE PRESIDENT-ADMINISTRATION
St. Paul, Minnesota
A 572 adult and 116 pediatric bed medical center. An operating budget of $72M with $92M of assets. United Hospitals is the St. Paul anchor for Allina Health System. 1976 - 1982

CHRISTIAN HEALTH SERVICES
CHRISTIAN HOSPITAL NORTHWEST
ADMINISTRATIVE INTERNSHIP
St. Louis, Missouri
Preceptor Ron Aldrich, S-COO of Christian Hospitals now BJC Heath System, 1975

OTHER EXPERIENCE

PROPAPA MISSIONS • AMERICA
Johnstown, Pennsylvania
Co-founded a philanthropic foundation that has developed 2 medical centers for the poor in Honduras. In addition, ProPapa organizes and funds 4 American medical, dental and vision brigades per year that travel to Central America to serve the poor. Additional projects include shipping nearly 20 tons of relief supplies per year, food for work programs, clean water projects, education scholarships, habitat houses, and U.S. case management services.

DIVINE PROVIDENCE MEDICAL CENTER
PROJECT CHIEF
Corquin, Copan, Honduras, Central America
In 1999 and again in 2004 took several months of sabbatical to fulfill dream of building second clinic/hospital for the poor of Honduras. Crafted first of its kind collaboration between, U.S. Government, U.S. Military, Honduran Government, the local community, and an NGO. Completed construction and start up of the clinic/hospital. Trained caregivers, and transitioned the facility to the Hondurans. Designed demonstration projects w/ World Bank & United Nations, and currently crafting alliance with U.S. donor to build multi-million dollar clinic.

Bridgeport Hospital and Healthcare System, Bridgeport, CT
Member of Yale New Haven Health System

Director of Budget and Financial Planning **August, 2003 to February, 2006**

Manage 4 health care financial professionals in a 425-bed comprehensive teaching health system affiliated with the Yale University School of Medicine with annual net revenue of over $290 million. Directly responsible for the areas of budgeting, cost accounting, and flexible budget. Report directly to the Senior Vice President and Chief Financial Officer of the hospital. Key accomplishments include:

- Successfully led and managed the re-development of the flexible budget system (TSI) allowing the hospital to better analyze productivity and control costs.
- Successfully led and implemented capital budgeting system (Strata Cap) as well as forecasting system (Strata Cast).
- Actively participate in the financial statement review.
- Team member and active participant in Clinical Program Teams.
- Perform business line profit and loss analysis.

Director of Revenue Enhancements **January, 2003 to August, 2003**

Manage two health care professionals in the task of maximizing net revenue for the hospital, through interactive dialogue and technical support to the ancillary departments in revenue issues. Responsible for the development and accuracy of Net Revenue Budget for Bridgeport Hospital. Coordinated the monthly net revenue close and actively participated in the financial statement review. Manage the TSI department. Participate in ad hoc activities as requested. Responsible for establishing and managing the revenue enhancement committee. Directly responsible for managing the Denial Committee, seeking strategies and changing processes to ensure limited exposure to denial of accounts while maximizing net revenues. Directly responsible for managing the Medicare APC Committee, seeking to minimize compliance exposure and maximize net revenue. Key accomplishments include:

- Successfully managed and led the APC Medicare rebilling initiative for Fiscal Year 2000, resulting in additional reimbursement of $67,000.
- Successfully led and managed revenue enhancement efforts in the area of Ambulatory Surgery resulting in additional $300,000 net revenue.
- Developed and implemented a process to capture "carve out" items for additional reimbursement by payers in the amount of $65,000.
- Developed process to review contract compliance resulting in additional reimbursement for Burn Unit of approximately $85,000.

Director of Budget, Reimbursement and Decision Support **May, 1998 to January, 2003**

Mange 7 health care financial professionals in a 425-bed comprehensive teaching health system affiliated with the Yale University School of Medicine with annual net revenues of over $260 million. Directly responsible for the areas of budgeting, cost accounting, decision support, managed care contract analysis,

reimbursement and regulatory reporting. Report directly to the Senior Vice President and Chief Financial Officer of the hospital. Key accomplishments include:

- Successfully led and managed the development of the cost accounting and decision support system (TSI) allowing the hospital to better analyze managed care contracts and contracting, utilize flexible budgeting, perform business line profit and loss analysis and control costs.
- Successfully enhanced the hospital's reimbursement for teaching programs and disproportionate share that resulted in over $3 million of revenue per year for the past 9 years.
- Developed a rolling five-year analytical model, which was used as the corner stone to the hospitals long-range financial stability. Established expense reduction targets that facilitated a re-engineering process that eliminated over $40 million of operating expense while balancing "Quality of Care" issues.
- Performed a major rile in the Yale New Haven Health System management information system (Lawson) conversion process including general ledger, accounts payable and purchasing modules.
- Performed a significant role in the Yale New Haven Health System patient accounting system (SDK) successful conversion process.
- Participated in the merger of a community-based hospital with Bridgeport Hospital. Performed invaluable effort and obtained accurate results through due diligence, financial analysis and regulatory reporting related to the merger.
- Developed outstanding and long-term relationships with key members of the Connecticut Hospital Association, Office of Health Care Access, Healthcare Financial Management Association, major accounting and consulting firms and other health care organizations and providers.

Newington Children's Hospital, Newington, CT **1987 to 1989**
Director of Corporate Fiscal Services

- Reported directly to the Vice President of Finance and Chief Financial Officer and acted as such in his absence.
- Managed the daily financial operations of the only Children's Hospital in the state of Connecticut.
- Daily responsible for the financial professionals in the areas of general accounting, restricted funds and corporate accounting.
- Managed the year-end audit for all entities as well as financial reporting.
- Directed annual budget preparation, both internal and external.

New Milford Hospital, New Milford, CT **1980 to 1987**
Controller

- Reported directly to the Vice President of Finance, responsible for the direction of the professional financial staff in the areas of general accounting, restricted funds, corporate accounting, revenue and billing and data processing.
- Successfully designed, implemented and converted payroll/personnel system (ADP of New Haven, CT).
- Successfully coordinated the conversion and Implementation of billing system from Tymshare to McAuto.
- Directed the implementation and conversion to UB-82.

- Preparation of cost reports, internal and external Hospital budgets. Coordinated year-end audit.

Danbury Hospital, Danbury, CT **1974-1980**
Accounting Manager

- Managed the general accounting area (Payroll, A/P, G/L, Cashiers, Cash Application).
- Responsibilities included general ledger and revenue accounting, preparation of monthly financial reports, payroll taxes, accounts payable distribution, account reconciliation and analysis.

Personal History:

Date of Birth:	July 10, 1969 (Bangkok, Thailand)
Marital Status:	Married, two daughters
Citizenship:	Thailand
Immigration Status:	Permanent Resident of US (Green Card)

Employment:

07/2005 to Present	Quality Cardiovascular Care, LLC 1389 West Main Street Waterbury, CT 06708 Clinical and Interventional Cardiologist

Hospital Affiliations:

07/2005 to Present:	Privileges in Internal Medicine and Cardiology, Waterbury Hospital, Waterbury, CT Privileges in Internal Medicine and Cardiology, Saint Mary's Hospital, Waterbury, CT

Education:

07/2004-06/2005	Lahey Clinic Medical Center, Tufts University, Burlington, MA Fellowship in Interventional Cardiology (Chief Fellow).
07/2001-06/2004	Lahey Clinic Medical Center, Tufts University, Burlington, MA Fellowship in Clinical Cardiology.
01/1999-04/2001	Brigham & Women Hospital, Harvard Medical School, Boston, MA Research Fellowship in Cardiovascular Medicine.
10/1995-10/1998	Pennsylvania Hospital, University of Pennsylvania, Philadelphia, PA Internship and Residency in Internal Medicine.
07/1991-09/1995	Thomas Jefferson Medical College, Philadelphia, PA M.D. degree.
07/1987-06/1991	University of Hawaii, Honolulu, HI B.A. in Biology, with distinction.

Experiences Research & Publications

Agrawal RS, Muangman, S, Layne MD, Melo L, Perrella MA, Lee RT, Zhang L, Lopez-Ilasca M, Dzau VJ.
Pre-emptive gene therapy using recombinant adeno-associated virus delivery of extracellular superoxide dismutase protects heart against ischemic reperfusion injury, improves ventricular function and prolongs survival. Gene Ther. 2004 June; 11(12):962-9

Lindsey ML, Yoshioka J, MacGillivray C, Muangman S, Gannon J, Verghese A, Aikawa M, Libby P, Krane SM, Lee RT.
Effect of a cleavage-resistant collagen mutation on left ventricular remodeling. Cir Res. 2003 Aug 8;93(3):238-45. Epub 2003 Jul 10.

Wang Y, De Keulaenaer GW, Weinberg EO, Muangman S, Gualberto A, Landschulz KT, Turi TG, Thompson JF, Lee RT
Direct biomechanical induction of endogenous calcineurin inhibitor Down Syndrome Critical Region-1 in cardiac myocytes.
Am J Physiol Heart Circ Physiol. 2002 Aug:283(2):H533-9

De Keulenaer GW, Wang Y, Feng Y, Muangman S, Yamamoto K, Thompson JF, Turi TG, Landschultz K, Lee RT
Identification of IEX-1 as a biomechanically controlled nuclear factor-kappaB target gene that inhibits cardiomyocyte hypertrophy. Cir Res. 2002 Apr 5;90(6):690-6

Technical Skills

Transthoracic and Transesophageal Echocardiogram.
Cardiac catheterization and percutaneous intervention.
Intracardiac device closure (PFO ASD).
Animal echocardiogram (mouse, rabbit, rat).
Animal left heart cath via right carotid artery (mouse).
Myocardial Infarction microsurgery in mouse and rabbit (left lateral Thoractomy with LAD ligation).
Noninvasive blood pressure measurement in mouse.
Image analysis with computer software.

Activities/Interests

Fluent in Windows and Macintosh operating systems

Citizenship United States

CURRENT POSITION

2005-present	**Connecticut Cardiothoracic Surgical Associates** Cardiac, Thoracic, and Aortic Surgery. Heart Transplantation.
2005-present	**University of Connecticut School of Medicine** Department of Surgery, Farmington, Connecticut Clinical Instructor

GRADUATE MEDICAL TRAINING

2004-2005	**Yale University School of Medicine,** Division of Cardiothoracic Surgery, New Haven, Connecticut Clinical Fellow
2002-2004	**Yale University School of Medicine,** Division of Cardiothoracic Surgery, New Haven, Connecticut Fellowship in Heart Transplantation and Aortic Surgery
2000-2002	**Virginia Commonwealth University**, Richmond, Virginia Thoracic Surgery Residency
1999-2000	**Baystate Medical Center/Tufts University School of Medicine,** General Surgery Chief Residency
1996-1999	**Baystate Medical Center/Tufts University School of Medicine,** General Surgery Residency
1995-1996	**Baystate Medical Center/Tufts University School of Medicine,** General Surgery Internship

EDUCATION

1991-1995	**University of Connecticut School of Medicine,** Farmington, Connecticut Doctor of Medicine
1990-1991	**University of Connecticut**, Storrs, Connecticut Post-baccalaureate Program
1988-1993	**Worcester Polytechnic Institute**, Worcester, Massachusetts Master of Science in Electrical Engineering Thesis: "An Investigative Study of the Bispectrum and its Application to Machine Vibration Analysis"
1983-1986	**University of Connecticut**, Storrs, Connecticut Bachelor of Science in Engineering. Completed 134 credit engineering program in three years

WORK HISTORY

1986-1990	**General Electric Company**, Edison Engineer Engineering Leadership Development Program
1987-1990	**General Electric Company**, Aircraft Instruments Division, Wilmington, MA Edison Engineer: Stealth Bomber and other secret clearance projects
1986-1987	**General Electric Company**, Military Electronic Systems, Syracuse, NY Underwater Warfare Systems Division Edison Engineer: Embedded microprocessor hardware and assembly language software design in secret clearance project

LICENSURE

Connecticut 040489

CERTIFICATION

American Board of Thoracic Surgery
American Board of Surgery
National Board of Medical Examiners

PROFESSIONAL AND SCIENTIFIC SOCIETIES

American College of Surgeons, Associate Fellow
American College of Cardiology
American Heart Association, Council on Cardiothoracic and Vascular Surgery
Society of Thoracic Surgeons, Candidate Member
Eta Kappa Nu National Electrical Engineering Honor Society
Tau Beta Pi National Engineering Honor Society

CLINICAL INTERESTS

Adult Cardiac Surgery
Heart Failure
Ventricular Restoration Procedures (TR3SVR)
Mechanical Circulatory Support (Thoratec, Novacor, Heartmate, Abiomed)
Heart Transplantation
Aortic Surgery
Mitral Valve Surgery
Technology and Medicine

COMMUNITY SERVICE

2004	**Enfield Montessori School**, Enfield, Connecticut School presentation of heart health and disease prevention
1998-1999	**Enfield Montessori School**, Enfield, Connecticut Elementary school chess coach
1991-1995	**South Park Inn Medical Clinic**, Hartford, CT: General Medical Clinic Performed history and physical examinations on homeless shelter patients
1990-1991	**Saint Francis Hospital and Medical Center**, Hartford, CT: Emergency Room Assisted with triage at an inner city hospital emergency room

OTHER HONORS

1991	**Hartford Hospital**, Department of Neurosurgery Designed, tested, and optimized Wavelet Transformation software for application to EEG waveform analysis

Work Experience

Cardiothoracic Surgeon, July 1991 – present
Senior Attending, Department of Surgery, Section of Cardiothoracic Surgery, Hartford Hospital, Hartford, CT – with Connecticut Cardiothoracic Surgical Associates, L.L.C. (since August, 1995); previously with Hiroyoshi Takata, M.D., P.C.

Director, Division of Cardiovascular Surgery, Hartford Hospital, Hartford, CT
September 2005 – present

Director, Cardiac Transplant Program, Hartford Hospital, Hartford,CT

Assistant Clinical Professor of Surgery, University of Connecticut School of Medicine, Farmington, CT

Associate Staff, Department of Surgery, John Dempsey Hospital at the University of Connecticut Health Center, Farmington, CT

Board Certification

American Board of Thoracic Surgery

- Recertified 2002
- Certificate #5219, June 5, 1992
- Part I February 16, 1992 (95th percentile)
- Part II September 10, 1990

American Board of Surgery

- Certificate #35532, September 11, 1989 (98th percentile)
- Part I October 12, 1989
- Part II September 10, 1990

Internship and Residency

Resident in Cardiothoracic Surgery, July 1, 1989 – June 30, 1991
Medical College of Wisconsin, Milwaukee, WI

Resident in General Surgery, July 1, 1985 – June 30, 1989
Hartford Hospital/University of Connecticut Integrated General Surgery Residency Program, Hartford, CT

Education

Harvard Medical School Boston, MA 1980-1984

Williams College Williamstown, MA 1976-1980

- B.A., Chemistry, Magna Cum Laude
- Phi Beta Kappa, elected Junior Year
- Chemistry Department Teaching Assistant
- Varsity Squash
- Principal Clarinet, Berkshire Symphony Orchestra
  Council Rock High School Newtown, PA 1972-1976

- Class Valedictorian
- Varsity Tennis
- National High School Honors Band (Clarinet)

Committees and Activities

Editorial Board, International Society for Minimally Invasive Cardiac Surgery
Surgical Director, Heart Transplant Program, Hartford Hospital Mechanical Circulatory Support Service
Cardiac Value Enhancement Program Steering Committee working with LBA Consulting to improve efficiency of cardiac surgery services at Hartford Hospital
Transfusion Committee
Trauma Quality Assurance Committee
United Network for Organ Sharing – Thoracic Organ Transplantation Committee – Region I Representative

CURRICULUM VITAE

Name:	David Joseph Underhill, M.D.
Address:	32 Lazy Valley Road Glastonbury, CT 06033
Office:	85 Seymour Street, Suite 725 Hartford, CT 06106 (860) 524-5905
Birthplace:	Baltimore, Maryland March 15, 1954
Spouse:	Kathleen P. Underhill
Children:	Kristen, Daniel, Candace, Joseph

EDUCATION

Undergraduate:	Providence College Magna Cum Laude, Biology	B.S. 1976
Graduate:	University of Vermont	M.D. 1980
Postgraduate:	New England Medical Center Tufts University Intern, General Surgery	1980-1981
	New England Medical Center Tufts University Resident, General Surgery	1981-1983
	National Heart-Lung Blood Institute National Institutes of Health Research Fellow, Cardiac Surgery	1983-1985
	New England Medical Center Tufts University Resident, General Surgery	1985-1986
	New England Medical Center Tufts University Chief Resident, General Surgery	1986-1987
	University of Michigan Resident, Thoracic Surgery	1987-1989

HONORS

Alpha Omega Alpha Resident Teaching Award New England Medical Center	1986 & 1987

APPOINTMENTS AND POSITIONS

Surgical Associates, Inc. Private practice of cardiothoracic and vascular surgery. Staff Surgeon, Lutheran Hospital, Parkview Memorial Hospital and St.Joseph Medical Center	1989
Hartford Thoracic & Cardiovascular Group, P.C. Private practice for cardiothoracic and vascular surgery. Staff Surgeon, Hartford Hospital and New Britain General Hospital	1992-1998
Connecticut Cardiothoracic Surgical Associates, L.L.C. Private practice for cardiothoracic and vascular surgery. Staff Surgeon, Hartford Hospital and John Dempsey Hospital	1998-present

CERTIFICATION AND LICENSURE

Certification:	National Board of Medical Examiners	#228672 - 1981
	American Board of Surgery	#33203 - 1988
	American Board of Thoracic Surgery	#5026 – 1990 - 2000 recertification
Licensure:	State of Michigan	#051562 – 1987
	State of Indiana	#01037644 – 1989
	State of Connecticut	#032227 – 1992

MEMBERSHIP IN PROFESSIONAL AND SCIENTIFIC SOCIETIES

Fellow, American College of Surgeons
Fellow, Society of Thoracic Surgeons
Fellow, American College of Chest Physicians
International Society for Heart and Lung Transplantation

Curricula Vitae
Paul B. Langevin, M.D.

PRESENT APPOINTMENT

Associate Professor, Department of Anesthesiology, Yale University School of Medicine, New Haven, Connecticut, 2001 to present
Staff Physician, Anesthesiology, Critical Care, Echocardiology, VA CT Healthcare System, West Haven, Connecticut, 2001 to present

DATE OF BIRTH: April 1, 1954, New Haven, Connecticut

EDUCATION

B.S., Southern Connecticut State College, New Haven, Connecticut, 1977
M.S., Southern Connecticut State College, New Haven, Connecticut, 1978
M.D. (cum laude), University of Missouri School of Medicine, Columbia, Missouri, 1988
Internship, Department of Internal Medicine, S.U.N.Y. at Stony Brook, Stony Brook, New York, 1988-1989
Residency, Department of Internal Medicine, S.U.N.Y. at Stony Brook, Stony Brook, New York, 1989-1990
Residency, Department of Anesthesiology, University of Florida College of Medicine, Gainesville, Florida, 1990-1993
NASA Flight Surgeon Certification, Kennedy Space Center, Cape Canaveral, Florida, 1995
Fellowship, Critical Care Medicine, Dartmouth-Hitchcock Medical Center, New Hampshire, 2000-2001
Fellowship, Echocardiology Care Medicine, Dartmouth-Hitchcock Medical Center, New Hampshire, 2000-2001

APPOINTMENTS

Graduate Teaching Assistant, Department of Chemistry, Southern Connecticut State College, New Haven, Connecticut, 1976-1979
Instructor, Columbia College, Columbia, Missouri, 1979-1981
Graduate Teaching Assistant, University of Missouri, Department of Physiology, Columbia, Missouri, 1979-1986
Graduate Teaching Assistant, University of Missouri, Department of Anatomy, Columbia, Missouri, 1984-1986
Assistant Professor, Department of Anesthesiology, University of Florida College of Medicine, Gainesville, Florida, 1993-1999
Affiliate Assisatnt Professor, Department of Pharmacodynamics, University of Florida College of Pharmacy, Gainesville, Florida, 1998-1999
Associate Professor, Department of Anesthesiology, University of Florida College of Medicine, Gainesville, Florida, 1999 to 2001

APPOINTMENTS (cont.)

Affiliate Associate Professor, Department of Pharmacodynamics, University of Florida, College of Pharmacy, Gainesville, Florida, 1999 to 2001
Director, Postanesthesia Care Unit, Veterans Administration Medical Center, Gainesville, Florida, 1997 to 2000
Associate Professor, Department of Anesthesiology, Yale University School of Medicine, New Haven, Connecticut, 2001 to present
Staff Physician, Anesthesiology, Critical Care, Echocardiology, VA CT Healthcare System, West Haven, Connecticut, 2001 to present

MILITARY SERVICE

United States Army Medical Corps, Reserve Officer, 1984 - 1993

HONORS

American Society of Anesthesiologists,
Second Place for Art and Literature, ASA Art Exhibit, 1996
Gulf Atlantic Anesthesiology Residents' Conference,
Third Place for Original Research, 1992
Gulf Atlantic Anesthesiology Residents' Conference,
Second Place for Original Research, 1991
National Institutes of Health, Predoctoral Fellowship, 1981-1984
University of Florida College of Medicine
Howard Hughes Medical Institute Research Resources Award, $2,000, 1998-1999.
University of Missouri
Golden Key Award for Excellence in Teaching, 1986

BOARDS

American Board of Anesthesiology, Diplomate, 1994
National Board of Medical Examiners, Diplomate, 1991
Critical Care Medicine, Board eligible
Echocardiology Level II Certification
American Board of Internal Medicine, Board eligible, 2001

LICENSURE

Florida, ME 0064568, 1993
Connecticut, 042641

SOCIETY MEMBERSHIPS

Alachua County Medical Society, 1993 - 2001

SOCIETY MEMBERSHIPS (cont.)

American Heart Association, 1994
American Physiologic Society, 1994

Florida Medical Association, 1993 - present
International Obstetrical Anesthetists Association, 1993 - present
Society for Ambulatory Anesthesia, 1994
Society of Cardiovascular Anesthesiologists, 1994
Society of Neurosurgical Anesthesia, 1994
Society for Obstetric Anesthesia and Perinatology, 1994 - 2000

EDITORIAL BOARDS

Anesthesiology, Reviewer, 1997
Manuscript 199905072, May 1999
Anesthesia and Analgesia, Reviewer, 1996
Journal of Clinical Monitoring and Computing, Reviewer, 1998
Chest, Consulting Editor, 1999 – present
Reviewed 1 Manuscript, May 1999

PROFESSIONAL CONSULTATIONS

Medical Consultant for Zeneca Pharmaceuticals, 1999 – 2001
Medical Consultant for B. Braun 1998-2000

VISITING PROFESSORSHIPS

University of Massachusetts, Department of Anesthesiology, Boston, Massachusetts, 1993
University of Florida College of Pharmacy, Department of Pharmaceutics, November 1993
Yale University, Department of Anesthesiology and Critical Care Medicine, November 1997
St. Rapheal's Hospital, Department of Radiology and Critical Care Medicine, October 1998
State University of New York at Stonybrook, Department of Anesthesiology and Critical Care Medicine, December 1999
Dartmouth Hitchcock Hospital, Department of Cardiology, 2001

TEACHING ACTIVITIES

University of Florida College of Medicine
Department of Anesthesiology
Advisor for Residents
Glennon Brown, MD, 1997-1998

TEACHING ACTIVITIES (cont.)

Lisa W. Faberowski, MD, 1996-1997
Eric Loudermilk, MD, 1996-1997
Co-director, Difficult Airway Course, Lecture curriculum and practicum, 1996
Developed teaching curriculum for intraoperative training of housestaff, 1995
Developed teaching curriculum for conscious sedation, 1997
Coordinator of Anesthesiology Resident Research for Gulf-Atlantic Coast Anesthesiology Residents' Research Conference, 1994, 1995
Mentoring New Faculty
Caridad Bravo-Frenandez, MD, 1997-1998
Morning Conferences
Preoperative assessment, 1994
ASA Presentation, September 19, 1994
Aging processes, January 9, 1996
Anesthetic considerations with malignancies, February 27, 1996
Essentials of oxygenation and ventilation, July 24, 1996
Cardiovascular physiology, February 17, 1998
Cardiovascular pharmacology, February 18, 1998
Cardiovascular physiology, March 4, 1998
Mediastinal masses, April 15, 1998

Dartmouth University College of Medicine
Department of Critical Care Medicine
Utility of measuring gastric pH in the ICU, April 14, 2000
Pre-eclampsia, hypertensive mechanisms, September 8, 2000

Yale University College of Medicine
Department of Anesthesiology
Director of Resident education - Present
Airway Concerns, cyclical since February 2001
Preoperative evaluations and Consultations, Cyclical since February 2001
Echocardiographic principals of cardiac function, March 15, 2002
Cardiac Physiology, June 23, 2003
Post operative Nausea and Vomiting, October 17, 2003
Postoperative shaking January 19, 2004

COMMITTEE APPOINTMENTS

Yale University
College of Medicine
Resident Review Committee

COMMITTEE APPOINTMENTS (cont.)

West Haven VA Medical Center
IHI for Perioperative infections
National Institutes of Health
Consultant to NIH Study Section for Project Program Review, 1994
University of Florida
College of Medicine
Department of Anesthesiology
Gulf Atlantic Anesthesia Residents' Research Conference, Coordinating Committee, 1994, 1995
Medicare Billing Committee, 1996
We Care Program, 1994
University Senate, 1995-1996, 1999-2001
University of Missouri, Department of Physiology
Graduate Professional Council, Department Representative, 1981-1983
Southern Connecticut State University
President's Subcommittee on Mission Statement, 1976
Long-range Planning Committee, 1974-1977

SPECIAL SERVICES

University of Florida
Developed emergency airway system, 1994
Organized departmental journal club, 1994
Developed didactic and practical curriculum at VA Medical Center for residency training, 1995
Developed advanced training program for recovery room nurses, 1996
Yale University
Developed advanced training program for SICU and MICU nurses, 2002

Clinical Responsibilities

University of Florida 1991-2001
Cardiac anesthesia (adult) – all types of cardiac and thoracic anesthesia including transplant, trauma and cases requiring ventricular assist devices
Neuroanesthesia – anesthetic Management of all types of neurosurgical cases including those requiring, EEG, EP and TCD interpretation
General Anesthesia – primarily complex, adult ICU related cases.
Yale University/West Haven VA Medical Center
Department of Anesthesiology
General Anesthesia
Cardiac Anesthesia

P.B. Langevin

Neuroanesthesia

Clinical Responsibilities (cont.)

Teaching Attending in the MICU and SICU

Department of Cardiology

Echocardiology - performance and interpretation of intra-op, in patient and outpatient TTE, TEE, and stress echo

P.B. Langevin

PAPERS AND LECTURES PRESENTED

An experimental model of regional sympathectomy **and** Hyperresponsiveness in hypertensive rabbits. Seventeenth Annual Gulf-Atlantic Anesthesia Residents' Conference. Department of Anesthesiology, University of Kentucky College of Medicine, Lexington, Kentucky, May 1991.

Epidural catheter disconnection: extent of contamination (May 24). Eighteenth Annual Gulf Atlantic Anesthesia Residents' Conference. Department of Anesthesiology, Tulane University School of Medicine, New Orleans, Louisiana, May 22-24, 1992.

Epidural catheter disconnection: extent of contamination (October 19) **and** Epidural catheter contamination: effect of catheter position and meniscus on extent of contamination (October 20). Annual Meeting. American Society of Anesthesiologists, New Orleans, Louisiana, October 17-21, 1992.

Effectiveness of nitroglycerin for relaxation of uterine smooth muscle. Visiting Professor. Department of Anesthesia, University of Massachusetts, Boston, Massachusetts, 1993.

Effectiveness of nitroglycerin for relaxation of uterine smooth muscle. Annual Meeting. Obstetric Anaesthetist's Association, London, United Kingdom, September 24-25, 1993.

Propofol: potentiation of infections; Effectiveness of nitroglycerin for relaxation of uterine smooth muscle; **and** Epidural catheter disconnection--final conclusions. Annual Meeting. American Society of Anesthesiologists, Washington, DC, October 9-13, 1993.

Potentiation of infection by Intralipid. Visiting Professor. Department of Pharmaceutics, University of Florida College of Pharmacy, Gainesville, Florida November 10, 1993.

Pneumocephalus with epidural anesthesia: an unusual occurrence in a healthy pregnant woman **and** Nitroglycerin and uterine muscle relaxation in pregnant sheep. 26th Annual Meeting. Society for Obstetric Anesthesia and Perinatology, Philadelphia, Pennsylvania, May 11-14, 1994.

PAPERS AND LECTURES PRESENTED (cont.)

Intralipid alters LD50 of Staphylococcus aureus. 51st Annual Meeting. Canadian Anaesthetists' Society, Edmonton, Alberta, Canada, June 17-21, 1994.

Transtracheal jet ventilation with partial airway obstruction: an oversight of the algorithm **and** Nitroglycerin and uterine muscle relaxation in pregnant sheep (October 17) **and** Multiple use of monoject syringes (October 18). Annual Meeting. American Society of Anesthesiologists, San Francisco, California, October 15-19, 1994.

A re-evaluation of the growth rate of staphylococcus aureus in propofol and intralipid: implications on infection **and** Effect of nitroglycerin on uterine smooth muscle tone, fetal hemodynamics, and the fetal oxygen supply and demand relationship in sheep. 69th Clinical and Scientific Congress. International Anesthesia Research Society, Honolulu, Hawaii, March 10-14, 1995.

Effect of sodium thiopental on fetal oxygen supply and demand in the term laboring ewe. Annual Meeting. Society for Obstetric Anesthesia and Perinatology, Montreal, Quebec, Canada, May 16-21, 1995

Misconceptions regarding growth rates for *Staphylococcus aureus* in intralipid. 52nd Annual Meeting. Canadian Anaesthetists' Society, Ottawa, Ontario, Canada, June 23-27, 1995.

Induction doses of sodium thiopental and foetal oxygen supply and demand at term in the laboring ewe. What's New in Obstetric Anaesthesia. Obstetrical Anaesthetists Association, Basel, Switzerland, September 29-30, 1995.

Effect of sodium thiopental on fetal oxygen supply and demand in the term laboring ewe (October 23); A new on-line in vivo model for the study of fetal oxygen supply and demand in the term laboring ewe **and** Transtracheal jet ventilation in the presence of a variable airway obstruction (October 24); **and** Growth characteristics of S. aureus in propofol and intralipid **and** Time to re-evaluate routine 24-hour syringe discard policy in the operating room (October 25). 1995 Annual Meeting. American Society of Anesthesiologists, Atlanta, Georgia, October 21-25, 1995.

Opened but unused pressure transducers remain sterile longer than 24 hours. Annual Meeting. International Anesthesia Research Society, Washington, DC, March 7-13, 1996.

An alternative technique for securing the difficult airway **and** Pneumocephalus associated with small gas volumes following epidural anesthesia (April 17); **and** Methodology for quantitative collection of nebulized organisms (April 18). 11th World Congress of Anesthesiologists. Australian Society of Anaesthetists and the World Federation of Societies of Anaesthesiologists,

Sidney, Australia, April 14-20, 1996.

PAPERS AND LECTURES PRESENTED (cont.)

Difficulties optimizing rate for transtracheal jet ventilation in the presence of an obstructed airway (October 21) **and** Uterine smooth muscle compliance: effect of nitroglycerine independent of a contractile mediator (October 22). Annual Meeting. American Society of Anesthesiologists, New Orleans, Louisiana, October 21-24, 1996.

A simple, innocuous, and inexpensive treatment for postoperative nausea and vomiting. Annual Meeting. International Anesthesia Research Society, San Francisco, California, March 14-21, 1997.

The effect of nitroglycerin on the uterus: mechanism of action. OAA Annual Meeting. International Society for Obstetric Anesthesia, Guildford, Surrey, April 10-11, 1997.

The effect of nitroglycerin on the uterus: mechanism of action. Annual Meeting. Society for Obstetric Anesthesia and Perinatology, Bermuda, April 13-17, 1997.

A simple, innocuous, and inexpensive treatment for postoperative nausea and vomiting (October 20) **and** The effect of nitroglycerin on the uterus: mechanisms of action (October 21). Annual Meeting. American Society of Anesthesiologists, San Diego, California, October 18-22, 1997.

Adding albumin to pump prime during cardiopulmonary bypass (CPB) reduces crystalloid requirements. Annual Meeting. International Anesthesia Research Society, Orlando, Florida, March 7-12, 1998.

Vascular responsiveness during labor (April 30). Annual Meeting. Society for Obstetric Anesthesia and Perinatology, Vancouver, British Columbia, April 29-May 2, 1998.

Vascular responsiveness to phenylephrine during labor (October 19) **and** Dissemination of *Mycobacterium tuberculosis* through anesthesia breathing circuits. Annual Meeting. American Society of Anesthesiologists, Orlando, Florida, October 17-21, 1998.

Vascular responsiveness during pregnancy **and** Resting vascular tone during pregnancy (October 11). Annual Meeting. American Society of Anesthesiologists, Dallas, Texas, October 9-13, 1999.

CONTRACTS AND GRANTS

Langevin PB (principal investigator), Gulig PA, Gravenstein N (co-principal investigators): The effect of intralipid on the incidence and severity of staphylococcal infections. Department of Sponsored Research, $5,000, 1994-1995.

CONTRACTS AND GRANTS (cont.)

Langevin PB (principal investigator), Wood CE, James CF (co-principal investigators): Effect of nitroglycerin on uterine muscle in pregnant sheep and postpartum rabbits. UF Starter Grant, $5,000, 1994.

Langevin PB (principal investigator), Gulig PA, Gravenstein N (co-principal investigators): Effect of propofol on staphylococcus aureus infection. Stuart Pharmaceuticals, $2000, 1993-1994.

Layon AJ (principal investigator), Rand K, Banner MJ, Langevin PB (co-principal investigators): Evaluation of bacterial transmission from ventilators to patients. Pall Incorporated, $48,400, 1995.

Langevin PB (principal investigator), Lobato EB (co-principal investigator): Multicenter study of the effects of Tirilizad on the prevention of renal failure after cardiovascular surgery. Upjohn Pharmaceuticals, $300,000, 1998-1999.

Langevin PB (principal investigator): Vascular responsiveness in pregnancy and pre-eclampsia. International Anesthesia Research Society, $70,336, 1998.

Langevin PB, Sulek CA (co-principal investigators): In vitro effects of milrinone on human cerebral arteries. I. Heerman Anesthesia Foundation, $20,000, 1998-1999.

Layon AJ (principal investigator), Langevin PB, Rand K (co-principal investigators): Bacterial excretion from critically ill patients with pneumonia—a project to better understand the theoretical and practical aspects of ventilator associated pneumonia. Biomedical Engineering Seed Grant, $15,000, 1999.

PATENTS

Langevin PB: Chest tube colar, UF #1589.

Langevin PB: Contamination proof infusion systems, UF #1580.

Langevin PB: Infection resistant blood sampling system, UF #1570.

Langevin PB, Brown MM: Nausea-Rite, UF #1583.

Langevin PB, Lampotang S: A method and apparatus for triggering an event at a desired point in

the breathing cycle, UF #1633.

PATENTS (cont.)

Lampotang S, Langevin PB: A method and apparatus for coordinating an event to desired points in one or more physiological cycles.

CURRICULUM VITAE

RONALD E. BURT, M.D.
Chairman, Department of Anesthesiology
Eastern Connecticut Health Network
Manchester Memorial Hospital/Rockville General Hospital
Manchester, Connecticut
Partner, Milford Anesthesia Associates, P.C.
Board of Directors, Milford Anesthesia Associates, P.C.
Milford, Connecticut

Address: Five Wentworth Park
Farmington, Connecticut 06032

Social: Born: Columbia, Missouri, 08/06/1956
Married: 1992, Elizabeth (Sena)
Children: Eric Robert, b. 1995
Olivia Marie, b. 2000
Victoria Elizabeth, b. 2002

Current Positions: **March 1, 2007** - present
Chairman, Department of Anesthesiology
Eastern Connecticut Health Network
Manchester Memorial Hospital/Rockville General Hospital
Partner, Milford Anesthesia Associates, P.C.

January 15, 2008 - present
Attending Cardiac Anesthesiologist
Heart Center of Greater Waterbury
St. Mary's Hospital
Waterbury Hospital
Waterbury, Connecticut

Prior Positions: **August 11, 1986 – March 1, 2007**
Attending Anesthesiologist
St. Francis Hospital and Medical Center
Hartford, Connecticut

2002 – 2004 (term limit)
President, Medical and Dental Staff
St. Francis Hospital and Medical Center
Hartford, Connecticut

2000 - 2002
Vice President, Medical and Dental Staff
St. Francis Hospital and Medical Center
Hartford, Connecticut

2002 - 2006
Chairman, Department of Anesthesiology
St. Francis Hospital and Medical Center
Hartford, Connecticut

1989 - 2007
Partner, Woodland Anesthesiology Associates, P.C.
Hartford, Connecticut
President, Woodland Anesthesiology Associates, P.C.
December 2002 – March 2006
Vice President, Woodland Anesthesiology Associates, P.C.
October 1998 – December 2006
Board of Directors, Woodland Anesthesiology Associates, P.C.
October 1994 – March 2006

Academic Appointments/Educational Positions Held:

1989 - 2007
Assistant Professor of Clinical Anesthesiology
University of Connecticut School of Medicine

At St. Francis Hospital and Medical Center Integrated Clinical Site:
Core Faculty for Cardiac Anesthesia
Director, Ambulatory Anesthesia Clerkship
Resident Clinical Competency Committee

Clinical Training: **1985- 1986**
Fellow, Anesthesiology Advanced Clinical Track
University of Vermont School of Medicine
Medical Center Hospital of Vermont
Burlington, Vermont
Clinical Foci: Cardiac/Vascular/Thoracic Anesthesia

1983-1985
Resident, Anesthesiology
Tufts University School of Medicine
St. Elizabeth's Hospital of Boston
Brighton, Massachusetts
Chief Resident, 1985

1982-1983
Intern, Flexible (Internal Medicine, Surgery, Pediatrics)
St. Louis University School of Medicine
Deaconess Hospital
St. Louis, Missouri

Education:

1978-1982
University of Missouri-Columbia School of Medicine
Columbia, Missouri
Degree: **M.D.**
Class Representative to American Medical Student Association

1975-1978
Washington University
Saint Louis, Missouri
Degree: **B.S.**, Biology

Licensure: Connecticut (27196)

Certification: American Board of Anesthesiology (1986)

Professional Memberships/Activities:

Connecticut State Medical Society
Hartford County Medical Association
American Society of Anesthesiologists
International Anesthesia Research Society
New England Society of Anesthesiologists

At Eastern Connecticut Health Network:
Medical Executive Committee
Medical Peer review Committee
Quality Improvement Council
Surgical Leadership Executive Committee
Cancer Committee
Code Blue Committee

DAVID A. HEIMBINDER, M.D.

2433 Whitemarsh Way, Savannah, GA 31410
912-704-9494; dah75@jhu.edu

PROFILE

Experienced anesthesiologist specializing in adult cardiac cases and interventional pain management.

EXPERIENCE

Memorial Health Hospital, Savannah, GA: 2/2007 to present
- General anesthetic practice including adult hearts. Level 1 trauma facility

Central Maine Heart and Vascular Institute, Central Maine Medical Center, Lewiston, ME: November 2005 to 02/2007
- Adult cardiothoracic practice.
- Interventional pain management for trauma and CT patients.

St. Elizabeth Hospital, Appleton, WI: February 2001 to October 2005
- Section Chief cardiothoracic anesthesia in Level 3 Hospital.
- Duties included mix of OR and Interventional Pain Clinic patients: OR 3 days/wk and Pain Clinic 2 days per week.

Tobey Hospital, Wareham, MA: April 2000 to February 2001
- Staff Anesthesiologist in physician only practice. Cases limited to routine surgery.

St. Elizabeth Hospital, Appleton, WI: July 1998 to April 2000
- Staff Anesthesiologist in hospital employed anesthesiology group.
- 50% CRNA supervision
- All cases excluding tertiary pediatrics and transplants.

Union Memorial Hospital, Baltimore, MD: July 1986 to July 1998
- Extensive experience w/ regional anesthesia in Level 2 Hospital, a designated Regional Center for Upper Extremity Trauma in the Delmarva area.
- Adult cardiac cases, including OPCAB, MIDCAB, and HeartPort.
- Minimal CRNA supervision
- Outpatient surgery center coverage

EDUCATION/TRAINING

Fellowship- Critical Care Medicine, July 1985- June 1986
University of Maryland Hospital, Shock Trauma Unit, Baltimore MD

Residency- Anesthesiology, July 1983 to June 1985
Yale University/New Haven Hospital Dept. of Anesthesiology, New Haven, CT
Rotating internship- Hospital of St. Raphael, July 1982 to June 1983
New Haven, CT

M.D. - University of Brussels, Brussels Belgium, June 1982

B.A. in Biology, 1975
Johns Hopkins University, Baltimore, MD

PROFESSIONAL MEMBERSHIPS

American Society of Anesthesiologists
Society of Cardiovascular Anesthesiologists
American Society of Echocardiography
American Academy of Pain Medicine
American Society of Interventional Pain Physicians
International Spine Intervention Society
American Society of Regional Anesthesia
American Medical Association

CERTIFICATIONS

Diplomate, American Board of Anesthesiology
Diplomate, American Board of Pain Medicine
Diplomate, National Board of Echocardiography (Perioperative TEE)

LICENSES

Active: Georgia/Maine/Wisconsin
Inactive: Massachusetts/Maryland

CURRICULUM VITAE

Ricardo Cardenas, M.D.

Home Address:

125 Ridgewood Road
West Hartford, Connecticut 06107
Phone: 860-313-0429

Education:

1/1984-6/1990	**Pontificia Universidad Javeriana**, Bogotá, Colombia Doctor in Medicine

Post-degree and Continuing Education Training:

7/2002-12/2002	**McGill University School of Medicine** McGill University Health Center. Montreal, Quebec, Canada. Clinical Fellowship in Regional Anesthesiology.
1/2001-6/2002	**McGill University School of Medicine** McGill University Health Center. Montreal, Quebec, Canada. Clinical Fellowship in Cardiac Anesthesiology
1/1997-12/2000	**University of Nebraska School of Medicine** University of Nebraska Medical Center, Omaha, Nebraska Categorical Residency in Anesthesiology.
3/1996-11/1996	**University of Miami School of Medicine** Jackson Memorial Hospital, Miami, Florida. Voluntary Observership, Department of Anesthesiology.
2/1995-9/1995	**Stanley H. Kaplan Educational Institute.**Boston, Massachusetts. Basic/Clinical Science Course for USMLE Steps 1 and 2.
2/1993-12/1995	**Boston University School of Medicine** Boston VA Medical Center, Boston, Massachusetts. Vascular Research Laboratory. Research Assistant, (Voluntary).
9/1991-12/1992	**Georgia State University**, Atlanta, Georgia English as a Second Language

Professional Experience and Academic Appointments:

4/2008-Present	**Staff Anesthesiologist,** Milford Anesthesia Associates Milford, Connecticut
7/2007-3/2008	**Staff Anesthesiologist,** Narragansett Bay Anesthesia The Miriam Hospital Providence, Rhode Island
4/2006-6/2007	**Assistant Professor,** University of Nebraska Medical Center Department of Anesthesiology Omaha, Nebraska
1/2003-3/2006	**Instructor,** University of Nebraska Medical Center Department of Anesthesiology Omaha, Nebraska
9/1990-8/991	**Rural Medical Doctor**. Mandatory Social Service Hospital San Francisco Gacheta, Cundinamarca. Colombia.

Other Appointments:

1/2004-6/2007	**Director of Cardiovascular Anesthesia Service** University of Nebraska Medical Center Omaha, Nebraska.

Academic Honors:

7/1999-6/2000	**Chief Resident,** Department of Anesthesiology, University of Nebraska Medical Center, Omaha, Nebraska

Certifications:

Diplomate. Certificate No: 39095
American Board of Anesthesiology

Diplomate, Certificate No: 2002-6735
National Board of Echocardiography
Periopertive Transesophageal Echocardiography

ECFMG Certificate # 0-481-373-7

Licenses:

Connecticut Medical License #046243
Rhode Island Medical License #12359
Massachusetts Medical License #232988
Nebraska Medical License #21550

Memberships and Offices in Professional Societies:

American Society of Anesthesiologists
International Anesthesia Research Society
Society of Cardiovascular Anesthesiologists
American Society of Echocardiography

Publications, Abstracts, and Case Presentations:

Cardenas R; Schricker T; Moore A. **"Respiratory Depression after Anesthesia Premedication in Patients undergoing CABG: a Comparison between standard benzodiazepine/opioid and Clonidine Based premedication".** Poster Presentation at the Philip R Bromage Anesthesia Research Day, Montreal, QC. April 2002

Cardenas R; Lunn J; Hill G. **"Cardiovascular Stability During Carotid Endarterectomy".** Poster Presentation at the International Anesthesia Research Society Clinical Scientific Congress, Orlando, FL, March 1998, and Midwest Anesthesia Residents Conference, Minneapolis, MN, May 1998.

Watkins M.; Al-Badawi H.; Cardenas R.; Dubois E.' Larson D. **"Endogenous Reactive Oxygen Metabolites Mediate Sublethal Endothelial Cell Dysfunction during Reoxygenation".** JOURNAL OF VASCULAR SURERY. 23 (1): 95-103, 1996, Jan.

Professional Lectureship invitations:

Basics of TEE, Current Concepts in Anesthesia annual meeting, Omaha, Nebraska. March 2005, April 2006 and March 2007
TEE for the general anesthesiologist, Anesthesia grand rounds. Methodist Hospital, Des Moines, Iowa. November, 2005
Cardiovascular Assessment and TEE, Nebraska Society of Perfusionists annual meeting, Omaha, Nebraska. February 2005 and 2007

Hobbies: Bicycling, Model trains

David J. Rosinski M.S. LCP
106 North Beacon St
Hartford, Connecticut 06105
(860) 670-0486

Experience:

University of Connecticut Health Center April 2005 to present

Director of Cardiovascular Perfusion at UCHC and The Heart Center of Greater Waterbury

- Established two new perfusion programs in collaboration with the development of open heart surgery at two hospitals in Waterbury Connecticut, Waterbury Hospital and St. Mary's Hospital

Quinnipiac University September 2005 to present

- Faculty - Teach two full courses for the fall and spring Semesters of the perfusion education program

Hartford Hospital July 1991 to April 2005

University of Connecticut Health Center
Farmington, Connecticut November 1994 to Present

Clinical Chief, Department of Cardiovascular Perfusion

- Responsible for a staff of 8 perfusionists performing approximately 1000 open-heart procedures at two institutions.
- Established both the University of Connecticut Health Center and the Connecticut Children's Medical Center perfusion programs in collaboration with the establishment of open-heart surgery at each institution.
- Responsible for completion of operational budget / cost analysis and efficiency.

- Developed departmental policy and procedures.
- Implemented and maintain departmental quality assurance program.
- Chair, Mechanical Circulatory Support Committee.
- Active member of Hartford Hospital Ethics Committee.
- Active member of Hartford Hospital Transfusion Committee.
- Clinical instructor / coordinator for Quinnipiac University perfusion students at Hartford Hospital.

Connecticut Society of Perfusion President 1998 to Present

- Conduct annual educational forum to provide C.E.U. credit.
- Successfully passed legislation for the licensing of Connecticut perfusionists 2005
- Established journal club forum for Connecticut perfusionists.

Best Practice Perfusion Group
Co-founder of a team of clinicians involved in cardiac surgery establishing evidence based standards of practice for perfusion.

Lahey Clinic
Burlington, Massachusetts July 1990 to October 1991
Staff Perfusionist

Education:

Northeastern University
Boston, Massachusetts
Bachelor of Science Degree, Respiratory Therapy and Perfusion Technology
June 1990

University Of Nebraska Medical Center
Omaha, Nebraska
Master of Perfusion Science Degree, College of Medicine
May, 2008

Certificates and Professional Affiliations:

Certified Clinical Perfusionist
Certified in C.P.R.
Member, American Society of Extracorporeal Technology
Member, American Society of Law, Medicine and Ethics
Inducted, 1989 member of Who's Who in American Colleges and Universities
Inducted, 2006 member of Who's Who in American Medicine and Health Care

Member, International Consortium of Evidence Based Perfusion, Chair – Education sub-committee, Steering Committee

Professional Meeting Faculty:

October 2007 – AmSECT Best Practices meeting, Montreal Canada
October 2006 – AmSECT Best Practices Meeting, Seattle, Washington
May 2005 - The Outcomes Meeting, Key West, Florida
May 2004 - The Outcomes Meeting, Key West, Florida

Publications:

David Donofrio, CCP

Work Experience

University of Connecticut Health Center, Farmington, Connecticut
Clinical Perfusionist
June 2005 - Present

Integral member of the perfusion team. Responsible for three heart institutions including Saint Mary's Hospital, the University of Connecticut Health Center, and Waterbury Hospital. Proficient in the operation of the heart-lung machine and related equipment used during cardiopulmonary bypass and non-cardiac procedures. Procedures include elective and emergent coronary artery bypass grafts, valve repairs and replacements, ascending and descending aortic aneurysms, and cell saving. Responsible for operating perfusion-related equipment including the Intra-aortic balloon pump. Perform point-of-care blood gas analysis. Perform quality control tests on point-of-care instruments. Instruct nurses and scrub technicians on various bypass procedures.

Yale-New Haven Hospital, New Haven, Connecticut
Clinical Perfusionist
December 1996 - June 2005

Responsibilities as described above including the following: Ascending and descending aortic aneurysms, heart and liver transplants, platelet-gel sequestration, isolated limb perfusion, and pediatric ECMO. Proficient with ventricular assist devices such as the Abiomed, Jarvik, and Novacor. Perform yearly Intra-aortic balloon pump competency reviews and training.

CBC Corporation, LLC, Thomaston, Connecticut
Plant Manager
June 1988 - December 1996

Operate a family owned metal finishing business. Oversee all aspects of daily plant operations. Responsible for sales and marketing of various automotive coatings. Designed an innovative coating process for the automotive industry.

Educational Background

Bachelor of Science in Health Science, Perfusion Certificate (1996)
Quinnipiac University, Hamden, Connecticut

Perfusion Clinical (1996)
Yale-New Haven Hospital, Bridgeport Hospital, Hospital of Saint Raphael's

Certifications

American Board of Cardiovascular Perfusion
Adult, child and infant CPR
Emergency Medical Technician, IV certified

Professional Organizations

Connecticut Society of Perfusion
December 1996 - Present

Thomaston Volunteer Ambulance Corps, Inc.
February 1994 - Present
Member in good standing; average 900 service hours annually. Member of the Scholarship Committee.

Thomaston Little League
Coach and Safety Officer - April 2005 - Present

Ronald A. Salonia

308 West Avon Road, Avon, CT (860) 404-8815 ron.salonia@comcast.net

Experience

Cardiovascular Perfusionist
June 2005 – present University of Connecticut Health Center, Farmington, CT

- Directly responsible for performing all aspects of cardiovascular perfusion services, including bypass, cell saving, Hemobag for UCHC, Waterbury Hospital and St. Mary's Hospital
- Development of standards and best practices
- Conduct Quality Assurance and Improvement activities

Cardiovascular Perfusionist
January 1994 – June 2005 Hartford Hospital, Hartford, CT

- Responsible for performing cardiovascular perfusion services
- Liaison for UCONN Medical Center Perfusion Services, managing and communicating best practices, monitoring clinical quality and reporting standards

Assistant Director of Respiratory Care Services
May 1990 – December 1993 Hospital for Special Care, New Britain, CT

- Responsible for the supervision of clinical supervisory staff, departmental goal setting, budget development, purchase and inventory management
- Member of the hospital Quality Assurance, Safety and Planning Committees

Medical Sales Representative
1988 - 1990 Grant Medical, Inc., Vernon, CT

- Product Specialist for Respiratory, Anesthesia, Critical Care Supplies and DME
- Consultant for over 40 hospitals in CT, NY and MA

Respiratory Care Supervisor
1982 - 1998 Hartford Hospital, Hartford, CT

- Supervision of over 30 clinical therapists, development protocols, policies for critical care, neonatal, emergency and routine respiratory care
- Chief Flight Respiratory Therapist for LIFE STAR, responsible for start up, development and oversight of the respiratory program

Education, Certification and License

Quinnipiac College, Hamden, CT
June 1991 – December 1993

- Cardiovascular Perfusion Certificate of Completion

Central Connecticut State University, New Britain, CT
May 1984

- Bachelor of Science in Business Management

State of Connecticut, Department of Public Health
Licensed Perfusionist 2008

Interests and Professional Affiliations

National Board of Cardiovascular Perfusion
Certified Cardiovascular Perfusionist

OBJECTIVE: To use my educational background and professional experience to enhance a dynamic cardiovascular perfusion program.

EDUCATION: Quinnipiac University 8/94 - 12/95
Hamden CT.
Completion of Cardiovascular Perfusion Certificate Program

Stony Brook University 8/91 - 6/93
Stony Brook NY.
B.S. Cardiopulmonary Respiratory Therapy

ST. Johns University 1/85 - 6/89
Jamaica NY.
B.S. Biology

EXPERIENCE: UCHC. Medical Center, Farmington, CT
6/17/05-Present
Staff Perfusionist with Open Heart Surgical Team. Also practicing at Waterbury Hospital and St.Mary's Hospital cardiac programs.

Hartford Hospital , Hartford CT.
12/95 – 6/16/05
Staff Perfusionist at this high volume cardiac and trauma center. Averaging 800 cases per year. Experienced in cardiopulmonary support for adult CABG's, valve replacements, aortic arch aneurysm involving deep hypothermia and retrograde cerebral perfusion, along with redo-operations requiring assisted mechanical venous drainage. Other responsibilities include: Assembly and priming of ventricular assist devices including the Heartmate and Abiomed 5000. Management of VAD and ECMO patients. Assisting on pediatric and neonatal corrective procedures. Along with animal research studies and clinical education of perfusion students.

Good Samaritan Hospital, West Islip, NY.
6/92 -12/95
Night staff therapist for this 475 bed hospital. Providing car for critical ventilator dependent patients, neonatal care, emergency room and trauma patients along with long term care of end stage patients. Proficient in intubation techniques, arterial samples, ventilatory support, and diagnostic critical decision making.

CERTIFICATIONS: Certified Cardiovascular Perfusionist 1997
Registered Respiratory Therapist 1993
Licensed Perfusionist State of CT.

The Joint Commission

September 14, 2007

John H. Tobin
President and Chief Excutive Officer
The Waterbury Hospital
64 Robbins Street
Waterbury, CT 06721

Joint Commission ID #: 5702
Accreditation Activity: Evidence of Standards Compliance
Accreditation Activity Completed: 9/14/2007

Dear Mr. Tobin:

The Joint Commission would like to thank your organization for participating in the Joint Commission's accreditation process. This process is designed to help your organization continuously provide safe, high-quality care, treatment, and services by identifying opportunities for improvement in your processes and helping you follow through on and implement these improvements. We encourage you to use the accreditation process as a continuous standards compliance and operational improvement tool.

The Joint Commission is granting your organization an accreditation decision of Accredited for all services surveyed under the applicable manual(s) noted below:

- Comprehensive Accreditation Manual for Behavioral Health Care
- Comprehensive Accreditation Manual for Hospitals.

This accreditation cycle is effective beginning May 11, 2007. The Joint Commission reserves the right to shorten or lengthen the duration of the cycle; however, the certificate and cycle are customarily valid for up to 39 months.

Please visit Quality Check® on the Joint Commission web site for updated information related to your accreditation decision.

We encourage you to share this accreditation decision with your organization's appropriate staff, leadership, and governing body. You may also want to inform the Centers for Medicare and Medicaid Services (CMS), state or regional regulatory services, and the public you serve of your organization's accreditation decision.

Please be assured that the Joint Commission will keep the report confidential, except as required by law. To ensure that the Joint Commission's information about your organization is always accurate and current, our policy requires that you inform us of any changes in the name or ownership of your organization or the health care services you provide.

Sincerely,

Linda S. Murphy-Knoll

HCGW Quality Assurance Plan

Door To Balloon Alliance for Quality

WH Protocols for Service

SMH Protocols for Service

Heart Center of Greater Waterbury
Quality Management Plan

Organization Description:

The Heart Center of Greater Waterbury, Inc. (HCGW) is an organization that provides management and oversight services to the joint advanced cardiac care program offered through the collaboration of Waterbury Hospital, St. Mary's Hospital and the University of Connecticut Health. HCGW supports through the collaborative process the ability of these health care institutions to service the greater Waterbury area with exceptional cardiac care.

Quality Management Program Purpose:

The HCGW's Quality Management Program is in place to assist the partner organizations to effectively measure, report and improve patient outcomes through a defined process of:

- Data collection
- Data input
- Report generation
- Data analysis
- Communication of results
- Problem solving and action planning

The ultimate goal of the program is to promote the highest level of collaboration and communication which will ultimately lead to exceptional quality of care for the cardiac patients of the greater Waterbury area.

Policy:

The Heart Center of Greater Waterbury will provide oversight and coordination to the quality data process including collection, analysis, identification of trends, communication of results and submission of data to the Board of Directors, required regulatory agencies and registries.

Objectives of the Quality Management Program:

1. To be consistent with the purpose of the Heart Center of Greater Waterbury
2. To implement and maintain a computerized quality management data base system for the advanced cardiac care program
3. To assist each of the organizations involved in the joint advanced cardiac care program to collect and analyze necessary quality data for the purpose of performance improvement in each respective organization and at a Programmatic level
4. To maintain the integrity of the data by facilitating education, systems training and quality checks
5. To stay abreast of any registry revisions for the purpose of ongoing accuracy of all data collected
6. To adhere to regulatory requirements for reporting including annual reports to OHCA
7. To report data as required to the American College of Cardiologists National Cardiovascular Database Registry (ACC-NCDR), the Society of Thoracic Surgeons Database (STS-DB) and the OHCA CT Cardiac Registry.
8. To establish communication mechanisms for reporting quality information to each organization, HCGW Board of Directors and the HCGW Advisory Board

Leadership Roles and Responsibilities:

Board of Directors: The Board of Directors is comprised of Executive Leadership from Waterbury Hospital and Saint Mary's Hospital and as such is responsible for the quality of care provided at the two organizations.

Executive Director HCGW: The Executive Director serves in an oversight function of the Quality Management Program through a collaborative relationship with the clinical leaders at Waterbury Hospital and St. Mary's Hospital. The Executive Director is responsible to report quality information directly to the BOD of the Heart Center and is responsible for reporting required data to regulatory agencies.

Medical Director HCGW: Works directly with the Executive Director in the oversight to the Quality Management Program. The Medical Director participates in the evaluation of quality data and in the communication process to Waterbury Hospital and St. Mary's Hospital leadership.

Advisory Board HCGW: The Advisory Board is comprised of Executive Leadership and physicians from Waterbury Hospital, Saint Mary's Hospital and the University of Connecticut Health Center, community physicians and clinical leaders. The Advisory Board will review quality data and make recommendations as needed.

Clinical Leadership at Waterbury Hospital, St. Mary's Hospital and University of Connecticut Health Center: Works in collaboration with the HCGW in the review and analysis of quality data related to advanced cardiac care. Is responsible within the quality management infrastructure of each organization to demonstrate ongoing performance improvement as it relates to the quality data analysis.

D2B Spotlight

Please Complete Your Follow Up Survey

By now all D2B Alliance hospitals should have received an email with the D2B Follow Up Survey link. We urge you to please complete your follow up online survey. It should take only about 20 minutes. This information will help us understand your institution's experience and improve future initiatives. Please help us achieve 100% participation!

For additional information, you can contact Matthew Fitzgerald at mfitzger@acc.org. Thank you for your time and consideration of this important initiative.

Print

What is D2B?

D2B: An Alliance for Quality™ is a new Guidelines Applied in Practice (GAP) program launched by the American College of Cardiology (ACC) to save time and save lives by reducing the door-to-balloon times in U.S. hospitals performing primary PCI. A growing list of other organizations, including the American Heart Association (AHA) and the National Heart Lung and Blood Institute, are partners in this effort.

National guidelines developed by the American College of Cardiology (ACC) and the American Heart Association (AHA) state that hospitals treating STEMI patients with emergency PCI should reliably achieve a door-to-balloon time of 90 minutes or less. However, accomplishing this level of performance is an organizational challenge.

The D2B Alliance™ was developed to make what is current extraordinary performance ordinary by providing hospitals with key evidence-based strategies and supporting tools needed to begin reducing their D2B™ times. More importantly, it provides an open, vibrant community for hospitals to share their findings and experiences and reward excellence.

The D2B Alliance™ offers something for all participants, whether a hospital is already well on its way to reducing D2B™ times or just beginning. Your hospital can join the community of over 1,000 hospitals already enrolled in D2B™!

FAQs

Q. What is the D2B Alliance?

Q. What is the goal of the D2B: An Alliance for Quality?

A. D2B: An Alliance for Quality is a new campaign designed to provide hospitals with the key supporting tools they will need to begin reducing their door-to-balloon times. A web-based netw learning community hospitals can use to share their findings and experiences with others. The membership to achieve door-to-balloon times of <= 90 minutes for at least 75 percent of non-tr segment elevation myocardial infarction in all participating hospitals performing primary PCI.

Q. Why is reducing D2B time important?

Q. How can hospitals join D2B: An Alliance for Quality?

Q. What is expected of D2B participants?

Q. Am I required to submit data?

Q. How do I become a partner organization?

Q. What is the March 16, 2007 deadline all about?

WATERBURY HOSPITAL HEALTH CENTER
CARDIOPULMONARY POLICY AND PROCEDURE MANUAL

Subject:	**Provisions of Patient Care Scope of Services**
Effective:	**7/02**
Reviewed:	**12/03; 2/05;5/05, 12/06**
Revised:	**2/05, 8/08**

PURPOSE:. To provide a plan for the provision of patient care scope of services

SCOPE: The Cardiopulmonary Department encompasses 6 individual laboratories and provides safe and effective diagnostic testing and rehabilitative services with high quality of care to all patients who are referred. The main population served consists of adolescent, adult, and older adult.

Cardiopulmonary is an ambulatory service department and provides diagnostic testing with hours of operation that are service specific.

The cath lab hours of operation are 6:30 am to 7:00pm Monday through Friday. A cath lab team will be on call from 7:00 pm to 6:30 am the following mornings, Monday through Friday. Weekend and holiday hours include 24/7 availability This will begin 7/05.

There are two stress laboratories available for testing. Currently, one stress lab is operational. Stress tests are performed Monday through Friday from 7 am to 3:30pm.

Cardiac Rehab is available from 6:30 am to 5:30pm Monday, Wednesday and Friday. Classes are also available on Tuesdays and Thursdays.

When the department laboratories are closed, the voice mail system has specific instructions are left for emergency coverage. This can be reached by calling the main department number 573-7264.

Physician orders are required for all elective laboratory services. Out patient testing is scheduled through central scheduling. Inpatients are scheduled directly through the Cardiopulmonary Department Assistants..

STAFFING:
There is an Assistant Director of Cardiopulmonary Services, who reports directly to The Director Of Outpatient Services. The Assistant Director is responsible for all laboratories daily operations. A designee is assigned when he or she is not available. Staffing is flexed to daily patient census for all laboratories. Cardiopulmonary Services is staffed with the requisite number of professional and technical personnel required to perform the number of tests scheduled. All staff members are annually validated on job specific competencies to assure delivery of safe, quality care. Staffing patterns by laboratory are dependant on volume.

One Cardiac Catheterization Laboratory:

- One registered nurse
- One scrub technician (RT,RN ,ICVT)
- One computer operator (RT,RN, ICVT)

Two Stress Laboratory:

- Each lab is staffed with:
  - One APRN
  - Two cardiology technicians
- One stress laboratory is currently in operation

Holter Laboratory:

- One cardiovascular technician and/or EKG editor

Echocardiography:

- Presently the department has the availability of two echo machines and two cardiac ultrasonographers

Cardiac Rehabilitation:

- Two Registered Nurses, two Exercise physiologists and two certified respiratory care practitioners. The patient ratio is 1:5 for phase II patients (this population is monitored by EKG) and 1:15 for phase III patients, (supervised but not monitored)

Pulmonary Function Laboratory:

- One certified respiratory technologist or certified pulmonary function technologist

EKG/Department Assistant:

- Two ekg editors and three Department Assistants

Assignments

- Staffing schedules, denoting laboratory assignments, are generated monthly. Daily assignments are made out by the Assistant Director or her designee, adjusting for increases or decreases in volume.

Basic requirements for staff members include, but not limited to:

- Registered Nurses:
  - Current CT State Licensure
  - ACLS certified
  - Current competencies including age specific
- All other technical staff:
  - BCLS-C certification
  - Certification according to classification
  - Current competencies including age specific
  - Graduates of specific program in discipline, i.e. human performance exercise physiology
  - ACLS as required for cardiac cath laboratory
- Department Assistants/EKG editors:
  - Clerical skill as defined in job description
  - Current competencies including age specific competences

Cardiopulmonary Services

Waterbury Hospital REVISED 8/08

Inpatient Cardiac Cath Patient Flow

Patient seen by Cardiologist→decision made that patient needs cath:

- Cardiologist schedules cath *see below*
- Writes pre-procedure orders
- Obtains consent

Cath lab routine (hours 6:30am-7:00pm)

- Composes schedule in early AM
- Faxes cath lab schedule to: Telemetry, CVU, ICU, OR, One Day Surgery and Nursing Supervisors

Routine non-urgent case: Calls cath lab at 7264

- Cath lab obtains information for schedule
- Cath lab gives Cardiologist time slot
- Cath lab adds to next day schedule or same day
- After hours; Physician goes to department & writes pt. name and preferred time in scheduling book for next regular scheduled day, or leaves a message on voice mail (573-7264)
- Cath team confirms with cardiologist next day

Urgent case:

- **Days (**M-F; 6:30am -7:00pm)
- Calls cath lab & they rearrange schedule and call for patient ASAP
- **Afterhours;** cardiologist calls operator to have cath lab team called in *(team is circulator, monitor, scrub)*
- Cath lab comes in sets up lab and either calls nursing unit for patient or goes and gets patient.

Telemetry/Monitored Unit:

- If urgent case unit alerts nursing supervisor of situation
- Pre-procedure orders initiated and completed
- Pre-procedure labs and testing completed - if not available
- Calls cardiologist with abnormal results
- Pre-procedure checklist completed
- Completes patient teaching

Day of procedure:

- Initiates IV or confirms IV patency
- Pre-medicates as ordered
- Rechecks checklist

Patient transported to cath lab by transporter if non-monitored
Patient is transported with RN if monitor if ordered

Cath lab:

- Reviews chart and verifies allergies
- Patient ID and procedure verified → compared with armband
- Patient prepped
- Monitoring devices applied
- Patient assessed immediately prior to procedure
- **Time out** – final verification of correct patient and correct procedure
- Procedure done
- Staff calls bed control to coordinate bed placement if different bed is needed post procedure

Follow appropriate Outpatient Cardiac Cath Patient Flow - post procedure

Outpatient Elective Cardiac Cath/PCI Patient Flow
Waterbury Hospital revised 8/08

CARDIOLOGIST'S OFFICE
Patient is seen → needs a Cath/PCI
Cardiologist:
- Completes pre-procedure orders, H&P, and consent

Office:
- Schedules procedure by calling 573-7264
- Arranges for PAT appointment
- Obtains pre-certification
- Gives pre-procedure instructions and date & time of procedure and where to report
- Faxes to cath lab orders, consent and H&P to: 573-6733
- Central Scheduling:
- Scheduling calls patient with date of appointment and completes pre-registration

DAY OF PROCEDURE:
- Patient reports to Cardiology
- Patient taken back to holding area prep/admission

Holding:
- RN Reviews chart for completeness and verifies allergies
- RN Calls abnormal results to cardiologist, if not already done
- RN Verifies ID
- RNAssesses patient and documents in WITT
- RN/CVT completes patient prep
- RN/CVT transports patient into lab
- Family is directed to the Cardiology waiting area

Cath Lab
- **Time out**- Verifies ID and procedure with all members of team → compares to name band
- Monitoring devices applied
- Patient assessment completed immediately prior to procedure and documented in WITT
  Patient prepped and draped
- Procedure performed

NEGATIVE CATH:
Cath lab staff pulls sheaths
Patient returns to the observation area for immediate recovery if sheaths need to be pulled by LIP
If a closure device is used:
Patient taken to One Day Surgery for recovery and D/C

POSITIVE CATH PATIENT NEEDS:

Elective PCI (to be scheduled for a later date)
Cath lab pulls sheaths
Patient returns to Telemetry/CVU/One Day Surgery for recovery depending on when procedure is scheduled.
Elective intervention scheduled by Cardiologist office
Cardiologist's office obtains precert
Cardiologist obtains consent for procedure
Day of procedure:
Patient reports to Cardiology waiting then taken to holding area for prep.
Immediate PCI
PCI completed
CCL calls bed control for bed in CVU
Patient remains in Cardiology holding until bed ready
Patient transferred to CVU by Cath lab RN
Report given to receiving RN
CVU APN/ RN pulls sheath if closure device was not used
Elective CABG
Cath lab staff pulls sheath
CV surgeon called by cardiologist→informed of case
If patient to be discharged→ sent back to same bed if inpt. Or to One Day Surgery if outpatient.
If patient is to be admitted→CCL calls bed control for bed placement
Patient transferred to appropriate Unit

POSITIVE CATH, NEEDS EMERGENCY CABG

See Emergent cath to CVOR flow

Emergency Department to Cardiac Cath Lab/ STEMI Patient Flow

EMERGENCY DEPARTMENT

Patient presents to ED with acute symptoms:

- Initial evaluation completed (labs, EKG, etc.)
- ED physician evaluates pt→ identifies STEMI
- ED physician notifies interventionalist and in consultation with Interventionalist , decides to do cath
- Pt and family informed of need for cath by ED physician.
- Interventional Cardiologist notifies cath lab of emergent case during hours of operation
- After hours: ED Unit Clerk calls operator to activate Cath Lab team
- Unit clerk calls for old medical Calls bed control for CVU bed
- ED continues to treat patient and prepares patient for cath/PCI procedure (includes marking peripheral pulses, starting 2 peripheral IV's with one larger gauge,) until the CCL is prepared for pt
- Cardiologist sees patient/family, obtains consents (cath/PCI/OHS *and blood*) before case

CCL

Cath Lab Staff:

- Prepares lab for case
- Goes to ED to assist with patient transport or calls for patient when lab is ready

ED Staff:

- RN gives verbal report to CCL RN, and uses the faxed report sheet as guide
- Family accompanies patient and is taken to Cardiology waiting area

Cath Lab Staff:

- Reviews chart and verifies allergies
- Verifies patient ID compares with armband
- Preps patient
- Applies monitoring devices
- Assesses patient immediately prior to procedure and documents in WITT
- Time- out – final verification of correct patient and correct procedure
- Procedure completed
- Patient is transferred to Cardiology Recovery area

PCI completed:

- Patient transferred to CVU
- Transported by cath lab RN with O2 and monitor
- RN to RN report

Positive cath, for elective CABG

- Patient transferred to telemetry or CVU
- Surgeon schedules elective case

Follow Inpatient Open Heart Surgery Patient Flow

Emergency CABG

- Cardiologist notifies CV surgeon and talks with the family

Follow Emergency from Cardiac Cath lab to CVOR Patient Flow

PATIENT WEIGHT (Kg)

(PATIENT IDENTIFICATION)

ACUTE ST SEGMENT ELEVATION WITH DIRECT TRANSFER TO CATH LAB FOR CATHETERIZATION/PCI

Attending Physician: _____ Resident/Intern: _____

Code Status is: _____

PAIN MANAGEMENT/VASODILATION:

Select the appropriate nitroglycerin route of administration:

- ☐ **Nitroglycerin SL 0.4 mg** every 5 min. pm for chest pain. May repeat for maximum of 3 doses.
- ☐ **Nitroglycerin IV** 50 mg/250 mL D5W. Start infusion at 5 mcg/minute and increase 5-10 mcg/minute prn until pain free.
  - For any Nitroglycerin product, hold drug and notify MD if Systolic BP less than 90 mmHg.
- ☐ **Morphine Sulfate** _____ mg IV push every _____.

ANTIPLATELET/ANTICOAGULATION THERAPY:

- ☐ Aspirin _____mg taken prior to arrival or given by EMS personnel.
- ☐ Chewable baby aspirin 325 mg total (4 tabs of 81 mg) orally NOW if not previously taken by the pt at home or given by EMS. If pt intake was less than 325mg prior to arrival, supplement dose to reach 325mg.
- ☐ IV Heparin bolus and infusion. Follow IV porcine Heparin protocol. Adjust for weight and risk.
- ☐ Eptifibatide (Integrilin) 180 micrograms/Kg bolus followed by 2 mcg/Kg/min infusion. May co-administer with aspirin and weight adjusted Heparin. If CrCl is 25-50 mL give 180 mcg/Kg bolus followed by 1 mcg/Kg/min infusion.
- ☐ Repeat eptifibatide (Integrilin) bolus 10 minutes after first bolus.
- ☐ Other _____.

BETA BLOCKADE:

- ☐ Metoprolol 5 mg IV push every 5 minutes for total 3 doses (or 15 mg maximum).
  - Hold for heart rate less than 55 BPM, systolic BP less than 90 mHg, PR interval greater than 0.24 seconds or 2nd or 3rd degree heart block. Contact MD if medication has been held.

LABORATORY PANEL:

The following blood work has been drawn: (✓) labs drawn in ED.

☐ Tropinin I ☐ Pt/INR ☐ Type and crossmatch ☐ CK-MB ☐ K, BUN, Creatinine ☐ CBC

Waterbury Hospital Patient Flow
Emergency Cath to CVOR

POSITIVE CATH/UNSUCCESSFULL PTCA NEEDS EMERGENCY CABG

- Cardiologist notifies CV surgeon
- Cardiologist talks to patient's family with staff member present
- Patient remains in CCL or transferred to PACU or CVU, depending on patient's acuity and CVOR availability

- Regular Operating Hours:
  - ▶Cath lab - notifies OR at 6155 of case (M-F; 7am-3pm)
  - ▶OR - notifies cardiac anesthesia, perfusion, PA, and CVOR staff of case
- Off shifts:
  - ▶CCL notifies operator of emergent case . Operator will notify CVOR on-call team
  - ▶Nursing supervisor – beeped with "911"
    -comes to cath lab to assist with family

- Cath lab staff:
  - ▶ initiates pre-op OHS orders and checklist
  - ▶ obtains pre-op labs such as T & C and any needed tests such as CXR
  - ▶ notifies blood bank & pharmacy
  - ▶ completes pre-op teaching as able
  - ▶ if able will insert temp tip Foley
  - ▶ notifies CVU of add on case
  - ▶ Calls security to assist with transport of pt
- CV surgeon comes to cath lab and obtains consents (OR) from family /patient
- Anesthesia comes to cath lab to assist with patient needs and obtains consent for anesthesia

Patient transport to CVOR: (when CVOR calls that room is ready)
- ▶ Security clears hallway and obtains elevator
- ▶ Cath lab RN, anesthesia, and perfusion if available, transport patient
- ▶ Cath lab RN may need to remain in CVOR, if IAPB has been inserted, until perfusion arrives
- ▶ Family may accompany patient to CVOR with them if condition allows
- ▶ Family directed to CVU waiting area.

- CVU staff:
  - ▶ Informs RT of add on case
  - ▶ Calls unit where patient originated from and get belongings and report

ALLERGIES
PATIENT WEIGHT (Kg)

3 Hole 1/4 4 1/4 c-to-c

DATE	TIME	**Pre-Cardiac Catheterization/Angioplasty Orders**
		Diet: NPO except for meds
		Hold all Metformin products (i.e. Glucophage, Metaglip, Glucovance, Avandamet, Fortamet, Riomet, Actoplus Met)
		Hold Lasix for one dose the night before procedure
		Hold Lasix morning of procedure
		Insulin adjustments in a.m. of procedure
		Vital signs per protocol
		Activity: Continue with present activity until procedure
		May be transferred off cardiac monitor ❑ Yes ❑ No
		Diagnostic Testing: 12 lead EKG on chart
		12 lead EKG morning of procedure, if one is not available
		Laboratory:
		Estimated Creatinine Clearance
		If outpatient: Confirm all pre-admission testing is on chart
		If inpatient: Draw the following, the morning of procedure:
		❑ PT/INR ❑ PTT ❑ BMP ❑ CBC
		IV therapy: (Select one form of IV hydration from list below)
		❑ Time permitting: Sodium chloride 0.9% at 1ml/Kg/hr for 12 hours prior to procedure, then continue hydration at 1ml/Kg/hr for 12 hours after procedure.
		❑ 500ml Sodium chloride 0.9% over 4-6 hours prior to procedure, then continue hydration at 1ml/Kg/hr for 12 hours following the procedure.
		❑ Patients with *heart failure*: Sodium Chloride 0.9% at 0.5ml/Kg/hr for 12 hours prior to procedure, then continue hydration at this rate following the procedure while monitoring fluid status.
		***Emergent catheterization/angioplasty*:** ❑ Sodium chloride 0.9% at 3ml/Kg/hr for 1 hour prior to procedure, then continue hydration at 1ml/Kg/hr for 12 hours after procedure. ❑ Sodium Bicarbonate 3 amps (150mEq) in 850 ml D5W at 3 ml/kg//hour for 1 hour prior to procedure, then continue hydration at 1ml/kg/hour for 6 hours after procedure.
		❑ **Other Fluid Type**: Volume: run @ cc/hr
		❑ No hydration
		N-Acetylcysteine (Mucomyst): (Indicated along with hydration for patients with risk factors for developing RCIN who are to undergo cardiac catheterization, and for ALL patients – including those without risk factors for RCIN - who are to have angioplasty for ST segment elevation AMI)
		❑ Oral route: Mucomyst: 600mg orally twice daily for 2 doses the day before the procedure, a 600mg oral dose in the am prior to the procedure, and 600mg orally after the procedure.
		❑ IV route: Mucomyst 1200mg IV bolus before intervention (Dilute 6ml of the 200mg/ml solution in D5W and give over 15 min), followed by 1200mg **ORALLY** twice daily for 48 hours following the intervention.

WATERBURY HOSPITAL HEALTH CENTER
CARDIOPULMONARY POLICY AND PROCEDURE MANUAL

Subject:	**Guidelines for Use of Vascular Closure Devices PTCA/Cardiac Catheterization**
Effective:	**6/05**
Reviewed:	**5/05, 4/07**
Revised:	**8//08**

PURPOSE: To obtain hemostasis of arterial puncture sites following cardiac catheterization/PTCA procedures.

SKILL LEVEL: MD

SCOPE OF CARE: Timely and safe removal of arterial sheath with minimal patient discomfort.

GENERAL INFORMATION:

- Only licensed physicians who have gone through specific training can deploy vascular closure devices.
- When a venous sheath has been placed in the same leg, the venous sheath should be removed and hemostasis achieved after the use of a vascular closure device.
- The Vascular Closure Device utilized in the CCL is Angio-Seal, a collagen plug
- Vascular closure devices are deployed according to the manufacturer's recommendations.

INDICATIONS:

The use of vascular closure devices should be considered on the following patients:

- Same-day diagnostic cardiac catheterizations
- Aortic insufficiency
- Hypertension
- Obesity
- Patients who have coagulopathy or are receiving anticoagulant or antiplatelet agents.
- Patients who have undergone prior arterial punctures.
- Combative /uncooperative patients

COMPLICATIONS:

- Bleeding or hematoma
- AV fistula or pseudoaneurysm
- Thrombosis
- Embolism
- Device non-deployment
- Infection

POST CARE:

- A clear sterile dressing will be applied over the insertion site.
- Upon arrival to the receiving unit:
    a. Assess arterial puncture site.
    b. Assess presence and quality of distal pulses
    c. Obtain vital signs.
    d. Continue to assess vital signs, puncture site and pulses every 15 minutes x4, then every 30 minutes x4, then every1 hr x4.
    e. Document assessments in nursing notes.
- Routine use of sandbags, pressure dressings or compression devices is not necessary unless bleeding occurs.
- If oozing or bleeding occurs, apply firm but non-occlusive manual pressure for 15-20 minutes or until bleeding is controlled
- If bleeding persists or a raised ecchymotic area develops, apply heavy (occlusive) manual pressure above the puncture site for 10-15 minutes or until hemostasis is achieved.
- Notify the physician.
- Keep the puncture site clean and dry. Change soiled dressing, as needed using sterile technique and maintaining universal precautions.
- Ambulate the patient per the physician's order.
- Assess patient prior to ambulation for:
    a. Vital signs: should be within baseline limits for the patient.
    b. Puncture site: should have no bleeding or expanding accumulation of blood under the skin.
    c. Distal pulses: should be comparable to baseline.
    d. Pain: patient should not be experiencing chest or leg pain.
- Notify the physician, as necessary, of changes from the initial assessment.
- Instruct patient to do the following:
    a. Support the puncture site when coughing, straining or sneezing.
    b. Keep affected extremity straight and relaxed for the prescribed amount of time as per the physician's order.
    c. Discharge instructions:
        - Patient may shower after 24 hours.
        - No tub baths for 1 week.
        - Remove dressing the next day; gently clean the site with mild soap and water. Gently dry area. Cover site with a bandage, change dressing daily until skin heals, approximately 3-4 days.

DEFINITION OF TERM:

- Angio-Seal is composed of a collagen sponge and a specially designed absorbable polymer anchor that are connected by an absorbable suture. The device seals and sandwiches the arteriotomy between its primary members, the anchor and collagen sponge.

WATERBURY HOSPITAL HEALTH CENTER
CARDIOPULMONARY POLICY AND PROCEDURE MANUAL

Subject:	**Assessment and Treatment of Contrast Related Adverse Reactions in Cath Lab**
Effective:	**6/05**
Reviewed:	**5/05, 4/07**
Revised:	**8/08**

PURPOSE: Provides guidelines for the care of patients receiving (and potentially experiencing adverse reactions to) contrast media during a cardiac catheterization/PTCA procedure.

SKILL LEVEL: Licensed Independent Practitioner (L.I.P.)

SCOPE: Patients undergoing cardiac exams involving the utilization of contrast media need to be carefully assessed prior to their procedure, observed during the procedure and treated promptly in the event of an adverse reaction to administration of iodinated contrast agent.

POLICY:

Pre-procedure

The patient is assessed before the administration of contrast media using the Intravenous Contrast Check List for previous reactions. Any allergies must be documented on the checklist and will be documented in the WITT report. A known allergy to contrast media will be treated prophylactic ally per protocol (see Pre-cath Order sheet).

Notify the cardiologist or LIP if the patient presents with the following:

- History of any contrast allergy.
- History of asthma, renal disease, diabetes, CHF, allergy to seafood or shellfish, or previous CABG.
- Known allergy to peanuts or eggs.
- Elevation in BUN and/or Creatinine.
- Metformin (Glucophage) should be stopped as directed by the cardiologist.

During procedure

RN will observe the patient for any of the following reactions:

- **Anaphylactoid:** mimics severe allergic reactions, anaphylactic reaction and shock
- **Nonanaphylactoid:** chemo toxic, vasovagal or idiopathic.
- **Chemo toxic side effects:** include cardiac arrhythmia, EKG changes and may exhibit severe respiratory distress, hypotension, bradycardia or tachycardia.
  Vasovagal reactions: occurs as a result of increased vagal tone on the heart and blood vessels. They are manifested as a depressed sinoatrial and atrioventricular nodal conduction, inhibition of atrioventricular conduction and peripheral vasodilatation. The patient exhibits bradycardia, hypotension, confusion, apprehension, weakness, diaphoresis, unresponsiveness, and or loss of bowel and bladder control.
  Idiopathic: "other reactions" without chemo toxic or vasovagal basis.

- **Combined:** anaphylactoid and non-anaphylactoid reactions occurring simultaneously. This can create a complex life-threatening situation usually resulting with a patient in shock.

Notify Cardiologist if the patient exhibits any of the following symptoms:

- Respiratory: cough, dyspnea, bronco spasm (wheezing)
- Circulatory: pallor, diaphoresis, chest pain, hypotension
- Central Nervous System: headache, dizziness, slurred speech, anxiety, nausea, vomiting, abnormal cramps or/and diarrhea
- Integumentary and Digestive Reactions: rash, hives, nausea, vomiting.

Acute symptoms may include:

- Acute respiratory distress, laryngeal edema or apnea
- Cardiac arrhythmias, acute pulmonary edema or cardiac arrest
- Stupor, convulsions or coma

Assessments, treatments, response to treatment, outcomes and disposition of patient should be documented in the patient's medical record.

CATEGORIES OF REACTIONS

Mild

Nausea, vomiting	Altered taste	Sweating
Cough	Itching	Rash, Hives
Warmth	Pallor	Nasal stuffiness
Headache	Flushing	Swelling eyes/face
Dizziness	Chills	Anxiety
Shaking		

Moderate

Moderate degree of clinically evident focal or systemic signs and symptoms including but not limited to:

Tachycardia, bradycardia, hypotension	Bronchospasm, wheezing	Hypertension
Pronounced percutaneous reaction	Laryngeal edema	Dyspnea

Severe

Life threatening with more severe signs and symptoms,including but not limited to:

Laryngeal edema	Profound hypotension	Convulsions
Clinically manifested arrhythmias	Unresponsiveness	Cardiopulmonary arrest

Protocol

The following are guidelines for the treatment of contrast induced allergic reactions. Treatments will be prescribed and ordered by the LIP.

Angina

- Nitroglycerin 1/150 grain (0.4mg) sublingual, may repeat every 3 minutes up to 3 doses.
- Oxygen therapy.

Seizure

- Valium 5 mg IV slowly
- Oxygen therapy

Mild Vasomotor Symptoms

- Reassure patient, monitor vital signs and observe for progression.
- For mild cutaneous reactions, give Diphenhydramine (Benadryl) 25mg IV over 1 to 2 minutes.
- For severe cutaneous reaction:
    1. Stop injection of contrast media.
    2. Give Diphenhydramine (Benadryl) 25mg IV
    3. Famotidine (Pepcid) 20mg IV diluted in 10ml of normal saline.
    4. If severe edema and/or hypotension occurs, give Epinephrine 0.1-0.3mg IV of 1:10,000 solution slowly over 2-5 minutes. May repeat in 15 minutes, but not to exceed 1mg total dose.

Moderate Vasomotor Symptoms

Bronchospasm:

- Administer Oxygen
- Monitor Sp02
- Albuterol 2-3 puffs using deep slow breaths
- If no response to Albuterol, give low dose Epinephrine: 1ml of 1:10,000 solution(0.1mg/ml). May repeat every 15 min. up to total dose of 1mg.
- If no response to Epinephrine, may give patient Aminophylline 250mg IV in 100cc D5W over 10-20 minutes.
- For sever bronchospasm requiring intubation, call Code 3.

Severe Vasomotor Symptoms

- If hypotension develops, place patient in Trendelenberg position.
- Administer oxygen therapy.
- Give 0.9NS IV rapid fluid bolus
- Monitor Sp02, vital signs and cardiac rhythm.
- Administer low dose Epinephrine IV 1:10,000 solution (0.1mg/ml), give 1 ml over 2-5 minutes. Titrate to effect, not to exceed 1 mg total dose.
- If no response, call Code 3 and follow ACLS protocol.
- May give: Hydrocortisone 500mg IV and repeat 100mg IV in 6 hours or Decadron 20 mg IV, repeat 4mg IV in 6 hours.

WATERBURY HOSPITAL HEALTH CENTER
CARDIOPULMONARY POLICY AND PROCEDURE MANUAL

Subject:	**Management of Hematoma for PTCA/Cath Lab/CVU/Telemetry/ICU Manual Pressure**
Effective:	**6/05**
Reviewed:	**5/05, 4/07**
Revised:	**8/08**

PURPOSE: To provide guidelines for the care of patients suspected of developing hematoma or other complications from undergoing arterial access.

SKILL LEVEL: MD, APRN,PA

SCOPE: Patients undergoing cardiac exams requiring insertion of arterial sheaths.

PROCEDURE:

After sheath has been removed, assess the patient for the following:

- Vital signs as ordered by MD, APRN, PA and documented on post catheterization order sheet.
- Inspection and palpation of the puncture site.
- Palpation of the distal pulses.
- Report a decrease in blood pressure, increase in heart rate, abdominal pain, and confusion. These may be signs of blood loss.
- If obvious bleeding is noted, all dressings should be removed and manual pressure **MUST** be applied above the puncture site using universal precautions.
- If closure device is used and bleeding occurs, an occurrence report must be completed. The report is to include the device used, noting both serial number and lot number. Forward report to Risk Management.
- The site of bleeding should be visualized.
- Pressure should be held for 20 minutes or until hemostasis is accomplished. This may be done by either manual pressure, Femostop, or by reapplying the compressor.
- If hemostasis cannot be established, the cardiologist must be called.
- A vascular surgeon may be notified at the discretion of the cardiologist.
- If internal bleeding is suspected, the MD, APRN or PA may want to order a CT scan or ultrasound. To do so, call ext. 7330.
- Mark borders of any raised ecchymosed areas.
- Reassure patient and assess for pain using Numeric Pain Intensity Scale.

COMPLICATIONS OF ARTERIAL ACCESS:

Most common complications may include, but are not limited to the following:

- Localized raised ecchymosed area (this is the most common complication).
- Retroperitoneal hematoma
- pseudoaneurysm
- Arteriovenous fistula formation.
- Arterial thrombosis secondary to intimal dissection
- Stroke.

- Sepsis with or without abscess formation
- Cholesterol or air embolization
- Acute Renal Failure

FREQUENCY OF COMPLICATIONS:

- High-risk procedures
- Critically ill elderly patients
- Patient receiving anticoagulation, antiplatlet and fibrinolytic therapies
- NYHA class IV CAD or CHF
- Patients with Valvular Disease
- Insulin Dependent Diabetes Mellitus
- Peripheral Vascular Disease
- Cerebral Vascular Disease
- Renal Insufficiency

MECHANISM FOR REPORTING COMPLICATIONS:

- All complications need to be reported to Risk Management by filling out the hospital's occurrence report.

NURSING DOCUMENTATION:

- Record vital signs.
- Nurse's notes will reflect any changes in the patient condition.
- Cardiologist is to be notified of any changes in pt's condition.
- Document any treatments or interventions.
- Reassess pain level using pain scale.

WATERBURY HOSPITAL HEALTH CENTER

Subject: Hemostasis Protocol Following Arterial and/or Venous Sheath Removal using Protocol A or Protocol B

Effective: July 23, 2005

Reviewed: 04/05, 4/07, 8/08
Revised:8/08

POLICY :
Arterial and/or venous sheath removal is to be performed by MD, APRN, PA or specially trained and validated RN.

PURPOSE:
To ensure optimum patient safety and care during arterial/venous puncture site hemostasis status post cardiac catheterization/cardiac intervention procedure.

SCOPE:
MD, APRN, PA

CRITERIA:
1. Angioplasty patients will be assigned to either Protocol A or Protocol B as defined.

Protocol A – Early removal – sheath will be removed when ACT is equal to or below 180.

Protocol B – Late removal – Sheath will be removed 3 hours after heparin is discontinued.

PROCEDURE:
A. Arterial Sheath Site: Compression Procedure

1. When ACT is equal to or below 180, the sheath can be removed.

2. While the arterial sheath is being removed, firm pressure must be applied for 20 minuets or until hemostasis is achieved.

3. Monitor patient vital signs and peripheral circulation every 5 min. x3, every1/2hr. x3 then every hour until patient stable.

4. If systolic blood pressure is greater than 170, consider use of nitroglycerin as ordered by MD, APRN or PA.

B. Venous Sheath Site: Compression Procedure

1. Venous sheath site compression procedure is performed once arterial site hemostasis is achieved and the patient is stable.

2. Designated staff as indicated per policy performs sheath removal.

3. Firm manual pressure is applied over the puncture site.

4. Pressure will be held for 5-10 min. until hemostasis is achieved.

5. Monitor patient vital signs and peripheral circulation every 5 min. x3, every1/2hr. x3 then every hour until patient stable.

C. Post Hemostasis Achievement:

1. Apply transparent dressing over puncture site and apply soft restraint as necessary.

WATERBURY HOSPITAL HEALTH CENTECARDIOPULMONARY POLICY AND PROCEDURE MANUAL

Subject: Vasovagal Reactions in the Cath Lab

Revised: 5/05, 8/08
Effective: 5/05

PURPOSE: To ensure rapid and appropriate care of the patient demonstrating the signs and symptoms of a Vasovagal reaction.

SKILL LEVEL: LIP

DEFINITION: Within the Cath Lab, vasovagal reactions may be precipitated by but not limited to painful stimuli occurring during arterial access or during arterial sheath removal and application of pressure to the groin area.

SCOPE OF CARE: To provide care, treatment and support for patients experiencing the symptoms of a vasovagal reaction during a cardiac catheterization or angioplasty procedure in the Cath Lab.

PROCEDURE:

- Monitor vital signs and record in WITT
- Assess patient for decrease in heart rate, decrease in blood pressure, and symptoms of dizziness, pallor, nausea, or diaphoresis.
- Reassure patient and provide comfort
- If the reaction occurs while stabilizing the arterial access, decrease the pressure being applies while still maintaining hemostasis
- Place patient in Trendelenberg position or elevate the patient's legs approximately 30 degrees.
- Notify LIP
- Infuse normal saline 0.9% IV rapidly until signs and symptoms decrease as directed by the physician
- Administer Atropine 0.5-1.0 mg IV push per LIP order, (ACLS protocol). The dose may be repeated if necessary up to total dose of 3mg, per LIP order.
- Document assessment, interventions and evaluations of the treatment rendered in the WITT

WATERBURY HOSPITAL HEATH CENTER
CARDIOPULMONARY POLICY AND PROCEDURE MANUAL

SUBJECT: **Brachial Artery Catheterization/PTCA**
EFFECTIVE: 7/00

REVIEWED: 6/05, 4/07
REVISED: 6/05

SCOPE: A Radial approach for the patients undergoing a Catheterization or PTCA.

PURPOSE: To provide guidelines for patients undergoing a radial approach for a catheterization or PTCA.

SKILL LEVEL: Cardiologist or Interventionalist, RN, ICVT,APRN

PROCEDURE;

- Perform Allen test (*Refer to policy for ALLEN TEST)*
- Position patient's arm on an arm board, hyperextend the patient's wrist and support it with towels
- If MD prefers a topical anesthetic may be applied
- The MD injects a local anesthetic
- A sheath is placed into the artery, this may be sutured in place as determined by MD
- The physician may want to administer intraarterial vasodilators (Nitroglycerine ,Verapamil) and/or Lidocaine. This would used to reduce the arterial spasms, that may occur
- MD or Interventionalist will then proceed with the left heart catheterization or PTCA. (*Refer to policy for PTCA and Left Heart Catheterization)*

Post procedure:

- The sheath is removed by the MD
- Hemostatis will be obtained by:
    - Manual pressure
    - MD may choose to use a Hemaband or another type of bracelet device
    - Asses patient's extremity for bleeding, also access the quality and strength of pulses, temperature and sensation
    - Bracelet device should be tight enough to obtain hemostatis but it should not occlude the pulse
    - A pressure dressing may be used, this is the preference of the MD
    - Pressure dressing should be removed in about 6 hours, this is at the desricion of the MD
    - The bracelet device may be loosened in about 1-2 hours and removed in 6 hours as directed by MD or APRN

Director of Interventional and Invasive Cardiology

Assistant Director Cardiopulmonary Services

WATERBURY HOSPITAL HEALTH CENTER
CARDIOPULMONARY POLICY AND PROCEDURE MANUAL

Subject:	**Angioplasty**
Effective:	**6/2005**
Reviewed: 4/07	
Revised:	

PURPOSE: To provide guidelines for patients requiring revascularlization in the cardiac cath lab.

SKILL LEVEL: MD with assistance from RN, ICVT and/or RT.

POLICY: To review use of angioplasty using balloons, stents, cutters, laser, grinders, suckers, filters and other PTCA techniques,.

SCOPE OF CARE: The purpose of this policy is to provide care, treatment, and support for the patients undergoing PTCA in the cardiac catheterizations lab. The cath lab staff will include the interventional cardiologist, cath lab RN and two intervention technicians (or an RN trained to use the physiologic monitoring system.)

PROCEDURE:

- Prepare patient on cath table for diagnostic procedure.
- Vital signs, conscious sedation (including O_2 sat) are documented. Patient is shaved, draped and prepared for procedure (catheterization/ PTCA).
- MD gains arterial access via the femoral artery, brachial artery or radial artery. A sheath is then placed into the artery.
- The MD passes a "guiding catheter" which is seated in the coronary ostium.
- A guide wire is introduced into the coronary artery and positioned across the stenosis into the distal aspect of the artery.
- An angioplasty catheter is inserted through the guiding catheter and is positioned across the stenosis.
- Once in place, the PTCA interventional device catheter is inflated as necessary for periods lasting anywhere from 10 seconds to several minutes. The balloon is then deflated thereby restoring blood flow to the artery. The stent may be drug eluting
- Once the stent is expanded against the arterial wall, the balloon is deflated and the delivery
- catheter and guide wire are removed.
- The interventionalist will then assess the result of the dilation by angiography flow.

INTRA PROCEDURE:

- The RN and the cath lab staff will be continuously watching the patient's vital signs, EKG, and O_2 sats, assisting the physician as needed, and medicating the patient if warranted and approved by the interventionalist. Vital signs will be monitored and documented.

POST PROCEDURE CARE:

- The interventionalist will remove all catheters and guide wires for the final images.
- Femoral arteriography will be checked to determine the possibility of a closure device. Closure device may be used at this time.
- If a closure device is not utilized, the sheath may be sutured in place to be removed at a time determined by the physician.
- RN assesses patient's vital signs and will also assess patient's limb warmth, color, and peripheral pulses. Puncture site will be checked for any bleeding or hematoma.
- A clear dressing should be applied to the puncture site.
- RN is to transport patient to CVU, the patient will be on O_2 and a cardiac monitor. Report will be given to the CVU staff.

CARDIOPULMONARY POLICY AND PROCEDURE MANUL

Subject: PTCA by IVUS
Effective: 7/05

Reviewed: 4/07
Revised:

PURPOSE: To provide guidelines for the use of intravascular ultrasound for nonangiographic coronary lesion assessment.
Provides an adjunct to percutaneous coronary interventions.

SKILL LEVEL: Cardiologist (trained in used of IVUS),with assistance of RN and ICVT

DEFINITION:
Intravascular ultrasound (IVUS) is an approved technique for catheter tipped, real time, echocardiography imaging of the cardiovascular system. IVUS generates cross-sectional tomographic images of the peripheral and coronary arteries that reflect vessel histology.

INDICATIONS:
- Assessment of lesion
- Vessel dimensions
- Confirmation of atherosclerotic plaque
- Selection of device of interventional procedure.
- Assess stent deployment
- Adjunctive diagnostic modality during interventional coronary procedures.

PROCEDURE:
- Administer anticoagulant (heparin) per physician's order.
- Administer Nitroglycerine per physician's order.
- IVUS catheter is passed along the angioplasty wire, using a monorail technique, until the transducer is beyond the region of interest.
- The catheter is then pulled back to determine lesion length and for volumetric analyses.
- Ultrasound images are recorded.

CATEGORY:	ORIGINATED: 12/2007
PAGE (s): 2	REVIEWED:
OWNER: Monica Giacomi,RN Assistant Director, Cardiopulmonary Services	REVISED:
APPROVED BY:	RETIRED:

SCOPE: Use of the pressure wire in the Cardiac Cath Lab is indicated to direct a catheter thru a blood vessel & to measure physiological parameters in the coronary arteries.
PURPOSE: To measure physiological parameters in the coronary arteries.

POLICY:

- Set up system per manufacture's instructions
- Under the direction of Interventional Cardiologist
- Utilized via guiding catheter- 6fr sheath or larger
- Inspect and prepare device
- Remove torque device by loosening the screw and gently withdrawing it
- Carefully advance interventional device over male connector
- Pressure Wire proceed according to standard clinical practice
- Monitor carefully, simultaneous measuring the distal pressure with pressure wire and the proximal pressure through the guiding catheter
- The signals from the sensor can be used for measurements of intravascular BP & estimates of Fractional Flow Reserve (FFR)
- Frequently reexamine placement of wire under fluoroscopy if the wire has been moved or torqued
- Always advance wire or withdraw slowly
- Avoid excessive manipulation of wire while in vessel- excessive manipulation of wire may cause wire tip to bend or fracture

ADVERSE:

Same as all catheterization procedures: vessel dissection, occlusion, perforation, embolus, spasm, infection (systematic or local), MI, pneumothorax, arrhythmias or death

Date

WATERBURY HOSPITAL HEALTH CENTER

Subject: Procedure for use of the Femostop Compressor Device.

Effective: June 01, 2005

Reviewed: 04/05
Revised:

POLICY :
The MD, PA, or APRN will request a Femostop for a patient when it is applicable. Femoral and/or venous sheaths will be removed by the MD, APRN, or PA and the Femostop applied by the RN, APRN, MD, or PA. An order from the physician must be obtained for use of the device.

PURPOSE:
To provide guidelines for the use of the Femostop Compression Arch and Pump when indicated for achieving and maintaining hemostasis following IABP removal, sheath removal, or prolonged bleeding.

SCOPE:
Validated APRN, PA, MD, Cardiovascular Unit RN, Cardiology Cath Laboratory RN, ICU and Telemetry RN.

EQUIPMENT:
The Femostop pressure arch, pressure tubing, belt and pump manometer.

PRECAUTIONS:
1. The initial inflation pressure should be 10-20 mm Hg above the systolic pressure, or higher if necessary to control the bleeding.

2. Tightening of the belt should be done cautiously, ensuring that the hard plastic rim around the pressure dome is not in forceful contact with patient tissues.

3. Once sheaths are removed, pressures higher than the initial pressure may be necessary to control the bleeding. Exceeding pressures above 200 mm Hg may indicate the need to secure the belt more snugly.

4. DO NOT leave the artery completely blocked for more than 2-3 minutes to avoid extended occlusion of the vessel.

5. DO NOT leave the device on the patient for inappropriately long compressions, as tissue damage may be produced. During longer compressions, a brief interruption at least every three hours is recommended.

6. Femostop system should only be used by or under the supervision of APRN'S, MD's, RN's or PA's trained in femoral artery or vein compression procedures.

7. Use of the femostop is not intended to replace careful monitoring of the patient. The patient should not be left completely unattended during the time of compression.

8. Femostop application for hematoma with indwelling catheter should not exceed 80 mm Hg.

PROCEDURE:

1. Remove the plastic arch from the package keeping center of dome sterile and inspect for any defect. Check that it holds adequate pressure, 120 mm of Hg for 10 minutes.

2. Place the belt under and around the patient's hips prior to inflation. Pull it up equally on both sides and directly in line with the puncture site. Placement of device may not be suitable on patient's with wide hips.

3. Pass the strap through either end of the sidearm locks by fully compressing the lever. Adjust the strap to a snug, but comfortable fit around the patient. The arch should be level and squarely across the groin area.

4. Attach male end of the connecting tubing to the manometer. Check connections to ensure a tight fit.

5. Place dome 1 cm superior and 1 cm medial to site.

6. Proceed to inflate the device while the MD, PA, or APRN simultaneously withdraws the sheath. The final pressure should be 10-20 mm Hg above systolic or higher as necessary to maintain initial hemostasis. Exceeding pressure above 200 mg Hg may indicate the need to secure the belt more snugly.

7. Once the catheters or sheaths are removed, increase dome pressure as needed to achieve hemostasis. Maintain hemostasis for 1-2 minutes.

8. Lower the pressure until a good pedal pulse is present, color of extremity is good, and hemostasis is maintained by using the manometer. Gradually lower the pressure by 20 mm Hg every 10 minutes until a pressure of 40 mm Hg is sustained.

9. The MD, APRN or PA will determine length of time to keep femostop in place, typically two hours after a pressure of 40 mm Hg is achieved.

10. When the device is to be removed, gradually lower the pressure and observe the site for 2-3 minutes. If the site is free of any bleeding, carefully remove the dome from the site as not to dislodge any clot formation at the site.

11. Apply a transparent dressing to the site.

NURSING CARE/DOCUMENTATION:

1. Assessment of vital signs, pulses, groin checks, circulation, motion and sensation to affected leg should be done per sheath removal protocol.

Reviewed and Approved:

WATERBURY HOSPITAL HEALTH CENTER
CARDIOPULMONARY POLICY AND PROCEDURE MANUAL

Subject:	**Angioplasty Utilizing Rotablader**
Effective:	**6/05**
Reviewed: 4/07	
Revised:	

PURPOSE: To provide guidelines for using alternative methods for PTCA.

SKILL LEVEL: MD, Assisted by RN, ICVT

SCOPE OF PRACTICE: These procedures will encompass only the cath lab staff. The purpose of this policy is to provide alternative methods for PTCA in the cath lab.

POLICY: To outline the alternative methods of PTCA as determined by the interventional cardiologist.

METHODS OF PTCA: These methods are in addition to standard balloons and stents.

Rotablader

- Removes atherosclerotic plaque from the artery.
- Olive shaped, diamond-studded steel tip on the front half of catheter, and is rotated at high speed through plaque.
- May be combined with balloon and stenting PTCA.
- This may be utilized (at the discretion of the interventionalist) for:
    - Single vessel atherosclerotic CAD with a calcified stenosis than can be crossed by a guide wire
    - Multivessel CAD
    - Native Vessel CAD of variable lengths
    - Undilatble lesion
    - Ostial lesion
- Temporary pacemaker may be inserted prior to procedure.
- The Rotoblator "cocktail" is as follows:

  1000ml Normal Saline
  5000U Heparin
  5mg Nitroglycerine
  20mg Cardizem
  6mg Adenosine
  20cc Rotoblator Lubricant
- ***REMEMBER TO DETERMINE IF PT IS ALLERGIC TO EGGS***
- Possible Complications:
    a. Access bleeding
    b. Intimal dissection
    c. Acute vessel closure
    d. Vessel perforation

e. Emergency CABG
f. MI
g. Death
h. Cardiac Tamponade
i. Distal embolization

- **Procedure:**
  Rotablator guidewire is positioned cross the lesion
  The infusion port on the advancer is connected to a one liter bagof pressurized saline and lubricant mixture, a macrodrip tubing is used, this is to ensurea steady infusion against arterial pressure. Recommended pressure is 200-300 mm Hg
- The saline mixture (see above) should flow through the advancer and sheath, this must be bubble free
- Roraglide lubricate is a mixture used to lubriate the drive shaft. (egg yoke/olive oil/ethylenediaminetetraacetic acid) This is mixed with saline and is compatible with antispasm drugs and adenosine
- The burr is advanced through the guide catheter and tested by MD
- The burr is positioned, and the system is activated and is advanced through the lesion

Reviewed and Approved:

Director of Interventional and Invasive Cardiology

Assistant Director Cardiopulmonary Services

Director of Outpatient Services

Subject: **PTCA Using Angiojet**
Effective: **7/05**

Reviewed: 4/07
Revised:

PURPOSE: To provide guidelines for patient undergoing PTCA utilizing Angiojet

SCOPE OF CARE: This procedure will encompass the cath lab staff, for the purpose of performing a PTCA

SKILL LEVEL: Interventionalist specially trained in the use of the Angiojet, with the assistance of a RN and or ICVT, RT

PRE-PROCEDURE:

Angiojet uses high-pressure water jets directed backward into the catheter creating a strong suction at the space near the tip. This is performed to evacuate the thrombus these either aspirate thrombus or pulverize it.

- Angiojet catheter is advanced through the suspected thrombus and is positioned distally. The catheter is pulled back slowly (this may need to be performed multiple times).
- The pump set drives saline in and out of the catheters and maintains a constant pressure in the artery
- Angiojet is used in acute MI, stent thrombosis, and SVG thrombosis.

Indications:

Removing thrombus in the coronary artery
Removing thrombus in SGV vessels $\geq$ 2.0mm in diameter prior to balloon angioplasties or stent placement

Procedure: A temporary pacemaker will be available and inserted as necessary with the use of the Angiojet.

- Mix 1000cc .9 Normal Saline with Heparin 5,000U of Heparin
- Load pump body into the drive unit
- Attach IV tubing into the IV bag being careful to close the IV clamp
- Push in the inflow tubing into the inflow bubble detector
- Spike IV bag
- Be sure to fill the whole drip chamber in the IV tubing
- Release the clamp and allow the saline to flow and prime pump
- *Hang collection bag (on the side of the machine)* Angiojet
- Angiojet catheter is advanced through the suspected thrombus and is positioned distally. The catheter is pulled back slowly (may need to be performed multiple times).

- Connect the tubing to the outflow tubing and place in the outflow roller pump

- Close roller pump
- Slide foot peddle to the MD
- The RN or the ICVT hands the sterile catheter to the MD
- The MD will give the assistant the high pressure tubing to attach to the unit
- The MD will completely submerge the catheter and will prime the catheter and the pump set
- The catheter is advance over the guide wore through the thrombolytic lesion
-

Contraindications:

Patients undergoing other intracoronary procedures
If the lesion can't be crossed with the guide wire

Possible adverse reactions:

- Operation of catheter may cause hemolysis
- Hemolysis indicator should be monitored if total time exceeds 10minutes
- If the operation in a flowing blood field exceeds 5 minutes
- Excessive hemolysis may require blood transfusions

CARE PATHWAYS – CVU ONE STOP POST-OP INDEX

The Waterbury Hospital

- Scope of Services – Cardiovascular Unit (CVU)
- General Admission Policy
- Ambulation Policy
- Electrolyte Replacement Protocol
- Intensive Insulin Therapy Protocol
- Ventilator Weaning Protocol

THE WATERBURY HOSPITAL
PLAN FOR PROVISION OF CARE

Cardiovascular Unit

SCOPE OF SERVICE PROVIDED:

The Cardiovascular Unit is an 8-bed unit that provides patient services to adult and geriatric patients requiring Cardiac Interventions and Open Heart Surgery. Further delineations of the population may be found in the General Admission Criteria for the Cardiovascular Unit (CVU). This unit will provide 24-hour care to patients that will include but not limited to intensive monitoring, observation/assessments and applicable therapies provided by a staff that has met core critical care/cardiovascular competencies, state licensure and hospital requirements. Patients receive care on this unit from admission to discharge.

CRITERIA OF ADMISSION:

Appropriate conditions for patients admitted to this unit would include post cardiac angioplasty or stenting, pre operative and post operative open heart surgery (CABG/Valve). See General Admission Policy to the CVU.

STAFFING PLAN/MIX:

There is a Director and Assistant Director of Nursing for the CVU who are responsible for the staffing plans, education/competencies, and compliance measures. Other responsibilities will include providing assistance and oversight for triage of patients from admission to discharge. During the off shifts and holidays there is an Administrative Supervisor available to assist in staffing plans and triage of patients.

There is a complement of Registered Nurses (RN), Clinical Information Associate (CIA), Patient Care Associate (PCA) and Nurse Practitioners (APRN). Staffing assignments for the Registered Nurses will be based upon the acuity of the patients. Registered nurses coordinate the care of the patient, collaborating with other disciplines such as Respiratory Therapy, Pharmacy, Case Management, Physical Therapy, Nutrition Services. A Clinical Instructor (CI) is available to provide education and oversight support to the RN, CIA and PCA staff.

The staffing plan and patient assignment for the Registered Nurses is based upon patient acuity. There is a charge nurse for each shift with a PCA and CIA for 8 hours a day. The charge nurse is responsible for the patient assignment. Medical Management is provided by the Attending Physicians with assistance from the Nurse Practitioners.

QUALIFICATION OF STAFF:

Nurse Practitioners:

- Current CT State RN and APRN Licensure
- ACLS Certification
- APRN Competency

Registered Nurses:

- Current CT State Licensure
- ACLS Certification
- Critical Care Competency
- Cardiovascular Competency
- Point of Care Competency
- Intra-aortic Balloon Pump Competency
- Age Specific Competency

Clinical Information Associate/Patient Care Associate:

- Skills outlined in job description
- Age Specific Competency

QUALITY IMPROVEMENT INITIATIVES:

The Cardiovascular Unit is committed to a Quality Improvement Process as part of the Hospital's Quality Improvement Program as well as through the Heart Center Joint Quality Committee. Data is collected and submitted to the American College of Cardiology and the Society for Thoracic Surgeons as applicable to the Cardiac interventions and Open Heart Surgery populations. Comparative data is reviewed and process improvement initiatives are undertaken in response to data. In addition to these indicators, the Cardiovascular Unit also participates in Hospitalwide Quality measurements including:

Patient Satisfaction
Patient Falls
Pneumovax and Flu Vaccine Compliance
Pressure Ulcer Prevention

WATERBURY HOSPITAL HEALTH CENTER
GENERAL ADMISSION POLICY TO THE CARDIOVASCULAR UNIT

Effective: 7/05
Reviewed: 7/08
Revised: 7/08

The Cardiovascular Unit (CVU) is primarily designed for the post cardiac intervention patients and post-operative cardiothoracic patients, whose attending staff has appointments in the Department of Surgery or in the Department of Cardiology. The Medical Directors of the CVU or their designee must approve other admissions. Transfer or admission to the CVU will be based on the patient meeting the criteria for admission to the CVU. Medical or surgical inpatients that require cardiac interventions will be transferred to the CVU for recovery however, post recovery the patient may be transferred to the medical or surgical service and specialty floor. If CVU bed space is inadequate in number, and a patient is in need of this specialty area, the Medical Directors of the CVU, Assistant Nursing Director for the CVU will assist in prioritizing or triaging of the patients.

Prioritization criteria for the CVU is based on the following general guidelines:

1. Post cardiac interventional (angioplasty, stents, rotoblations) patients requiring post procedure hemodynamic monitoring, IABP, intravenous drip titrations, IIb/IIa inhibitor
2. All post open heart surgery (CABG/ Valve combination procedure) patients
3. Preoperative open heart surgery patients
4. Pre-procedure cardiac interventional patients

The postoperative cardiac surgery patients will be transferred and admitted directly to the CVU from the Operating Room, bypassing the post anesthesia care unit. The post cardiac intervention patients will have stage I recovery completed in the cardiac catherization laboratory then transferred and admitted into the CVU for further recovery and care.

The intent of the CVU is to maintain the patient in a single unit setting, from admission through discharge, through multiple levels of care (CVU recovery, critical care, telemetry and floor). However, in the event that there are no available beds in the CVU, the Medical Director(s) of the CVU or their designee in conjunction with the Assistant Director of Nursing for the CVU will review the patients to determine patients who may be moved to another unit based on the following:

1. The post-operative open-heart surgery patient who does require further management of ongoing mechanical ventilation may be considered for transfer to another critical care unit for continued care.
2. The post cardiac intervention patient, who has recovered from their cardiac intervention however, does require further medical management may be considered for transfer to an appropriate unit providing the necessary level of care.

WATERBURY HOSPITAL HEALTH CENTER
AMBULATION POLICY FOR POST OPEN HEART

Effective: 7/05
Reviewed: 7/08
Revised: 7/08

Scope:
Registered Nurses caring for post open-heart surgery patients

Purpose:
To provide a guideline for ambulation for stable post open heart surgery patients

Policy:
The Registered Nurse and Physical Therapist will evaluate all post open-heart patients within 24 hours of their surgery. This evaluation should determine the need for specific assistive devices. All patients should remain monitored with oxygen administered as necessary with proper pain management.

Day of Surgery 1. Physical therapy evaluation 2. If the patient is stable and extubated they may dangle at the edge of the bed 3. Initiate Education to the patient and family on ambulation/exercise needs
POD#1 1. If the patient remains stable then they should ambulate to the chair at least twice 2. The patient should be assisted to ambulate BID as tolerated
POD#2 to 3 1. If the patient remains stable they should ambulate to the chair TID 2. The patient be assisted with ambulation TID as tolerated
POD#4 to discharge 1. If the patient remains stable the removal of monitoring and oxygen should be reviewed with ambulation continued QID 2. If the patient remains stable, prior to discharge, the patient should be ambulated in the stairway.

The Waterbury Hospital

PROTOCOL: Electrolyte Replacement Protocol

CATEGORY: Cardiovascular Unit

PAGE(S): 3

OWNER:
Director of Cardiovascular Unit
APPROVED BY:
Katherine Benson; Pharmacy & Therapeutics Committee

ORIGINATED: 5/05

LAST REVIEWED: 2/5/08

LAST REVISED: 2/5/08

RETIRED:

SCOPE: RN
PURPOSE: Electrolyte Replacement Post Cardiac Surgery and Cardiac Interventions

To initiate Protocol:

1. Must have an ordering/prescribing practitioner order that states electrolyte replacement protocol.
2. Can be used on patient's with exclusion criteria per ordering/prescribing practitioner discretion

Suggested exclusion criteria:

1. Patient with known or documented chronic or acute renal failure (**CABG patient may have CRI at baseline and still require electrolyte replacement in the immediate post-operative recovery period)
2. Serum creatinine >1.6
3. Patient's with creatinine clearance <25ml/min or urine output <25cc/hr over the previous 8 hour shift
4. Urine output <25cc/hr over the previous 8 hour shift

I.

Potassium (normal= 3.4-4.5 mmol/l)

K+ level (mmol/liter	**IV Replacement (VIA INFUSION PUMP ONLY)**
3.3-3.9	**Peripheral Line:** KCL 10mEq/100mL Sterile water x2 (each bag over 1 hour) **Central Line:** KCL 20mEq/100mL sterile water x1 (each bag over 1 hour)
3-3.2	**Peripheral Line:** KCL 10mEq/100mL Sterile water x3 (each bag over 1 hour) **Central Line:** KCL 20mEq/100mL sterile water (each bag over 1 hour) x1, then KCL 10mEq/100mL sterile water x1 (over 30 minutes)

<3 **(CALL MD)**	**AND:**	**Peripheral Line:** KCL 10mEq/100mL Sterile water x4 (each bag over 1 hour) **Central Line:** KCL 20mEq/100mL sterile water x2 (each bag over 1 hour)

K+ level	**Oral Replacement (space doses by 2 hours)**
3.5-3.9	KCL 20mEq x 2
3-3.4	KCL 20mEq x 4
<3 **(CALL MD) AND:**	KCL 20mEq x 5

Recheck K+ level 1-2 hours after infusion or after infusion or 4-6 hours after po dose. Suggested Maximum daily dose = 200mEq

II.

Calcium (normal = 1.17 – 1.33 mmol/liter)

Ca++ level (mmol/liter)	**Single Dose IV replacement (Peripheral or central line, via infusion pump)**
1.15-1.16	Calcium gluconate 1g/50mL D5W or NS over 30-60 minutes
1.1-1.14	Calcium gluconate 2g/100mL D5W or NS over 30-60 minutes
≤1.09 (CALL MD) AND:	Calcium gluconate 3g/150mL D5W or NS over 30-60 minutes

Check ionized serum calcium levels 1-2 hours after each single infusion. Single doses may be repeated up to a maximum of 3g calcium gluconate within 24 hours.

If you wish to continue with the protocol and additional calcium supplementation is required, it must be administered by continuous infusion via a central line. Any continuous infusion of calcium, either on or off the protocol, requires administration via a central line. Recommended dose for a continuous infusion is:

1. 0.5-1mg elemental calcium/kg/hour (via infusion pump)
(93 mg elemental calcium = 1g calcium gluconate)

OR

2. 3-4g calcium gluconate/ 500 mL D5W or NS (via infusion pump) over each eight hour period.

Check serum calcium levels every 4-6 hours during a continuous infusion.

Note: Calcium chloride should not be used if the gluconate is available since it can cause severe thrombophlebitis and tissue burs if extravasated.

Oral Supplement: Calcium carbonate (TUMS) 500mg po TID

III.

Magnesium (normal=1.6-2.7mg/dl)

Mg++ level (mg/dl)	**IV replacement (Peripheral or central line, via infusion pump)**
1.48 -1.89	MgSO4 1g/50mL D5W or NS over 30 minutes
1.2 – 1.47	MgSO4 2g/100mL D5W or NS over 30 minutes
≤1.1 **(CALL MD) AND:**	MgSO4 5g/500mL D5W or NS over 4 hours

Recheck magnesium level 4-6 hours after infusion. Suggested Maximum dose = 4-8g in 24 hours.

Oral supplement: Magnesium chloride (Slo-Mag) 1-2 tablets 2-4 times per day; OR magnesium gluconate 500 mg 1-2 tablets 2-4 times per day.

IV.

Phosphorous (normal = 2.7-4.5mg/dl)

Phosphate level (mg/dl)	**IV replacement (Peripheral or central line, via infusion pump)**
1.6-2	15 mmoles Na+ or K+ phosphate/ 250mL D5W or NS over 6 hours
<1.6 **(CALL MD) AND:**	30 mmoles Na+ or K+ phosphate/ 500ml D5W or NS over 6 hours
<1.6 **(CALL MD) AND:**	**Central Line Only (via infusion pump):** 30 mmoles Na+ or K+ phosphate/250mL D5W or NS over 6 hours

Recheck level 6 hours after infusion. Maximum dose = 45 mmols in 24 hours (to avoid hyperphosphatemia)

Oral supplement: Neutraphos 2 packets po BID

WATERBURY HOSPITAL
PATIENT CARE SERVICE

POLICY: Intensive Insulin Therapy in Critically Ill Patients	
CATEGORY:	ORIGINATED: 9/05
PAGE(S): 4	LAST REVIEWED:
OWNER: Medical Director, Critical Care	LAST REVISED: 8/08
APPROVED BY: J. Lawrason, M.D. Critical Care Committee	RETIRED:

SCOPE: Patients that are post-operative from Open Heart Surgery procedures
PURPOSE: To provide guidelines for the management of hyperglycemia in this patient population

Desired Range: Maintain blood glucose between 80-110mg/deciliter

Patient Population: Hyperglycemic patients in the CVU with a persistent glucose ≥140mg/dl for greater than 24 hours

Initiating Insulin Infusion: (To be activated by a physician's order)

1. Bolus the patient with 0.1 unit/Kg (obtain a physician's order for the bolus dose). The maximum bolus dose is 10 units IV. Therefore, a patient weighing more than 100kg will only receive a 10 unit bolus. Regular insulin should be used. Start the drip at 1 unit per hour if the blood glucose level is between 140 and 200mg/dl. Start the drip at 2 units per hour if the blood glucose is > 200mg/dl.

2. Blood glucose should be checked at 1-hour intervals for three hours following the start of the insulin infusion and following each change in infusion rate made thereafter. See the tables below for "ONGOING INSULIN INFUSIONS". The patient will receive a dose of insulin IVP and the drip will be increased by increments of 0.5-3 units per hour for persistent hyperglycemia. The size of the bolus and the incremental increase in infusion rate depends on the current infusion rate and the blood glucose reading.

3. Blood glucose monitoring should continue every hour until the patient has achieved a "stable" blood glucose within the target range (80-110mg/dl). Once the blood glucose is maintained within the target range for three consecutive blood glucose determinations, then the blood glucose should be monitored every 2-4 hours for at least the first 24 hours.

4. Once glycemic control is maintained for 24 hours, monitoring can be performed at 4-6 hour intervals. HOWEVER, if changes are made in insulin infusion rates, steroids are added or deleted or the dose is significantly changed, or changes are made in nutrition (significant increase or decrease in caloric intake). Then blood glucose should be monitored at 1-hour intervals again as stated in #2 above.

Precautions:

1. Patients on insulin infusions need to have a 24 hour continuous source of nutrition. Patients who are not on tube feed or TPN with blood sugars less than 200 should receive adequate glucose intake equal to 5 grams of dextrose per hour for the duration of the insulin infusion (D5W at 100cc/hour).
2. Blood glucose must be carefully monitored when steroids are added/deleted/ or a change in dose occurs. Blood glucose should also be carefully monitored when nutrition (caloric intake) is increased or decreased (as in #2 above). Other drugs that may increase plasma glucose concentration include: beta blockers, diazoxide (Hyperstat), diuretics, pentamidine, phenytoin, and sympathomimetics (epinephrine, norepinephrine, dopamine, dobutane, phyenylephrine).
3. Interruptions in nutritional supplementation require simultaneous interruption in the insulin drip. Any interruption in the drip may require re-bolusing prior to resuming the drip.
4. The use of "sliding scale" insulin in addition to the insulin drip is discouraged.
5. Patients should be monitored for symptoms of hypoglycemia (sweating, agitation, confusion, hypotension). Note, in many instances critically ill patients with hypoglycemia are asymptomatic.

ONGOING INSULIN INFUSIONS

Blood Glucose above desired range (80-110mg/dl):

Glucose Level	**Infusion Rate of 1-5 units/hr**	**Infusion rate of 6-10 units/hr**	**Infusion rate of 11-16 units/hr**
*111-139	Increase infusion by 0.5 unit/hr	Increase infusion 0.5 unit/hr	Increase infusion by 1 unit/hr
*140-200	Increase infusion by 0.5 unit/hr	Increase infusion by 1 unit/hr	Give 2 units insulin IVP and increase infusion by 2 units/hr
201-250	Give 2 units insulin IVP and increase infusion by 1 unit/hr	Give 3 units insulin IVP and increase infusion by 2 units/hr	Give 3 units insulin IVP and increase infusion by 3 units/ hr
251-300	Give 3units insulin IVP and increase infusion by 1 unit /hr	Give 5 units insulin IVP and increase infusion by 2 units /hr	Give 5 units insulin IVP and increase infusion by 3 units/ hr
301-350	Give 6 units insulin IVP and increase infusion by 1 units/ hr	Give 8 units insulin IVP and increase infusion by 2 units/hr	Give 8 units insulin IVP and increase infusion by 3 units/hr
351-400	Give 10 units insulin IVP and increase infusion by 1 unit/hr	Give 10 units insulin IVP and increase infusion by 2 units/hr	Give 10 units insulin IVP and increase infusion by 3 units/hr
>400 or infusion rate >16 units/hr	Call physician for new orders		

***Note: For a rapidly decreasing blood glucose**: If the BG drops by 80 points or more in any one hour period, call physician.*

***When the blood glucose is steadily declining and has decreased to the range of approximately 200mg/dl or less, the following steps should be taken:**

a) If the BG decreases from a level of approximately 200mg/dl to a level between 140 to 160 mg/dl within a 1hour period, decrease the infusion rate by 25%. For example, if the current rate of infusion is 4 units/hr, multiply (4 units/hr)(0.25)=1unit/hr. The new infusion rate is 3 units/hr.

b) If the BG decreases from a level of approximately 200mg/dl to a level between 120 to 140mg/dl within a 1 hour period, decrease the rate by 50%.

c) If the BG drops from a level of approximately 200mg/dl to a level ≤120 (or an 80 point drop within one hour), call physician and turn off insulin drip.

Monitoring: The blood glucose must be monitored every hour until the patient has achieved a "stable" blood glucose within the target range (80-110mg/dl). When the patient remains within the target range for three consecutive blood glucose determinations, then the blood glucose should be monitored every 2-4 hours.

Blood Glucose in desired range (80-110mg/dl):

A. For infusion rates of 1-9 units/hour: No changes now. If blood continues to decrease within the desired range over 3 consecutive hours decrease rate by 0.5 to 1 unit/hour.

B. For infusion rates of 10 to >16 units/hour: No changes now. If blood glucose continues to decrease within the desired range over 3 consecutive hours, decrease the rate by 2 units/hour.

Blood Glucose below desired range (80-110mg/dl):

<table>
<tr><th>Glucose Level</th><th>Infusion rate 1-3 units/hr</th><th>Infusion rate 4-6 units/hr</th><th>Infusion rate 7-9 units/hr</th><th>Infusion rate 10-12 units/hr</th><th>Infusion rate 13-16 units/hr</th><th>Infusion rate >16 units/hr</th></tr>
<tr><td><40</td><td colspan="6">1. Call physician.
2. D/C insulin infusion and give 25 gram intravenous dextrose.
3. Assure adequate glucose intake and check blood glucose level every 30 minutes until >80 mg/dl. Once >80mg/dl, re-start infusion but decrease rate by 50% of previous rate. Check BG in 30 minutes.
❑ If BG <40, repeat steps 1,2, and 3. If BG 40-60, or 61-70, or 71-79, refer to the appropriate blocks below.
❑ If BG>80, repeat BG in 30 min then every hour until BG is maintained with the target range for four consecutive BG determinations.</td></tr>
<tr><td>40-60</td><td colspan="6">1. Call physician.
2. D/C insulin infusion and assure adequate baseline glucose intake.
3. Check blood glucose level every 30 minutes until >80mg/dl. Once >80mg/dl, re-start infusion but decrease rate by 50%of previous rate. Check BG in 30 minutes.
❑ If BG 40-60, repeat steps 1,2, and 3. If BG 61-70 or 71-79, refer to the blocks below.
❑ If BG>80, repeat BG in 30 minutes then every hour until BG is maintained within the target range for four consecutive BG determinations.</td></tr>
<tr><td>61-70</td><td colspan="2">D/C infusion and check blood glucose in 1 hour. If >80mg/dl, restart infusion but decrease rate by 25% of the previous rate.</td><td colspan="2">Decrease infusion rate by 50% of the previous rate. Check blood glucose in 30 minutes. If BG still 61-70 repeat BG in 30 minutes.</td><td colspan="2">Decrease infusion rate by 50% of previous rate. Check blood glucose in 1 hour. If BG still 61-70 repeat BG in 1 hour</td></tr>
<tr><td>71-79</td><td colspan="2">Decrease infusion rate by 0.5-1 unit per hour and check blood glucose in 1 hour.</td><td colspan="2">Decrease infusion rate by 2-3 units/hour and check blood glucose in 1 hour.</td><td colspan="2">Decrease infusion rate by 4-5 units/hour and check blood glucose in 1 hour.</td></tr>
</table>

Discontinuing insulin infusion: The insulin drip must be discontinued prior to transfer to a medical/surgical floor. Consider using a longer-acting insulin [NPH, insulin glargine (Lantus)] along with short-acting insulin coverage as soon as possible.

Waterbury Hospital
Respiratory Therapy Department
CVU Weaning Protocol

Purpose:

To define the care/sequence of events required to wean post-open heart surgical patients from mechanical ventilation.

Goal:

Extubation, if possible, in 6-8 hours post-op.

Assessment:

1. RN and RT will assess patient jointly.
2. Baseline ABG will be drawn within first hour of patient's arrival in CVU.
3. Patient is awake and breathing spontaneously above set ventilator rate, but <30bpm.
4. Pain is managed.
5. O2 saturation > 91% on FIO2 < or equal to 40%.
6. Assess breath sounds and work of breathing.
7. Heart rate, rhythm, and blood pressure stable.

Weaning:

1. Place patient on CPAP 5, continuing to monitor physiologic and cardiopulmonary parameters. (Add PS if patient is not tolerating CPAP.)
2. Obtain ABG after 1 hour.
3. Continue to assess patient's comfort and tolerance. (If patient is on PS, decrease to CPAP as tolerated.)
4. If there is an increased work of breathing, poor ABG's, or a significant change in the patient's parameters, change back to SIMV and try again in 2 hours.
5. If patient tolerates CPAP, proceed to extubation.
6. If patient fails CPAP > 24 hours, consider an intensivist consult.

Extubation:

1. Assessment made by RN and RT.
2. The following criteria should be met on CPAP 5:
    - RR > 10, but < 30
    - Minute volume > 5 lpm, but < 12 lpm.
    - Hemodynamics and cardiac rhythm stable.
    - ABG's in normal range.
    - Patient awake and cooperative.
3. If the above criteria are met and all team members agree, then extubate.
4. Obtain ABG after 1 hour.
5. Use Incentive Spirometer Q2 hours.

Effective: 6/05

CARE PATHWAYS – OHS INDEX

The Waterbury Hospital

- Scope of Services – Operating Room
- Patient Flows – Inpatient OHS
- Patient Flows – Perioperative OHS
- Patient Flows – Out Patient OHS
- Patient Flows – Emergent OHS
- OHS Pre-operative orders
- OHS Post-operative orders
- OHS Patient Discharge Instructions

THE WATERBURY HOSPITAL
PLAN FOR PROVISION OF CARE

OPERATING ROOM

SCOPE OF SERVICES PROVIDED:

The Operating Room provides a safe and comfortable environment for both patients and staff in order to provide optimum assistance to provide optimum assistance to the surgeons in meeting the emergency, preventative and restorative health needs of the patients. The Operating Room staff provides quality-conscious, competent cost-effective care with respect for life and dignity. The Operating Room accommodates all outpatient and inpatient surgical procedures preformed at Waterbury Hospital. The American College of Surgeons Committee on Trauma and the State of Connecticut has certified Waterbury Hospital as a Level II Trauma Center. The populations served are infants, children, adolescents, adults and older adults. Surgery and procedures are performed in the following specialties: Cardiac, Vascular, Thoracic, General, Orthopedics, otorhinolaryngological (ENT), Podiatry, Plastics, Urology, Gynecological, Neurosurgery, Spinal, Cardiology, Pain Management, and other invasive procedures. The OR is divided into two (2) sections. The Main OR consists of ten (10) OR suites and one (1) Cystoscopy room. The Reed OR consists of seven (7) OR suites, one (1) Cardiovascular OR suite and perfusion room for performing open heart surgery. The Operating Room is available and staffed on a 24 hour basis seven days per week.

CRITERIA OF ADMISSION:

The patients are scheduled by the surgeon and assessed by anesthesia. The patient must meet the hospital preoperative screening criteria, e.g. laboratory work, EKG, etc. as developed by the surgical services committee. All patients require a surgical consent within 30 days of surgery and a history and physical 30 days old or less and be updated within 24 hours of the procedure. (reference - Preoperative Requirements, Surgical Consent and History & Physical policy).

STAFFING PLAN/MIX:

In collaboration, the Director of Surgical Services and two Assistant Directors of the OR are responsible for and assures the delivery of patient care services in the Operating Room on a 24/7 basis. Monday-Friday 6:30am-5:00pm and at least one available on call after hours. There will be at least one Assistant Director or their designee (charge nurse) managing the OR schedule and managing the Inner Core at all times.

The current staff is composed of Registered Nurses who may assume charge, circulator, and scrub responsibilities, Licensed Practical Nurses and Certified Surgical Technologists, who assume scrub responsibilities and may assist the circulators under the supervision of a Licensed Registered Professional Nurse. An OR team consists of one RN circulator and one scrub (RN trained to scrub, LPN or CST). There will be at least one RN responsible for supervising and/or managing patient care in each of the operating rooms. During the week Monday-Friday on day shift 7:00-3:30pm there is an average of 2.5 staff assigned to most rooms. A 24 hour second call team is present on site Monday-Friday from 9:00am-5:30pm for emergencies, relief and

late cases (past 3:30pm). At 2:30pm an evening OR team arrives and finishes the days cases, does urgent and emergent add on cases, and assigned responsibilities to include preparing for the next days cases until 11:00pm. The evening shift remains in house overnight (can retire to on call rooms) available to do cases till 7:00am the next morning. The second call team leaves at 5:30pm but is available on call from home till 9:00am the next morning for trauma emergencies or a disaster. On weekends (Saturday-Sunday), and holidays the OR is staffed with one team from 7:00am-3:30pm and one team 3:00pm-10:30pm who them remains in house overnight on call. A second call team is on home call 24 hours day on weekends and holidays. There is a separate cardiac OR call team consisting a specially trained RN and scrub in cardiac surgery available on home call Monday-Friday 3:30pm-7:00am and on 24 hour call on weekends (Saturday-Sunday), and holidays.

From 6:00am-11:00pm there are varying numbers (shifts and amount of staff staggered to meet volume and acuity) of Surgical Assistants to provide assistance to the OR teams and patients. There is one Radiological Technologist available in the OR Monday-Friday 7:15am-3:45pm to provide imaging support and assistance, the Radiology Department provides an additional Radiology Technologists as needed to meet the OR's imaging needs/volume. After hours and on weekends and holidays a Radiology Technologists is provided by the Radiology Department as needed.

Customer Services Associates provide clerical support 6:45am-5:30pm Monday-Friday, this includes the OR scheduling office and front desk.

QUALIFICATION OF STAFF:

- Registered Nurses – graduate from an accredited nursing school, required to be currently licensed by the State of Connecticut, current BLS certification. An RN who is specially trained to participate in the administration of conscious (moderate) sedation must be ACLS certified and have completed a conscious sedation competency. An RN working in the CVOR is required to be ACLS certified and have completed a cardiac surgical education and training program.
- Licensed Practical Nurses – graduate from an accredited LPN program, required to be currently licensed by the State of Connecticut, current BLS certification.
- Certified Surgical Technologists – graduate from a surgical tech program, current certification as a surgical technician is preferred, current BLS certification. A Surgical technician working in the CVOR must have completed a special cardiac surgical education and training program.
- Surgical Assistants – high school graduate or equivalent, successful completion of Certified Nursing Assistant Program, current BLS certification.
- Customer Service Associates - high school graduate or equivalent, secretary experience, medical terminology, computer skills, and customer service experience and skills.
- Radiology Technologist – graduate of an accredited radiology technologist school, currently licensed by the State of Connecticut.

QUALITY IMPROVEMENT INITIATIVES:

- Time out
- 7:30am start delays
- Infection Control/EOC compliance
- National Patient Safety Goals
- Fire Safety in the OR
- Hypothermia post colon surgery
- SCIP – antibiotic timing and appropriateness

Revised April 15, 2008

WATERBURY HOSPITAL

Waterbury Hospital
Inpatient Cardiac Surgery Patient Flow
Revised 4/08

INPATIENT, DETERMINED SURGERY INDICATED:

- PCP consults surgeon
- Calls OR front desk to schedule the patient (if after hours, calls same number and gives information to the charge nurse)
- Completes H&P, if not done
- Surgeon visits patient
- Writes pre-op orders and progress note

Anesthesia:

- Assesses and evaluates patient
- Lists medications patient should take prior to surgery
- Writes any appropriate pre-op orders

Nursing Staff:

- Transcribes pre-op orders
- Pastoral care notified
- Initiated pre-op checklist
- Any additional testing completed, abnormal results called to surgeon

Pre-Op Education:

- Pre-op teaching completed by CV nursing staff member (once patient in CVU)

Case Management will become involved and follow patient from this point forward

OR:

- OR scheduler obtains information, schedules case and notifies:
- Anesthesia
- CVU
- Patient's current nursing unit if not in CVU
- Blood Bank

IF PATIENT NOT CURENTLY IN CVU:

- Unit calls CVU and arranges for transfer
- Report given to CVU
- Places a transfer request
- Bed control and CVU determine bed placement
- Patient transferred to CVU

Evening Before Surgery:

- Pre-op checklist reviewed, updated
- Presence of H&P and pre-op note on chart confirmed
- Family given approximate time to be at hospital next day
- Hibiclens shower completed

Day of Surgery:

- Hibiclens shower completed
- Chart reviewed for completeness – test results, consents, and H&P, verify T&C acceptable
- Belongings secured
- Patient weight obtained
- Any additional orders entered
- Clip prep to be completed
- All orders implemented as appropriate (IV, medications, etc.)
- Family directed to CVU waiting room
- Surgeon may see patient prior to transfer to OR
- Lines inserted in OR
- Pre-op checklist completed
- Family waits in private waiting room
- CVU will wait for call from OR verifying patient is ready
- Patient transporter and unit RN to transport patient to OR in patient bed with monitor

Waterbury Hospital

Perioperative Patient Flow

CVOR Circulator RN goes to CVU (or Telemetry) to do a pre-op interview, assessment and report from floor nurse prior to transport
Patient transported to CVOR by Cardiac Anesthesiologist, Cardiac Anesthesia RN and unit staff in CVU bed (stretcher if on Telemetry) with CVOR O2 tank and monitor if ordered
Patient is taken directly into the operating room
Bed remains outside of OR room

- Circulator RN reviews chart for appropriate pre-op documents including H&P and consent
- Patient ID verified with name and medical record #→compared to arm band
- Lines inserted by Anesthesia and antibiotic given
- Surgeon notified by anesthesia when they are ready to anesthetize the patient
- CVOR staff will prep and drape patient
- Time-out – final verification of correct patient and correct procedure conducted.
- Surgery Started

↓

COMMUNICATION WITH FAMILY and CVU

CVOR:

- Surgical Assistant obtains CVU bed if patient not received in a CVU bed
- Circulator RN notifies CVU ½ hour before ready to leave the operating room
- Circulator RN calls CVU with brief report → procedure done, ventilator settings, drips, any problems etc, when off pump or when closing for off pump cases
- Circulator RN will call CVU to get family if needed by surgeon while patient is in CVOR
- Circulator RN calls main OR desk and asks them to have Surgical Assistant obtain elevator key and hold elevator for transport of patient to CVU
- Patient transported to CVU (see below)

CVU:

- When notified by CVOR ½ hour before → calls:
    1. Respiratory care sets up ventilator in room and awaits patient
    2. Radiology will be notified when patient arrives in unit

↓

Patient transport to CVU:

- Anesthesia, Cardiac Anesthesia RN, perfusion (if IABP) and in attendance
- Bedside report given by anesthesia to primary nurse
- 2nd RN begins to admit patient
- RT begins to connects to vent and confirms breath sounds
- Cardiac Anesthesia RN takes CVU IV pumps back to CVOR leaves IV pumps that patient is using in CVU
- If patient is connected to portable pacer anesthesia will take a CVU AV pacer back to CVOR and leaves one on patient
- Cardiac Anesthesia RN will take CVOR monitor and O2 tank back to CVOR
- First assessment started
- When patient is settled and stable in CVU, surgeon will go to the waiting room and speak with the family.
- Family in for first visit 20 minutes to 1 hour after patient arrival in CVU, if stable

Outpatient Cardiac Surgery Patient Flow

Surgeon's Office:
- Obtains basic demographic information
- Obtains insurance information
- Obtains pre-certification
- Calls 6188 booking office to schedule case, (open M-F 8am to 4:30pm, after-hours leaves message on OR Scheduler's voice mail
- Fax order to OR scheduler's office and central registration
- Fax Pre-operative orders, consents and other information to CVU
- Surgeon to dictate H&P, completes pre-op testing orders, surgical consent and blood consents
- Patient given script for labs and testing
- Tells patient that they will be called for PAT appointment

Central Scheduling:
- Receives reservation form
- Calls patient to schedule PAT appointment for afternoon starting at 1pm.
- Pre registers patient
- If patient has labs completed elsewhere they will be informed to bring copies with them.
- Informs patient where and when to report for PAT

Day of Surgery:
- CVU clerk or staff processes admission forms
- Patient to CVU with family
- RN assesses patient
- Chart reviewed for completeness - test results, consents, and H &P, verify T&C acceptable redraws if > 72 hours
- A complete set of vital signs and pulse ox reading, are obtained and abnormals called to surgeon
- Patient weight obtained
- Approximately an hour before scheduled surgery an OR Surgical Assistant will perform the clip prep
- Removes dirty linens and places warm blankets on patient when completed.
- Notify surgeon if the patient has chest pain
- Anesthesia, Cardiac Anesthesia RN and the CVU staff transports patient to CVOR
- Family taken to the CVU waiting area
- Family communication will be with CVU staff

Pre-admission Visit:
- Patient arrives to Pat Lab
- Registration is confirmed
- Patient signs in
- APRN in CVU notified of pt. arrival
- Orders are entered (need to be flagged for ASAP)
- Blood work drawn labeled as STAT
- Diagnostic testing completed
- PAT staff provides pt. with Hibiclens and Bactroban to take home

APN:
- Completes pre-op assessment of pt.; H&P form
- Completes pre-op teaching to include → incentive spirotomy teaching - documents baseline volume on admission form, skin prep instructions
- Patient taken to CVU for tour
- Instructs patient to return to hospital at 5:30 am the day of surgery and to pull up to front circle for valet or park in main lot and use the front door of hospital
- Informs patient of which medication to withhold the morning of surgery. If patient is taking Beta Blockers, patient is instructed to take the morning of surgery with sip of water
- Notifies surgeon of any abnormal findings/results

Anesthesia: will see patient the patient in Cardiac diagnostic assessment area
- Completes assessment and evaluation
- Writes pre-op orders

Emergent Return to CVOR from CVU - Patient Flow

POST-OP PATIENT PRESENTS WITH ACUTE SYMPTOMS:

- Surgeon paged using beeper,
- Surgeon evaluates patient → decides patient need to return to OR
- Surgeon calls 6155 (7am-3pm) and operator after hours to alert CVOR staff of case
- Surgeon talks to family to inform of a change in patient condition
- CVU continues to prepare patient for CVOR

Sequence if situation turns to an open arrest:

CVU staff:

- Will pull open arrest, crash cart and light source to room and follows protocol
- Calls OR to ask for assistance from surgical tech, anesthesia (1st is to have CVOR staff if not available general in-house OR staff)
- If patient arrests calls for code team
- Follows guidelines of open arrest; preparing suction, preps skin, drapes patient
- CVU continues to assist surgeon and prepares to return to CVOR if needed

DAY SHIFT (7am to 3pm)

OR notifies: surgeon informs at 6155

- CVOR team (Cardiac Anesthesia, Surgical Tech, Circulator)
- Perfusion may not be needed, ask surgeon if they need to be called in

CVU clerk will call:

- Blood bank to check on blood availability

AFTER HOURS (3pm-7am)

CVU calls for assistant manager and nursing supervisor to assist them in unit

Assistant Manager/ Supervisor:

- Calls blood bank to check on blood availability
- Assists with support of family
- Calls operator to inform of case
- Asks that In-house OR call (if not in case) to begin CVOR room setup
- May need to pull clerk to unit to assist with orders

Operator: After confirmed by surgeon

- Calls CVOR team (Cardiac Anesthesia, Surgical Tech, Circulator)
- Perfusion, if instructed by surgeon as needed

CVOR calls CVU when ready

Patient transported to OR by:

- Surgeon if he has not gone ahead to scrub
- Aesthesia, Cardiac Anesthesia RN, CVU RN and others as needed
- Respiratory Therapy

Family directed back to CVU waiting area after they see patient

The Waterbury Hospital

- Scope of Services – Cardiac Rehabilitation
- Levels of Program

WATERBURY HOSPITAL HEALTH CENTER
CARDIOPULMONARY REHABILITATION POLICY AND PROCEDURE MANUAL

Subject:	Personnel for Cardiopulmonary Rehabilitation Services/Scope of Practice
Effective:	1/13/92
Reviewed:	1/13/92, 1/5/95, 12/3/97, 11/23/1999, 9/28/00, 11/26/01, 2/4/05
Revised:	12/3/97, 11/2003, 01/07/04, 2/9/05, 8/08

PURPOSE: To establish guidelines for personnel to provide services and strategies for successful rehabilitation of the cardiac and pulmonary client.

POLICY: The collective skills of the staff must reflect the multidisciplinary nature of cardiopulmonary rehabilitation, in accordance with each Cardiopulmonary Department Job Description. Depending on individual client needs, personnel must possess the competencies needed to guide interventions aimed at restoring functional capacity and effect favorable modification of coronary heart disease and pulmonary disease risk factors. Staff utilization must assure safe and appropriate monitoring , instruction, and progress review for each intervention applied in the individualized plan of care.

Cardiac Rehabilitation requires a physician written order:
Phase I Rehab is conducted while the patient is in the hospital. An order is faxed to Cardiopulmonary, and a member of the staff visits the patients in Telemetry, CVU or ICU speaking to the patient and leaving informational literature.
Phase II Rehab is a structured program consisting of monitored exercise sessions, risk modifications, dietary consultations, and is outcomes based.
Phase III Rehab is self pay supervised but unmonitored sessions, the patients can exercise 5 days per week
Hours of Operation:
Cardiac Rehab is available from 6:30 am to 5:30pm Monday, Wednesday and Friday. Classes are also available on Tuesdays and Thursdays

The following responsibilities are in addition to each *Cardiopulmonary Department Job Description* and are associated with the day-to-day operation of cardiopulmonary rehabilitation.

Staff to Patient Ratio: Phase II---1 to 5
Phase III---1 to 15

Cardiopulmonary Medical Director:
Reviews and signs all client progress records.
Supports and consults with rehab staff as needed.

Registered Nurse:

- CT State Licensure: 2 RNs assigned to oversee Cardiopulmonary Rehab sessions, both monitored (Phase II) and supervised (Phase III).
- Conduct initial client evaluation including physical evaluation, risk factor
- Patient Assessment, establish goals and review with client, using case management assignment.
- Select the intervention strategies most appropriate to achieving the treatment goals for each client.
- Evaluate progress, adjusting strategies and treatment modalities to optimize outcomes.
- Provide reports and recommendations to the primary care physician and Cardiologist regarding client progress and discharge, as well as consult with the physician as needed throughout the client's participation in cardiopulmonary rehabilitation.

Cardiopulmonary Rehabilitation Therapist:

- CT State Licensed Respiratory Therapist.
- Conducts initial assessment of pulmonary client, including physical evaluation, risk factor assessment
- Under direction of the Registered nurse, sets goals and reviews with client; selects interventional strategies most appropriate to achieving the treatment goals for each client.
- Provide pulmonary client reports to primary care physician and Pulmonologist regarding client progress and discharge, as well as consult with the physician throughout the client's participation in Cardiopulmonary Rehab.

Cardiopulmonary Rehabilitation Clinician

- Bachelor of Science Degree in Physical Education &/ or Bachelor of Science Degree in Exercise Physiology.
- Conducts fitness assessments on all pulmonary clients.
- Under the direction of the Registered Nurse, develops an exercise program to accommodate individual functional status using case management assignment.
- Consult with rehab team to evaluate progress, adjust strategies and treatment modalities to optimize outcomes.

Saint Mary's Hospital

Cardiac Catheterization Laboratory

Scope of Practice

Scope of Services:

The Cardiac Catheterization Laboratory provides diagnostic cardiac catheterization services to patients with medical conditions such as suspected coronary artery disease, angina, and heart failure Interventional services are provided for patients with acute and/or significant coronary artery vessel obstruction.

Types and Age of Patients Served:

Service is available to both elective and urgent patients Monday through Friday 7 a.m. to 5:00 p.m. The services are provided to adult and geriatric patients. Emergency services are available 7 days per week, 24 hours a day.

Scope and Complexity of Patient Care Needs:

The Cardiac Catheterization Laboratory provides a safe and comfortable environment for both patients and personnel in order to provide optimum assistance to the physician in meeting the emergency, preventive and restorative health needs of the patient undergoing a diagnostic invasive cardiac procedure. Services provided include left heart catheterization, right heart catheterization, combined heart catheterization, temporary pacemaker insertion, permanent pacemaker insertion, pericardiocentesis, and intra-aortic balloon pump insertion. Interventional services include coronary angioplasty and stenting.
The Cardiac Catheterization Laboratory is located on the 2nd floor of the Sacred Heart building, adjacent to the O'Brien building.

Level of Care

The patient's physical, psychological and social needs are assessed initially on the Nursing Units and are reassessed on admission to the Cardiac Catheterization Laboratory, with a plan of care developed and revised as necessary. Patients are continually reassessed throughout the pre-, intra- and post-procedure periods. Modifications of the plan of care are based on reassessment of the patient. In the immediate post-procedure phase, the patient is under the direct supervision of the performing physician who maintains responsibility for the needs of the patient until the patient is discharged from the Cardiac Catheterization Laboratory.
Cardiology nurses and cardiovascular technicians interact with the patient throughout the continuum of patient care.

Department/Unit Staffing

Physicians board certified in cardiology that have had additional training in cardiac catheterization/intervention and have met the hospital credentialing/privileging process for cardiac catheterization performs cardiac catheterizations/interventions.

The Cardiac Catheterization Laboratory is staffed during procedures with a minimum of three staff members of which one must be a Registered Nurse. In cases where conscious sedation is administered, the policy, procedure and standards related to conscious sedation are followed.

The basic requirements for R.N. staff and Cardiovascular Technicians include BCLS Certification, ACLS Certification and annual competencies. RN's are licensed by the state of Connecticut.

An ongoing program of in-service education and periodic clinical skills evaluation for all staff members is maintained to ensure that the quality of care provided is kept current.

Methods Used to Assess and Meet Patient's Care Needs

Standard of practice are based on the American College of Cardiology and American Heart Association Guidelines for Cardiac Catheterization Laboratories, institutional standards, policies, procedures, protocols, and regulatory agencies. These standards and recommended practices serve as a basis for performance improvement and evaluation.

Collaboration

The nurse's partnership with the patient and other healthcare providers is to work in a collaborative, coordinated manner throughout the process of caring for a patient requiring an invasive cardiac procedure. The involvement of the patient, family, or significant other is paramount. An appropriate degree of participation is expected of the patient, family or other healthcare providers and is determined by the clinical environment and the patient's situation.

Revised: 6/2002, 2/2005, 2/2008

ST. Mary's Hospital

PCI Inpatient Flow

Approved 4/21/05
Revised 8/3/08

Inpatient Unit:
- Patient exhibits symptoms of STEMI/ACS
- EKG completed (reviewed by PCP, resident or available cardiologist)

If routine/non-urgent PCI indicated:
- Cardiologist determines PCI for that day or next day
- Cardiologists/PCP determine if patient needs transferred to a monitored unit if not currently on a monitored unit
- Call initiated to Cardiology to add to schedule
- Orders and consent completed
- Patient education completed
- Unit reviews labs, calls any abnormals
- Day of procedure:
  - Immediate preprocedure orders implemented
  - Family to second floor waiting room
  - CCL tech assists in transporting to cath lab

If urgent/emergency PCI indicated:
- PCP or resident that reviewed EKG, will call interventionalist
- Unit calls CCL to notify of emergency case
- **If after hours or weekend:** Unit calls supervisor to notify of emergency cath
  - Supervisor alerts operator to call in cath lab on call team and diverts resources to the unit to assist if needed
  - Unit or supervisor notifies patient's family
- **In every situation:**
  - Unit initiates any preprocedure orders
  - Unit enters bed request if patient not in CVU
  - CCL calls when ready and CCL tech comes to unit to assist in transport
  - Family to 2nd floor waiting room

Cath Lab
- Cath lab will routinely have one tray prepared for emergencies prior to leaving for the day
- **If daylight Mon. through Fri. during operational hours**, cath lab will let working cardiologist know about emergency procedure and case on table with be either completed (if PCI or cath near completion), or removed from table (if early in diagnostic and floor is ready)
  - CCL will turnover room ASAP, enter any available patient data and call for patient as soon as ready
  - CCL will send one person to assist with transport
- **If after hours or weekend**, once cath lab staff arrives, equipment will be set up, any available data entered and will call for patient as soon as ready, one CCL staff member will assist with transport
- Consent will be completed in the cath lab
- Family will be directed to waiting room on second floor
- Once in the lab, patient ID verified with two identifiers
- Patient assessment completed immediately prior to procedure, reviews chart, verifies allergies and consents
- Monitoring devices applied, patient prep and drape completed, time out completed
- Procedure preformed along with associated activities
- Immediate post procedure patient is stabilized (closure device or sheath may remain in), instructions given
- Post procedure instructions reviewed with patient
- Physician goes to waiting room to talk with family
- CCL transports patient to CVU with CCL RN and monitor

CVU:
- Report given to CVU RN by CCL at bedside
- CVU performs patient assessment, implements post procedure orders and reinforces post procedure instructions, family in to see patient

St. Mary's Hospital

Outpatient Elective PCI Patient Flow **Approved 4/21/05**
Revised 8/08

CARDIOLOGIST'S OFFICE
Patient is identified to need an elective PCI
Cardiologist:
- Completes pre-procedure orders, H&P, and consent

Office:
- Schedules procedure by calling SMH Cardiology secretary (who will check the schedule and determine the time slot)
- Obtains pre-certification
- Gives pre-procedure instructions including date & time of PCI
- Completes CCL/PAT scheduling form trifax to 203-578-xxxx **(?)** (admitting, OSTD and CCL), consent **preprocedure orders** and H&P are faxed to OS TD
- Office provides educational materials to patient

One Stop Testing:
- Completes pre-reg form
- Performs testing when patient comes in (walk ins)
- Faxes lab results to PCP and ordering physician
- Maintains the HC record
- Has chart available for CCL pick up day prior to procedure

CCL:
- Cardiology will enter scheduled patient information into scheduler
- Receives tri-fax
- Pick up chart day prior from OSTD
- Compile chart
- Reviews chart and begins entry into CCL data management system
- Calls patient day prior to procedure to confirm arrival time (2 hours prior) to hospital
- Takes CCL packet to SDS for PCI patients and for diagnostic cath patients

Patient Access and Pre-Registration: Complete patient registration processes

SDS:
- Gets completed CCL/PAT scheduling form
- Receives chart from CCL, reviews chart

Day of Procedure Patient Arrives:
Second Floor Registration:
- Roll over the registration
- Obtains: consent for treatment, HIPAA, sign consents, validates insurance, applies ID band, etc.
- Calls SDS to notify that patient/family is on the way to unit
- Customer care representative to escort patient and family to SDS

SDS (Same Day Surgery):
- Verifies ID
- Family directed to waiting area and given beeper with instructions (will be permitted to see patient prior to patient going to lab)
- Performs admission assessment, reviews chart completeness and verifies allergies
- Completes pre-procedure checklist any patient prep and implements any pre op orders
- Preops patient upon phone call notification from CCL
- CCL tech will come to unit to transport patient to cath lab

Cath Lab
- Verifies patient ID by using two identifiers
- Patient assessment completed immediately prior to procedure, reviews chart and consents, allergy verification

St. Mary's Hospital

Outpatient Elective PCI Patient Flow –pg.2

Approved 4/21/05
Revised 8/8

Day of Procedure (Continued):

Cath Lab

- Time out performed
- Procedure patient care activities performed
- Intra procedure activities performed
- Immediate post procedure patient is stabilized (closure device or sheath may remain in), instructions given
- Post procedure instructions reviewed with patient
- Physician goes to waiting room to talk with family
- CCL transports patient to CVU with CCL RN and monitor

CVU:

- Report given to CVU RN by CCL at bedside
- CVU performs patient assessment, implements post procedure orders and reinforces post procedure instructions

Saint Mary's Hospital

Emergency ED to CCL Patient Flow

Approved 4/21/05
Revised 8/3/08

Patient arrives in the ED (either walk in or ambulance)

- EKG obtained stat and immediately given to ED physician
- ED physician interprets EKG, evaluates patient →identifies STEMI
- ED clerical coordinator will initiate Acute MI with ST elevation QI data Flow Sheet
- ED physician calls interventionalist who will make the decision regarding need for immediate intervention
- ED clerical coordinator and/or interventionalist will notify the cath lab of an emergent case during hours of operation.
- After hours the ED clerical coordinator will use 1*1 to activate cath lab team
- Operator will activate Cath Lab Beepers using the Alpha Pager software located in the switchboard and text message "Cath Team Activation".
- Operator will call Cath Lab RN cell phone to activate Cath Lab Team Leader.
- Operator will page cardiac anesthesiologist and perfusionist (see call list).
- ED physician will speak with the patient and family informing them of the need for the procedure. (Patient education materials may be utilized)
- ED physician will initiate Acute Coronary Syndrome ED Physician Order Sheet
- ED clerical coordinator will book ED Cardiac Cath Lab panel, cardiac cath requisition and schedule the patient for a CVU bed.
- ED notifies PCP (if daylight hours that patient is going to CCL).
- ED continues to treat patient and prepares patient for cath/PCI procedure (includes marking peripheral pulses, initiating IV lines, ASA, NTG,Plavix, Heparin and Integrelin if indicated)
- The ED clerical Coordinator upon receiving notification that the cath lab is ready immediately notify the nurse caring for the patient and page PCA stat to assist with the transfer.
- ED RN will accompany the patient to the cath lab and provide verbal report.
- Family accompanies patient and is taken to the waiting area outside cath lab.

↓

Cath Lab

- Cath lab will routinely have one tray prepared for emergencies prior to leaving for the day
- **If daylight Mon. through Fri. during operational hours**, cath lab will let working cardiologist know about emergency procedure and case on table with be either completed (if PCI or cath near completion), or removed from table (if early in diagnostic and ED is ready)
    - CCL will turnover room ASAP, enter any available patient data and call for patient as soon as ready
    - CCL will send one person to assist with transport
- **If after hours or weekend**, once cath lab staff arrives, equipment will be set up, any available data entered and will call for patient as soon as ready, one CCL staff member will assist with transport
- Consent will be completed in the cath lab
- Family will be directed to waiting room on second floor
- Once in the lab, patient ID verified with two identifiers
- Patient assessment completed immediately prior to procedure, reviews chart and consents
- Monitoring devices applied, patient prep and drape completed, time out completed
- Procedure preformed along with associated activities
- Immediate post procedure patient is stabilized (closure device or sheath may remain in), instructions given

Cath Lab cont..

- Post procedure instructions reviewed with patient
- Physician goes to waiting room to talk with family
- CCL transports patient to CVU with CCL RN and monitor

CVU:

- Report given to CVU RN by CCL at bedside
- CVU performs patient assessment, implements post procedure orders and reinforces post procedure instructions, family in to see patient, notifies PCP if not completed in ED

St. Mary's Hospital
Cath Lab to CVOR Emergency Patient Flow

Approved 4/21/05
Revised 8/08

POSITIVE CATH (TVD or LM) → NEEDS EMERGENCY CABG:

- Cardiologist notifies CV surgeon, and updates patient's family

Cardiac Cath Lab Staff:

- At all time the OR is notified and they inform CVOR team
- If off hours, cath lab calls the nursing supervisor to notify of emergency procedure.
- CCL enters bed request (unless patient originated in CVU)
- CCL calls sending unit to notify of impending surgery
- CCL notifies PCP (if daylight hours)
- Pre OHS (modified) orders are initiated, obtaining any needed pre-op lab/tests
  - Verification that type and cross match is completed
  - Verify if antibiotics to be administered or send to be given in OR
- Begins basic pre-op teaching to patient and family as able
- Begins to prepare patient for surgery → (IABP insertion)

CV surgeon: (will not hold up patient transport to OR if OR ready)

- Assesses patient if in house
- Discusses procedure with family /patient, obtains consents

Anesthesia: (will not hold up patient transport to OR if OR ready)

- assesses patient and assists with stabilization

Patient transport to CVOR : (when CVOR calls that room is ready)

- Cath lab staff and any needed ancillary transport patient
- Cath lab RN may need to remain in CVOR, if IAPB has been inserted, until perfusion arrives
- Family directed to OR or CVU waiting area

CVU:

- Notifies Respiratory of add on case and arranges staffing and bed
  Once patient arrives post op, PCP notified if not completed in cath lab
-
-

OR Day Shift

- OR notifies team (anesthesia, perfusion and OR room staff)
- OR made ready for patient, preferably Room 1

OR After Hours

- Determine from surgeon if perfusion is also needed.
- Nursing supervisor may call for clerk or PCA to be pulled to assist with phone calls, etc. in either CCL or OR
- First call team gets OR ready for patient
- Operator notifies on call team hearts including perfusion if surgeon directed **(call directly or group page, and process to verify all received call)**

- OR calls CCL when ready for patient and patient is transported to OR (CCL staff and respiratory to assist with transport)
- In the event that the OR is occupied or a delay, the patient may be taken to CVU to await the OR

Follow Patient Flow
Peri-Operative

Cardiac Catherization Laboratory
Guidelines for Use of Vascular Closure Devices

PURPOSE:

To obtain hemostasis of arterial puncture sites following cardiac catherization/PCI procedures.

SCOPE OF CARE:

Timely and safe removal of arterial sheath with minimal patient discomfort.

GENERAL INFORMATION:

- Licensed physicians who have been trained on the use of the device deploy vascular closure devices.
- When a venous sheath has been placed in the same leg, the venous sheath should be removed and hemostasis achieved after the use of a vascular closure device.
- Vascular closure devices may include collagen seal (Angio-Seal), collagen plug (Vaso-Seal), thrombin injection (Duett), or suture devices (Perclose).
- Vascular closure devices are deployed according to the manufacturer's recommendations.
- The following guidelines are relevant to all devices. Each individual device may have specific indications and precautions.

INDICATIONS:

The use of vascular closure devices should be considered on the following patients:

- Same-day diagnostic cardiac catherizations
- Aortic insufficiency
- Hypertension
- Obesity
- Patient who have coagulopathy or are receiving anticoagulant or antiplatelet agents.
- Patients who have undergone prior arterial punctures.
- Combative/uncooperative patients

COMPLICATIONS:

- Bleeding or hematoma
- AV fistula or pseydoaneurysm
- Thrombosis
- Embolism
- Device non-deployment
- Infection

POST CARE:

- A clear sterile dressing will be applied over the insertion site.
- Upon arrival to the receiving unit:
    a. Assessment of arterial puncture site.
    b. Presence and quality of distal pulses.
    c. Vital signs.
    d. Continued assessment q 15 minutes x 4, then q 30 minutes x4, then q1 hr x4.

- Routine use of sandbags, pressure dressings or compression devices is not necessary, unless bleeding occurs.

  If oozing or bleeding occurs, apply firm but non-occlusive manual pressure (as if holding and I.V. site for 2-3 minutes.

  If bleeding persists or a hematoma develops, apply heavy (occlusive) manual pressure above the puncture site for 10-15 minutes or until hemostasis is achieved.

  Notify the physician.

- Keep the puncture site clean and dry. Change soiled dressing, as needed using sterile technique and maintaining universal precautions.

- Ambulate the patient per the physician's order.

- Assess patient prior to ambulation:

    a. Vital signs should be within historical limits for the patient.
    b. Puncture site should have no bleeding or expanding hematoma.
    c. Distal pulses should be comparable to baseline.
    d. Pain, patient should be free of chest and leg pain.

  Assist patient to side of bed to dangle legs and assess for orthostatic decrease in blood pressure. If not significant drop in blood pressure, assist the patient to a standing position. Assess the groin site. If no bleeding, ambulate a short distance (i.e., to the bathroom).

- Document assessments and reassessments and interventions taken in the medical record.

- Notify the physician, as necessary, of changes from the initial assessment.

- Patient teaching:
    a. Support the puncture site when coughing, straining or sneezing.
    b. Keep affected extremity straight and relaxed for the prescribed amount of time as per the physician's order.
    c. Discharge instructions:
        - Patient may shower after 24 hours.
        - No tub baths for 1 week.
        - Remove dressing the next day; gently clean the site with mild soap and water. Gently dry area. Cover site with a bandage, change dressing daily until skin heals, approximately 3-4 days.

DEFINITION OF TERMS:

- Angio-Seal is composed of a collagen sponge and a specially designed absorbable polymer anchor that are connected by an absorbable suture. The device seals and sandwiches the arteriotomy between its primary members, the anchor and collagen sponge.

- Vaso-Seal is a collagen plug that utilizes an intravascular positioning device but no elements are left intra-arterially once completed. The positioning device is expected to position the collagen plug immediately outside the arterial wall. Collagen is inserted while occlusive pressure is applied to the vessel. Once injected, pressure is released slowly to allow the blood and collagen to co-mingle and create a hemostatic plug.

- Perclose is a suture based device employing differing numbers of sutures with two nitinol needles attached to each suture creating a "purse-string" method of pulling the sides of the arteriotomy together. A slipknot is tied manually or automatically, allowing the physician to pull the knot down to the artery and cinch the edges of the arteriotomy together.

- Duett utilizes the indwelling sheath. A special balloon catheter is inserted into the preexisting sheath and a small balloon is inflated and pulled back against the inside of the arterial wall. The sheath is then retracted until just outside the arterial lumen and a solution containing thrombin and collagen is mixed and injected through the side-port of the sheath at various stages. Manual pressure is maintained over the site for 5 minutes post injection.

Treatment of Contrast Reactions

Purpose: Guidelines for health care providers administering or caring for patients receiving contrast media. Treatment will be rendered within the scope of practice for each health care provider/

Definition: A contrast reaction is defined as a patient's adverse response following the administration of a contrast agent.

Pre Procedure:

- Assess the patient for previous history of reactions to contrast agents
- Notify the performing physician of any:
  - ✓ History of contrast allergy
  - ✓ History of asthma, renal disease or diabetes
  - ✓ Allergies to shellfish, peanuts and/or eggs
  - ✓ Elevations in BUN and/or creatinine

Policy:

- The R.N. will monitor and assess the patient for signs or symptoms of contrast induced reactions
- Notify the physician/APRN/PA if the patient develops signs or symptoms of possible contrast induced reactions
- Monitor and assess vital signs including heart rate, BP, respirations, O2 saturations and ECG monitor
- Document assessments, symptoms, interventions, response to interventions and outcomes in the patient chart.
- Report any new reactions to the pharmacy department and on the patient chart

Protocol: The following are guidelines for the treatment of contrast induced allergic reactions. The physician/APRN/PA will direct and order all treatments.

- **Angina**
  - ✓ Nitroglycerine 1/150 gr sl, may repeat every 3 minutes up to 3 doses
  - ✓ Oxygen therapy

- **Siezure**
  - ✓ Medication therapy as per the physician order
  - ✓ Oxygen therapy
- **Mild vasomotor symptoms**: nausea, vomiting or warmth
  - ✓ Reassure patient, observe for progression of symptoms
  - ✓ Report to the physician

- **Mild cutaneous reaction**: hives or local erythema
  - ✓ No treatment is necessary in most cases, however observe for any progression to more serious reaction
  - ✓ If symptoms are bothersome to the patient, Diphenhydramine (Benadryl) may be administered as per the physician order.

- **Severe cutaneous reaction**: erythema, urticaria
  - ✓ Stop the injection of the contrast
  - ✓ Diphenhydramine (Benadryl) as per the physician order intraveneously
  - ✓ Famotidine (Pepcid) 20 mg diluted in normal saline 10 cc
  - ✓ If severe edema and/or hypotension:
    - Epinephrine IV 0.1-0.3 mg of 1:10,000 solution slowly over 2 –5 minutes
    - May repeat every 15 min not to exceed 1mg total dose

- **Bronchospasm: w**heezing and shortness of breath
  - ✓ Mild
    - Oxygen
    - Monitor SpO2, vital signs, and cardiac monitor
    - Beta-agonist metered dose inhaler (Albuterol) 2 – 3 slow deep breaths

✓ Moderate to Severe
  - Oxygen
  - Monitor SpO2, vital signs and cardiac monitor
    - ➢ Drugs (use only if unsatisfactory response to Inhaler)
    - ➢ Low dose Epinephrine 1ml of 1:10,000 solution (0.1 mg/ml). Repeat every 15 minutes up to 1 mg.
    - ➢ If patient does not respond to Beta-angonist inhaler and Epinephrine proceed to Aminophylline 250 mg IV in 100 cc d5w over 10 – 20 min
    - ➢ Call Code 3 and initiate ACLS protocol for severe Bronchospasm requiring intubation.

- Facial/Laryngeal edema – stridor, hoarseness
  - ✓ Evaluate airway
  - ✓ Oxygen therapy
  - ✓ Monitor SpO2, vital signs, and cardiac monitor
  - ✓ Low dose Epinephrine IV 1:10,000 solution (0.1 mg/ml), give 1 ml over 2 – 5 minutes which equals 20 – 50 mcg/min. every 15 minutes. Not to eceed 1 mg total dose.
  - ✓ Call Code 3 and initiate ACLS protocol for severe laryngeal edema requiring intubation

- Severe hypotension, tachycardia
  - ✓ Trendelenburg position
  - ✓ Oxygen therapy
  - ✓ 0.9 NS IV rapid fluid bolus
  - ✓ Monitor SpO2, vital signs and cardiac monitor
  - ✓ Low dose Epinephrine: IV 1:10,000 solution (0.1 mg/ml), give 1 ml over 2 – 5 minutes which equals 20 – 50 mcg/min. titrate to effect. Not to exceed 1 mg total dose.
  - ✓ If patient does not respond, call Code 3 and initiate ACLS protocol
  - ✓ Dopamine 2-20 ug/kg/min IV;alternatively can use Epinephrine drip
  - ✓ Decadron 20 mg IV, may repeat 4 mg IV in 6 hours

- Vagal reaction – hypotension with bradycardia
  - ✓ Trendelenburg position
  - ✓ Oxygen therapy
  - ✓ 0.9 NS IV rapid fluid bolus
  - ✓ Monitor SpO2, vital signs and cardiac monitor
  - ✓ Atropine 0.5 mg to 1 mg IV. May repeat every 3 – 5 minutes to a total of 0.03 to 0.04 mg/kg. Total cumulative dose should not exceed 3 mg.

revised 08/07

St. Mary's Hospital
Waterbury, Connecticut

Management of Peripheral Vascular Complications Post Cardiac Catheterization and PCI

Purpose: To provide guidelines for the care and management of vascular access site complication after cardiac catheterization and percutaneous coronary interventions.

Scope of care: Patients undergoing diagnostic and interventional cardiac catheterization procedures requiring the insertion of arterial and/or venous sheaths.

Risk Factors:

- Females
- Elderly over 65 years of age
- Peripheral Vascular Disease
- Obesity
- Low Platelet count
- Multiple Procedures
- Use of Anticoagulants/IIb/IIIa inhibitors
- Sheath placement in the arterial and venous system

Procedure: Refer to the "Femoral Sheath Removal" policy for post sheath removal vital signs and vascular access site assessment.
When a peripheral vascular complication is suspected the following steps should be taken:

- Access the vascular site
- Access vital signs and vascular status of the affected extremity
- Mark the distal pulses
- Maintain Standard Precautions when removing soiled dressings and applying manual pressure.
- Apply manual pressure by locating the femoral pulse proximally to the access site. Place finger parallel to the artery ¼ to ½ inch above the access site. Enough pressure must be applied to occlude the distal pulse, and stop bleeding.
- Manual or mechanical compression may be used
- Reassure the patient
- Assess the pain level 0/10
- Administer pain medication for pain per the physician order
- After 10 minutes access the progress of hemostasis
  - ✓ If obtained, release pressure slowly and apply clear dressing to the site. Notify the Physician/APRN/PA.
- If unresolved, continue with pressure until hemostasis is obtained. Notify the Physician/APRN/PA.
- Mark the borders of the ecchymotic area
- If there is a hematoma mark the firm edges of the site.
- Continue to monitor vital signs and assess the condition of the access site, quality and strength of peripheral pulses, color, temperature, sensation and movement of the extremity.

Documentation:

- Vital Signs per protocol
- Size of ecchymotic or raised area of hematoma
- Quality of peripheral pulse
- Color of extremity
- Other signs or symptoms
- Interventions taken

- Physician/APRN/PA notification

Definitions:

- **Ecchymosis** is caused by the oozing of blood at the site of sheath insertion, which may occur during or following cardiac catheterization/PCI. Signs and symptoms may include:
  - ✓ Pain or focal discomfort
  - ✓ Discoloration/bruising
- **Hematoma** is a focal extravasation of blood, which is usually clotted or partially clotted which is situated within an organ or a soft tissue space, such as within a muscle. Signs and symptoms may include:
  - ✓ 10 cm femoral access
  - ✓ 2 cm radial access
  - ✓ 5 cm brachial access
  - ✓ 3.0 gmdl decrease in hemoglobin
  - ✓ pain or focal discomfort
  - ✓ discoloration/bruising
- **Retroperitoneal bleeding** is usually associated with arterial puncture above the inguinal ligament. Bleeding is internal. Signs or symptoms may include:
  - ✓ Unexplained hypotension
  - ✓ Tachycardia
  - ✓ Flank, abdominal or back pain
  - ✓ Unexplained drop in Hematocrit

  Confirm by CT scan or Ultrasound if CT is unavailable
- Femoral Pseudoaneurysm is a blood filled cavity resulting from a communication between the femoral artery and the overlying fibromuscular tissue. Signs and symptoms may include:
  - ✓ Groin tenderness
  - ✓ Palpable pulsatile mass
  - ✓ Bruit in the groin
  - ✓ Expanding hematoma

  Confirm diagnosis by Color Flow Doppler Ultrasound
- Access site occlusion is defined as total occlusion of the artery usually by thrombus (but may have other causes). May require surgical repair. Signs and symptoms may include:
  - ✓ Absence of palpable pulse
  - ✓ Absence of doppler pulse
- Transferring RN will give verbal and site check in report to receiving RN regarding hematoma management and orders.
- Consider repeating hemaglobin with hematomas over 6cm.

Effective 04/02
Revised 01/05,04/05,08/07

Waterbury, Connecticut

Femoral Sheath Removal
Manual Compression

Statement of Purpose: To obtain Hemostasis of an arterial or venous puncture site following Cardiac Catheterization or Percutaneous Angioplasty.

Equipment:

- Sterile 4 x 4 sponges
- Sterile gloves
- Protective eyewear
- Transparent occlusive dressing or Band-Aid
- Dressing per physician preference
- Doppler and transmission gel
- Crash Cart
- Cardiac Monitor

Procedure:

- Performing Cardiologist identifies the method of hemostasis management.
- For Angioplasty patients the Cardiologist orders Protocol A or Protocol B
  - ✓ **Protocol A:** is early sheath removal.
    - ♦ Sheath will be removed when the ACT is equal to or below 180
    - ♦ Sheath is removed in the Cath Lab
  - ✓ **Protocol B:** Late sheath removal
    - ♦ Sheath will be removed three to four hours after anticoagulant or antiplatelet therapy is discontinued.
    - ♦ Sheath removal is done at the bedside in the nursing unit.
- Assess the following parameters prior to sheath removal.
  - ✓ Appropriate laboratory values
    - ♦ ACT less than or equal to 180 seconds or
    - ♦ PTT less than 50 seconds or
    - ♦ PT less than 14 seconds or
    - ♦ INR less than 1.5
  - ✓ Cardiac Monitor
  - ✓ Vital signs, if systolic BP is greater than 180mmhg, notify the physician
  - ✓ R.N. assesses the extremity distal to the sheath for quality and strength of pulses, color, temperature, sensation, and movement.
  - ✓ Mark pulses if not already done.
  - ✓ Explain procedure to the patient; assess the patient's understanding.
  - ✓ Maintain standard precautions.
  - ✓ Lower the head of the bed to supine or less than 15 degrees.
  - ✓ Turn off any intravenous or intra arterial fluids to the sheath.

- ✓ Remove the dressing. Observe the site for raised ecchymotic area or hematoma. If present, outline the firm border with a skin marker.

Removal of the arterial or venous sheath:

- **Arterial sheath** (Arterial sheath is the most lateral)
  - ✓ The arterial sheath should be the first to be removed in the event that both sheaths are in place.
  - ✓ Palpate femoral pulse proximal to the sheath insertion site. Place fingers parallel to the artery along the pulse ¼ to ½ inch above the access site.
  - ✓ Gently remove the arterial sheath with smooth, steady motion during patient exhalation. If resistance is encountered, stop and call the physician.
  - ✓ Allow the blood to flow for 1-2 heartbeats, and then apply pressure.
  - ✓ Apply enough pressure for three minutes for complete occlusion, and for 10 minutes of partial occlusion of the distal blood flow.
  - ✓ Gradually release pressure in small increments.
  - ✓ Patients undergoing angiography who have not received anticoagulants or antiplatelet agents will typically achieve hemostasis within 15 – 20 minutes from the time the sheath is removed.
  - ✓ Patients undergoing PCI and are receiving anticoagulant or antiplatelet agents will take longer to achieve hemostasis, even though the ACT is within the acceptable range.
  - ✓ Duration of manual compression is also dependant on the sheath size, ACT, BP, and body habitus.

- **Venous sheath** (most medial)
  - ✓ The Venous sheath should be the last to be removed if both sheaths are present.
  - ✓ Place fingers over the sheath site, remove the sheath in smooth gentle motion.
  - ✓ Apply firm pressure over the insertion site for 5-10 minutes or until hemostasis is achieved.
  - ✓ Avoid prolonged pressure on the femoral vein.

While maintaining hemostasis:

- Observe color of the extremity and check pulse. Pulse may be diminished, but should not be completely obliterated during manual compression.
- Palpate area surrounding the site for raised ecchymotic area or hematoma formation. Observe for overt signs of bleeding. The site should be soft and pliable.
- Monitor vital signs, (BP, HR, and rhythm). Observe for vasovagal response (hypotension, bradycardia, nausea, dizziness, and diaphoresis).

Once hemostasis is achieved, apply sterile dressing to the site.
Apply sandbag to the site per the physician order.
Notify the APRN/PA, when indicated of changes in the initial assessment.

The R.N. reassesses and documents q15 min x4, q30 min x4, and q 1 hr till stable.

- Vital signs and cardiac rhythm
- Site appearance including raised ecchymotic area, or hematoma.
- Extremity appearance (color, temperature, sensation, and movement).
- Pulse presence and quality in distal extremity.
- Patient tolerance of the procedure.
- Pre and post procedure patient education and instruction.
- Notification of physician of changes in the clinical assessment.

The cardiac catheterization R.N. and the receiving R.N., upon the patient arrival to the nursing unit will perform an assessment of the access site.

Patient teaching:

- Preprocedure:
  - ✓ Explain the procedure to the patient
  - ✓ Instruct the patient/family to report dizziness, diaphoresis, lightheadedness, or nausea during the manual compression.
- Post procedure:
  - ✓ Instruct the patient/family of the need for frequent assessment and vital signs.
  - ✓ Bed rest per the physician order. Head of bed may be elevated 30 degrees.
  - ✓ Instruct the patient to keep the affected extremity immobile. No flexion at the access site.
  - ✓ Instruct the patient to notify nursing personnel if there is bleeding at the access site or there is any unusual discomfort.

Cardiac Catherization Laboratory
Vasovagal Reactions

PURPOSE:

To ensure quick and appropriate care of the patient demonstrating the signs and symptoms of a vasovagal reactions.

SCOPE OF CARE:

The purpose of this policy is to provide care, treatment, and support for the patients experiencing the symptoms of a vasovagal reaction during cardiac catheterization or PCI procedures.

DEFINITION:

Vasovagal reactions more commonly are precipitated by painful stimuli occurring during arterial access or during arterial sheath removal and application of pressure to the groin area.

PROCEDURE:

- Monitor vital signs.
- Assess patient for decrease in heart rate, drop in blood pressure and symptoms of dizziness, pallor, nausea, or diaphoresis.
- If the vasovagal reaction occurs while stabilizing the arterial access site, decrease the pressure being applied while maintaining hemostasis.
- Reassure patient and provide comfort measures.
- Place patient if possible in a Trendelenburg position or elevate the patient's legs to approximately 30 degrees.
- Notify the Cardiologist.
- Infuse normal saline IV rapidly until vital signs improve and symptoms decrease per M.D. order.
- Administer Atropine 0.5 to 1 mg IV push per M.D. order. The dose may be repeated if necessary up to a total dose of 3 mg per M.D. order.
- Document in the medical record the assessment, interventions and evaluation of treatment rendered.

Radial Artery Catheterization

Purpose: To provide guidelines for patients undergoing radial artery catheterization for diagnostic and interventional evaluation.

Scope of Care: The radial approach improves patient comfort, offers the physician easier accessibility facilitates hemostasis with minimal ancillary structure involvement.

Skill Level: M.D. with the assistance of R.N., ICVT and/or RT.

Procedure:

- Perform Allen Test prior to the procedure to assess Ulnar blood flow.
  - ✓ Radial and Ulnar arteries are occluded spontaneously while the patient is asked to make a fist.
  - ✓ When the patient is asked to open hand, it should appear blanched.
  - ✓ Release of the Ulnar artery should result in return of hand color within 8-10 seconds.
  - ✓ Pulse oximetry can be used to access Ulnar flow.
- Position patients arm on an arm board by abducting the arm at a 70-degree angle. A roll of towels should be used to support the hyperextended wrist.
- Sedation as indicated per physician order.
- The physician administers local anesthetic to the appropriate site.
- To reduce arterial spasm and improve patient comfort, an intraarterial injections of vasodilators (Nitroglycerine, Verapamil) and/or Heparin may be administered by the physician.
- See policy "Cardiac Catheterization: Right and /or Left Heart Catheterization with Coronary Angiography".

Care of Patient Post Procedure:

- The physician removes the sheath.
- Hemostasis is obtained by manual compression followed by a pressure dressing or the application of a Hemoband.
- Assess the extremity for quality and strength of pulses, color, temperature, sensation, and motion.
- Check for bleeding
- Reassess the extremity per the physician order.
- Pressure dressing or Hemoband should be tight enough to ensure hemostasis but not to occlude blood flow to the hand.
- Pressure dressing or Hemoband may be loosened after 1-2 hours and may be removed after 6 hours or per the physician order.

Effective 04/05

Coronary Stent Placement

Purpose: To provide guidelines for stent placement in the Cardiac Catheterization Laboratory.

Procedure description: A coronary stent is a flexible metallic tubular structure that is implanted into a coronary artery for the purpose of maintaining arterial integrity in the presence of coronary artery disease, dissection, or abrupt closure of a vessel during and interventional procedure. Stents may or may not have inert or active coatings or biodegradable coatings and/or drug delivery systems.

Skill Level: Cardiologist with assistance from R.N., ICVT, and/or RT.

Scope of Care: This procedure will encompass only the cardiac catheterization laboratory staff. The purpose of this procedure is to provide care, treatment and support for patients undergoing stent placement during percutaneous coronary interventions.

Procedure:

- See procedure for Angioplasty.
- Stents are placed after plaque modification is performed. Coronary plaque modification techniques include PTCA, Cutting Balloon, or rotational/directional atherectomy.
- The coronary stent delivery system is guided to the site of the lesion.
- When using a balloon expandable stent, position it within the lesion. By inflating the balloon the stent expands compressing the plaque against the arterial wall.
- Examination of the deployed stent is done via fluoroscopy and/or the use of intravascular ultrasound (IVUS).
- Once the desired stent expansion has been achieved, the balloon catheter is deflated and the balloon catheter and guide wires are removed.

Complications:

- Delivery failure
- Expansion failure
- Loss of access to the stent
- Malpositioned or embolized stent
- Stent perforation of the artery
- Stent-related dissection, thrombosis and ischemia
- Ruptured or tethered balloon

Documentation:

- Document stent information
  - ✓ Size (diameter and length)
  - ✓ Manufacturer
  - ✓ Model number
  - ✓ Lot number

Revised 07/07

St. Mary's Hospital
Waterbury, Connecticut

IVUS Imaging System

Purpose: To provide intracoronary ultrasound for the assessment of coronary lesions. Provides an adjunct to percutaneous coronary interventions.

Procedure Description: Intravascular ultrasound (IVUS) is an approved technique for catheter tipped, real time, echo imaging of the cardiovascular system. IVUS generates cross-sectional tomographic images of the peripheral and coronary arteries, which reflect the vessel histology.

Skill Level: Cardiologist (trained in IVUS) assisted by R.N., ICVT, and/or RT

Indications:

- Suspected Left Main disease
- Suspected coronary ostial lesions
- Coronary artery stenosis of uncertain hemodynamic significance
- Evaluation of coronary artery after stent placement
- Diagnosis of vascular disease (chronic rejection, accelerated atherosclerosis) after heart transplant
- Evaluation and diagnosis of coronary artery aneurysms
- Suspected aortic an/or peripheral vessel dissection

Contraindications: Luminal dimensions less than the imaging catheter (presently less than 1.1mm). In such instances, predilatation with a balloon catheter will often permit imaging.

Procedure:

- Patients are anticoagulated according to the physician orders.
- The ultrasound catheter is inserted by the physician under fluoroscopy. The catheter's positions are recorded on the video track of the ultrasonograph.
- If coronary spasm occurs, intracoronary Nitroglycerine is given per the physician order.
- Ultrasound images are recorded continuously on CD
- Images are stored in the Ivus
- Hard copy of images are made from the IVUS and attached to the patient chart.
- Calculation of vessel diameter and sizes are recorded in the physician report.

St. Mary's Hospital
Waterbury, Connecticut
Pressure Flow Wire

Purpose: To measure physiological parameters in the coronary and peripheral blood vessels.

Procedure description: A Pressure Flow Wire is a specialized guide wire with a high fidelity sensor located just proximal to the 3 cm radiopaque shapeable tip. At the physician direction the pressure wire is advanced to the target vessel and with the appropriate dosage of intravenous therapy measurements are taken to determine the necessity of intervention. The measurement generated is labeled Fractional Flow Reserve (FFR)

Skill Level: Cardiologist with the assistance from R.N., ICVT, and/or RT.

Scope of Care: This procedure will encompass only the cardiac catheterization laboratory staff. The purpose of this procedure is to provide care, treatment and support for patients undergoing diagnostic cardiac catheterization with a question of the need for PCI.

Procedure:

- The flow wire is set up between the Witt system and the Radi system as described on separate sheet. (See attached).
- Adenosine is administered as per the physician order (by drip or intracoronary injection)
- If Adenosine is administered by drip method, it should be run in a central line or a large peripheral IV line.
- The flow wire is positioned distal to the lesion in question
- Functional significance of a lesion is dependent upon obtaining maximum hyperemic stimulus with Adenosine dosage.
- Multiple measurements will be taken to make the optimal measurement and qualify lesion significance.
- Adenosine is discontinued when measurements are finished.
- The pressure wire may be used as a guide wire.
- Measurements less than 0.75 FFR are considered indicative of a treatable lesion.

Complications:

- Access site bleeding
- Distal embolization
- Intimal dissection
- Vessel perforation or tear
- MI
- Cardiac tamponade

Documentation:

- Concentration of Adenosine Injection IC
- Concentration of Adenosine drip with rate
- IV site of Adenosine drip
- FFR measurements each time across the lesion in question
- Termination of Adenosine drip.

Procedure for the use of Femostop

Purpose: To obtain/assure hemostasis following Cardiac Catheterization / PCI

Procedure description: The Femostop provides an alternative to manual pressure and other external methods of achieving femoral artery hemostasis, while allowing the practitioner clear visibility of the access site.

Skill level: Femostop should be applied and monitored by personnel trained in the use of the device.

Procedure:

The Femostop should be applied prior to sheath removal

- Obtain baseline blood pressure
- Check and mark baseline pedal pulses
  (Use doppler if necessary)
- Patient should void prior to application if needed.
- Patient should be lying flat
- Patient may lift bending the unaffected leg, keeping the affected leg straight
- Position belt in line with the puncture site, equal on both sides (ensure that the belt lies flat under the patient)
- Remove the sterile protective lid from the dome
- While maintaining sterility, rest the dome on the puncture site and withdraw the sheath approx. 2cm (enough to clear the dome)
- Position the dome slightly superior and medial to the insertion site. Tighten the belt in a snug and comfortable position. Do not tighten using the belt.
- If a venous sheath is in place, remove the venous sheath first @20-30 mmhg x 5 minutes (decreases the incidence of A-V fistula) then proceed to remove the arterial sheath.

OPEN STOPCOCK WITH INFLATION AND DEFLATION

- Attach gauge to femostop and inflate dome between 60-80 mm Hg, remove sheath. Continue to inflate until you are 10-20 mm Hg above your systolic pressure or greater if necessary to maintain hemostasis.
- **NEVER ATTACH GAUGE TO SHEATH SIDE PORT.**
- **PEDAL PULSE WILL SHOULD BE OCCLUDED**

- Maintain this pressure for 3 minutes then ***SLOWLY*** lower pressure to mean arterial pressure, until baseline pedal pulse is restored. Maintain X 15 min, then reduce pressure by 10 – 20 mmhg every few minutes.
- Leave in place at 0 mmhg X 10 min to assure hemostasis
- Do not leave on skin more than 3 hrs (may cause skin breakdown). If more than 3 hours is necessary, remove briefly and cleanse skin to let skin breath. Than replace.
- Remove dome by gently rotating dome of puncture site.

CONTINUE MAINTENANCE PRESSURE ACCORDING TO MD ORDERS

Contraindications:

- PVD
- limb ischemia
- skin necrosis or infection
- arterial injuries above or near the inguinal ligament
- leg edema, femoral nerve compression or arterial obst.
- inability to adequately compress due to; marked obesity large hematomas, or excessive pain
- femoral artery or vein graft due to the risk of damage
- ultrasound guided compression repair of infected femoral pseudoaneurysms

Renal Prophylaxis for patient's requiring Radiocontrast Procedures

Purpose: To minimize the incidence of Renal Nephropathy in "at risk" patients, with the appropriate pretreatment.

Scope of Practice: These procedures will encompass only the patients who have been identified by the physician who are at risk for contrast induced nephropathy. Consideration should be given to patients with:

- Serum Creatinine = or >1.5
- Creatinine Clearance < 50 ml/min

Procedure: Per the Physician order:

- If the patient is not volume overloaded administer:
  - ✓ Mucomyst (Acetylcystine) 600 mg PO every 12 hours the day before and the day of the procedure (600 mg PO q12 hrs X 2 days for a total of 4 doses).
  - ✓ If the patient is absolutely NPO consult a Neprologist.
    - ♦ Intravenous administration of Mucomyst (Acetadote):
      - ➢ 600 to 1200 mg IV in 100 cc of 0.9 Normal Saline over 30 minutes prior to the procedure followed by an oral regimen.
- One hour before administration of radiocontrast begin NaHCO3 infusion:
  - ✓ NaHCO3 infusion: 1 liter D5W with 3 Ampules of NaHCO3 per liter at 3ml/kg/hr for one hour (maximum of 300mls/hr). Then decrease the rate to 1ml/kg/hr X 6 hours (maximum 100 mls/hour).

Important Notes:

- Follow the patient volume status
- For patients with serum CO2>32 mmol/l or an arterial pH>7.45, normal saline should be substituted for the D5W/NaHCO3 based solution and administered at the same rate/amount as noted above.

St Mary's Hospital
Waterbury, Connecticut

Rotational Atherectomy (Rotablader)

Purpose: To provide ancillary methodologies to PCI.

Procedure description: The Rotablader is a tiny football-shaped tip coated with microscopic diamond crystals that rotates on the end of a catheter. It rotates at very high speed and is able to pulverize the plaque into microscopic particles that are removed by the body's retiiculoendothelial system.

Skill Level: Cardiologist with the assistance of R.N., ICVT, and/or RT.

Scope of Practice: These procedures will encompass only the Cardiac Catheterization laboratory staff. The purpose of this procedure is to provide care, treatment and support for patients undergoing complex PCI.

Procedure: At the direction of the Cardiologist

- The rotablader mix is prepared (attached).
- The infusion port on the advancer is connected to the pressurized mix
- Rotablader is attached to the CO2
- Catheter and pedal are given to the physician.
- Catheter is connected to the console.
- The catheter and the console are tested outside the patient
  - ✓ The saline mix should flow through the advancer and sheath and exit from the sheath tip running bubble free.
  - ✓ For speed of burr
- The burr is passed across the lesion by the physician
- Time and speed is called out and recorded in the patient log.
- The physician removes the burr.

Complications:

- Access site bleeding
- Distal embolization
- Intimal dissection
- Acute vessel closure
- Vessel perforation or tear
- Emergency Bypass surgery
- MI
- Cardiac tamponade
- Death

Documentation:

- Size (diameter and Length
- Duration of runs
- Speed of runs

Thrombus Aspiration System (Angiojet)

Purpose: To provide adjunct therapies for facilitation of PCI.

Procedure description: The Angiojet thrombectomy system that is designed to remove thrombus with the Venturi-Bernoulli effect, with multiple high-velocity, high pressure saline jets which are introduced through the orifices in the distal tip of the catheter to create a localized low pressure zone, resulting in a vaccum effect with the entrainment and dissociation of bulky thrombus.

Skill level: Cardiologist with the assistance from R.N., ICVT, and/or RT.

Scope of Care: This procedure will encompass only the cardiac catheterization laboratory staff. The purpose of this procedure is to provide care, treatment and support for patients in the setting of AMI.

Procedure:

- The pump is set up and primed with Heparinized Saline.
- The Angiojet catheter is advanced through the suspected thrombus and postitioned distally by the physician.
- The pump of the angiojet is activated, delivering a saline solution under high pressure out through the pump jets, into the artery, breaking up the clot
- The clot pieces are removed out through the catheter and returned to the pump
- Multiple runs may be made with the catheter at the descretion of the physician
- The Angiojet catheter is then removed and the physician proceeds to PCI if necessary.

Complications:

- Temporary cardiac rhythm disturbances
  - ✓ Bradycardia
  - ✓ Heart block
- ST Twave changes

- Cerebral embolism
- Peripheral embolism

Documentation:

- Time of run
- CC's per run
- Adverse reactions as noted above

CARE PATHWAYS – CVU ONE STOP POST-OP INDEX

Saint Mary's Hospital

- Scope of Services – Cardiovascular Unit (CVU)
- General Admission Policy
- Ambulation Policy
- Electrolyte Replacement Protocol
- Intensive Insulin Therapy Protocol
- Ventilator Weaning Protocol

St. Mary's Hospital
Department of Nursing

Cardiovascular Unit (CVU)

Scope of Practice:

Critical Care/Progressive Care Services are provided on an 8 bed unit, located on the third floor of the O'Brien building.

The unit consists of 7 rooms, 1 of which is a semi-private room. Each room is equipped with oxygen outlets, suction outlets, compressed air outlets, a Code 3 button, grounding outlets and cardiac monitors. Central monitoring capabilities are located at the nurses' station. There is 1 isolation room with negative pressure capability.

The Cardiovascular Unit provides continuous monitoring, observation, and highly skilled care on a 24-hour basis to adults and geriatric patients. Primary examples of appropriate conditions for patients requiring admission to the Cardiovascular Unit include: pre and post cardiac interventional, pre-operative and post-operative open heart surgery (CABG/Valve).

Special Services provided include:

- Continuous arterial venous hemofiltration
- Hemodynamic monitoring
- Continuous cardiac monitoring
- Ventilator support
- Thrombolytic administration
- IIb/IIIa Inhibitor admisistration
- Cardioversion
- Temporary pacing - invasive/non-invasive
- Intra-aortic balloon pumping

Patient-centered care is the model for the delivery of nursing care. Patient care is coordinated by the RN as he/she integrates the care through utilization of the support services: continuing care, social service, dietary, pharmacy, physical therapy, and respiratory therapy.

Basic Requirements for Staff:

Requirements for all RN Staff include:

Current state licensure
Critical Care experience (1 yr minimum)
ACLS
Cardiovascular Course

The Cardiovascular Unit nurse receives education in cardiovascular disease and critical care nursing principles as related to the care of the post-cardiac interventional patients and care of the open heart surgical patient. Ongoing education is provided continuously throughout the year by the Clinical Educator and/or APRN's.

Staffing:

There is a Division Director for Cardiopulmonary/Critical Care Services who is responsible for the oversight of the CVU. A Clinical Manager and Lead RN are on duty five days a week during the day. The manager has 24 hour accountability for the unit. On weekends, evenings and nights, there is a charge nurse on duty with a nursing Supervisor available as a resource.

A Patient Care Assistant and Clerical Coordinator are staff support on each shift, seven days a week.

A Critical Care Educator supports the educational needs of the CVU staff. Staffing is adjusted according to patient acuity and the foal of a 2:1 patient/nurse ratio.

Assignments:

Assignment of patient care is done for each shift by the LEAD RN or charge nurse. Assignments are reflective of the degree of supervision needed by the individual staff member, the patient's needs, the technology used and the geography of the unit. The registered nurse responsible for making the assignments will be familiar with the respective policies and procedures and will review them as necessary to keep his/her information current.

Examples of patients who may fall into the 1:1 patient/nurse category are:

- Immediate post-op patient that has undergone CABG, valve repair or any procedure requiring CPB
- Any patient requiring IABP therapy for hemodynamic stability
- Any patient requiring re-exploration in the CVU or with an open cardiotomy incision

- Any patient deemed to be hemodynamically unstable to the point that it would be deemed unsafe to have an additional patient assignment (determined by the Clinical Manager/designee in collaboration with the nurse caring for the patient.

Examples of patients who may fall into the 2:1 patient/nurse category are:

- A hemodynamically stable post-op day one patient who has undergone CABG, valve repair, or any procedure requiring CPB
- A patient requiring mechanical ventilation
- A patient receiving IABP therapy who is not balloon dependent and is extubated
- A patient immediately post-op that has undergone a surgical procedure other than CABG, valve replacement or re-exploration (examples: thoracotomy, CEA, AFB, and AAA repair)

Examples of patients who may fall into the 3:1 patient/nurse category are:

- Patients considered hemodynamically stable for a minimum of 24 hours; these patients should not be on IV infusions requiring active titration nor should they be dependent on temporary pacemakers

Patients in this category will not require vital signs or neurological assessments more frequently than every 4 hours

Admission/Discharge to the Cardiovascular Unit

The Cardiovascular Unit (CVU) is primarily designed to care for patients who undergo invasive cardiac intervention or cardiothoracic surgery. The Nursing Director in collaboration with the Medical Directors will approve other admissions. If CVU bed space is inadequate and a patient is in need of this specialty area, the Clinical Manager of the CVU will prioritize patients for this admission.

Admission Criteria:

1. All post open heart patients
2. All post cardiac intervention patients requiring post procedure hemodynamic monitoring, IABP, intravenous drip titrations
3. Preoperative open heart surgery patients
4. Pre-procedure cardiac interventional patients

The postoperative cardiac surgery patients will be transferred and admitted directly to the CVU from the Operation room, bypassing the post anesthesia care unit. The post cardiac intervention patient will have stage I recovery completed in the cardiac catherization laboratory before transfer and admission into the CVU for further recovery and care.

The philosophy of care for the CVU is based on the one-stop model. The patient is cared for by one expert, dedicated staff from admission through discharge. In the event that there are no available beds in the CVU, the Clinical Nurse Manager in collaboration with the appropriate Medical Director for the CVU will determine who may be moved to another unit based on the following:

Discharge Criteria:

1. The post-operative open-heart surgery patient who requires further management of ongoing mechanical ventilation may be considered for transfer to the critical care unit for continued care.
2. The post cardiac intervention patient, who has stable vital signs, no EKG changes, no signs of bleeding and no complaints of chest pain may be considered for transfer to Telemetry.

May 2005
Revised: 3/2008

Saint Mary's
HOSPITAL

SUBJECT: Ambulation Policy for Post Open Heart
Last Revised Date: August 2008
Last Reviewed Date: August 18, 2008

Scope: Registered Nurses caring for post open-heart surgery patients

Purpose: To provide a guideline for ambulation for stable post open heart surgery patients

Policy: The Registered Nurse and Physical Therapist will evaluate all post open-heart patients within 24 hours of their surgery. This evaluation should determine the need for specific assistive devices. All patients should remain monitored with oxygen administered as necessary with proper pain management.

Day of Surgery

1. If the patient is stable and extubated they may dangle at the edge of the bed
2. Initiate Education to the patient and family on ambulation/exercise needs

POD#1

1. If the patient remains stable then they should ambulate to the chair at least twice
2. The patient should be assisted to ambulate BID as tolerated

POD#2 to 3

1. If the patient remains stable they should ambulate to the chair TID
2. The patient be assisted with ambulation TID as tolerated

POD#4 to discharge

1. If the patient remains stable the removal of monitoring and oxygen should be reviewed with ambulation continued QID

Electrolyte Replacement Protocol for Post Open Heart Surgery

III

Magnesium (normal = 1.6-2.7mg/dl)

Mg++ level (mg/dl)	IV replacement (Peripheral or central line, via infusion pump)
1.48-1.59	Magnesium Sulfate 1g/50ml D5W or NS over 30 min
1.2-1.47	Magnesium Sulfate 2g/100ml D5W or NS over 30 min
<=1.1 (CALL MD) AND	Magnesium Sulfate 5g/500ml D5W or NS over 4 hours

Recheck magnesium level 4-6 hours after infusion. Suggested maximum dose = 4-8g in 24 hours.

Oral supplement: Mag oxide 400mg 1-2 tabs 2-4 times per day

IV.

Phosphorus (normal = 2.7-4.5mg/dl)

Phosphate Level (mg/dl)	IV replacement (peripheral or central line, via infusion pump)
1.6-2	15 mmoles Na+ or K+ phosphate/250ml D5W or NS over 6hr
<1.6 (CALL MD) AND	30 mmoles Na+ or K+ phosphate/500ml D5W or Ns over 6hr
<1.6 (CALL MD) AND	Central Line Only (via infusion pump): 30 mmoles na+ or K+ phosphate/250 ml D5W or NS over 6h

Recheck level 6 hours after infusion. Maximum dose = 45 mmoles in 24 hours (to avoid hyperphosphatemia)

Oral supplement: Neutraphos 2 packets po BID

Original 5/2005

II.

Calcium (normal = 1.17-1.33 mmol/liter

Ca++ Level (mmol/liter)	**Single Dose IV Replacement (Peripheral or central line, via infusion pump)**
1.15-1.16	Calcium Gluconate 1g/50ml D5W or NS over 30-60 mins. 1 amp = 1 gram
1.1-1.14	Calcium Gluconate 2g/100ml D5W or NS over 30-60 mins 1 amp = 1 gram
<=1.09 (CALL MD) AND:	Calcium Gluconate 3g/150ml D5W or NS over 30-60 mins. 1 amp = 1 gram

Check ionized serum calcium levels 1-2 hours after each single infusion. Single doses may be repeated up to a maximum of 3g calcium gluconate within 24 hours.

If you wish to continue with the protocol and addition calcium supplementation is required, it must be administered by continuous infusion via a central line. Any continuous infusion of calcium, either on or off the protocol, requires administration via a central line. Recommended dose for a continuous infusion is:

1. 0.5-1mg elemental calcium/kg/hour (via infusion pump)
   (93 mg elemental calcium = 1g calcium gluconate)

   OR

2. 3-4g calcium gluconate/ 500ml D5W or NS (via infusion pump) over each eight hour period.

Check serum calcium levels every 4-6 hours during a continuous infusion.

Oral Supplement: Calcium Carbonate (TUMS) 500mg po TID

Saint Mary's
HOSPITAL

CVU

Intensive Insulin Therapy in Critically Ill Patients

Desired Range: Maintain blood glucose between 80-110mg/deciliter

Patient Population: Hyperglycemic patients with a persistent glucose ≥140mg/dl for greater than 24 hours.

Initiating Insulin Infusion: (To be activated by a physician's order)

1. Bolus the patient with 0.1 unit/Kg (obtain a physician's order for the bolus dose). The maximum bolus dose is 10 units IV. Therefore, a patient weighing more than 100 Kg will only receive a 10 unit bolus. Note: Insulin Aspart (Novolog) or Lispro (Humalog) regular insulin should be used for all boluses in this protocol. Start the drip at 1 unit per hour if the blood glucose level is between 140 and 200 mg/dl. Start the drip at 2 units per hour if the blood glucose is >200 mg/dl. Note: Regular Human Insulin (Humulin R) should be used to make up drip.

2. Blood glucose should be checked at 1-hour intervals for three hours following the start of the insulin infusion and following each change in infusion rate made thereafter. Then check every 2-4 hours as needed for at least the first 24 hours.

3. Once glycemic control is reached (80-110mg/dl), monitoring can be performed at 4-6 hour intervals. HOWEVER, if changes are made in insulin infusion rates, steroids are added or deleted or the steroid dose significantly changed, or changes are made in nutrition (significant increase of decrease in caloric intake), then blood glucose should be monitored as in #2 above.

4. The drip can be increased by increments of 0.5 – 2 units per hour for persistent hyperglycemia (see "Ongoing Insulin Infusion" table below). For patients requiring high infusion rates [see column 4 in the table below (11-16 units/hr)], the drip may be increased by 3 units/hour for blood glucose >200mg/dl.

Precautions:

1. Patients on insulin infusions need to have a 24-hour continuous source of nutrition. Patients who are not on tube feed or TPN with blood sugars less than 200 should receive adequate glucose intake equal to 5 grams of dextrose per hour for the duration of the insulin infusion (D5W at 100cc/hour).
2. Blood glucose must be carefully monitored when steroids are added/deleted/or a change in dose occurs. Blood glucose should also be carefully monitored when nutrition (caloric intake) is increased or decreased. See #2 above. Other drugs that may increase plasma glucose concentration include: beta-blockers, diazoxide (Hyperstat), diuretics, pentamidine, phenytoin, and sympathomimetics (epinephrine, norepinephrine, dopamine, dobutamine, phenylephrine).
3. Interruptions in nutritional supplementation require simultaneous interruption in the insulin drip. Any interruption in the drip may require re-bolusing prior to resuming the drip.
4. The use of "sliding scale" insulin in addition to the insulin drip is discouraged.
5. Patients should be monitored for symptoms of hypoglycemia such as sweating, agitation, confusion, and hypotension. Note, in many instances critically ill patients with hypoglycemia are asymptomatic.

ONGOING INSULIN INFUSIONS

Blood Glucose above desired range (80-110 mg/dl):

Glucose Level	Infusion Rate of 1-5 units/hr	Infusion Rate of 6-10 units/hr	Infusion Rate of 11-16 units/hr
111-139	Give 1 unit insulin IVP and Increase infusion by 0.5 unit/hr	Give 1 unit insulin IVP and Increase infusion by 1 unit/hr	Give 2 units insulin IVP and Increase infusion by 1 unit/hr
140-200	Give 1 unit Insulin IVP and Increase infusion by 1 unit/hr	Give 1 unit insulin IVP and Increase infusion by 1-2 units/hr	Give 2 units insulin IVP and Increase infusion by 3 units/hr
201-250	Give 2 units insulin IVP and Increase infusion by 1 unit/hr	Give 3 units insulin IVP and Increase infusion by 2 units/hr	Give 3 units insulin IVP and Increase infusion by 3 units/hr
251-300	Give 3 units insulin IVP and Increase infusion by 1 unit/hr	Give 5 units insulin IVP and Increase infusion by 2 units/hr	Give 5 units insulin IVP and Increase infusion by 3 units/hr
301-350	Give 8 units insulin IVP and Increase infusion by 1 unit/hr.	Give 8 units insulin IVP and Increase infusion by 2 units/hr	Give 8 units insulin IVP and Increase infusion 3 units/hr
351-400	Give 10 units insulin IVP and Increase infusion 1 unit/hr	Give 10 units insulin IVP and Increase infusion by 2 units/hr	Give 10 units insulin IVP and Increase infusion by 3 units/hr
>400 or Infusion rate of >16 units/hr	Call Physician for new orders		

Blood Glucose below desired range (80-110 mg/dl):

Glucose Level	Infusion Rate 1-3 units/hr	Infusion Rate 4-6 units/hr	Infusion Rate 7-9 units/hr	Infusion Rate 10-12 units/hr	Infusion Rate 13-16 units/hr	Infusion Rate >16 units/hr
<40	1. Call Physician. 2. D/C Infusion and give 25g intravenous dextrose. 3. Assure adequate glucose intake and check blood glucose level within the next hour.					
40-60	1. Call Physician. 2. D/C Infusion and assure adequate baseline glucose intake. 3. Check blood glucose level within the next hour.					
61-70	D/C Infusion and check blood glucose in 1 hour. If >80, re-start but decrease rate by 0.5 – unit/hour		Decrease infusion rate by 4-5 units/hour and check blood glucose in 1 hour.		Decrease infusion rate by 6-8 units/hour and check a blood glucose in 1 hour.	
71-79	Decrease infusion rate by 0.5 unit per hour and check blood glucose in 1 hour.		Decrease infusion rate by 2-3 units/hour and check blood glucose in 1 hour.		Decrease infusion rate by 4-5 units/hour and check blood glucose in 1 hour.	

Blood glucose in Desired range (80-110 mg/dl):

A. <u>For infusion rates of 1 to 9 units/hour:</u> No Changes Now. If glucose continues to decrease within the desired range over 3 consecutive hours, decrease rate by 0.5 to 1 unit/hour
B. <u>For infusion rates of 10 to >16 units/hour:</u> No Change Now. If glucose continues to decrease within the desired range over 3 consecutive hours, decrease the rate by 2 units/hour.

CVU

PROTOCOL FOR:	Weaning: Ventilator Weaning Post-Open Heart Surgery
PURPOSE:	To define the care/sequence of events required to wean post-open heart surgical patients from mechanical ventilator.
POLICIES:	1. Patients that have demonstrated the requirement of PEEP (positive/expiratory pressure) >5cm, should not be considered candidates for the protocol. 2. The patient must demonstrate hemodynamic stability as evidenced by a. Free of new onset dysrhythmias b. Able to maintain an adequate cardiac index (>2 L/min/m^2), mean blood pressure >60 mmHg and c. Urine output (>30cc/hr) 3. The patient must be on a pulse oximeter with reliable readings. 4. Once physiologic stability is established, the MD/LIP can write the order "Wean per CVU Protocol", acknowledging the RN's and therapist's ability to accomplish the protocol. Documentation of the order allows a range of 2-4 arterial blood gas (ABG's) to be drawn during weaning process. 5. Respiratory Therapy will validate all ventilator changes. 6. Patients that have been medically treated for COPD should be reviewed by the MD/LIP prior to enrollment in the weaning protocol.

SUPPORTIVE DATA:	Collaboration between the covering physician, RN, and respiratory therapist is necessary to successfully implement this protocol. Team discussion should include the following areas: 1. Patient's pre-operation pulmonary and cardiac function 2. Specific perioperative information: Anesthesia – drugs used, any complications, and airway considerations, intra-op minute ventilation (VE) and ABG result. 3. Hemodynamic stability When the decision is made to initiate the protocol, the RN and respiratory therapist will progress the patient as his/her status warrants. Upon successfully meeting the established criteria, the patient will be extubated to ventimask or nasal cannual.
DESIRED PATIENT OUTCOME:	Patient will achieve successful extubation from mechanical ventilation to ventimask or nasal cannual, therefore allowing spontaneous respirations, gas exchange, verbal communication and a means for oral nutrition to be resumed.
ASSOCIATED STANDARDS:	Protcol for : Ventilator: Care of Patient on a Ventilator.
ASSESSMENT:	1. RN, mid-level practitioner and respiratory therapist will assess the patient collaboratively. 2. Verify that a baseline ABG was drawn with 1st hour of arrival to ICU. 3. Awake – open eyes, moves spontaneously and follows commands. 4. Determine patient's need for narcotics for pain control. Assess dosages, frequency, and evaluate the effectiveness. 5. $ETCO_2$ <40mmHg. 6. FIO_2<0.5.

	7. PT/Ventilator rate (sum of the two) <30 breaths/minute >10 breaths/minute Hemodynamically stable: HR<120/min with no new dysrhythmia Bp>100 systolic CI>2L/min CT<100ml/hr
WEANING PROTOCOL:	1. Titrate FiO2 until an FiO2 of 40% is reached, and the patient is maintaining an O2 saturation of ≥ 92%. 2. Decrease IMV rate by 2 breaths/minute. If patient is stable 15-30 minutes after the IMV rate is changed, continue with IMV by 2 breaths every 15-30 minutes as long as the patient's $SpO_2 \geq 92\%$, $ETCO_2$ <40, and hemodynamics remain stable. STOP when IMV rate equals 4 breaths/minute. 3. If the patient is receiving PEEP of more than 5cm H_2O, decrease PEEP by 5 cm H_2O every 30 minutes until PEEP is equal to 5cm H_2O, as long as the patient's SpO_2 is ≥ 92%. 4. Obtain ABG analysis as needed and notify MD/LIP if the patient's SpO_2 falls below 92% or $ETCO_2$ rises above 40 mmHg or if patient shows any signs of agitation or distress. 5. Discontinue weaning if the patient can't maintain acceptable hemodynamic, neurologic, or respiratory parameters. Return to previous ventilator settings and notify MD/LIP.
PREPARING FOR EXTUBATION:	1. When the IMV rate equals 2 breaths/min, obtain an ABG analysis and correlate the results with the patient's SpO_2 and $ETCO_2$ values.

	2. Obtain lung function tests: - The patient's tidal volume should be greater than 5cc/kg. - Spontaneous rate between 8 and 30 breaths/minute. - Vital capacity greater than 15cc/kg. - Minute ventilation less than 10L/meter.
	3. If readiness to wean criteria, hemodynamics and lung mechanics are met, place patient on CPAP of 5. Pressure support of 5cm may be added if patient is dyspneic or not tolerating CPAP alone. 4. If patient tolerates breathing trial for 30 minutes with acceptable neurologic, hemodynamic and respiratory parameters, prepare to extubate.

Saint Mary's Hospital

Operating Room

Scope and Philosophy for Perioperative Nursing Practice

Scope of Practice

The Operating Room is located on the 2nd floor of the Kenny building. It is made up of 10 surgical suites, 1 of which is committed to open heart surgery and one dedicated cystoscopy suite. Service is provided for patients of all ages ranging from pediatrics to geriatrics who are undergoing operative or other invasive procedures. Indications for surgical or invasive procedures may be for diagnostic, curative, restorative, or palliative reasons. The cases scheduled are ranked as elective, urgent, emergent, or trauma, and categorized as same day admissions, same day surgery and in-house patients. Trauma cases originate in the emergency room. The surgical specialties available are:

- Bariatric
- Cardiac; Open Heart (CABG/Valve)
- Ear, Nose and Throat
- General
- Genitourology
- Gynecology
- Neuro Surgery
- Ophthalmology
- Oral Surgery
- Organ Procurement
- Orthopedic
- Plastic
- Podiatry
- Thoracic
- Vascular

Perioperative team members involved in surgical procedures include, surgeons; anesthesiologists; certified nurse anesthetists; perfusionists (open heart); residents; physician assistants; registered nurses; and operating room technicians. Other supportive staff includes, Secretaries, unlicensed assistive personnel (PCA's; CNA's), Clinical Engineering Technicians, and Radiology Technicians and. The operating room is staffed with in-house personnel 24/7, 365 days a year. An on-call team is also available off routine hours. The goal of the perioperative team is to assist patients, their families, and significant others to achieve a level of wellness equal to or greater than that which they had prior to the procedure.

Basic Requirements for Staff
Requirements for all RN Staff include:

- Current state licensure
- BCLS certification
- Prefer Perioperative nursing experience or Completion of an OR orientation program
- Successful completion of general orientation and annual competencies
- Independently circulate on surgical procedures; may also scrub on procedures.

Additional requirements for Cardiac OR RN include:

- Successful completion of CVOR orientation-Didactic and Clinical
- Independently scrub or circulate on CABG and Valve surgeries

Basic Requirements for all Surgical Technicians include:

- Graduation from an accredited surgical technology program.
- Successful completion of general orientation and annual competencies
- Independently scrub on surgical procedures

Additional requirements for Cardiac Surgical Technicians include:

- Successful completion of CV orientation-Didactic and Clinical
- Independently scrub on CABG and Valve Surgeries

Administrative Responsibility

The operating room is under the direction of the Division Director of Perioperative and Invasive Services. The chairman of the Department of Surgery provides medical direction. Any problems or questions related to Anesthesia are referred immediately to the Chairman of the Department of Anesthesia or his designate. Other Section Chief Physicians are consulted as appropriate.

Staffing

There is one Operating Room Clinical Manager and a Perioperative Nurse Educator on five days a week during the day. The Clinical Manager assumes 24-hour accountability for the department. In addition during the day, there is a Charge Nurse who is responsible for the smooth daily operation of the surgery caseload and the monitoring of quality patient outcomes. On evenings, nights, weekends and holidays, there is a Charge Nurse on each shift. Two teams (2 RN's or an RN and Surgical Technologist) are available on non-routine hours. The process for assessing and acting on positive and negative staffing variances is one of balancing the number of OR rooms needed for a particular caseload, clinical competence, and staffing availability. Staffing patterns are based on AORN recommendations but can fluctuate based on daily case load and intensity of service. There is a minimum of 1 circulating RN and 1 Surgical Technician or RN in attendance for every case. Additional RN's and Surgical Technicians are provided as needed.

Staff Assignments

The unit Clinical manager or the charge nurse does assignment of patient care. Clinical assignments are based on patient needs, technology needed for the procedure, the identified competence of the staff and the level of supervision required.

Philosophy of Perioperative Nursing Care

The Patient who experiences the prospect or performance of an operative or other invasive procedure is the focus of perioperative nursing. Perioperative nursing practice addresses resulting patient needs amenable to nursing intervention. While basic life-sustaining needs may be of the highest priority, the perioperative nurse is concerned with all physiological, psychological, sociological, and spiritual dimensions of the patient's human responses.

Perioperative nurses provide care designed to meet individual patient needs through use of the nursing process. Perioperative nursing occurs within a social setting characterized by rapidly changing technological, economic, and cultural forces that require continuous adaptation by professional practitioners. The complexity of knowledge and skill required to effectively care for recipients of perioperative nursing compels nurses to be well educated and to continue their education beyond generic nursing programs.

Perioperative nursing practice includes providing direct care, coordinating comprehensive care, educating recipients of perioperative nursing, and generating perioperative nursing knowledge in a variety of settings. The perioperative nurse uses substantial knowledge, judgment, and skill based on the principles of biological, physiological, behavioral, social, and nursing sciences. Knowledge and skills acquired by the nurse are used to implement the nursing process and the "Standards of (perioperative) nursing practice." In this context, the perioperative nurse works with the patient to make decisions regarding the patient's needs and to assist and support the patient.

The perioperative nurse also works in collaboration with other health professionals to meet patients' needs. The perioperative nurse has primary responsibility and accountability for the nursing care of patients who are experiencing operative and other invasive procedures.

Nursing care must be individualized to meet a particular patient's unique needs and situation. This care should be provided in the context of disease or injury prevention, health promotion, health restoration, health maintenance, or palliative care. The cultural, racial, and ethnic diversity of the patient must always be taken into account in providing nursing services.

The nurse must respect the patient's goals and preferences in developing and implementing a plan of care. One of the nurse's primary responsibilities is patient education; therefore, nurses should provide patients with appropriate information to make informed decisions regarding their care and treatment.

The perioperative nurse also works in collaboration with other health professionals to meet patients' needs. The perioperative nurse has primary responsibility and accountability for the nursing care of patients who are experiencing operative and other invasive procedures.

Definition of Recipients of Perioperative Care

Recipients of care are patients, their families, and significant others who vary in age, degree of wellness, and socioeconomic and educational status. Patients are those whose protective reflexes and/or self-care abilities are potentially diminished by the prospect or performance of an operative or other invasive procedure.

Recipients have widely diverse knowledge levels and capabilities for self-care. They have both predictable and unique needs caused by these procedures. Some needs can be predicted based on the nurse's knowledge of the procedure and the technology used; others are unique to the individual.

Goals of Perioperative Nursing Practice

The goal of perioperative nursing practice is to assist patients, their families, and significant others to achieve a level of wellness equal to or greater than that which they had prior to the procedure.

Scope of Perioperative Nursing Practice

Perioperative nursing practice begins with the prospect of an operative or other invasive procedure and is completed by evaluating the extent to which the recipient's needs have been met. Perioperative nurses interact with both the patient and/or the patient's significant others throughout the continuum of patient care. Perioperative nursing takes place in the patient's environment and includes, but is not limited to, surgical suites, ambulatory care settings, clinics, physicians' offices, communities, and homes.

The management of the recipient's needs, both unique and predictable, may be through direct or indirect interventions. These interventions are planned to assist the recipient in meeting the projected outcome in an appropriate manner. Perioperative nursing care is implemented by register nurses who strive to assist the patient to meet projected outcomes by functioning in various roles-clinical practitioner, manager, educator, and researcher.

Perioperative nursing varies and may include, but is not limited to,

- peer education and patient/family teaching,
- support and reassurance,
- advocacy,
- control of environment,
- efficient provision of resources,
- maintenance of asepsis,
- monitoring physiologic and psychological status,
- management of aggregate patient needs,
- supervision of ancillary personnel,
- perioperative exploration and validation of current and future practices,
- integration and coordination of care across settings and among disciplines, and
- collaboration and consultation.

These activities are based on using the problem-solving approach in practice, management, education, and research.
The standards used for Patient Care within the Perioperative setting are based on AORN, JCAHO, OSHA, the State of Connecticut and other regulatory body statutes, laws and requirements.

St. Mary's Hospital

Inpatient Cardiac Surgery Patient Flow Page 1 Approved 8/08

INPATIENT, DETERMINED SURGERY INDICATED:

- PCP consults surgeon
- Surgeon visits patient
- Calls OR front desk to schedule the patient (if after hours, calls same number and gives information to the charge nurse)
- Completes H&P, if not done
- Writes pre-op orders and progress note

Anesthesia:

- Assesses and evaluates patient
- Lists medications patient should take prior to surgery
- Writes any appropriate pre-op orders

Nursing Staff:

- Transcribes pre-op orders
- Pastoral care notified
- Initiates pre-op checklist
- Any additional testing completed, abnormal results called to surgeon

Pre-op Education:

- Pre-op teaching completed by CV nursing staff member (once patient in CVU)

Case Management will become involved and follow patient from this point

OR:

- OR scheduler obtains information, schedules in PHS.

IF PATIENT NOT CURRENTLY IN CVU:

- Unit calls CVU and arranges for transfer
- Report given to CVU
- Places a transfer request
- Patient access and CVU determines bed placement
- Patient transferred to CVU

Evening Before Surgery:

- Pre op checklist reviewed, updated
- Presence of H&P and pre-op note on chart confirmed
- Family given approximate time to be at hospital next day
- Hibiclens shower completed

Day of Surgery:

- Hibiclens shower completed
- Chart reviewed for completeness - test results, consents, and H &P, verify T&C acceptable
- Belongings secured
- Patient weight obtained
- Any additional orders entered
- Clip prep to be completed
- All orders implemented as appropriate (IV, medications, etc.)
- Family directed to CVU waiting room
- Surgeon to see patient if not already done
- Anesthesia to see patient (if not seen in PAT)
- A-line inserted in CVU. Other central lines inserted in OR
- Pre op checklist completed
- CVU gives family beeper for notifications while in waiting
- CVU will wait for call from OR verifying patient is ready
- Anesthesia transports patient to OR in patient bed with monitor

St. Mary's Hospital

Inpatient Cardiac Surgery Patient Flow (PAGE 2) Approved 8/08

Operating Room:

- Patient transported directly to OR #1
- Circulator RN confirms chart, consents, obtains report from Anesthesiologist.
- Patient ID verified with name and medical record #→compared to arm band
- Lines inserted by Anesthesia
- Surgeon notified by anesthesia when they are ready to anesthetize the patient
- Patient prepped and draped by Surgeon, PA and CVOR staff.
- Time-out – final verification of correct patient and correct procedure
- Surgery Started
- Circulator RN calls CVU with brief report → procedure done, ventilator settings, drips, any problems etc, when off pump or when closing for off pump cases
- Family may call into OR for updated patient information Once case completed, OR team transports patient in bed to CVU
- Surgeon talks with family
- Blood not used in OR is returned to Blood Bank

CVU:

- OR call prompts CVU to notify Respiratory Therapy
- CVU makes final check that all equipment and supplies are in room and set up

CVU:

- Patient arrives with OR team members
- Report given at bedside
- Equipment exchanged as appropriate (pumps, pacer box, etc.)
- Patient assessment and admission to CVU completed as per CVU policy
- Once initial assessment and evaluation is completed, family permitted in to see patient

St. Mary's Hospital

Outpatient Cardiac Surgery Patient Flow PAGE 1 Approved 8/08

Physician Office:
- Obtains demographic information
- Obtains insurance information
- Obtains pre-certification
- Surgeon dictates H&P(into SMH dictation system), completes pre-op testing orders, surgical consent
- Office does a group fax surgical schedule request and PAT form, to: Operating Room, Patient Access, Pre Registration and One Stop Testing; orders to One Stop Testing
- Patient education materials give to patient/family

Patient Access/Pre Registration:
- Verifies insurance, precert., preauthorization, co-pays, etc.
- Starts the PAT chart
- Pre Registration calls the patient and verifies information, pre registers the patient
- Keeps the access file until PAT day

One Stop Testing:
- Contacts Cardiac Anesthesia group for PAT date
- Contacts patient and sets up PAT appointment.
- Notifies CVU & Cardiology of PAT appointment date.
- Initiates the Medical Record.

Operating Room:
- Reviews information for pre op diagnosis, surgery time element, insurance, demographics
- Begins scheduling process in PHS system
- Schedule coordinator calls surgeon's office and CVU and verifies date of surgery
- Time for patient arrival confirmed the day prior with surgeon's office (office to notify patient)

Pre-admission Visit:
- Patient goes to first floor registration
- Once registration is completed, directed to One Stop Testing
- Labs, CXR and EKG completed as appropriate (PFT and Carotid dopplers, if required, attempted to be scheduled at same PAT visit)
- Patient teaching, day of surgery instruction completed (including hebiclens shower)and nursing history completed by CVU nurses and documented in hospital information system (nursing history to be reviewed and validated on day of admission)
- Discharge planning screen completed
- Anesthesia sees patient and performs assessment/evaluation
- PAT collects all results and compiles chart
- Abnormal lab result critical values reported as per hospital policy; surgeon specific abnormal results called to surgeon (once results reported)
- One Stop Testing delivers completed medical record to CVU.

Day of Surgery:
- Patient reports to Central Waiting Area on 2nd Floor
  - Patient activated, bracelet applied, consent to treat signed, co-pays collected
  - CVU notified that patient arrived and customer care representative escorts patient to CVU
- Chart reviewed for completeness - test results, consents, and H &P, verify T&C acceptable
- Patient changed into hospital gown, belongings secured
- Patient assessment completed and nursing history validated
- Patient weight obtained
- Any additional orders entered
- Clip prep completed
- All orders implemented as appropriate (IV, medications, etc.)

Outpatient Cardiac Surgery Patient Flow (PAGE 2) Approved 8/08

Day of Surgery (continued):

- Family directed to CVU waiting room
- Surgeon to see patient if not already seen
- Anesthesia to see patient (if not seen in PAT)
- Pre op checklist completed
- Pastoral care notified
- CVU gives family beeper for notifications while in waiting
- Anesthesiology/CVU will wait for call from OR verifying patient is ready

Operating Room:

- Patient transported directly to OR #1
- Circulator RN confirms chart, consents, obtains report from Anesthesiologist.
- Patient ID verified with name and medical record #→compared to arm band
- Lines inserted by Anesthesia in OR
- Surgeon notified by anesthesia when they are ready to anesthetize the patient
- Patient prepped and draped by surgeon, PA and CVOR staff.
- Time-out – final verification of correct patient and correct procedure
- Surgery Started
- Circulator RN calls CVU with brief report → procedure done, ventilator settings, drips, any problems etc, when off pump or when closing for off pump cases
- Once case completed, OR team transports patient in bed to CVU
- Surgeon talks with family
- Blood not used in OR is returned to Blood Bank

CVU:

- OR call prompts CVU to notify Respiratory Therapy
- CVU makes final check that all equipment and supplies are in room and set up

CVU:

- Patient arrives with OR team members
- Report given at bedside
- Equipment exchanged as appropriate (pumps, pacer box, etc.)
- Patient assessment and admission to CVU completed as per CVU policy
- Once initial assessment and evaluation is completed, family permitted in to see patient

St. Mary's Hospital

CABG Crash with Emergent Return to CVOR **Approved 8/08**

Post-op patient presents with acute symptoms

- Surgeon called
- Surgeon evaluates patient and decides to return to OR
- Staff bring open arrest cart and crash cart to room
- OR notified (24 hours per day) **See OR flow below**
- CVU notifies:
  - Nursing supervisor (may call for clerk or PCA to assist with phone calls in either CVU or OR)
  - Respiratory care
  - Blood Bank (if new use of blood products, may be aware if pt. has been using products)
  - Family
  - Pastoral care (per family request)
- CVU provides ongoing patient support and prepares patient for return to OR
- CVU obtains consents, if possible
- **If chest is to be opened in CVU:**
  - Call CVOR for assist if possible; call OR for in house OR staff support.
  - Continue care of patient and stabilization until patient can be taken to OR for closing

OR Day Shift

- OR notifies team (cardiac anesthesia, perfusion and OR room staff)
- First available OR made ready for patient (Room 1 preferred)

OR After Hours

- Determine from surgeon if perfusion is also needed.
- Nursing supervisor may call for clerk or PCA to be pulled to assist with phone calls, etc. in either CVU or OR
- First call team gets OR ready for patient (including anesthesia)
- Operator notifies on call team hearts including perfusion if surgeon directed **(call directly or group page, and process to verify all received call)**

- OR calls unit when ready for patient and sends someone to assist with transport (unit staff and respiratory to assist with transport)
- Family to remain in CVU waiting room

Follow CVOR Intraoperative Flow

CARE PATHWAYS
Cardiac Rehabilitation
INDEX

Saint Mary's Hospital

- Scope of Services – Cardiac Rehabilitation
- Levels of Program

Saint Mary's Hospital

Cardiac Rehabilitation

Scope of Services:

The Cardiac rehabilitation program provides services to individuals who have experienced a cardiovascular event/disease, undergone open heart surgery or coronary artery intervention, pulmonary disease and those who wish to develop a healthier lifestyle through exercise and education.

Goals of Service:

The goals of the cardiac rehabilitation program are to provide progressive exercise and education with medical supervision. Individualized nursing care is provided to assist the participant in achieving his/her optimal personal level of physical, psychological, vocational and social health. As health care professionals we are concerned with the prevention of disease, promotion of health, as well as rehabilitation.

Types and Age of Participants Served:

Service is provided by appointment Monday through Friday, 7:30 am to 4:00 pm to persons with myocardial infarction within preceding 12 months, coronary artery bypass surgery within preceding 6 months, stable angina, arrhythmia (associated with MI, CABG, or angina), hypertension, and others that may be included under certain circumstances: severe left ventricular dysfunction, heart transplant, diabetes, and peripheral artery disease. A physician referral initiates the program. Age group consists of young adults to geriatrics.

Scope and Complexity of Participant Care Needs

Cardiac Rehabilitation department provides a safe and comfortable environment for participants and staff in order to assist the participant in achieving optimum physical strength and exercise endurance as well as meeting educational needs.

The participant's physical, psychological, and social needs are assessed during initial interview and exercise session. Continual reassessment is maintained during program and plan of care is based on initial assessment and reassessment.

Services provided include instruction on telemetry application, instruction and guidance with equipment use, (treadmill, bike, airdyne bike, rower, arm egrometer, hand held weights and therabands), warm-up and cooldown/stretches and relaxation.

Weekly educational programs include but are not limited to lectures on coronary artery disease, lifestyle changes, risk factor modification, low fat/sodium diets, stress management, exercise guidelines, medications, and cardiac testing.

Department/Unit Staffing

Medical Director – board certified cardiologist who has me the hospital's credentialing/privileging process and provides direct physician supervision for the cardiac rehabilitation program. The Cardiopulmonary Clinical Manager is responsible for the staffing adjustments related to participant census, department budget, and staff evaluations. The basic requirements for the RN include current state license, BLS certification, ACLS certification, and completion of annual competencies. The Cardiac Rehabilitation Registered Nurse will provide direct participant supervision, instruct participants in warm-up exercises, proper equipment use, use of therabands and hand held weights, cooldown stretching and relaxation.

An ongoing program of inservice education and periodic clinical skills evaluation for staff members is maintained to ensure that quality of care provided is kept current.

Methods used to Assess and Meet Participant's Care Needs

Standards of practice are based on the Guidelines for Cardiac Rehabilitation and Secondary Prevention Programs of the American Association of Cardiovascular and Pulmonary Rehabilitation and the American Heart Association Guidelines. These standards and recommended practices serve as a basis for performance improvement and evaluation.

Collaboration

The RN staff partner with other healthcare providers to work in a collaborative, coordinated manner throughout the process of caring for the participant requiring cardiac rehabilitation. The involvement of the patient, family, or significant other is encouraged.

Revised: 3/05, 2/08

Saint Mary's
HOSPITAL

Cardiac Rehabilitation Program

Phase I – Inpatient : The cardiac rehabilitation program for hospitalized patients includes participant and family information regarding the out patient cardiac rehabilitation program. This phase begins during the hospital admission and ends when the patient is discharged.

Phase II – Outpatient : The cardiac rehabilitation/conditioning program is optimally initiated shortly after hospital discharge, or, possibly, if complications were present, may not begin for up to 12 months following hospital discharge. It most commonly lasts 12 weeks (3 sessions/weekly) or 36 sessions. Phase II provides participant and family education and support concerning coronary artery disease, MI, risk factor modification, nutrition and diet modification, stress management, and emotional support through a multidisciplinary approach, combined with an individualized, progressive exercise regimen geared toward gradually increasing the participant's duration and intensity of exercise. MET levels are approximately 4 or greater. The participants are closely supervised by registered nurses, utilizing continuous telemetry monitoring to evaluate response to exercise. Discussions regarding goal review and level of progress are held periodically between participant and staff members.

Wellness Program – This is a conditioning program for participants who have completed the Phase II program, or for persons with increased risk factors for CAD who are referred by their physician. The participant is not monitored with telemetry, but must be able to monitor their pulse and know their target heart rate range. The ongoing interaction and supervision by nursing, medical, and other multidisciplinary roles continue. The participants are encourage to continue healthy lifestyle choices and risk factor identification/modification.

APPENDIX 9.a.

Memorandum of Understanding

MEMORANDUM OF UNDERSTANDING

This Memorandum of Understanding is entered into as of this 22nd day of December, 2003 among **Waterbury Area Heart Center, Inc., St. Mary's Hospital, Waterbury Hospital** and the **University of Connecticut Health Center**, and Connecticut **Cardiothoracic Surgical Associates, LLC** ("CCSA"), and summarizes the intent of the parties with respect to the establishment of a joint interventional cardiology and open heart surgery program by St. Mary's Hospital and Waterbury Hospital in the City of Waterbury ("Program") and the collaboration and services to be provided by University of Connecticut Health Center and CCSA in connection with the establishment of that Program (sometimes the signators are referred to as a "Party" or collectively the "Parties"); and

WHEREAS, the Program would be provided by a two-site program utilizing existing cath lab capacity and cardiac operating rooms to be constructed at St. Mary's Hospital and Waterbury Hospital; and

WHEREAS, the University of Connecticut Health Center is an academic health center that incorporates the School of Medicine ("SOM"), its faculty practice plan UConn Medical Group ("UMG"), and an acute care general hospital John Dempsey Hospital (JDH); and

WHEREAS, JDH and UMG are existing providers of a full array of cardiology and cardiothoracic services; and

WHEREAS, CCSA surgeons are members of the faculty of SOM; and

WHEREAS, the University of Connecticut Health Center and CCSA have agreed to provide services to the Program in Waterbury and to become members of the advisory board established in connection with the Program ("Advisory Board"); and

WHEREAS, St. Mary's Hospital and Waterbury Hospital shall establish the Waterbury Area Heart Center, Inc. ("WAHC"), a non-stock corporation which will be separately organized and which shall serve as a management services organization to oversee the joint heart program providing programmatic, quality, training, marketing and community wellness coordination; and

WHEREAS, St. Mary's Hospital, Waterbury Hospital and University of Connecticut Health Center administration, together with clinical leaders and physicians, will constitute the members of an Advisory Board which provides strategic direction to WAHC; and

WHEREAS, the sole members of the Waterbury Area Heart Center shall be St. Mary's Hospital and Waterbury Hospital; and

WHEREAS, cardiac surgery will be provided by physicians of CCSA, or UMG as the case may be, who are credentialed at JDH and also credentialed at St. Mary's Hospital and Waterbury Hospital; and

WHEREAS, JDH shall provide or arrange for the provision of perfusion services; and

WHEREAS, all of the parties acknowledge that no later than December 23, 2003, St. Mary's Hospital and Waterbury Hospital will submit a Certificate of Need Application concerning the Program and including in the application a description of the services to be provided by the University of Connecticut Health Center and CCSA with respect to the Program; and

WHEREAS, the parties have agreed to execute this Memorandum of Understanding so as to more clearly set forth the responsibilities and services to be provided by the University of Connecticut Health Center and CCSA to the Program;

NOW, THEREFORE, in consideration of the mutual promises, covenants and agreements contained herein, receipt of which is hereby acknowledged, the parties agree as follows:

Conflicting Arrangements

Each of the parties represents and warrants with the other parties that it has no commitments, understandings or arrangements with any party other than the signators that might adversely affect their respective ability to participate in the Program as described in this Agreement.

Services To Be Provided by University of Connecticut Health Center

WAHC, St. Mary's Hospital, Waterbury Hospital and University of Connecticut Health Center will work together to create a definitive agreement among the WAHC, St. Mary's Hospital, Waterbury Hospital and the University of Connecticut Health Center which will provide for the support by the University of Connecticut Health Center and JDH in the manner defined in this Memorandum of Understanding and, in particular, attached **Schedule A**. The collaboration by the University of Connecticut Health Center will include, without limitation, University of Connecticut Health Center providing support for the CON Application for the Program, including pre- and post-file testimony. This Memorandum of Understanding shall be effective as among the parties; however, it is expected that a definitive agreement among WAHC, St. Mary's Hospital, Waterbury Hospital and the University of Connecticut Health Center will be executed and delivered.

Services To Be Provided by CCSA

WAHC, St. Mary's Hospital, Waterbury Hospital, and CCSA will work together to create a definitive agreement among them which will provide for the support by CCSA in the manner defined in this Memorandum of Understanding and, in particular, attached **Schedule B**. The collaboration by CCSA will include CCSA providing support for the CON Application for the Program, including pre-file and post-file testimony. This Memorandum of Understanding shall be effective among WAHC, St. Mary's Hospital, Waterbury Hospital and CCSA; however, it is expected that a definitive agreement among WAHC, St. Mary's Hospital, Waterbury Hospital and CCSA will be executed and delivered.

Confidentiality

(a) "Proprietary Information" shall include all tangible and intangible information which is related in any way to the Program and is of a confidential or proprietary nature, including but not limited to, analyses, business or strategic plans, compilations, financial statements, proposals, studies, patient revenue, gross charges, payor mix, employment or compensation models or other information relating to the business of a Party or any of its corporate affiliates related to the Program. Any discussions with respect to the Program shall also constitute Proprietary Information.

(b) "Representatives" shall include any Party's directors, officers, employees, attorneys, accountants, accountants, consultants, agents and representatives involved in any discussions related to the Program.

(c) Each Party shall treat as confidential the Proprietary Information of the other Party and shall each use its best efforts to hold the Proprietary Information of the other Party in strict confidence.

(d) A Party shall only disclose Proprietary Information received from the other Party to its Representatives who need to know the Proprietary Information for the purpose of the Program, who are informed of the confidential nature of the Proprietary Information, and who agree to be bound by the terms of this Agreement. Each Party receiving Proprietary Information shall use due care to prevent its Representatives from disclosing the Proprietary Information and shall be liable to the other Party for any damages caused by the breach of this provision by its Representatives. However, no party shall be liable for the disclosure of Proprietary Information if said disclosure is required by law or order of an appropriate administrative agency.

(e) No Party shall disclose to a third party the Proprietary Information of the other Party, in whole or in part, without the express written consent of the Party that furnished the Proprietary Information, which consent may be withheld at the furnishing Party's sole discretion.

(f) Each Party and its Representatives shall use the Proprietary Information of the other Party solely for the purpose of the Discussions and for no other purpose.

(g) If a Party or a Party's Representative is requested or required by any governmental authority to disclose the Proprietary Information of any other Party, it shall provide the Party that furnished the Proprietary Information with prompt written notice of the request or demand, so the Party that furnished the Proprietary Information may seek an appropriate protective order.

Conditions to Parties' Participation

The Parties recognize that this Memorandum of Understanding, the definitive agreement referenced above, and the parties' full and final participation in the Program is subject to the issuance of a Certificate of Need by the Office of Health Care Access of the State of Connecticut acceptable to St. Mary's Hospital and Waterbury Hospital as well as final approval of their respective Boards of Directors, and also acceptable to the University of Connecticut Health Center and CCSA.

Nature of This Memorandum of Understanding

It is understood that the provisions of this Memorandum of Understanding concerning confidentiality shall survive any participant's withdrawal from participation in the Program. This Memorandum of Understanding indicates a willingness on the part of each of parties to participate as contemplated above and as shall be more definitively provided for in final agreements among the parties.

Applicable Law

This Agreement shall be construed and enforced in accordance with the laws of the State of Connecticut

Legal Constraints

The parties recognize that their efforts to develop the Program as described in this Memorandum of Understanding will be constrained by various legal requirements. The parties recognize that the Program will be structured and any activities undertaken pursuant to the Memorandum of Understanding will be carried out so as to assure that at all times no federal or state statute, rules or regulations are violated.

Public Announcement

No public announcement regarding this Memorandum of Understanding shall be made unless the parties have mutually agreed in writing on the content and timing of such announcement. The parties recognize, however, that the substance of this Memorandum of Understanding may, in fact, be disclosed to the Office of Health Care Access as part of the Certificate of Need Application in connection with the Program.

IN WITNESS WHEREOF, this Memorandum of Understanding has been executed by The Waterbury Area Heart Center, Inc., St. Mary's Hospital, Waterbury Hospital, the University of Connecticut Health Center and Connecticut Cardiothoracic Surgical Associates, LLC.

SCHEDULE A

University of Connecticut Health Center
John Dempsey Hospital

Proposed Support to the
Advanced Cardiac Services Program

1. **Pre-Program Support:**

   A. Provide support for the CON Application process including pre- and post-file testimony

   B. Provide staff educational programs for angioplasty and open heart surgery care

      - Training and instruction at John Dempsey Hospital
      - Surgical Staff
        - ICU Staff (Nurses, PA's, Clinical Techs)
        - Cath Lab Staff (Nurses, PA's, Cardiovascular Techs)
        - Inpatient Cardiac Nursing Unit Staff (Nurses, Cardiovascular Techs)
        - Cardiac Rehab Staff (Nurses, Exercise Therapists)
        - Respiratory (Respiratory Therapists)
      - Rotation of John Dempsey Hospital Staff to Waterbury and St. Mary's Hospitals to provide on-site supervision and education of staff in support of the cardiac program
      - Provide access to John Dempsey Hospital's Cardiac Cath Lab and Surgical Suites for Waterbury /St. Mary's staff for training and education in support of the cardiac program

   C. Consult on the development of clinical standards of care, nursing protocols, admission and discharge criteria, and continuing education requirements

   D. Assist with the recruitment and selection of cardiac support staff (e.g. Nurses, PA's, Cardiovascular Techs, etc.)

E. Assist as requested in the evaluation and selection of capital equipment and supplies needed in support of the cardiac program

F. Design, in collaboration with Physicians and Staff of Waterbury and St. Mary's Hospitals, a Quality Improvement System for a cardiac program

2. **Program Initiation:**

A. Assist as requested in vendor negotiations for purchase of equipment and supplies

B. Provide assistance with marketing and promotion of the Waterbury/St. Mary's heart program.

3. **Program Management**

Assist in development, implementation and coordination of a Quality Improvement program

- Train Waterbury/St. Mary's staff in implementing a process for data collection and compilation
- Assist in development of an outcomes data base
- Provide National, State and John Dempsey Hospital benchmarking data for program comparison and quality improvement
- Arrange for University of Connecticut Health Center physicians and administrators to collaborate as members of the Waterbury Area Heart Center Advisory Board

SCHEDULE B

Connecticut Cardiothoracic Surgical Associates, LLC

Proposed Support to the
Advanced Cardiac Services Program

- 24/7 cardiothoracic surgical team coverage for all cardiac surgical procedures required by the Program at the Hospitals
- Assistance with the selection of ancillary support team services, including perfusion capabilities and others to be defined
- Coordination of cardiac surgery services with medical cardiology services, actively working with the Hospitals and WAHC to fully develop an integrated cardiology program
- Completion of the necessary credentialing for medical staff privileges at the Hospitals
- Participation in all cardiac-related quality management activities in cooperation with the Hospitals for cardiac surgery services
- Provision of expertise for the development and oversight of practice guidelines, policies, processes, protocols, clinical pathways, clinical trials and protocols for the Program
- Participation in the evaluation of purchased equipment and supplies, making recommendations for necessary or desirable improvements or replacements
- Participation in medical staff education through grand rounds, CEUs, both on-sight and via satellite
- Providing support for the Certificate of Need application process, including pre- and post-file testimony

APPENDIX 9.b.

Clinical Oversight Agreement

Affiliation Agreement

Perfusion Contract

CLINICAL OVERSIGHT AGREEMENT

This Agreement is made as of the 21st day of April, 2007, by and among **Heart Center of Greater Waterbury** (referred to herein as "HCGW"), **The Waterbury Hospital** ("WH"), **Saint Mary's Hospital** ("SMH"), and **University of Connecticut Health Center Finance Corporation** ("UCHCFC"), (sometimes the signatories are referred to as "Party" or collectively as "Parties").

Recitals

WHEREAS, The Waterbury Hospital ("WH") and St. Mary's Hospital ("SMH') have established a joint percutaneous coronary intervention ("PCI") and open heart surgery program ("Program"); and

WHEREAS, UCHC wishes to provide services in accordance with the terms and conditions set forth herein; and

WHEREAS, UCHC has agreed to provide services to the Program in Waterbury, Connecticut and to become a member of the advisory board established in connection with the Program ("Advisory Board"); and

WHEREAS, SMH, WH and UCHC's administration, together with clinical leaders and physicians, will constitute the members of HCGW's Advisory Board which provides strategic direction to HCGW; and

WHEREAS, the sole members of HCGW are SMH and WH; and

WHEREAS, cardiac surgery will be provided by physicians of Cardiothoracic Surgical Associates, LLC (CCSA), or UMG as the case may be, with medical privileges at JDH and also credentialed at SMH and WH through the coordination of UCHC; and

WHEREAS, JDH has agreed to provide or arrange for the provision of perfusion services in support to the Program; and

WHEREAS, all of the parties acknowledge that on December 23, 2003, SMH and WH submitted a Certificate of Need Application ("CON") concerning the Program and including in the application a description of the services to be provided by UCHC with respect to the Program; and

WHEREAS, the parties wish to clearly set forth the responsibilities and services to be provided by UCHC to HCGW and as appropriate WH and SMH;

NOW, THEREFORE, in consideration of the mutual promises, covenants and agreements

contained herein, receipt of which is hereby acknowledged, the parties agree as follows:

1. **Conflicting Arrangements**

Each of HCGW, WH, SMH, and UCHC represents and warrants to the other that it has no commitments, understandings or arrangements with any party other than the signators to this Agreement that might adversely affect their respective ability to participate in the Program as described in this Agreement.

2. **Operations**

UCHC responsibilities shall include, without limitation, the duties set forth on **Schedule A**; coordination of cardiac surgery services provided by physicians of Cardiothoracic Surgical Associates, LLC (CCSA), or UMG as the case may be, by virtue of UCHC's agreement with physician practices which agreement(s) are attached as **Schedule A-1**; and provision of perfusion services as needed to address the needs of the open heart surgery patients. The agreement referenced in **Schedule A-1** contains certain representations and covenants by CCSA concerning, among other things, licensure, training, insurance, compliance with applicable federal and state laws and regulations by CCSA. CCSA has acknowledged in that agreement that HCGW, WH and SMH are third parties beneficiary to such representations and covenants who are entitled directly to rely on such representations and covenants. UCHC has no reason to believe that such representations or covenants are not correct. CCSA's physicians will maintain active privileges at JDH and also be credentialed at WH and SMH. The collaboration by UCHC will include, without limitation, UCHC providing support for the CON modification for the Program, including pre-and post-file testimony. HCGW, WH and SMH agree that during the Term UCHC shall be their exclusive provider of the services described in this Agreement.

The parties recognize and agree that it is desirable to establish a clinical oversight relationship; cooperate in the ongoing development of policies, procedures and protocols; and facilitate the training of WH and SMH staff.

3. **Documentation and Confidentiality**

UCHC shall make available its existing proprietary information and management systems to HCGW, WH and SMH for use in credentialing, certification and administration of the open heart surgery program in the cardiovascular operating room, patient care areas and any supporting departments (i.e. cardiac rehabilitation, cardiac catheterization lab, nursing education), as may be needed in the ongoing program development. This proprietary documentation ("UCHC Proprietary Information") includes:

a. Quality assurance information;
b. Credentialing requirements;
c. Personnel documentation;
d. Regulatory requirements;
e. Emergency transport plan;

f. Patient education materials.

Copies of the UCHC Proprietary Information shall be delivered to HCGW, WH and SMH, as appropriate by UCHC upon the request of HCGW which shall facilitate those requests. UCHC shall work with WH and SMH to revise such documentation, so as to be applicable to their respective needs.

"WH and SMH Proprietary Information" shall include all tangible and intangible information which is related in any way to the Program and is of a confidential or proprietary nature, including but not limited to, analyses, business or strategic plans, compilations, financial statements, proposals, studies, patient revenue, gross charges, payor mix, employment or compensation models or other information relating to the business of a Party or any of its corporate affiliates related to the Program. Any discussions with respect to the Program shall also constitute Proprietary Information. UCHC Proprietary Information and WH and SMH Proprietary Information are sometimes referred to as "Proprietary Information".

"Representatives" shall include any Party's directors, officers, employees, attorneys, accountants, consultants, agents and representatives involved in any discussions related to the Program.

Each Party shall treat as confidential the UCHC Proprietary Information and the WH and SMH Proprietary Information, as the case may be and shall use its best efforts to hold the Proprietary Information of the other Party in strict confidence.

A Party shall only disclose Proprietary Information received from any other Party to its Representatives who need to know the Proprietary Information for the purpose of the Discussions, who are informed of the confidential nature of the Proprietary Information, and who agree to be bound by the terms of this Agreement. Each Party receiving Proprietary Information from any other Party shall use due care to prevent its Representatives from disclosing such Proprietary Information and shall be liable to the other Party for any damages caused by the breach of this provision by its Representatives.

No Party shall disclose to a third party the Proprietary Information of the other Party, in whole or in part, without the express written consent of the Party that furnished the Proprietary Information, which consent may be withheld at the furnishing Party's sole discretion.

Each Party and its Representatives shall use the Proprietary Information of the other Party solely for the purpose of advancing the Program and for no other purpose.

If a Party or a Party's Representative is requested or required by any governmental authority to disclose the Proprietary Information of any other Party, it shall provide the Party that furnished the Proprietary Information with prompt written notice of the request or demand, so the Party that furnished the Proprietary Information may seek an

appropriate protective order.

4. Further Consultation

UCHC shall continue to be a resource, as needed, to HCGW, WH and SMH as appropriate with respect to the organization, construction and continuation of the open heart surgery and coronary PCI programs of WH and SMH. Available services include: equipment and supply selection; purchasing information; facility and space planning and design; inventory management systems; budget development; project management and oversight; reimbursement and medical record coding information; patient education; continuing education programming; marketing support and consultation; licensure and inspection; development of policies, procedures, protocols and clinical pathways, and other regulatory approvals. Further UCHC agrees to supply physicians in relevant specialties to participate in Morbidity and Mortality (M&M) Conferences at WH and SMH as appropriate.

5. Training

UCHC shall provide training at the facilities of WH, SMH and UCHC, as appropriate, as set forth in Schedule A for registered nurses and technicians employed by each of WH and SMH to staff the areas within the Program. All orientation and training plans will be subject to review and approval by the nursing administration of each of WH and SMH.

6. Consulting Fee

As compensation for the services provided in this Agreement, HCGW shall reimburse UCHC a consulting fee payable in accordance with the terms of **Schedule B**.

Notwithstanding the forgoing, the parties agree that the perfusion services described herein are not included in the compensation schedule and will be included in an agreement relative to perfusion services.

7. Contacts of the Parties

Each of HCGW, WH, SMH and UCHC shall identify their respective designated contacts who shall be responsible for day-to-day management of UCHC obligations under this Agreement.

8. Privileges

This Agreement does not confer credentialing on any physician. The parties agree that the grant, renewal or any other action with respect to credentialing is vested in the governing bodies of, and governed by the credentialing process in effect from time to time at each of WH and SMH.

9. Employment

Each of WH and SMH hospital shall be responsible for the employment, discipline, and compensation of any and all of their respective employees or contractors who may be involved from time to time in providing services to the Program.

10. Term

This Agreement shall be effective April 21, 2007 and shall terminate two (2) years following its effective date, unless the Program is not continued or unless sooner terminated as hereinafter provided ("Term"). The parties may be willing to consider an extension of the terms of the Agreement provided that they are able to reach agreement upon the length, fees and other terms and conditions of the extended term prior to the expiration of the Term.

11. General Prohibition Concerning UCHC Employees

HCGW, WH and SMH agree that during the term of this Agreement and for a period of one year following its expiration none of them shall, without the prior knowledge and consent of UCHC actively recruit, retain, employ or otherwise engage any employee of UCHC who may perform any work in connection with the Program except that HCGW, WH and SMH may recruit and hire employees of UCHC who retire from UCHC. Should HCGW, WH and SMH violate this provision, UCHCFC shall be entitled to damages in an amount equal three times the annual salary of the UCHC employee.

12. Insurance Coverage

Each of UCHC, HCGW, WH and SMH agrees that, for its own employees, and at its own cost and expense, it will procure and continue in force, throughout the term of this Agreement, adequate insurance coverages through programs of self-insurance or otherwise in amount and scope that are consistent with industry practice and acceptable to the other parties to this Agreement, for any and all claims for injuries to persons and property as each of them deems necessary or adequate. Each party shall furnish the other party with evidence concerning the insurance discussed in this paragraph 12. Each party shall provide at least 30 days prior written notice of the cancellation or termination of the insurance discussed in this paragraph 12.

13. Indemnification by the Parties

HCGW, WH and SMH herby agree to indemnify and hold harmless UCHC, JDH, its officers, employees and representatives, from any and all claims, demands or actions of any and every kind and nature whatsoever (excluding attorneys' fees) caused by the participation of WH and SMH staff in activities on the UCHC campus as described herein.

UCHCFC hereby agrees to indemnify and hold harmless HCGW, WH and SMH, its officers, employees and representatives, from any and all claims, demands or actions of any and every kind and nature whatsoever (excluding attorneys' fees) incurred by HCGW, WH or SMH as a result of the failure by UCHC, JDH or CCSA to provide the services described in this Agreement with respect to the Program.

14. Nature of Relationship

UCHC, HCGW, SMH and WH are independent contractors with respect to the services provided pursuant to this Agreement and nothing in this Agreement shall be construed as creating a joint venture, partnership or agency relationship among HCGW, WH, SMH on the one hand and UCHC on the other hand with respect to those services. In furtherance of this intent, each Party agrees that it shall not in its advertisements, correspondence, professional listings, stationary or other public representation state that the other Party is its partner or agent, or that the other Party constitutes a unit of the Party making the representation.

15. Governmental Action

This Agreement is subject to and subordinate to the requirements of any governmental agency having jurisdiction. Notwithstanding any other provision of this Agreement, in the event that any governmental agency, or private entity acting on behalf of or under contract with any governmental agency, having jurisdiction , including OHCA, takes any other action inconsistent with the terms of this Agreement or the intended operation and effect hereof, the party affected shall have the right, after consultations with the other parties, to suggest a modification of any of the terms of this Agreement to the extent and in the manner reasonably necessary or desirable to accommodate such governmental action. The other parties shall be afforded a reasonable opportunity to contest any governmental action which might result in a modification of this Agreement.

The parties specifically agree to comply with Connecticut Sate Statutes and Executive Orders detailed in Schedule C which consists of eleven (11) pages in the aggregate.

16. Prior Approval of Public Materials

No advertisement or other publicly distributed materials which mentions any party to this Agreement in the context of the Program will be used without the prior consent of all parties to this Agreement prior to its public announcement. No public announcement regarding this Agreement shall be made unless the Parties have mutually agreed in writing on the content and timing of such announcement. The Parties recognize, however, that the substance of this Agreement will, in fact, be disclosed to the Office of Health Care Access as part of the Certificate of Need Application in connection with the Program.

17. Covenants Not to Compete

During the term of this Agreement and any extension thereof and for a period of two (2) years following the termination of this Agreement, UCHCFC and any subsidiaries, parent or sister corporations of UCHCFC, will not joint venture, contract with or otherwise undertake services as part of a cardiac surgery and PCI program: (i) separately either with WH or SMH or any of their respective subsidiaries, parent corporation or sister corporations in the service area identified for the Program in the CON or (ii) with Danbury Hospital, its subsidiaries, parent corporation or any sister corporations.

18. Notices

Any notice required or permitted to be given by the parties hereto shall be given in writing and unless otherwise required under this Agreement, shall be sufficiently given or made if delivered personally to the person named below or mailed to such person by fax to the parties listed below c/o their respective designee's respective facsimile numbers. Any party may change the person who is to receive notice under this Agreement in accordance with the provisions of this Section.

If to HCGW:

P. O. Box 2153
Waterbury, CT 06722
Attention: Ms. Loraine Shea, Executive Director

If to SMH:

56 Franklin Street
Waterbury, CT 06706
Attention: Mr. Robert P. Ritz, President and CEO

If to WH:

64 Robbins Street
Waterbury, CT 06721
Attention: Mr. John H. Tobin, President and CEO

If to UCHCFC:

263 Farmington Avenue
Farmington, CT 06030-3802
Attention: Dan Upton, CFO

19. Termination

The Agreement may be terminated at any time only by the mutual agreement of all of the Parties. HCGW, WH and SMH may terminate this Agreement for cause as to UCHCFC and UCHCFC may terminate this Agreement for cause as to HCGW, WH and SMH by giving the other Party thirty (30) days' (hereinafter "cure period") written notice identifying the breach of this Agreement and providing an opportunity to cure such breach. If the said breach is not cured within the cure period, this Agreement shall automatically terminate, without need for further notice. For purposes of this paragraph, "for cause" shall mean the following:

a. A decision during the term of this Agreement, by HCGW, WH and SMH to discontinue the Program.

b. Changes which affect this Agreement in the rules or regulations adopted by Medicare, Medicaid or any other third-party payor which has contractual agreements with the Parties following the completion by the parties of the process defined in this paragraph 19 b. If at any time during the term hereof any new legislation is enacted by the federal government or any state government, or if any governmental agency (or its representative, or any other payor or any other federal, Connecticut or local governmental agency passes, issues or promulgates any law, rule, regulation, standard or interpretation which would render this Agreement illegal, or which could cause significant and material legal and/or economic consequences for any party hereto (hereinafter referred to as "Legislative or Regulatory Change"), such party may give to the other parties notice of intent to amend this Agreement in order to achieve the least burdensome alternative for the parties which still manages to bring this Agreement into compliance with such Legislative or Regulatory Changes and alleviate such legal or financial consequences. If this Agreement is not so amended in writing within ninety (90) days after said notice is given, this Agreement shall terminate as of midnight of the 90th day after said notice is given.

c. Material breach by UCHCFC on the one hand or HCGW, WH and SMH on the other hand of any of their respective obligations under this Agreement.

d. Discontinuation of the Program by OHCA.

This Agreement may not be terminated other than for cause, or as otherwise permitted by this Agreement. If this Agreement is terminated by HCGW, WH and SMH for other than cause, then they shall continue to pay the Fees as set forth in Schedule B in recognition of the substantial commitment of time and resources made by UCHC.

20. Integration

This Agreement constitutes the entire understanding of the parties with respect to the subject matter hereof and supersedes all prior agreements and negotiations between them.

21. Amendment

This Agreement may be modified or amended at any time in whole or in part only by an instrument in writing signed by all parties.

22. Headings

The headings in this Agreement are inserted for convenience of reference only and are not to be used in construing or interpreting any of the provisions of this Agreement.

23. Governing Law

This Agreement shall be construed and enforced in accordance with the laws of the State of Connecticut.

24. Legal Effect

This Agreement shall be binding upon and inure to the benefit of the parties hereto and their respective successors and assigns.

25. Counterparts

This Agreement may be executed in two or more counterparts, each of which shall be deemed to be an original but all of which together shall be deemed to be one and the same instrument.

26. Severability

The invalidity or unenforceability of any particular provisions of this Agreement shall not affect its other provisions, an this Agreement shall be construed in all aspects as if such invalid or unenforceable provisions were omitted. The failure of any party to meet its obligations under any one or more of the provisions herein shall in no way avoid or alter the remaining obligations of the parties.

27. Waiver

Any waiver, permission, consent or approval of any kind or character by any party hereto of any breach or default under this Agreement or any waiver of any provision or condition of this Agreement by any party must be in writing and shall by effective only in the specific instance and for the specific purpose set forth and shall not operate or be construed as a waiver of any subsequent breach, default, provision or condition of this Agreement by any party.

28. Assignment

This Agreement may not be assigned by any party without the prior written consent of all of the other parties.

29. Access to Records

Until the expiration of four (4) years after the furnishing of the services provided under this Agreement, the parties will make available to the Secretary, U.S. Department of Health and Human Services and the U.S. Comptroller General, and their representatives, this Agreement and all books, documents, and records necessary to certify the nature and extent of the costs of those services. If either party hereto carries out the duties of this Agreement through a subcontract worth TEN THOUSAND ($10,000) DOLLARS or more over a twelve-month period with a related organization, the subcontract will also contain an access clause to permit access by the secretary, Comptroller General, and their representatives, to the related organization's books and records.

The parties recognize and agree that they will afford to the other parties to this Agreement access to their respective records dealing with their performance under this Agreement in circumstances where such access and review is reasonable and necessary for a party to provide a defense to a lawsuit brought by a party which is not subject to the terms of this Agreement. Any access to records under this paragraph shall be compliant at all times with the provisions of Paragraph 31 of this Agreement and shall be conducted in such a manner as to not only preserve the confidentiality of such records but also not subject any party to any claimed waiver of safeguards available in accordance with applicable law.

30. Legal Constraints

The Parties recognize that their efforts to develop the Program as described in this Agreement will be constrained by various legal requirements. The Parties recognize that the Program will be structured and any activities undertaken pursuant to this Agreement will be

carried out so as to assure that at all times no federal or state statute, rules or regulations are violated.

31. HIPAA

a. The purpose of this clause is to establish the permitted and required uses and disclosures by the PARTIES of Personal Health Information or Electronic Information ("PHI") it may possess by reason of the Agreement.

b. Definitions. The following terms shall have the meaning ascribed to them in this Section. Other capitalized terms shall have the meaning ascribed to them in the context in which they first appear.

   i. HHS Privacy Regulations shall mean the Code of Federal Regulations ("C.F.R.") at Title 45, Section 160 and 164.

   ii. HHS Security Regulations shall mean the Code of Federal Regulations ("C.F.R.") at Title 45, Sections 160, 162, and 164.

   iii. Individual shall mean the person who is the subject of the PHI, and has the same meaning as the term "individual" as defined by 45 C.F.R. section 164.501.

   iv. Information shall mean any "health information" provided and/or made available by a PARTY to a PARTY, and has the same meaning as the term "health information" as defined by 45 C.F.R. Section 160.102.

   v. Electronic Information shall mean any "electronic protected health information" provided and/or made available by a PARTY to the other PARTY, or otherwise created, maintained or transmitted on behalf of the PARTIES and has the same meaning as the term "electronic protected health information" as defined by 45 C.F.R

   vi. Parties shall mean the PARTY or the PARTIES.

   vii. PHI means "Information" or "Electronic Information"

   viii. Secretary shall mean the Secretary of the Department of Health and Human Services ("HHS") and any other officer or employee of HHS to whom the authority involved has been delegated.

c. Limits on Use and Disclosure Established by Terms of Agreement or Law. Each PARTY hereby agrees that it shall not use or disclose the PHI provided or made available by the other PARTY for any purpose other than as permitted by this Agreement or required by law. The PARTIES shall not use or disclose PHI in a manner that would violate HHS Privacy or Security Regulations.

d. Permitted Uses and Disclosures of PHI by the PARTIES. Each PARTY shall be permitted to use and/or disclose PHI provided or made available from the other PARTY for the purposes stated in the existing Agreement.

e. Use or Disclosure of PHI for Management, Administration of Business, and Legal Responsibilities. The PARTIES may use PHI if necessary for the proper management and administration of the PARTIES; to carry out legal responsibilities of the PARTIES; and to provide data aggregation services

relating to the health care operations of the PARTIES. A PARTY may also disclose PHI provided if:

i. The law requires the disclosure; and/or

ii. The PARTY obtains reasonable assurances from the person to whom the PHI is disclosed that it will be held confidentially and used or further disclosed only as required by law or for the purposes for which it was disclosed to the person; and the person promptly notified the PARTY of any instances of which it is aware that the confidentiality of the PHI has been breached; and/or.

iii. the PARTY obtains reasonable assurances from the person to whom the PHI is disclosed (to include subcontractors or any other agents of the PARTY) that reasonable and appropriate safeguards have been implemented.

f. Administrative, Physical, and Technical Safeguards. The PARTIES will implement administrative, physical, and technical safeguards that reasonably and appropriately protect the confidentiality, integrity, and availability of PHI that it creates, receives, maintains, or transmits on behalf of the other PARTY.

g. Obligations of the PARTIES.

i. Appropriate Safeguards. The PARTIES will use appropriate safeguard to prevent use or disclosure of PHI other than as provided for by this Addendum.

ii. Reporting Security Incidents. A PARTY will report to the other PARTY any security incident of which it becomes aware. Report shall be made within 24 hours of identification of incident by the PARTY.

iii. Reporting Improper Use or Disclosure. A PARTY will report to the other PARTY any use or disclosure of PHI not provided by this Addendum of which it becomes aware.

iv. Mitigation of Improper Use or Disclosure. Each PARTY will mitigate to the extent practicable, any harmful effect that is known to the PARTY of a use or disclosure in violation of the requirements of this Addendum.

v. Agents and Subcontractors. The PARTIES shall ensure by subcontract that any agents or subcontractors to whom it provides or makes available PHI, will be bound by the same restrictions and conditions on the use of PHI that apply to the PARTIES and that are contained in this Agreement.

vi. Individuals' Rights of Access to PHI. Within ten (10) days of receiving a written request from a PARTY, the other PARTY shall make available PHI in accordance with Individual's right to access such PHI in accordance with 45 C.F.R. section 164.524.

vii. Amendments to Individuals' PHI. Within fifteen (15) days of receiving a written request from a PARTY, the other PARTY shall make PHI available for amendment and incorporation of amendments to PHI in accordance with 45 C.F.R. section 164.526.

viii. Accountings of Disclosure. Within fifteen (15) days of receiving a written request from a PARTY, a PARTY shall make PHI available as required to provide an accounting of disclosures made of PHI in accordance with 45 C.F.R. section 164. 528.

ix. Access to Books and Records. Each PARTY shall made its internal practices, books and records relating to the use or disclosure of PHI from, or created or received by, a PARTY on behalf of the other PARTY, available to the Secretary for purposes of determining compliance with HHS Privacy Regulations.

x. Return or Destruction of Information. At termination of Agreement, a PARTY will return or destroy all PHI received from, or created or received by a PARTY on behalf of the other PARTY. The returning PARTY shall not retain copies of such information upon termination of Agreement. If returning or destroying PHI at termination of Agreement is not feasible, the returning PARTY will extend the PHI protections of this Addendum and limit further uses and disclosures to those purposes that make the return or destruction of PHI infeasible.

IN WITNESS WHEREOF, the parties have caused this Agreement to be executed as of the date first above written.

5. Coordinate cardiac surgery services in the manner described in Paragraph 2 of the Agreement to which this Schedule is attached. Coordinate perfusion services in the manner described in the Perfusion contract dated March 30, 2005.

SCHEDULE A-1

SCHEDULE A-1

AGREEMENT BETWEEN THE UNIVERSITY OF CONNECTICUT HEALTH CENTER FINANCE CORPORATION AND CONNECTICUT CARDIOTHORACIC SURGICAL ASSOCIATES, LLC

THIS AGREEMENT is made by and between Connecticut Cardiothoracic Surgical Associates, LLC ("CCSA") and the University of Connecticut Health Center Finance Corporation ("UCHCFC") on behalf of the clinical enterprises of the University of Connecticut Health Center ("UCHC") including John Dempsey Hospital ("JDH") and UConn Medical Group ("UMG").

WHEREAS, the University of Connecticut Health Center is an academic health center that incorporates the School of Medicine ("SOM"), its faculty practice plan UConn Medical Group ("UMG"), and an acute care general hospital John Dempsey Hospital (JDH); and

WHEREAS, CCSA constitutes a group of cardiothoracic surgeons who are members of the faculty of SOM and who provide services in as members of UMG and as members of the JDH medical staff; and

WHEREAS, the parties, the Heart Center of Greater Waterbury (HCGW), St. Mary's Hospital (SMH), Waterbury Hospital (WH) and the University of Connecticut Health Center, and Connecticut Cardiothoracic Surgical Associates, LLC ("CCSA"), have established a joint interventional cardiology and open heart surgery program with St. Mary's Hospital and Waterbury Hospital in the City of Waterbury ('Program') and the collaboration and wish to continue said services provided by UCHC and CCSA in connection with the continuation of that Program; and

WHEREAS, UCHCFC has entered into a Clinical Oversight agreement with the Heart Center of Greater Waterbury (HCGW), SMH and WH which includes among other things responsibility for coordinating cardiothoracic surgical services in association with the Program.

WHEREAS, the University of Connecticut Health Center and CCSA have agreed to provide services to the Program in Waterbury and to become members of the advisory board established in connection with the Program ("Advisory Board"); and

WHEREAS, the parties hereto wish to continue the terms under which they will collaborate in the provision of services to the Waterbury Program; and

WHEREAS, each party is properly authorized to enter into this Agreement.

NOW THEREFORE, in consideration of the promises and mutual covenants herein contained, the parties agree as follows:

1. **Duties of CCSA**

1.1 CCSA shall cooperate with UCHC in activities related to ongoing clinical operations for cardiothoracic surgery services in support of the Program, including but not limited to meetings with physicians, administrators, and clinical teams for the purpose of quality and program review associated with St. Mary's Hospital and Waterbury Hospital, and consultation regarding policies, procedures and protocols.

1.2 CCSA agrees to cooperate and comply with the terms of the Clinical Oversight Agreement between UCHCFC and Heart Center of Greater Waterbury, Inc., St. Mary's Hospital, Waterbury Hospital both incorporated herein and presented in Exhibit A.

1.3 CCSA will provide cardiothoracic surgery services on site at both St. Mary's Hospital and Waterbury Hospital as required to support the Program.

1.4 CCSA agrees that its physicians will maintain active clinical privileges at St. Mary's Hospital and Waterbury Hospital.

1.5 CCSA warrants that its physicians:

1.5.1 Are duly licensed and registered, in good standing, to practice his profession in the State of Connecticut, which license shall not be revoked, suspended or restricted in any manner;

1.5.2 Have current controlled substances registrations issued by the appropriate federal and state governmental agencies, which registrations shall not be suspended, revoked or restricted in any manner;

1.5.3 Participate in the Medicare and Medicaid programs;

1.5.4 Are Faculty members at the University of Connecticut SOM;

1.5.5 Are members in good standing of John Dempsey Hospital's active staff, having clinical privileges commensurate with his duties hereunder;

1.5.6 Are Board certified in or eligible for Board certification in cardiothoracic surgery.

2. Duties of UMG

2.1 UMG shall coordinate the provision of clinical oversight services for the Heart Center of Greater Waterbury, Inc., St. Mary's Hospital, and Waterbury Hospital including surgical and other services as described in the Agreement and in Schedule A.

2.2 UMG will provide administrative support reasonably requested by CCSA in support of their duties hereunder.

3. Compensation

3.1 CCSA, in cooperation with UMG, agrees to seek compensation for patient care services directly from patients or patients' health plans in accordance with applicable industry standards.

4. Relationship of Parties

4.1 The relationship among CCSA and UMG and Physicians is that of independent contractors. Nothing contained in this Agreement is intended to create or shall be construed to create an agency, partnership, employer/employee or joint venture relationship among the parties. Each party shall remain solely liable for its own debts, obligations or liabilities without, however, in any way modifying the obligations each party has assumed herein.

4.2 It is specifically acknowledged and agreed by the parties hereto that the provision of services by Physicians to UMG and the payments made by UMG to CCSA pursuant to this Agreement will not in any way require or be contingent upon the referral of patients by either party to the other.

5. Term and Termination

5.1 This Agreement shall be effective April 21, 2007 and shall terminate two (2) years following its effective date, unless sooner terminated as hereinafter provided ("Term"). The parties may be willing to consider an extension of the terms of the Agreement provided that they are able to reach agreement upon the length, fees and other terms and conditions of the extended term prior to the expiration of the Term.

5.2 Termination of this Agreement shall not release or discharge either party from any obligation, debt, or liability which shall have previously accrued and remains to be performed upon the date of termination.

5.3 Either party shall have the right to terminate this Agreement upon written notice in the event the other party fails to keep, observe or perform any term or provision of this Agreement to be kept, observed or performed and such default shall continue for a period of thirty (30) days after written notice thereof to the other party.

6. HIPAA

6.1. The purpose of this clause is to establish the permitted and required uses and disclosures by the PARTIES of Personal Health Information or Electronic Information ("PHI") it may possess by reason of the Agreement.

6.2. Definitions. The following terms shall have the meaning ascribed to them in this Section. Other capitalized terms shall have the meaning ascribed to them in the context in which they first appear.

6.2.1. HHS Privacy Regulations shall mean the Code of Federal Regulations ("C.F.R.") at Title 45, Section 160 and 164.

6.2.2. HHS Security Regulations shall mean the Code of Federal Regulations ("C.F.R.") at Title 45, Sections 160, 162, and 164.

6.2.3. Individual shall mean the person who is the subject of the PHI, and has the same meaning as the term "individual" as defined by 45 C.F.R. section 164.501.

6.2.4. Information shall mean any "health information" provided and/or made available by a PARTY to a PARTY, and has the same meaning as the term "health information" as defined by 45 C.F.R. Section 160.102.

6.2.5. Electronic Information shall mean any "electronic protected health information" provided and/or made available by a PARTY to the other PARTY, or otherwise created, maintained or transmitted on behalf of the PARTIES and has the same meaning as the term "electronic protected health information" as defined by 45 C.F.R

6.2.6. Parties shall mean the PARTY or the PARTIES.

6.2.7. PHI means "Information" or "Electronic Information"

6.2.8. Secretary shall mean the Secretary of the Department of Health and Human Services ("HHS") and any other officer or employee of HHS to whom the authority involved has been delegated.

6.3. Limits on Use and Disclosure Established by Terms of Agreement or Law. Each PARTY hereby agrees that it shall not use or disclose the PHI provided or made available by the other PARTY for any purpose other than as permitted by this Agreement or required by law. The PARTIES shall not use or disclose PHI in a manner that would violate HHS Privacy or Security Regulations.

6.4. Permitted Uses and Disclosures of PHI by the PARTIES. Each PARTY shall be permitted to use and/or disclose PHI provided or made available from the other PARTY for the purposes stated in the existing Agreement.

6.5. Use or Disclosure of PHI for Management, Administration of Business, and Legal Responsibilities. The PARTIES may use PHI if necessary for the proper management and administration of the PARTIES; to carry out legal responsibilities of the PARTIES; and to provide data aggregation services relating to the health care operations of the PARTIES. A PARTY may also disclose PHI provided if:

6.5.1. The law requires the disclosure; and/or

6.5.2. The PARTY obtains reasonable assurances from the person to whom the PHI is disclosed that it will be held confidentially and used or further disclosed only as required by law or for the purposes for which it was disclosed to the person; and the person promptly notified the PARTY of any instances of which it is aware that the confidentiality of the PHI has been breached; and/or.

6.5.3. the PARTY obtains reasonable assurances from the person to whom the PHI is disclosed (to include subcontractors or any other agents of the PARTY) that reasonable and appropriate safeguards have been implemented.

6.6. Administrative, Physical, and Technical Safeguards. The PARTIES will implement administrative, physical, and technical safeguards that reasonably and appropriately protect the confidentiality, integrity, and availability of PHI that it creates, receives, maintains, or transmits on behalf of the other PARTY.

6.7. Obligations of the PARTIES.

6.7.1. Appropriate Safeguards. The PARTIES will use appropriate safeguard to prevent use or disclosure of PHI other than as provided for by this Addendum.

6.7.2. Reporting Security Incidents. A PARTY will report to the other PARTY any security incident of which it becomes aware.

Report shall be made within 24 hours of identification of incident by the PARTY.

6.7.3. Reporting Improper Use or Disclosure. A PARTY will report to the other PARTY any use or disclosure of PHI not provided by this Addendum of which it becomes aware.

6.7.4. Mitigation of Improper Use or Disclosure. Each PARTY will mitigate to the extent practicable, any harmful effect that is known to the PARTY of a use or disclosure in violation of the requirements of this Addendum.

6.7.5. Agents and Subcontractors. The PARTIES shall ensure by subcontract that any agents or subcontractors to whom it provides or makes available PHI, will be bound by the same restrictions and conditions on the use of PHI that apply to the PARTIES and that are contained in this Agreement.

6.7.6. Individuals' Rights of Access to PHI. Within ten (10) days of receiving a written request from a PARTY, the other PARTY shall make available PHI in accordance with Individual's right to access such PHI in accordance with 45 C.F.R. section 164.524.

6.7.7. Amendments to Individuals' PHI. Within fifteen (15) days of receiving a written request from a PARTY, the other PARTY shall make PHI available for amendment and incorporation of amendments to PHI in accordance with 45 C.F.R. section 164.526.

6.7.8. Accountings of Disclosure. Within fifteen (15) days of receiving a written request from a PARTY, a PARTY shall make PHI available as required to provide an accounting of disclosures made of PHI in accordance with 45 C.F.R. section 164. 528.

6.7.9. Access to Books and Records. Each PARTY shall made its internal practices, books and records relating to the use or disclosure of PHI from, or created or received by, a PARTY on behalf of the other PARTY, available to the Secretary for purposes of determining compliance with HHS Privacy Regulations.

6.7.10. Return or Destruction of Information. At termination of Agreement, a PARTY will return or destroy all PHI received from, or created or received by a PARTY on behalf of the other PARTY. The returning PARTY shall not retain copies of such information upon termination of Agreement. If returning or destroying PHI at termination of Agreement is not feasible, the returning PARTY will extend the PHI protections of this Addendum and limit further uses and disclosures to those purposes that make the return or destruction of PHI infeasible.

7. **Miscellaneous Provisions**

7.1 The parties agree to comply with state orders described in Exhibit B hereto.

7.2 Either party shall not differentiate or discriminate in any way in the provision of covered services on the basis of race, sex, age, religion, place of residence, health status or source of payment.

7.3 During the term of and following termination of this Agreement, each party shall keep strictly confidential any proprietary information regarding the other party. All information which is reasonably treated by any party as being proprietary, shall be presumed to be proprietary. Each party shall take necessary reasonable precautions to prevent unauthorized disclosure of proprietary information and shall require all of its officers, employees and other personnel to whom it is necessary to disclose the same, or to whom the same has been disclosed, to keep such proprietary information confidential. Upon termination of this Agreement, each party agrees to return to the other, within ten (10) days of the termination of this Agreement, all proprietary information of the other party in such party's possession.

7.4 No failure by either party to exercise, and no delay in exercising any right, power or privilege under this Agreement shall constitute a waiver thereof, nor shall any single or partial exercise of any right, power or privilege hereunder preclude any other or further exercise of any right, power or privilege. The rights and remedies provided herein are cumulative and not exclusive of any rights or remedies provided by law or otherwise.

7.5 This Agreement constitutes the entire agreement between the parties and contains all the agreements between the parties with respect to the subject matter hereof.

7.6 Neither this Agreement nor any of its provisions may be waived, altered, amended or supplemented in any manner except by a writing signed by the parties hereto. In the event any licensing, certifying or accrediting body requires or recommends that this Agreement include any provision not included herein, the parties agree to amend this Agreement to include such provision.

7.7 Neither this Agreement nor any right or interest hereunder may be assigned, in whole or in part, nor may any obligation hereunder be delegated, by CCSA without the prior written consent of UMG.

7.8 This Agreement shall be binding upon and shall inure to the benefit of the parties hereto and their respective successors and permitted assigns.

7.9 If any provision of this Agreement is held to be invalid or unenforceable, such invalidity or unenforceability shall not affect any other provision of this Agreement that can be given effect without the invalid provision. In such event, all parties agree that the court making such determination shall have the power to alter or amend such provision so that it shall be enforceable to an extent which is consistent with the intention of the parties.

7.10 This Agreement shall be governed by and construed in accordance with the laws of the State of Connecticut.

7.11 The parties agree that this HCGW, WH and SMH are third party beneficiaries to this agreement.

7.12 Nothing in this Agreement shall be construed as creating or giving rise to any rights in any third parties or any persons other than the parties hereto.

7.13 If: (i) in the opinion of nationally recognized health care counsel jointly selected by the parties (the "Opinion"), it is determined that it is more likely than not that applicable legislation, regulations, rules or procedures (collectively referred to herein as the "Law) in effect (or to become effective as of a date certain), or (ii) either of the parties receives notice (the "Notice") of an actual or threatened decision, finding or action by any governmental or private agency or court (collectively referred to herein as an "Action"), which Law or Action, if or when implemented, would have the effect of subjecting either party to civil or criminal prosecution under state and/or federal laws; then the parties shall attempt in good faith to amend this Agreement to the minimum extent necessary in order to comply with such law or to avoid the Action, as applicable, and shall utilize mutually agreed upon joint legal counsel to the extent practicable. If, within thirty (30) days the parties either are unable to mutually agree upon and make amendments or alterations to this Agreement to meet the requirements in question or determine in good faith that compliance with such requirements is impossible or unfeasible, then this Agreement shall be terminated without penalty, charge or continuing liability, except as otherwise set forth in Section 8.(d) of this Agreement, upon the earlier of: (x) sixty (60) days subsequent to the date the parties became aware of this matter or (y) the effective date upon which the Law or Action prohibits the relationship of the parties pursuant to this Agreement.

7.14 All notices required or which may be given hereunder shall be mailed to:

SCHEDULE C

Compliance with State Orders

Sec. 4a-60. (Formerly Sec. 4-114a). Nondiscrimination and affirmative action provisions in contracts of the state and political subdivisions other than municipalities.

(a) Every contract to which the state or any political subdivision of the state other than a municipality is a party shall contain the following provisions: (1) The contractor agrees and warrants that in the performance of the contract such contractor will not discriminate or permit discrimination against any person or group of persons on the grounds of race, color, religious creed, age, marital status, national origin, ancestry, sex, mental retardation or physical disability, including, but not limited to, blindness, unless it is shown by such contractor that such disability prevents performance of the work involved, in any manner prohibited by the laws of the United States or of the state of Connecticut. The contractor further agrees to take affirmative action to insure that applicants with job-related qualifications are employed and that employees are treated when employed without regard to their race, color, religious creed, age, marital status, national origin, ancestry, sex, mental retardation, or physical disability, including, but not limited to, blindness, unless it is shown by such contractor that such disability prevents performance of the work involved; (2) the contractor agrees, in all solicitations or advertisements for employees placed by or on behalf of the contractor, to state that it is an "affirmative action-equal opportunity employer" in accordance with regulations adopted by the commission; (3) the contractor agrees to provide each labor union or representative of workers with which such contractor has a collective bargaining agreement or other contract or understanding and each vendor with which such contractor has a contract or understanding, a notice to be provided by the commission advising the labor union or workers' representative of the contractor's commitments under this section, and to post copies of the notice in conspicuous places available to employees and applicants for employment; (4) the contractor agrees to comply with each provision of this section and sections 46a-68e and 46a-68f and with each regulation or relevant order issued by said commission pursuant to sections 46a-56, 46a-68e and 46a-68f; (5) the contractor agrees to provide the Commission on Human Rights and Opportunities with such information requested by the commission, and permit access to pertinent books, records and accounts, concerning the employment practices and procedures of the contractor as relate to the provisions of this section and section 46a-56. If the contract is a public works contract, the contractor agrees and warrants that he will make good faith efforts to employ minority business enterprises as subcontractors and suppliers of materials on such public works project.

(b) For the purposes of this section, "minority business enterprise" means any small contractor or supplier of materials fifty-one per cent or more of the capital stock, if any, or assets of which is owned by a person or persons: (1) Who are active in the daily affairs of the enterprise, (2) who have the power to direct the management and policies of the enterprise and (3) who are members of a minority, as such term is defined in subsection (a) of section 32-9n; and "good faith" means that degree of diligence which a reasonable person would exercise in the performance of legal duties and obligations. "Good faith efforts" shall include, but not be limited to, those reasonable initial efforts necessary to comply with statutory or regulatory requirements and additional or substituted efforts when it is determined that such initial efforts will not be sufficient to comply with such requirements.

(c) Determination of the contractor's good faith efforts shall include but shall not be limited to the

following factors: The contractor's employment and subcontracting policies, patterns and practices; affirmative advertising, recruitment and training; technical assistance activities and such other reasonable activities or efforts as the commission may prescribe that are designed to ensure the participation of minority business enterprises in public works projects.
(d) The contractor shall develop and maintain adequate documentation, in a manner prescribed by the commission, of its good faith efforts.
(e) The contractor shall include the provisions of subsection (a) of this section in every subcontract or purchase order entered into in order to fulfill any obligation of a contract with the state and such provisions shall be binding on a subcontractor, vendor or manufacturer unless exempted by regulations or orders of the commission. The contractor shall take such action with respect to any such subcontract or purchase order as the commission may direct as a means of enforcing such provisions including sanctions for noncompliance in accordance with section 46a-56; provided, if such contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the commission, the contractor may request the state of Connecticut to enter into any such litigation or negotiation prior thereto to protect the interests of the state and the state may so enter.

Sec. 4a-60a. Contracts of the state and political subdivisions, other than municipalities, to contain provisions re nondiscrimination on the basis of sexual orientation.
(a) Every contract to which the state or any political subdivision of the state other than a municipality is a party shall contain the following provisions: (1) The contractor agrees and warrants that in the performance of the contract such contractor will not discriminate or permit discrimination against any person or group of persons on the grounds of sexual orientation, in any manner prohibited by the laws of the United States or of the state of Connecticut, and that employees are treated when employed without regard to their sexual orientation; (2) the contractor agrees to provide each labor union or representative of workers with which such contractor has a collective bargaining agreement or other contract or understanding and each vendor with which such contractor has a contract or understanding, a notice to be provided by the Commission on Human Rights and Opportunities advising the labor union or workers' representative of the contractor's commitments under this section, and to post copies of the notice in conspicuous places available to employees and applicants for employment; (3) the contractor agrees to comply with each provision of this section and with each regulation or relevant order issued by said commission pursuant to section 46a-56; (4) the contractor agrees to provide the Commission on Human Rights and Opportunities with such information requested by the commission, and permit access to pertinent books, records and accounts, concerning the employment practices and procedures of the contractor which relate to the provisions of this section and section 46a-56.
(b) The contractor shall include the provisions of subsection (a) of this section in every subcontract or purchase order entered into in order to fulfill any obligation of a contract with the state and such provisions shall be binding on a subcontractor, vendor or manufacturer unless exempted by regulations or orders of the commission. The contractor shall take such action with respect to any such subcontract or purchase order as the commission may direct as a means of enforcing such provisions including sanctions for noncompliance in accordance with section 46a-56; provided, if such contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the commission, the contractor may

request the state of Connecticut to enter into any such litigation or negotiation prior thereto to protect the interests of the state and the state may so enter.

Executive Order No. Three

WHEREAS, sections 4-61d(b) and 4-114a of the 1969 supplement to the general statutes require nondiscrimination clauses in state contracts and subcontracts for construction on public buildings, other public works and goods and services, and

WHEREAS, section 4-61e(c) of the 1969 supplement to the general statutes requires the labor department to encourage and enforce compliance with this policy by both employers and labor unions, and to promote equal employment opportunities, and

WHEREAS, the government of this state recognizes the duty and desirability of its leadership in providing equal employment opportunity, by implementing these laws,

NOW, THEREFORE, I, THOMAS J. MESKILL, Governor of the State of Connecticut, acting by virtue of the authority vested in me under section twelve of article fourth of the constitution of the state, as supplemented by section 3-1 of the general statutes, do hereby ORDER and DIRECT, as follows, by this Executive Order:

I. The labor commissioner shall be responsible for the administration of this Order and shall adopt such regulations as he deems necessary and appropriate to achieve the purposes of this Order. Upon the promulgation of this Order, the commissioner of finance and control shall issue a directive forthwith to all state agencies, that henceforth all state contracts and subcontracts for construction on public buildings, other public works and goods and services shall contain a provision rendering such contract or subcontract subject to this Order, and that such contract or subcontract may be cancelled, terminated or suspended by the labor commissioner for violation of or noncompliance with this Order or state or federal laws concerning nondiscrimination, notwithstanding that the labor commissioner is not a party to such contract or subcontract.

II. Each contractor having a contract containing the provisions prescribed in section 4-114a of the 1969 supplement to the general statutes, shall file, and shall cause each of his subcontractors to file, compliance reports with the contracting agency or the labor commissioner, as may be directed. Such reports shall be filed within such times and shall contain such information as to employment policies and statistics of the contractor and each subcontractor, and shall be in such form as the labor commissioner may prescribe. Bidders or prospective contractors or subcontractors may be required to state whether they have participated in any previous contract subject to the provisions of this Order or any preceding similar Order, and in that event to submit on behalf of themselves and their proposed subcontractors compliance reports prior to or as an initial part of their bid or negotiation of a contract.

III. Whenever the contractor or subcontractor has a collective bargaining agreement or other contract or understanding with a labor organization or employment agency as defined in section 31-122 of the general statutes, the compliance report shall identify the said organization or agency and the contracting agency or the labor commissioner may require a compliance report to be filed with the contracting agency or the labor commissioner, as may be directed, by such organization or agency, signed by an authorized officer or agent of such organization or agency, with supporting information, to the effect that the signer's

practices and policies, including but not limited to matters concerning personnel, training, apprenticeship, membership, grievance and representation, and upgrading, do not discriminate on grounds of race, color, religious creed, age, sex or national origin, or ancestry of any individual, and that the signer will either affirmatively cooperate in the implementation of the policy and provisions of this Order, or that it consents and agrees that recruitment, employment and the terms and conditions of employment under the proposed contract shall be in accordance with the purposes and provisions of the Order.

IV. The labor commissioner may by regulation exempt certain classes of contracts, subcontracts or purchase orders from the implementation of this Order, for standard commercial supplies or raw materials, for less than specified amounts of money or numbers of workers or for subcontractors below a specified tier. The labor commissioner may also provide by regulation for the exemption of facilities of a contractor which are in all respects separate and distinct from activities of the contractor related to the performance of the state contract, provided only that such exemption will not interfere with or impede the implementation of this Order, and provided further, that in the absence of such an exemption, all facilities shall be covered by the provisions of this Order.

V. Each contracting agency shall be primarily responsible for obtaining compliance with the regulations of the labor commissioner with respect to contracts entered into by such agency or its contractors. All contracting agencies shall comply with the regulations of the labor commissioner in discharging their primary responsibility for securing compliance with the provisions of contracts and otherwise with the terms of this Order and of the regulations of the labor commissioner issued pursuant to this Order. They are directed to cooperate with the labor commissioner and to furnish the labor commissioner such information and assistance as he may require in the performance of his functions under this Order. They are further directed to appoint or designate from among the personnel of each agency, compliance officers, whose duty shall be to seek compliance with the objectives of this Order by conference, conciliation, mediation, or persuasion.

VI. The labor commissioner may investigate the employment practices and procedures of any state contractor or subcontractor and the practices and policies of any labor organization or employment agency hereinabove described, relating to employment under the state contract, as concerns nondiscrimination by such organization or agency as hereinabove described, or the labor commissioner may initiate such investigation by the appropriate contract agency, to determine whether or not the contractual provisions hereinabove specified or statutes of the state respecting them have been violated. Such investigation shall be conducted in accordance with the procedures established by the labor commissioner and the investigating agency shall report to the labor commissioner any action taken or recommended.

VII. The labor commissioner shall receive and investigate or cause to be investigated complaints by employees or prospective employees of a state contractor or subcontractor or members or applicants for membership or apprenticeship or training in a labor organization or employment agency hereinabove described, which allege discrimination contrary to the contractual provisions specified hereinabove or state statutes requiring

nondiscrimination in employment opportunity. If this investigation is conducted for the labor commissioner by a contracting agency, that agency shall report to the labor commissioner what action has been taken or is recommended with regard to such complaints.

VIII. The labor commissioner shall use his best efforts, directly and through contracting agencies, other interested federal, state and local agencies, contractors and all other available instrumentalities, including the commission on human rights and opportunities, the executive committee on human rights and opportunities, ad the apprenticeship council under its mandate to provide advice and counsel to the labor commissioner in providing equal employment opportunities to all apprentices and to provide training, employment and upgrading opportunities for disadvantages workers, in accordance with section 31-51(d) of the 1969 supplement to the general statutes, to cause any labor organization or any employment agency whose members are engaged in work under government contracts or referring workers or providing supervising apprenticeship or training for or in the course of work under a state contract or subcontract to cooperate in the implementation of the purposes of this Order. The labor commissioner shall in appropriate cases notify the commission on human rights and opportunities or other appropriate state or federal agencies whenever it has reason to believe that the practices of any such organization or agency violate equal employment opportunity requirements of state or federal law.

IX. The labor commissioner or any agency officer or employee in the executive branch designated by regulation of the labor commissioner may hold such hearings, public or private, as the labor commissioner may deem advisable for compliance, enforcement or educational purposes under this Order.

X. (a) The labor commissioner may hold or cause to be held hearings, prior to imposing ordering or recommending the imposition of penalties and sanctions under this Order. No order for disbarment of any contractor from further state contracts shall be made without affording the contractor an opportunity for a hearing. In accordance with such regulations as the labor commissioner may adopt, the commissioner or the appropriate contracting agency may

1. Publish or cause to be published the names of contractors or labor organizations or employment agencies as hereinabove described which it has concluded have complied or failed to comply with the provisions of this Order or the regulations of the labor commissioner in implementing this Order.

2. Recommend to the commission on human rights and opportunities that in cases in which there is substantial or material violation or threat thereof of the contractual provision or related state statutes concerned herein, appropriate proceedings be brought to enforce them, including proceedings by the commission on its own motion under chapter 563 of the general statutes and the enjoining, within the limitations of applicable law, of organizations, individuals or groups who prevent directly or indirectly compliance with the provisions of this Order.

3. Recommend that criminal proceedings be brought under chapter 939 of the general statutes.

4. Cancel, terminate, suspend or cause to be cancelled, terminated, or suspended in accordance with law any contract or any portion or portions thereof for failure of the contractor or subcontractor to comply with the nondiscrimination provisions of the contract. Contracts may be cancelled, terminated, suspended absolutely or their continuance conditioned upon a program for future compliance approved by the contracting agency.

5. Provide that any contracting agency shall refrain from entering into any further contracts or extensions or modifications of existing contracts with any contractor until he has satisfied the labor commissioner that he has established and will carry out personnel and employment policies compliant with this Order.

6. Under regulations prescribed by the labor commissioner each contracting agency shall make reasonable efforts with a reasonable period of time to secure compliance with the contract provisions of this Order by methods of conference, conciliation, mediation or persuasion, before other proceedings shall be instituted under this Order or before a state contract shall be cancelled or terminated in whole or in part for failure of the contractor or subcontractor to comply with the contract provisions of state statute and this Order.

(b) Any contracting agency taking any action authorized by this Order, whether on its own motion or as directed by the labor commissioner or pursuant to his regulations shall promptly notify him of such action. Whenever the labor commissioner makes a determination under this Order, he shall promptly notify the appropriate contracting agency and other interested federal, state and local agencies of the action recommended. The state and local agency or agencies shall take such action and shall report the results thereof to the labor commissioner within such time as he shall specify.

XI. If the labor commissioner shall so direct, contracting agencies shall not enter into contracts with any bidder or prospective contractor unless he has satisfactorily complied with the provisions of this Order, or submits a program for compliance acceptable to the labor commissioner, or if the labor commissioner so authorizes, to the contracting agency.

XII. Whenever a contracting agency cancels or terminates a contract, or a contractor has been disbarred from further government contracts because of noncompliance with the contract provisions with regard to nondiscrimination, the labor commissioner or the contracting agency shall rescind such disbarment, upon the satisfaction of the labor commissioner that the contractor has purged himself of such noncompliance and will thenceforth carry out personnel and employment policies of nondiscrimination in compliance with the provision of this Order.

XIII. The labor commissioner may delegate to any officer; agency or employee in the executive branch any function or duty of the labor commissioner under this Order except authority to promulgate regulations of a general nature.

XIV. This Executive Order supplements the Executive Order issued on September 28, 1967. All regulations, orders, instructions, designations and other directives issued heretofore in these premises, including those issued by the heads of various departments or agencies under or pursuant to prior order or statute, shall remain in full force and effect, unless and until revoked or superceded by appropriate authority, to the extent that they are not inconsistent with this Order.

Dated at Hartford, Connecticut, this 16th day of June, 1971.

Thomas J. Meskill, Governor

Executive Order No. Seventeen

WHEREAS, Section 31-237 of the General Statutes of Connecticut as amended requires the maintaining of the established free services of the Connecticut State Employment Service to both employers and prospective employees and

WHEREAS, Section 31-5 of the General Statutes of Connecticut requires that no compensation or fee shall be charged or received directly or indirectly for the services of the Connecticut State Employment Service and

WHEREAS, large numbers of our citizens who have served in the Armed Forces of our nation are returning to civilian life in our state and seeking employment in civilian occupations and

WHEREAS, we owe a duty as well as gratitude to these returning veterans including the duty to find suitable employment for them and

WHEREAS, many of our handicapped citizens are fully capable of employment and are entitled to be placed in suitable employment and

WHEREAS, many of the citizens of our state who are unemployed are unaware of the job openings and employment opportunities which do in fact exist in our state and

WHEREAS, notwithstanding the free services of the Connecticut State Employment Service, many of our Connecticut employers do not use its free services or do not avail themselves fully of all the services offered,

NOW, THEREFORE, I, THOMAS J. MESKILL, Governor of the State of Connecticut, acting by virtue of the authority vested in me under the fourth article of the Constitution of the State and in accordance with Section 3-1 of the General Statutes, do hereby ORDER and direct, as follows, by this Executive Order:

I. The Labor Commissioner shall be responsible for the administration of this Order and shall do all acts necessary and appropriate to achieve its purpose. Upon promulgation of this Order, the Commissioner of Finance and Control shall issue a directive forthwith to all state agencies, that henceforth all state contracts and subcontracts for construction on public buildings, other public works and goods and services shall contain a provision rendering such contract or subcontract subject to this Order, and that such contract or

subcontract may be cancelled, terminated or suspended by the Labor Commissioner for violation of or noncompliance with this Order, notwithstanding that the Labor Commissioner is not a party to such contract or subcontract.

II. Every contractor and subcontractor having a contract with the state or any of its agencies, boards, commissions, or departments, every individual partnership, corporation, or business entity having business with the state or who or which seeks to do business with the state, and every bidder or prospective bidder who submits a bid or replies to an invitation to bid on any state contract shall list all employment openings with the office of the Connecticut State Employment Service in the area where the work is to be performed or where the services are to be rendered.

III. All state contracts shall contain a clause which shall be a condition of the contract that the contractor and any subcontractor holding a contract directly under the contractor shall list al employment openings with the Connecticut State Employment Service. The Labor Commissioner may allow exceptions to listings of employment openings which the contractor proposes to fill from within its organization from employees on the rolls of the contractor on the date of publication of the invitation to bid or the date on which the public announcement was published or promulgated advising of the Program concerned.

IV. Each contracting agency of the state shall be primarily responsible for obtaining compliance with this Executive Order. Each contracting agency shall appoint or designate from among its personnel one or more persons who shall be responsible for compliance with the objectives of this Order.

V. The Labor Commissioner shall be and is hereby empowered to inspect the books, records, payroll and personnel data of each individual or business entity subject to this Executive Order and may hold hearings or conferences, formal or informal, in pursuance of the duties and responsibilities hereunto delegated to the Labor Commissioner.

VI. The Labor Commissioner or any agency officer or employee in the executive branch designated by regulation of the Labor Commissioner may hold such hearings, public or private, as the Labor Commissioner may deem advisable for compliance, enforcement or educational purposes under this Order.

VII. (a) The Labor Commissioner may hold or cause to be held hearings, prior to imposing, ordering, or recommending the imposition of penalties and sanctions under this Order. In accordance herewith, the Commissioner or the appropriate contracting agency may suspend, cancel, terminate, or cause to be suspended, cancelled, or terminated in accordance with law any contract or portion or portions thereof for failure of the contractor or subcontractor to comply with the listing provisions of the contract. Contracts may be cancelled, terminated, suspended absolutely or their continuance conditioned upon a program for future compliance approved by the contracting agency.

(b) Any contracting agency taking any action authorized by this Order, whether on its own motion or as directed by the Labor Commissioner, shall promptly notify him of such action. Whenever the Labor Commissioner makes a determination under this Order, he

shall promptly notify the appropriate contracting agency of the action recommended. The agency shall report the results to the Labor Commissioner promptly.

VIII. If the Labor Commissioner shall so direct, contracting agencies shall not enter into contracts with any bidder or prospective contractor unless he has satisfactorily complied with the provisions of this Order.

Dated at Hartford, Connecticut, this 15th day of February 1973.

Thomas J. Meskill, Governor

Executive Order No. Sixteen

WHEREAS, the State of Connecticut recognizes that workplace violence is a growing problem that must be addressed; and

WHEREAS, the State is committed to providing its employees a reasonably safe and healthy working environment, free from intimidation, harassment, threats, and/or violent acts; and

WHEREAS, violence or the threat of violence by or against any employee of the State of Connecticut or member of the public in the workplace is unacceptable and will subject the perpetrator to serious disciplinary action up to and including discharge and criminal penalties.

NOW, THEREFORE, I, John G. Rowland, Governor of the State of Connecticut, acting by virtue of the authority vested in me by the Constitution and by the statutes of this state, do hereby ORDER and DIRECT:

1. That all state agency personnel, contractors, subcontractors, and vendors comply with the following **Violence in the Workplace Prevention Policy**:

   The State of Connecticut adopts a statewide zero tolerance policy for workplace violence.

   Therefore, except as may be required as a condition of employment:

   - No employee shall bring into any state worksite any weapon or dangerous instrument as defined herein.
   - No employee shall use, attempt to use, or threaten to use any such weapon or dangerous instrument in a state worksite.
   - No employee shall cause or threaten to cause death or physical injury to any individual in a state worksite.

   Weapon means any firearm, including a BB gun, whether loaded or unloaded, any knife (excluding a small pen or pocket knife), including a switchblade or other knife having an automatic spring release device, a stiletto, any police baton or nightstick or any martial arts weapon or electronic defense weapon.

   Dangerous instrument means any instrument, article, or substance that, under the circumstances, is capable of causing death or serious physical injury.

   Violation of the above reasonable work rules shall subject the employee to disciplinary action up to and including discharge.
2. That each agency must prominently post this policy and that all managers and supervisors must clearly communicate this policy to all state employees.
3. That all managers and supervisors are expected to enforce this policy fairly and uniformly.
4. That any employee who feels subjected to or witnesses violent, threatening, harassing, or intimidating behavior in the workplace immediately report the incident or statement to their supervisor, manager, or human resources office.

5. That any employee who believes that there is a serious threat to their safety or the safety of others that requires immediate attention notify proper law enforcement authorities and his or her manager or supervisor.
6. That any manager or supervisor receiving such a report shall immediately contact their human resources office to evaluate, investigate and take appropriate action.
7. That all parties must cooperate fully when questioned regarding violations of this policy.
8. That all parties be advised that any weapon or dangerous instrument at the worksite will be confiscated and that there is no reasonable expectation of privacy with respect to such items in the workplace.
9. That this order applies to all state employees in the executive branch.
10. That each agency will monitor the effective implementation of this policy.
11. That this order shall take effect immediately.

Dated at Hartford, Connecticut this 4th day of August 1999.

John G. Rowland, Governor

Executive Order Number 7C

This Contract is subject to **Executive Order No. 7C of Governor M. Jodi Rell, promulgated on July 13, 2006.** The Parties to this Contract, as part of the consideration hereof, agree that:

a. The State Contracting Standards Board ("Board") may review this contract and recommend to the state contracting agency termination of this contract for cause. The State contracting agency shall consider the recommendations and act as required or permitted in accordance with the contract and applicable law. The Board shall provide the results of its review, together with its recommendations, to the state contracting agency and any other affected party in accordance with the notice provisions in the contract not later than fifteen (15) days after the Board finalizes its recommendation. For the purposes of this Section, "for cause" means:

(1) a violation of the State Ethics Code (Chapter 10 of the general statutes) or section 4a-100 of the general statutes or

(2) wanton or reckless disregard of any state contracting and procurement process by any person substantially involved in such contract or state contracting agency.

b. For purposes of this Section, "contract" shall not include real property transactions involving less than a fee simple interest or financial assistance comprised of state or federal funds, the form of which may include

but is not limited to grants, loans, loan guarantees, and participation interests in loans, equity investments and tax credit programs. Notwithstanding the foregoing, the Board shall not have any authority to recommend the termination of a contract for the sale or purchase of a fee simple interest in real property following transfer of title.

c. Notwithstanding the contract value listed in sections 4-250 and 4-252 of the Connecticut General Statutes and section 8 of Executive Order Number 1, all State Contracts between state agencies and private entities with a value of $50,000 (fifty thousand dollars) or more in a calendar or fiscal year shall comply with the gift and campaign contribution certification requirements of section 4-252 of the
Connecticut General Statutes and section 8 of Executive Order Number 1. For purposes of this section, the term "certification" shall include the campaign contribution and annual gift affidavits required by section 8 of Executive Order Number 1.

Dated at Hartford, Connecticut this 13th day of July 2006

M. Jodi Rell, Governor

AFFILIATION AGREEMENT

This Affiliation Agreement is entered into on the 22nd day of December, 2003, by and between **The Waterbury Hospital** ("WH" or "Waterbury Hospital") and **St. Mary's Hospital** ("SMH" or "St. Mary's Hospital") and collectively, "hospitals" or "parties".

RECITALS

WHEREAS, WH and SMH intend to establish a joint percutaneous coronary intervention ("PCI") and open heart surgery program ("Program"); and

WHEREAS, the Program would be provided by a two-site program utilizing existing cath lab capacity and cardiac operating rooms to be constructed at St. Mary's Hospital and Waterbury Hospital; and

WHEREAS, the University of Connecticut Health Center is an academic health center that incorporates the School of Medicine ("SOM"), its faculty practice plan UConn Medical Group ("UMG"), and an acute care general hospital John Dempsey Hospital (JDH); and

WHEREAS, JDH and UMG are existing providers of a full array of cardiology and cardiothoracic services; and

WHEREAS, Cardiothoracic Surgical Associates, LLC ("CCSA") surgeons are members of the faculty of SOM; and

WHEREAS, the University of Connecticut Health Center and CCSA have agreed to provide services to the Program in Waterbury and to become members of the advisory board established in connection with the Program ("Advisory Board"); and

WHEREAS, St. Mary's Hospital and Waterbury Hospital shall establish the Waterbury Area Heart Center, Inc. ("WAHC"), a non-stock corporation which will be separately organized and which shall serve as a management services organization to oversee the joint heart program providing programmatic, quality, training, marketing and community wellness coordination; and

WHEREAS, St. Mary's Hospital, Waterbury Hospital and University of Connecticut Health Center administration, together with clinical leaders and physicians, will constitute the members of an Advisory Board which provides strategic direction to WAHC; and

WHEREAS, the sole members of the Waterbury Area Heart Center, Inc. shall be St. Mary's Hospital and Waterbury Hospital; and

WHEREAS, cardiac surgery will be provided by physicians of CCSA, or UMG as the case may be, who are credentialed at JDH and also credentialed at St. Mary's Hospital and Waterbury Hospital; and

WHEREAS, JDH shall provide or arrange for the provision of perfusion services; and

WHEREAS, all of the parties acknowledge that no later than December 23, 2003, St. Mary's Hospital and Waterbury Hospital will submit a Certificate of Need Application concerning the Program and including in the application a description of the services to be provided by the University of Connecticut Health Center and CCSA with respect to the Program which will be detailed in a Memorandum of Understanding with the University of Connecticut Health Center ("UConn MOU"); and

WHEREAS, the parties wish to clearly set forth the responsibilities of WH and SMH in this affiliation and in their operation of the Program;

NOW, THEREFORE, in consideration of the mutual promises, covenants and agreements contained herein, receipt of which is hereby acknowledged, the parties agree as follows:

1. Program To Be Established

Contemporaneously with the signing of this Agreement, WH and SMH are signing a Certificate of Need Application which seeks the approval by the Office of Health Care Access ("OHCA") of two sites utilizing existing cath lab capacity and cardiac operating rooms to be constructed at each of WH and SMH. The parties have established Waterbury Area Heart Center, Inc. ("WAHC") as part of this affiliation for the Program of which WH and SMH shall be the sole members. The members shall operate WAHC in accordance with its Certificate of Incorporation, By-Laws and a Members' Agreement signed by the parties of even date ("WAHC Organizational Agreements"). WH and SMH, as part of the establishment of WAHC, have also established an Advisory Board consisting of representatives of WH, SMH and University of Connecticut Health Center and CCSA. The organizational structure of WAHC is identified on the chart attached as **Schedule A**. WAHC shall serve as a management services organization with respect to the Program and work with the three hospitals and their medical staffs and oversee the effective and efficient cardiac service line operations, marketing and community wellness outreach. The Program is more fully described in the CON Application submitted by WH and SMH as part of OHCA document 03-3016. The Program will operate under the joint CON being sought by WH and SMH.

2. Employment by WAHC

WAHC shall hire approximate level of staffing who will receive direction from WH and SMH jointly as the sole members of WAHC in accordance with the WAHC Organizational Agreements. It is expected that WAHC will have additional

employees to provide, among other things, programmatic, quality, training, marketing, and community wellness coordination.

3. **Medical Management**

Each of WH and SMH shall be responsible for the management of all activities pertaining to the Program conducted within their respective hospitals. Neither hospital assumes any responsibility for the performance of services at the other hospital. Through WAHC, each hospital agrees to participate in a joint and ongoing program to monitor and evaluate the quality, patient selection criteria, and appropriateness of services provided under the Program. The hospitals have committed their best efforts to that end in establishing WAHC.

4. **UConn MOU**

The parties, together with WAHC, as part of the Program, will engage the services of University of Connecticut Health Center to provide clinical oversight for the Program pursuant to the terms and conditions of the UConn MOU attached as **Schedule B**.

5. **Privileges**

Only physicians credentialed by WH and SMH, in addition to any other credentialing as may be required by the UConn MOU, shall provide medical and surgical services for patients of the Program as conducted at each site of WH and SMH. Such credentials shall be sufficient to permit the physicians to provide clinical services as part of the Program at WH and SMH.

This Agreement does not confer privileges on any physician. The parties agree that the grant, renewal or any other action with respect to privileges is vested in the governing bodies of, and governed by the credentialing process in effect from time to time at each of WH and SMH. The parties, while reserving to each its autonomy and credentialing responsibility, agree to confer as needed to ensure that the lack of privileges at either hospital will not become a factor in the choice of hospital setting for patients of the Program.

6. **Selection of Site of Surgery**

Both hospitals recognize and affirm a cardinal principal which is that nothing in this Agreement requires any patient to receive services from the Program at, or to be referred either to or from, either WH or SMH. The choice of site is and will remain with the patient and the patient's personal physician.

7. **Ownership of Equipment and Facilities and Supplies**

WH and SMH shall provide WAHC with the resources necessary to conduct its business of the Program. Each hospital shall be solely responsible for providing and maintaining all equipment, facilities and supplies needed in connection with the Program at their respective facilities.

8. **Employment by WH and SMH**

Each of WH and SMH shall be responsible for the employment, discipline, and compensation of any and all of their respective employees or contractors who may be involved from time to time in providing services to the Program at their respective hospitals.

9. **Insurance Coverage**

Each of WH and SMH agree that, for its own employees, and at its own cost and expense, they will procure and continue in force, throughout the term of this Agreement, adequate insurance in amount and scope for any and all claims for injuries to persons and property as each of them deems necessary or adequate. WH and SMH shall arrange for appropriate insurances with respect to WAHC from resources provided by them to WAHC. Each party shall furnish the other party with customary insurance certificates evidencing the insurance required in this paragraph 9. Each party shall provide at least 30 days prior written notice to the other with respect to the cancellation or termination of the insurance required in this paragraph 9.

10. **Prior Approval of Public Materials**

No advertisement or other publicly distributed materials which mentions any party to this Agreement in the context of the Program will be used without the prior consent of all parties to this Agreement prior to its public announcement. No public announcement regarding this Agreement shall be made unless the Parties have mutually agreed on the content and timing of such announcement. The Parties recognize, however, that the substance of this Agreement and the UConn MOU will, in fact, be disclosed to the Office of Health Care Access as part of the CON Application in connection with the Program.

11. **Special Needs of the Program**

Each of WH and SMH agrees that the Program requires ancillary and support services. Each of WH and SMH agrees to provide, either on site or under contract, adequate ancillary and support services for the Program at each hospital's expense.

12. Billing and Collection

Each hospital shall be responsible for all billing and collection activities in connection with services under the Program performed within each hospital. In the event that any future law, rule or regulation ("Requirement") requires that either of WH or SMH bills for services involved with the Program differently than initially understood or agreed upon, the parties agree to comply with such requirement, with all unaffected provisions of this Agreement remaining in effect. In no event shall either hospital bill for or accept payment with respect to the surgical services provided by any cardiac-surgeon providing physician services to or on behalf of a patient. Payment for physician services of any type is expressly excluded from this Agreement.

13. Term

Subject to the further provisions of this Paragraph 13, this Agreement shall be effective from the date hereof for a period of six (6) years ("Initial Term"). The Initial Term shall be renewed by two additional five (5) year terms unless either of the parties provides notice to the other party of its intention not to renew by a written notice at least one (1) year prior to the end of the Initial Term or the first renewal term. The Initial Term and any renewals is referred to collectively as "Term."

14. Covenants of Hospital

Each hospital will:

Perform all renovations deemed by it to be necessary to provide facilities appropriate for the care of patients undergoing PCI or open-heart surgery, at a cost which is in accordance with the CON approval. In addition, each hospital will furnish all other necessary hospital facilities, furniture, equipment, supplies, support services, security services, housekeeping services, and inpatient services, including diagnostic services, to patients of the Program. Each hospital will maintain all such supplies, equipment, facilities and furniture in good order and at levels and at quality standards consistent with the requirements of the Program.

Provide, either on site or under arrangement, for ancillary services to the extent required to meet the needs of the Program, including, but not limited to, radiology, laboratory, angiography and cardiac catheterization.

15. Governmental Action

This Agreement is subject to and subordinate to the requirements of any governmental agency having jurisdiction. WH and SMH shall fully consult with each other with respect to all such approval processes. Notwithstanding any other provision of this Agreement, in the event that any governmental agency, or private entity acting on behalf of or under contract with any governmental agency, having jurisdiction , including OHCA, takes any other action inconsistent with the terms of this Agreement or the

intended operation and effect hereof, the party affected shall have the right, after consultations with the other parties, to suggest a modification of any of the terms of this Agreement to the extent and in the manner reasonably necessary or desirable to accommodate such governmental action. The other party shall be afforded an opportunity to contest any governmental action which might result in a modification of this Agreement.

In any such event, written notice of any such proposed modification shall be given not less than thirty (30) days prior to the proposed effective date of the modification. The proposed modification shall be conclusively binding on both parties if accepted by the other party. If either party rejects the proposed modification by written notice delivered to the other party prior to the proposed effective date contained in such notice, the proposed modification shall not be binding on the parties. If the parties cannot agree on a modification within thirty (30) days from the date of receipt of the written rejection of the proposed modification, this Agreement may be terminated by either party upon thirty (30) days further notice.

16. Relationship of the Parties

Except as required by this Affiliation Agreement per the WAHC Organizational Agreements, WH and SMH are independent contractors and nothing in this Agreement shall be construed as creating a joint venture, partnership or agency relationship between the parties. In furtherance of this intent, each party agrees that it shall not in its advertisements, correspondence, professional listings, stationary or other public representation state that the other party is its partner or agent, or that the other party constitutes a unit of the party making the representation.

The parties further agree that any publicly distributed materials which are reasonably susceptible of creating the inference that any agency, partnership, or other affiliation exists, will be submitted to the other party for its approval prior to its publication. No advertisement or other publicly distributed materials which mentions such other party will be used without the prior consent of the party referenced in such public pronouncement, which consent shall not be unreasonably withheld.

Nothing in this Agreement shall prevent WH or SMH from recognizing each other as affiliated institutions for the purposes of the Program. Each party, however, covenants and agrees that it will not use the name of the other party without having first obtained the prior consent of the other party.

17. Termination

This Agreement may be terminated at any time by the parties upon the mutual agreement of all of the parties. WH and SMH may terminate this Agreement for cause as to the other party by giving the other party ninety (90) days' (hereinafter "cure period") written notice identifying the breach of this Agreement and providing an opportunity to cure such breach. If the said breach is not cured within the cure period,

this Agreement shall automatically terminate, without need for further notice. For purposes of this paragraph, "for cause" shall mean the following:

a. A decision during the term of this Agreement, by WH and SMH to discontinue the Program.

b. Changes which affect this Agreement in the rules or regulations adopted by Medicare, Medicaid or any other third-party payor which has contractual agreements with the parties.

c. Material breach by WH or SMH of any of their respective obligations under this Agreement.

This Agreement may not be terminated other than for cause, or as otherwise permitted by this Agreement and the attempt by either hospital to do so, if that attempt shall cause an actual or threatened default in the performance of its obligations hereunder, shall render the hospital so attempting to terminate this Agreement to be in default of its obligations hereunder.

18. **Further Covenants of WH and SMH**

The hospitals agree that it is intended that the Program which provides PCI and open heart surgery will be offered exclusively at the two hospitals as proposed in the CON Application. Accordingly, unless the parties mutually agree in writing otherwise, each hospital covenants that during the Term of this Agreement, and any renewal thereof, and for a period of two (2) years following the termination of this Agreement, whether for cause, not for cause, or upon non renewal, the hospitals, and any subsidiaries, parent or sister corporations of the hospitals, will not within the service area identified in the CON Application directly or indirectly establish, maintain, operate, engage in, affiliate with, invest in, provide services to, or support or assist in any manner in a program with any other hospital for any services included in the Program defined by the CON Application.

Each of WH and SMH covenants that during the term of this Agreement or any renewal thereof, and for a period of two (2) years following the termination of this Agreement, whether for cause, not for cause, or upon non renewal, neither of WH or SMH will apply for or obtain a Certificate of Need for the conduct of open heart surgery or PCI at their respective hospitals, or, if the Certificate of Need program is no longer in effect at such time, it will not institute or conduct PCI or open heart surgery at their respective hospitals.

Each of WH and SMH agrees that, in the conduct of its own affairs, it will support the business and objectives of the Program, and it will refrain from taking any action that is likely to materially impair, or adversely affect, the Program's business or the accomplishment of its objectives.

Each of WH and SMH hereby acknowledges and agrees that, in light of the substantial financial investment in the Program and its related activities that will be required from each of them and the length of time that reasonably will be required to establish the Program as a provider of high quality medical care to the service area defined in the CON Application, the duration and scope of the restrictive covenants set forth in this Agreement are reasonable under the circumstances and are material terms of this Agreement, and they acknowledge that they have each relied on these restrictive covenants in entering into this Agreement. If any provision of Paragraph 18 is held or deemed to be invalid or unenforceable, in whole or in part, for any reason, including without limitation, the geographic or business scope or the duration thereof, by a court or administrative body of competent jurisdiction, then: (i) such provision shall be construed in such a way, and/or limited in scope and duration, so as to be valid and enforceable to the maximum extent deemed permissible by the court or administrative body; (ii) such provision, to the extent of such invalidity or unenforceability, shall be deemed ineffective and severable from the remainder of this Agreement; and (iii) all other provisions of this Agreement shall continue to be valid and enforceable.

Each of WH and SMH acknowledges and agrees that a breach or attempted or threatened breach by it of any provision of Paragraph 18 would cause the other irreparable injury not compensable in money damages. Therefore, each of WH and SMH agrees that, in addition to any other rights and remedies either party may have in the event of any such breach or attempted or threatened breach, the other party shall be entitled to obtain temporary and permanent injunctive relief against the other and a decree for specific performance of the provisions of Paragraph 18, without being required to prove damages or furnish any bond or other security. Resort by any party to equitable relief shall not be construed as a waiver by that party of any other rights or remedies it may have for damages or otherwise.

19. Medical Records

Each hospital agrees that medical records for patients of the Program shall be maintained at the hospital which provided services hereunder to the patient, and shall be maintained in accordance with the laws of the State of Connecticut and the hospital's procedures established in accordance therewith.

20. Condition Precedent and Covenant

Each hospital agrees that a condition precedent to the effectiveness and enforceability of this Agreement is the receipt from OHCA of a final Certificate of Need authorizing the Program, either without conditions or with such conditions as are mutually acceptable to both hospitals. Each of WH and SMH covenants to use its best efforts to obtain the CON from OHCA to satisfy this condition precedent. Each of WH and SMH agree that the development of the Program shall not go forward unless and until all regulatory approvals necessary for the joint development and operation of the Program are received by SMH, WH and any other party involved in the development of the Program with the result that each of SMH and WH are able to provide comprehensive

cardiac services, including cardiac surgery and PCI at each of their campuses as part of their plans for a long-term strategic collaboration involving cardiac surgery, PCI and other comprehensive heart care services for the patients in the Greater Waterbury Area.

21. **Legal Constraints**

The parties recognize that their efforts to develop the Program as described in this Agreement will be constrained by various legal requirements. The parties recognize that the Program will be structured and any activities undertaken pursuant to this Agreement will be carried out so as to assure that at all times no federal or state statute, rules or regulations are violated.

22. **Business Associate Agreement**

Prior to the Effective Date, the parties will execute HIPAA related Business Associate Agreements in the forms mutually agreed upon.

23. **Miscellaneous Provisions**

This Agreement shall be governed by and construed, interpreted, and enforced in accordance with the laws of the State of Connecticut.

Except to the extent that any other agreement may be implemented in accordance with the terms herein, or referenced herein, this Agreement constitutes the entire agreement between the parties hereto and supercedes all prior agreements and understandings, both written and oral, between the parties. No amendment or modification of this Agreement shall be valid or binding unless reduced to writing and executed by the parties.

No waiver by either party of any breach by the other of any of the terms, agreements, covenants or conditions of this Agreement, or acceptance of payment with respect to any of the services provided herein, shall be deemed to constitute a waiver of any succeeding breach or a waiver of any breach of any of the other terms, covenants, agreements and conditions herein contained.

Each of the parties hereto binds itself and its successors, administrators, assigns and legal representatives to the other party to this Agreement and to its successors, administrators and assigns.

Any notice required or permitted to be given by the parties hereto shall be given in writing and unless otherwise required under this Agreement, shall be sufficiently given or made if delivered personally to the person named below or mailed to such person by certified mail, return receipt requested, at the address set forth below. Any such mail notice shall be deemed to have been given on the second business day following the date of deposit in the United States mail. Any party may change the person

who is to receive notice under this Agreement in accordance with the provisions of this Section.

If to WH:	John H. Tobin, President 64 Robbins Street Waterbury, CT 06721
If to SMH:	Robert Ritz, President 56 Franklin Street Waterbury, CT 06706

Neither party shall have the right to sell, transfer or assign ("transfer") this Agreement directly, by operation of law or otherwise, without the prior written consent of the other. Any consent to any particular transfer shall not constitute consent to any other transfer.

The captions in this Agreement are solely for the purpose of identification and shall not, in any manner, alter or vary the interpretation or construction of this Agreement.

This Agreement may be executed in any number of counterparts, each of which shall be an original and all of which together shall constitute the same agreement. It shall not be necessary for both parties to this agreement to have signed the same counterpart, provided that both parties have signed at least one counterpart.

Until the expiration of four (4) years after the furnishing of services pursuant to this Agreement, either hospital shall make available, upon request by the Secretary of Health and Human Services ("Secretary") or the Comptroller General, or any of their duly authorized representatives, this Agreement, and any books, documents and/or records of such hospital that are necessary to certify the nature and extent of the cost claimed to Medicare with respect to the services provided under this Agreement.

If either hospital carries out any of the duties of this Agreement through a subcontract, with a value or cost of Ten Thousand and No/100 Dollars ($10,000.00) or more over a twelve-month (12) period, with a related organization, as that term is defined by applicable regulations the Secretary, until the expiration of four (4) years after the furnishing of such services pursuant to such subcontract, such hospital shall cause the regulated organizations to make available, upon written request by the Secretary or the Comptroller General, or any of their duly authorized representatives, the subcontract, and any books, documents and/or records of such related organization that are necessary to verify the nature and extent of the costs claimed to Medicare with respect to the services provided under this Agreement.

If any part of this Agreement should be held to be void or unenforceable, such part will be treated as severable, leaving valid the remainder of this Agreement notwithstanding the part or parts found void or unenforceable.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be executed by their duly authorized officers and the respective corporate seals to be hereunto fixed, with the intent that this instrument is an instrument made under seal, on the date first above written.

AGREEMENT BETWEEN THE UNIVERSITY OF CONNECTICUT HEALTH CENTER FINANCE CORPORATION AND HEART CENTER OF GREATER WATERBURY

THIS AGREEMENT is by and between the Heart Center of Greater Waterbury ("Center"), Saint Mary's Hospital ("SMH") and Waterbury Hospital ("WH") (collectively, the "Hospitals") and the University of Connecticut Health Center Finance Corporation on behalf of John Dempsey Hospital ("JDH").

WHEREAS, the Hospitals are acute care hospitals; and

WHEREAS, the Hospitals require the services of qualified perfusionists ("PERFUSIONISTS") for their open heart surgery program ("Program"); and

WHEREAS, JDH is able to provide those services; and

WHEREAS, the parties seek to provide for the delivery of high quality services to patients; and

WHEREAS, each party is properly authorized to enter into this Agreement.

NOW THEREFORE, in consideration of the premises and the mutual covenants herein contained, the parties agree as follows:

1. Duties of JDH.

1.1. JDH shall maintain a Department of Perfusion ("DEPARTMENT") to service St. Mary's, Waterbury and John Dempsey Hospitals. JDH shall be the exclusive provider of said services unless otherwise agreed in writing by the PARTIES.

1.2. JDH shall supply administrative service for the DEPARTMENT including but not limited to:

- 1.2.1. Employ or otherwise engage a team of PERFUSIONISTS (minimum 5.0 FTEs including Perfusion Chief)
- 1.2.2. Administer all personnel functions
- 1.2.3. Associate Vice President of Operations of JDH will oversee the department

1.3. JDH shall assemble a team of PERFUSIONISTS who will be scheduled such that a PERFUSIONIST is available for all scheduled cases and for coverage of urgent and emergent cases 24 hours per day/365 days per year. The on-call PERFUSIONIST must maintain a response time of no more than thirty (30) minutes from the time of call to arrival at the Hospitals' cardiovascular operating suites.

1.4. In the performance of duties in association with the Hospitals, each PERFUSIONIST shall:

1.4.1. Be duly certified by the American Board of Cardiovascular Perfusion; attain and maintain licensure if/as required by the State of Connecticut

1.4.2. Attain and maintain privileges at the Hospitals in accordance with the Hospitals' Medical Staff By-laws

1.4.3. Comply with all laws, ordinances, rules, regulations and orders of all governmental authorities having jurisdiction in the premises which are applicable to the conduct of PERFUSIONISTS.

1.4.4. Cooperate with the Hospitals in the maintenance of adequate records relating to the provision of services, in such form and containing such information as are required by the Hospitals and applicable law. The Hospitals shall each have sole ownership and authority for records.

1.4.5. Cooperate with the Hospitals in documentation necessary to permit the Hospitals to render bills for services.

1.4.6. Upon request and under the supervision of either the primary surgeon or treating physician, PERFUSIONISTS shall furnish the following services:

1.4.6.1. Administer through the extra-corporeal circuit blood and blood products, anesthetic agents, and drugs;

1.4.6.2. Perform the initial set up and timing of an intra-aortic balloon pump;

1.4.6.3. Operate blood salvage system during cardiac cases;

1.4.6.4. Remain on the Hospitals' facilities for follow-up care until released by the primary surgeon or treating physician.

1.4.7. Comply with all policies, procedures, and/or standards of the Hospitals set forth in writing by the Hospitals, as they may exist from time to time, all applicable state, federal and local laws, rules and regulations, and the standards of the Joint Commission on Accreditation of Healthcare Organizations ("JCAHO").

1.4.8. While at the Hospitals, accept administrative and coordinative direction from the Hospitals' director of surgical services

1.5. JDH shall identify a Perfusion Chief who will be responsible to:

1.5.1. Develop and manage PERFUSIONISTS schedule and assignment

1.5.2. Manage the perfusion service

1.5.3. Participate and cooperate with designated Hospital representatives in program operations including but not limited to:

1.5.3.1. developing policies, procedures, protocols and standards as appropriate for the perfusion services

1.5.3.2. participating and coordinate equipment purchase, maintenance, and repair

1.5.3.3. participating in perfusion supply management

1.5.3.4. developing a quality management and quality improvement program for the perfusion service

1.5.3.5. preparing for licensure and accreditation visits/reviews

1.5.3.6. participating in capital and operating budget process

1.5.3.7. being available at reasonable mutually agreeable times, at no additional charge to the Hospitals, for providing

training and education of the Hospitals' staff and employees

1.5.4. Participate and cooperate with designated hospital representatives in quality management including but not limited to

1.5.4.1.1. conducting quality assurance and risk management review

1.5.4.1.2. conducting focused quality reviews

1.5.4.1.3. collecting and recording operative data for STS Adult Cardiac Surgery Database

1.5.4.1.4. identifying and conduct continuous quality improvement initiatives

1.5.4.1.5. submitting information upon request to the Hospitals' Quality Assurance Committees.

1.6. JDH shall establish a mechanism for reasonable input of the Hospitals in individual PERFUSIONIST assignment, performance review and disciplinary action, which shall include an ability on the part of the Hospitals to request a replacement for a PERFUSIONIST for legitimate reasons.

1.7. JDH shall provide to PERFUSIONISTS adequate information to fulfill their obligations under the terms of this Agreement.

2. Duties of Saint Mary's Hospital, Waterbury Hospital.

2.1. The Hospitals shall furnish all facilities and services reasonably required to support the provision of services, including but not limited to:

2.1.1. space, equipment and supplies;

2.1.2. technical and administrative support.

2.2. The Hospitals shall comply with all laws, ordinances, rules, regulations, and orders of all governmental authorities having jurisdiction in the premises.

2.3. The Hospitals agree to provide to JDH information as may reasonably be required to assess performance of PERFUSIONISTS.

2.4. The Hospitals shall not release to any third party information related to the performance of PERFUSIONISTS hereunder except with the express written permission of JDH.

3. Compensation.

3.1. The Hospitals each agree to pay and JDH agrees to accept as compensation in full for services hereunder during the period July 1, 2008 through June 30, 2009, $2,208 per case. A 3.5% increase would be applied to each subsequent year for 2 or 3 years if an option to renew the Agreement is executed.

3.2. JDH will prepare monthly invoices. SMH and WH shall each pay JDH within sixty (60) days of invoice.

3.3. The parties acknowledge and agree that the compensation set forth herein represents the fair market value of the services provided to the Hospitals by JDH, and has been negotiated in an arm's length transaction and has not been determined in a manner which takes into account the volume or value of referrals or business that may otherwise be generated between the parties.

4. Relationship of Parties.

4.1. The relationship among JDH and the Hospitals is that of independent contractors. Nothing contained in this Agreement is intended to create or shall be construed to create an agency, partnership, employer/employee or joint venture relationship among the parties. Each party shall remain solely liable for its own debts, obligations or liabilities without, however, in any way modifying the obligations each party has assumed herein.

4.2. JDH shall have sole responsibility to administer salary and benefits of Perfusionists. JDH shall withhold and be responsible for the payment of all federal, state and local income and occupational taxes, F.I.C.A. taxes, unemployment compensation and workers' compensation contributions, vacation pay, sick leave, retirement benefits and any other payments or expenses for or on behalf of Physician. All such payments, withholdings and benefits shall be the sole responsibility of JDH. JDH shall have the authority and responsibility to recruit, hire, train, supervise, and compensate in accordance with the policies of JDH. This provision shall survive termination of this Agreement.

4.3. It is specifically acknowledged and agreed by the parties hereto that the provision of services by JDH to the Hospitals and the payments made by SMH and WH to JDH pursuant to this Agreement will not in any way require or be contingent upon the referral of individuals for patient care services.

4.4. Neither of the Hospitals shall be responsible for the performance of the obligations of the other Hospital whether financial or otherwise.

5. **HIPAA**
Health Insurance Portability Act of 1996 ("HIPAA")

(a) If the Contactor is a Business Associate under the requirements of the Health Insurance Portability and Accountability Act of 1996 ("HIPAA"), the Contractor must comply with all terms and conditions of this Section of the Contract. If the Contractor is not a Business Associate under HIPAA, this Section of the Contract does not apply to the Contractor for this Contract.

(b) The Contractor is required to safeguard the use, publication and disclosure of information on all applicants for, and all clients who receive, services under the Contract in accordance "with all applicable federal and state law regarding confidentiality, which includes but is not limited to ("HIPAA"), more specifically with the Privacy and Security Rules at 45 C.F.R. Part 160 and Part 164, subparts A, C, and E; *and*

(c) The State of Connecticut Department named on page 1 of this Contract (hereinafter "Department") is a "covered entity" as that term is defined in 45 C.F.R. § 160.103; *and*

(d) The Contractor, on behalf of the Department, performs functions that involve the use or disclosure of "individually identifiable health information," as that term is defined in 45 C.F.R. § 160.103; *and*

(e) The Contractor is a "business associate" of the Department, as that term is defined in 45 C.F.R. § 160.103; *and*

(f) The Contractor and the Department agree to the following in order to secure compliance with the HIPAA, more specifically with the Privacy and Security Rules at 45 C.F.R. Part 160 and Part 164, subparts A, C, and E.

(g) Definitions

(1) "Business Associate" shall mean the Contractor.

(2) "Covered Entity" shall mean the Department of the State of Connecticut named on page 1 of this Contract.

(3) "Designated Record Set" shall have the same meaning as the term "designated record set" in 45 C.F.R. § 164.501.

(4) "Individual" shall have the same meaning as the term "individual"' in 45 C.F.R. § 160.103 and shall include a person who qualifies as a personal representative as defined in 45 C.F.R. § 164.502(g).

(5) "Privacy Rule" shall mean the Standards for Privacy of Individually Identifiable Health Information at 45 C.F.R. part 160 and parts 164, subparts A and E.

(6) "Protected Health Information" or "PHI" shall have the same meaning as the term "protected health information" in 45 C.F.R. § 160.103, limited to information created or received by the Business Associate from or on behalf of the Covered Entity.

(7) "Required by Law"' shall have the same meaning as the term "required by law" in 45 C.F.R. § 164.103.

(8) "Secretary" shall mean the Secretary of the Department of Health and Human Services or his designee.

(9) "More stringent" shall have the same meaning as the term "more stringent" in 45 C.F.R. § 160.202.

(10)"This Section of the Contract" refers to the HIPAA Provisions stated herein, in their entirety.

(11)"Security Incident" shall have the same meaning as the term "security incident" in 45 C.F.R.§ 164.304.

(12)"Security Rule" shall mean the Security Standards for the Protection of Electronic Protected Health Information at 45 C.F.R. part 160 and parts 164, subpart A and C.

(h) Obligations and Activities of Business Associates.

(1) Business Associate agrees not to use or disclose PHI other than as permitted or required by this Section of the Contract or as Required by Law.

(2) Business Associate agrees to use appropriate safeguards to prevent use or disclosure of PHI other than as provided for in this Section of the Contract.

(3) Business Associate agrees to use administrative, physical and technical safeguards that reasonably and appropriately protect the confidentiality, integrity, and availability of electronic protected health information that it creates, receives, maintains, or transmits on behalf of the Covered Entity.

(4) Business Associate agrees to mitigate, to the extent practicable, any harmful effect that is known to the Business Associate of a use or disclosure of PHI by Business Associate in violation of this Section of the Contract.

(5) Business Associate agrees to report to Covered Entity any use or disclosure of PHI not provided for by this Section of the Contract or any security incident of which it becomes aware.

(6) Business Associate agrees to insure that any agent, including a subcontractor, to whom it provides PHI received from, or created or received by Business Associate, on behalf of the Covered Entity, agrees to the same restrictions and conditions that apply through this Section of the Contract to Business Associate with respect to such information.

(7) Business Associate agrees to provide access, at the request of the Covered Entity, and in the time and manner agreed to by the parties, to PHI in a Designated Record Set, to Covered Entity or, as directed by Covered Entity, to an Individual in order to meet the requirements under 45 C.F.R. § 164.524.

(8) Business Associate agrees to make any amendments to PHI in a Designated Record Set that the Covered Entity directs or agrees to pursuant to 45 C.F.R. § 164.526 at the request of the Covered Entity, and in the time and manner agreed to by the parties.

(9) Business Associate agrees to make internal practices, books, and records, including policies and procedures and PHI, relating to the use and disclosure of PHI received from, or created or received by, Business Associate on behalf of Covered Entity, available to Covered Entity or to the Secretary in a time and manner agreed to by the parties or designated by the Secretary, for purposes of the Secretary determining Covered Entity's compliance with the Privacy Rule.

(10)Business Associate agrees to document such disclosures of PHI and information related to such disclosures as would be required for Covered Entity to respond to a request by an Individual for an accounting of disclosures of PHI in accordance with 45 C.F.R. § 164.528.

(11)Business Associate agrees to provide to Covered Entity, in a time and manner agreed to by the parties, information collected in accordance with paragraph I of this Section of the Contract, to permit Covered Entity to respond to a request by an Individual for an accounting of disclosures of PHI in accordance with 45 C.F.R. § 164.528.

(12)Business Associate agrees to comply with any state law that is more stringent than the Privacy Rule.

(i) Permitted Uses and Disclosure by Business Associate.

(1) General Use and Disclosure Provisions Except as otherwise limited in this Section of the Contract, Business Associate may use or disclose PHI to perform functions, activities, or services for, or on behalf of, Covered Entity as specified in this Contract, provided that such use or disclosure would not violate the Privacy Rule if done by Covered Entity or the minimum necessary policies and procedures of the Covered Entity.

(2) Specific Use and Disclosure Provisions

(A) Except as otherwise limited in this Section of the Contract, Business Associate may use PHI for the proper management and administration of Business Associate or to carry out the legal responsibilities of Business Associate.

(B) Except as otherwise limited in this Section of the Contract, Business Associate may disclose PHI for the proper management and administration of Business Associate, provided that disclosures are Required by Law, or Business Associate obtains reasonable assurances from the person to whom the information is disclosed that it will remain confidential and used or further disclosed only as Required by Law or for the purpose for which it was disclosed to the person, and the person notifies Business Associate of any instances of which it is aware in which the confidentiality of the information has been breached.

(C) Except as otherwise limited in this Section of the Contract, Business Associate may use PHI to provide Data Aggregation services to Covered Entity as permitted by 45 C.F.R. § 164.504(e)(2)(i)(B).

(j) Obligations of Covered Entity.

(1) Covered Entity shall notify Business Associate of any limitations in its notice of privacy practices of Covered Entity, in accordance with 45 C.F.R.

§ 164.520, or to the extent that such limitation may affect Business Associate's use or disclosure of PHI.

(2) Covered Entity shall notify Business Associate of any changes in, or revocation of, permission by Individual to use or disclose PHI, to the extent that such changes may affect Business Associate's use or disclosure of PHI.

(3) Covered Entity shall notify Business Associate of any restriction to the use or disclosure of PHI that Covered Entity has agreed to in accordance with 45 C.F.R. § 164.522, to the extent that such restriction may affect Business Associate's use or disclosure of PHI.

(k) Permissible Requests by Covered Entity. Covered Entity shall not request Business Associate to use or disclose PHI in any manner that would not be permissible under the Privacy Rule if done by the Covered Entity, except that Business Associate may use and disclose PHI for data aggregation, and management and administrative activities of Business Associate, as permitted under this Section of the Contract.

(l) Term and Termination.

(1) Term. The Term of this Section of the Contract shall be effective as of the date the Contract is effective and shall terminate when all of the PHI provided by Covered Entity to Business Associate, or created or received by Business Associate on behalf of Covered Entity, is destroyed or returned to Covered Entity, or, if it is infeasible to return or destroy PHI, protections are extended to such information, in accordance with the termination provisions in this Section.

(2) Termination for Cause Upon Covered Entity's knowledge of a material breach by Business Associate, Covered Entity shall either:

(A) Provide an opportunity for Business Associate to cure the breach or end the violation and terminate the Contract if Business Associate does not cure the breach or end the violation within the time specified by the Covered Entity; or

(B) Immediately terminate the Contract if Business Associate has breached a material term of this Section of the Contract and cure is not possible; or

(C) If neither termination nor cure is feasible, Covered Entity shall report the violation to the Secretary.

(3) Effect of Termination

(A) Except as provided in (l)(2) above, upon termination of this Contract, for any reason, Business Associate shall return or destroy all PHI received

from Covered Entity, or created or received by Business Associate on behalf of Covered Entity. This provision shall apply to PHI that is in the possession of subcontractors or agents of Business Associate. Business Associate shall retain no copies of the PHI.

(B) In the event that Business Associate determines that returning or destroying the PHI is infeasible, Business Associate shall provide to Covered Entity notification of the conditions that make return or destruction infeasible. Upon documentation by Business Associate that return of destruction of PHI is infeasible, Business Associate shall extend the protections of this Section of the Contract to such PHI and limit further uses and disclosures of PHI to those purposes that make return or destruction infeasible, for as long as Business Associate maintains such PHI. Infeasibility of the return or destruction of PHI includes, but is not limited to, requirements under state or federal law that the Business Associate maintains or preserves the PHI or copies thereof.

(m) Miscellaneous Provisions.

(1) Regulatory References. A reference in this Section of the Contract to a section in the Privacy Rule means the section as in effect or as amended.

(2) Amendment. The Parties agree to take such action as in necessary to amend this Section of the Contract from time to time as is necessary for Covered Entity to comply with requirements of the Privacy Rule and the Health Insurance Portability and Accountability Act of 1996, Pub. L. No. 104-191.

(3) Survival. The respective rights and obligations of Business Associate shall survive the termination of this Contract.

(4) Effect on Contract. Except as specifically required to implement the purposes of this Section of the Contract, all other terms of the Contract shall remain in force and effect.

(5) Construction. This Section of the Contract shall be construed as broadly as necessary to implement and comply with the Privacy Standard. Any ambiguity in this Section of the Contract shall be resolved in favor of a meaning that complies, and is consistent with, the Privacy Standard.

(6) Disclaimer. Covered Entity makes no warranty or representation that compliance with this Section of the Contract will be adequate or satisfactory for Business Associate's own purposes. Covered Entity shall not be liable to Business Associate for any claim, loss or damage related to or arising from the unauthorized use or disclosure of PHI by Business Associate or any of its officers, directors, employees, Contractors or agents, or any third party to whom Business Associate has disclosed PHI pursuant to this Contract. Business Associate is solely responsible for all decisions made, and actions

taken, by Business Associate regarding the safeguarding, use and disclosure of PHI within its possession, custody or control.

(7) Indemnification. The Business Associate shall indemnify and hold the Covered Entity harmless from and against all claims, liabilities, judgments, fines, assessments, penalties, awards, or other expenses, of any kind or nature whatsoever, including, without limitation, attorney's fees, expert witness fees, and costs of investigation, litigation or dispute resolution, relating to or arising out of any violation by the Business Associate and its agents, including subcontractors, of any obligation of Business Associate and its agents, including subcontractors, under this Section of the Contract.

6. Insurance and Indemnity.

6.1. JDH agrees that it will maintain such policies of professional liability insurance or formal program of self-insurance acceptable to the Hospitals as shall be necessary to protect JDH and PERFUSIONISTS, when providing services hereunder, from liability for any claim or claims for damages arising by reason of personal injury or death occasioned directly or indirectly in connection with the performance of PERFUSIONISTS hereunder. At a minimum, general and professional liability insurance in the amount of $1 million per claim and $3 million in the aggregate will be maintained. This provision may be satisfied by a program of self insurance.

6.2. SMH and WH agree that it will maintain such policies of insurance acceptable to JDH as shall be necessary to protect SMH and WH from liability for any claim or claims for damages arising by reason of personal injury or death occasioned directly or indirectly in connection with the performance by SMH or WH. At a minimum, general and professional liability insurance in the amount of $1 million per claim and $3 million in the aggregate will be maintained. This provision may be satisfied by a program of self insurance.

6.3. Each party shall be provided with a thirty (30) day written notice in the event that there is a material change or cancellation of the other party's self insurance program.

6.4. In addition, SMH and WH agree to indemnify and hold harmless the State of Connecticut, the University of Connecticut, JDH, the University of Connecticut Health Center Finance Corporation and/or its/their officers, agents and employees from and against any and all suits, actions, legal or administrative proceedings, claims, demands, judgments, damages, liabilities, monetary loss, interest, attorney's fees, costs and expenses of whatever kind or nature arising from the performance of this contract by the parties hereto relative to the respective duties of SMH and WH.

7. Term and Termination.

7.1. This Agreement shall commence on July 1, 2008 and remain in full force and effect for a term of one (1) year ending on June 30, 2009.

7.2. Each of WH and JDH on the one hand and SMH and JDH on the other hand, reserve the right to terminate this agreement without affecting the

rights of others. In such circumstances, WH and JDH as to each other and SMH and JDH as to each other shall have the right to terminate this Agreement upon written notice in the event that a party fails to keep, observe or perform any term or provision of this Agreement to be kept, observed or performed and such default shall continue for a period of thirty (30) days after written notice thereof to a party.

7.3. Termination of this Agreement shall not release or discharge either party from any obligation, debt, or liability which shall have previously accrued and remains to be performed upon the date of termination.

7.4. Changes which affect this Agreement in the rules or regulations adopted by Medicare, Medicaid or any other third-party payor which has contractual agreements with the parties following the completion by the parties of the process defined in this paragraph 7.4. If at any time during the term hereof any new legislation is enacted by the federal government or any state government, or if any governmental agency (or its representative, or any other payor or any other federal, Connecticut or local governmental agency passes, issues or promulgates any law, rule, regulation, standard or interpretation which would render this Agreement illegal, or which could cause significant and material legal and/or economic consequences for any party hereto (hereinafter referred to as "Legislative or Regulatory Change"), such party may give to the other party notice of intent to amend this Agreement in order to achieve the least burdensome alternative for the parties which still manages to bring this Agreement into compliance with such Legislative or Regulatory Changes and alleviate such legal or financial consequences. If this Agreement is not so amended in writing within ninety (90) days after said notice is given, this Agreement shall terminate as of midnight of the 90th day after said notice is given.

8. Governmental Action.

8.1. This agreement is subject to and subordinate to the requirements of any governmental agency having jurisdiction. Notwithstanding any other provision of this Agreement, in the event that any governmental agency, or private entity acting on behalf of or under contract with any governmental agency, having jurisdiction, including OHCA (Office of Health Care Access), takes any other action inconsistent with the terms of this Agreement or the intended operation and effect hereof, the party affected shall have the right, after consultations with the other party, to suggest a modification of any of the terms of this Agreement to the extent and in the manner reasonably necessary or desirable to accommodate such governmental action. The other party shall be afforded a reasonable opportunity to contest any governmental action which might result in a modification of this Agreement.

9. **Miscellaneous Provisions.**

9.1. The parties agree to comply with State orders described in **Exhibit A** appended hereto.

9.2. During the term of and following termination of this Agreement, each party shall keep strictly confidential any proprietary information regarding the other party. All information which is reasonably treated by any party as being proprietary, shall be presumed to be proprietary. Each party shall take necessary reasonable precautions to prevent unauthorized disclosure of proprietary information and shall require all of its officers, employees and other personnel to whom it is necessary to disclose the same, or to whom the same has been disclosed, to keep such proprietary information confidential. Upon termination of this Agreement, each party agrees to return to the other, within ten (10) days of the termination of this Agreement, all proprietary information of the other party in such party's possession.

9.3. No failure by either party to exercise, and no delay in exercising any right, power or privilege under this Agreement shall constitute a waiver thereof, nor shall any single or partial exercise of any right, power or privilege hereunder preclude any other or further exercise of any right, power or privilege. The rights and remedies provided herein are cumulative and not exclusive of any rights or remedies provided by law or otherwise.

9.4. This Agreement constitutes the entire agreement between the parties and contains all the agreements between the parties with respect to the subject matter hereof.

9.5. Neither this Agreement nor any of its provisions may be waived, altered, amended or supplemented in any manner except by a writing signed by the parties hereto. In the event any licensing, certifying or accrediting body requires or recommends that this Agreement include any provision not included herein, the parties agree to amend this Agreement to include such provision.

9.6. Neither this Agreement nor any right or interest hereunder may be assigned, in whole or in part, nor may any obligation hereunder be delegated, by JDH without the prior written consent of SMH and WH.

9.7. This Agreement shall be binding upon and shall inure to the benefit of the parties hereto and their respective successors and permitted assigns.

9.8. If any provision of this Agreement is held to be invalid or unenforceable, such invalidity or unenforceability shall not affect any other provision of this Agreement that can be given effect without the invalid provision. In such event, all parties agree that the court making such determination shall have the power to alter or amend such provision so that it shall be enforceable to an extent which is consistent with the intention of the parties.

9.9. This Agreement shall be governed by and construed in accordance with the laws of the State of Connecticut.

9.10. Nothing in this Agreement shall be construed as creating or giving rise to any rights in any third parties or any persons other than the parties hereto.

9.11. The Hospitals also agree that the sole and exclusive means for the presentation of any claim against JDH arising from this Agreement shall be in accordance with Chapter 53 of the Connecticut General Statutes (Claims

Against the State) and the Hospitals further agrees not to initiate legal proceedings in any State or Federal Court in addition to or in lieu of said Chapter 53 proceedings.

EXHIBIT B Compliance with State Orders

Sec. 4a-60. (Formerly Sec. 4-114a). Nondiscrimination and affirmative action provisions in contracts of the state and political subdivisions other than municipalities.

(a) Every contract to which the state or any political subdivision of the state other than a municipality is a party shall contain the following provisions: (1) The contractor agrees and warrants that in the performance of the contract such contractor will not discriminate or permit discrimination against any person or group of persons on the grounds of race, color, religious creed, age, marital status, national origin, ancestry, sex, mental retardation or physical disability, including, but not limited to, blindness, unless it is shown by such contractor that such disability prevents performance of the work involved, in any manner prohibited by the laws of the United States or of the state of Connecticut. The contractor further agrees to take affirmative action to insure that applicants with job-related qualifications are employed and that employees are treated when employed without regard to their race, color, religious creed, age, marital status, national origin, ancestry, sex, mental retardation, or physical disability, including, but not limited to, blindness, unless it is shown by such contractor that such disability prevents performance of the work involved; (2) the contractor agrees, in all solicitations or advertisements for employees placed by or on behalf of the contractor, to state that it is an "affirmative action-equal opportunity employer" in accordance with regulations adopted by the commission; (3) the contractor agrees to provide each labor union or representative of workers with which such contractor has a collective bargaining agreement or other contract or understanding and each vendor with which such contractor has a contract or understanding, a notice to be provided by the commission advising the labor union or workers' representative of the contractor's commitments under this section, and to post copies of the notice in conspicuous places available to employees and applicants for employment; (4) the contractor agrees to comply with each provision of this section and sections 46a-68e and 46a-68f and with each regulation or relevant order issued by said commission pursuant to sections 46a-56, as amended by this act, 46a-68e and 46a-68f; (5) the contractor agrees to provide the Commission on Human Rights and Opportunities with such information requested by the commission, and permit access to pertinent books, records and accounts, concerning the employment practices and procedures of the contractor as relate to the provisions of this section and section 46a-56, as amended by this act. If the contract is a public works contract, the contractor agrees and warrants that he will make good faith efforts to employ minority business enterprises as subcontractors and suppliers of materials on such public works project. Prior to entering into the contract, the contractor shall provide the state or such political subdivision of the state with documentation in the form of a company or corporate policy adopted by resolution of the board of directors, shareholders, managers, members or other governing body of such contractor to support the nondiscrimination agreement and warranty under subdivision (1) of this subsection. For the purposes of this section, "contract" includes any extension or modification of the contract, and "contractor" includes any successors or assigns of the contractor.

(b) For the purposes of this section, "minority business enterprise" means any small contractor or supplier of materials fifty-one per cent or more of the capital stock, if any, or assets of which is owned by a person or persons: (1) Who are active in the daily affairs of the enterprise, (2) who have the power to direct the management and policies of the enterprise and (3) who are members of a minority, as such term is defined in subsection (a) of section 32-9n; and "good faith" means that degree of diligence which a reasonable person would exercise in the performance of legal duties and obligations. "Good faith efforts" shall include, but not be limited to, those reasonable initial efforts necessary to comply with statutory or regulatory requirements and additional or substituted efforts when it is determined that such initial efforts will not be sufficient to comply with such requirements.

Sec. 4a-60a. Contracts of the state and political subdivisions, other than municipalities, to contain provisions re nondiscrimination on the basis of sexual orientation.

(a) Every contract to which the state or any political subdivision of the state other than a municipality is a party shall contain the following provisions: (1) The contractor agrees and warrants that in the performance of the contract such contractor will not discriminate or permit discrimination against any person or group of persons on the grounds of sexual orientation, in any manner prohibited by the laws of the United States or of the state of Connecticut, and that employees are treated when employed without regard to their sexual orientation; (2) the contractor agrees to provide each labor union or representative of workers with which such contractor has a collective bargaining agreement or other contract or understanding and each vendor with which such contractor has a contract or understanding, a notice to be provided by the Commission on Human Rights and Opportunities advising the labor union or workers' representative of the contractor's commitments under this section, and to post copies of the notice in conspicuous places available to employees and applicants for employment; (3) the contractor agrees to comply with each provision of this section and with each regulation or relevant order issued by said commission pursuant to section 46a-56, as amended by this act; (4) the contractor agrees to provide the Commission on Human Rights and Opportunities with such information requested by the commission, and permit access to pertinent books, records and accounts, concerning the employment practices and procedures of the contractor which relate to the provisions of this section and section 46a-56, as amended by this act. Prior to entering into the contract, the contractor shall provide the state or such political subdivision of the state with documentation in the form of a company or corporate policy adopted by resolution of the board of directors, shareholders, managers, members or other governing body of such contractor to support the nondiscrimination agreement and warranty under subdivision (1) of this subsection. For the purposes of this section, "contract" includes any extension or modification of the contract, and "contractor" includes any successors or assigns of the contractor.

(b) The contractor shall include the provisions of subsection (a) of this section in every subcontract or purchase order entered into in order to fulfill any obligation of a contract with the state and such provisions shall be binding on a subcontractor, vendor or manufacturer unless exempted by regulations or orders of the commission. The contractor shall take such action with respect to any such subcontract or purchase order as the commission may direct as a means of enforcing such provisions including sanctions for noncompliance in accordance with section 46a-56; provided, if such contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the commission, the contractor may request the state of Connecticut to enter into any such litigation or negotiation prior thereto to protect the interests of the state and the state may so enter.

Executive Order No. Three

WHEREAS, sections 4-61d(b) and 4-114a of the 1969 supplement to the general statutes require nondiscrimination clauses in state contracts and subcontracts for construction on public buildings, other public works and goods and services, and

WHEREAS, section 4-61e(c) of the 1969 supplement to the general statutes requires the labor department to encourage and enforce compliance with this policy by both employers and labor unions, and to promote equal employment opportunities, and

WHEREAS, the government of this state recognizes the duty and desirability of its leadership in providing equal employment opportunity, by implementing these laws,

NOW, THEREFORE, I, THOMAS J. MESKILL, Governor of the State of Connecticut, acting by virtue of the authority vested in me under section twelve of article fourth of the constitution of the state, as supplemented by section 3-1 of the general statutes, do hereby ORDER and DIRECT, as follows, by this Executive Order:

I. The labor commissioner shall be responsible for the administration of this Order and shall adopt such regulations as he deems necessary and appropriate to achieve the purposes of this Order. Upon the promulgation of this Order, the commissioner of finance and control shall issue a directive forthwith to all state agencies, that henceforth all state contracts and subcontracts for construction on public buildings, other public works and goods and services shall contain a provision rendering such contract or subcontract subject to this Order, and that such contract or subcontract may be cancelled, terminated or suspended by the labor commissioner for violation of or noncompliance with this Order or state or federal laws concerning nondiscrimination, notwithstanding that the labor commissioner is not a party to such contract or subcontract.

II. Each contractor having a contract containing the provisions prescribed in section 4-114a of the 1969 supplement to the general statutes, shall file, and shall cause each of his subcontractors to file, compliance reports with the contracting agency or the labor commissioner, as may be directed. Such reports shall be filed within such times and shall contain such information as to employment policies and statistics of the contractor and each subcontractor, and shall be in such form as the labor commissioner may prescribe. Bidders or prospective contractors or subcontractors may be required to state whether they have participated in any previous contract subject to the provisions of this Order or any preceding similar Order, and in that event to submit on behalf of themselves and their proposed subcontractors compliance reports prior to or as an initial part of their bid or negotiation of a contract.

III. Whenever the contractor or subcontractor has a collective bargaining agreement or other contract or understanding with a labor organization or employment agency as defined in section 31-122 of the general statutes, the compliance report shall identify the said organization or agency and the contracting agency or the labor commissioner may require a compliance report to be filed with the contracting agency or the labor commissioner, as may be directed, by such organization or agency, signed by an authorized officer or agent of such organization or agency, with

supporting information, to the effect that the signer's practices and policies, including but not limited to matters concerning personnel, training, apprenticeship, membership, grievance and representation, and upgrading, do not discriminate on grounds of race, color, religious creed, age, sex or national origin, or ancestry of any individual, and that the signer will either affirmatively cooperate in the implementation of the policy and provisions of this Order, or that it consents and agrees that recruitment, employment and the terms and conditions of employment under the proposed contract shall be in accordance with the purposes and provisions of the Order.

IV. The labor commissioner may by regulation exempt certain classes of contracts, subcontracts or purchase orders from the implementation of this Order, for standard commercial supplies or raw materials, for less than specified amounts of money or numbers of workers or for subcontractors below a specified tier. The labor commissioner may also provide by regulation for the exemption of facilities of a contractor which are in all respects separate and distinct from activities of the contractor related to the performance of the state contract, provided only that such exemption will not interfere with or impede the implementation of this Order, and provided further, that in the absence of such an exemption, all facilities shall be covered by the provisions of this Order.

V. Each contracting agency shall be primarily responsible for obtaining compliance with the regulations of the labor commissioner with respect to contracts entered into by such agency or its contractors. All contracting agencies shall comply with the regulations of the labor commissioner in discharging their primary responsibility for securing compliance with the provisions of contracts and otherwise with the terms of this Order and of the regulations of the labor commissioner issued pursuant to this Order. They are directed to cooperate with the labor commissioner and to furnish the labor commissioner such information and assistance as he may require in the performance of his functions under this Order. They are further directed to appoint or designate from among the personnel of each agency, compliance officers, whose duty shall be to seek compliance with the objectives of this Order by conference, conciliation, mediation, or persuasion.

VI. The labor commissioner may investigate the employment practices and procedures of any state contractor or subcontractor and the practices and policies of any labor organization or employment agency hereinabove described, relating to employment under the state contract, as concerns nondiscrimination by such organization or agency as hereinabove described, or the labor commissioner may initiate such investigation by the appropriate contract agency, to determine whether or not the contractual provisions hereinabove specified or statutes of the state respecting them have been violated. Such investigation shall be conducted in accordance with the procedures established by the labor commissioner and the investigating agency shall report to the labor commissioner any action taken or recommended.

VII. The labor commissioner shall receive and investigate or cause to be investigated complaints by employees or prospective employees of a state contractor or subcontractor or members or applicants for membership or apprenticeship or training in a labor organization or employment agency hereinabove described, which

allege discrimination contrary to the contractual provisions specified hereinabove or state statutes requiring nondiscrimination in employment opportunity. If this investigation is conducted for the labor commissioner by a contracting agency, that agency shall report to the labor commissioner what action has been taken or is recommended with regard to such complaints.

VIII. The labor commissioner shall use his best efforts, directly and through contracting agencies, other interested federal, state and local agencies, contractors and all other available instrumentalities, including the commission on human rights and opportunities, the executive committee on human rights and opportunities, ad the apprenticeship council under its mandate to provide advice and counsel to the labor commissioner in providing equal employment opportunities to all apprentices and to provide training, employment and upgrading opportunities for disadvantages workers, in accordance with section 31-51(d) of the 1969 supplement to the general statutes, to cause any labor organization or any employment agency whose members are engaged in work under government contracts or referring workers or providing supervising apprenticeship or training for or in the course of work under a state contract or subcontract to cooperate in the implementation of the purposes of this Order. The labor commissioner shall in appropriate cases notify the commission on human rights and opportunities or other appropriate state or federal agencies whenever it has reason to believe that the practices of any such organization or agency violate equal employment opportunity requirements of state or federal law.

IX. The labor commissioner or any agency officer or employee in the executive branch designated by regulation of the labor commissioner may hold such hearings, public or private, as the labor commissioner may deem advisable for compliance, enforcement or educational purposes under this Order.

X. (a) The labor commissioner may hold or cause to be held hearings, prior to imposing ordering or recommending the imposition of penalties and sanctions under this Order. No order for disbarment of any contractor from further state contracts shall be made without affording the contractor an opportunity for a hearing. In accordance with such regulations as the labor commissioner may adopt, the commissioner or the appropriate contracting agency may

1. Publish or cause to be published the names of contractors or labor organizations or employment agencies as hereinabove described which it has concluded have complied or failed to comply with the provisions of this Order or the regulations of the labor commissioner in implementing this Order.

2. Recommend to the commission on human rights and opportunities that in cases in which there is substantial or material violation or threat thereof of the contractual provision or related state statutes concerned herein, appropriate proceedings be brought to enforce them, including proceedings by the commission on its own motion under chapter 563 of the general statutes and the enjoining, within the limitations of applicable law, of organizations, individuals or groups who prevent directly or indirectly compliance with the provisions of this Order.

3. Recommend that criminal proceedings be brought under chapter 939 of the general statutes.

4. Cancel, terminate, suspend or cause to be cancelled, terminated, or suspended in accordance with law any contract or any portion or portions thereof for failure of the contractor or subcontractor to comply with the nondiscrimination provisions of the contract. Contracts may be cancelled, terminated, suspended absolutely or their continuance conditioned upon a program for future compliance approved by the contracting agency.

5. Provide that any contracting agency shall refrain from entering into any further contracts or extensions or modifications of existing contracts with any contractor until he has satisfied the labor commissioner that he has established and will carry out personnel and employment policies compliant with this Order.

6. Under regulations prescribed by the labor commissioner each contracting agency shall make reasonable efforts with a reasonable period of time to secure compliance with the contract provisions of this Order by methods of conference, conciliation, mediation or persuasion, before other proceedings shall be instituted under this Order or before a state contract shall be cancelled or terminated in whole or in part for failure of the contractor or subcontractor to comply with the contract provisions of state statute and this Order.

(b) Any contracting agency taking any action authorized by this Order, whether on its own motion or as directed by the labor commissioner or pursuant to his regulations shall promptly notify him of such action. Whenever the labor commissioner makes a determination under this Order, he shall promptly notify the appropriate contracting agency and other interested federal, state and local agencies of the action recommended. The state and local agency or agencies shall take such action and shall report the results thereof to the labor commissioner within such time as he shall specify.

XI. If the labor commissioner shall so direct, contracting agencies shall not enter into contracts with any bidder or prospective contractor unless he has satisfactorily complied with the provisions of this Order, or submits a program for compliance acceptable to the labor commissioner, or if the labor commissioner so authorizes, to the contracting agency.

XII. Whenever a contracting agency cancels or terminates a contract, or a contractor has been disbarred from further government contracts because of noncompliance with the contract provisions with regard to nondiscrimination, the labor commissioner or the contracting agency shall rescind such disbarment, upon the satisfaction of the labor commissioner that the contractor has purged himself of such noncompliance and will thenceforth carry out personnel and employment policies of nondiscrimination in compliance with the provision of this Order.

XIII. The labor commissioner may delegate to any officer; agency or employee in the executive branch any function or duty of the labor commissioner under this Order except authority to promulgate regulations of a general nature.

XIV. This Executive Order supplements the Executive Order issued on September 28, 1967. All regulations, orders, instructions, designations and other directives issued heretofore in these premises, including those issued by the heads of various departments or agencies under or pursuant to prior order or statute, shall remain in full force and effect, unless and until revoked or superseded by appropriate authority, to the extent that they are not inconsistent with this Order.

Dated at Hartford, Connecticut, this 16th day of June, 1971.

Thomas J. Meskill, Governor

Executive Order No. Seventeen

WHEREAS, Section 31-237 of the General Statutes of Connecticut as amended requires the maintaining of the established free services of the Connecticut State Employment Service to both employers and prospective employees and

WHEREAS, Section 31-5 of the General Statutes of Connecticut requires that no compensation or fee shall be charged or received directly or indirectly for the services of the Connecticut State Employment Service and

WHEREAS, large numbers of our citizens who have served in the Armed Forces of our nation are returning to civilian life in our state and seeking employment in civilian occupations and

WHEREAS, we owe a duty as well as gratitude to these returning veterans including the duty to find suitable employment for them and

WHEREAS, many of our handicapped citizens are fully capable of employment and are entitled to be placed in suitable employment and

WHEREAS, many of the citizens of our state who are unemployed are unaware of the job openings and employment opportunities which do in fact exist in our state and

WHEREAS, notwithstanding the free services of the Connecticut State Employment Service, many of our Connecticut employers do not use its free services or do not avail themselves fully of all the services offered,

NOW, THEREFORE, I, THOMAS J. MESKILL, Governor of the State of Connecticut, acting by virtue of the authority vested in me under the fourth article of the Constitution of the State and in accordance with Section 3-1 of the General Statutes, do hereby ORDER and direct, as follows, by this Executive Order:

I. The Labor Commissioner shall be responsible for the administration of this Order and shall do all acts necessary and appropriate to achieve its purpose. Upon promulgation of this Order, the Commissioner of Finance and Control shall issue a directive forthwith to all state agencies, that henceforth all state contracts and subcontracts for construction on public buildings, other public works and goods and services shall contain a provision rendering such contract or subcontract subject to this Order, and that such contract or subcontract may be cancelled, terminated or suspended by the Labor Commissioner for violation of or noncompliance with this Order, notwithstanding that the Labor Commissioner is not a party to such contract or subcontract.

II. Every contractor and subcontractor having a contract with the state or any of its agencies, boards, commissions, or departments, every individual partnership, corporation, or business entity having business with the state or who or which seeks to do business with the state, and every bidder or prospective bidder who submits a bid or replies to an invitation to bid on any state contract shall list all employment openings with the office of the Connecticut State Employment Service in the area where the work is to be performed or where the services are to be rendered.

III. All state contracts shall contain a clause which shall be a condition of the contract that the contractor and any subcontractor holding a contract directly under the contractor shall list all employment openings with the Connecticut State Employment Service. The Labor Commissioner may allow exceptions to listings of employment openings which the contractor proposes to fill from within its organization from employees on the rolls of the contractor on the date of publication of the invitation to bid or the date on which the public announcement was published or promulgated advising of the program concerned.

IV. Each contracting agency of the state shall be primarily responsible for obtaining compliance with this Executive Order. Each contracting agency shall appoint or designate from among its personnel one or more persons who shall be responsible for compliance with the objectives of this Order.

V. The Labor Commissioner shall be and is hereby empowered to inspect the books, records, payroll and personnel data of each individual or business entity subject to this Executive Order and may hold hearings or conferences, formal or informal, in pursuance of the duties and responsibilities hereunto delegated to the Labor Commissioner.

VI. The Labor Commissioner or any agency officer or employee in the executive branch designated by regulation of the Labor Commissioner may hold such hearings, public or private, as the Labor Commissioner may deem advisable for compliance, enforcement or educational purposes under this Order.

VII. (a) The Labor Commissioner may hold or cause to be held hearings, prior to imposing, ordering, or recommending the imposition of penalties and sanctions under this Order. In accordance herewith, the Commissioner or the appropriate contracting agency may suspend, cancel, terminate, or cause to be suspended, cancelled, or terminated in accordance with law any contract or portion or portions thereof for failure of the contractor or subcontractor to comply with the listing provisions of the contract. Contracts may be cancelled, terminated, suspended absolutely or their continuance conditioned upon a program for future compliance approved by the contracting agency.

(b) Any contracting agency taking any action authorized by this Order, whether on its own motion or as directed by the Labor Commissioner, shall promptly notify him of such action. Whenever the Labor Commissioner makes a determination under this Order, he shall promptly notify the appropriate contracting agency of the action recommended. The agency shall report the results to the Labor Commissioner promptly.

VIII. If the Labor Commissioner shall so direct, contracting agencies shall not enter into contracts with any bidder or prospective contractor unless he has satisfactorily complied with the provisions of this Order.

Dated at Hartford, Connecticut, this 15th day of February 1973.

Thomas J. Meskill, Governor

Executive Order No. Sixteen

WHEREAS, the State of Connecticut recognizes that workplace violence is a growing problem that must be addressed; and

WHEREAS, the State is committed to providing its employees a reasonably safe and healthy working environment, free from intimidation, harassment, threats, and/or violent acts; and

WHEREAS, violence or the threat of violence by or against any employee of the State of Connecticut or member of the public in the workplace is unacceptable and will subject the perpetrator to serious disciplinary action up to and including discharge and criminal penalties.

NOW, THEREFORE, I, John G. Rowland, Governor of the State of Connecticut, acting by virtue of the authority vested in me by the Constitution and by the statutes of this state, do hereby ORDER and DIRECT:

1. That all state agency personnel, contractors, subcontractors, and vendors comply with the following **Violence in the Workplace Prevention Policy**:

   The State of Connecticut adopts a statewide zero tolerance policy for workplace violence.

   Therefore, except as may be required as a condition of employment:

   - No employee shall bring into any state worksite any weapon or dangerous instrument as defined herein.
   - No employee shall use, attempt to use, or threaten to use any such weapon or dangerous instrument in a state worksite.
   - No employee shall cause or threaten to cause death or physical injury to any individual in a state worksite.

   Weapon means any firearm, including a BB gun, whether loaded or unloaded, any knife (excluding a small pen or pocket knife), including a switchblade or other knife having an automatic spring release device, a stiletto, any police baton or nightstick or any martial arts weapon or electronic defense weapon.

   Dangerous instrument means any instrument, article, or substance that, under the circumstances, is capable of causing death or serious physical injury.

   Violation of the above reasonable work rules shall subject the employee to disciplinary action up to and including discharge.
2. That each agency must prominently post this policy and that all managers and supervisors must clearly communicate this policy to all state employees.
3. That all managers and supervisors are expected to enforce this policy fairly and uniformly.

4. That any employee who feels subjected to or witnesses violent, threatening, harassing, or intimidating behavior in the workplace immediately report the incident or statement to their supervisor, manager, or human resources office.
5. That any employee who believes that there is a serious threat to their safety or the safety of others that requires immediate attention notify proper law enforcement authorities and his or her manager or supervisor.
6. That any manager or supervisor receiving such a report shall immediately contact their human resources office to evaluate, investigate and take appropriate action.
7. That all parties must cooperate fully when questioned regarding violations of this policy.
8. That all parties be advised that any weapon or dangerous instrument at the worksite will be confiscated and that there is no reasonable expectation of privacy with respect to such items in the workplace.
9. That this order applies to all state employees in the executive branch.
10. That each agency will monitor the effective implementation of this policy.
11. That this order shall take effect immediately.

Dated at Hartford, Connecticut this 4th day of August 1999.

John G. Rowland, Governor

Executive Order Number 7C

This Contract is subject to **Executive Order No. 7C of Governor M. Jodi Rell, promulgated on July 13, 2006.** The Parties to this Contract, as part of the consideration hereof, agree that:

a. The State Contracting Standards Board ("Board") may review this contract and recommend to the state contracting agency termination of this contract for cause. The State contracting agency shall consider the recommendations and act as required or permitted in accordance with the contract and applicable law. The Board shall provide the results of its review, together with its recommendations, to the state contracting agency and any other affected party in accordance with the notice provisions in the contract not later than fifteen (15) days after the Board finalizes its recommendation. For the purposes of this Section, "for cause" means:

(1) a violation of the State Ethics Code (Chapter 10 of the general statutes) or section 4a-100 of the general statutes or

(2) wanton or reckless disregard of any state contracting and procurement process by any person substantially involved in such contract or state contracting agency.

b. For purposes of this Section, "contract" shall not include real property transactions involving less than a fee simple interest or financial assistance comprised of state or federal funds, the form of

which may include but is not limited to grants, loans, loan guarantees, and participation interests in loans, equity investments and tax credit programs. Notwithstanding the foregoing, the Board shall not have any authority to recommend the termination of a contract for the sale or purchase of a fee simple interest in real property following transfer of title.

c. Notwithstanding the contract value listed in sections 4-250 and 4-252 of the Connecticut General Statutes and section 8 of Executive Order Number 1, all State Contracts between state agencies and private entities with a value of $50,000 (fifty thousand dollars) or more in a calendar or fiscal year shall comply with the gift and campaign contribution certification requirements of section 4-252 of the Connecticut General Statutes and section 8 of Executive Order Number 1. For purposes of this section, the term "certification" shall include the campaign contribution and annual gift affidavits required by section 8 of Executive Order Number 1.

Dated at Hartford, Connecticut this 13th day of July 2006

M. Jodi Rell, Governor

Campaign Contribution Restrictions

On February 8, 2007, Governor Rell signed into law Public Act 07-1, An Act Concerning the State Contractor Contribution Ban and Gifts to State and Quasi-Public Agencies.

For all State contracts as defined in P.A. 07-1 having a value in a calendar year of $50,000 or more or a combination or series of such agreements or contracts having a value of $100,000 or more, the authorized signatory to this Agreement expressly acknowledges receipt of the State Elections Enforcement Commission's notice advising state contractors of state campaign contribution and solicitation prohibitions, and will inform its principals of the contents of the notice. See SEEC Form 11.

SEEC FORM 11

NOTICE TO EXECUTIVE BRANCH STATE CONTRACTORS AND PROSPECTIVE STATECONTRACTORS OF CAMPAIGN CONTRIBUTION AND SOLICITATION BAN

This notice is provided under the authority of Connecticut General Statutes 9-612(g)(2), as amended by P.A. 07-1, and is for the purpose of informing state contractors and prospective state contractors of the following law (italicized words are defined below):

Campaign Contribution and Solicitation Ban

No state contractor, prospective state contractor, principal of a state contractor or principal of a prospective state contractor, with regard to a state contract or state

contract solicitation with or from a state agency in the executive branch or a quasi-public agency or a holder, or principal of a holder of a valid prequalification certificate, shall make a contribution to, or solicit contributions on behalf of (i) an exploratory committee or candidate committee established by a candidate for nomination or election to the office of Governor, Lieutenant Governor, Attorney General, State Comptroller, Secretary of the State or State Treasurer, (ii) a political committee authorized to make contributions or expenditures to or for the benefit of such candidates, or (iii) a party committee;

In addition, no holder or principal of a holder of a valid prequalification certificate, shall make a contribution to, or solicit contributions on behalf of (i) an exploratory committee or candidate committee established by a candidate for nomination or election to the office of State senator or State representative, (ii) a political committee authorized to make contributions or expenditures to or for the benefit of such candidates, or (iii) a party committee.

Duty to Inform

State contractors and prospective state contractors are required to inform their principals of the above prohibitions, as applicable, and the possible penalties and other consequences of any violation thereof.

Penalties for Violations

Contributions or solicitations of contributions made in violation of the above prohibitions may result in the following civil and criminal penalties:

Civil penalties—$2000 or twice the amount of the prohibited contribution, whichever is greater, against a principal or a contractor. Any state contractor or prospective state contractor which fails to make reasonable efforts to comply with the provisions requiring notice to its principals of these prohibitions and the possible consequences of their violations may also be subject to civil penalties of $2000 or twice the amount of the prohibited contributions made by their principals.

Criminal penalties—Any knowing and willful violation of the prohibition is a Class D felony, which may subject the violator to imprisonment of not more than 5 years, or $5000 in fines, or both.

Contract Consequences

Contributions made or solicited in violation of the above prohibitions may result, in the case of a state contractor, in the contract being voided.

Contributions made or solicited in violation of the above prohibitions, in the case of a prospective state contractor, shall result in the contract described in the state contract solicitation not being awarded to the prospective state contractor, unless the State Elections Enforcement Commission determines that mitigating circumstances exist concerning such violation.

The State will not award any other state contract to anyone found in violation of the above prohibitions for a period of one year after the election for which such

contribution is made or solicited, unless the State Elections Enforcement Commission determines that mitigating circumstances exist concerning such violation.

Additional information and the entire text of P.A. 07-1 may be found on the website of the State Elections Enforcement Commission, www.ct.gov/seec. Click on the link to "State Contractor Contribution Ban."

UNIVERSITY OF CONNECTICUT HEALTH CENTER
NON-DISCRIMINATION CERTIFICATION

Certification to accompany all State contracts, regardless of type, term, cost, or value., pursuant to Connecticut General Statutes §4a-60(a)(1) and § 4a-60a(a)(1), as amended by Public Act 07-245 and Section 9(a)(1) and 10(a)(1) of Public Act 07-142.

(By corporate or other business entity regarding support of nondiscrimination against persons on account of their race, color, religious creed, age, marital or civil union status, national origin, ancestry, sex, mental retardation, physical disability or sexual orientation.)

I Loraine Shea (signer's name) Executive Director (signer's title)
of Heart Center of Greater Waterbury (name of entity) an entity lawfully organized and existing under the laws of Connecticut (name of state or commonwealth) do hereby certify that the following is a true and correct copy of a resolution adopted on the __ day of ____, 20__ by the governing body of Heart Center of Greater (name of entity) in accordance with all of its documents of governance and management and the laws of Connecticut (name of state or commonwealth) and further certify that such resolution has not been modified, rescinded, or revoked, and is at present in full force and effect.

RESOLVED: That Heart Center of Greater Wtby (name of entity) hereby adopts as is policy to support the nondiscrimination agreements and warranties required under Connecticut General Statues § 4a-60(a)(1) and § 4a-60a(a)(1), as amended in State of Connecticut Public Act 07-245 and sections 9(a)(1) and 10(a)(1) of Public Act 07-142.

STATE OF CONNECTICUT
GIFT AND CAMPAIGN CONTRIBUTION CERTIFICATION

Certification to accompany a State contract with a value of $50,000 or more in a calendar or fiscal year, pursuant to C.G.S. §§ 4-250 and 4-252(c); Governor M. Jodi Rell's Executive Orders No. 1, Para. 8, and No. 7C, Para. 10; and C.G.S. §9-612(g)(2), as amended by Public Act 07-1

INSTRUCTIONS:

Complete all sections of the form. Attach additional pages, if necessary, to provide full disclosure about any lawful campaign contributions made to campaigns of candidates for statewide public office or the General Assembly, as described herein. Sign and date the form, under oath, in the presence of a Commissioner of the Superior Court or Notary Public. Submit the completed form to the awarding State agency at the time of initial contract execution (and on each anniversary date of a multi-year contract, if applicable).

CHECK ONE: ☑ Initial Certification ☐ Annual Update (Multi-year contracts only.)

GIFT CERTIFICATION:

As used in this certification, the following terms have the meaning set forth below:

1) "Contract" means that contract between the State of Connecticut (and/or one or more of it agencies or instrumentalities) and the Contractor, attached hereto, or as otherwise described by the awarding State agency below;
2) If this is an Initial Certification, "Execution Date" means the date the Contract is fully executed by, and becomes effective between, the parties; if this is an Annual Update, "Execution Date" means the date this certification is signed by the Contractor;
3) "Contractor" means the person, firm or corporation named as the contactor below;
4) "Applicable Public Official or State Employee" means any public official or state employee described in C.G.S. §4-252(c)(1)(i) or (ii);
5) **"Gift"** has the same meaning given that term in C.G.S. § 4-250(1);
6) "Planning Start Date" is the date the State agency began planning the project, services, procurement, lease or licensing arrangement covered by this Contract, as indicated by the awarding State agency below; and
7) "Principals or Key Personnel" means and refers to those principals and key personnel of the Contractor, and its or their agents, as described in C.G.S. §§ 4-250(5) and 4-252(c)(1)(B) and (C).

I, the undersigned, am the official authorized to execute the Contract on behalf of the Contractor. I hereby certify that, between the Planning Start Date and Execution Date, neither the Contractor nor any Principals or Key Personnel has made, will make (or has promised, or offered, to, or otherwise indicated that he, she or it will, make) any **Gifts** to any Applicable Public Official or State Employee.

I further certify that no Principals or Key Personnel know of any action by the Contractor to circumvent (or which would result in the circumvention of) the above certification regarding **Gifts** by providing for any other principals, key personnel, officials, or employees of the Contractor, or its or their agents, to make a **Gift** to any Applicable Public Official or State Employee. I further certify that the Contractor made the bid or proposal for the Contract without fraud or collusion with any person.

CAMPAIGN CONTRIBUTION CERTIFICATION:

I further certify that, on or after December 31, 2006, neither the Contractor nor any of its principals, as defined in C.G.S. § 9-612(g)(1), has made any **campaign contributions** to, or solicited any contributions on behalf of, any exploratory committee, candidate committee, political committee, or party committee established by, or supporting or authorized to support, any candidate for statewide public office, in violation of C.G.S. § 9-612(g)(2)(A). I further certify that **all lawful campaign contributions** that have been made on or after December 31, 2006 by the Contractor or any of its principals, as defined in C.G.S. § 9-612(g)(1), to, or solicited on behalf of, any exploratory committee, candidate committee, political committee, or party committee established by, or supporting or authorized to support any candidates for statewide public office or the General Assembly, are listed below:

STATE OF CONNECTICUT
GIFT AND CAMPAIGN CONTRIBUTION CERTIFICATION

Certification to accompany a State contract with a value of $50,000 or more in a calendar or fiscal year, pursuant to C.G.S. §§ 4-250 and 4-252(c); Governor M. Jodi Rell's Executive Orders No. 1, Para. 8, and No. 7C, Para. 10; and C.G.S. §9-612(g)(2), as amended by Public Act 07-1

INSTRUCTIONS:

Complete all sections of the form. Attach additional pages, if necessary, to provide full disclosure about any lawful campaign contributions made to campaigns of candidates for statewide public office or the General Assembly, as described herein. Sign and date the form, under oath, in the presence of a Commissioner of the Superior Court or Notary Public. Submit the completed form to the awarding State agency at the time of initial contract execution (and on each anniversary date of a multi-year contract, if applicable).

CHECK ONE: ☑ Initial Certification ☐ Annual Update (Multi-year contracts only.)

GIFT CERTIFICATION:

As used in this certification, the following terms have the meaning set forth below:

1) "Contract" means that contract between the State of Connecticut (and/or one or more of it agencies or instrumentalities) and the Contractor, attached hereto, or as otherwise described by the awarding State agency below;
2) If this is an Initial Certification, "Execution Date" means the date the Contract is fully executed by, and becomes effective between, the parties; if this is an Annual Update, "Execution Date" means the date this certification is signed by the Contractor;
3) "Contractor" means the person, firm or corporation named as the contactor below;
4) "Applicable Public Official or State Employee" means any public official or state employee described in C.G.S. §4-252(c)(1)(i) or (ii);
5) **"Gift"** has the same meaning given that term in C.G.S. § 4-250(1);
6) "Planning Start Date" is the date the State agency began planning the project, services, procurement, lease or licensing arrangement covered by this Contract, as indicated by the awarding State agency below; and
7) "Principals or Key Personnel" means and refers to those principals and key personnel of the Contractor, and its or their agents, as described in C.G.S. §§ 4-250(5) and 4-252(c)(1)(B) and (C).

I, the undersigned, am the official authorized to execute the Contract on behalf of the Contractor. I hereby certify that, between the Planning Start Date and Execution Date, neither the Contractor nor any Principals or Key Personnel has made, will make (or has promised, or offered, to, or otherwise indicated that he, she or it will, make) any **Gifts** to any Applicable Public Official or State Employee.

I further certify that no Principals or Key Personnel know of any action by the Contractor to circumvent (or which would result in the circumvention of) the above certification regarding **Gifts** by providing for any other principals, key personnel, officials, or employees of the Contractor, or its or their agents, to make a **Gift** to any Applicable Public Official or State Employee. I further certify that the Contractor made the bid or proposal for the Contract without fraud or collusion with any person.

CAMPAIGN CONTRIBUTION CERTIFICATION:

I further certify that, on or after December 31, 2006, neither the Contractor nor any of its principals, as defined in C.G.S. § 9-612(g)(1), has made any **campaign contributions** to, or solicited any contributions on behalf of, any exploratory committee, candidate committee, political committee, or party committee established by, or supporting or authorized to support, any candidate for statewide public office, in violation of C.G.S. § 9-612(g)(2)(A). I further certify that **all lawful campaign contributions** that have been made on or after December 31, 2006 by the Contractor or any of its principals, as defined in C.G.S. § 9-612(g)(1), to, or solicited on behalf of, any exploratory committee, candidate committee, political committee, or party committee established by, or supporting or authorized to support any candidates for statewide public office or the General Assembly, are listed below:

STATE OF CONNECTICUT
GIFT AND CAMPAIGN CONTRIBUTION CERTIFICATION

Certification to accompany a State contract with a value of $50,000 or more in a calendar or fiscal year, pursuant to C.G.S. §§ 4-250 and 4-252(c); Governor M. Jodi Rell's Executive Orders No. 1, Para. 8, and No. 7C, Para. 10; and C.G.S. §9-612(g)(2), as amended by Public Act 07-1

INSTRUCTIONS:

Complete all sections of the form. Attach additional pages, if necessary, to provide full disclosure about any lawful campaign contributions made to campaigns of candidates for statewide public office or the General Assembly, as described herein. Sign and date the form, under oath, in the presence of a Commissioner of the Superior Court or Notary Public. Submit the completed form to the awarding State agency at the time of initial contract execution (and on each anniversary date of a multi-year contract, if applicable).

CHECK ONE: ☑ Initial Certification ☐ Annual Update (Multi-year contracts only.)

GIFT CERTIFICATION:

As used in this certification, the following terms have the meaning set forth below:

1) "Contract" means that contract between the State of Connecticut (and/or one or more of it agencies or instrumentalities) and the Contractor, attached hereto, or as otherwise described by the awarding State agency below;
2) If this is an Initial Certification, "Execution Date" means the date the Contract is fully executed by, and becomes effective between, the parties; if this is an Annual Update, "Execution Date" means the date this certification is signed by the Contractor;
3) "Contractor" means the person, firm or corporation named as the contactor below;
4) "Applicable Public Official or State Employee" means any public official or state employee described in C.G.S. §4-252(c)(1)(i) or (ii);
5) **"Gift"** has the same meaning given that term in C.G.S. § 4-250(1);
6) "Planning Start Date" is the date the State agency began planning the project, services, procurement, lease or licensing arrangement covered by this Contract, as indicated by the awarding State agency below; and
7) "Principals or Key Personnel" means and refers to those principals and key personnel of the Contractor, and its or their agents, as described in C.G.S. §§ 4-250(5) and 4-252(c)(1)(B) and (C).

I, the undersigned, am the official authorized to execute the Contract on behalf of the Contractor. I hereby certify that, between the Planning Start Date and Execution Date, neither the Contractor nor any Principals or Key Personnel has made, will make (or has promised, or offered, to, or otherwise indicated that he, she or it will, make) any **Gifts** to any Applicable Public Official or State Employee.

I further certify that no Principals or Key Personnel know of any action by the Contractor to circumvent (or which would result in the circumvention of) the above certification regarding **Gifts** by providing for any other principals, key personnel, officials, or employees of the Contractor, or its or their agents, to make a **Gift** to any Applicable Public Official or State Employee. I further certify that the Contractor made the bid or proposal for the Contract without fraud or collusion with any person.

CAMPAIGN CONTRIBUTION CERTIFICATION:

I further certify that, on or after December 31, 2006, neither the Contractor nor any of its principals, as defined in C.G.S. § 9-612(g)(1), has made any **campaign contributions** to, or solicited any contributions on behalf of, any exploratory committee, candidate committee, political committee, or party committee established by, or supporting or authorized to support, any candidate for statewide public office, in violation of C.G.S. § 9-612(g)(2)(A). I further certify that **all lawful campaign contributions** that have been made on or after December 31, 2006 by the Contractor or any of its principals, as defined in C.G.S. § 9-612(g)(1), to, or solicited on behalf of, any exploratory committee, candidate committee, political committee, or party committee established by, or supporting or authorized to support any candidates for statewide public office or the General Assembly, are listed below:

STATE OF CONNECTICUT
CONSULTING AGREEMENT AFFIDAVIT

Affidavit to accompany a State contract for the purchase of goods and services with a value of $50,000 or more in a calendar or fiscal year, pursuant to Connecticut General Statutes §§ 4a-81(a) and 4a-81(b)

INSTRUCTIONS:

If the bidder or vendor has entered into a consulting agreement, as defined by Connecticut General Statutes § 4a-81(b)(1): Complete all sections of the form. If the bidder or vendor has entered into more than one such consulting agreement, use a separate form for each agreement. Sign and date the form in the presence of a Commissioner of the Superior Court or Notary Public. **If the bidder or vendor has not entered into a consulting agreement, as defined by Connecticut General Statutes § 4a-81(b)(1):** Complete only the shaded section of the form. Sign and date the form in the presence of a Commissioner of the Superior Court or Notary Public.

Submit completed form to the awarding State agency with bid or proposal. For a sole source award, submit completed form to the awarding State agency at the time of contract execution.

This affidavit must be amended if the contractor enters into any new consulting agreement(s) during the term of the State contract.

AFFIDAVIT: [Number of Affidavits Sworn and Subscribed On This Day: _____]

I, the undersigned, hereby swear that I am the chief official of the bidder or vendor awarded a contract, as described in Connecticut General Statutes § 4a-81(a), or that I am the individual awarded such a contract who is authorized to execute such contract. I further swear that I have not entered into any consulting agreement in connection with such contract, **except for the agreement listed below**:

Consultant's Name and Title	Name of Firm (if applicable)

Start Date	End Date	Cost

Description of Services Provided: NONE

Is the consultant a former State employee or former public official? ☐ YES ☒ NO

If YES: _____ (Name of Former State Agency) _____ (Termination Date of Employment)

TWH Board Resolution

SMH Board Resolution

JDH Board Resolution

RESOLUTIONS OF THE BOARD OF TRUSTEES OF THE WATERBURY HOSPITAL

WHEREAS, pursuant to the Connecticut Office of Health Care Access ("OHCA") Docket No. 03-30167 ("Initial CON"), the Waterbury Hospital (the "Hospital"), Saint Mary's Hospital, Inc. ("SMH") and John Dempsey Hospital ("JDH") developed a joint program for a regional comprehensive heart care services including cardiac surgery and angioplasty (the "Program"); and

WHEREAS, the demonstration project contemplated by the Initial CON has expired and a letter of intent for a new Certificate of Need for the Program has been filed; and

WHEREAS, the Board of Directors of the Hospital continues to believe that there is sufficient patient need in Waterbury, Connecticut and its surrounding towns (the "Greater Waterbury Area") for the Program; and

WHEREAS, the Hospital, together with SMH and JDH, has the ability to jointly provide interventional cardiology, including cardiac surgery and angioplasty, to patients in the Greater Waterbury Area; and

WHEREAS, the Board of Trustees believes it to be in the best interests of the Hospital and health care consumers within the Greater Waterbury Area to continue the Program and that absent the continuation of the Program the lives of health care consumers within the Greater Waterbury Area could be endangered; and

WHEREAS, the Board of Trustees of the Hospital believes it to be in the best interests of the Hospital and health care consumers within the Greater Waterbury Area to take further action to maintain the Program and to seek all regulatory approvals necessary for the operation of the Program; and

WHEREAS, the Board of Trustees of the Hospital hereby adopts the following resolutions, a copy of such resolutions to be filed with the minutes of the meetings of the Board of Trustees of the Hospital.

NOW, THEREFORE, be it:

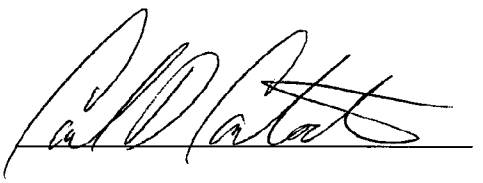
RESOLVED, that the Hospital, SMH and JDH continue to jointly operate the Program in Waterbury; and further

RESOLVED, that the Hospital and SMH utilize the existing cath lab capacities and cardiac operating rooms at the Hospital and SMH; and further

RESOLVED, that the Hospital and SMH continue to jointly manage the Program through the Heart Center of Greater Waterbury, Inc. ("HCGW"), which shall serve as a management services organization to oversee the Program and to provide programmatic, quality, marketing and community wellness coordination for the Program; and further

RESOLVED, that the Hospital, jointly with SMH and JDH, pursue all necessary regulatory approvals for the joint operation of the Program and develop a mutual strategy for obtaining such regulatory approvals, including but not limited to, the filing of a joint application for a Certificate of Need with OHCA; and further

RESOLVED, that John Tobin, President of the Hospital is hereby authorized and empowered, in the name and on behalf of the Hospital to negotiate, execute and deliver such agreements, instruments and documents on the terms such individual may deem necessary or appropriate and in the best interests of the Hospital, specifically in connection with obtaining all regulatory approvals necessary for the hospitals to jointly operate the Program, such execution and delivery thereof to be conclusive evidence of such individual's approval thereof and authority hereunder; and further



RESOLVED, that John Tobin, the President of the Hospital is hereby authorized and empowered, in the name and on behalf of the Hospital to execute and deliver such agreements, assignments, instruments, certificates or other documents and exhibits thereto, including (without limitation) any amendments, additions or modifications thereto, as he may deem necessary or appropriate and in the best interests of the Hospital specifically for the consummation of the transactions contemplated hereby, including, but not limited to those documents necessary to confirm or formalize the agreement(s) among the hospitals, and/or HCGW to jointly administer and operate the Program and set forth the specific details for the joint administration of the Program; such determination to be conclusively evidenced by such individual's execution thereof; and further

RESOLVED, that the Hospital pursue all regulatory approvals necessary for the joint operation of the Program; and further

RESOLVED, that all actions taken by the Hospital in connection with the development and operation of the Program prior to the date hereof, are hereby ratified, confirmed and approved; and further

RESOLVED, that to the extent any prior resolutions of the Board of Trustees of the Hospital are or may be in conflict with any of the resolutions set forth herein, such prior resolutions are hereby revoked.

RESOLUTIONS OF
THE EXECUTIVE COMMITTEE OF THE BOARD OF DIRECTORS OF
SAINT MARY'S HOSPITAL, INC.

WHEREAS, pursuant to the Connecticut Office of Health Care Access ("OHCA") Docket No. 03-30167 ("Initial CON"), Saint Mary's Hospital, Inc. (the "Hospital"), The Waterbury Hospital ("WH") and John Dempsey Hospital ("JDH") developed a joint program for regional comprehensive heart care services including cardiac surgery and angioplasty (the "Program"); and

WHEREAS, the demonstration project contemplated by the Initial CON has expired and a letter of intent for a new Certificate of Need for the Program has been filed; and

WHEREAS, the Board of Directors of the Hospital continues to believe that there is sufficient patient need in Waterbury, Connecticut and its surrounding towns (the "Greater Waterbury Area") for the Program; and

WHEREAS, the Hospital, together with WH and JDH, has the ability to jointly provide interventional cardiology, including cardiac surgery and angioplasty, to patients in the Greater Waterbury Area; and

WHEREAS, the Board of Directors believes it to be in the best interests of the Hospital and health care consumers within the Greater Waterbury Area to continue the Program and that absent the continuation of the Program the lives of health care consumers within the Greater Waterbury Area could be endangered; and

WHEREAS, the Board of Directors of the Hospital believes it to be in the best interests of the Hospital and health care consumers within the Greater Waterbury Area to take further action to maintain the Program and to seek all regulatory approvals necessary for the operation of the Program; and

WHEREAS, the Board of Directors of the Hospital hereby adopts the following resolutions, a copy of such resolutions to be filed with the minutes of the meetings of the Board of Directors of the Hospital.

NOW, THEREFORE, be it:

RESOLVED, that the Hospital, WH and JDH continue to jointly operate the Program in Waterbury; and further

RESOLVED, that the Hospital and WH utilize the existing cath lab capacities and cardiac operating rooms at the Hospital and WH; and further

RESOLVED, that the Hospital and WH continue to jointly manage the Program through the Heart Center of Greater Waterbury, Inc. ("HCGW"), which shall serve as a management

services organization to oversee the Program and to provide programmatic, quality, marketing and community wellness coordination for the Program; and further

RESOLVED, that the Hospital, jointly with WH and JDH, pursue all necessary regulatory approvals for the joint operation of the Program and develop a mutual strategy for obtaining such regulatory approvals, including but not limited to, the filing of a joint application for a Certificate of Need with OHCA; and further

RESOLVED, that William Casey, Interim President and Chief Executive Officer of the Hospital, is hereby authorized and empowered, in the name and on behalf of the Hospital to negotiate, execute and deliver such agreements, instruments and documents on the terms such individual may deem necessary or appropriate and in the best interests of the Hospital, specifically in connection with obtaining all regulatory approvals necessary for the hospitals to jointly operate the Program, such execution and delivery thereof to be conclusive evidence of such individual's approval thereof and authority hereunder; and further

RESOLVED, that William Casey, Interim President and Chief Executive Officer of the Hospital, is hereby authorized and empowered, in the name and on behalf of the Hospital to execute and deliver such agreements, assignments, instruments, certificates or other documents and exhibits thereto, including (without limitation) any amendments, additions or modifications thereto, as he may deem necessary or appropriate and in the best interests of the Hospital specifically for the consummation of the transactions contemplated hereby, including, but not limited to those documents necessary to confirm or formalize the agreement(s) among the hospitals, and/or HCGW to jointly administer and operate the Program and set forth the specific details for the joint administration of the Program; such determination to be conclusively evidenced by such individual's execution thereof; and further

RESOLVED, that the Hospital pursue all regulatory approvals necessary for the joint operation of the Program; and further

RESOLVED, that all actions taken by the Hospital in connection with the development and operation of the Program prior to the date hereof, are hereby ratified, confirmed and approved; and further

RESOLVED, that to the extent any prior resolutions of the Board of Directors of the Hospital are or may be in conflict with any of the resolutions set forth herein, such prior resolutions are hereby revoked.

Dated: August 14, 2008

Stephen R. Griffin
Secretary

University of Connecticut Health Center
John Dempsey Hospital

TO: **Members of the Clinical Affairs Subcommittee of the UCHC Board of Directors**

FROM: **Dr. Steven Strongwater**

DATE: **February 3, 2004**

Recommendation:
That the Clinical Affairs Subcommittee make the following recommendation to the UCHC Board of Directors:

That the UCHC Board of Directors authorize the University of Connecticut Health Center to provide support, assistance and clinical oversight for the proposed Angioplasty and Open Heart Surgery Program at St. Mary's Hospital and Waterbury Hospital and to cooperate with the Hospitals in a Certificate of Need application to the Office of Health Care Access to secure regulatory approval to establish the Program; and further authorize UCHC to contract with the Finance Corporation to enter into an agreement with St. Mary's Hospital and Waterbury Hospital to provide the services.

Background:
The CEOs of Waterbury and St. Mary's Hospitals indicated in discussions with Dr. Strongwater that they needed support and assistance in the development of a proposed Angioplasty and Open Heart Surgery Program. UCHC agreed to work with the two Waterbury facilities to support and assist the proposed program.

Rationale: 1) UCHC, as the State's academic medical center, is committed to facilitating the translation of education, research and clinical expertise to Connecticut communities, and to lending its expertise toward the goal of delivering high quality heath care services to the citizens of the State of Connecticut; 2) Cardiovascular Health is a key Signature Program for UCHC; 3) JDH is the Connecticut provider with the most recent experience implementing an Angioplasty and Open Heart Surgery Program.

See the Memorandum of Understanding attached.

STEPHEN FRAYNE
SENIOR VICE PRESIDENT, HEALTH POLICY
CONNECTICUT HOSPITAL ASSOCIATION
BEFORE THE
THE DEPARTMENT OF ECONOMIC AND COMMUNITY DEVELOPMENT
Thursday, January 17, 2008

Economic Impact of Connecticut Hospitals

Good evening Commissioner McDonald. My name is Stephen Frayne and I am the Senior Vice President, Health Policy of the Connecticut Hospital Association (CHA). I appreciate the opportunity to testify on behalf of CHA and its members regarding the Department of Economic and Community Development's study on the future course of the state's economy.

In 2007, Governor M. Jodi Rell began planning for growing the state's economy by creating a strategic plan for Connecticut. The Governor's strategic plan is to be a blueprint for state policy and includes recommendations on how Connecticut's industries and workers can successfully innovate, grow, and compete in the global economy. I know that you are looking at a variety of topics in your study, including transportation, technology transfer, brownfield remediation and redevelopment, business regulation, labor force quality and sustainability, cost of doing business, affordable housing, land use policy, taxation, availability of capital, and energy costs and supply.

I am here tonight to ask you to make sure hospitals and healthcare are included in the strategic plan for growing the state's economy. Connecticut's hospitals, like good schools and safe roads, are an essential part of the state's economy. As you focus on investing in the future of Connecticut, CHA asks that you recognize the need to invest in hospitals so that hospitals can continue to provide the services needed in their communities.

Providing patients and communities with the finest quality healthcare services is the highest priority for Connecticut's not-for-profit hospitals. Hospitals fulfill a vital role, caring for Connecticut residents 24 hours a day, seven days a week, and they make enormous contributions to the health and quality of life for millions of Connecticut residents. Last year, Connecticut hospitals provided 2.1 million days of inpatient care. In addition, hospital provide a significant amount of outpatient care. Last year, Connecticut hospitals provided more than 4 million outpatient visits, including: 1.5 million emergency department visits; 183,000 ambulatory surgery visits; 30,000 cardiac procedures; 99,000 cardiac rehab visits; 144,000 gastroenterology procedures; 43,000 chemotherapy visits; 204,000 radiation therapy visits; 844,000 outpatient rehabilitation visits; 344,000 psychiatric care visits; and 624,000 primary care visits. Every moment of every day hospitals touch the lives of Connecticut residents by providing high quality healthcare services.

What is often overlooked, however, are the vital contributions that Connecticut's not-for-profit hospitals make to the state's economy. Connecticut's hospitals are both the economic bedrock and engine in their communities. They are major employers, offering jobs at all skill and salary levels in a growing employment sector. Connecticut hospitals won't move out of Connecticut in search of a more favorable business climate – Connecticut hospitals are here to stay. Hospital purchases provide important secondary income and job benefits to the local economy. Hospitals serve as a magnet for other healthcare business and serve as a stimulus for new businesses, attracting other businesses into the community, such as retail shops, banks, grocery stores, and family restaurants. This year, CHA conducted an analysis of the economic impact of Connecticut hospitals a summary of which I have appended to this testimony. The study shows that Connecticut hospitals and health systems:

- Generate nearly **$12.2 billion** per year for the state and local economies—about **6%** of the Gross State Product;
- Provide **70,000** jobs in our communities generating approximately **$6.5** billion in annual local economy payroll; and
- Purchased goods and services generating approximately **$2.7** billion annually in local economic activity.

During the last three years, there has been a 24% increase in hospital contributions to Connecticut's economy---from $9.8 billion in 2004 to $12.2 billion in 2006.

The ability of Connecticut hospitals' to continue to make such contributions is constantly threatened. Payments for individuals enrolled in state and federal programs always fall short of the amount needed to cover the cost of care. These deficits rob Connecticut hospitals of the dollars needed for investment in facilities and acquiring modern technology. As of today, it would take $1.1 billion in investment by Connecticut hospitals to catch up to the nation in average age of physical plant.

Connecticut hospitals are also struggling with a growing workforce shortage. Today's workforce problems can easily become tomorrow's crisis, particularly when you consider the needs of an expanding elderly population in Connecticut. According to the U.S. Census Bureau, Connecticut is one of the top 10 oldest states in the country. By the year 2030, the Census Bureau projects there will be a 69% increase in those over 65 in Connecticut and a 7% decrease in the population aged 18 to 50. This shift in demographics has serious implications for hospitals and the residents of Connecticut:

- As people age they require more hospital care—this will challenge a system that can't absorb the need.
- The need for essential hospital caregivers will rise; the federal government projects that by 2020, Connecticut will have the second worst nurse vacancy rate in the country—second only to Alaska.
- Connecticut's older physical plants—and the lack of necessary capital and cash reserves to upgrade these aged structures—will impede both the implementation of new and life-saving technologies and the safety and quality of care for Connecticut residents.

Last spring, Governor Rell established the *Hospital System Strategic Task Force,* chaired by Secretary of the Office of Policy and Management Robert Genuario and Commissioner of the Office of Healthcare Access Cristine Vogel. Its members included representatives of Connecticut hospitals and other healthcare experts, as well as business leaders. The report is final and has been submitted to the Governor. I urge you to review the report's findings and recommendations. One of the topics extensively discussed by the task force was "cost shifting" of losses from underfunded government programs to employer-sponsored insurance. The report concludes cost shifting is one of the leading drivers of the financial instability of Connecticut hospitals, is unsustainable, and is eroding the employer-sponsored insurance system hospitals rely on to make ends meet. CHA believes that one of the most important ways to stabilize Connecticut hospitals, recognized in the task force report, is to increase Medicaid funding in the state budget so that hospitals receive the full cost of providing care to patients who are covered by government-funded programs, such as Medicaid and SAGA.

On behalf of the millions of Connecticut residents who rely on a strong, stable hospital and healthcare system, we ask that you include in your strategic plan strategies to help Connecticut hospitals. We believe that a hospital investment strategy should be an integral component in any plan to strengthen Connecticut's infrastructure for today and tomorrow.

Thank you for your consideration. I am happy to answer any questions.

Subject: Confirming Public Hearing Date for Docket No.: 08-31202-CON

Dear Chad, Colleen, Loraine and Monte,

Please be advised that OHCA is in the process of scheduling a public hearing regarding the Establishment of Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital, an application filed under CON Docket No.: 08-31202-CON.

Based on Commissioner Vogel's schedule and availability of a room for the public hearing at the Legislative Office Building, Wednesday, November 5, 2008, appears to be the best date available for the public hearing in this matter.

If possible by this coming Monday, (October 6, 2008), please confirm if that date works for all Applicants involved as well. If you have any questions regarding this email, please feel free to contact me.

Thank you,
-Steven

Subject: RE: Confirming Public Hearing Date for Docket No.: 08-31202-CON

Steven,

Our group has collectively looked at the calendars of the key witnesses that we would expect to testify at the Public Hearing for CON Docket Number 08-31202-CON. November 5, 2008 presents the Applicants with difficultly as John Tobin, CEO and President of Waterbury Hospital and Steve Widman, MD, Interventional Cardiologist are out of the state on that date. If at all possible we would like to respectfully request an alternative hearing date of November 14, 2008 or any day the week of November 17, 2008. Your consideration of this request is appreciated.

Sincerely,

Loraine Shea

Good Morning Loraine,

Thank you for your voice mail message yesterday afternoon requesting to hold the public hearing on either November 12th or 13th. We will check Commissioner Vogel's schedule, as well as room availability at the Legislative Office Building and get back to you hopefully by Monday afternoon.

In the meantime, have a nice weekend,

-Steven

Subject: RE: Confirming Public Hearing Date for Docket No.: 08-31202-CON

Steven,

Our group has collectively looked at the calendars of the key witnesses that we would expect to testify at the

Public Hearing for CON Docket Number 08-31202-CON. November 5, 2008 presents the Applicants with difficultly as John Tobin, CEO and President of Waterbury Hospital and Steve Widman, MD, Interventional Cardiologist are out of the state on that date. If at all possible we would like to respectfully request an alternative hearing date of November 14, 2008 or any day the week of November 17, 2008. Your consideration of this request is appreciated.

Sincerely,

Loraine Shea

Subject: Confirming Public Hearing Date for Docket No.: 08-31202-CON

Dear Chad, Colleen, Loraine and Monte,

Please be advised that OHCA is in the process of scheduling a public hearing regarding the Establishment of Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital, an application filed under CON Docket No.: 08-31202-CON.

Based on Commissioner Vogel's schedule and availability of a room for the public hearing at the Legislative Office Building, Wednesday, November 5, 2008, appears to be the best date available for the public hearing in this matter.

If possible by this coming Monday, (October 6, 2008), please confirm if that date works for all Applicants involved as well. If you have any questions regarding this email, please feel free to contact me.

Thank you,
-Steven

Hi Loraine,

Please share with your group that October 30, 2008 has been confirmed as the public hearing date and we have reserved room 2C at the Legislative Office Building.

OHCA will fax & mail out public hearing notice to the Applicants, as well as to the Newspaper tomorrow. Please let me know if you have any additional questions.

Thanks,
-Steven

Good Morning Loraine,

Thank you for your voice mail message yesterday afternoon requesting to hold the public hearing on either November 12th or 13th. We will check Commissioner Vogel's schedule, as well as room availability at the Legislative Office Building and get back to you hopefully by Monday afternoon.

In the meantime, have a nice weekend,

-Steven

Re: Certificate of Need Application, Docket Number 08-31202
The Waterbury Hospital and St. Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital
Establish a Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital
Notice of Public Hearing

Dear Gentlemen:

With the receipt of the completed Certificate of Need ("CON") application information submitted by The Waterbury Hospital and St. Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital ("Applicants") on September 15, 2008, the Office of Health Care Access ("OHCA") has initiated its review of the CON application identified above.

Pursuant to Section 19a-638 of the Connecticut General Statutes ("C.G.S."), OHCA may hold a hearing whenever a health care facility or institution proposes to introduce a new or additional function or service, or terminate a service.

This hearing notice is being issued pursuant to Section 19a-638, C.G.S.

Applicants:	The Waterbury Hospital and St. Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital
Docket Number:	08-31202-CON
Proposal:	Establish a Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital with no capital expenditure.

Notice is hereby given of a public hearing to be held in this matter to commence on:

Date: October 30, 2008

Time: 9:00 a.m.

Place: Conference Room 2C, Legislative Office Building
300 Capitol Ave. Hartford, CT

The Applicants are designated as parties in this proceeding. Enclosed for your information is a copy of the hearing notice for the public hearing that will be published in the *Waterbury Republican Americane* pursuant to Section 19a-643-48 of OHCA's Regulations.

Sincerely,

Kimberly R. Martone

RE: Docket Number 08-31202-CON
The Waterbury Hospital and St. Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital
Establish Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital
Request for Prefiled Testimony and a Response to the Interrogatories

Dear Ms. Shea:

The Office of Health Care Access ("OHCA") will hold a public hearing on October 30, 2008, at 9:00 a.m. in Conference Room 2C in the Legislative Office Building at 300 Capitol Avenue, Hartford, the Certificate of Need ("CON") application identified above. Pursuant to Section 19a-643-51(e) of OHCA's Regulations, OHCA hereby requires any party or other participant to prefile in written form all substantive, technical or expert testimony that it proposes to offer at the hearing. It is the responsibility of The Waterbury Hospital, St. Mary's Hospital and John Dempsey Hospital ("Applicants") to present their "Case in Chief" in the CON application and provide prefiled testimony prior to the hearing, and it is the Applicants' burden to justify the request.

Attached are OHCA's interrogatories that must be addressed by the Applicants' in addition to providing its prefiled testimony. Please submit an original and eight (8) copies of your paginated response to these interrogatories to OHCA. In responding to an interrogatory, please repeat each question prior to providing a response. If a response is continued in an attachment or an appendix, the response must clearly list the page number of the attachment or appendix in which the response is continued. Conversely, the attachment or appendix should contain a page number reference to the original question.

The Applicants' prefiled testimony and responses to OHCA's interrogatories must be submitted to OHCA no later than 4:30 p.m. on Friday, October 24, 2008. As required by the Regulation identified above, all persons responsible for providing prefiled evidence must be present at the public hearing to adopt their written testimony under oath, and such persons must be available for cross-examination for the entire duration of the hearing.

If the Applicants are unable to meet the specified time for filing the prefiled testimony or the interrogatories, the Applicants must request a time extension in writing to the OHCA Commissioner detailing the reasons for not being able to meet the specified deadline.

Please contact Alexis G. Fedorjaczenko or Steven W. Lazarus at (860) 418-001 if you have any questions concerning this request.

Sincerely,

Cristine A. Vogel
Commissioner

INTERROGATORIES

for Public Hearing:

Certificate of Need Application, Docket Number: 08-31202-CON

The Waterbury Hospital and St. Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital

Establish Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital, with No Associated Capital Expenditure

Physical Layout:

1) For **each** The Waterbury Hospital ("TWH") and St. Mary's Hospital ("SMH"), provide schematic drawings to demonstrate the dedicated inpatient beds for the inpatient cardiac services. Please elaborate in a narrative if necessary.

2) How many times in the last three years have the cardiac OR's at TWH and SMH been in use for Open Heart Surgery ("OHS") at the same time? Please elaborate in a narrative if necessary.

Care Pathways:

3) For **each** TWH and SMH, provide the following:

   a) The number of patients who arrived at each hospital for cardiac-related services through the Emergency Department ("ED") each year, for the last three Fiscal Years ("FYs"). Break out these volumes by the method of arrival to the ED (e.g., ambulance, personal transportation).

   b) For the last three FYs, the number of patients admitted for cardiac catheterization, angioplasty and heart surgery broken out by scheduled and non-scheduled. Please use the following table.

	FY 2006		**FY 2007**		**FY 2008**	
	Scheduled	Non-Sch.	Scheduled	Non-Sch.	Scheduled	Non-Sch.
Cardiac Catheterization						
Angioplasty						
Heart Surgery						

Staffing:

4) Is there a cardiac services team that rotates between TWH and SMH? If so, provide the following:

   a) Type of staff the team is comprised of (provide specific titles, for example nurse, tech., etc.);

   b) The number of staff by type of team; and

   c) Provide a narrative on the function or duties of the team.

5) Are any changes proposed for the staffing as a result of this proposal?

Capacity and Utilization:

6) For **each** TWH and SMH, provide the following:

   a) The bed capacity and occupancy rate by major service line for the past three FYs. Please use the following table and complete additional rows as needed for service lines.

	Licensed Beds	Physical Beds	Staffed Beds	Occupancy FY 2006	Occupancy FY 2007	Occupancy FY 2008
ICU						
CCU						
Telemetry						
Step-down						

   b) The average monthly census by inpatient unit for all services for the past three years.

c) For the last year, the number of patients that were treated monthly at each hospital for cardiac services (OHS, Primary and Elective PCI, Diagnostic Cardiac Catheterizations). Use the following table.

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
TWH												
OHS												
Angioplasty												
Cardiac Cath												
SMH												
OHS												
Angioplasty												
Cardiac Cath												

Financial:

7) For FY 2009 through FY 2011, the Heart Center of Greater Waterbury ("HCGW") is projected to provide a gain of approximately $2.3 million to Waterbury Hospital ("TWH") and 1.3 million to Saint Mary's Hospital ("SMH") ***(pgs. 1146 and 1150).*** The sum of these amounts is not consistent with the $10 million combined impact noted on page 108. Please reconcile these amounts.

8) On page 104, the cash equivalent balances of SMH and TWH were reported as $30 million and $33.6 million, respectively. These amounts do not agree to the cash and cash equivalent balances of SMH and TWH reported on pages 1135 and 1140, of $9 and $14.8 million, respectively. Please reconcile these amounts.

9) Please provide the most recently completed annual financial statements of HCGW, which contain at a minimum a balance sheet and statement of operations.

10) Please provide copies of HCGW Internal Revenue Service Form 990 for the fiscal years beginning October 1, 2006 and October 1, 2007.

11) Provide a copy of Audited or if unavailable, Unaudited FY 2008, Financial Statements for each, TWH and SMH.

12) Please provide revised appendices 11.b.i and 11.c.i, which includes the incremental FTEs and volume statistics including primary angioplasty, elective angioplasty and open heart surgery cases.

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202-CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

I am John Tobin, President and CEO of Waterbury Hospital. I hereby submit this written pre-file testimony for the Office of Health Care Access Public Hearing in the matter of Docket Number 08-31202-CON to be held on October 30, 2008. As you know and have previously heard, I am a native Waterburian, and, I have lived and worked in or near Waterbury for my entire life. My family and I rely on the hospitals and caregivers of Greater Waterbury. I know on both professional and personal levels just how much our community needs and values the advanced cardiac services provided through the Heart Center of Greater Waterbury.

The Office of Health Care Access took an affirmative step when it granted approval for the original demonstration project in 2004. No longer does the Waterbury area suffer from being the only major region in Connecticut without a full service, comprehensive cardiac program. What OHCA had the vision to do in 2004 was nothing less than the most significant change in the healthcare landscape in Connecticut in my almost 35 years in this field. We are looking forward to the opportunity you have given us to prove – beyond shadow of doubt – that our Program has earned permanent status.

In 2004, the granting of a demonstration project to The Heart Center was controversial, just as was the granting of a permanent full service cardiac program to the Danbury Hospital. But OHCA took that controversy head on and did the right thing to correct a flawed delivery system for cardiac care. OHCA changed Connecticut's de facto long standing health philosophy concerning advanced cardiac services. I truly believe that years from now, many will look back at OHCA's 2004 decision and recognize it to have been visionary and a critical turning point in health care in Connecticut.

We are pleased that the controversy surrounding the 2004 CON application appears to have abated. Why is the granting of permanent status to this Program so uncontroversial when compared to 2004? I suggest it is because in 2004 although we knew our Program would be a successful one, not even those close to the Program could predict just how impressive the results of this Program would

be in such a short period of time. Another important reason for the lack of controversy is that unlike all of the other applications that are brought before OHCA that are based solely on projections, we stand before OHCA with three years' worth of actual quality data and results of which we are extremely proud, and deservedly so. When you hear of some of the specifics of our quality data from Dr. Underhill, you will learn that in a mere three years, extraordinary when you think about that, our quality results rival, and in some manners surpass, nationally renowned centers. We have demonstrated not just need, but that critical needs have been met with outstanding care and results.

Although it has been said before, we cannot stress enough that the lack of a full service cardiac program is simply no longer acceptable in an urban area such as greater Waterbury, with a large population of poor and elderly citizens who are often medically fragile, and who cannot travel easily to other cities for acute care. Interventional cardiac services – angioplasty and open-heart surgery – are the centerpiece of an entire system of care that includes prevention and medical therapies as well as these more invasive, acute forms of care, and thus benefits thousands of greater Waterbury residents, not just the acutely ill. We also expect that the best treatments for the various manifestations of heart disease will continue to evolve. The continuation of a full service program in Waterbury ensures that all current treatment options are at the disposal of our local caregivers and available to our citizens, and, at the same time, will enable our program to evolve along with changing technologies. We simply cannot turn back to the way it was, nor is there any reason to even consider doing so.

As it relates to the structure of the Program, the Applicants have on numerous occasions seriously explored the feasibility of alternative structures for the Program, which are outlined in the CON application. Initially the one Program-two campus model was instituted as one that would suit the needs of the community and allow the hospitals the ability to start offering advanced cardiac services with capital costs that could be expended at the time. Significant

investments were made and have begun to show a positive financial return for the hospitals.

Any change to the structure of the Program would not only cause disruption to services that directly impact patient care, but will also cause irreparable financial harm to both hospitals. An analysis has been conducted jointly by each of the hospital financial teams to determine the financial impact should the Program be reorganized. The details of this analysis are staggering.

For example, if the Program were to be consolidated into one of the campuses, (that is, only one hospital provides all of the cardiac services) the other hospital would potentially lose between $10 and $12 million. This includes only the expected revenue for the procedure volume that would be lost. This does not account for any additional expenses that the host hospital would need to incur for renovation, capital equipment and additional staffing costs. This would be a lose-lose situation for the hospitals and for those we serve.

Another proposal analyzed was the following: one hospital performs primary angioplasty only and the other hospital continues to provide all advanced cardiac services including primary and elective angioplasty and open heart surgery. This too would create a devastating financial situation for both hospitals as demonstrated by a projected loss of between $8.1 and $9.5 million. Again, a decision of this nature limits access to the community and puts the hospitals in a financial situation that would be devastating.

Over the past several months, it appears that our Heart Center's application for permanent status has become enmeshed in our hospitals' ongoing discussions about a possible merger. From our perspective, neither the day to day operation nor the two campus configuration would be changed, even if the hospitals were to merge, because the Program works so well in our environment. The Heart Center's application must be considered on its own merits.

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

As to the status of the merger, we know OHCA, through its own analyses, is well aware of the unique challenges facing the health care delivery system in Waterbury—financial, demographic and other unique community characteristics, such as traffic patterns, hospital use patterns, existing infrastructure, and so forth. While a full asset merger offers the greatest long term economic benefit, as discussed with State officials it will require an initial investment that can only be made with financial support from the State of Connecticut. In the meantime, given both institutions financial stresses, disruption or cessation of this program will only aggravate an already difficult situation. Furthermore, under the law, our hospitals remain competitors until a merger transaction is actually consummated. Even if a preliminary agreement were achieved today, we still face months of regulatory process and due diligence. Any OHCA decision that puts the hospitals back into a competitive situation, hurts financial performance or requires further capital investment (or negates investments already made) simply makes no sense.

The decision before OHCA today is whether or not a Heart Center that provides seamless access to a complete system of care for thousands of heart patients should be granted permanent status.

As a hospital executive, I am often put in a position of reviewing data and other information and of having to make a difficult decision. This does not appear to me to be one of these situations. There is no clinical or financial reason to discontinue or reorganize the advanced cardiac services provides in this one Program-two campus model. In fact, there is quite simply no other financially possible alternative for these two-financially distressed hospitals.

OHCA embraced the opportunity given to it to correct a historic imbalance and a flawed delivery system in 2004. OHCA allowed for marked enhancement of the healthcare delivery system in the Greater Waterbury community. OHCA ensured the continued clinical relevance of two community hospitals that have served this region with distinction for over a century.

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

OHCA must appreciate the significance of its 2004 decision and see the Heart Center for what it actually has become: the centerpiece of a comprehensive system of care for thousands of heart patients—and potential heart patients—in our region. Three years of safe, high quality heart care is ample proof for any reasonable person that the Heart Center of Greater Waterbury has earned permanent status. We are proud of the fact that we have made this decision for permanent status in 2008 an easy one by demonstrating not only critical need and quality results, but no reasonable alternative Program configuration. We hope that the Office of Health Care Access will allow us to continue to provide this vital service to our community on a permanent basis.

Respectfully submitted,

John Robin, CEO and President
Waterbury Hospital

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

I, Chad Wable, hereby submit this written pre-file testimony for the Office of Health Care Access (OHCA) Public Hearing in the Matter of Docket Number 08-31202- CON on October 30, 2008.

I am currently serving as the interim President and CEO of Saint Mary's Hospital. In addition to my role at Saint Mary's, I am a fellow of the American College of Healthcare Executives.

In my previous role as Vice President, I was actively involved in the development of our initial Certificate of Need application in 2003 and was administratively responsible for the cardiology division during the demonstration project period. Based on that experience and the merits of the joint cardiac Program, including the tremendous track record of quality care and lives that have been dramatically improved and even saved, I believe the current application for permanent status should, in fact, be straightforward to review and approve.

The fundamental difference, of course, is that this application is based not on forecasts or market projections but on actual history and clinical data. For the past three years the Heart Center of Greater Waterbury has amassed a performance record that places it on solid footing among its peers throughout the state and in fact, the country. Our initial application projected significant need for advanced cardiac services in Waterbury—the past three years have proven the demand is greater than originally estimated. The application before you today is unique for OHCA—it is not about approving a new program, but rather about making an existing program permanent.

Since 2005, we have performed well over 2,500 interventional cardiac procedures and saved countless lives. Market share data indicates that more than 80% of people in the Waterbury area choose the Heart Center for their cardiac care. The significance of that

very high market share in such a short period of time should not be lost in the massive amount of information and data in this application. Our community has embraced the Heart Center as it is currently configured and has voiced its passionate support for maintaining the program on a permanent basis. In fact, more than 17,000 individuals have signed letters and petitions in support of the Program, and our public rally vividly demonstrated the widespread support for the Heart Center.

Our hospitals pledged to provide the standard of care to our community, and we have delivered on that promise. In turn, the community has come to expect nothing less than the access to advanced cardiac care that is available in other major cities of Connecticut. It is imperative that we maintain this level of access by granting the Heart Center program permanent status.

The ability to deliver on our commitment to provide advanced cardiac care did not come without significant financial investment. Our hospitals spent a combined $7 million in order to complete the renovations and construction necessary for these services. And although that figure is significant, particularly for the financially distressed hospitals of Waterbury, the cost was far less than the alternatives to the one program, two-campus configuration that were considered. We believe that this investment has resulted in cardiac surgical suites and patient care units that are among the most advanced in the state. In addition to financial capital, we have also invested heavily in human capital by creating and training specialized teams focused exclusively on providing high quality cardiac care. The quality of our program is a direct reflection of the exceptional people who work in the Heart Center. All of these investments were made with a long term focus. There is simply no defensible clinical or patient access reason to not utilize these valuable resources.

Finally, the Heart Center has had a positive financial impact on both Saint Mary's and Waterbury Hospital. The revenue generated from our cardiac program is an integral component of our overall financial stability. As has been clearly reported on numerous occasions, our hospitals are financially challenged. It simply does not make sense to eliminate or even significantly change one of the major clinical service lines that makes a positive contribution to our financial viability. In fact, should income from cardiac procedures be reduced or eliminated, it is likely that the loss in revenue would cause the closure of other unprofitable medical, surgical, and psychological clinics in our community. The result would be a reduction in access not only to cardiac care, but to other services as well. Most importantly, it may cause a dramatic reduction in access to safety net services for those indigent citizens that may not be able to receive care elsewhere.

The Heart Center of Greater Waterbury is a Program with a proven need and a proven track record. And it works! The past three years have clearly demonstrated the clinical quality and life saving capabilities of our hospitals. Our community has rallied behind the program and shown their unwavering confidence and support. We respectfully request that you grant permanent status to this program, allowing us to continue providing the services our community needs and deserves.

Respectfully submitted,

Chad Wable, Interim President & CEO
Saint Mary's Hospital

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

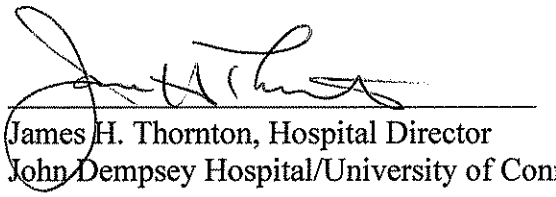
I, James Thornton, hereby submit this written pre-file testimony for the Office of Health Care Access Public Hearing in the matter of Docket Number 08-31202-CON to be held on October 30, 2008. Since January 2007, I have been the Hospital Director of John Dempsey Hospital, University of Connecticut Health Center. I have over 30 years hospital administrative experience, including 8 years at the CEO/Hospital Director level.

As Connecticut's only public academic medical center, the University of Connecticut Health Center and John Dempsey Hospital are committed to facilitating the translation of education, research and clinical expertise to Connecticut communities. It is consistent with the strategic planning of the Health Center and John Dempsey Hospital to expand and enhance our community relationships, with the goal of using our education, research and clinical strengths to improve the quality of care, health status and clinical outcomes of the citizens of the State of Connecticut.

We are pleased to support the efforts of Waterbury Hospital and Saint Mary's Hospital to provide specialized cardiac services to the residents of Waterbury and its surrounding communities.

As a co-Applicant on this innovative project I ask that consideration be made to establish The Heart Center of Greater Waterbury as a permanent service.

John Dempsey Hospital is proud to have been the tertiary partner with Saint Mary's Hospital and Waterbury Hospital over the last three years as we collectively brought advanced cardiac services to the greater Waterbury area. The knowledge and expertise at the University of Connecticut and John Dempsey Hospital were shared with the full purpose of fulfilling its mission as a teaching institution. Cardiology and operating room staff from Waterbury were trained at John Dempsey. Clinical protocols were developed with the assistance and direction of our education department, and equipment and facility consultation and decisions were made with collaboration of our physician and professional staff.



Because of this initial and ongoing involvement we are confident in the skills and competencies of the staff, the clinical leadership of cardiology and cardiac surgery and the overall strong foundation on which the Program was built. The level of service provided has consistently met quality benchmarks and this alone should have value as OHCA makes its decision related to this proposal.

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

John Dempsey Hospital continues to support the Heart Center in Waterbury through clinical oversight of quality and in an advisory capacity for areas such as administrative issues, marketing, community outreach and strategic planning. John Dempsey Hospital has consistently participated in the Heart Center of Greater Waterbury's Advisory Board and has provided advice and counsel on many administrative and clinical matters since the inception of the Program.

The Heart Center of Greater Waterbury has saved lives from in and around the greater Waterbury area with the help of John Dempsey Hospital. We believe this program to be an excellent community resource for the people of Waterbury. The Heart Center of Greater Waterbury represents hospitals doing what hospitals are supposed to do, namely create and sustain a very real improvement in the health status of the communities they serve. Accordingly, John Dempsey Hospital is proud to be co-applicant for a new CON and will gladly continue to serve the program in the same capacity as the previous three years.

Respectfully submitted,

James H. Thornton, Hospital Director
John Dempsey Hospital/University of Connecticut Health Center

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

I, Henry Borkowski, hereby submit this written pre-file testimony for the Office of Health Care Access Public Hearing in the matter of Docket Number 08-31202-CON to be held on October 30, 2008. I am a Board Certified Cardiologist and have been practicing in Waterbury for thirty-one (31) years. I am the Medical Director of the Heart Center of Greater Waterbury, a managing partner of Cardiology Associates of Waterbury, an ex-officio member of the Heart Center of Greater Waterbury Board of Directors, a member of the Advisory Board of the Heart Center, a member of the Saint Mary's Hospital Board of Directors, Chairman of the Quality Committee of the Saint Mary's Hospital Board of Directors and a member of the Saint Mary's Health System Board of Directors.

As the Medical Director of the Heart Center, I worked for two years with the clinical and interventional cardiologists, the cardiothoracic surgeons, emergency medicine physicians and the administrations of Waterbury Hospital, Saint Mary's Hospital and University of Connecticut – John Dempsey Hospital to design, develop and operationalize the Heart Center of Greater Waterbury. With a goal of providing access to high quality, life saving primary angioplasty, elective angioplasty as well as emergent, urgent and emergency cardiothoracic surgery, we considered all clinical models before committing to the one program – two campus model. Given the reality of our community's resources including two overloaded emergency rooms and telemetry units, transferring patients from one facility to the other would have delayed or prevented the care of the most vulnerable patients, the acute ST-Elevation Myocardial Infarction (STEMI) patients, especially those presenting with cardiac arrest or cardiogenic shock. Neither emergency room nor telemetry unit is large enough to care for all the patients who present with acute STEMI, acute coronary syndrome, unstable angina or congestive heart failure.

In addition to structuring the location of care in both hospitals, we did the following to insure the delivery of excellent care at the inception of the program:

1. Primary and elective angioplasty was provided by senior experienced interventional cardiologists 24 hours a day, 7 days a week, 365 days a year with emergency Coronary Artery Bypass Graft (CABG) surgery available on site;
2. Cardiac Surgery was provided by senior experienced surgeons from University of Connecticut John Dempsey Hospital;
3. Post angioplasty and post CABG care was provided by experienced Registered Nurses and Advanced Practice Registered Nurses, many of whom were trained at University of Connecticut John Dempsey Hospital;
4. A comprehensive quality assurance program was established prior to the program's first patient. The QA program includes:
    a. Participation in the American College of Cardiology (ACC) database
    b. Participation in the Society of Thoracic Surgeons database
    c. Use of uniform treatment protocols on both campuses
    d. Morbidity and Mortality Review Conference
    e. Joint Quality Review Committee with representatives from the medical staff and each campus
    f. External peer review by The Greeley Group

In the first three years of the program, we have performed 289 primary angioplasties for acute STEMI, 1687 urgent and elective angioplasties, and 641cardiac surgeries (page 0042 of CON application). We have established clinical outcomes that are comparable to the national averages set by the ACC and the STS. The angiographic success is at or above the ACC mean of 99.3%. The program's risk adjusted mortality is lower than the ACC mean of 1.23 ranging from 0.67% to 1.05%. We joined the Door to Balloon Alliance, a national quality initiative to decrease the time from onset of symptoms to treatment of STEMI patients. The Program's Door to Balloon time is at an average of 67 minutes. This is superior to the average door to balloon time 2.5 to 4 hours or more that

existed prior to July 2005 when our patients were transported to other cities for emergency PCI. Approximately 88% of the patients arriving at the emergency departments of Saint Mary's Hospital and Waterbury Hospital are being treated with emergency angioplasty in less than 90 minutes. This is significantly better than the national target of 75% and the ACC mean of 72%.

The cardiac surgery clinical outcomes are also comparable to national averages set by the Society of Thoracic Surgeons with a raw mortality for isolated coronary bypass surgery of 2.4%, and for isolated aortic valve surgery 1.7% or 1 of 57 patients. These results were achieved by the Heart Center of Greater Waterbury on both campuses through a systematic, collaborative process with all Emergency Department physicians and staff, cardiologists, interventional cardiologists and catheterization lab staff. In summary, the Heart Center of Greater Waterbury succeeded in achieving its goal: to dramatically transform the care of cardiac patients in our community by providing high quality access where and when it was needed.

Closure of this highly successful program is unacceptable to the community and to those of us who have been involved with its development and implementation from 2003 through 2008. Continuation of the program will allow us to continue to provide primary angioplasty to our most vulnerable ST-Elevation Myocardial Infarction (STEMI) patients, urgent angioplasty to patients with non-STEMI and acute coronary syndrome, elective angioplasty at the time of diagnostic catheterization when clinically indicated, elective diagnostic catheterization, as well as elective, urgent and emergency cardiac surgery. These procedures are part of the larger, total continuum of heart care now available in Waterbury – from prevention to diagnosis to treatment.

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

Closing the Heart Center of Greater Waterbury would create a health care crisis by terminating access to lifesaving care and will directly result in immediate and long term, permanent adverse effects on patients with cardiovascular disease in our community.

Cessation of Primary Angioplasty for STEMI patients will immediately increase the time to treatment for these critically ill patients and will be the cause of preventable deaths and permanent disability. Use of thrombolytic management protocols, where these are not the appropriate standard of care, will increase the risk of bleeding complications including life threatening hemorrhage and stroke. An increase in chronic congestive heart failure due to permanent myocardial loss will result in long term disability, increased risk of total cost of care due to medications and outpatient monitoring for the duration of patients' lifetime and the increased need for Automatic Implantable Cardiac Devices (AICD).

In addition to emergency angioplasty, elective and urgent angioplasty for non-STEMI, acute coronary syndrome as well as diagnostic cardiac catheterizations will no longer be available to area residents. Our cardiologists and primary care physicians will choose to send patients to a full service hospital for diagnostic procedures rather than have the patient subjected to duplicative procedures in different facilities.

Additionally, our Emergency Departments, already stressed and overburdened, will be required to triage, stabilize, manage and board cardiac patients, including STEMI, Non-STEMI and Acute Coronary Syndrome patients, while waiting for available beds at other Connecticut hospitals. Patients would then be transferred away from family support and their physicians incurring substantial increase in cost of care to themselves and the entire healthcare system including, but not limited to, duplication of admission and discharge services and fees, duplication of consultations by specialty physicians, duplication of laboratory testing and ambulance charges.

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

In summary, the Heart Center of Greater Waterbury was developed by the collaborative efforts of Waterbury Hospital, Saint Mary's Hospital and the University of Connecticut to improve heath care access for the 280,000 residents of the greater Waterbury area. Patients with cardiovascular disease have benefited from a comprehensive program that dramatically improved their morbidity and mortality in comparison to the care available prior to the program. The quality of our outcomes is documented in detail in the ACC and STS databases and in the DTB Alliance and American Heart Association Get with the Guidelines databases.

As you are well aware, the permanent status of the Heart Center of Greater Waterbury has been linked to the potential merger of Waterbury Hospital and Saint Mary's Hospital. As a member of the medical staff of both hospitals and as member of the Board of Directors of Saint Mary's Hospital, I am fully aware of the importance of the merger process. However, it is essential to recognize that, although many things will be changed by a merger, the actual delivery of emergency, urgent and elective cardiovascular care will not be changed at all until there is a single campus large enough to accommodate the needs of all our patients.

This CON is about terminating a program that has already proven its value to our community and, from OHCA's perspective, should be viewed totally differently than approving a new program. On behalf of the citizens of greater Waterbury, the staff of the Heart Center, the cardiologists, cardiothoracic surgeons, nurses and technicians who are dedicated to this program, I ask you to grant us the permanent status we earned.

Respectfully Submitted,

Henry Borkowski, M.D.

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

I, Dr. Stephen Widman, hereby submit this written pre-file testimony for the Office of Health Care Access Public Hearing in the matter of Docket Number 08-31202-CON to be held on October 30, 2008. I am the director of interventional cardiology at the Heart Center of Greater Waterbury and have been a member of Cardiology Associates of Waterbury, a private practice located in Waterbury, CT for the past 18 years.

I am a fellow of the American College of Cardiology (ACC), the former vice president of the Connecticut Chapter of the American College of Cardiology, and am board certified in Internal medicine, Cardiovascular medicine, Nuclear medicine, and Interventional cardiology. Just since the inception of the Program I have performed a total of 564 primary and elective angioplasties in Waterbury (page 0067 CON application).

The purpose of my testimony is to request approval of this certificate of need application for interventional cardiac care. In addition I will review the current construct of the interventional program at the Heart Center of Greater Waterbury (HCGW) and the benefits of such.

In the most recent ACC data summary, the heart center performed 598 total PCI's over the rolling four quarters. Volumes continue to remain steady and our expectation going forward is that this will continue. We maintain four interventional cardiologists working in the program. Each averages approximately 150 cases per year, far exceeding the ACC recommended 75 per year. Our mortality and procedural complications match or exceed the ACC standards in all areas. This is despite intervening on an older more urgent patient population and higher risk lesion subset.

The development of the interventional cardiac program in Waterbury was based upon the recognition of an ongoing and burgeoning need for local, urgent and emergent interventional services for this population of greater than 280,000 people. We maintain a high quality service, but more importantly stand ready to emergently serve the needs of this large patient population unable to be so served by any other interventional program in the state.

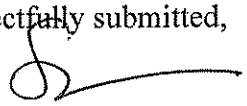
In a continuing effort to improve our efficiency and quality, we have entered into a national, ACC sponsored, Door to Balloon Alliance. This endeavor is based upon the knowledge that combining experience and knowledge amongst the various hospitals in the state performing emergency angioplasty will improve the likelihood of a more rapid response in each site. Embracing the concept that "time is myocardium" there are monthly meetings within our own heart center involving emergency room (ER)

personnel, catheterization lab personnel and physicians reviewing each case in an effort to improve local performance. Our Program door-to-balloon time average of 67 minutes far exceeds the less than 90 minute standard promulgated by the ACC and is among the best in the country based upon the ACC database. Clearly, the local availability of angioplasty has benefited the hundreds of individuals served by this effort.

Full time interventional services provide emergency angioplasty services but additionally provide urgent services to those patients admitted from the ER with acute coronary syndromes. We know through our data that we have an unusually high percentage of angioplasty patients admitted through the ER when compared to the national average. This highlights the acuity of our population. Finally, we provide routine outpatient services to our more stable patient population.

The HCGW functions as a single entity. Both catheterization laboratories are identically equipped and staffed. The post angioplasty recovery areas are identical, and the Program staff meets on a monthly basis to review difficult procedures, complications and strategies for improved performance. The hospitals have been uniformly supportive of this interaction and encourage cooperation on all levels.

This CON request seeks to maintain the current level of service in the HCGW. Our proposal is to maintain the one program, two campus approach. Our performance thus far justifies this approach as the most efficient way to deliver expedient and, when required, emergent care to the patients within our service area who present with progressive coronary syndromes. To not approve the continuation of this successful Program would do a disservice to a population that has benefited greatly from these services. This is a population that according to the most recent Connecticut economic resource center has a poverty rate of 16%, double the state average of 7.9% (1999 data). Restructuring the program, limiting services to one campus, would financially handicap both hospitals by forfeiting a very sizeable investment made by one to accommodate cardiac services, and requiring a further sizeable investment by the other to accommodate the substantially increased volumes at a single campus.



Additionally to advocate a restructuring of the program to provide only emergency services for ST-Elevation Myocardial Infarction (STEMI) is impractical for our community on several levels. Providing STEMI only services would reduce volumes in the catheterization lab drastically. Urgent cases would no longer undergo catheterization in Waterbury since the opportunity to therapeutically intervene would not be available. Routine cases with a high likelihood of coronary artery disease would similarly be

admitted elsewhere to avoid duplicative procedures. Commensurate with that marked drop in volume would be a loss of personnel. Fewer interventionalists would be required, thus, those remaining would spend most days out of town, no longer able to respond to a local emergency. Catheterization lab nurses and technicians, who are highly trained practitioners, would be forced to find employment elsewhere given the drastic change in work load. The catheterization labs would functionally become irrelevant. There is no advantage to the residents of Waterbury to make a change of this nature. There is in fact harm.

Given the city dynamics of two stressed hospitals, a documented successful track record over the past three years, broad based community support and a demonstrated commitment to excellence, this is the Program that works for us at the present time. Opposition exists to this program. It is not opposition borne of safety concerns, for those have been answered. The concerns are those of stressed hospitals in other communities who see our volume as a panacea for their difficulties. While we sympathize with and understand their plight, we see our patients care needs safely and completely met by our own Heart Center.

The noted British philosopher Bertrand Russell observed in all affairs it is a healthy thing now and then to hang a question mark on things you have long taken for granted. Our one program-two campus approach is different and for that the Program has been questioned by some and undergone much scrutiny, scrutiny we welcomed because we knew of the quality and achievements of the Program. The information in our application and pre-file testimony, particularly that of Dr. Underhill, responds to and squelches every unsupported doubt and question mark. The time for permanency of the Program is more than appropriate and justified.

Respectfully submitted,

Stephen Widman, M.D.

Pre-File Testimony

Before the Office of Health Care Access: Docket No. 08-31202- CON

Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital

Elective and Primary Angioplasty and Open Heart Surgery

October 24, 2008

I, David Underhill, MD, hereby submit this written pre-file testimony for the Office of Health Care Access Public Hearing in the matter of Docket Number 08-301202 to be held on October 30, 2008. I am a board certified cardiothoracic surgeon and went to medical school at the University of Vermont before completing my general surgical residency at the New England Medical Center. During this time I spent two years that the National Institutes of Health (NIH) in Bethesda, Maryland in the National Heart, Lung, and Blood Institutes. After completing my general surgery training in Boston, I did my formal Cardiothoracic Surgical residency at the University of Michigan in Ann Arbor, Michigan. My first staff position was working for the Indian Ohio Heart Group in Fort Wayne, Indiana. I have been working at the Hartford Hospital since 1992 and the University of Connecticut Medical Center since the program opened there. I am proud to have been a member of Connecticut Cardiothoracic Surgical Associates (CCTSA) since 1998 and have been an active participant in the Heart Center of Greater Waterbury (HCGW) since the Program opened in 2005.

The scope of my practice, as well as that of my partners, includes the full range of all types of cardiac and general thoracic surgery including all open heart operations, heart transplant and artificial heart devices, lung operations such as lung cancer surgery and esophageal surgery, and in addition I perform all types of peripheral vascular surgery. With the exception of transplants and ventricular support devises we have performed all of these procedures at both Saint Mary's Hospital and Waterbury Hospital.

I have always been interested in outcomes data since my fellowship at the NIH when I studied under Dr. Richard Clark who developed the Society for Thoracic Surgeons (STS) database. I am on the High Risk Cardiac Surgical Review Committee at Hartford Hospital and recently presented the data for Hartford Hospital's Quality Improvement Program at the American Heart Association national meeting. I am also an active participant in the Northern New England Cardiovascular Study Group (NNECSG).

As a group we have participated in the STS database through Hartford Hospital since its' inception and are proud to have been the longest continuously participating heart surgery group in this database in the state of Connecticut. Between the four members in our group we have over 70 years of clinical practice as staff surgeons and have cared for tens of thousands of cardiothoracic surgical patients. We have been pleased to bring this experience to the patients in greater Waterbury and feel that our presence has made a measurable improvement in the cardiovascular health of the community. Presently

between Hartford Hospital and the University of Connecticut and the Heart Center of Greater Waterbury we perform nearly 620 open heart surgeries each year that is perhaps the largest number of any single group practice in the state of Connecticut.

I have been involved with the HCGW during the preparation and implementation phases and am extremely proud to be associated with such an excellent Program. This Program is critical to greater Waterbury and its residents.

The important points which I wish to make in this testimony are the following:

I. To assure the Office of Health Care Access (OHCA) of the quality of the cardiac surgical outcomes in the program;

II. To re-emphasize that volume is not considered a proxy for quality in cardiac surgical performance;

III. To illustrate the concept of surgeon procedure volume and its relation to quality metrics. I will use references to peer reviewed articles in the cardiac surgical literature to emphasize and illustrate these points.

I. Quality Outcomes.

I have reviewed all of the open heart surgical data for the Program to date. All of the cardiac surgery has been performed by the four members of our group. This is an incredible amount of data and it is my intention to make it palatable and understandable for OHCA and other members of the non-medical community. Naturally when trying to assess quality metrics, it is inevitable that comparisons must be made to either national or regional benchmarks. In addition, in the field of cardiac surgery, an organization will frequently compare itself to other nationally known programs. We are fortunate in cardiac surgery to have probably the finest clinical data base in all of medicine in the STS Adult Cardiac Surgical Database. Cardiac surgeons on the national scene have been very proactive in trying to assure patients that the work that they are performing is of top quality. I am confident that you will be very pleased when you see that STS results of the open heart surgical Program.

Since its inception on July 18, 2005 until most recently on September 15, 2008, we have performed 669 open heart surgical operations in the Program. Of the 669 total patients, 416 patients underwent isolated coronary artery bypass graft (CABG) surgery. This includes CABG surgeries that were emergencies from the emergency room or

catheterization lab or elective procedures. Importantly second and third redo operations are also included in this total. We are proud that our overall operative mortality rate for isolated CABG was only 2.4%. This compares very favorably to the nationally renowned Cleveland Clinic's isolated CABG mortality rate of 2.6%. Finally, there have been 57 patients who have undergone isolated aortic valve replacement (AVR) surgery. There has been only one mortality in this cohort of 57 patients.

Please recognize that this is raw data without any risk adjustment associated with it. However, these results are outstanding in the field of cardiac surgery.

As stated earlier, perhaps the most meaningful way of determining quality of a program is by using national and regional benchmark comparisons. The STS database affords this opportunity to all of its participants. What follows are the data from two of the largest and most commonly performed "homogeneous" patient groups in the STS database. These are isolated CABG and isolated AVR. As these are the two most commonly performed operations in adult cardiac surgery, the numbers of patients in these groups are naturally larger and allow for meaningful statistical comparison. To ensure that we have presented our most recent information for OHCA, the data is presented for calendar year 2007.

The STS Database is administered and validated by the Duke Clinical Research Institute (DCRI). The results are risk stratified using a proprietary methodology and each participating center's results are reported back to them with 95% confidence intervals. What this means is that if the results are within that confidence interval, the Program's data is not statistically different from those reporting to the database. OHCA required the Program to report its results to the STS database. In 2008 the Program was randomly selected by STS to participate in an audit of its data for validation purposes. This audit occurred on October 15, 2008 and concluded that the Program has an excellent data collection, monitoring and submission process.

Tables 1 and 2 illustrate the data for isolated CABG and AVR procedures

Table 1 Isolated CABG

THW (57 Cases)	**2007**	**STS Average**
Inpatient Mortality	0%	1.8%
Deep Sternal Wound Infection	0%	0.3%
Post Operative Stroke	0%	1.1%
SMH (69 Cases)		
Inpatient Mortality	1.4 %	1.8%
Deep Sternal Wound Infection	0%	0.3%
Post Operative Stroke	1.3%%	1.1%

Source: STS Database 2007

Table 2 Isolated AVR

THW (9 Cases)	**2007**	**STS Average**
Inpatient Mortality	0%	2.5%
Deep Sternal Wound Infection	0%	0.4%
Post Operative Stroke	0%	1.6%
SMH (6 Cases)		
Inpatient Mortality	0%	2.5%
Deep Sternal Wound Infection	0%	0.4%
Post Operative Stroke	0%	1.6%

Source: STS Database 2007

As stated above, we would have chosen to submit this data as CCTSA has already participated in this database longer than any other group in the state of Connecticut. Even if it were not required by OHCA, CCTSA would have demanded that the hospitals enroll in this database as it is the most logical way for us to monitor the quality of our outcomes. This demonstrates our commitment to the transparency of our results.

Pre-File Testimony

Before the Office of Health Care Access: Docket No. 08-31202- CON

Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital

Elective and Primary Angioplasty and Open Heart Surgery

October 24, 2008

We are pleased to report to OHCA that the outcomes for all procedure categories in the STS database for both Saint Mary's Hospital and the Waterbury Hospital are within the 95% national confidence intervals. This means that these results are not statistically different than the nationally established outcomes of any of the given procedures performed by the open heart surgical team. Furthermore, the quality is absolutely excellent. In the Program, our patients get the same or better care than anywhere else in the United States.

STS Composite Quality Rating And National Quality Forum (NQF Measures)

The STS has recently developed a comprehensive rating system that allows for comparisons of the quality of cardiac surgery among hospitals across the United States. Seventy-seven percent (77%) of all hospitals throughout the United States are considered "equal" in the hospital's performance and outcomes in their open heart surgical results. This means that their performance is not statistically different from the STS average. In the most recent analysis issued by the STS, the Program was considered to be in this select group. In the most recent assessment of the program's performance per the NQF measures, both hospitals conformed to the STS standards in all categories assessed. This was found to be within a 95% confidence interval. The NQF measures include indicators such as the usage of preoperative beta blocker medications, the use of internal mammary arteries during performance of isolated coronary bypass graft surgery, discharging the patients on appropriate anti-platelet medications from the hospital, discharging patients on appropriate beta blocker medications from the hospital, the occurrence of deep sternal wound infection as a complication of surgery, the incidence of postoperative renal insufficiency after performing open heart surgery, the need for reoperation for bleeding, the occurrence of stroke during or after the operation, and finally operative mortality for both isolated CABG and isolated AVR. What this means is that the quality and the results of the open heart surgical team in the program at the Heart Center of Greater Waterbury are absolutely outstanding and compare favorably to any other program performing open heart surgery in the United States.

European System for Cardiac Operative Risk Evaluation

In addition to an analysis of the clinical outcome data, the program completed an extensive retrospective review of its patient data in relation to the predicted versus

observed mortality. Essentially what this means is that we are able to assign a predicted risk of mortality for a patient undergoing open heart surgery. Naturally, all patients present to the operating team with various medical conditions and co-morbidities. Furthermore, not everyone's surgical procedure has the same complexity. It naturally follows that each would have different risks for undergoing open heart surgical procedures. In an attempt to try and compare programs to one another, various instruments have been devised to help establish the risk of the surgical candidates. This therefore allows a so-called "leveling of the playing field" when comparing program A to program B and so forth. When it appeared as though the program was going to be reviewed last year, we retrospectively assessed each patient for their risk of mortality using a risk stratifying instrument called the EuroSCORE tool. EuroSCORE stands for the European System for Cardiac Operative Risk Evaluation. This is a standardized and validated tool and it is used by cardiac programs in Connecticut, the country, and especially in Europe. It is a method of calculating predicted operative mortality for cardiac surgery patients by closely examining risk factors. The tool is comprised of 13 patient related factors such as age, sex, and existing and historical clinical conditions for the patient and 4 operation related factors. Research has demonstrated that these 17 elements are accurate measures of a patient's risk of mortality from open heart surgery. Once this is assessed through a mathematical formula, an overall risk score is calculated for each patient.

As stated, this assessment tool was retrospectively administered for each of the patients who underwent any type of open heart surgery at the program from July 18, 2005 through July 17, 2007 through a medical record review by me and a team of individuals. Per the table below, the actual observed mortality rate for our program was far lower than the expected mortality, demonstrating that the program outcomes have exceeded what was predicted. Please note Table 3, EuroSCORE comparisons for categories of open heart surgical patients.

Table 3 EuroSCORE Comparison for all Categories of OHS Patients (HCGW)

Category	Patient Cases	Expected Mortality Rate	Observed Mortality Rate	Expected # Deaths	Observed # Deaths
Isolated CABG	271	7.62%	2.95%	20.64	8
CABG + Other OHS	11	18.69%	9.09%	2.06	1
CABG + Valve	44	13.63%	6.82%	6	3
CABG + Valve + Other	5	9.77%	0.0%	.49	0
Other	11	16.78%	18.18%	1.85	2
Isolated Valve	60	10.45%	5%	6.27	3
Valve + Other	12	15.78%	0.0%	1.89	0
Total All Procedures	414	9.47%	4.11%	39.19	17

The patient population in greater Waterbury has presented great challenges to both the cardiologists as well as the surgeons in the program. As surgeons operating in different service areas in the state of Connecticut, we have suspected that the Waterbury patients presented with more significant co-morbidities in terms of both number and severity.

The patients having isolated CABG for the first two years of our program, that is July 18, 2005 until July 17, 2007, were compared to another group of similar patients operated on by our same group of surgeons at another hospital here in Connecticut during the same time period. We noted that the average additive EuroSCORE for patients in the Program was 5.37 points with an expected mortality of 7.62%. This compared to the same group of patients having isolated coronary bypass graft surgery at another hospital of only 4.54 with a predicted death risk of only 5.9%. This bore out our suspicions that the severity and the level of acuity of the patients in the Waterbury area was greater than in the other service areas in which we practice.

When risk stratifying patients using the EuroSCORE, patients can be broken into four different categories in terms of quartiles by their assigned risk score. Patients who are considered low risk have a EuroSCORE of between 1 and 2 points, while medium risk patients score in the range of 3 to 5 points. High risk patients are considered any patients with a score higher than 6 points and extremely high risk patients obviously will score even higher. After reviewing our data, we found that the majority of our Observed Mortality occurred only in the patients with the highest average EuroSCORE. In other words, the patients who had the highest co-morbidities and potential risk for undergoing the operations were the patients who had poor outcomes.

Comparison to New York State Programs

The Heart Center of Greater Waterbury's Program outcomes were also analyzed through a comparison of our Program outcomes with the State of New York Adult Surgery Report published by the New York State Department of Health. Once again, this was done in preparation for filing for permanent CON status last year. Therefore the statistics from New York utilized were published in June of 2006. As noted in this report, "New York has taken a leadership role in setting standards for cardiac services, monitoring outcomes, and sharing performance data with patients, hospitals, and physicians." At the current time, public reporting of cardiac surgical data in the State of Connecticut is being developed but has not occurred yet. As a result of this, local comparison of public reported data in the State of Connecticut cannot be accomplished at this time. However, the data from New York State is available for comparison. To allow for this comparison, the data from our program for isolated CABG patients were collected and analyzed using the data elements and data analysis currently used in the State of New York. This analysis was independently prepared by Dr. Gerald O'Connor, Ph.D., Sc.D., Professor of Medicine and Community and Family Medicine, Dartmouth Medical School and the Research Director of the Northern New England Cardiac Disease Study Group (NNECDSG). I am also a participant in this group and have been so for over ten years now. This analysis provides a Risk Adjusted Mortality Rate (RAMR) and demonstrates that the Program's outcomes are comparable to several of the higher and the lower volume programs in this neighboring state. In addition, this RAMR is within the confidence levels set by this validated system.

II. Volume is not a proxy for quality in cardiac surgery performance.

In the past decade there has been a steady decline in the rates of coronary artery bypass graft surgery in the United States as evidenced by the most recent executive summary from the STS database. The average number of cases per hospital has dropped from 553 in 1999 to 318 in 2007.

A similar decline in the number of open heart surgeries in the State of Connecticut has also been observed as seen in Table 5 from the OHCA web site shown below. There has been a drop of nearly 25% in the total number of open heart operations from 4644 in 2002 as compared to 3508 in 2007. This occurred despite opening three new heart surgery programs during this time period.

Table 5 The number of open heart surgeries performed by hospital FY 2002-FY 2007.

Hospital	2002	2003	2004	2005	2006	2007
Bridgeport	345	313	268	263	175	194

Please note: unduplicated counts utilizing all procedure codes
Fiscal Year from October 1 through September 30

As demonstrated in the table the only hospitals that have consistently increased the number of procedures each year are the two members of the Heart Center of Greater Waterbury. This clearly shows an increased need in utilization by the people of this area. If one evaluates the profiles of the patients undergoing cardiac surgery at the Program, it is easily apparent that these patients conform to the usual patient profile of patients undergoing these operations throughout the United States and certainly in the region.

Additionally as we have already shown above, in looking at patients just having coronary bypass graft surgery, the Waterbury patients are even perhaps "sicker" than other patients in the State of Connecticut. Angioplasty volume during the first three years of the Program exceeded expectations by one and a half times. In fact, this is further testimony to the quality and the integrity of the practitioners and the whole philosophy of the HCGW Program. By the very fact that we performed one and a half times the expected number of angioplasties, it is obvious evidence that no attempt was made to "pad" the surgical numbers with patients who could have been treated and were treated by percutaneous means. This would certainly have been easy to do, but did not occur because practitioners, both cardiologists and surgeons, did what they felt was "right" both medically and ethically for the patient group here. The Waterbury community can be proud that they have cardiac professionals that are acting on their best interests at all costs.

GUIDELINES:

The ACC/AHA published Revised Guideline Update for Coronary Artery Bypass Graft Surgery (CABG) in 2004. The revised guidelines were approved by the American College of Cardiology Foundation Board of Trustees in March of 2004 and by the American Heart Association Science Advisory and Coordinating Committee in June of 2004 and published for the first time on August 31, 2004 in *Circulation, The Journal of the American Heart Association.* These updated guidelines are not the same guidelines used to approve the Program's demonstration project in 2004 as such were published after the Technical Hearing and the signing of the Agreed Settlement. These guidelines provide an extensive review of relevant literature at the time and noted that the studies found a wide variation in the mortality rates and that some low volume programs maintained excellent outcomes. The conclusion reached is as follows:

> In summary, studies suggest that survival after CABG is negatively affected when carried out in institutions that perform less than a threshold number of cases annually. Similar conclusions have been drawn regarding individual surgeon volumes. In states where reporting of outcomes is an accepted practice (example New York State), the relationship between low volumes at either an institution or individual level seem to have diminished over time. This observation strengthens

> the argument for outcome tracking and supports a posture of close monitoring of institutions or individuals who perform that less than 100 cases annually. It must be remembered that these studies also found a wide variation in risk adjusted mortality rates in low volume situations; i.e., some institutions and practitioners maintain excellent outcomes despite relatively low volumes. Therefore, credentialing policies based on conclusions drawn from these data must be made with caution.

These guidelines continue to support the argument for monitoring clinical outcomes in those programs that perform less than 100 cases annually, however, that do not support that programs with an institutional volume of less than 100 cases not be allowed to operate. As a program HCGW has never performed below 100 cases as will be demonstrated further is not projected to do so. These guidelines refer to surgeon volume which in the case of this program is key, as will be shown by other supporting literature as well as data in the pre-file testimony.

Society of Thoracic Surgeons:

Additionally, the Society of Thoracic Surgeons (STS) is the nationally recognized professional organization for cardiothoracic surgeons. The Society of Thoracic Surgeons established a Quality Measure Taskforce to develop a methodology for the comprehensive assessment of adult cardiac surgery quality of care, including both individual measures and overall composite quality score. The report of the STS Quality Measure Taskforce entitled, *Quality Measurement in Adult Cardiac Surgery: Part 1 – Conceptual Framework and Measure Selection* was published in 2007 and recommended the use of National Quality Forum measures of quality and program evaluation. The STS does not endorse threshold volume for cardiac surgeons or open heart surgical programs. The 2007 document states the following regarding the use of volume as a proxy for CABG procedures:

> **Structure**:
> Structural measures refer to inherent characteristics of the provider that are believed to be associated with higher quality. These may include, for example, the volume of a particular type of procedure performed annually, advanced information technology such as electronic health records or computerized order

entry, participation in an outcomes database registry, sophisticated radiographic imaging capabilities, the number of approved residencies, and nurse staffing ratios. For many such measures, the strength of their relationship with desired healthcare outcomes is not well defined.

Without question, volume is the most extensively studied structural measure of quality in all of medicine and surgery. Whether this reflects "practice makes perfect" or "selective referral" to institutions perceived to be of higher quality is uncertain. The strength of the volume outcome relationship varies widely. For complex procedures such as esophagectomy or pancreatectomy that are performed relatively infrequently even at high volume institutions, the volume outcome association is strong. For some frequently performed, relatively standardized and mature or complex procedures such as CABG where annual hospital volumes may range from 100 to 1000 cases the volume-outcome relationship is weak.

Structural measures may be useful proxies for outcomes when the latter data are unavailable. Conversely, their relative utility diminishes when reliable outcomes data are accessible. Furthermore, structural measures are often not readily actionable by providers, and this diminishes their usefulness as quality improvement tools.

The leading organization for cardiothoracic surgeons has very strong opinions on the matter of volume targets.

As a surgeon, I understand the reasons that the 1996 guidelines for the American College of Surgeons (ACS) were used originally. However, in 2008 this document is significantly outdated.

The 1996 guidelines state that the "current standards of practice form the basis of the report." However, the standards state that the volume guidelines are based on data from 1975. In 1975, cardiac surgery was in its infancy. In 1975, the practice of cardiothoracic surgery did not have the benefit of subsequent years of the additional science and technology that have shaped the practice today.

In 2008, over 30 years later, it is important to consider and review the current status of the medical literature which speaks to cardiac surgery volume and outcomes. The Program seeks to provide quality services with excellent outcomes for our community. Relevant and current medical literature to date related to cardiac surgery and the volume-outcome connection is summarized below. The medical literature supports the fact that programs such as the Heart Center of Greater Waterbury, can and do produce excellent outcomes. Medical research takes years of study and analysis and what is presented in the following summary of literature is information that OHCA did not have available when this Program was initially implemented.

III. Surgeon Procedure Volume and its Relation to Quality Metrics

OHCA can be assured that the surgeons in the Program are all considered to be "high volume practitioners." As noted above, in at least one of the reference articles, surgeon volume unlike hospital volume may be an important predictor for quality of outcomes. As stated above, our group performed 620 open heart surgical procedures last year. This makes CCTSA one of the busiest open heart surgical private practice groups in the State of Connecticut.

The surgical team is highly experienced and is currently providing cardiothoracic surgical services at two other advanced cardiac programs in the State of Connecticut. Each member of this skilled team of surgeons is considered to be, according to the current standards contained in the literature, a high volume surgeon. Tables 6,7 and 8 illustrate this point.

Table 6 Individual Surgeon Totals Program Year 1* (OHS)

Daniel Fusco, MD	23	22	74	119
David Underhill, MD	68	9	50	127

*** July 18, 2006- July 17, 2007: This does not include other thoracic surgeries.**

Table8 Individual Surgeon Totals Program Year 3* (OHS)

	Hartford Hospital	UCHC	HCGW	Totals*
Paul Preissler, MD	71	21	62	154
John Hammond, MD	135	6	40	181
Daniel Fusco, MD	23	50	70	143
David Underhill, MD	78	8	37	123

*** July 18, 2007- June 30, 2008: This does not include other thoracic surgeries.**

As stated below, recent studies have suggested the importance of surgeon – procedure volume. Many, if not most of the studies that noted a relationship between hospital volume and outcome did not consider the influence of surgeon volume on this relationship. The more recent studies clearly show that surgeon-procedure volume is a very important component in any analysis of the quality of a program especially with higher risk patients.

More importantly however, is that like the literature cited below, our surgical group has been able to reproduce the same excellent outcomes at the Heart Center of Greater Waterbury Program as it achieves in the high volume program where we practice.

Table 9 is a demonstration of this.

Table 9 Key NQF Measures - Source STS Data Base and Program Data Bases

Comparison of Surgeon Outcomes in two separate Programs

	HCGW	# of Cases	HVP Surgeon Data	# of Cases
CABG Inpatient Mortality	2.6%	10 of 385 cases	1.7%	9 of 530
CABG: Deep Sternal Wound Infection	0.2%	1	0.6%	3
CABG: Post Operative Stroke	1.8%	7	1.1%	6
CABG: Post Operative Renal Insufficiency	4.6	18	2.6%	14
AVR Mortality	1.9%	1 of 51 cases	1 %	1 of 94 cases
AVR: Deep Sternal Wound Infection	0%	0	0%	0
AVR: Post Operative Stroke	0%	0	0%	0
AVR: Post Operative Renal Insufficiency	1.9	1	6.4%	6

As previously noted above, the Program's outcomes for these major quality indicators have been exceptional and well within the confidence levels which are identified by the STS Database. Furthermore, even within our own state, the results in the program in Waterbury are absolutely of the highest quality and equal to the same results that my surgical group achieves in our high volume hospital where we operate. In addition, the results of a 2 – Proportions Statistical Test demonstrate that there is no statistically difference between the rates for mortality and complications in the program at Waterbury and in my surgical group's practice at the high volume hospital for the same relative time frame. This clearly demonstrates that our group's practicing in different programs of varying volumes have similar outcomes regardless of the institution in which we provide these services for our patients.

The information is complex, but the conclusion is not. The surgeon's judgment and skill do not differ because of location.

IV. Summary of Recent Medical Literature related to Volume and Outcome

The following is a summary of nine studies and their conclusions. These studies were published subsequent to the approval of the Program in 2004. All of this literature can be found on pages 0343-0426 of the CON application. They demonstrate that there is no clear relationship between volume and outcome, that volume is a poor predictor of quality and that the prior studies that found an association between volume and outcome did not address the effects of surgeon-specific volume. The following more relevant and recent medical literature must be taken into consideration in evaluating any advanced cardiac care Program in the greater Waterbury area.

Ricciardi R., Virnig B. A., Ogilvie J. W., Dahlberg P. S., Selker H. P. & Baxter N.N. (2008). Volume-outcome relationship for coronary artery bypass grafting in an era of decreasing volume. ***Archives of Surgery*****, 143(4), 338-44.**

This study was conducted over a period of 16 years. Study leaders hypothesized that the decrease in hospital procedure volume for CAGB would relate to an increase in the in-hospital mortality rate. It used hospital discharge data from the National Inpatient Sample from January 1, 1988 to December 31, 2003. A 20% random sample of all patients who underwent CABG or angioplasty was used. The study had four different aims including: 1) to determine trends in coronary revascularization techniques performed surgically or by angioplasty; 2) to define trends in valve replacement and repair; 3) to record mortality by year and by CAGB volume to evaluate the effect of declining CABG volume on the volume-outcome relationship, and 4) to quantify the difference in mortality between high and low volume hospitals.

During this period, the rate of CABG increased from 7.2 cases per 1,000 discharges in 1988 to 12.2 cases per 1,000 in 1997 and then declined to 9.7 cases in 2003. During this same period the volume of angioplasty procedures tripled. For CABG, the proportion of high volume hospitals increased to a peak of 32.5%, but then decreased to 15.5% in 2003.

During this same time frame, low volume hospitals (12-149 CABG/year) decreased from 49.6% in 1988 to 35.5% in 1997, but then increased to 52.4% in 2003. The numbers of individuals undergoing CABG procedures in low volume hospitals peaked in 2003 at 24.6%.

In this 16 year time frame CABG mortality rate declined from 5.4% to 3.3% and in every category of hospital defined by volume, there was a statistically significant decrease in mortality. Hospitals performing the lowest volume of CABG experienced the largest decrease of in-hospital mortality. The study concludes that these results should, "challenge the setting of any arbitrary volume cut point: positive effects on patient outcome are multi-factorial and are inadequately described by procedure volume."

Yuh, D. D. (2008). Volume-outcome relationship for coronary artery bypass grafting in an era of decreasing volume-invited critique. ***Archives of Surgery*****, 143(4), 344.**

In this invited critique the author notes that findings of above study suggest that traditional volume-outcome tenets may be overly simplistic and inaccurate in assessing current CABG practices. The critique notes that there is growing experiential evidence that hospital-based quality control, monitoring and best-practice programs may have a more significant effect on outcomes than volume, particularly in generally routine surgical procedures such as CABG.

Marcin, J. P., Li, Z., Kravitz, R. L., Dai, J. J., Rocke, D. M., & Romano P. S. (2008, February). The CABG surgery volume-outcome relationship: Temporal Trends and Selection Effects in California, 1998-2004. ***Health Research & Educational Trust*****, 43(1). Retrieved from http://www3.interscience.wiley.com/cgi-bin/fulltext/119390760/PDFSTART**

This recently published study examines patient-level clinical data collected from the California CABG Mortality Reporting Program; a voluntary reporting program from 1998 to 2002 involving between 68 and 81 hospitals. In addition, for the years from 2003 to 2004, patient-level clinical data was examined from the California CABG Reporting Program which is a mandatory reporting program in the State of California. This study took place during a transition from the voluntary to the mandatory reporting of CABG

outcomes. In this study the patient was the primary unit of study and in-hospital mortality was the primary outcome measured. The study acknowledged previous research in the area of volume and outcomes. It also noted that several recent studies with vigorous statistical methods and the use of risk adjusted data found limited or insignificant relationships between volume and outcome. The data elements collected included patient-level data defined by the STS in addition to data elements defined by other state programs including Massachusetts, New York, New Jersey and Pennsylvania. For this group of multiple hospitals in California it was determined that there was a "consistent but small" volume-outcome relationship for CABG surgery during the years 1998 to 2002, however this relationship disappeared in 2003 and 2004.

The study demonstrated, as other more recent studies, that CABG volume may no longer be the quality metric to use to determine Program value. Several reasons were hypothesized for this result including the use of patient specific clinical and risk adjusted data rather than administrative data as well as the advances in surgical practice that have increased overall quality of care to the patient.

Welke K. F., Barnett M. J., Sarrazin M. S. & Rosenthal G. E. (2005). Limitations of hospital volume as a measure of quality of care for coronary artery bypass graft surgery. *Annals of Thoracic Surgery*, 80(6), 2114-9.

This study reviewed over 900,000 Medicare patients for the purpose of quantifying the strength of hospital volume as a predictor of mortality following CABG surgery. Through examination of six years worth of data, the study demonstrated that although on average higher volume hospitals had lower CABG mortality rates than lower volume hospitals, a wide variation in risk-adjusted mortality rates existed among hospitals within similar volume categories and the discrimination of volume as a predictor of mortality was only "slightly better than a coin flip". It concluded that while there are many factors that contribute to the mortality risk of a patient undergoing CABG, hospital volume is a relatively weak predictor.

Khuri S. F. & Henderson W.G. (2005). The case against volume as a measure of quality of surgical care. *World Journal of Surgery*, 29(10), 1222-9.

The purpose of this study was to evaluate the use of volume criteria in setting standards of quality of surgical care. The conclusion of this study was that the use of risk-adjusted

outcomes is more appropriate for setting such standards. The author notes that allowing standards based on volume means accepting the premise that low volume hospitals deliver substandard care and high volume hospitals always deliver good care. The author, Dr. Shukri Khuri, has been actively involved in the Veterans Administration National Surgical Quality Improvement Program (NSQIP), the first national, validated, outcome-based and peer controlled program for measuring and enhancing quality surgical care. In contrast to many research studies which have reviewed administrative databases to look at the volume-outcome relationship, NSQIP utilizes a trained nurse to collect prospective clinical data on all major surgical operations in the V.A. This allows for the ability to adequately adjust for patient severity of illness.

Work by the NSQIP indicates that volume of surgical workload is unrelated to quality of care and attempts at setting volume as a standard are flawed. NSQIP has found no direct relationship between volumes and outcomes and has demonstrated that the systems of care have more impact on overall outcomes than does volume. Dr. Khuri notes that any threshold volume below which quality is likely to be compromised is illusive at best.

Zacharias A., Schwann T. A., Riordan C. J., Durham S. J., Shah A., Papadimos T. J., Engoren M. & Habib R.H. (2005). Is hospital procedure volume a reliable marker of quality for coronary artery bypass surgery? A comparison of risk and propensity adjusted operative and midterm outcomes. ***Annals of Thoracic Surgery*****, 79(6), 1961-9.**

This study reviews the type of system currently in place within the Program [i.e. same surgical team providing services at what are considered Low Volume Hospitals (LVH) and High Volume Hospitals (HVH)]. Zacharias et al. reviewed the results of several recent studies looking at the association between hospital volume and outcome, including a study by Peterson, et al. described below. In these studies, the authors concur that hospital volume-outcome effects are confounded by a significant independent surgeon volume effect. The purpose of this study was to better define whether the procedure volume effects are surgeon or institutional in origin. The study examined 30-day and 3-year mortality for two different institutions served by the same surgical team over a two-year period. The same perfusion team provided bypass services at the two hospitals. Results showed that the two hospitals exhibited multiple demographic and risk factor differences. However, unadjusted operative mortality was similar for the LVH and the

HVH (2.38% vs. 2.98%), with nearly identical observed to expected ratios, irrespective of preoperative risk category. Hospital volume did not predict operative mortality.

The study concluded that when served by the same high volume surgeons, similar operative and mid-term outcomes may be achieved in LVH and HVH and surgeon experience rather than institutional volume may be the more critical factor. In addition, cardiac surgeons who apply similar patient care standards and pathways and emphasize a team approach to cardiac surgery care can and do achieve similar outcomes at independent low volume and high volume programs.

Peterson E.D., Coombs L.P., DeLong E. R., Haan C. K. & Ferguson T. B. (2004). Procedural volume as a marker of quality for CABG surgery. *JAMA*, 291(2), 195-201.

This study did an observational analysis of 267,089 CABG procedures performed at 439 U.S. hospitals and reported through the STS National Cardiac Data Base. Overall, operative mortality for CABG surgery was 2.66%. After adjusting for patient risk, the rates of operative mortality decreased with increasing CABG volume; however, this association was not observed in patients under the age of 65 or for those with low preoperative risk. Hospital volume generally had poor predictive accuracy as a means of identifying hospitals with significantly better or worse CABG mortality rates. The study indicates, however, that in contemporary practice, hospital procedure volume is only modestly associated with CABG risk adjusted outcomes, and therefore is not an adequate quality metric for CABG surgery. The use of risk adjusted outcomes through national clinical databases should be supported as a measure of quality. The results of this study indicating that the volume-outcome effect is not significant in patients under 65 years of age and in those with low pre-operative risk, imply that prior studies performed exclusively in Medicare patients and without risk stratification would have inflated the volume-outcome effect. The conclusion was that "the closure of up to 100 of the lowest volume centers (i.e. those performing less than or equal to 150 CABG procedures) would avert fewer than 50 of the 7,110 (less than 1%) of CABG related deaths."

Papadimos T. J., Habib R. H., Zacharias A., Schwann T. A., Riordan C. J., Durham S. J. & Shah A. (2005, May). Early efficacy of CABG care delivery in a low procedure-volume community hospital: operative and midterm results. *BMC Surgery*, 5,10. Retrieved from http://www.pubmedcentral.nih.gov/picrender.fcgi?artid=1131908&blobtype=pdf

The authors note that the studies related to the volume-outcome connection have had varying and sometimes conflicting results. This study reviews the experience with a recently initiated small community hospital cardiac surgery program modeled after a similar high volume program in the same region. The newer program had cardiac surgery services provided by the same surgeons who performed services at an HVH. The authors looked at isolated CABG morbidity and mortality outcomes at the LVH (new program) and compared them to the national data as reported by the STS National Cardiac Data Base over the period of time from February 1, 2001 to December 31, 2003. All CABG procedures at the LVH were performed by the same high volume surgeons who performed CABG procedures at the HVH. The LVH operative mortality did not statistically differ from the STS benchmark.

This study paradigm, involving a group of high volume surgeons from a high volume facility establishing a new lower volume program at another facility is similar to the structure of the HCGW Program and demonstrates that high quality CABG care with good outcomes can be achieved at a new lower volume program provided that it is served by high volume cardiac surgeons and backed up by a highly trained dedicated support team.

Kalant N. & Shrier I. (2004). Volume and outcome of coronary artery bypass graft surgery: Are more and less the same? *Canadian journal of cardiology*, 20(1), 81-6.

This research looked at and compared many previously quoted studies relating procedure volume to outcomes. Although in early studies there seemed to be a relationship between volume and procedure outcome, the relationship has diminished over time virtually to zero. The findings of this study, along with the other recent studies, suggest that the evolution of CABG surgery has reduced the importance of the earlier evidence linking volume and outcome. Individual studies may still show a small effect of volume on outcome, but the overall pattern of results does not. Consequently, the combined evidence does not provide support for a policy of regionalization of CABG surgery.

V. Conclusion

The study of outcomes data has been a passion of mine now for nearly 30 years. I realize that I have presented an enormous amount of information and I have tried to explain this technical data in a way in which it can be understood by the OHCA administrative team upon review. I welcome the opportunity to explain or review this information with you now, in the future or at the administrative hearing. I thank you very much for your time and for consideration of the great amount of data. I realize that your time is very valuable and at the risk of being too inclusive and exhaustive, I hope I have not included too much information. Thank you.

Respectfully submitted,

David J. Underhill, M.D.

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202- CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

I am Paul Preissler and I hereby submit this written pre-file testimony for the Office of Health Care Access ("OHCA") hearing in the matter of docket number 08-31202-CON. I am a cardiac surgeon and I have been active in the practice of cardiac and thoracic surgery in Connecticut for over 25 years. My colleagues are Jonathan Hammond, M.D., David Underhill, M.D., Daniel Fusco M.D. and Henry B.C. Low, M.D. We care for patients at five of the nine hospitals in Connecticut that have a full cardiac program: Hartford Hospital (HH), John Dempsey Hospital at the University of Connecticut Health Center (JDH), Connecticut Children's Medical Center (CCMC), Waterbury Hospital (TWH), and Saint Mary's Hospital (SMH). I am Chief of Cardiac Surgery at John Dempsey Hospital, Waterbury Hospital, and Saint Mary's Hospital. Prior to being Chief of Cardiac Surgery for these three hospitals I had been Chief of Cardiac Surgery at Hartford Hospital. As a group we bring over 100 years of collective experience in cardiac surgery to the care of our patients. I would like to address the issue of permanent status of the Heart Center of Greater Waterbury. In making this request, I will enumerate several reasons why permanency of the Program as currently configured is necessary for the citizens of greater Waterbury.

I. Background

When Dr. Steven Strongwater and Dr. Peter Deckers first approached me to discuss the University of Connecticut's decision to support the CON for expanded cardiac services in Waterbury, the proposal seemed logical and appropriate to me. The concept of redistributing these services to medium sized communities, while rare in Connecticut, has occurred frequently in recent years in the Northeast region. The driving issue behind this redistribution of cardiac services is timely access and local availability. The issue is not one of capacity.

The reasons for this expansion of cardiac programs to local sites is easy to understand. First, interventional cardiology and cardiac surgery are mature, well-developed routine therapies that

are easily installed in local hospitals. We are just one of numerable examples of successful programs in smaller communities, often with results better than found in larger centers.

The Program was immediately successful. It began serving patients on its first day of approval and operation and since that time has received continued significant support and acceptance in the community. The Heart Center work is now a known entity. There is no conjecture about the needs and the volumes of care being delivered by the Heart Center. This has been demonstrated by over three years of experience with over 2400 patients having chosen the Heart Center of Greater Waterbury either at Waterbury Hospital or Saint Mary's Hospital for their care. This represents over 600 open heart surgery patients and roughly 1800 angioplasty patients. There are also an untold number of patients who have received diagnostic studies and consultations in addition to the above mentioned patients who have chosen to have the procedures done in Waterbury. As my associate Dr. David Underhill will expand upon in his Prefile testimony and at the hearing, this program has generated excellent outcomes in all areas. The quality of the work that is being delivered to Waterbury patients rivals any program in the state of Connecticut.

The Program's mission was and is to deliver the utmost in advance cardiac care at the lowest possible investment cost. Having both catheterization labs with angioplasty capabilities and open heart surgery at both campuses allowed the best access with the least amount of construction costs at either hospital. Neither hospital in the city without very major renovations is large enough to accept all chest pain patients. Secondly, having a two campus configuration allowed for the smallest disruption in Emergency Medical Technician and Emergency Department algorithms. Both the angioplasty and open heart surgery, were they to be isolated to one hospital or the other, would necessitate triaging all chest pain patients to one emergency room which would have overburdened one over the other. Thirdly, the two campus arrangement allowed both hospitals to participate and each hospital to maintain an active presence in cardiac care, also allowing for inpatient cardiac patients that arose from other services such as

orthopedics or general surgery the benefit from onsite angioplasty and open heart surgery services should they arise in the postoperative period following their other procedures. Fourthly, having a two campus program required no disruption of patients' historic institutional loyalties and choices, some generations in the making and difficult to alter. The logistics of angioplasty for ST-Elevation Myocardial Infarction (STEMI) and open heart surgery at both hospitals has been well worked out and has worked very well over the past 3½ years creating the situation where patients never need to be transferred regardless of where they present for their care.

I am here to talk particularly about the open heart surgery component of the program which is critical for the overall completeness of cardiac care in Waterbury. The Heart Center of Greater Waterbury has added significant value to the medical community not just through its procedures, but through education of both physicians and patients, through the heart health awareness programs and smoking cessation programs. It has allowed each emergency room to accept all chest pain patients knowing that each cause of chest pain can be evaluated and treated at its institution. The open heart surgery component, of course has supported the angioplasty for acute myocardial infarction program, which continues to be the ideal arrangement throughout the country. There has been extensive support of elective angioplasty as well.

II. Quality Outcomes

An important prerequisite to understanding why permanency of the Program as it is currently configured will benefit the community is to understand the outcomes of care that the Program has produced. As for the plethora of empirical evidence of the quality results of the Program, I will only touch upon what Dr. Underhill will cover in depth. The Program has submitted data via the OHCA CT Cardiac Registry since 2005 and at no time was the Program notified that OHCA had any concerns or issues with quality. There is good reason for this lack of action. Very simply, the quality of the Program is exceptional and in line with the other programs in

which my group practices and consistent with national measures of the Society of Thoracic Surgeons (STS) database to which we submit our data for review.

As a surgeon we look at many aspects of the care we provide. We do this consistently with the intention of making improvements as needed. We have looked at our outcomes and are compelled to share them with OHCA so that OHCA is comfortable with the necessary decision to continue the Program.

Our quality endeavors did not end with submission of our data to you the Commissioner via OHCA's CT Cardiac Registry, nor for national scrutiny via the STS. Our surgical group provides cardiothoracic surgery at Hartford Hospital, UCONN, Connecticut Children's Medical Center, Saint Mary's Hospital and Waterbury Hospital. I have looked at our outcomes in all of the programs in which we provide cardiothoracic surgery. This was not required, but was done because we felt it was important to us to be certain that our performance was not significantly different based on where we practiced. We were not surprised to find that our outcomes in Waterbury, despite volume differences, were not significantly different than at the other hospitals where we provide these services. We have compared our own outcomes for key measures related to Coronary Artery Bypass Graft Surgery and Aortic Valve Replacement Surgery. These measures are those that the STS database examines as National Quality Forum measures. The data clearly demonstrates that the Program's surgeons practicing in different hospitals of varying volumes have similar outcomes regardless of the institution in which they care for patients.

OHCA must also understand that positive outcomes are not inadvertent. There are several factors that contribute to this and as the decision to continue the Program is considered, it is important to understand those other elements.

III. Program success is Due to Structure, not In spite of It

By providing the cardiac surgery component of the Program, my colleagues and I have brought the same experience and expertise noted previously to the patients in the Waterbury community. In doing so, we did not start a new cardiac surgery program in Waterbury; rather we extended our work into a new area. We used the same procedures, protocols, personnel (physicians and physician assistants), equipment and instrumentation in all of the hospitals (Hartford, UCONN, CCMC, SMH and TWH) in which we work. We chose to integrate the Program into our existing network in order to gain efficiencies not available to new or startup programs. By using our tried and true approaches and bringing a whole team of experienced professionals with us, we could coordinate every aspect of care and management for the patients in Waterbury. All that we do is coordinated through a single centralized control office. We can generate flexibility, efficiency and cost savings unavailable to stand-alone programs. By rotating personnel, including physicians, physician assistants, perfusionists and anesthesiologists, we can guarantee continuous coverage 24/7 and 365 days a year. This approach has yielded our quality outcomes.

In addition, our network approach offers direct access to more advance technologies in cardiac care for every patient regardless of their hospital of origin. We can coordinate and arrange for cardiac transplantation, left ventricular assist device support, advanced analysis of complex high risk cases or adult congenital heart problems without having to move outside of our network. We have also brought a collection of resources in noncardiac thoracic surgery to the Waterbury community, allowing for more noncardiac thoracic patients to stay near home for their care. Also, there have been a number of patients, often elderly, who have been able to benefit from our consultation and evaluation even if no operative intervention has followed. This has been an invaluable service to their total care. They can make their decisions knowing that every potential therapy has been investigated and explored. Of course, cardiac surgery service in Waterbury has also supported and allowed the development of a robust high quality program for both emergency and elective coronary angioplasty. Lastly, the Heart Center has propagated a huge

community outreach and education effort in the Waterbury area, focusing on disease prevention, smoking cessation, and cardiac risk factor management.

I raise these issues because they help elucidate the value of the total Program, and to emphasize that each component is intrinsically related to the other's within the Program. The Program must be assessed as a whole, not dissected into small pieces. Cardiac surgery is one component of the program, but it supports the entire program. It allows for the emergency room evaluation of chest pain, to back up emergency angioplasty for STEMI, or stabilization of non-STEMI acute coronary syndrome patients who need urgent operations but not emergency operations, patients who cannot be discharged safely prior to an intervention. If cardiac surgery and emergency angioplasty are not available, then emergency rooms are impacted in how they must do their work and patients cannot efficiently proceed to definitive therapy without significant delays and unnecessary transfers to other institutions. The point I am attempting to emphasize is the cardiac surgery portion of the Program is not a stand-alone surgical entity. It is completely integrated into our larger practice. As such, the Program is part of one of the largest cardiac surgery programs in Connecticut.

As evidenced by the CHIME data for FY 2006, 2007 and the first six months of fiscal year 2008, the Program has performed more surgical cases than the John Dempsey Hospital, the Bridgeport Hospital, the Danbury Hospital and the Stamford Hospital programs. These programs, also providing vital service to their respective communities and unlike our Program are in no danger of being discontinued or altered. The two hospitals in Waterbury should not be dissected apart by the State into two separate identities. This would further the error of incorrectly evaluating the Program at large. As stated elsewhere, everything in each hospital is identical, including the people doing the procedures. The only differences are the bricks and mortar surrounding the patient, and the color of the scrub suits that we wear. To assume that institutional volumes instead of the surgeon volumes is how the Program is to be judged is to assume that each surgeon

loses his skills and judgment as he heads West on Interstate 84. Surely, life and death decisions should not be made upon such notions. In fact, the structure of the Program is clearly one of its strengths. While allowing Waterbury patients their choice of access to the hospitals that they prefer, the Program delivers the most advanced, efficient and lifesaving cardiac care available in Connecticut. The number of cardiac surgery cases performed in each hospital in the Program should not be the marker of its worth, nor should it be a factor in judging its success or failure. The total impact of the program and the network that it is part of should be the measure. To decide the existence of this program in the long term based on quantity measures alone and to ignore the quality and access the

Program has provided to citizens of the state is in my opinion, simply too narrow and shortsighted and is a complete disservice to efficient and effective patient care,

IV. **Conclusion**

In summary, the permanent approval of this CON, giving long-term and permanent status to the Program would allow an established, known program which delivers advanced cardiac care to continue its work and serve its community. Cardiac surgery procedures are being performed by highly experienced surgeons that bring with them not only significant years of experience, but also systems of care that are necessary to provide this high quality care. It would allow us to continue to deliver excellent care and outcomes to a community that has embraced the Program. Any change in the Program's configuration would compromise access, compromise outcomes, could necessitate transfers, and generate new and increased investment costs. I appeal to the Commission to approve the Heart Center's application for permanent CON status unaltered and to allow the program to continue its work for both the near and distant future. Closing and even altering the Program would deny access to care to the Waterbury population.

Respectfully submitted,

Paul L. Preissler, M.D.

Pre-File Testimony
Before the Office of Health Care Access: Docket No. 08-31202-CON
Saint Mary's Hospital, Waterbury Hospital and John Dempsey Hospital
Elective and Primary Angioplasty and Open Heart Surgery
October 24, 2008

I, Dr. Christopher Michos, hereby submit this written pre-file testimony for the Office of Health Care Access Public Hearing in the matter of Docket Number 08-31202-CON to be held on October 30, 2008. I am currently the Chairman of Emergency Medicine at Waterbury Hospital and have been practicing emergency medicine in Connecticut for 13 years. I am Board Certified in Emergency Medicine and a Fellow of the American College of Emergency Medicine. I received my medical education at the University of Medicine and Dentistry, The New Jersey Medical School and completed my internship in medicine at The Long Island Jewish Medical Center in Queens, New York and completed my residency training in Emergency Medicine at The Long Island Jewish Medical Center and was also Chief Resident for the program. For five years I was an attending in Emergency Medicine at Griffin Hospital and during those five years served as the Emergency Department Quality Assurance Director, the Assistant Chairman and the Interim Director of the Emergency Department. During the past eight years at Waterbury Hospital, I have served as the ED quality assurance Director, Research Director and currently as the Chairman of the Department. In this role, I am responsible for the day-to-day operations and long-term planning for the department. I am also the Medical Director for our ground emergency medical services. I want to make it clear that I am not just an administrator but also a clinician who works 6-8 clinical shifts per month and in addition to those assigned clinical shifts, I see patients almost on a daily basis because of our high volume and acuity. In addition to my emergency medicine responsibilities, I am the Health Director for the Town of Easton, Connecticut. Our mission, through the efforts of our highly trained group of clinicians, nurses and staff, is to provide the highest level of care to our patients. Our Emergency Department cares for over 55,000 patients per year and my colleagues at Saint Mary's Hospital lead by Dr. Peter Jacoby care for approximately 70,000 patients per year in their ED.

The Certificate of Need application is about maintaining a program that saves lives in the City of Waterbury and surrounding communities and as the Chairman of the Emergency Department at Waterbury Hospital I can speak directly to that. The Emergency Department (ED) is the front door for the majority of cardiac patients that enter the hospital. Each year, anywhere from 13,000-15,000 patients require a cardiac evaluation and/or intervention between the two emergency departments in the City of Waterbury. This is a staggering number of patients entering the system that need fast and experienced emergency care. I see this occur on a daily basis. We are fortunate that our educational programs have been effective, because when someone experiences chest pain, they go to the closest facility.

In the Emergency Department, we move fast because we have to. When a heart attack hits the door of the ER, we say, "time is muscle" because the longer we wait to provide definitive treatment the more the heart is damaged. In some cases, it can cost a life. With the Heart Center

of Greater Waterbury, when the radio call comes to the department from our outstanding paramedics or for those patients who actually walk into the Emergency Department and this happens more often than you think, our experienced group of Emergency Department physicians, Cardiologists, nurses and technicians spring into action to provide life saving treatment. It is like a well trained Olympic athlete running a sprint. If you so much as blink, you might miss seeing the patient whisked to the catheterization lab for life saving treatment. This becomes our race to save a life. I have no doubt that in the three years since the Heart Center opened, we have saved the lives of many, many patients who might not have made it if they had to spend hours being transported out of Waterbury to another hospital. Many of them might not survive the wait time it would take to transfer them across town.

I respectfully request your consideration that this certificate of need application for a permanent program be maintained in its current structure. The staffs at both emergency departments in the City of Waterbury have been well trained and now function like a well oiled machine. They are able to care for the current volume of cardiac patients at both hospitals and have contributed largely to the exceptional door to balloon times that has been reported by the program. The Emergency Department staffs have also contributed to identifying other urgent cardiac patients that have needed medical or interventional care.

So I ask, why alter something when it works so well? Perhaps total patient volumes are the question and if that is the case, then the problems associated with redirecting the total volume should be considered. Currently, each of the city's Emergency Departments is overwhelmed with patients on a daily basis. Any reconfiguring of the Cardiac Program that would partially or completely force all cardiac patients to one institution would severely impact the quality of care provided to all patients, not just cardiac patients. No emergency department in Waterbury can assume the entire burden of cardiac care for the city and surrounding communities. This should be a strong consideration of OHCA in the context of this Application. Not only would space, equipment and expense be issues but increased volume of this extent would significantly increase wait times for all patients. Patients would leave the emergency department without being seen. Most importantly, such would impact quick access and treatment at a time when it is needed most. Patients on the other side of town from the designated heart center will be geographically disadvantaged as they will have to endure a longer ambulance transport to that designated facility instead of the closest facility that can also provide life saving care. Waiting to transport a patient from one facility to another, even across town will strain ambulance services. I have worked at an institution without advanced cardiac care where we would "drip and ship" and there are difficulties with this transfer process. Imagine the Herculean effort required to move a patient from an ED stretcher to the ambulance stretcher with all the monitoring

equipment and intravenous medications, placing and securing that patient in the ambulance and then repeating that process at the receiving institution. This consumes the ED in activity directed toward one patient who needs critical care, depriving other patients in the emergency department and the waiting room of the care that they need.

Let me describe these two scenarios, the way we currently practice and the way it will be should the Heart Center no longer be available. With our Heart Center, the patient arrives, is seen by the clinician and nurse, the EKG is performed, a heart attack is identified, a call is made to activate the cath lab and in minutes the patient is receiving treatment and the ED is ready to see its next patient. Without our Heart Center, the patient arrives, is seen by the clinician and nurse, the EKG is performed, a heart attack is identified, medical treatment is initiated, a call is made to the cardiologist, an ambulance is called, the receiving institution is called, paperwork must be completed and instead of traveling down a corridor, the patient must travel to another institution while the clock is ticking.

The importance of approving this program on a permanent basis could not be more strongly stated. After providing emergency cardiac care for the last three and a half years, what am I going to say to our critical heart patients when they arrive in the Emergency Department because we are the closest hospital if that care is no longer available? Instead of providing this highest level of care, instead of rushing that patient to the catheterization lab, I will need to delay care. And by doing so, we are going to place that patient at great risk. There is no reason for this outcome. To me, this is a potential health crisis for the City of Waterbury and the surrounding communities. The program is all about providing life saving treatment. And from someone who knows first hand about the value of time, failure to approve this application as it has been submitted would be a disservice of the greatest magnitude to this community. Right now, we do our job well and we are saving lives. As a physician, all I want is the best care for my patients, the care they deserve.

Respectfully submitted,

Christopher J. Michos, MD, FACEP
Chairman, Emergency Department
Waterbury Hospital

Introduction

Interrogatory Response for Public Hearing:

Certificate of Need Application, Docket Number: 08-31202-CON

The Waterbury Hospital, and Saint Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital

Establish Primary and Elective Angioplasty and Open Heart Surgery Program at The Waterbury Hospital and Saint Mary's Hospital, with No Associated Capital Expenditure

The Waterbury Hospital (TWH), Saint Mary's Hospital (SMH) and John Dempsey Hospital (JDH), the Applicants, hereby submit responses to the Interrogatories posed by the Office of Health Care Access (OHCA) related to Certificate of Need Application, Docket Number: 08-31202- CON.

In review of the questions posed, the Applicants perceive that OHCA is seeking information to determine if it is possible to consolidate the advanced cardiac services (Program) currently provided to the greater Waterbury community. Consolidation may appear to be the next step had the hospitals demonstrated inefficiency, poor quality or overall inability to provide the necessary services. This, however, has not been the case for this Program. In the three year demonstration project, the Applicants demonstrated excellent quality, efficient use of hospital and staffing resources and a level of care that has been overwhelmingly accepted and appreciated by the community. In addition, the Program has provided these two financially distressed hospitals with positive financial results. The Applicants, as part of their review of the program and program alternatives, have asked the questions:

Is there value in changing the Program's current structure?
Will outcomes become more positive than they are currently?
Will patients be taken better care of?
Will access to life saving healthcare increase?
Will there be positive financial impact for the hospitals and the community?

The Applicants have overwhelmingly determined that the answers to these questions are a resounding "No."

The Program works exceedingly well for Waterbury. It is a model that should not be modified simply because it is different from other programs in Connecticut. Residents of other Connecticut urban areas have two hospitals with separate and distinct advanced cardiac Program offerings. How fortunate for the residents of greater Waterbury, the fourth largest urban area in the State, that their hospitals had the foresight to be

collaborative in the development of one advanced cardiac care Program; a program that not only has saved lives, but has provided continuity of care regardless of which side of the Naugatuck River one chooses to receive treatment. What was once a long range plan for advance cardiac services has been successfully implemented and should be allowed to continue in this current configuration on a permanent basis.

This application represents three hospitals that are collaborating for the benefit of the community to deliver excellent and much needed cardiac care. To do this, in the initial planning phases of the Program (prior to 2004) and again through the existence of the demonstration project, ongoing analysis has been conducted by the Applicants to determine if another Program structure would benefit the community in any way. As noted on pages 0017-0019 of the CON Application, several different structures were considered. Clinical and financial analyses were conducted to determine if these structures would be a benefit to the community and to the hospitals providing this care. The overwhelming conclusion is no. No other program configuration would provide greater access to these services for members of the community, especially the poor and elderly.

ALTERNATIVES CONSIDERED:

Full service advanced cardiac care in Waterbury - One Campus:

Patients receiving care at either of the Program's campuses benefit from the care of established, experienced interventional cardiologists, cardiothoracic surgeons and clinicians. Patients suffering chest pain, or other symptoms associated with a heart attack, are well advised to go to the nearest emergency department for expert evaluation. While such symptoms may or may not be due to a heart attack, if these advanced cardiac services were available at only one hospital campus, patients who think they may be having a heart attack would choose the emergency department in Waterbury where both coronary intervention and open heart surgery capabilities exist. This could put those patients at risk and create a financial burden for the hospital that did not have the advanced cardiac program. Likewise, patients seeking diagnostic treatment and in need of a cardiac catheterization would choose the location where advanced cardiac services were available. According to the Connecticut Hospital Association's *Patient Census Report*, the combined total of emergency department visits at both of the Waterbury hospitals was almost 122,400 in fiscal year 2007. The emergency departments, catheterization labs, cardiovascular intensive care units and telemetry units at SMH or TWH campuses could not accommodate a shift in demand from one hospital to the other. To consolidate advanced cardiac services at a single campus would cost more, in terms of capital investment, than the two campus model, because one institution's facilities would have to be expanded in order to meet demand, while the other institutions facilities would suffer from diminished use—resulting in an unnecessary waste of existing resources.

A financial impact analysis has been completed by the hospitals that shows significant financial losses at both hospitals should the program be consolidated into one or the other, or if the Program were not given final approval to continue. The conservative

estimate of the financial impact of this scenario would be a $10 million to $12 million loss. This accounts for the loss of net revenue for interventional as well as other cardiac services and takes into consideration the direct fixed expenses that would stay with each hospital.

If the Program were to be consolidated into one facility, the financial impact noted above does not account for the necessary physical plant renovations that would be required by one hospital to renovate for increased cardiovascular (CVU) unit bed space, increased cardiovascular operating room space, increased emergency department space as well as capital equipment purchases in the catheterization labs and for the CVU. These additional expenses would generate further losses.

Primary Angioplasty Only (PAMI Only) in Waterbury:

Decreasing access by limiting the type of advanced cardiac care provided in Waterbury would be a significant disservice to the community. Over the last 3 years the greater Waterbury community has enjoyed the access and availability of advanced cardiac services.

PAMI-only programs offer services to only a small segment of the total population requiring immediate emergency interventional cardiac care. Given the volume and acuity of patients seen in Waterbury, the Program would find itself in an untenable situation where a patient could present with STEMI (ST- Elevation Myocardial Infarction) and be treated with primary angioplasty intervention, while, simultaneously, another patient presents with unstable coronary syndrome, undergoes a cardiac catheterization which identifies the need for coronary intervention, and must subsequently be transferred to another location for definitive therapy. The cardiologist and clinical staff involved in this scenario could have treated both patients in one locale, providing the most efficacious treatment, while saving time and dollars. Moreover, under a PAMI-only program, current caregivers, having provided a full range of life-saving angioplasty services over the last three years during the demonstration project, would find themselves in the untenable situation of not being able to practice what they have demonstrated an ability to do exceedingly well. A step backward in the standard of care would be an unfortunate and devastating result. While a PAMI-only program may be a solution for communities without access to any advanced cardiac care, it is not so for the fourth largest urban region in the State that has already had the full range of advanced cardiac services for over three years.

Furthermore, PAMI-only programs often produce a financial loss. Although some hospitals are able to absorb this loss, the case is quite different with SMH and TWH. An impact analysis of converting to this reduced level of service has been conducted and demonstrates that for SMH and TWH a conservative estimate of the financial loss would be between $3.8 million and $6.1million if one or both of the hospitals were to revert to PAMI-only. This accounts for the revenue lost for elective angioplasty and open heart surgery only. In reality, the impact would be greater as additional cardiac services provided on an outpatient basis could be impacted as well.

The additional financial burden that would be incurred would further distress the overall status of both SMH and TWH, and impact the ability of each campus to operate other unprofitable medical, surgical and psychiatric clinics that are so desperately needed by the poor and uninsured in this region. Again this does not account for the investments already made by the Program to train and educate staff and to renovate and equip the CVU and CVOR. These important and valuable resources will have been wasted in an era of healthcare when this can be ill-afforded.

Other Scenarios

An examination of any combination of the above scenarios continues to demonstrate that the Program as it exists today is one that provides the highest level of care to thousands of greater Waterbury residents in an efficient and cost effective manner. Any other imposed structure, done without careful thought and consideration of the consequences could lead us down a path of ultimate financial destruction of one or both hospitals. Thus, the Applicants ask for consideration of this application based its merits.

Conclusion

This CON Application is about Saint Mary's Hospital and Waterbury Hospital's desire to continue to serve the greater Waterbury community with the advanced cardiac services that it needs and deserves and as has been available since July 18, 2005.

Since approval of the original demonstration project several facts have remained constant. The need for advanced cardiac care remains high in this community and will continue to increase. The physician group who committed to the development and implementation of this Program has remained strong. Additionally, community members who originally voiced strong opinions related to the development of this Program have grown by the thousands and continue to voice their support.

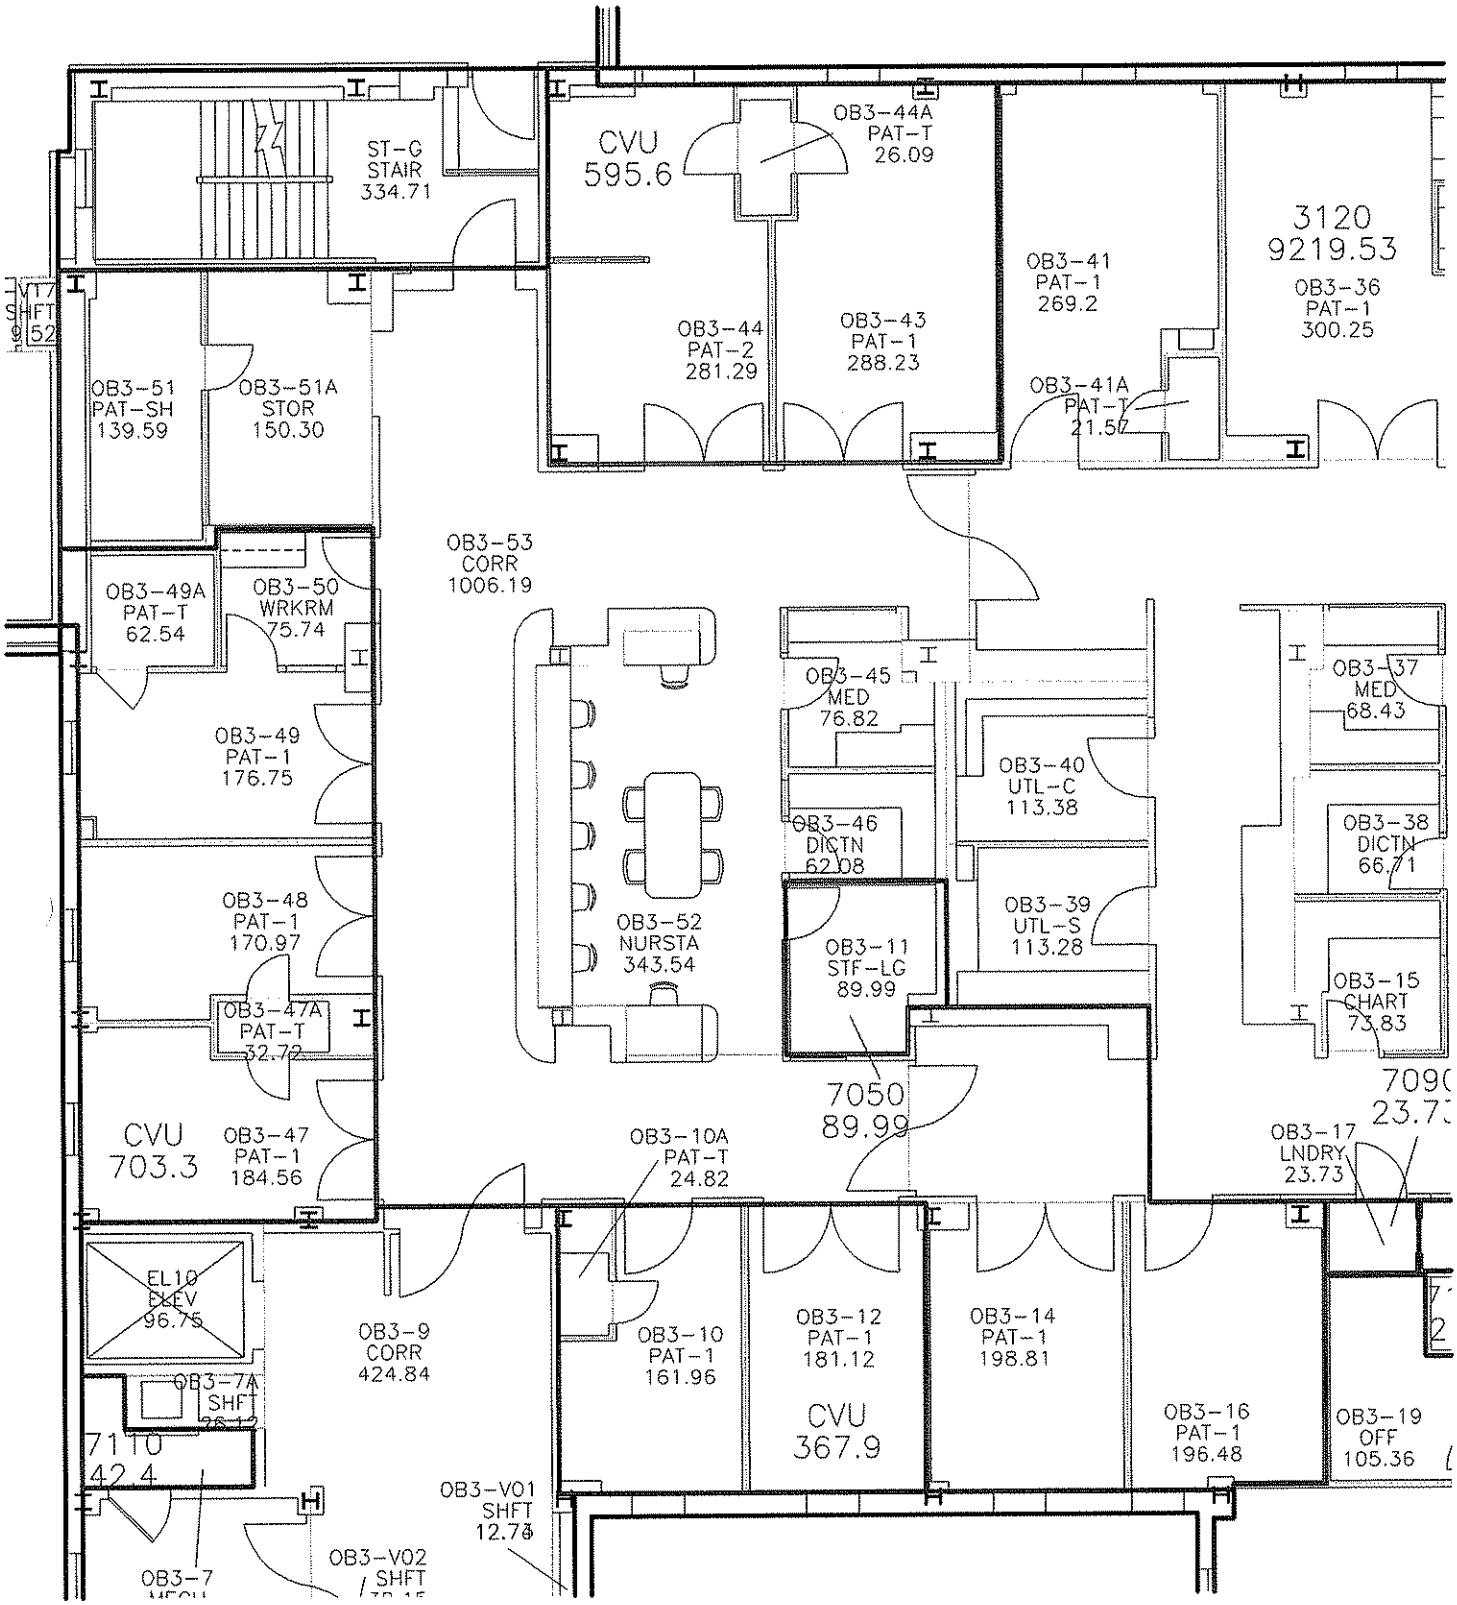
Several facts, however, have changed since the approval of the original demonstration project. The most obvious is that the Program has demonstrated a proven track record of success and has demonstrated *actual* need, not projected need. By all measures including clinical outcomes, patient satisfaction, community support and financial impact, the Program has been a success.

The Applicants request that OHCA evaluate the Program as it was presented in the CON application-- one Program-two campuses -- based on the needs of the community, a proven track record of success and a structure that works for this community.

INTERROGATORIES

for Public Hearing:

Certificate of Need Application, Docket Number: 08-31202-CON



The Waterbury Hospital, and Saint Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital

Establish Primary and Elective Angioplasty and Open Heart Surgery Program at The Waterbury Hospital and Saint Mary's Hospital, with No Associated Capital Expenditure

Physical Layout:

1) For each The Waterbury Hospital (TWH) and Saint Mary's Hospital (SMH), provide schematic drawings to demonstrate the dedicated inpatient beds for the inpatient cardiac service. Please elaborate in a narrative if necessary.

Response:
The Cardiovascular Units (CVU) at TWH and SMH are the units dedicated to provide inpatient care to cardiac patients receiving advanced cardiac services (angioplasty and open heart surgery services) through the established Program. Each CVU is an eight bed intensive care unit specifically designed and staffed for the post cardiac procedure patient. At TWH, the CVU is on the second floor of the Pomeroy building and was newly renovated space when the Program commenced in July 2005. At SMH, the CVU is on the third floor of the O'Brien building and was newly renovated space when the Program commenced in July 2005. Schematic drawings for the units are provided on the following pages.

2) How many times in the last three years have the cardiac OR's at TWH and SMH been in use for Open Heart Surgery (OHS) at the same time? Please elaborate in a narrative if necessary.

Response:

In Fiscal Year (FY) 2006 the operating rooms at TWH and SMH were not used simultaneously. In FY 2007 the Operating rooms were used simultaneously three (3) times and this increased to eight (8) times in FY 2008.

In addition there have been multiple days since the Program commenced when there have been two or more (but not simultaneous) open heart surgeries in Waterbury. In FY 2005 this occurred seven (7) times, in FY 2006 this occurred nine (9) times, in FY 2007 this occurred thirty-eight (38) times and in FY 2008 this occurred thirty-three (33) times for a total of 87 days.

This means that on these days two or more individuals were in need of open heart surgical services. To provide these services the operating rooms were used twice in one day at one campus or once or twice at one campus and then again at the other campus. A review of the open heart surgical cases that occur on the same day revealed that same day usage of the cardiovascular operating rooms was not typically due to more than one elective surgery being scheduled. 88% of the time multiple surgeries occurred for the purpose of urgently or emergently providing open heart surgery services to greater Waterbury residents. That is, at least one or both of the cases were for urgent, emergent or emergent salvage level of care. This demonstrates that it is not always possible to predict when the Program's operating rooms will be used and that there is a need for availability of operating room resources at both campuses.

Care Pathways:

3) For Each TWH and SMH, provide the following:

a) The number of patients who arrived at each hospital for cardiac-related services through the Emergency Department (ED) each year, for the last three fiscal years (FYs). Break out these volumes by the method of arrival to the ED (e.g. ambulance, personal transportation)

Response:

The following table illustrates the ED visits for cardiac related services to TWH and SMH. This data was gathered through the hospitals' medical record coding information system and includes ED visits with cardiac symptomology requiring a cardiac workup as well as cardiac admission diagnoses. The method of transportation to the ED is captured by the nurse at triage and is also included. Personal transport includes patients who transport themselves or have a family member or friend transport them via automobile or walking in. If the method of transportation could not be determined it was considered unknown.

Cardiac Related ED Visits

TWH	FY 06	FY 07	FY 08*
Emergency Dept Visits	**7,215**	**7,357**	**6,918**
Personal Transport	3,862	3,938	3,703
Ambulance Transport	2,916	2,974	2,796
Helicopter	-	-	-
Police	-	-	-
Unknown	437	445	419
SMH			
Emergency Dept Visits	**6,984**	**7,366**	**7,208**
Personal Transport	4,879	5,372	5,278
Ambulance Transport	2,028	1,752	1,647
Helicopter	1	0	2
Police	35	37	23
Unknown	41	205	258

* Fiscal Year 08 includes only those ED visit through September 15, 2008. At the time of data collection the medical record coding for the entire month of September had not been completed.

Citywide volumes in the ED for patients presenting with cardiac issues totals 14,000 to 15,000 visits per year. Any shifting of ED volume to the other hospital would have a serious negative impact on the receiving hospital.

ED data from TWH demonstrates that 55,000 visits per year are handled in an ED that has the capacity for 35,000 visits per year (TWH ED was last renovated 10 years ago). ED data from SMH demonstrates that approximately 70,000 visits per year are handled in a newly renovated ED that has the capacity for 58,000 visits. Clearly the volume already outweighs

the existing capacity. Any additional burden on either ED would not be in the best interests of the patients or the caregivers.

b) For the last three FYs, the number of patients admitted for cardiac catheterization, angioplasty and heart surgery broken out by scheduled and non-scheduled. Please use the following table.

Response:

	FY 06 Scheduled *	FY 06 Non-Scheduled**	FY07 Scheduled	FY07 Non-Scheduled	FY 08 Scheduled	FY 08 Non-Scheduled
TWH						
Cardiac Catheterizations	394	238	290	303	303	328
Angioplasty	152	229	105	296	118	228
Open Heart Surgery	63	55	58	62	63	75
Total	**609**	**522**	**453**	**661**	**484**	**631**
SMH						
Cardiac Catheterizations	263	222	272	240	279	201
Angioplasty	86	223	38	219	25	233
Open Heart Surgery	30	40	61	47	35	49
Total	**379**	**485**	**371**	**506**	**339**	**483**

In the table above the definitions below apply:

*Scheduled: Procedures were determined to be an elective status
**Non-scheduled: Procedures were determined to be urgent, emergent or emergent salvage status.

The Table above demonstrates that the majority of cases in the catheterization lab as well as the operating room are unscheduled or had an urgent, emergent or emergent salvage status. This demonstrates that the majority of individuals in need of advanced cardiac care, whether it is diagnostic or interventional care, do not schedule appointments. Most of the care is provided as needed in an urgent or emergent situation and available resources are necessary to provide this in the highest quality manner.

Staffing:

4) Is there a cardiac services team that rotates between TWH and SMH? If so, provide the following:

a) Type of staff the team is comprised of (provide specific titles, for example nurse, technician, etc.);

b) The number of staff by type of team; and

c) Provide a narrative on the function or duties of the team.

Response:

The entire Heart Center of Greater Waterbury (HCGW) physician team has privileges and practices at both TWH and SMH. This includes four cardiothoracic surgeons and the three surgical physician assistants who provide support to them, four cardiac anesthesiologists, five interventional cardiologists and twelve cardiologists. Each physician is able to treat his patients at the hospital of the patient's choice which means the patient can be treated at the hospital at which they sought care, without being transferred. Additionally the perfusion team, made up of four Perfusionists also has privileges and practice at both TWH and SMH. Each of these groups has an on-call schedule that covers the Program regardless of which campus care needs to be provided.

There is also a team of five Registered Nurses (RNs) that provide preoperative and intraoperative support to the cardiac anesthesiologist in the cardiovascular operating room (CVOR) for the Program. All of these RNs work at each campus based on the operating room schedule and the needs of the patient. This group has an on-call schedule that covers the Program regardless of which campus care needs to be provided.

5) Are any changes proposed for the staffing as a result of this proposal?

Response:
At this time there are no proposed changes for the staffing as a result of this proposal. However as with any Program, if issues related to staffing were identified as an area of improvement, this would be considered, studied and an appropriate workable plan would be put into place.

Capacity and Utilization:

6) For each TWH and SMH, provide the following:

   a) The bed capacity and occupancy rate by major service line for the past three FYs. Please use the following table and complete additional rows as needed for service lines

Response:

See table below. Each hospital has a total number of licensed beds indicated in the table. Physical beds in each unit of the hospital are not licensed separately by service area. Therefore there is only a total of licensed beds.

Demonstrated below is the average occupancy rate of each specific unit. This means that throughout the years, on an average, the units will be filled at this average rate. However demonstrated in the graphs on the following pages, OHCA will see that census fluctuates greatly and for example, in the CVU, there are many days when the units are nearly or completely full. Therefore, it would be not be possible to consolidate the patient population from one hospital into the other without adding the physical space and related resources necessary to accommodate this population.

Additionally, and not accounted for in the occupancy rates below, are the numbers of boarders that exist in the hospitals' EDs on a daily basis. Boarders are defined as an admitted patient waiting for an inpatient bed. These patients not only impact ED capacity but also the inpatient units as well. Board volumes per hospital are graphically displayed on the following pages as well.

	Licensed Beds	Physical Beds	Net Clinically Available Beds*	Budgeted Staffed Beds **	Maximum Staffed Beds ***	Occupancy FY 06	Occupancy FY 07	Occupancy FY 08
TWH	357							
ICU	N/A	20	20	16	20	75%	75%	85%
CVU	N/A	8	8	6	8	63%	63%	63%
Telemetry	N/A	20	20	18	20	90%	90%	90%
Med-Surg	N/A	119	114	114	119	95%	90%	90%
Step-Down	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Total	357	167	162	154	167	87%	84%	86%
SMH	347

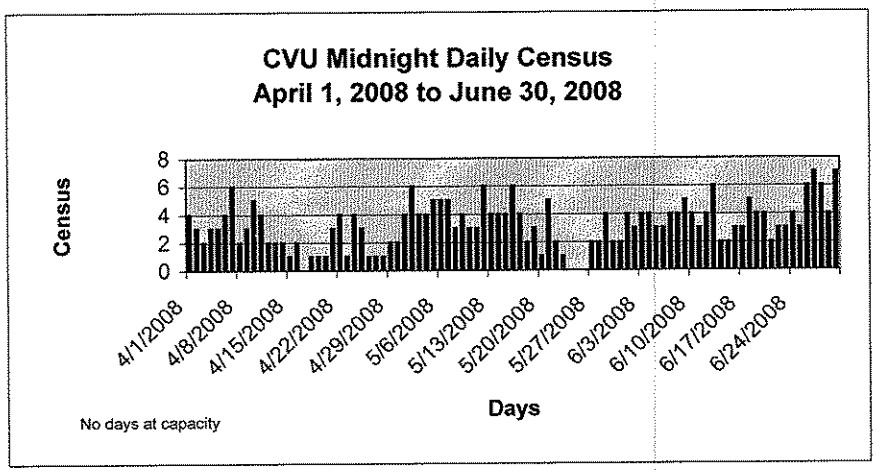
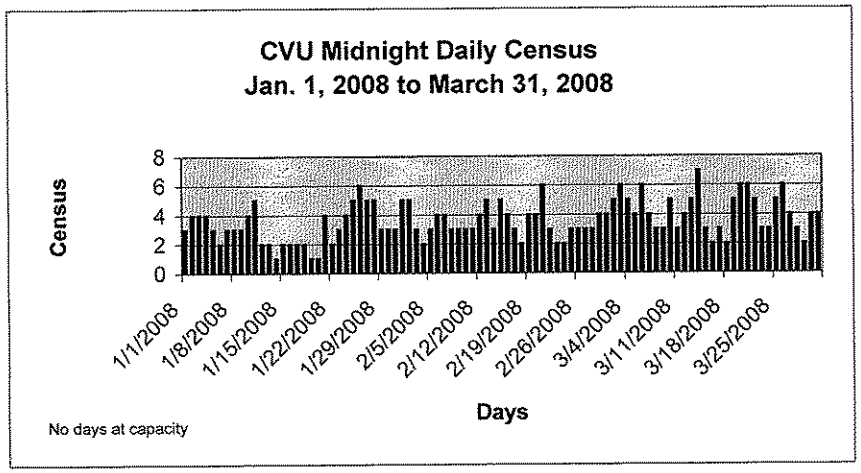
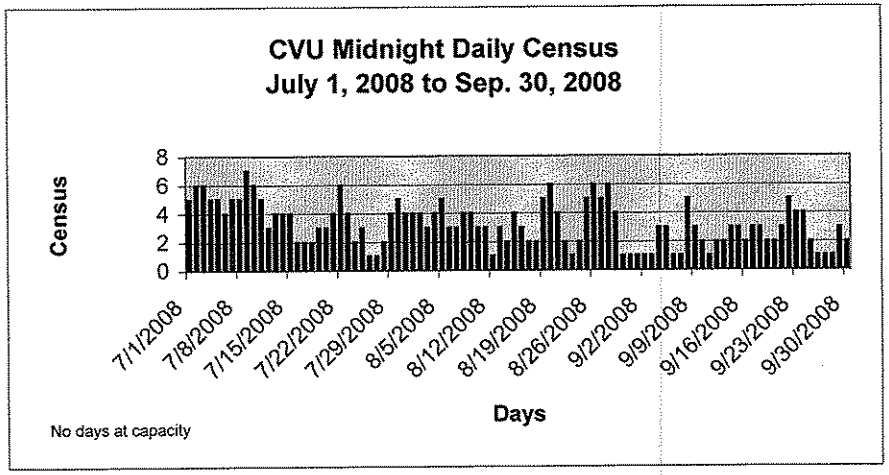
CVU	N/A	8	8	4	8	40%	51%	43%
Telemetry	N/A	20	20	19	20	84%	85%	86%
Med-Surg	N/A	103	100	97	103	93%	94%	87%
Step-Down	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Total	347	147	143.5	132	147	88%	89%	84%



*Net Clinically Available Beds - Due to the lack of private room availability; semi-private rooms are converted to private rooms routinely to accommodate isolation patient needs. This number reflects average impact; the range can be as high as 10 beds closed due to the private room isolation needs.



** Budgeted Staffed Beds - Each hospital budgets for a number of beds to staff.



*** Maximum Staffed Beds - If the census requires, and the private room availability allows, staffing is provided for this maximum number of beds.

Telemetry	514	514	523
Med Surg	2911	2,928	2,738

c) For the last year, the number of patients that were treated monthly at each hospital for cardiac services (OHS, Primary and Elective Angioplasty, Diagnostic Cardiac Catheterizations). Use the following table.

Response:
See Table below.

	Oct	Nov	Dec	Jan	Feb	Mar	April	May	June	July	Aug	Sept	Total
TWH													
OHS	4	14	9	14	10	11	14	10	16	10	9	17	138
Angioplasty	34	29	26	39	27	28	20	21	30	29	30	33	346
Cardiac Cath	58	57	43	54	46	46	49	52	50	57	48	71	631
SMH													
OHS	10	4	6	6	6	6	5	6	12	9	7	7	84
Angioplasty	24	27	15	16	21	31	22	22	20	17	28	15	258
Cardiac Cath	52	31	25	34	38	40	39	44	53	42	37	45	480

Financial:

7) For FY 2009 through FY 2011, the Heart Center of Greater Waterbury (HCGW) is projected to provide a gain of approximately $2.3 million to TWH and $1.3 million to SMH ***(pgs. 1146 and 1150)***. The sum of these amounts is not consistent with the $10 million combined impact noted on page 108. Please reconcile these amounts.

Response:

The gain calculated on the schedules used on pages 1146 and 1150 is the "contribution margin" for the Program.

Contribution margin is defined as Net Revenue - (Direct Variable Cost + Direct Fixed Cost)

Direct expenses are an allocation of all the costs generated by direct care giving departments doing billable work. There are two major components in Direct Expenses. They include:

1) Direct variable costs, those costs which are driven by volume.
2) Direct fixed costs, those costs within direct departments which are not effected by volume changes.

When an impact analysis is conducted, it is assumed that all of the net revenue will be lost and only the direct variable expenses will be lost. The direct fixed expenses would remain with each of the hospitals.

For TWH the difference between the contribution margin of $2.3 million (from page 1146) and the portion of the $10 million impact was $3.8 million of direct fixed expenses. For SMH the difference between the contribution margin of $1.3 million (from page 1150) and the portion of the $10 million impact was $2.8 million of direct fixed expenses. This is the total estimated $10 million impact noted on page 108.

8) On page 104, the cash equivalent balances of SMH and TWH were reported as $30 million and 33.6 million, respectively. These amounts do not agree to the cash and cash equivalent balances of SMH and TWH reported on pages 1135 and 1140, of $9 and $14.8 million, respectively. Please reconcile these amounts.

Response:

For TWH: Page 1135 indicates the operating cash of $8,992,246.
Page 104 indicates a cash equivalent balance of $33,553,132 which is broken down as follows:

Operating Cash	$ 8,992,496
Debt Service Funds	$ 2,217,556
Network Investments	$22,343,080
Total	$33,553,132

For SMH: Page 1140 indicates the operating cash of $14,772.
Page 104 indicates a cash equivalent balance of $30,019,000 which is broken down as follows:

Operating Cash	$14,772,000
Additional consolidated from SMHS	$ 2,737,000
Debt Service Funds	$ 1,022,000
Network Investments	$11,488,000
Total	$ 30,019,000

9) Please provide the most recently completed annual financial statement of HCGW, which contain at a minimum a balance sheet and statement of operations.

Response:
See HCGW financial statement on the following pages.

10) Please provide copies of HCGW Internal Revenue Service Form 990 for the fiscal years beginning October 1, 2006 and October 1, 2007.

Response:

The Internal Revenue Service Form 990 for Fiscal Year beginning on October 1, 2006 is provided on the following pages. The Internal Revenue Service Form 990 for Fiscal Year beginning on October 1, 2007 will not be completed until calendar years 2009.

mailed 8-13-08

COPY

Form **990**

Department of the Treasury
Internal Revenue Service

Return of Organization Exempt From Income Tax

Under section 501(c), 527, or 4947(a)(1) of the Internal Revenue Code (except black lung benefit trust or private foundation)

▶ The organization may have to use a copy of this return to satisfy state reporting requirements.

OMB No. 1545-0047

2006

Open to Public Inspection

A For the 2006 calendar year, or tax year beginning October 1 , 2006, and ending September 30 , 20 07

B Check if applicable:
- ☐ Address change
- ☐ Name change
- ☐ Initial return
- ☐ Final return
- ☐ Amended return
- ☐ Application pending

Please use IRS label or print or type. See Specific Instructions.

C Name of organization: Heart Center of Greater Waterbury

Number and street (or P.O. box if mail is not delivered to street address): PO BOX 2153 — Room/suite:

City or town, state or country, and ZIP + 4: Waterbury, CT 06722

D Employer identification number: 83 0416893

E Telephone number: (203) 575-5570

F Accounting method: ☐ Cash ☑ Accrual ☐ Other (specify) ▶

• Section 501(c)(3) organizations and 4947(a)(1) nonexempt charitable trusts must attach a completed Schedule A (Form 990 or 990-EZ).

G Website: ▶ www.heatcentergw.org

H and I are not applicable to section 527 organizations.

H(a) Is this a group return for affiliates? ☐ Yes ☑ No

H(b) If "Yes," enter number of affiliates ▶ N/A

H(c) Are all affiliates included? ☐ Yes ☐ No (If "No," attach a list. See instructions.)

H(d) Is this a separate return filed by an organization covered by a group ruling? ☐ Yes ☑ No

J Organization type (check only one) ▶ ☑ 501(c) ( ) ◀ (insert no.) ☐ 4947(a)(1) or ☐ 527

K Check here ▶ ☐ if the organization is not a 509(a)(3) supporting organization and its gross receipts are normally not more than $25,000. A return is not required, but if the organization chooses to file a return, be sure to file a complete return.

I Group Exemption Number ▶ N/A

L Gross receipts: Add lines 6b, 8b, 9b, and 10b to line 12 ▶ 590,570

M Check ▶ ☑ if the organization is not required to attach Sch. B (Form 990, 990-EZ, or 990-PF).

g	43g				
44 **Total functional expenses.** Add lines 22a through 43g. (Organizations completing columns (B)–(D), carry these totals to lines 13–15)	44	698,310	552,230	146,080	

Joint Costs. Check ▶ ☐ if you are following SOP 98-2.

Are any joint costs from a combined educational campaign and fundraising solicitation reported in (B) Program services? ▶ ☐ Yes ☑ No

If "Yes," enter (i) the aggregate amount of these joint costs $ _____; (ii) the amount allocated to Program services $ _____; (iii) the amount allocated to Management and general $ _____; and (iv) the amount allocated to Fundraising $ _____

Part III Statement of Program Service Accomplishments *(See the instructions.)*

Form 990 is available for public inspection and, for some people, serves as the primary or sole source of information about a particular organization. How the public perceives an organization in such cases may be determined by the information presented on its return. Therefore, please make sure the return is complete and accurate and fully describes, in Part III, the organization's programs and accomplishments.

What is the organization's primary exempt purpose? ▶ See Attached Statement All organizations must describe their exempt purpose achievements in a clear and concise manner. State the number of clients served, publications issued, etc. Discuss achievements that are not measurable. (Section 501(c)(3) and (4) organizations and 4947(a)(1) nonexempt charitable trusts must also enter the amount of grants and allocations to others.)	Program Service Expenses (Required for 501(c)(3) and (4) orgs., and 4947(a)(1) trusts; but optional for others.)
a See Attached Statement (Grants and allocations $) If this amount includes foreign grants, check here ▶ ☐	552,230
b (Grants and allocations $) If this amount includes foreign grants, check here ▶ ☐	
c (Grants and allocations $) If this amount includes foreign grants, check here ▶ ☐	
d (Grants and allocations $) If this amount includes foreign grants, check here ▶ ☐	
e Other program services (attach schedule) (Grants and allocations $) If this amount includes foreign grants, check here ▶ ☐	
f **Total of Program Service Expenses** (should equal line 44, column (B), Program services). . . . . ▶	552,230

Part IV Balance Sheets *(See the instructions.)*

Note: *Where required, attached schedules and amounts within the description column should be for end-of-year amounts only.*

				(A) Beginning of year		(B) End of year
Assets	45	Cash—non-interest-bearing		108,244	45	29,176

Part IV **Reason for Non-Private Foundation Status** (See pages 4 through 7 of the instructions.)

I certify that the organization is not a private foundation because it is: (Please check only **ONE** applicable box.)

5 ☐ A church, convention of churches, or association of churches. Section 170(b)(1)(A)(i).

6 ☐ A school. Section 170(b)(1)(A)(ii). (Also complete Part V.)

7 ☐ A hospital or a cooperative hospital service organization. Section 170(b)(1)(A)(iii).

8 ☐ A federal, state, or local government or governmental unit. Section 170(b)(1)(A)(v).

9 ☐ A medical research organization operated in conjunction with a hospital. Section 170(b)(1)(A)(iii). **Enter the hospital's name, city, and state** ▶ .....

10 ☐ An organization operated for the benefit of a college or university owned or operated by a governmental unit. Section 170(b)(1)(A)(iv). (Also complete the **Support Schedule** in Part IV-A.)

11a ☐ An organization that normally receives a substantial part of its support from a governmental unit or from the general public. Section 170(b)(1)(A)(vi). (Also complete the **Support Schedule** in Part IV-A.)

11b ☐ A community trust. Section 170(b)(1)(A)(vi). (Also complete the **Support Schedule** in Part IV-A.)

12 ☐ An organization that normally receives: **(1) more than 33⅓%** of its support from contributions, membership fees, and gross receipts from activities related to its charitable, etc., functions—subject to certain exceptions, and **(2) no more than 33⅓%** of its support from gross investment income and unrelated business taxable income (less section 511 tax) from businesses acquired by the organization after June 30, 1975. See section 509(a)(2). (Also complete the **Support Schedule** in Part IV-A.)

13 ☑ An organization that is not controlled by any disqualified persons (other than foundation managers) and otherwise meets the requirements of section 509(a)(3). Check the box that describes the type of supporting organization:

☑ Type I ☐ Type II ☐ Type III-Functionally Integrated ☐ Type III-Other

Provide the following information about the supported organizations. (See page 7 of the instructions.)

(a) Name(s) of supported organization(s)	(b) Employer identification number (EIN)	(c) Type of organization (described in lines 5 through 12 above or IRC section)	(d) Is the supported organization listed in the supporting organization's governing documents?		(e) Amount of support
			Yes	No	
Saint Mary's Hospital, Inc.	06-0646844	Hospital 7	✓		294,000
The Waterbury Hospital	06-0665979	Hospital 7	✓		294,000
Total ▶					588,000

14 ☐ An organization organized and operated to test for public safety. Section 509(a)(4). (See page 7 of the instructions.)

Part IV-A Support Schedule (Complete only if you checked a box on line 10, 11, or 12.) ***Use cash method of accounting.*** N/A

Note: *You may use the worksheet in the instructions for converting from the accrual to the cash method of accounting.*

Calendar year (or fiscal year beginning in) ▶	(a) 2005	(b) 2004	(c) 2003	(d) 2002	(e) Total
15 Gifts, grants, and contributions received. (Do not include unusual grants. See line 28.)					
16 Membership fees received					
17 Gross receipts from admissions, merchandise sold or services performed, or furnishing of facilities in any activity that is related to the organization's charitable, etc., purpose					
18 Gross income from interest, dividends, amounts received from payments on securities loans (section 512(a)(5)), rents, royalties, and unrelated business taxable income (less section 511 taxes) from businesses acquired by the organization after June 30, 1975					
19 Net income from unrelated business activities not included in line 18.					
20 Tax revenues levied for the organization's benefit and either paid to it or expended on its behalf					
21 The value of services or facilities furnished to the organization by a governmental unit without charge. Do not include the value of services or facilities generally furnished to the public without charge					
22 Other income. Attach a schedule. Do not include gain or (loss) from sale of capital assets					
23 Total of lines 15 through 22					
24 Line 23 minus line 17					
25 Enter 1% of line 23					

26	**Organizations described on lines 10 or 11:** a Enter 2% of amount in column (e), line 24 ▶	26a	
	b Prepare a list for your records to show the name of and amount contributed by each person (other than a governmental unit or publicly supported organization) whose total gifts for 2002 through 2005 exceeded the amount shown in line 26a. **Do not file this list with your return.** Enter the total of all these excess amounts ▶	26b	
	c Total support for section 509(a)(1) test: Enter line 24, column (e) ▶	26c	
	d Add: Amounts from column (e) for lines: 18 _____ 19 _____ 22 _____ 26b _____ ▶	26d	
	e Public support (line 26c minus line 26d total) ▶	26e	
	f **Public support percentage (line 26e (numerator) divided by line 26c (denominator))** ▶	26f	%

27 **Organizations described on line 12:** a For amounts included in lines 15, 16, and 17 that were received from a "disqualified person," prepare a list for your records to show the name of, and total amounts received in each year from, each "disqualified person." **Do not file this list with your return.** Enter the sum of such amounts for each year:

(2005) ..... (2004) ..... (2003) ..... (2002) .....

b For any amount included in line 17 that was received from each person (other than "disqualified persons"), prepare a list for your records to show the name of, and amount received for each year, that was more than the **larger** of **(1)** the amount on line 25 for the year or **(2)** $5,000. (Include in the list organizations described in lines 5 through 11b, as well as individuals.) **Do not file this list with your return.** After computing the difference between the amount received and the larger amount described in **(1)** or **(2)**, enter the sum of these differences (the excess amounts) for each year:

(2005) ..... (2004) ..... (2003) ..... (2002) .....

	c Add: Amounts from column (e) for lines: 15 _____ 16 _____ 17 _____ 20 _____ 21 _____ ▶	27c	
	d Add: Line 27a total _____ and line 27b total _____ ▶	27d	
	e Public support (line 27c total minus line 27d total) ▶	27e	
	f Total support for section 509(a)(2) test: Enter amount from line 23, column (e) ▶ 27f		
	g **Public support percentage (line 27e (numerator) divided by line 27f (denominator))** ▶	27g	%
	h **Investment income percentage (line 18, column (e) (numerator) divided by line 27f (denominator))** ▶	27h	%

28 **Unusual Grants:** For an organization described in line 10, 11, or 12 that received any unusual grants during 2002 through 2005, prepare a list for your records to show, for each year, the name of the contributor, the date and amount of the grant, and a brief description of the nature of the grant. **Do not file this list with your return.** Do not include these grants in line 15.

Part V **Private School Questionnaire** (See page 9 of the instructions.)
(To be completed ONLY by schools that checked the box on line 6 in Part IV) N/A

			Yes	No
29	Does the organization have a racially nondiscriminatory policy toward students by statement in its charter, bylaws, other governing instrument, or in a resolution of its governing body?	29		
30	Does the organization include a statement of its racially nondiscriminatory policy toward students in all its brochures, catalogues, and other written communications with the public dealing with student admissions, programs, and scholarships?	30		
31	Has the organization publicized its racially nondiscriminatory policy through newspaper or broadcast media during the period of solicitation for students, or during the registration period if it has no solicitation program, in a way that makes the policy known to all parts of the general community it serves?	31		
	If "Yes," please describe; if "No," please explain. (If you need more space, attach a separate statement.)			
32	Does the organization maintain the following:			
a	Records indicating the racial composition of the student body, faculty, and administrative staff?	32a		
b	Records documenting that scholarships and other financial assistance are awarded on a racially nondiscriminatory basis?	32b		
c	Copies of all catalogues, brochures, announcements, and other written communications to the public dealing with student admissions, programs, and scholarships?	32c		
d	Copies of all material used by the organization or on its behalf to solicit contributions?	32d		
	If you answered "No" to any of the above, please explain. (If you need more space, attach a separate statement.)			
33	Does the organization discriminate by race in any way with respect to:			
a	Students' rights or privileges?	33a		
b	Admissions policies?	33b		
c	Employment of faculty or administrative staff?	33c		
d	Scholarships or other financial assistance?	33d		
e	Educational policies?	33e		
f	Use of facilities?	33f		
g	Athletic programs?	33g		
h	Other extracurricular activities?	33h		
	If you answered "Yes" to any of the above, please explain. (If you need more space, attach a separate statement.)			
34a	Does the organization receive any financial aid or assistance from a governmental agency?	34a		
b	Has the organization's right to such aid ever been revoked or suspended? If you answered "Yes" to either 34a or b, please explain using an attached statement.	34b		
35	Does the organization certify that it has complied with the applicable requirements of sections 4.01 through 4.05 of Rev. Proc. 75-50, 1975-2 C.B. 587, covering racial nondiscrimination? If "No," attach an explanation	35		

Part VI-A **Lobbying Expenditures by Electing Public Charities** (See page 10 of the instructions.)
(To be completed **ONLY** by an eligible organization that filed Form 5768) N/A

Check ▶ a ☐ if the organization belongs to an affiliated group. Check ▶ b ☐ if you checked "a" and "limited control" provisions apply.

Limits on Lobbying Expenditures (The term "expenditures" means amounts paid or incurred.)		(a) Affiliated group totals	(b) To be completed for all electing organizations

Heart Center of Greater Waterbury

Year Ended 9/30/07

EIN 83-041689

HEART CENTER of Greater Waterbury

Attachment to Form 990 Part III – Organization's Primary Exempt Purpose:

Organization Description: The Heart Center of Greater Waterbury, Inc. is a managed service organization that provides administrative support and management functions to the advanced cardiac care program which offers patients at Saint Mary's Hospital and Waterbury Hospital immediate access to services such as angioplasty and open-heart surgery. In the support of the missions and charitable functions of Saint Mary's Hospital and Waterbury Hospital, the primary purpose of the Heart Center of Greater Waterbury Inc. includes quality assurance and management, community outreach, coordination of services, strategic planning with the partner hospitals and marketing.

Quality Assurance and Management: The Heart Center of Greater Waterbury Inc. is responsible for managing and reporting data related to the advanced cardiac care services provided at Saint Mary's Hospital and Waterbury Hospital. This includes managing the software system, maintaining data validity, producing management reports for the organizations for the purpose of identifying areas of process improvement and reporting program data to national and state registries. Analysis of cardiac service data as a component of the quality process is a function of the Heart Center.

Community Outreach: The Heart Center of Greater Waterbury Inc. is responsible for assessing the needs of the community as it relates to knowledge of cardiac health and services. As such the Heart Center will provide education to various individuals/groups free of charge as a service to the community.

Coordination of Services: The Heart Center of Greater Waterbury Inc. provides coordination and oversight of services for the purpose of consistency, to foster ongoing communication and to minimize duplication of services. This includes physician services, community activities/education and clinical services.

Strategic Planning: The Heart Center of Greater Waterbury Inc. will establish an Advisory Board made of hospital leadership, Heart Center leadership, community physicians and clinical leadership. The purpose of this Advisory Board will be to coordinate information and to identify and recommend issues related to cardiac care for consideration in strategic planning

Marketing: The Heart Center of Greater Waterbury Inc. is responsible for providing physicians, healthcare providers and community members of the greater Waterbury area with accurate information related to the advanced cardiac care services provided at Saint Mary's Hospital and Waterbury Hospital.

WATERBURY HOSPITAL | Saint Mary's HOSPITAL | UConn Health Center

Heart Center of Greater Waterbury EIN: 83-0416893
Form 990 Part VIII Line 93a Attachment
For Year Ended 09/30/07

FY 2007 Accomplishments

Administrative Accomplishments:

- Facilitated renewal of UCONN Clinical Service Agreement
- Applied for and received grant dollars from the American Heart Association for Community Outreach Activities
- Facilitated a process for correct billing from WAA to the hospitals
- Facilitated negotiations for new Anesthesia contract
- Reviewed usage and discontinued answering call service for ED physicians desiring to transfer patients to Waterbury

Program Coordination Accomplishments:

- Met all requirements for OHCA reporting requirements
- Coordinated and organized three presentations before the Commissioner of OHCA
- Coordinated the efforts for the CON modification process including writing several drafts, interviewing physicians from around the country, and coordinating several meetings internally for CON planning and strategy.
- Ongoing quarterly Advisory Board meetings
- Ongoing monthly case conference review meetings with physician and clinical representation from both hospitals
- Ongoing joint meeting of data collection teams for the purpose of sharing data issues/registry definitions and internal processes
- Continued publication of an Internal Newsletter for physicians and staff of HCGW (X4 per year)

Marketing Accomplishments:

- Published 3 issues of "The Beat Goes On" , the Heart Center newsletter distributed 3x/year to over 21,000 Greater Waterbury households
- Updated and revised program website
- Organized a joint team from WH and SMH at the New Haven Heart Walk
- Chose and engaged a new marketing firm
- Implemented a marketing plan including billboard and print advertising as well as event sponsorship
- Representation on Waterbury Regional Chamber Health Care Council Board of Directors
- Representation on Waterbury Regional Chamber Health Care Council Public Relations Committee
- Direct involvement in naming the HCC's biannual healthcare supplement to the Waterbury Republican- American newspaper

Heart Center of Greater Waterbury EIN: 83-0416893
Form 990 Part VIII Line 93a Attachment
For Year Ended 09/30/07

- Celebrated HC 2nd anniversary by recognizing hospital based staff with a Heart pin and thank you note
- Continued with Physician office visits to promote Heart Center services

Community Outreach Accomplishments:

- Continued with a collaborative relationship with the American Heart Association
- Facilitated/managed three Freedom from Smoking Clinics (7 weeks each)
- Maintained working relationships with greater Waterbury Senior Centers, Neighborhood Associations, churches, and community groups for regular Heart Health Programs
- Provided **199** community outreach programs including blood pressure screenings, health fairs, individual patient consults, heart health educational presentations by physicians and APRN and community relations activities
- Provided staff education at local nursing facilities as it relates to the cardiac patient
- Developed and implemented a four week series on Diabetes as a primary risk factor for heart disease
- Developed an implemented group education programs for PCP offices
- Attended several corporate wellness fairs for area business' employees and colleges
- Continued a quarterly mailing to Heart Center patients to maintain connection and for information on community outreach activities

Quality Accomplishments:

- Served as a resource to hospitals regarding registry definitions, reporting and compliance to standards
- Transitioned to paperless data collection systems throughout the program
- Submitted all required data elements to three separate registries (ACC, STS and OHCA) per requirements. Communicated reported results to key stakeholders
- Facilitated Heart Center's enrollment in the D2B Alliance a national forum supporting the guidelines applied in practice to reducing door-to-balloon time
- Prepared for STS data base revisions by educating staff, determining data collection responsibilities and working with software company
- Conducted over 400 chart reviews for retrospective EUROSCORE data collection in preparation of CON modification
- Improved use of the quality software at all three sites including education to staff, ongoing monitoring and upgrades as needed and installation of new reporting software.
- Began a new joint quality oversight meeting with physicians, hospital based staff and directors.

Attachment to Form 990 Schedule A Part II and Schedule A Part III Line 2c Transactions with Parties connected with our Board of Directors And Explanation of Compensation Arrangement Fye 9/30/07

Heart Center of Greater Waterbury Inc. (HCGW) has entered into an arms-length agreement with Franklin Medical Group of 56 Franklin St., Waterbury CT. HCGW purchases administrative services from Franklin Medical Group (FMG). The administrators who provide these services include the executive director, her administrative assistant, data analyst and clinical nurse specialist. FMG is a taxable entity wholly owned by Saint Mary's Hospital, one of the two members of HCGW. All applicable payroll taxes are remitted by FMG. At the end of September 30, 2007, there were four such employees dedicated towards running the operations of HCGW.

HCGW has a written lease for rental of office space and phone line with the Harold Leever Regional Cancer Center of Waterbury, CT (HLRCC). HLRCC is a joint venture between Saint Mary's Hospital and Waterbury Hospital and has six board members that also sit on the board of directors at HCGW. The terms of the lease were negotiated at arm's length by the Executive Director of the Heart center and the Director of Finance at the Cancer Center based on the amount of space and utilities that would be utilized. This lease will be reevaluated yearly for any necessary changes due to market value, increase in utility costs or the possible need for the area by patient care providers. For the year ended September 30, 2007, HCGW paid HLRCC $18,720 at $1,060 per month for rent and $500 per month for the phone line from the inception of the lease.

One of the co-presidents of HCGW, Robert P. Ritz is also the CEO of Saint Mary's Hospital, a member of HCGW and also serves on the Board of Directors of FMG. The other co-president of HCGW, John H. Tobin is also CEO of Waterbury Hospital, the other member of HCGW. In total there are eight individuals on the HCGW Board of Directors, with four representing each member hospital.

Waterbury Hospital and Saint Mary's Hospital jointly fund the operations of HCGW. During the year ended September 30, 2007, each hospital allocated $294,000 to HCGW for a total of $588,000. There is no borrowing activity between the hospitals and its two members or any individuals connected with the three entities and its other affiliates.

HCGW has its business checking account with Sovereign Bank in Waterbury, CT. HCGW incurred no bank fees, did not conduct any borrowings or engage in any other business activity with Sovereign Bank or its affiliates.

12) Please provide revised appendices 11.b.i. and 11.c.i, which includes the incremental FTEs and volume statistics including primary angioplasty, elective angioplasty and open heart surgery cases.

Response:

See spreadsheets on the following pages for TWH. The spreadsheets filed in the CON Application on pages 1150 and 1151 have the incremental FTEs and volume statistics requested.

Steve, here are several documents pertaining to the CON. I'm sending them in separate emails so they don't bounce back. Each is clearly titled but please call me if you determine you are missing anything.

Subject: RE: Docket No.: 08-31202, CON Application Forms

Loraine,

I mistyped, I do meant the Table 9, should be "Projected" Cardiac Cath. Volume by Operator as titled on the table itself. The question leading to is misstated (question "o") and should ask for three years projected.

Hopefully that answers your question.

Steven,
I was inquiring about table 9 (below) and these answers refer to table 8. could you review again?

From: Lazarus, Steven [mailto:Steven.Lazarus@ct.gov]
Sent: Wednesday, July 30, 2008 11:41 AM
To: Loraine Shea (HCGW)
Cc: Martone, Kim; Fedorjaczenko, Alexis; Durdy, Barbara
Subject: RE: Docket No.: 08-31202, CON Application Forms

Hi Loraine,

I reviewed our CON Application forms that were sent out and in Questions vi) m, Table 8, OHCA is requesting the "Projected Operator Volume for each Facility." The wording in the written question m should state "projected" not "historical." In the question and the table prior this question (vi)k, we are requesting the "Historical" Operator volume for each Applicant.

So to clarify the Table 8 is correct and the question leading to Table 8 should have requested "projected" volume not "historical" volume.

Please let me know you have require any further clarification and sorry for the confusion.

Subject: RE: Docket No.: 08-31202, CON Application Forms

Steven,
Thank you for forwarding these documents. In reveiw of the application I have one question.

Page 6 or 12 of the application: (at the bottom) It appears to ask for historical volume however the table is referring to projected volume. Could you clarify that for me? (I have cut and pasted from the application)

> o) In the following table format, please provide last three years of cardiac catheterization volume by inpatient and outpatient, by operator and facility.

Table 9: *Projected* Cardiac Cath. Volume by Operator

Physician	Facility	FY 2009 (# of Patients)	I/P	O/P	FY 2010 (# of Patients)	I/P	O/P	FY 2011 (# of Patients)	I/P	O/P

Key: Inpatient= I/P, Outpatient= O/P

thanks very much

Loraine,

I mistyped, I do meant the Table 9, should be "Projected" Cardiac Cath. Volume by Operator as titled on the table itself. The question leading to is misstated (question "o") and should ask for three years projected.

Hopefully that answers your question.

Subject: RE: Docket No.: 08-31202, CON Application Forms

Hi Loraine,

I reviewed our CON Application forms that were sent out and in Questions vi) m, Table 8, OHCA is requesting the "Projected Operator Volume for each Facility." The wording in the written question m should state "projected" not "historical." In the question and the table prior this question (vi)k, we are requesting the "Historical" Operator volume for each Applicant.

So to clarify the Table 8 is correct and the question leading to Table 8 should have requested "projected" volume not "historical" volume.

Please let me know you have require any further clarification and sorry for the confusion.

Hi Loraine,

As of this morning, no one has filed a request for any type of status in this matter. If someone does file for status, we'll forward you a copy as soon as possible.

Further, can you provide us with an update of the number of people from the general public that have signed up to speak at the hearing so far and also the total number of people (general public) that have signed up to attend. Daily updates on these over the next couple of days will be very helpful to us as we finalize our logistics, including need for an overflow room and length of the hearing.

Sincerely,
-Steven

OFFICE OF
HEALTH CARE ACCESS

Office of The Attorney General
State of Connecticut

TESTIMONY OF
ATTORNEY GENERAL RICHARD BLUMENTHAL
BEFORE THE OFFICE OF HEALTH CARE ACCESS
OCTOBER 30, 2008

I appreciate the opportunity to urge approval of the certificate of need application (Docket 08-31202-CON) of St. Mary's Hospital, Waterbury Hospital and the University of Connecticut Health Center for a permanent primary and elective angioplasty and open heart surgery program known as the Heart Center of Greater Waterbury.

I have long supported and worked to achieve this program for effective lifesaving cardiac care. The time required to transport patients needing immediate hospital heart care can be literally the difference between life and death. Waterbury area residents deserve no less than the highly skilled and caring professionals and Heart Center programs provided by these hospitals. This heart care program should be made permanent under the extraordinary professional leadership team at both hospitals. If Greater Waterbury residents become ill -- especially in a heart threatening emergency -- they should be treated in Waterbury. As the 2004 agreement between the Office of Health Care Access (OHCA) and the hospitals indicates, transportation times from Waterbury to Bridgeport or New Haven are more than 40 minutes, and longer for residents in more distant towns in the Greater Waterbury area.

Approval of this certificate of need (CON) application will maintain a life-saving program in the city of Waterbury while enhancing the overall goal of Waterbury Hospital and St. Mary's Hospital to combine their assets and expertise for the benefit of Waterbury area residents. OHCA has strongly encouraged hospitals to use their limited financial resources more efficiently. Support for this CON is consistent with that overall goal.

The Heart Center of Greater Waterbury has already achieved its paramount goal -- providing residents of the 18 towns in the Greater Waterbury region with superb, world class cardiac care. Heart patients receive timely and seamless care in one facility from emergency room care to recovery. As OHCA acknowledged in its approval of the 2004 agreement, patients whose time of arrival to angioplasty exceeds two hours -- known as door to balloon time -- have a 40-60 percent increased risk of mortality.

This program's life saving benefits have been immeasurable and miraculous -- as testimony from patients as well as professionals irrefutably establishes.

The hospitals have committed over $7 million -- providing critical cardiac care to over 2400 patients, including the provision of more than 1800 angioplasty procedures and

approximately 600 open heart surgeries. But the real benefits of this investment have only begun. Its results in lives saved and enhanced are rising -- not only in numbers of successful medical outcomes but quality of life.

In 2004, OHCA established several benchmarks for this program of heart surgery services, using the best available information at that time. Since then, the Heart Center of Waterbury has met every condition except the volume target for open heart surgeries.

- As required by the agreement, the Heart Center has established a relationship with an experienced partner in providing cardiac services -- the University of Connecticut Medical Center and John Dempsey Hospital. Cardiac surgeons and perfusionists who work at John Dempsey Hospital are provided under contract to the Heart Center. The Chief Cardiac Surgeon at the Heart Center is the Chief of Cardiothoracic Surgery for John Dempsey Hospital. The University of Connecticut Medical Center and John Dempsey Hospital regularly perform oversight and hold case conferences with the Heart Center.

- As required under the agreement with OHCA, the Heart Center regularly submits data to the databases operated by the Society of Thoracic Surgeons Database and the American College of Cardiology. The Heart Center's outcomes meet or exceed the criteria and standards of these nationally recognized organizations.

- In each year since 2004, the Heart Center has exceeded the angioplasty target numbers -- in the past year by more than 50%.

Even if the Heart Center has not reached the overall volume targets for open heart surgery, the outcomes of its surgeries have met national standards. OHCA should consider that nationally and in Connecticut, the number of open heart surgeries has declined since 2004 while for the past three years, the combined number of open heart surgeries at St. Mary's Hospital and Waterbury Hospital has grown steadily -- countering the statewide downward trend.

The volume of surgeries target was established by OHCA to ensure that there would be sufficient operations to maintain surgical skill and expertise levels. As the CON application clearly and comprehensively demonstrates, there is a large body of recent research concluding that there is limited correlation between volume and expertise and skill level maintenance.

I urge OHCA's approval of the CON application.

PROGRAM REVIEW

Heart Center of Greater Waterbury Application for Permanent Status
Testimony of Senator Rob Kane
October 30, 2008

The Heart Center of Greater Waterbury deserves without question to be granted permanent status. The collaboration of Waterbury Hospital and St. Mary's Hospital to create the Heart Center has been exceptional. As evidenced from the outpouring of support at the hearing in August and various rallies in the Waterbury area, this is a vital resource for our community which has aided in saving the lives of many people.

Life or death can depend on mere minutes or even seconds. Without the Heart Center of Greater Waterbury, patients in our community who suffer from a heart attack are put at far greater risk. Delay of treatment due to transportation to another city such as New Haven, Hartford or Bridgeport could be detrimental and can lead to death. The Heart Center of Greater Waterbury is and should be very proud of its ability to treat patients in an average of 66 minutes well below the national average of 90 minutes. To think of what can happen in those additional twenty plus minutes is terrifying to patients and their families.

Additionally, the location of this facility is not only beneficial to those in our area suffering from heart disease, but also to their loved ones. It allows families and friends who provide so much love and support to their ailing family members to visit more frequently or assist in transportation to the Heart Center without time away from commitments such as work. Ultimately if the distance for care is too far, the sick family member may have to go without this essential support system.

In the three years since its doors have opened the Heart Center has treated thousands of area residents. Their programs rival any in the State of Connecticut and around the country. Many residents in my district have contacted me personally to express their

support for the Heart Center of Greater Waterbury. It is a facility that they and their families have come to know and trust for the quality of care they receive. It would be wrong to deprive them of this comfort when they are already suffering from so much discomfort.

Simply put, what started as a "demonstration project" in 2005 is working. The community can access equal care at either facility, as the "one program/two campus" model provides maximum access to those suffering from cardiovascular disease. More than 2400 hearts have been treated in this period of time, over 600 open heart surgeries and 1800 angioplasties. This is an impressive number and clearly demonstrates the need for this facility in our community.

The Office of Health Care Access saw fit to extend the Heart Center's certification this past August via an oral decision at the conclusion of the meeting. It is clear that the Office of Health Care Access saw the benefit of this program at that point and it is my sincere hope that you will see it today and grant the permanent status that the Heart Center of Waterbury so greatly deserves.

Thank you for your time and thoughtful consideration of this very important application.

Re: Application of the Waterbury Hospital and Saint Mary's Hospital d/b/a Heart Center of Greater Waterbury and John Dempsey Hospital to Establish a Primary and Elective Angioplasty and Open Heart Program
Docket No. 08-31202-CON
Submission of Late Filed Exhibits

Dear Commissioner Vogel:

On behalf of Saint Mary's Hospital (SMH), the Waterbury Hospital (TWH), and John Dempsey Hospital (JDH), (collectively the Applicants) enclosed are late filed exhibits requested by the Office of Health Care Access (OHCA or Agency) at the public hearing held on October 30, 2008 regarding the above-referenced docket. We appreciate the additional time granted by OHCA to submit these late filed exhibits and the opportunity to clarify and revise certain information contained in our Certificate of Need (CON or Application). The Applicants have submitted the CON and late filed exhibits for the continued provision of primary and elective angioplasty and open heart surgery as a single, integrated and unified program (Program) through the Heart Center of Greater Waterbury (HCGW) on the campuses of SMH and TWH.

We would have liked the opportunity to more fully discuss the core issues concerning the Program at our hearing on October 30, 2008. The Applicants desired to have the best possible information available to the Agency to arrive at the most appropriate decision for the State, the Applicants, and the patients in the greater Waterbury area. We would welcome the opportunity to answer any questions the Agency may have, in any format deemed appropriate, including an additional hearing, concerning the Application.

This Program is a model for how hospitals across the state could collaborate to streamline and make more cost effective delivery of care, while maintaining excellent outcomes.

Requested Late Filed Exhibits:

1. *Table 1: Update Historical Volume FY 2008 (Page 42)*

	A=Primary Angioplasty	B= Elective Angioplasty	C= Open Heart Surgery	D=Cardiac Catheterizations
WH	49	297	138	631
SMH	35	223	84	480
HCGW Total	**84**	**520**	**222**	**1111**
JDH	**	391	79	487

FY 2008 for JDH is July 1- June 30
FY 2008 for HCGW is Oct 1- Sept 30
** JDH is unable to separately split out primary angioplasty

2. Full Time Equivalent (FTE) Clarification, Revised Financials/Impact Analysis

A. FTE Clarification

In the revised financials the Applicants have recalculated the FTEs for each campus using the methodology noted below under "Revised Financials." With this methodology the FTEs for the Program at SMH are 20.3 and are 23.8 for TWH. The Applicants believe this revised method is an accurate way of calculating incremental FTEs and these revisions are reflected in the revised financials.

On pages 1149 and 1150 of the Application the FTE total for SMH only included the FTEs for the Cardiovascular Unit and did not include the FTEs for other areas within the cardiac Program as did the WH FTEs (Cardiology, Cardiovascular Operating Room and other FTEs that are allocated to the cardiac Program such as Emergency Department, Pharmacy, and Laboratory, etc.). The SMH financials, however, appropriately included both the salary and benefit dollars for the total number of FTEs.

The original financials for SMH showing an FTE total of 16 should have been 26.01. To reiterate, the SMH financials included the salary and benefit dollars for the total number of FTEs.

B. Financials and Impact Analysis

Using our usual financial process and models, the financials included in the CON application utilized two different methodologies to answer two different questions. As expected, the different methodologies, while usual and customary, produced two different financial results. In response to the questions raised by OHCA at the hearing, we have prepared revised schedules 11.B.(i) and 11.C.(i) that show the impact of the service on the hospitals with and without the project. In addition, the detailed financial statements 11.b.(iv) have also been revised.

The following provides an explanation of the two methodologies used in the CON submission.

C. Program Impact - Method 1: Traditional Cost Accounting

Typically, when completing CON schedules to evaluate new services (the "with and without project analysis"), an applicant estimates what 'new' costs will be added to the system to provide the service. These would include, for example, the costs of either building or leasing new space for the service. Indirect costs are typically not allocated to the new service because these costs are truly, not incremental, in that they already exist in the hospital.

Since the Program is an existing, fully functioning program, SMH and TWH used traditional cost accounting methodology to account for the new service submitted in the original financials on pages 1145-1152. The methodology tracks costs for each patient utilizing services across the institution, including everything from entry through the emergency department, through the ancillary departments and inpatient units, etc. This represents a more accurate picture of the resources utilized to treat any given patient by service type. Since the advanced cardiac services program has been operational for the past three years and this type of data was in fact available, it is an accurate methodology to calculate the incremental cost of the new service. Most often, hospitals estimate the new costs based on assumptions of what service utilization and costs will be. The aforementioned are two very different methods of determining impact of a program. One is based on projections and estimates, and the other is based on actual allocated cost methodology. Our path was to use actual allocated cost methodology.

D. Impact of Closing the Program - Method 2

The financial model used by hospitals to estimate the impact of the closing of a program is a different model altogether and different from that typically used for CON analysis. Once a program is established in an organization, the program revenue serves to offset the fixed costs of the organization, including services such as billing, maintenance, medical records, etc. If a hospital closes a program, the resulting reduction in program revenue leaves those 'fixed' costs uncovered. Unless the hospital has other programs to utilize that space, those fixed costs must be absorbed by the remaining programs. If those indirect costs cannot be covered by other profitable programs, the hospital decreases its overall profitability. It is not uncommon for hospitals to use different financial models to evaluate impact of the closing of a program and the adding of a new service. We hope this clarifies the different methodologies used for each particular inquiry in our original application.

E. Revised Financials

As noted above, the revised financials are found on the following pages. You will note that the methodology utilized in the revised financials is different from the traditional cost accounting method (Method 1) used in our original submission and consequently, produces slightly different results. With this submission, we are utilizing the same methodology to answer both questions raised by OHCA staff.

In this methodology, the impact of losing the project is estimated to be $8 million compared to the $10 million reported in our previous response. The difference is that the professional contract costs have been included as direct costs and would be eliminated if the program were to close. These were not included in the original impact analysis.

The financial impact is a conservative estimate as previously noted. This revised methodology does not take into account the loss of revenue from cardiology services that would inevitably be shifted elsewhere based on the services available. For example, the Applicants believe other outpatient cardiology services would be shifted to full service providers. For two financially fragile hospitals, a multimillion dollar negative impact could place the hospitals in a more fiscally precarious position from which they may not recover and one that would severely impact the public's access to health care.

Not only is this financial impact conservative, but it reflects many cost savings built into the design of the Program. The following represents areas in which SMH and TWH were able to streamline administrative resources in order to reduce costs:

First, the HCGW, Inc. was formed as a separate, non-stock, 501(c)(3) corporation whose sole members are SMH and TWH for the purpose of: (1) program coordination and quality oversight; (2) community outreach and education; (3) maintaining compliance with all of the stipulations set forth in OHCA's order, dated July 23, 2004, in Docket No. 03-30167-CON (the 2004 Order); and (4) marketing. There are four FTE's in this corporation, including the Executive Director, Data Analyst, Advanced Practice Registered Nurse, and Assistant. (These FTEs are not included in the revised financials as these FTEs are not at either of the hospitals)

Second, the HCGW, Inc. Board of Directors (the Board) is comprised of ten members consisting of four members each from the administration of SMH and TWH. Additionally, the Medical Director and Executive Director of HCGW, Inc. are ex-officio members of the Board. These individuals oversee the operations of the Program and review data, oversee community outreach, assess quality of care, and assure compliance with the OHCA stipulated orders. The Executive Director reports to the Board and the administration at both SMH and TWH. The primary responsibility of the Executive Director is to coordinate the Program between SMH and TWH.

Third, the Board appointed an internal subgroup to form a joint quality committee that consists of staff from both hospitals and Program physicians to review all quality

data and process improvements throughout the Program. The purpose of the subgroup is to ensure the highest quality patient care and to implement uniform protocols and processes between the two campuses.

Fourth, HCGW, Inc. negotiates contracts with physician groups on behalf of the Hospital's. SMH, TWH, HCGW Inc. and the applicable physician group are all parties to the physician contracts. This results in the Program having one set of cardiologists, surgeons, perfusionists and anesthesiologists.

Fifth, with regard to data management, HCGW, Inc. purchased software that provides a combined database of patient information for Program patients at both campuses. The database is on a single server and is connected and accessible to SMH, TWH and HCGW Inc. The data is currently split by campus because OHCA's 2004 Order required the Hospitals to maintain the data separately; however, we can easily combine the data at any time. In fact, the data is routinely combined internally to measure overall Program performance.

Sixth, every physician or professional group has one on-call schedule that covers both hospital campuses 24 hours a day, 365 days a year. Therefore, one single, unified schedule covers the whole Program.

Finally, SMH and TWH amended their respective bylaws to allow for the joint sharing of patient outcome data in a combined manner, related specifically to the Program.

This sharing of administrative resources reflects that this is one Program established on two separate campuses and yields a significant savings over the establishment of two separate programs. Compare this with the situation in other cities such as, Hartford, New Haven and Bridgeport. Those programs must incur, for each program, the above mentioned administrative resources. In addition, built into our Program are many cost saving measures which relate to the clinical aspects of our Program. As discussed at the public hearing, the Agency stated it clearly understands the clinical benefits of the way in which the Program is structured. Therefore, we do not find it necessary to detail those accomplishments here. Notwithstanding, we wanted to clarify how our unified Program allows for administrative cost reduction that go beyond the cost saving measures associated with the clinical aspects of the Program.

3. Resubmit historical 11b.i. and 11.ci (Pages, 1145 - 1147)

See the following pages.

11. B (i). Please provide FY 2008 (Annualized) and four years of historical actual results of Total Facility revenue, expense and volume statistics without, incremental to and with the CON proposal in the following reporting format:

4. Explanation of the 6.6 million direct fixed expenses from question 7. (Page 1241)

See above narrative in Section 2.

5. Audited Financials

The hospitals are still working with each of the hospitals' independent auditors for the completion of year end audits, and consequently, audited financial statements for the fiscal year ended September 30, 2008 are not yet available. We have included internal, unaudited financial statements through the end of the fiscal year on the final pages of this document. The report formats for internal statements are different from those used in audited financial reports. While the report formats differ, the results should closely approximate final audited results.

The audit process is complex and time consuming. The internal staff must complete detailed analysis and work papers for all balance sheet accounts. The work efforts, including inventories, reconciliations and confirmations are much more time consuming than those techniques used to close out the records on a monthly basis. The auditors are scheduled months in advance (to coordinate work with multiple clients with similar fiscal year ends) to be available to complete their independent audit once the internal staff has completed their work. They must also obtain confirmations from outside vendors, legal counsel, and banks and complete their test of transactions and validate systems of control. After all work has been completed, financial statements must be prepared according to GAAP and footnotes completed. The draft statements are then reviewed by the respective Audit Committees from each hospital board and approved to be issued. Once approved and prior to issue, the statements must be finalized and printed. Both hospitals are putting its best efforts into completing their audits on a timely basis.

It is our hope that the unaudited year end financials statements will answer the necessary questions related to the financial status of the hospitals. The audited financials will be submitted to OHCA as soon as they are available to the hospitals from their respective independent auditor.

Conclusion

The Program's unique structure provides the Agency an opportunity to issue a visionary decision that will improve patient access to health care while reducing health care costs. This CON involves an unprecedented collaboration of two competing hospitals to provide full cardiac services as one, unified program. This model does not exist in any of Connecticut's major cities. In Hartford, New Haven, and Bridgeport, each city has two competing hospitals with two separate, full service cardiac programs. Such competitive programs increase healthcare costs due to duplication of services, without added value or clinical superiority.

We believe that our unified, dual campus model should be emulated by other hospitals and encouraged by the State. As currently structured, our Program has had a

positive financial impact on both hospitals and the community and has resulted in outstanding patient outcomes that rival any cardiac program in the state. Access to life saving health care via a dual campus program creates more accessibility for patients than would a single campus model, a stand alone model, or any other alternative model. We believe that a positive ruling on our Application would be visionary because it would demonstrate that OHCA supports and encourages other competing hospitals across the State to collaborate, thereby providing better access to patients and reducing health care costs.

We urge OHCA to look favorably upon the Application. Should there be any questions or additional information needed, please contact me at 203-575-5571.

Best regards,

Loraine C. Shea
Executive Director, HCGW

Subject: please confirm date

Steven,

Could you confirm the date that the Commissioner is expecting the Audited Financials.

When you and I spoke after the hearing I belive you said 12/30/08. Is that accurate?

Thanks
Loraine

Cc: cscott@wtbyhosp.org; Chad Wable; Giampini-Monte; Martone, Kim
Subject: RE: please confirm date

Hi Loraine,

I went back and listened to the public hearing recording and even though there is no specific date for the FY 2008 Audited Financial Statements for St. Mary's Hospital and Waterbury Hospital other than end December or sooner. OHCA requested December 15th. OHCA Commissioner did make a statement that the public hearing will remain open until all Late Files have been filed and reviewed by OHCA.

I hope this further helps clarify your question regarding the requested Late Files.

The Waterbury Hospital and St. Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital
Establish a Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital
Notice of Reconvening of the Hearing

Dear Ms. Scott, Mr. Wable and Mr. Giannini:

As part of the late filed exhibits received on November 14, 2008, by the Office of Health Care Access from The Waterbury Hospital, St. Mary's Hospital and John Dempsey Hospital (collectively known as "Applicants"), the Applicants stated in the second paragraph of the cover letter that "[w]e would welcome the opportunity to answer any questions the Agency may have, in any format deemed appropriate, including an additional hearing, concerning the Application."

OHCA has carefully considered the Applicants' request and will reconvene the October 30, 2008 hearing on December 16, 2008, at 9:00 am in OHCA's Hearing Room at 410 Capitol Avenue, Hartford, CT 06134.

OHCA requests that all persons that filed prefiled testimony in the hearing held on October 30, 2008, make every effort possible to be present at the hearing to be held on December 16, 2008; however, OHCA requests that the following persons specifically be present at the December 16, 2008, hearing:

By Applicant:	*By Position*
The Waterbury Hospital:	Chief Executive Officer/President Chief Financial Officer Chairman of the Board Administrator of Clinical Operations
St. Mary's Hospital	Chief Executive Officer/President Chief Financial Officer Chairman of the Board Administrator of Clinical Operations
John Dempsey Hospital	Chief Executive Officer/President Administrator of Clinical Operations

If the Applicants or any of the aforementioned individuals are unable to attend the December 16, 2008 hearing, the Applicants shall provide a written explanation detailing why they are unable to attend (i.e. time of day, date, etc.).

Please be advised, OHCA will send the Applicants a copy of the newspaper notice for the reconvening of the hearing under a separate cover letter.

Sincerely,

Cristine A. Vogel
Commissioner

RE: Docket Number 08-31202-CON
The Waterbury Hospital and Saint Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital
Establish Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital
Response to the Interrogatories

Dear Ms. Shea:

The Office of Health Care Access ("OHCA") will reconvene the October 30, 2008 hearing on December 16, 2008, at 9:00 a.m. in OHCA's third floor Hearing Room at 410 Capitol Avenue, Hartford, regarding the Certificate of Need ("CON") application identified above.

Attached are OHCA's interrogatories that must be addressed at the hearing. Please submit an original and six (6) copies of your paginated response to additional completeness questions pertaining to the Applicants Late-File. In responding to these questions, please repeat each question prior to providing a response. If a response is continued in an attachment or an appendix, the response must clearly list the page number of the attachment or appendix in which the response is continued. Conversely, the attachment or appendix should contain a page number reference to the original question.

The Applicants' responses to OHCA's interrogatories will be provided in person at the reconvened hearing. The written responses to OHCA's questions regarding the Late-File material must be submitted to OHCA either prior to or at the public hearing on December 16, 2008.

If the Applicants are unable to meet the specified time for the responses to the questions regarding the Late-File material, the Applicants must request a time extension in writing to the OHCA Commissioner detailing the reasons for not being able to meet the specified deadline.

Please contact Alexis G. Fedorjaczenko or Steven W. Lazarus at (860) 418-7001 if you have any questions concerning this request.

Sincerely,

Cristine A. Vogel
Commissioner

INTERROGATORIES

for Reconvened Hearing on December 16, 2008:

Certificate of Need Application, Docket Number: 08-31202-CON

The Waterbury Hospital and St. Mary's Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital

Establish Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital

Please be fully prepared to discuss topics as described below:

1. At the hearing held on October 30, 2008, The Waterbury Hospital ("TWH") and St. Mary's Hospital ("SMH") d/b/a Heart Center of Greater Waterbury ("HCGW") and John Dempsey Hospital (herein referred to as "Applicants") stated that the main reason why the HCGW cannot become one entity (as in the example of Harold Leever Cancer Center) is because of the two separate inpatient units located at each hospital. Given the situation of two separate hospitals and the fact that the American College of Cardiology requires individual institutions to file data (as the case with TWH and SMH); describe how OHCA can reasonably consider the HCGW as one institution when filing data with Office of Health Care Access ("OHCA").

2. Provide detailed and specific evidence that demonstrates "actual" cost savings referenced in the Applicants' proposal by the design of this program having one clinical team and two separate hospitals.

3. Describe what monitoring and by what state agency the Applicants recommend when an institution performs less than a hundred (<100) (as referenced on pages 27 & 29 of the CON Application) open heart surgery procedures.

4. Be prepared to discuss the proposed merger agreement and other related topics.

Additional Completeness Questions Pertaining to Applicants Late-File:

Please address the following questions related to the Applicants late-file submissions received by OHCA on November 14, 2008:

(Written response to these questions may be filed with OHCA in advance of the December 16, 2008 Hearing or be submitted at the Hearing itself)

1. In the original CON application the assumptions utilized in developing the projections on pages 1145 through 1155, were provided on page 107. Please provide the assumptions utilized in developing the revised projections on pages 1287 through 1299 of the late file.

2. Please explain why The Waterbury Hospital ("TWH") FY 2007 actual results for revenue was unchanged but the FY 2007 expenses was reduced by $3.5 million (late file, page 1287). Include in your response an explanation of each expense category change.

3. Please explain why page 1294 of the late file, St. Mary's Hospital's FY 2007 actual results for revenue was unchanged but the FY 2007 expenses was reduced by $1.2 million (late file, page 1294). Include in your response an explanation of each expense category change.

4. For FY 2009, TWH bad debt associated with Primary PCI, Elective PCI and OHS was $58,844, $235,375 and $284,028, respectively (late file, pages 1291 – 1293. Please explain where the total bad debt of $578,247 is accounted for in the FY 2009 projected incremental column on page 1289.

OFFICE OF
THE ARCHBISHOP

December 4, 2008

Honorable Cristine A. Vogel, Commissioner
Office of Health Care Access
410 Capital Avenue, MS #13HCA
P.O. Box 340308
Hartford, Connecticut 06134-0308

Dear Commissioner Vogel:

In response to your letter dated November 26, 2008, as you requested I am providing a written explanation detailing why I regrettably will be unable to attend the December 16, 2008, hearing regarding The Saint Mary's Hospital ("SMH") and The Waterbury Hospital (d/b/a Heart Center of Greater Waterbury) and John Dempsey Hospital proposed application to establish primary and elective angioplasty and open heart surgery program.

As the Chairman of the Boards of Directors for Saint Mary's Health System and Hospital this issue is of critical importance to me. I would have liked the opportunity to testify and provide the Office of Health Care Access ("OHCA") with any information it needs to arrive at a decision that is favorable for the patients within the Waterbury community. In fact, I would be willing to work on a mutually acceptable time for me to provide any information OHCA deems necessary.

As you may be able to anticipate, my schedule at this time of year is quite challenging. On December 16, I have a pre-existing commitment in New York, a meeting of the Board of Councilors for the Knights and Ladies of the Holy Sepulchre (Connecticut, New Jersey, and New York). This is a commitment made months ago which I cannot reschedule. In my absence, I have asked the Vice-Chair of the Saint Mary's Board of Directors, Monsignor James Coleman, to attend the hearing. Monsignor Coleman is actively involved in all issues related to this application and the merger discussions. I am confident any questions you may have will be answered thoroughly by Monsignor Coleman.

I thank you in advance for your understanding of my conflict. I truly wish I could be present to discuss with you this application. If you need to reach me please contact me at 860-541-6491.

Sincerely,

+ Henry J. Mansell

Most Reverend Henry J. Mansell
Archbishop of Hartford

Subject: RE: Waterbury/SMH cardiac hearing

Kim,

Per my earlier voicemail I am working on confirming all requested witnesses for December 18th (a.m) which is the date the Arch Bishop can attend. I need to also confirm all physicians, administrators and WH Board Chairperson but am wondering if this date will work for OHCA. (before I go much furhter) Please let me know as several patients' appointments will also need to be rescheduled. I will be off site after 1:45. Please reach me on my cell phone at 203-841-6380 rather than through email if you are responding after that time.

thanks very much
Loraine

Loraine, I received your voice mail this morning and yes you interpreted this email correctly.

Kim

Loraine, we received the letter from Most Reverend Henry Mansell, the Archbishop of Hartford stating that he is unable to attend the reconvened hearing on December 16th. I spoke to the Commissioner who indicated that she would like to reach a "mutually acceptable time" as the Archbishop has stated in his letter to reconvene the hearing with his attendance. Please let me know at your earliest convenience the day and time by which that can happen ... even this week.

Subject: Waterbury/SMH cardiac hearing

Loraine, I received your voice mail this morning and yes you interpreted this email correctly.

Kim

Loraine, we received the letter from Most Reverend Henry Mansell, the Archbishop of Hartford stating that he is unable to attend the reconvened hearing on December 16th. I spoke to the Commissioner who indicated that she would like to reach a "mutually acceptable time" as the Archbishop has stated in his letter to reconvene the hearing with his attendance. Please let me know at your earliest convenience the day and time by which that can happen … even this week.

Establish a Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and St. Mary's Hospital
Change in Date and Time of the Reconvening of the Hearing

Dear Ms. Scott, Mr. Wable and Mr. Giannini:

Please be advised, Office of Health Access ("OHCA") has changed the date and time of the reconvening of the hearing under Certificate of Need ("CON") Docket No.: 08-31202-CON from the original scheduled date of December 16, 2008, at 9:00 am to December 18, 2008, at 7:30 am. The hearing will be reconvened at 410 Capitol Avenue, Hartford, CT 06134.

If you have any further questions regarding this letter, please contact Kimberly Martone, Certificate of Need, Supervisor at (860) 418-7029.

Sincerely,

Cristine A. Vogel
Commissioner

Additional Completeness Questions Pertaining to Applicants Late-File:

1. In the original CON application the assumptions utilized in developing the projections on pages 1145 though 1155, were provided on page 107. Please provide the assumptions utilized in developing the revised projections on pages 1287 through 1299 of the late file.

Response:

The overall assumptions utilized in developing the original projections that were provided on page 107 remain unchanged for the revised projections provided on pages 1287 through 1299 of the late file and are noted below. There was a difference in the calculation methodology between the two sets of projections specific to the incremental cost of the program and these are outlined in detail on pages 1284-1286.

For TWH the overall assumptions utilized in developing projection are as follows:

- Salaries and fringe benefits will increase 3.5%
- Professional and contracted services will increase 4%
- Net patient revenue will increase 4%
- Supplies and drugs will increase 5%
- Bad debt will increase 3%
- Other operating expenses will increase 3%
- Non operating revenue will increase 3%
- Case volume was held constant
- FTE's will remain flat
- In order to mitigate operating losses for FY 2009, TWH Management Team will be engaging an independent consultant group to work with management on improving revenues and reducing expenses. We conservatively estimated a $5 million improvement in revenue and a $3 million improvement in expenses.

For SMH the overall assumptions utilized in developing projections are as follows:

- Salaries and Fringe benefits will increase 3.5%
- Net Patient revenues will increase 4%
- Supplies and non-salary expenses will increase 5%
- Case volume was held constant
- FTE's will remain flat

2. Please explain why The Waterbury Hospital (TWH) FY 2007 actual results for revenue was unchanged but the FY 2007 expenses was reduced by $3.5 million (Late file page 1287). Include in your response an explanation of each expense category changes.

Response:

We refer you to our discussion of change in methods used to calculate the costs related to the program, as presented in out late file submission sections B – E (Pages 1283-1286). We have restated the incremental program costs using an alternative method. Revenue was not affected by this change of method.

The $3.5 million reduction in expenses by category is as follows:

1) Salaries and fringes was decreased $2.25 million related to exclusion of the expenses represented by the FTEs in the ED, OR, Lab, Pharmacy, and Respiratory Therapy.

2) Supplies and drugs decreased by $1.35 million to reflect a change in estimate of the supply and drug cost per case.

3) Professional contracts were increased by $120,000 after being moved from the other operating expense line item.

3. Please explain why page 1294 of the late file, St. Mary's Hospital's FY 2007 actual results for revenue was unchanged but the FY 2007 expenses was reduced by $1.2 million (late file, page 1294). Include in your response an explanation of each expense category change.

Response:

We refer you to our discussion of change in methods used to calculate the costs related to the program, as presented in out late file submission sections B – E (Pages 1283-1286). We have restated the incremental program costs using an alternative method. Revenue was not affected by this change of method.

The $1.2 million reduction in expenses by category is as follows:

1) Salaries and Fringe Benefits was decreased by $539,000 related to exclusion of the expenses represented by the FTEs in the ED, OR, Lab, Pharmacy, and Respiratory Therapy.

2) Supplies, Drugs, and other operating expenses were reduced $383,000 to reflect a decrease in supply and drug costs per case.

3) Depreciation of $301,000 was removed from cost due to the change in methodology noted above.

4. For FY 2009, TWH bad debt associated with Primary PCI, Elective PCI and OHS was $58,844, $235,373 and $284,028, respectively (late file, pages 1291 - 1293). Please explain where the total bad debt of $578,247 is accounted for in the FY 2009 projected incremental column on page 1289.

Response:

As OHCA has formatted the above mentioned pages (1291- 1293) the bad debt amount is considered a reduction in revenue (See column 8). For consistency purposes we also showed the incremental bad debt as a reduction in revenue on page 1289.

Applicants:	**The Waterbury Hospital and St. Mary's Hospital Corporation d/b/a Heart Center of Greater Waterbury and John Dempsey Hospital**
Docket Number:	**08-31202-CON**
Project Title:	**Establish Permanent Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and Saint Mary's Hospital**
Statutory Reference:	**Section 19a-638, Connecticut General Statutes**
Filing Date:	**September 15, 2008**
Hearing Dates:	**October 30, 2008 and December 18, 2008**
Commissioner & Presiding Officer:	**Cristine A. Vogel**
Decision Date:	**January 21, 2009**
Default Date:	**Not Applicable**
Staff:	**Alexis G. Fedorjaczenko** **Steven W. Lazarus** **Sharon Malinowski**

Project Description: The Waterbury Hospital ("TWH") and Saint Mary's Hospital ("SMH") d/b/a Heart Center of Greater Waterbury ("HCGW") and John Dempsey Hospital ("JDH") (herein referred to as "Applicants") propose to establish permanent primary and elective angioplasty and open-heart surgery programs at SMH and TWH, with no associated capital expenditure.

Nature of Proceedings: On September 15, 2008, the Office of Health Care Access ("OHCA") received the Applicants' Certificate of Need ("CON") application seeking authorization to establish permanent primary and elective angioplasty and open-heart surgery programs at SMH and TWH, with no associated capital expenditure. The Applicants are health care facilities or institutions as defined by Section 19a-630 of the Connecticut General Statutes ("C.G.S.").

Pursuant to Section 19a-638, C.G.S., a public hearing regarding the CON application was held on October 30, 2008. On October 9, 2008, the Applicants were notified of the date, time, and place of the hearing. On October 10, 2008, a notice to the public announcing the hearing was published in the *Republican American*. On November 28, 2008, OHCA informed the Applicants of its intention to reconvene the hearing on December 16, 2008 and on December 10, 2008, OHCA informed the Applicants of the change in date and time of the reconvened hearing from December 16, 2008 to December 18, 2008. On December 18, 2008, OHCA reconvened the hearing, originally convened on October 30, 2008. Commissioner Cristine A. Vogel served as Presiding Officer. The hearing was conducted as a contested case in accordance with the provisions of the Uniform Administrative Procedure Act (Chapter 54 of the Connecticut General Statutes) and Section 19a-638, C.G.S.

OHCA's authority to review and approve, modify or deny the CON application is established by Section 19a-638, C.G.S. The provisions of this section, as well as the principles and guidelines set forth in Section 19a-637, C.G.S., were fully considered by OHCA in its review.

Findings of Fact

Clear Public Need
Impact on the Applicants' Current Utilization Statistics
Proposal's Contribution to Accessibility and Quality of Health Care Delivery in the Region

1) St. Mary's Hospital ("SMH") is an acute care hospital with 347 acute care beds and 32 bassinets located at 56 Franklin Street, Waterbury, Connecticut. *(July 8, 2008, Letter of Intent & St. Mary's Hospital, 2007 Annual Reporting, Schedule 400)*

2) The Waterbury Hospital ("TWH") is an acute care hospital with 357 acute care beds and 36 basinets located at 64 Robbins Street, Waterbury, Connecticut. *(July 8, 2008, Letter of Intent & The Waterbury Hospital, 2007 Annual Reporting, Schedule 400)*

3) John Dempsey Hospital ("JDH") is an acute care hospital with 204 acute care beds and 20 bassinets located at 263 Farmington Avenue, Farmington, Connecticut. On April 29, 1994, JDH was approved under Docket Number 92-581 for the expansion of its cardiac services through addition of angioplasty and open-heart surgery

service. *(Agreed Settlement, April 29, 1994, DN 92-581, Letter of Intent and John Dempsey Hospital, 2007 Annual Reporting, Schedule 400)*

4) On July 23, 2004, under Office of Health Care Access ("OHCA") Agreed Settlement, Docket No: 03-30167-CON, TWH, SMH and JDH, together as Applicants were approved to establish a primary and elective angioplasty[1] ("PCI") and open heart surgery[2] ("OHS") program at TWH and SMH, at a total capital expenditure of $7,181,248. *(July 8, 2008, Agreed Settlement, Docket No.: 03-30167-CON)*

5) Under Agreed Settlement, Docket No.: 03-30167-CON, OHCA and the Applicants agreed to the following:

   a) The CON would be granted for and in effect for an initial period of three (3) years, starting on the date of the performance of the first elective or primary angioplasty procedure or open heart surgical procedure, but in no event later than July 23, 2005, in order to validate that the program can achieve the utilization that has been projected in the CON proposal;

   b) The Applicants must demonstrate that the service is achieving sufficient utilization for each of the three years of the authorized project period at St. Mary's Hospital and The Waterbury Hospital. Sufficient was defined as:

Table 1: Required Minimum Utilization Under Docket No.: 03-31067

PCI	Achieving 200 angioplasty procedures at each site.
OHS	125, 150 and 200 OHS procedures at each site for the first three years, respectively.

(July 8, 2008, Agreed Settlement, Docket No.: 03-30167-CON)

[1] Primary (Emergent) or Elective (Scheduled) Percutaneous Coronary Intervention (PCI) or Coronary Angioplasty (PCA) is an interventional procedure performed in a catheterization laboratory whereby a catheter, usually inserted into an artery in the groin, is threaded through the circulatory system to a previously diagnosed blockage in the heart. An expandable balloon is passed to this spot and inflated several times, thereby flattening the blockage-causing plaque, potentially widening the artery, and thus improving blood flow. National data show that 14-20% of all acute myocardial infarctions or heart attacks are eligible for treatment with primary angioplasty. Primary angioplasty is clinically indicated for patients with ST segment elevation MI (STEMI) or left bundle branch block (LBBB) who need immediate intervention to open an occlusion within 90-120 minutes. Recent studies have shown that primary angioplasty can be performed in hospitals without on-site cardiac surgery because the benefit to using primary angioplasty over thrombolytics or clot busting medications outweighs the risk of having a complication that may then require cardiac surgery. Non-ST Segment elevation MI (NSTEMI or high-risk) patients consist of 80% of all MIs and are considered for angioplasty on an elective basis within 72 hours. Performance of elective angioplasty without cardiac surgery back up is not recommended by the American College of Cardiology or the American Heart Association. (Source: MedicineNet.com, AHA &ACC)

[2] Open-heart surgery is a surgical intervention performed on the opened heart while the bloodstream is diverted through a heart-lung machine. Cardiac Surgery includes Coronary Artery Bypass Graft (CABG), Valvuloplasty, and Valve Replacement. CABG is where a vein from the chest or leg, or a prosthesis, is grafted onto either side of a blockage in the coronary artery. This reroutes blood flow around the blockage to the heart muscle. Valvuloplasty is where a balloon tipped catheter is inserted into plaque-blocked heart valves to widen and separate them through repeated balloon inflation. A Valve Replacement is a replacement of plaque-blocked heart valves with prosthetic or tissue graft. (Source: MedicineNet.com, AHA &ACC)

6) On September 11, 2008, under CON Modification, Docket No.: 03-30167-MD2, OHCA approved the Applicants' request to extend the initial period for the authorized demonstration project from three years to three and one-half years or until January 19, 2009. *(September 11, 2008, OHCA CON Modification, Docket No.: 03-30167-MD2)*

7) Under this CON proposal, TWH, SMH and JDH ("Applicants") propose to establish permanent PCI and OHS at SMH and TWH. The programs will be known as the Heart Center of Greater Waterbury ("HCGW"). *(September 15, 2008, CON Application, pages 2-33)*

8) The proposed cardiac services were designed as one program at the two hospital sites (TWH & SMH) due to its cost effectiveness. SMH and TWH initially invested approximately $7 million and currently the program offers identical catheterization laboratories, operating rooms suites and cardiovascular intensive care unit models. It also has single care-giving teams of cardiologists, interventional cardiologists, cardiothoracic surgeons, cardiac anesthesiologists, perfusionists and registered nurses. *(September 15, 2008, CON Application, page 16)*

9) According to the Applicants, they considered alternatives to the one program at two site model, including models such as primary angioplasty only at two campuses and full service advanced cardiac services jointly managed at one campus. The Applicants identified the one program at both campuses approach as being the most practical and cost effective way to provide advanced cardiac care services to the citizens of greater Waterbury. *(September 15, 2008, CON Application, pages 16-19)*

10) The proposed primary service area ("PSA") and secondary service area ("SSA") are based on the three year historical volume of the HCGW, as illustrated in the following table:

Table 2: Proposed PSA & SSA Towns

TOWN	2005	2006	2007	2008 YTD
	% of Total	*% of Total*	*% of Total*	*% of Total*
Beacon Falls	0.65	.025	1.28	1.31
Bethlehem	1.94	1.64	1.66	2.10

Total Service Area	***94.84***	***95.85***	***96.43***	***94.49***
Other	***5.16***	***4.15***	***3.57***	***5.51***

Note: Applicants Source: CHIME Decision Support Tool
Data includes patient origin of patients admitted to SMH and TWH for the following:
Valve surgeries: DRGs: 105&105,
OHS: DRGs: 106, 547-550, and
Angioplasties: DRGs: 518, 555-558.
Fiscal year 2008 YTD data represents October 2007-March 2008
(September 15, 2008, CON Application, page 34)

11) SMH and TWH currently provide the following cardiac related services:

a) Non-Invasive Cardiology:
   i) EKG testing with extensive database of historic EKG tests,
   ii) Holter monitor testing,
   iii) Echocardiography including Trans Esophageal Echocardiography with extensive database of historic test,
   iv) Stress Testing (treadmill, pharmacologic), and
   v) Cardiology dedicated dual head nuclear cameras.

b) Invasive Cardiology:
   i) Diagnostic Cardiac Catheterizations,
   ii) Single room with Biplane imaging,
   iii) Intra-aortic balloon pump placement,
   iv) Implants Pacemaker, and
   v) Implants Defibrillators.

c) Cardiology Clinics:
   i) Pacemaker Clinic.

d) Cardiac Rehab:
   i) Phase I,
   ii) Phase II, and
   iii) Phase III.

e) Peripheral Vascular:
   i) Interventional and diagnostic procedures,
   ii) Minimally Invasive Abdominal Aneurysm Endovascular procedures,
   iii) CT/MRI angiography,
   iv) Endovascular and traditional open vascular surgery, and
   v) Peripheral angioplasty.

f) Critical Care Units:
   i) Critical care units directed by Board Certified Intensivists,
   ii) Cardiovascular unit-one stop post operative model for interventional cardiology patients,
   iii) Ongoing nursing education in collaboration with Advanced Practice Nurses,
   iv) High percentage of RON and CCRN certification,
   v) Telemetry and hemodynamic units available, and
   vi) 24 hour physician unit, coverage provided by on-site surgical and medical residency program.

g) Emergency Department:
   i) Cardiac care protocols, and
   ii) Cardiac monitors available in treatment rooms.

h) Other:
   i) CT calcium scoring, and
   ii) CT angiography.

i) Advanced Cardiac Services* :
   i) Elective angioplasty,
   ii) Primary angioplasty, and
   iii) Open heart surgery.

   *Approved provisionally under CON Agreed Settlement 03-31067-CON
   (September 15, 2008, CON Application, pages 11-12)

12) The Applicants based the need for the proposal on the three year historical volume of elective and primary angioplasty and OHS, as well as on the quality of the programs over the three years of operation as a demonstration project.
(September 15, 2008, CON Application, page 29)

13) The Applicants provided the three year historical volume by hospital as follows:

Table 3: Historical Utilization

	FY 2005				FY 2006				FY 2007				FY 2008 (YTD)			
	A	B	C	D	A	B	C	D	A	B	C	D	A	B	C	D
TWH	8	59	23	147	50	331	118	632	60	341	120	893	42	241	112	6
SMH	5	58	20	117	49	260	70	485	46	211	108	512	29	186	70	4
HCGW Total	***13***	***117***	***43***	***267***	***99***	***591***	***188***	***1,117***	***106***	***552***	***228***	***1,105***	***71***	***427***	***182***	***1,1***
JDH	-	540	160	561	-	419	123	469	-	356	74	459	-	391	79	4

Note: Cardiac service legend: *A*: Primary Angioplasty, *B*: Elective Angioplasty, *C*: Open Heart Service, and *D*: Cardiac Catheterizations. JDH unable to separate primary and elective angioplasty.
(September 15, 2008, CON Application, page 42 and November 14, 2008, Applicants' Late-File, page 1283)

14) According to the Applicants, the three years of historical advanced cardiac services at HCGW involved the following:

a) Over 2,400 patients have had these services;
b) 1,800 out of 2,400 patients had angioplasty;
c) 300 of the 2,400 patients received primary angioplasty;
d) 88% of patients requiring acute (primary) angioplasty are treated in 90 minutes or less, compared to the American College of Cardiology ("ACC") goal of 75%; and
e) 600 out of the 2,400 patients had OHS.
(September 15, 2008, CON Application, pages 31-32)

15) According to the Applicants, the cardiac services at both hospitals are currently capturing 80% of the market share for angioplasty, 84% of the market share for Coronary Artery Bypass Graft ("CABG") surgery, and 65% market share for heart valve surgery in the proposed PSA. *(September 15, 2008, CON Application, page 80)*

16) According to the Applicants, the following illustrates the actual and projected market share:

Table 4: Projected Market Share by Service

Service	Actual FY 2008	Projected FY 2009	Projected FY 2010	Projected FY 2011
PCI	80.5%	80.5%	80.5%	80.5%
OHS	75.8%	80.5%	80.5%	80.5%
I/P Cath	71.7%	71.7%	71.7%	71.7%
O/P Cath	49.3%	49.3%	49.3%	49.3%

Note: The Applicants project the market share from FY 2008 will remain constant for all services through FY 2011 except for OHS. According to the Applicants, the historical OHS market share has grown 58.6%, 68.3% and 75.8% for FYs 2006-2008, respectively. *(September 15, 2008, CON Application, page 63)*

17) SMH and TWH currently have 17 cardiologists including five (5) interventional cardiologists, four (4) cardiothoracic surgeons and four (4) cardiac anesthesiologists, all of whom actively practice at both hospitals. *(September 15, 2008, CON Application, page 12)*

18) The Applicants noted for the record that the historical individual operator volume for each interventional cardiologist has exceeded the recommended volume of 75 per year. *(September 15, 2008, CON Application, page 29)*

19) According to the Applicants, over the last three years, the number of community based dedicated cardiologists has grown from 14 to 17 and a new practice has opened, Naugatuck Valley Cardiology Associates ("NVCC"). *(September 15, 2008, CON Application, page 100)*

20) According to the Applicants, the number of physicians residing in the Waterbury area has grown and includes the following:
   a) Four (4) interventional cardiologists;
   b) Four (4) cardiothoracic surgeons; and
   c) Four (4) cardiac anesthesiologists.
   (September 15, 2008, CON Application, page 100)

21) According to the Applicants, JDH has been an active and formal participant in administrative, clinical and quality activities for HCGW sine July 2004. After the initial assistance and guidance in the development of the advanced cardiac program including input on protocols, staff training and equipment purchases, the relationship with JDH has evolved into a collegial partnership of shared learning. JDH continues to act in an advisory capacity in all aspects of the advanced cardiac program. In 2007 and 2008, the agreements between the SMH, TWH and JDH were formally renewed. *(September 15, 2008, CON Application, page 102)*

22) JDH's role is described as follows:

- JDH provides cardiothoracic surgical services and perfusion services via contract;
- JDH's director of cardiology is a member of HCGW Advisory Board, and as such has been involved in review and discussion of quality data.
- JDH participates in joint clinical case discussions held monthly at one of the partner hospitals;
- JDH's chief of cardiothoracic surgery is also the chief of cardiothoracic surgery for HCGW;
- The chief and his team review the HCGW program data, clinical processes and overall areas of improvement;
- The JDH and HCGW chief of perfusion also practices in these quality review committees; and
- JDH personnel continue to provide guidance to the HCGW as it relates to new technology (i.e. Robotics), equipment (i.e. new balloon pump), supplies and possible purchases related to these technologies.
  (September 15, 2008, CON Application, pages 102-103)

23) The Applicants are projecting the following utilization for each hospital by cardiac service:

Table 5: Projected Utilization

	FY 2009			FY 2010			FY 2011		
	A	**B**	**C**	**A**	**B**	**C**	**A**	**B**	**C**
TWH	327	134	624	316	129	638	316	129	638
SMH	240	81	472	232	78	481	232	78	481
HCGW *Total*	567	215	1,097	548	207	1,119	548	207	1,119

Note: Cardiac service legend: *A*: Total Angioplasties, B: Open Heart Service, and C: Cardiac Catheterizations. The Applicants based the projected volumes on the historical volumes at each hospital.
(September 15, 2008, CON Application, pages 62-63)

24) According to the ACC/AHA guidelines, monitoring should occur for hospitals or individuals performing less that 100 cases per year.
(American College of Cardiology [www.acc.org], September 15, 2008, CON Application, page 29)

25) The following table provides the number of patients that were treated monthly at each hospital for cardiac services, from October 2007 to September 2008.

Table 6: Cardiac Patients per Month for the period October 2007 to September 2008

	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Total
TWH													
OHS	4	14	9	14	10	11	14	10	16	10	9	17	**138**
Angioplasty	34	29	26	39	27	28	20	21	30	29	30	33	**346**
Cardiac Cath	58	57	43	54	46	46	49	52	50	57	48	71	**631**
SMH													
OHS	10	4	6	6	6	6	5	6	12	9	7	7	**84**
Angioplasty	24	27	15	16	21	31	22	22	20	17	28	15	**258**
Cardiac Cath	52	31	25	34	38	40	39	44	53	42	37	45	**480**

(October 24, 2008, Interrogatories, page 1240)

26) Out of the 357 licensed beds at TWH and 347 licensed beds at SMH, the following table provides the beds available by major service line.

Table 7: Beds by Major Service Line

	Physical Beds	Net Clinically available Beds *	Budgeted Staffed Beds **	Maximum staffed Beds ***
TWH				
ICU	20	20	16	20
CVU	8	8	6	8
Telemetry	20	20	18	20
Med-Surg	119	114	114	119
Total	**167**	**162**	**154**	**167**
SMH				
ICU	16	15.5	12	16
CVU	8	8	4	8
Telemetry	20	20	19	20
Med-Surg	103	100	97	103
Total	**147**	**143.5**	**132**	**147**

** Net Clinically Available Beds: Due to the lack of private room availability, semi-private rooms are converted to private rooms routinely to accommodate isolation patient needs. This number reflects average impact; the range can be as high as 10 beds closed due to private room isolation needs.*
*** Budgeted Staffed Beds: Each Hospital budgets for a number of beds to staff.*
**** Maximum staffed beds: If the census requires, and the private room availability allows, staffing is provided for this maximum number of beds.*
(October 24, 2008, Interrogatories, page 1233)

27) The average occupancy rate for each unit is presented in the table below. The Applicants stated that this average does not reflect fluctuations in the census and provided data to show that the SMH CVU was at maximum capacity 1 day in FY 2008, at near-maximum capacity (6-7 patients) 39 days in FY 2008, and that TWH CVU was at maximum capacity 41 days in FY 2008.

Table 8: Average Occupancy Rate by Unit

	Occupancy FY 2006	Occupancy FY 2007	Occupancy FY 2008
TWH			
ICU	75%	75%	85%
CVU	63%	63%	63%
Telemetry	90%	90%	90%
Med-Surg	95%	90%	90%
Total	**87%**	**84%**	**86%**
SMH			
ICU	80%	81%	74%
CVU	40%	51%	43%
Telemetry	84%	85%	86%
Med-Surg	93%	94%	87%
Total	**88%**	**89%**	**84%**

(October 24, 2008, Interrogatories, pages 1233-1239)

28) The following tables provide the number and percentage of cardiac-related emergency department visits broken down by method of arrival and by hospital.

Table 9: Emergency Department Cardiac Related Population (By Number & Percentage)

	FY 2006		FY 2007		FY 2008	
	TWH	**SMH**	**TWH**	**SMH**	**TWH**	**SMH**
Personal Transport	3,682	4,874	3,938	5,372	3,703	5,278
Ambulance Transport	2,916	2,028	2,974	1,752	2,796	1,647
Helicopter	0	1	0	0	0	2
Police	0	35	0	37	0	23
Unknown	437	41	445	205	419	258
Cardiac-Related Emergency Department Visits	**7,215**	**6,984**	**7,357**	**7,366**	**6,918**	**7,208**

	FY 2006		FY 2007		FY 2008	
	TWH	**SMH**	**TWH**	**SMH**	**TWH**	**SMH**
Personal Transport	51%	70%	0%	73%	54%	73%

Helicopter	0%	0%	0%	0%	0%	0%
Police	0%	1%	0%	1%	0%	0%
Unknown	6%	1%	6%	3%	6%	4%
Cardiac-Related Emergency Department Visits	**100%**	**100%**	**100%**	**100%**	**100%**	**100%**

(October 24, 2008, Interrogatories, page 1229)

29) The HCGW physician team is made up of 4 cardiothoracic surgeons, 3 surgical physician assistants, 4 cardiothoracic anesthesiologists, 5 interventional cardiologists, and 12 cardiologists. The entire team has privileges and practices at both TWH and SMH. *(October 24, 2008, Interrogatories, page 1231)*

30) The HCGW perfusion team is made up of 4 perfusionists. The entire team has privileges and practices at both TWH and SMH. *(October 24, 2008, Interrogatories, page 1231)*

31) The HCGW team of 5 registered nurses ("RNs") provides perioperative and intraoperative support to the cardiac anesthesiologist in the cardiovascular operating room. All of these RNs work at each campus based on the operating room schedule and the needs of the patient. *(October 24, 2008, Interrogatories, page 1231)*

32) The physician, perfusion, and nurse teams have on-call schedules that cover at each hospital regardless of which campus care needs to be provided. *(October 24, 2008, Interrogatories, page 1231)*

33) TWH and SMH each have a dedicated 8-bed intensive care Cardiovascular Unit ("CVU") used to provide inpatient care to post cardiac procedure patients receiving advanced cardiac services (angioplasty and open heart surgery). Each CVU is in space that was newly renovated when the program commenced in July 2005. *(October 24, 2008, Interrogatories, page 1225)*

34) Stephen Widman, M.D., director of interventional cardiology at the HCGW, testified that both catheterization laboratories are identically equipped and staffed, and that the post angioplasty recovery areas are identical. *(October 24, 2008, Pre-File Testimony, page 1185)*

35) The Applicants provided the following information regarding the cardiac operating room usage at TWH and SMH.

Table 10: Cardiac Operating Room Usage

	FY 2005	FY 2006	FY 2007	FY 2008
Simultaneous Use (1)	--	0	3	8
Two or more per day (2)	7	9	38	33

(1)Simultaneous Use refers to both operating rooms being used at the same time;
(2) Two or more per day reflects days that two or more individuals received open heart surgery between both campuses.
Note: 88% of the multiple surgeries were for urgently or emergently providing open heart surgery, rather than for elective surgery.
(October 24, 2008, Interrogatories, page 1228)

36) Dr. Widman testified that the program's mortality and procedural complications match or exceed the ACC standards in all areas, despite intervening on an older more urgent patient population and higher risk lesion subset. *(October 24, 2008, Pre-File Testimony, page 1184)*

37) Henry Borkowski, M.D., Medical Director of the HCGW, testified to the following with regard to the program's quality:

- The angiographic success is at or above the ACC mean of 99.3%;
- The risk adjusted mortality is lower than the ACC mean of 1.23%, ranging from 0.67% to 1.05%;

- The Door to Balloon time (time from arrival at the hospital to PCI) is at an average of 67 minutes, superior to the average of 2.5 to 4 hours+ hours that existed prior to July 2005; and
- Approximately 88% of patients arriving at SMH or TWH EDs are being treated with emergency angioplasty in less than 90 minutes, significantly better than the national target of 75% and the ACC mean of 72%.
  (October 24, 2008, Pre-File Testimony, pages 1180-1181, "Door-to-Balloon" definition source: Circulation (American Heart Association). 2006; 113:1079-1085.*)*

38) Dr. Widman testified that the HCGW's four interventional cardiologists each average approximately 150 cases per year; far exceeding the ACC recommended 75 cases per year. *(October 24, 2008, Pre-File Testimony, page 1184)*

39) David Underhill M.D., board certified cardiothoracic surgeon, testified that:

- Both Hospitals conformed to the Society of Thoracic Surgeons ("STS") standards in all categories assessed, and fell within the group of hospitals in the United States (77%) that are considered "equal" in performance and outcomes in their open heart surgical results;
- The actual mortality rate was far lower than the expected based on EuroSCORE rating; and
- Based on a comparison to the State of New York Adult Surgery Report published by the New York State Department of Health, outcomes are comparable to several of the higher and the lower volume programs in this neighboring state.
  (October 24, 2008, Pre-File Testimony, pages 1191-1196)

40) Dr. Underhill testified that each surgeon is considered to be a "high volume practitioner" and provided summaries of recent studies that suggest the importance of surgeon - procedure volume. *(October 24, 2008, Pre-File Testimony, page 1201)*

41) Chad Wable, CEO and President of SMH testified that the HCGW was established based on need, however, the way the cardiac program has been structured there have been cost savings as a result of the one program, two campus approach, which are made up of three parts:

i) Clinical: There is one perfusion team, one medical director, one anesthesia contract, one surgical chief and one chief of interventional laboratory, leading to approximately $1 million in annual savings.
ii) Administrative: There is one database, instead of two databases and two information technology support structures at two individual hospitals. Also, cost savings in the support infrastructure, which has lead to approximately $300,000 in annual savings.
iii) Any changes to the structure of the existing cardiac program, i.e., moving to a full service advanced cardiac program jointly managed at one campus, would lead to the following:

(a) Extensive renovations to an emergency department to accommodate the additional patient volume, which would cost several million dollars,
(b) Another cardiac catheterization laboratory at one of the hospitals would cost an additional $2-3 million,
(c) Another cardiovascular operating room at one of the hospitals, which would cost approximately, $2-3 million,
(d) There would be other administrative support required, leading the total cost to be upwards of $10-$20 million.
(December 18, 2008, Hearing Testimony of Mr. Chad Wable, President and CEO of Saint Mary's Hospital)

42) John Tobin, President and CEO of TWH testified to the following:

a) Any changes in the existing structure of the existing cardiac program may also involve costs related to duplication of services but the biggest savings is in the quality of care and accessibility, and
b) SMH and TWH are required to file cardiac related data to ACC and STS individually but can also file it collectively.
(December 18, 2008, Hearing Testimony of Mr. John Tobin, President and CEO of The Waterbury Hospital)

43) Chad Wable testified to the following regarding the quality of HCGW:

a) The existing cardiac program (HCGW) has an advisory board that monitors quality of the program;
b) The Applicants submit data to STS and ACC, which is utilized as a tool to monitor quality,
c) The Applicants are also reviewed by Connecticut's Department of Public Health and also by the Commission on the Accreditation of Healthcare Organizations and Connecticut Medical Society, and
d) The Applicants contend that the internal program (self) monitoring through the physicians should continue.
(December 18, 2008, Hearing Testimony of Mr. Chad Wable, President & CEO of Saint Mary's Hospital)

Financial Feasibility of the Proposal and its Impact on the Applicants' Rates and Financial Condition
Impact of the Proposal on the Interests of Consumers of Health Care Services and Payers for Such Services
Consideration of Other Section 19a-637, C.G.S. Principles and Guidelines

44) The Waterbury Hospital's originally projected three-year incremental revenue from operations, total operating expense and losses/gains from operations associated with the implementation of the new unit are presented in the table below:

Table 11: Waterbury Hospital's Original Incremental Financial Projections

Description	FY 2009	FY 2010	FY 2011
Incremental Revenue from Operations	$11,318,005	$11,346,526	$11,800,387
Incremental Total Operating Expense	$9,023,156	$9,049,510	$9,411,490
Incremental Gain from Operations	**$2,292,850**	**$2,297,016**	**$2,388,897**

(September 15, 2008, Certificate of Need, page 1146)

45) The Waterbury Hospital's revised projected three-year incremental revenue from operations, total operating expense and losses/gains from operations associated with the implementation of the new unit are presented in the table below:

Table 12: Waterbury Hospital's Revised Incremental Financial Projections

Description	FY 2009	FY 2010	FY 2011
Incremental Revenue from Operations	$11,546,632	$11,579,673	$12,042,860
Incremental Total Operating Expense	$5,684,232	$5,882,323	$6,058,793
Incremental Gain from Operations	**$5,684,232**	**$5,697,350**	**$5,984,067**

(November 14, 2008, Applicant's late file, page 1287)

46) Saint Mary's Hospital's originally projected three-year incremental revenue from operations, total operating expense and losses/gains from operations associated with the implementation of the new unit are presented in the table below:

Table 13: Saint Mary's Hospital's Original Incremental Financial Projections

Description	FY 2009	FY 2010	FY 2011
Incremental Revenue from Operations	$7,462,000	$7,520,000	$7,820,000
Incremental Total Operating Expense	$6,089,000	$6,156,000	$6,405,000
Incremental Gain from Operations	**$1,373,000**	**$1,364,000**	**$1,415,000**

(September 15, 2008, Certificate of Need, page 1150)

47) Saint Mary's Hospital's revised projected three-year incremental revenue from operations, total operating expense and losses/gains from operations associated with the implementation of the new unit are presented in the table below:

Table 14: Saint Mary's Hospital's Revised Incremental Financial Projections Project

Description	FY 2009	FY 2010	FY 2011
Incremental Revenue from Operations	$7,462,000	$7,520,000	$7,820,000
Incremental Total Operating Expense	$5,092,000	$5,183,000	$5,339,000
Incremental Gain from Operations	**$2,370,000**	**$2,337,000**	**$2,481,000**

(November 14, 2008 Applicant's late file, page 1294)

48) The following chart presents the original incremental FTEs for the proposed program:

Table 15: Original additional Incremental FTEs

Description	FY 2009	FY 2010	FY 2011
Waterbury Hospital	41.8	41.9	43.6
Saint Mary's Hospital	16	16	16
Total Incremental FTEs	**57.8**	**57.9**	**59.6**

(September 15, 2008, Certificate of Need, pages 1146 and 1150)

49) The following chart presents the revised incremental FTEs for the proposed programs:

Table 16: Revised additional Incremental FTEs

Description	FY 2009	FY 2010	FY 2011
Waterbury Hospital	23.8	23.0	23.0
Saint Mary's Hospital	20.3	20.3	20.3
Total Incremental FTEs	**44.1**	**43.3**	**43.3**

(November 14, 2008 Applicant's late file, pages 1289 and 1296)

50) The Waterbury Hospital's payer mix with the CON proposal is as follows:

Table 17: Three-Year Projected Payer Mix with the CON Proposal

Total TWH	**Current Payer Mix**	**FY 2009 Payer Mix**	**FY 2010 Payer Mix**	**FY 2011 Payer Mix**
Medicare	40.7%	40.7%	40.7%	40.7%
Medicaid (including other medical assistance)	21.3%	21.3%	21.3%	21.3%
TRICARE	.2%	.2%	.2%	.2%
Total Government	**62.2%**	**62.2%**	**62.2%**	**62.2%**
Commercial Insurers	33.1%	33.1%	33.1%	33.1%
Self Pay	2.5%	2.5%	2.5%	2.5%
Workers Compensation	2.2%	2.2%	2.2%	2.2%

(September 15, 2008, Initial CON Application, page 105)

52) Bob Halko, CFO of SMH testified to the following:

a) For FY 2008, Saint Mary's Health System had a $4.3 million gain of which $3.5 million was a grant from the State's hardship fund. Without this grant the gain would only have been approximately $800,000;
b) For FY 2007, Saint Mary's Health System had a $6.1 million gain of which $5.5 million was a grant from the State's hardship fund. Without this grant the gain would only have been approximately $600,000;
c) For FY 2009, Saint Mary's Health System is projected to have a gain from operations of $175,000 and revenue in excess of expenses of $2.3 to $2.4 million. This takes into consideration changes such as Connecticut Children's Medical Center's pediatric department at SMH and associated renovations;
d) Pension funding for FY 2008 was approximately $3 million and for FY 2009 will be $5 million. The $5 million funding for FY 2009 was mandated; and
e) As of September 30, 2008, the unfunded portion of the pension plan was approximately $60 million.

(December 18, 2008, Hearing Testimony of Mr. Bob Halko, CFO of Saint Mary's Hospital)

53) Colleen Scott, CFO of TWH testified that for FY 2008, Waterbury Hospital had a loss of $9 million and the Health System had a total loss of $17 million.

(December 18, 2008, Hearing Testimony of Ms. Colleen Scott, CFO of Waterbury Hospital)

Rationale

The Office of Health Care Access ("OHCA") approaches community and regional need for Certificate of Need ("CON") proposals on a case by case basis. CON applications do not lend themselves to general applicability due to a variety of factors, which may affect any given proposal; e.g. the characteristics of the population to be served, the nature of the existing services, the specific types of services proposed to be offered, the current utilization of services and the financial feasibility of the proposal.

Saint Mary's Hospital ("SMH") is an acute care hospital located at 56 Franklin Street, Waterbury. The Waterbury Hospital ("TWH") is an acute care hospital located at 64 Robbins Street, Waterbury. John Dempsey Hospital ("JDH") is an acute care hospital located at 263 Farmington Avenue, Farmington. SMH, TWH, and JDH currently operate a primary and elective angioplasty ("PCI") and open heart surgery ("OHS") program at TWH and SMH as a demonstration project. Under this CON proposal, TWH, SMH and JDH (together, "Applicants") propose to establish permanent PCI and OHS programs at SMH and TWH.

The proposed cardiac services currently operate at two hospital sites, TWH and SMH. The cardiac services located at each hospital include catheterizations laboratories, operating rooms suites, and cardiovascular intensive care unit models that are identically equipped and staffed, along with single care-giving teams of cardiologists, interventional cardiologists, cardiothoracic surgeons, cardiac anesthesiologists, perfusionists and registered nurses which all have privileges and practice at both TWH and SMH. The on-call schedules of the care giving teams cover the program regardless of which campus may need care to be provided.

The Applicants provided facts to support their assertion that the OHS and PCI services cannot be accommodated solely at one location without significant renovations or construction of new space. OHCA has reviewed the financial situation at both organizations and concludes that neither hospital has the financial ability nor the access to capital that would be required to renovate and accommodate the entire service.

This CON proposal was presented to OHCA as one program; however, OHCA concludes that apart from the single clinical team model and the management of the services, the hospitals remain independent from each other in all other aspects. The Applicants did provide evidence that utilizing a single clinical team is cost-effective in a "two-hospital" scenario. Both SMH and TWH stated that having the capability to offer such services independently at each hospital does provide a financial gain.

There may be a point in time where the duplication of clinical space at each facility becomes less cost-effective especially if procedure volume remains steady or declines. Intuitively, having one appropriately-sized cardiac program at one location would appear to be most cost-effective and deliver the ideal continuity of care. It is reasonable to assume that the community would learn which facility offers inpatient cardiac services,

much like the hospitals' assertion with inpatient pediatric services being located at only one of the hospitals.

The Applicants testified at the hearing that the probability of a merger between the SMH and TWH is less likely now than in the recent past, especially in light of the current economic downturn. The reduced likelihood of the merger puts the long-term financial viability of the inpatient cardiac services in question. Given the fact that the two hospitals have come forward as co-applicants, and given the facilities' space constraints and financial circumstances, it is not reasonable for OHCA to separate the hospitals and modify the proposal to only one location. OHCA appreciates the efforts of collaboration; however, it remains concerned with the redundancy that results from providing all of the advanced cardiac services at both hospitals. The agency will continue to monitor the ongoing financial benefit of this proposal in light of OHCA's view that the long term financial viability of these programs would be enhanced if this were one legal partnership in all aspects, not just the clinical teams and management of the programs (as in the case of the Harold Lever Cancer Center).

OHCA does not consider this one program, as it involves two hospital organizations that operate independently of and competitively with each other. Since OHCA views these as two independent inpatient cardiac programs, OHCA will remain consistent with the data reporting requirements stipulated in the "demonstration project" which was the precursor to this application. OHCA recognizes that the evidence to date indicates that SMH and TWH are operating quality programs. This conclusion is a factor in deciding whether to approve this proposal. OHCA remains concerned, however, that utilization will remain low at SMH and TWH and that strict monitoring of these low-volume providers must continue. Professional cardiac associations suggest that cardiac programs with low utilization be monitored closely.

In conclusion, the Applicants presented evidence that supports the benefits of continuing the inpatient cardiac services as it currently exists. The procedure volumes and operational issues for both TWH and SMH, will remain under OHCA's close monitoring.

Order

NOW, THEREFORE, the Office of Health Care Access ("OHCA") and The Waterbury Hospital ("TWH") and Saint Mary's Hospital ("SMH") and John Dempsey Hospital ("JDH") (together referred to as "Applicants") hereby stipulate and agree to the terms of settlement with respect to the establishment of permanent primary and elective angioplasty and open-heart surgery programs at St. Mary's Hospital and at The Waterbury Hospital, with no associated capital expenditure, as follows:

1. The Applicants' request for a CON to establish permanent primary and elective angioplasty and open-heart surgery programs to be located at SMH and at TWH, with no associated capital expenditure, is hereby approved.

2. The scope of this CON authorization is being approved as was specifically presented in the Applicants' proposal, which consists of two full-service inpatient cardiac programs, one at SMH and one at TWH, but both served by the same clinical team. The Applicants agree that this CON authorization will become invalid and therefore null and void, if either of the following occurs in the future:

   (a) Any change to the structure of the single clinical team model serving both SMH and TWH (not including individual personnel changes), as highlighted in Finding of Facts numbers 17,29,30&31; or
   (b) Any changes in the ownership or control of one or both of the legal entities, SMH and TWH.

3. There is no associated capital expenditure approved. In the event that the Applicants learn of potential significant capital costs associated with start of operations of this program, the Applicants shall notify OHCA in a timely manner.

4. The Applicants agree that SMH and TWH are each required to file with OHCA, an annual utilization report containing specific data and/or information related to their separate full-service cardiac programs in a format to be defined by OHCA subsequent to the execution of this agreement. OHCA will provide the Applicants with the specific format for the annual filing within ninety days of the authorization date of this agreement. OHCA will also set forth the filing schedule related to the annual utilization reporting at that time. It is acceptable to OHCA that the legal entity, Heart Center of Greater Waterbury, Inc. coordinate such annual filings and directly submit the filings to OHCA on behalf of SMH and TWH.

5. The Applicants agree that it is the intent of SMH and TWH to participate in the American College of Cardiology National Cardiovascular Database Registry (ACC-NCDR). SMH and TWH are required to comply with the ACC/AHA criteria and standards. If SMH or TWH determines not to participate in the ACC-NCDR, the Applicants shall notify OHCA in a timely manner regarding such

decision not to participate and shall continue to comply with the ACC/AHA criteria and standards. Further, the Applicants agree that, if SMH and TWH do participate in ACC-NCDR, SMH and TWH are required to submit to OHCA any and all Executive Summary pages from the Institutional Outcomes Reports received by SMH or TWH from ACC-NCDR, such Executive Summary containing the PCI Quality Measures, PCI Utilization Measures, and Diagnostic Cath Quality Measures. All Executive Summaries received by SMH or TWH during the year, will be due to OHCA at the same time as the annual report specified and agreed upon in Stipulation #4 above. Further, SMH and TWH shall supply to OHCA the detail reports from ACC-NCDR to SMH and TWH only if OHCA specifically requests such detailed reporting. It is acceptable to OHCA that the legal entity, Heart Center of Greater Waterbury, Inc. coordinate such annual filings and directly submit the filings to OHCA on behalf of SMH and TWH.

6. The Applicants agree that it is the intent of SMH and TWH to participate in the Society of Thoracic Surgeons Database (STS-DB) database. If SMH or TWH determines not to participate in the STS-DB, the Applicants shall notify OHCA in a timely manner regarding such decision not to participate. Further, the Applicants agree that, if SMH and TWH do participate in STS-DB, SMH and TWH are required to submit to OHCA any and all Regional Outcomes Comparisons received by SMH or TWH from STS-DB, such Comparison Reports showing each Applicant hospital as compared to the Region. All Regional Outcomes Comparisons received by SMH or TWH during the year, will be due to OHCA at the same time as the annual report specified and agreed upon in Stipulation #4 above. Further, SMH and TWH shall supply to OHCA the detail reports from STS-DB to SMH and TWH, only if OHCA specifically requests such detailed reporting. It is acceptable to OHCA that the legal entity, Heart Center of Greater Waterbury, Inc. coordinate such annual filings and directly submit the filings to OHCA on behalf of SMH and TWH.

7. The Applicants each agree to attend meetings with OHCA on a semi-annual basis for the purposes of discussion on quality monitoring, clinical team structure, and overall organization structure for the programs and for SMH and TWH. Such meetings must include at least one member of executive management of the three Applicant hospitals. The number of meetings to be held will be at the discretion of OHCA and OHCA may discontinue the meetings in the future after written notification to the Applicant hospitals, without modification to this Order.

8. OHCA and SMH, TWH, and JDH agree that this Agreed Settlement represents a final agreement between OHCA and SMH and TWH, d/b/a Heart Center of Greater Waterbury and John Dempsey Hospital with respect to this request. The signing of this Agreed Settlement resolves all objections, claims and disputes, which may have been raised by the Applicants with regard to Docket Number 08-31202-CON.

9. This Agreed Settlement is an order of the Office of Health Care Access with all the rights and obligations attendant thereto, and the Office of Health Care Access may enforce this Agreed Settlement pursuant to the provisions of Sections 19a-642 and 19a-653 of the Connecticut General Statutes at the Applicants' expense, if the Applicants fail to comply with its terms.

Re: Heart Center of Greater Waterbury

Dear Commissioner Vogel:

Kudos on the article in today's Waterbury Republican regarding the okay of the draft for the Heart Center of Greater Waterbury.

As I mentioned before, without this crucial cardiac program, people's lives will surely be lost, and personally, I believe that every heart matters.

I will continue to have strong support for the continuation of these services on a permanent basis.

Very truly yours,

Tom Gormley
First Selectman

RE: **Docket Number 08-31202-CON**; The establishment of permanent angioplasty and open-heart surgery programs located at SMH and TWH

Dear Ms. Shea:

On January 21, 2009, The Waterbury Hospital ("TWH"), Saint Mary's Hospital ("SMH") and John Dempsey Hospital ("JDH") (together referred to as "Applicants") and the Office of Health Care Access ("OHCA") entered into an Agreed Settlement wherein OHCA granted a Certificate of Need ("CON") for the establishment of permanent primary and elective angioplasty and open-heart surgery programs at St. Mary's Hospital and at The Waterbury Hospital.

Stipulation #4 of the Agreed Settlement states the following:

"4. *The Applicants agree that SMH and TWH are each required to file with OHCA, an annual utilization report containing specific data and/or information related to their separate full-service cardiac programs in a format to be defined by OHCA subsequent to the execution of this agreement. OHCA will provide the Applicants with the specific format for the annual filing within ninety days of the authorization date of this agreement. OHCA will also set forth the filing schedule related to the annual utilization reporting at that time. It is acceptable to OHCA that the legal entity, Heart Center of Greater Waterbury, Inc. coordinate such annual filings and directly submit the filings to OHCA on behalf of SMH and TWH.*"

At this time, OHCA is providing the Applicants with greater detail regarding the annual utilization reporting required pursuant to Stipulation #4. It is being sent to you because Health Center of Greater Waterbury, Inc. is the coordinating entity for the reporting submissions for the Applicant hospitals' cardiac programs.

Within one month subsequent to the end of the full operational year (July 18th to July 17th[1]), The Waterbury Hospital and Saint Mary's Hospital will submit to OHCA its separate PCI and Open Heart Surgery volume by procedure code and by date of procedure, using the following table format as an example:

[1] Operational year is based on the original commencement of the cardiac programs at the two hospitals.

Waterbury Hospital PCI Volume	Procedure Code X*	Procedure Code Y	Procedure Code Z
Operational Day 1**			
Operational Day 2			
Operational Day 365			
Operational Year Total			

*When filing the table with OHCA, the Hospital should identify each specific procedure code(s)
**When filing the table with OHCA, the Hospital should list specific dates (i.e., Operational Day 3 should be listed as the actual date in the final table)

Waterbury Hospital Open Heart Surgery Volume	Procedure Code X	Procedure Code Y	Procedure Code Z
Operational Day 1			
Operational Day 2			
Operational Day 365			
Operational Year Total			

Saint Mary's Hospital PCI Volume	Procedure Code X	Procedure Code Y	Procedure Code Z
Operational Day 1			
Operational Day 2			
Operational Day 365			
Operational Year Total			

Saint Mary's Hospital Open Heart Surgery volume	Procedure Code X	Procedure Code Y	Procedure Code Z
Operational Day 1			
Operational Day 2			
Operational Day 365			
Operational Year Total			

The required information should not include any patient record level data or any patient identifying information. If you have any questions regarding the above, please contact Karen Roberts, Compliance Officer at OHCA at (860) 418-7041.

Sincerely,

Cristine A. Vogel
Commissioner

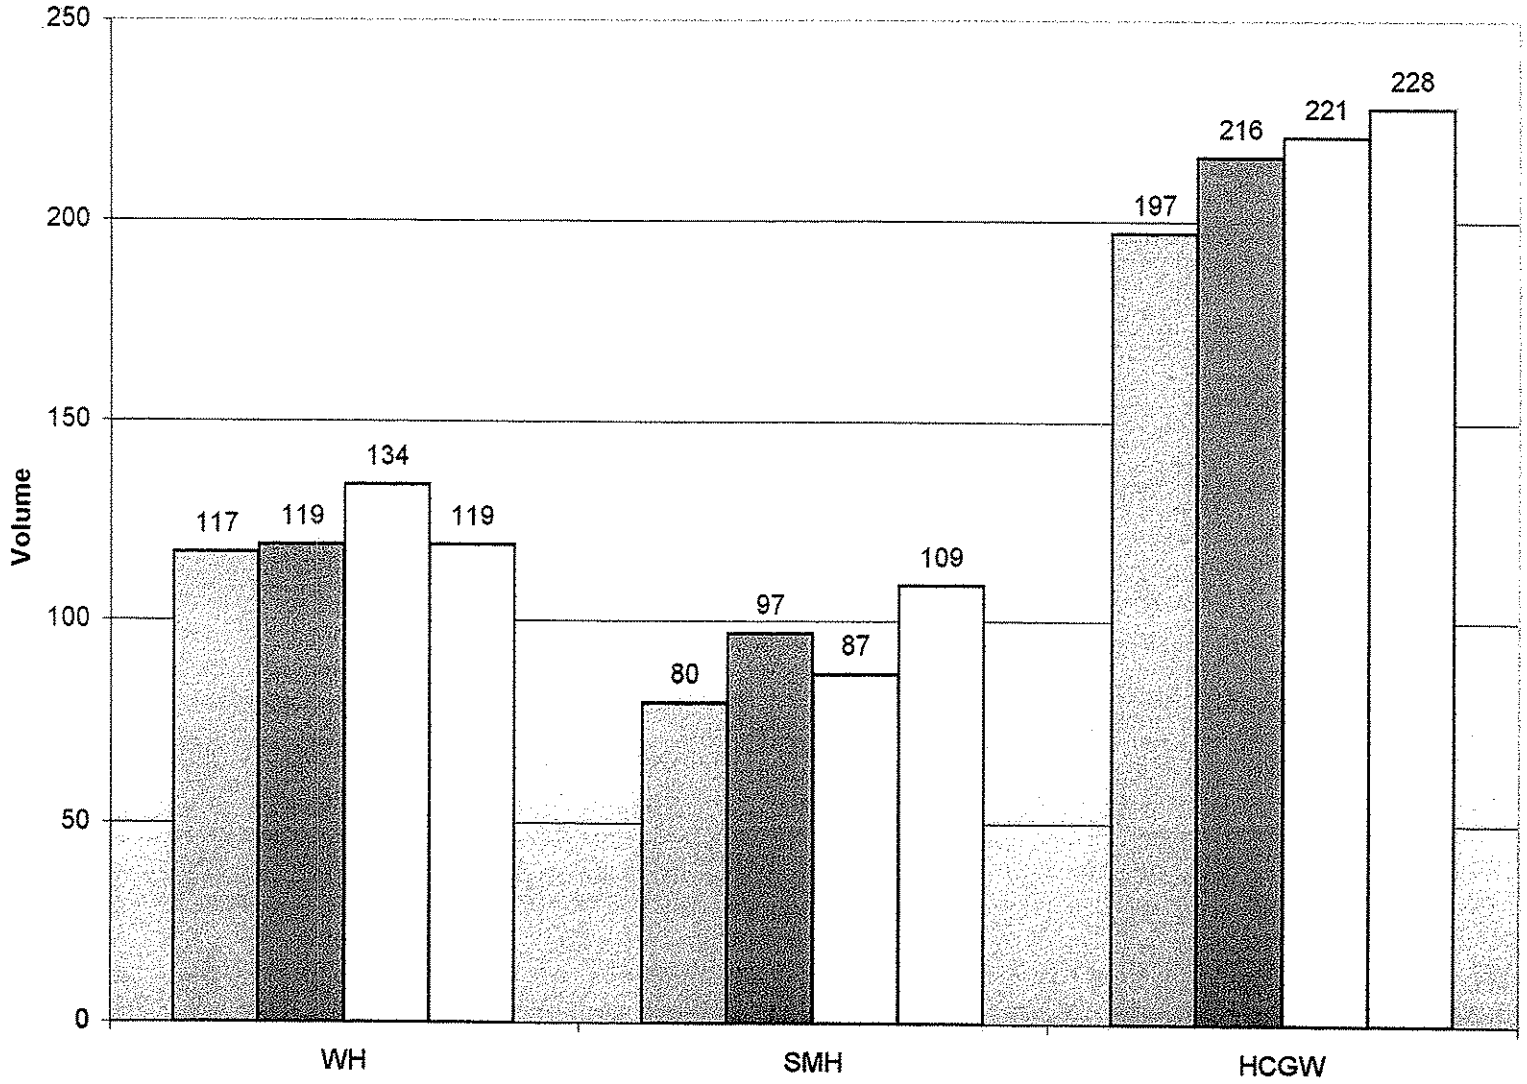
Meeting regarding Certificate of Need authorized under Docket Number 08-31202-CON
Waterbury Hospital, St. Mary's Hospital and John Dempsey Hospital

Meeting #1 on Friday, August 7, 2009 commencing at 8:00 AM

Present are as follows:



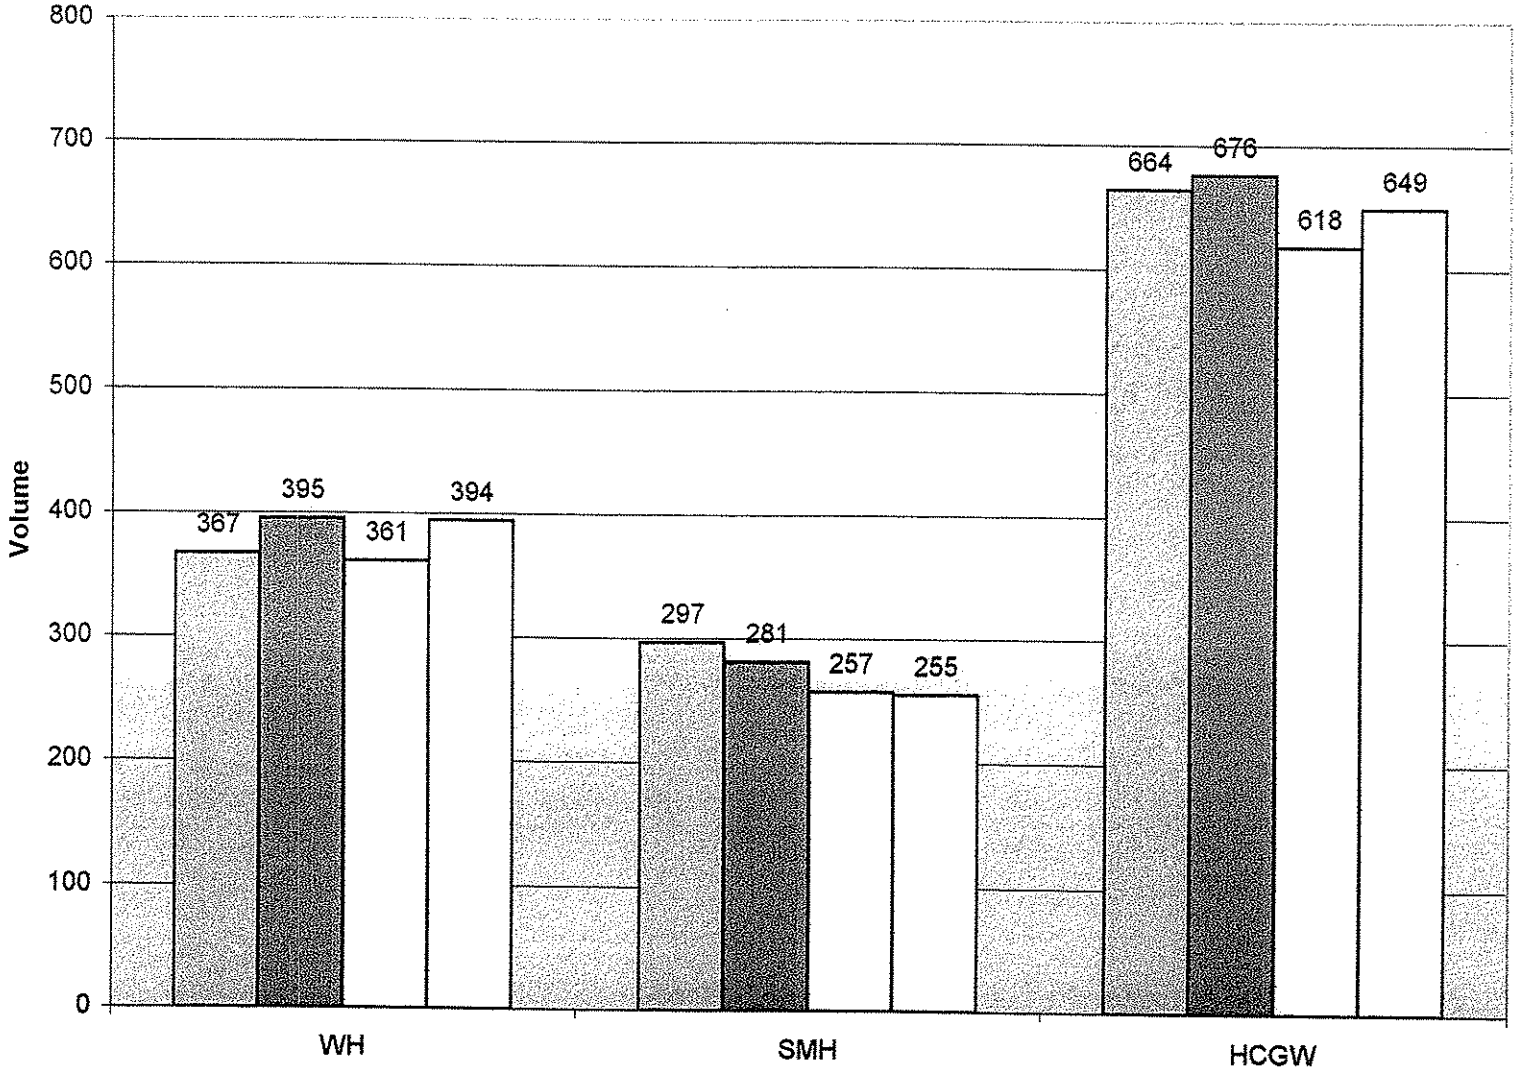
From the Applicant Hospitals

Print Name	Print Title	Print Affiliatiom
CHAD W. WASIE	CEO	SAINT MARY'S HOSPITAL
JOHN H. TOBIN	PRESIDENT/CSO	WATERBURY HOSPITAL
Lorraine Shea	Executive Director	Heart Center of Gtr Wtby
Carlo T Lavenia MD	VP Health Affairs/Dean	Univ. Connecticut

From the Office of Health Care Access

Print Name	Print Title	Print Affiliatiom
Kim Martone	Director of operations	OHCA
KAREN ROBERTS	Compliance Officer	OHCA
Carolyn Treiss	Chief of Staff	OHCA
Cristine Vogel	Commissioner	OHCA

OHS Comparison YR 1,2,3,4



As a Program OHS volumes continue to increase with a 16% increase from YR1 to YR4.

SMH has demonstrated an increase of 36% from YR1 to YR4 and a 25% increase from YR3 to YR4.

WH demonstrated a decrease of 11% from YR3 to YR4 with volumes staying relatively flat from YR1 to YR4.

PCI Comparison YR 1,2,3,4

As a Program the volumes have increased 5% from YR3 to YR4 demonstrating a 2% decrease from YR1.

PCI volumes for SMH have remained virtually the same time from YR3 to YR4 and have demonstrated a 14% decrease from YR1 to YR4 despite a 7% increase in diagnostic caths from YR1 to YR4.

PCI volumes for WH have fluctuated each year with an increase from YR 1 to YR4 of 7%.

HEART CENTER of Greater Waterbury

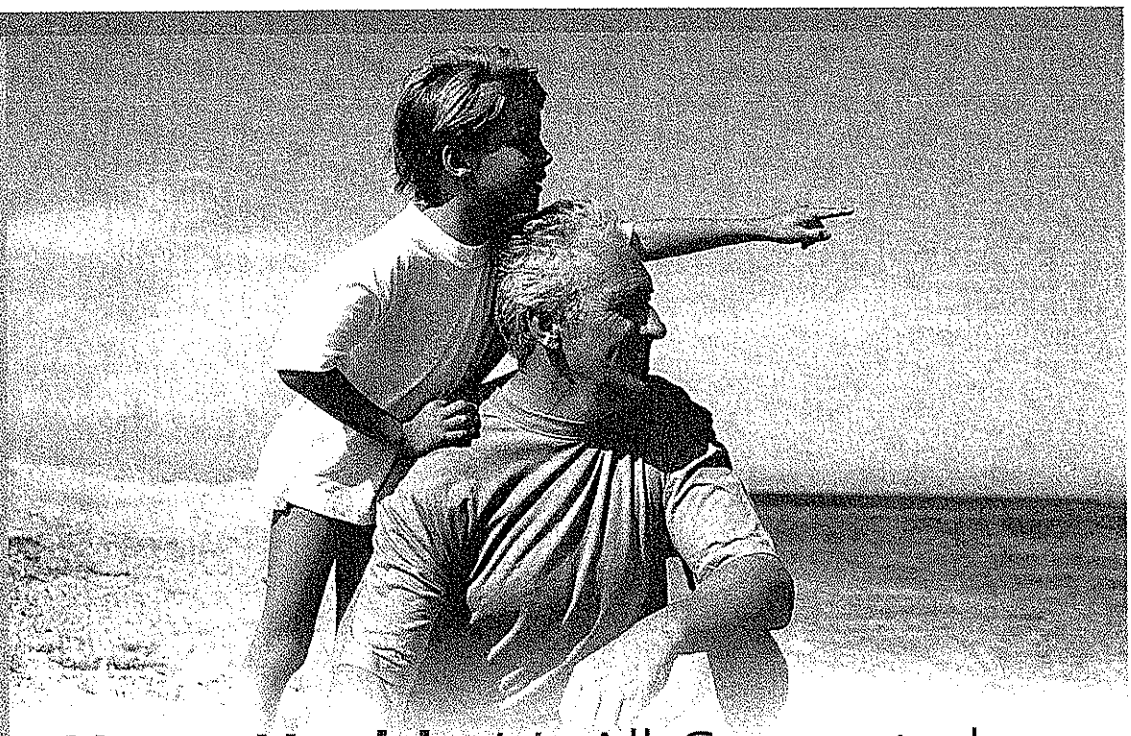
Summer 2009

THE BEAT GOES ON



Message from the Executive Director

Loraine C. Shea
Executive Director,
Heart Center of
Greater Waterbury

With this issue the Heart Center of Greater Waterbury celebrates its fourth year of providing advanced cardiac care to the residents of this community. In addition to the lifesaving medical care, the Heart Center is your source for heart health information. In this issue we review several risk factors for heart disease and their relationship to one another. Maintaining an awareness of your personal risk factors and keeping them in check or reducing their effect can help you maintain and improve your overall well-being.

For more information on risk factors and heart health, log on to our Web site at **www.heartcentergw.org** or schedule a heart health presentation for your community group by calling us at **203-575-1992**. Having accurate information is the first step to improving or maintaining your heart health!

Heart Health: It's All Connected

Overall heart health is dependent on many factors. Knowing the risk factors that can lead to coronary artery disease (CAD), understanding how these risk factors all relate to each other, and keeping them under control are key steps in understanding how to keep your heart healthy.

The Link Between Diabetes, Obesity, and Heart Disease

Diabetes is a growing public health problem in the United States. More than 23 million Americans have diabetes. About 1.6 million new cases were diagnosed in 2007 alone.

Health experts link the epidemic to a disturbing trend: Americans are losing the battle of the bulge. Nearly two-thirds of American adults are overweight or obese. Carrying too much weight is one of the main risk factors for type 2 diabetes, the most common form of the disorder. In turn, diabetes is one of the leading risk factors for heart disease.

Pre-Diabetes and Diabetes

Pre-diabetes is defined as higher than normal blood sugar, but not high enough to be true diabetes. More than one in four adults in the United States has this condition. Within 10 years of this diagnosis, many people with pre-diabetes will develop type 2 diabetes.

Best Bets to Prevent Type 2 Diabetes

Do you know your risk factors for type 2 diabetes? People with a family history of diabetes need to be particularly cautious. In addition to family history, other risk factors include:

- Age—about half of all cases occur in people ages 55 and older
- Being African-American, Hispanic-American, Asian, Pacific Islander, or American Indian
- Excess weight
- An inactive lifestyle
- A personal history of gestational diabetes—a form of the disease that affects some women during pregnancy

The Importance of Screening

Because diabetes often strikes without warning and the symptoms may be so mild that they go unnoticed, it is important to get screened for the disease on a regular basis.

Some early symptoms of type 2 diabetes may include:

- Excessive thirst and frequent urination
- Weight loss, fatigue, and drowsiness
- Frequent skin, gum, bladder, or vaginal infections
- Slow healing of cuts and bruises
- Blurred vision
- Numbness or tingling in the hands or feet
- Loss of coordination
- Itchy skin
- Nausea and vomiting

If detected, diabetes usually can be controlled. Some people can keep the disease in check by losing weight and exercising regularly—the same healthy measures that help prevent the disease. Others may need insulin and/or other medications.

Diabetes is the leading cause of heart disease, nerve disease, kidney disease, eye disease, and amputation. By maintaining good blood sugar control, many of these problems can be delayed or prevented.

The Heart Center offers group education for diabetes prevention. Call **203-575-5573** for information about our fall programs.

Upcoming Events

Heart Center of Greater Waterbury Support Group

July 13, 2009
7 p.m.
Harold Leever Regional Cancer Center
1075 Chase Parkway
Waterbury, CT
To register, call **203-575-5573.**

The following program will be offered at three different locations: "Hypertension Is a Major Risk Factor for Heart Attack and Stroke." Plan to attend and learn what you can do to control hypertension.

June 30, 2009
11 a.m.
The Federation, Jewish Community of Western CT
444 Main St. N.
Southbury, CT
To register, call **203-575-5573.**

July 14, 2009
11 a.m.
Cheshire Senior Center
240 Maple Ave.
Cheshire, CT
To register, call **203-575-5573.**

July 15, 2009
7 p.m.
The Harold Leever Regional Cancer Center
1075 Chase Parkway
Waterbury, CT
To register, call **203-575-5573.**

However, a healthy lifestyle can help the body become better at using sugar so it doesn't build up in the blood. Research shows that people with pre-diabetes can reduce their risk for full diabetes by more than half when they lose 5 to 7 percent of their body weight by exercising and eating right.

People with pre-diabetes rarely have symptoms, so it is a good idea to have your doctor check your blood sugar if you are age 45 or older. Younger people may want to ask their doctor about testing if they are overweight and have at least one other risk factor for diabetes. These include:

- Not exercising regularly
- Being African-American, Asian-American, or Latino
- Low HDL, or "good," cholesterol or high triglyceride levels

Because pre-diabetes is a precursor to diabetes, taking steps to diminish the chance of developing diabetes is vital.

A Problem for Young and Old Alike

Although the risk for type 2 diabetes increases with age, type 2 diabetes and obesity are growing fastest among young adults. In the last decade, type 2 diabetes rose by 70 percent in people ages 30 to 39. Obesity, too, jumped by 70 percent in people ages 18 to 29.

Even children and teens can develop type 2 diabetes. Experts say severe obesity in young people plays a major role in this development. Today, 15 percent of children and teens are overweight.

Other Ideas to Lower Your Risk

If you want to reduce your risk for developing diabetes—and complications such as heart disease, stroke, and blindness—try these strategies:

- **Shed extra pounds.** Losing just 5 to 7 percent of your weight may help ward off the disease. If you weigh 200 pounds, that's 10 to 15 pounds.
- **Go for a walk.** Walking just 30 minutes a day may help prevent diabetes. So can other regular exercise, such as dancing, swimming, or biking.
- **Watch how much you eat.** If you have trouble keeping your weight under control, try writing down what you eat and drink each day.

If you are concerned about getting diabetes, talk with your doctor about ways you can reduce your risk and live a healthier life.

The Link Between Diabetes and CAD

Approximately 30 percent of people with CAD also have diabetes. Over time, high blood sugar levels may work with other heart risk factors such as high blood pressure and high cholesterol to raise your risk of having a heart attack or stroke. There are several reasons why diabetes and heart disease go hand in hand:

- More than 70 percent of adults with diabetes also have high blood pressure or are on medication for it. High blood pressure is associated with stiff arteries, a major risk factor for CAD.
- Chances are, if you have diabetes, you also have abnormal cholesterol levels. Too little HDL ("good") cholesterol and too much LDL ("bad") cholesterol can lead to buildup on the inner walls of the arteries. Coronary artery disease occurs when the arteries become hardened or narrowed due to this buildup of plaque.

But you can prevent this—and help manage your CAD—by taking steps to control all these factors.

To learn about other major risk factors for heart disease, please see the Upcoming Events on page 2.

Primary Stroke Centers Close to Home

Both Heart Center of Greater Waterbury campuses, Saint Mary's Hospital and Waterbury Hospital, have recently been designated as Primary Stroke Centers by the Connecticut Department of Health. Both hospitals have met the criteria set by the state for the provision of quality stroke care.

Stroke is one of the leading causes of death in the U.S., right behind heart disease. The greater Waterbury community is fortunate to have these quality health care organizations available to care for their total cardiovascular needs.

Lower Your Health Risks with **Exercise**

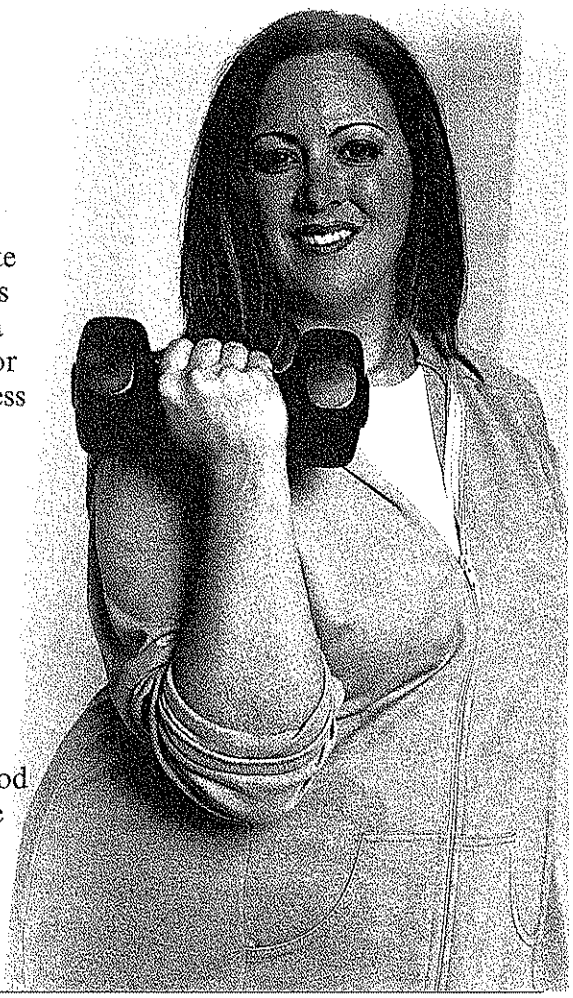
By now, many people are well-versed in the exercise advice prescribed by many experts: Get at least 30 minutes of moderate activity on most days of the week.

Following this advice can result in major health benefits. But does it go far enough?

You may be able to further reduce your risk for some chronic illnesses—such as those that run in your family—by expanding on this workout schedule.

Heart Disease

You can reduce your risk even further by working out longer or harder than 30 minutes of moderate activity a day. In one study, runners who averaged more than 40 miles a week had a 30 percent lower risk for heart disease than those who ran less than 10 miles a week.



However, there is a limit to how much you can exercise for heart health. If you are at high risk for heart disease or have heart disease, check with your doctor before starting a vigorous program.

Type 2 Diabetes

Regular aerobic exercise may help prevent diabetes by controlling blood sugar levels. It also can help people control another risk factor: excess weight.

Another good exercise for weight control is strength training, which can increase your metabolism.

Would you like to schedule a heart health presentation for your community group? Give us a call at 203-575-1992.

THE BEAT GOES ON

The Beat Goes On is published by the Heart Center of Greater Waterbury. The newsletter provides general health information and is not intended to provide personal medical advice, which should be sought from a physician. © 2009 Printed in U.S.A.

Re: **Docket Number: 08-31202 CON The Waterbury Hospital and Saint Mary's Hospital Corporation, d/b/a/ Heart Center of Greater Waterbury and University of Connecticut Health Center / John Dempsey Hospital**

Dear Karen:

Enclosed are the procedure and patient volume reports for Saint Mary's Hospital and Waterbury Hospital from July 18, 2008 through July 17, 2009.

The ACC Executive Summaries for both Saint Mary's Hospital and Waterbury Hospital are provided. The ACC Summaries represent data from Jan 1, 2008 through March 31, 2009.

The STS Regional Outcome Comparisons are also provided for both hospitals. The STS comparison summaries represent the period from January 2008 – December 2008.

If you have any questions, please feel free to contact me at (203)-575-5572 or via email at mlamour@hcogw.org

Sincerely,

Marjorie Lamour

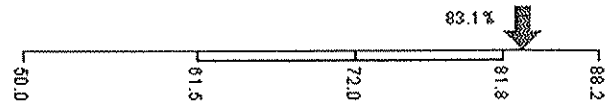
EXECUTIVE SUMMARY

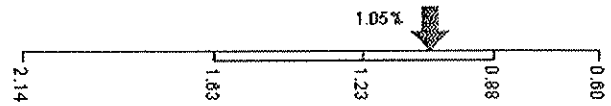


PCI and Diagnostic Catheterization Registry Metrics
Waterbury Hospital (841765) compared to Rolling Four Quarters (R4Q) for All Hospitals - 2008Y1

PCI Quality Metrics

1. Proportion of STEMI Pts with DBT <= 90"

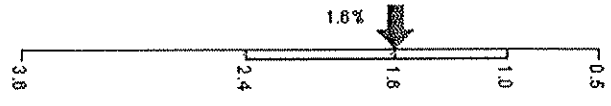
My Hospital: 83.1% (Rank: 190 of 824, Rank Percentile: 78)



The proportion of primary PCI patients with DBT (door to balloon time) <= 90 minutes. The goal is to have a DBT of <= 90 minutes for all non-transferred patients pts having an ST elevated MI and having primary PCI. [Detail Line: 1771]

2. Risk Adjusted Mortality

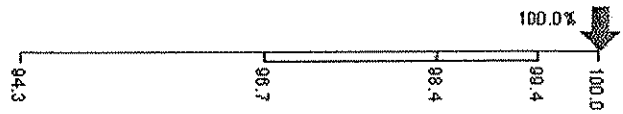
My Hospital: 1.05% (Rank: 295 of 771, Rank Percentile: 62)



Your hospital's PCI mortality rate adjusted using the ACC-NCDR® risk adjustment model [Detail Line: 1736]

3. Incidence of Vascular Complications

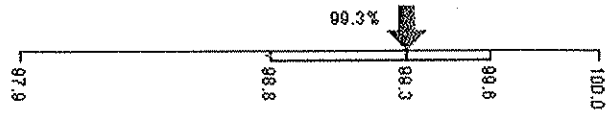
My Hospital: 1.6% (Rank: 428 of 844, Rank Percentile: 52)



Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 2039]

4. Thienopyridine on Discharge (Patients with Stents)

My Hospital: 100.0% (Rank: 2 of 842, Rank Percentile: 95)

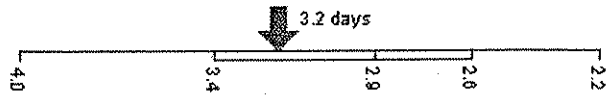


Percentage of eligible PCI patients who received any type of stent and had thienopyridine (such as clopidogrel or ticlopidine) prescribed at discharge. [Detail Line: 1587]

5. Angiographic Success (Lesions with Stents)

My Hospital: 99.3% (Rank: 421 of 843, Rank Percentile: 53)

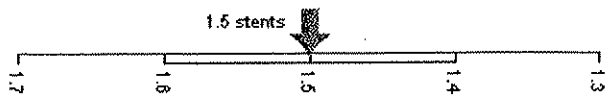
Percentage of stented lesions with angiographic success (defined as post -stenosis <=20% for lesions with a stent implanted). [Detail Line: 1864]



PCI Utilization Metrics

7. Length of Stay for All PCI Patients

My Hospital: 3.2 days

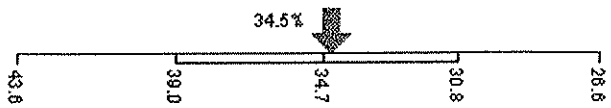


Mean total length of hospital stay (in days) for all patients having at least one PCI during admission. [Detail Line: 2094]

8. Mean Number of Stents per PCI Procedure

My Hospital: 1.5 stents

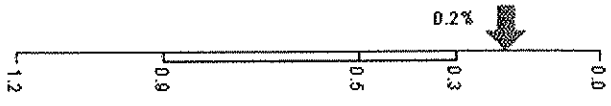
Mean number of stents deployed per PCI procedure with at least one stent. This includes all stents deployed: bare metal, drug eluting, coated, and covered. [Detail Line: 1979]



Diagnostic Cath Quality Metrics

9. Incidence of Non-Obstructive CAD

My Hospital: 34.5% (Rank: 333 of 674, Rank Percentile: 51)



Patients having a left heart catheterization (including only patients with the indications of r/o CAD and/or arrhythmia) where all coronary branches have <50% stenosis. (Note: if a vessel is not assessed, its stenosis is assumed as 0). [Detail Line: 1337]

10. Incidence of Vascular Complications

My Hospital: 0.2% (Rank: 149 of 674, Rank Percentile: 84)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 1435]

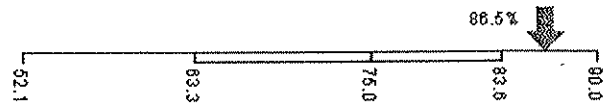
EXECUTIVE SUMMARY

PCI and Diagnostic Catheterization Registry Metrics
Waterbury Hospital (841765) compared to Rolling Four Quarters (R4Q) for All Hospitals - 2008Y2

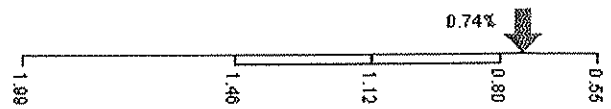


PCI Quality Metrics

Worse — Better

1. Proportion of STEMI Pts with DBT <= 90"

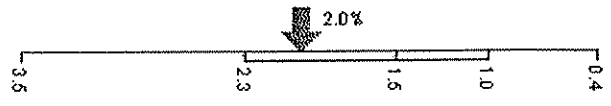
My Hospital: 86.5% (Rank: 143 of 857, Rank Percentile: 84)



The proportion of primary PCI patients with DBT (door to balloon time) <= 90 minutes. The goal is to have a DBT of <= 90 minutes for all non-transferred patients pts having an ST elevated MI and having primary PCI. [Detail Line: 1771]

2. Risk Adjusted Mortality

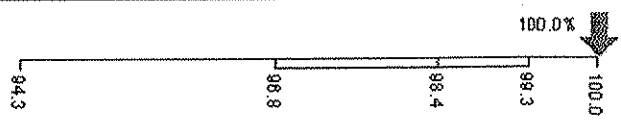
My Hospital: 0.74% (Rank: 163 of 800, Rank Percentile: 80)



Your hospital's PCI mortality rate adjusted using the ACC-NCDR® risk adjustment model [Detail Line: 1736]

3. Incidence of Vascular Complications

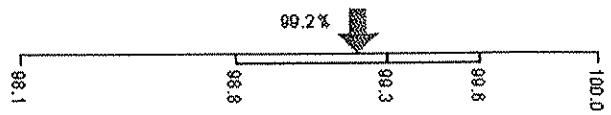
My Hospital: 2.0% (Rank: 585 of 876, Rank Percentile: 35)



Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 2039]

4. Thienopyridine on Discharge (Patients with Stents)

My Hospital: 100.0% (Rank: 3 of 875, Rank Percentile: 94)

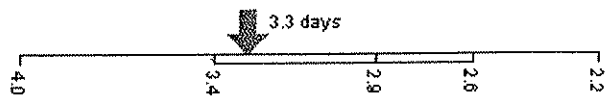


Percentage of eligible PCI patients who received any type of stent and had thienopyridine (such as clopidogrel or ticlopidine) prescribed at discharge. [Detail Line: 1587]

5. Angiographic Success (Lesions with Stents)

My Hospital: 99.2% (Rank: 478 of 875, Rank Percentile: 48)

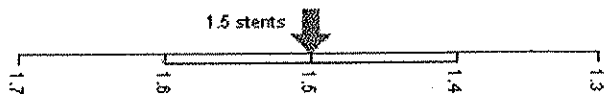
Percentage of stented lesions with angiographic success (defined as post -stenosis <=20% for lesions with a stent implanted). [Detail Line: 1864]



PCI Utilization Metrics

7. Length of Stay for All PCI Patients

My Hospital: 3.3 days

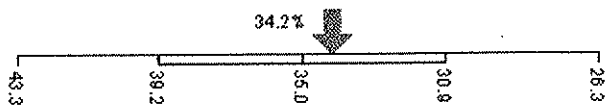


Mean total length of hospital stay (in days) for all patients having at least one PCI during admission. [Detail Line: 2094]

8. Mean Number of Stents per PCI Procedure

My Hospital: 1.5 stents

Mean number of stents deployed per PCI procedure with at least one stent. This includes all stents deployed: bare metal, drug eluting, coated, and covered. [Detail Line: 1979]

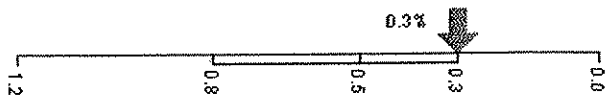


Diagnostic Cath Quality Metrics

Worse — Better

9. Incidence of Non-Obstructive CAD

My Hospital: 34.2% (Rank: 313 of 695, Rank Percentile: 55)



Patients having a left heart catheterization (including only patients with the indications of r/o CAD and/or arrhythmia) where all coronary branches have <50% stenosis. (Note: if a vessel is not assessed, its stenosis is assumed as 0). [Detail Line: 1337]

10. Incidence of Vascular Complications

My Hospital: 0.3% (Rank: 264 of 695, Rank Percentile: 68)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 1435]

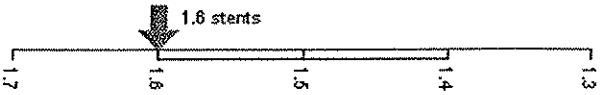
My Hospital: 3.5 days

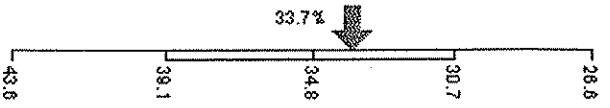


Mean total length of hospital stay (in days) for all patients having at least one PCI during admission. [Detail Line: 2094]

8. Mean Number of Stents per PCI Procedure

My Hospital: 1.6 stents

Mean number of stents deployed per PCI procedure with at least one stent. This includes all stents deployed: bare metal, drug eluting, coated, and covered. [Detail Line: 1979]

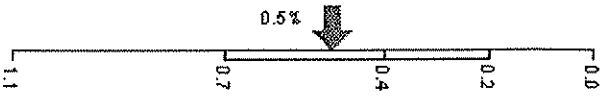


Diagnostic Cath Quality Metrics

Worse — Better

9. Incidence of Non-Obstructive CAD

My Hospital: 33.7% (Rank: 314 of 733, Rank Percentile: 57)



Patients having a left heart catheterization (including only patients with the indications of r/o CAD and/or arrhythmia) where all coronary branches have <50% stenosis. (Note: if a vessel is not assessed, its stenosis is assumed as 0). [Detail Line: 1337]

10. Incidence of Vascular Complications

My Hospital: 0.5% (Rank: 419 of 733, Rank Percentile: 47)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 1435]

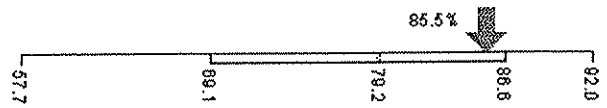
EXECUTIVE SUMMARY

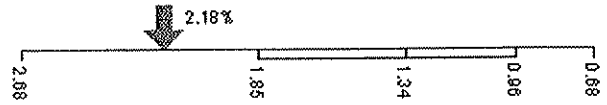


PCI and Diagnostic Catheterization Registry Metrics
Waterbury Hospital (841765) compared to Rolling Four Quarters (R4Q) for All Hospitals - 2009Y1

PCI Quality Metrics

1. Proportion of STEMI Pts with DBT <= 90"

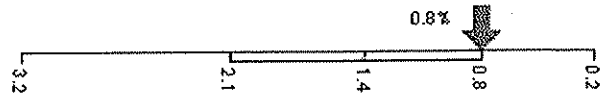
My Hospital: 85.5% (Rank: 278 of 949, Rank Percentile: 72)



The proportion of primary PCI patients with DBT (door to balloon time) <= 90 minutes. The goal is to have a DBT of <= 90 minutes for all non-transferred patients pts having an ST elevated MI and having primary PCI. [Detail Line: 1771]

2. Risk Adjusted Mortality

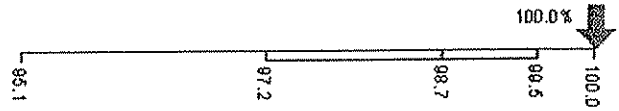
My Hospital: 2.18% (Rank: 718 of 890, Rank Percentile: 17)



Your hospital's PCI mortality rate adjusted using the ACC-NCDR® risk adjustment model [Detail Line: 1736]

3. Incidence of Vascular Complications

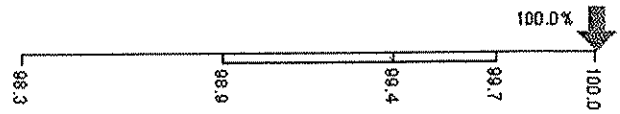
My Hospital: 0.8% (Rank: 260 of 961, Rank Percentile: 76)



Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 2039]

4. Thienopyridine on Discharge (Patients with Stents)

My Hospital: 100.0% (Rank: 1 of 961, Rank Percentile: 100)

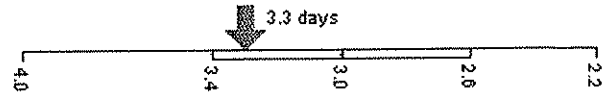


Percentage of eligible PCI patients who received any type of stent and had thienopyridine (such as clopidogrel or ticlopidine) prescribed at discharge. [Detail Line: 1587]

5. Angiographic Success (Lesions with Stents)

My Hospital: 100.0% (Rank: 1 of 961, Rank Percentile: 100)

Percentage of stented lesions with angiographic success (defined as post -stenosis <=20% for lesions with a stent implanted). [Detail Line: 1864]



PCI Utilization Metrics

7. Length of Stay for All PCI Patients

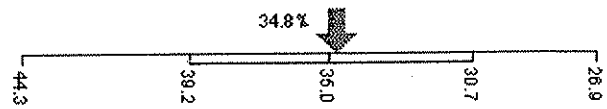
My Hospital: 3.3 days

Mean total length of hospital stay (in days) for all patients having at least one PCI during admission. [Detail Line: 2094]

8. Mean Number of Stents per PCI Procedure

My Hospital: 1.7 stents

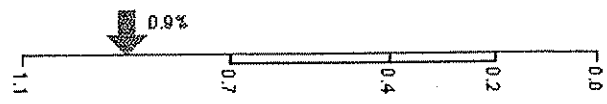
Mean number of stents deployed per PCI procedure with at least one stent. This includes all stents deployed: bare metal, drug eluting, coated, and covered. [Detail Line: 1979]



Diagnostic Cath Quality Metrics

9. Incidence of Non-Obstructive CAD

My Hospital: 34.8% (Rank: 368 of 769, Rank Percentile: 52)



Patients having a left heart catheterization (including only patients with the indications of r/o CAD and/or arrhythmia) where all coronary branches have <50% stenosis. (Note: if a vessel is not assessed, its stenosis is assumed as 0). [Detail Line: 1337]

10. Incidence of Vascular Complications

My Hospital: 0.9% (Rank: 661 of 769, Rank Percentile: 15)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 1435]

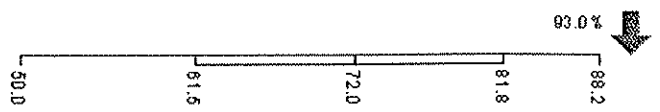
EXECUTIVE SUMMARY

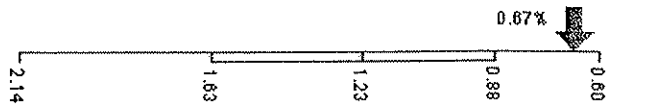


PCI and Diagnostic Catheterization Registry Metrics
Saint Mary's Hospital (881416) compared to Rolling Four Quarters (R4Q) for All Hospitals - 2008Y1

PCI Quality Metrics

1. Proportion of STEMI Pts with DBT <= 90"

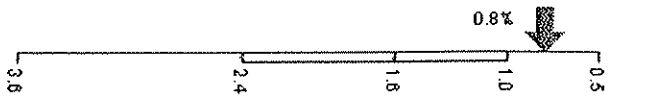
My Hospital: 93.0% (Rank: 40 of 824, Rank Percentile: 96)



The proportion of primary PCI patients with DBT (door to balloon time) <= 90 minutes. The goal is to have a DBT of <= 90 minutes for all non-transferred patients pts having an ST elevated MI and having primary PCI. [Detail Line: 1771]

2. Risk Adjusted Mortality

My Hospital: 0.67% (Rank: 93 of 771, Rank Percentile: 88)



Your hospital's PCI mortality rate adjusted using the ACC-NCDR® risk adjustment model [Detail Line: 1736]

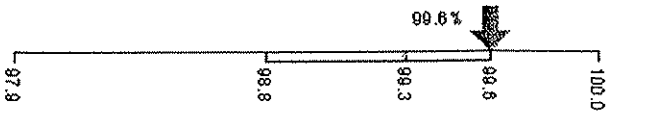
3. Incidence of Vascular Complications

My Hospital: 0.8% (Rank: 197 of 844, Rank Percentile: 80)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 2039]

4. Thienopyridine on Discharge (Patients with Stents)

My Hospital: 96.6% (Rank: 645 of 842, Rank Percentile: 23)

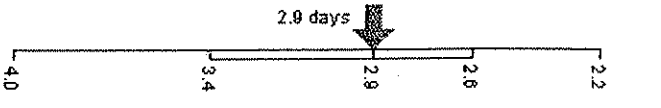


Percentage of eligible PCI patients who received any type of stent and had thienopyridine (such as clopidogrel or ticlopidine) prescribed at discharge. [Detail Line: 1587]

5. Angiographic Success (Lesions with Stents)

My Hospital: 99.6% (Rank: 232 of 843, Rank Percentile: 77)

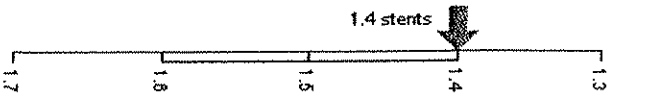
Percentage of stented lesions with angiographic success (defined as post -stenosis <=20% for lesions with a stent implanted). [Detail Line: 1864]



PCI Utilization Metrics

7. Length of Stay for All PCI Patients

My Hospital: 2.9 days

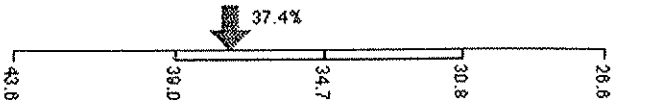


Mean total length of hospital stay (in days) for all patients having at least one PCI during admission. [Detail Line: 2094]

8. Mean Number of Stents per PCI Procedure

My Hospital: 1.4 stents

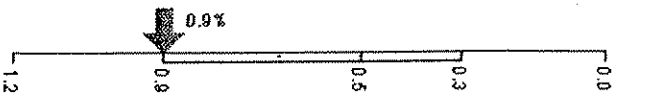
Mean number of stents deployed per PCI procedure with at least one stent. This includes all stents deployed: bare metal, drug eluting, coated, and covered. [Detail Line: 1979]



Diagnostic Cath Quality Metrics

9. Incidence of Non-Obstructive CAD

My Hospital: 37.4% (Rank: 446 of 674, Rank Percentile: 34)



Patients having a left heart catheterization (including only patients with the indications of r/o CAD and/or arrhythmia) where all coronary branches have <50% stenosis. (Note: if a vessel is not assessed, its stenosis is assumed as 0). [Detail Line: 1337]

10. Incidence of Vascular Complications

My Hospital: 0.9% (Rank: 516 of 674, Rank Percentile: 25)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 1435]

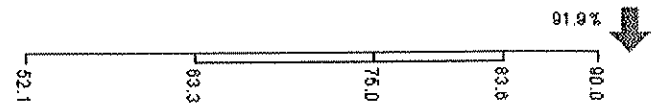
EXECUTIVE SUMMARY

PCI and Diagnostic Catheterization Registry Metrics
Saint Mary's Hospital (881416) compared to Rolling Four Quarters (R4Q) for All Hospitals - 2008Y2

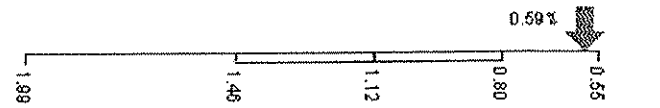


PCI Quality Metrics

Worse — Better

1. Proportion of STEMI Pts with DBT <= 90"

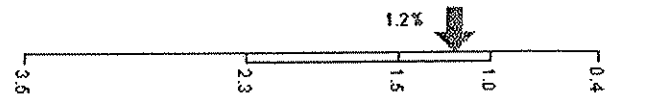
My Hospital: 91.9% (Rank: 62 of 857, Rank Percentile: 94)



The proportion of primary PCI patients with DBT (door to balloon time) <= 90 minutes. The goal is to have a DBT of <= 90 minutes for all non-transferred patients pts having an ST elevated MI and having primary PCI. [Detail Line: 1771]

2. Risk Adjusted Mortality

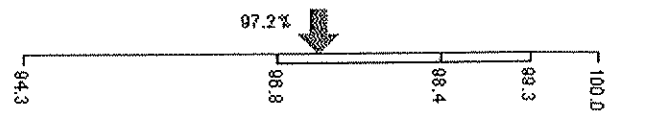
My Hospital: 0.59% (Rank: 95 of 800, Rank Percentile: 88)



Your hospital's PCI mortality rate adjusted using the ACC-NCDR® risk adjustment model [Detail Line: 1736]

3. Incidence of Vascular Complications

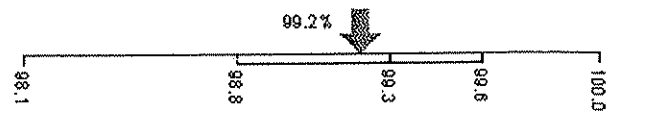
My Hospital: 1.2% (Rank: 305 of 876, Rank Percentile: 68)



Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 2039]

4. Thienopyridine on Discharge (Patients with Stents)

My Hospital: 97.2% (Rank: 612 of 875, Rank Percentile: 30)



Percentage of eligible PCI patients who received any type of stent and had thienopyridine (such as clopidogrel or ticlopidine) prescribed at discharge. [Detail Line: 1587]

5. Angiographic Success (Lesions with Stents)

My Hospital: 99.2% (Rank: 480 of 875, Rank Percentile: 48)

Percentage of stented lesions with angiographic success (defined as post -stenosis <=20% for lesions with a stent implanted). [Detail Line: 1864]

PCI Utilization Metrics

7. Length of Stay for All PCI Patients

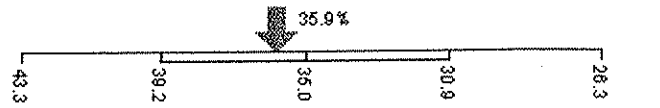
My Hospital: 6.0 days

Mean total length of hospital stay (in days) for all patients having at least one PCI during admission. [Detail Line: 2094]

8. Mean Number of Stents per PCI Procedure

My Hospital: 1.4 stents

Mean number of stents deployed per PCI procedure with at least one stent. This includes all stents deployed: bare metal, drug eluting, coated, and covered. [Detail Line: 1979]

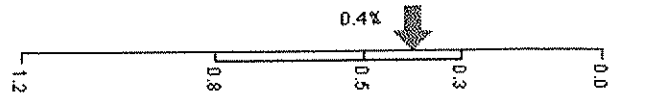


Diagnostic Cath Quality Metrics

Worse — Better

9. Incidence of Non-Obstructive CAD

My Hospital: 35.9% (Rank: 394 of 695, Rank Percentile: 43)



Patients having a left heart catheterization (including only patients with the indications of r/o CAD and/or arrhythmia) where all coronary branches have <50% stenosis. (Note: if a vessel is not assessed, its stenosis is assumed as 0). [Detail Line: 1337]

10. Incidence of Vascular Complications

My Hospital: 0.4% (Rank: 327 of 695, Rank Percentile: 58)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 1435]

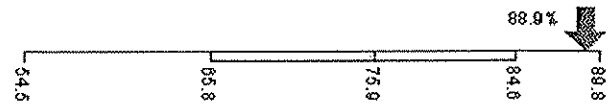
EXECUTIVE SUMMARY

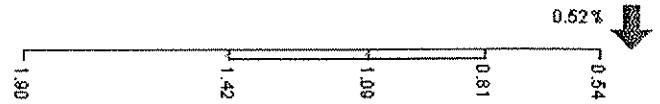


PCI and Diagnostic Catheterization Registry Metrics
Saint Mary's Hospital (881416) compared to Rolling Four Quarters (R4Q) for All Hospitals - 2008Y3

PCI Quality Metrics

1. Proportion of STEMI Pts with DBT <= 90"

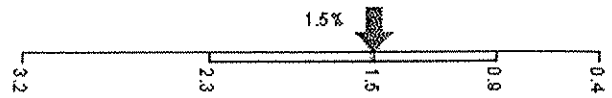
My Hospital: 88.9% (Rank: 122 of 882, Rank Percentile: 87)



The proportion of primary PCI patients with DBT (door to balloon time) <= 90 minutes. The goal is to have a DBT of <= 90 minutes for all non-transferred patients pts having an ST elevated MI and having primary PCI. [Detail Line: 1771]

2. Risk Adjusted Mortality

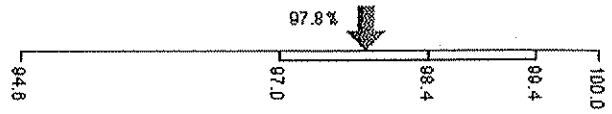
My Hospital: 0.52% (Rank: 77 of 830, Rank Percentile: 91)



Your hospital's PCI mortality rate adjusted using the ACC-NCDR® risk adjustment model [Detail Line: 1736]

3. Incidence of Vascular Complications

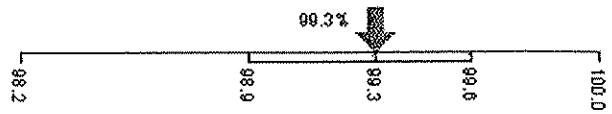
My Hospital: 1.5% (Rank: 479 of 899, Rank Percentile: 49)



Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 2039]

4. Thienopyridine on Discharge (Patients with Stents)

My Hospital: 97.8% (Rank: 584 of 898, Rank Percentile: 35)

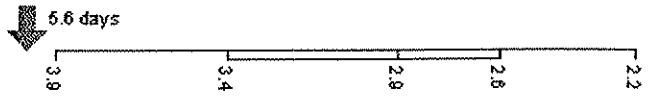


Percentage of eligible PCI patients who received any type of stent and had thienopyridine (such as clopidogrel or ticlopidine) prescribed at discharge. [Detail Line: 1587]

5. Angiographic Success (Lesions with Stents)

My Hospital: 99.3% (Rank: 504 of 898, Rank Percentile: 47)

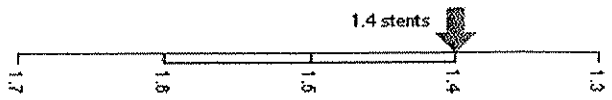
Percentage of stented lesions with angiographic success (defined as post -stenosis <=20% for lesions with a stent implanted). [Detail Line: 1864]



PCI Utilization Metrics

7. Length of Stay for All PCI Patients

My Hospital: 5.6 days

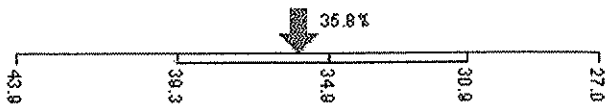


Mean total length of hospital stay (in days) for all patients having at least one PCI during admission. [Detail Line: 2094]

8. Mean Number of Stents per PCI Procedure

My Hospital: 1.4 stents

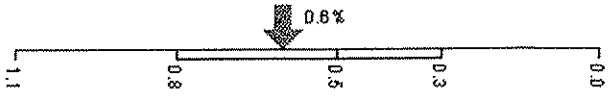
Mean number of stents deployed per PCI procedure with at least one stent. This includes all stents deployed: bare metal, drug eluting, coated, and covered. [Detail Line: 1979]



Diagnostic Cath Quality Metrics

9. Incidence of Non-Obstructive CAD

My Hospital: 35.8% (Rank: 394 of 720, Rank Percentile: 45)



Patients having a left heart catheterization (including only patients with the indications of r/o CAD and/or arrhythmia) where all coronary branches have <50% stenosis. (Note: if a vessel is not assessed, its stenosis is assumed as 0). [Detail Line: 1337]

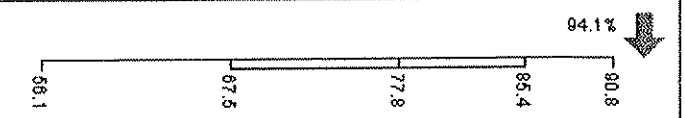
10. Incidence of Vascular Complications

My Hospital: 0.6% (Rank: 485 of 720, Rank Percentile: 36)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 1435]

© 2009, American College of Cardiology Foundation

EXECUTIVE SUMMARY



PCI and Diagnostic Catheterization Registry Metrics
Saint Mary's Hospital (881416) compared to Rolling Four Quarters (R4Q) for All Hospitals - 2008Y4

PCI Quality Metrics

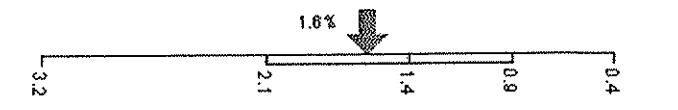
1. Proportion of STEMI Pts with DBT <= 90"

My Hospital: 94.1% (Rank: 54 of 906, Rank Percentile: 95)

The proportion of primary PCI patients with DBT (door to balloon time) <= 90 minutes. The goal is to have a DBT of <= 90 minutes for all non-transferred patients pts having an ST elevated MI and having primary PCI. [Detail Line: 1771]

2. Risk Adjusted Mortality

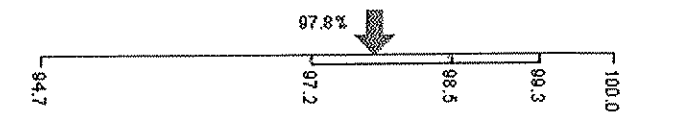
My Hospital: 0.55% (Rank: 33 of 858, Rank Percentile: 93)



Your hospital's PCI mortality rate adjusted using the ACC-NCDR® risk adjustment model [Detail Line: 1736]

3. Incidence of Vascular Complications

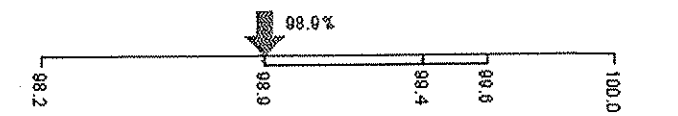
My Hospital: 1.6% (Rank: 517 of 923, Rank Percentile: 46)



Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 2039]

4. Thienopyridine on Discharge (Patients with Stents)

My Hospital: 97.8% (Rank: 626 of 922, Rank Percentile: 34)

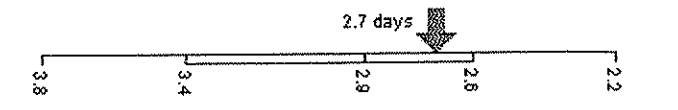


Percentage of eligible PCI patients who received any type of stent and had thienopyridine (such as clopidogrel or ticlopidine) prescribed at discharge. [Detail Line: 1587]

5. Angiographic Success (Lesions with Stents)

My Hospital: 98.9% (Rank: 683 of 922, Rank Percentile: 28)

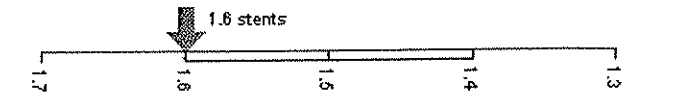
Percentage of stented lesions with angiographic success (defined as post -stenosis <=20% for lesions with a stent implanted). [Detail Line: 1864]



PCI Utilization Metrics

7. Length of Stay for All PCI Patients

My Hospital: 2.7 days

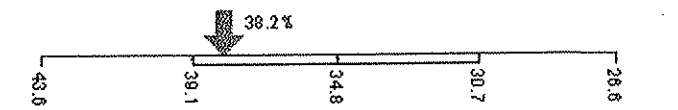


Mean total length of hospital stay (in days) for all patients having at least one PCI during admission. [Detail Line: 2094]

8. Mean Number of Stents per PCI Procedure

My Hospital: 1.6 stents

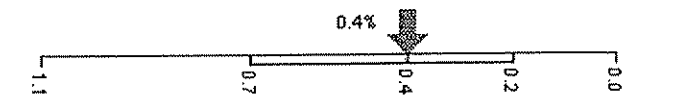
Mean number of stents deployed per PCI procedure with at least one stent. This includes all stents deployed: bare metal, drug eluting, coated, and covered. [Detail Line: 1979]



Diagnostic Cath Quality Metrics

9. Incidence of Non-Obstructive CAD

My Hospital: 38.2% (Rank: 507 of 733, Rank Percentile: 31)



Patients having a left heart catheterization (including only patients with the indications of r/o CAD and/or arrhythmia) where all coronary branches have <50% stenosis. (Note: if a vessel is not assessed, its stenosis is assumed as 0). [Detail Line: 1337]

10. Incidence of Vascular Complications

My Hospital: 0.4% (Rank: 352 of 733, Rank Percentile: 56)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 1435]

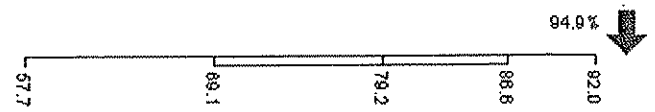
EXECUTIVE SUMMARY

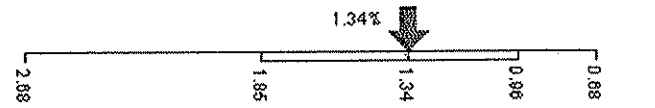


PCI and Diagnostic Catheterization Registry Metrics
Saint Mary's Hospital (881416) compared to Rolling Four Quarters (R4Q) for All Hospitals - 2009Y1

PCI Quality Metrics

1. Proportion of STEMI Pts with DBT <= 90"

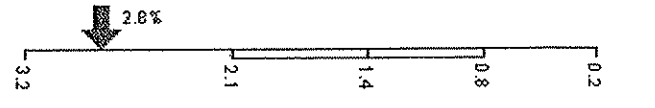
My Hospital: 94.9% (Rank: 56 of 949, Rank Percentile: 96)



The proportion of primary PCI patients with DBT (door to balloon time) <= 90 minutes. The goal is to have a DBT of <= 90 minutes for all non-transferred patients pts having an ST elevated MI and having primary PCI. [Detail Line: 1771]

2. Risk Adjusted Mortality

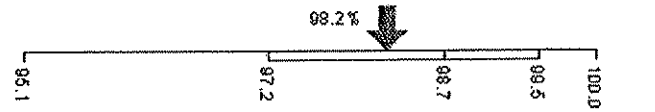
My Hospital: 1.34% (Rank: 410 of 890, Rank Percentile: 50)



Your hospital's PCI mortality rate adjusted using the ACC-NCDR® risk adjustment model [Detail Line: 1736]

3. Incidence of Vascular Complications

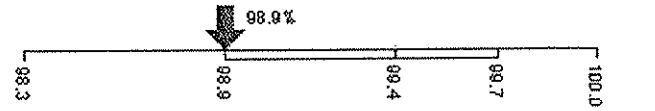
My Hospital: 2.8% (Rank: 834 of 961, Rank Percentile: 14)



Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 2039]

4. Thienopyridine on Discharge (Patients with Stents)

My Hospital: 98.2% (Rank: 594 of 961, Rank Percentile: 40)

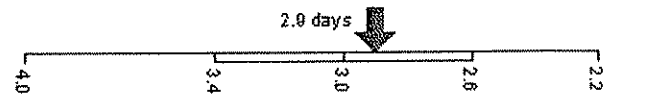


Percentage of eligible PCI patients who received any type of stent and had thienopyridine (such as clopidogrel or ticlopidine) prescribed at discharge. [Detail Line: 1587]

5. Angiographic Success (Lesions with Stents)

My Hospital: 98.9% (Rank: 721 of 961, Rank Percentile: 27)

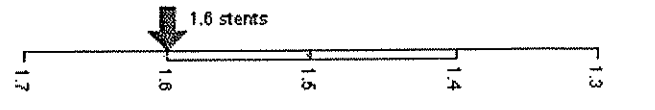
Percentage of stented lesions with angiographic success (defined as post-stenosis <=20% for lesions with a stent implanted). [Detail Line: 1864]



PCI Utilization Metrics

7. Length of Stay for All PCI Patients

My Hospital: 2.9 days

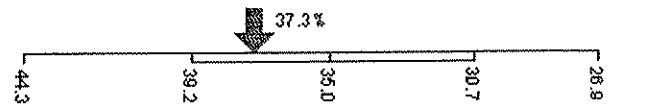


Mean total length of hospital stay (in days) for all patients having at least one PCI during admission. [Detail Line: 2094]

8. Mean Number of Stents per PCI Procedure

My Hospital: 1.6 stents

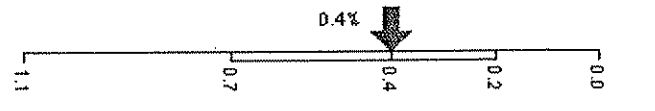
Mean number of stents deployed per PCI procedure with at least one stent. This includes all stents deployed: bare metal, drug eluting, coated, and covered. [Detail Line: 1979]



Diagnostic Cath Quality Metrics

9. Incidence of Non-Obstructive CAD

My Hospital: 37.3% (Rank: 490 of 769, Rank Percentile: 36)



Patients having a left heart catheterization (including only patients with the indications of r/o CAD and/or arrhythmia) where all coronary branches have <50% stenosis. (Note: if a vessel is not assessed, its stenosis is assumed as 0). [Detail Line: 1337]

10. Incidence of Vascular Complications

My Hospital: 0.4% (Rank: 361 of 769, Rank Percentile: 58)

Includes procedures with access site bleeding (includes at least one vascular bleeding complication excluding GI, GU and Other bleeding) [Detail Line: 1435]

Re: Certificate of Need Docket 08-31202-CON
Waterbury Hospital and Saint Mary's Hospital d/b/a Heart Center of Greater Waterbury
Advanced Cardiac Services Program

Dear First Selectman Cable:

On July 8, 2008, the Office of Health Care Access ("OHCA") received your letter concerning the Certificate of Need ("CON") Docket 08-31202-CON for the proposal by Waterbury Hospital and Saint Mary's Hospital d/b/a Heart Center of Greater Waterbury for advanced cardiac services program.

OHCA appreciates your comments. Your letter has been made part of the formal record of the application. Please be advised once a decision has been rendered it will be posted and available on OHCA's website at http:// www.ct.gov/ohca. Meanwhile, OHCA's website maintains status reports that you may review at your convenience.

If you have any further concerns or questions, please contact me at OHCA at (860) 418-7001.

Sincerely,

Cristine A. Vogel
Commissioner

Subject: Waterbury Heart Center

Dear Ms. Vogel: I was one of hundreds of people who spoke at the meeting three years ago when the State first decided to open a heart center here in Waterbury. Now I read in this morning's paper that this issue has come up again. Please, please give Waterbury and the surrounding towns the access to heart care that they deserve. In my case, my husband had to be transported to Bridgeport to have a stent put in his heart. He is now 83 and will probably have to go through this procedure again soon. I am 75 and would have to travel back to Bridgeport if the procedure cannot be done here in Waterbury. As I travelled Route 8 the last time, I had to follow the ambulance by myself. My husband was put into surgery and I did not know what was happening for at least 4 hours as he had been put in a waiting line before the surgery. When I finally was able to leave the hospital, it was late at night and I got lost on my way home. I did not have a cell phone at the time so I couldn't call anyone. Believe me, I was very frightened.

In my case, my three sisters have had heart attacks and open heart surgery and it is probably only a matter of time before I could have one too. How would my husband get to Bridgeport? He only drives short distances and only in the daytime.

I beg you to give the okay for a permanent permit.

Thank you.

Respectfully,

Dolores G. Oliver

Dear Commissioner Vogel:

This letter is in support of renewing the license of the Heart Center of Greater Waterbury.

In December of 2007 I underwent open-heart surgery (not by-pass surgery) at Waterbury Hospital. As my husband and I are both in our 60's, being close to home to have my surgery was of utmost importance to both of us. I cannot imagine having to undergo all the numerous required pre-operative testing at a distance from our home in nearby Middlebury.

After my surgery, my husband was able to visit me as many times as he wished each day to see in person the progress of my recovery. He could then report that progress to family members and friends. I am confident that my husband's close contact with me favorably assisted in my recovery.

The Waterbury Heart Center should be allowed to continue to serve the Greater Waterbury area.

Very truly yours,

Patricia E. Clark

Dear Commissioner Vogel:

I am writing to express my complete support for the Heart Center of Greater Waterbury.

As the Board Chairman for Saint Mary's Hospital, I have witnessed firsthand the planning, implementation, and ultimately the fruition of this superb program. We have made a significant investment in creating a state of the art cardiac center. Our facilities were specifically designed and built to provide the most innovative care available. We assembled teams of cardiac care specialists and provided them with additional training to ensure seamless integration between our campuses. We have demonstrated unprecedented collaboration between Saint Mary's Hospital, Waterbury Hospital, and the University of Connecticut Health Center.

The results of these efforts have been nothing short of spectacular. In the three years since the program was launched more than 2,500 people have been treated at either Saint Mary's or Waterbury Hospital. Countless lives have been saved right here in Waterbury.

Upon its approval in 2004, the Heart Center was given numerous management and performance criteria. The program has performed admirably, and has met all but one of the criteria. Surely the overall community impact of this life-saving program must be considered *in toto* before deciding its fate.

When one reviews all the good that has been accomplished, it is hard to believe that consideration might be given to closing the program. I urge you to take the necessary steps to ensure that advanced cardiac services will remain available through the Heart Center of Greater Waterbury. I would be most grateful for your understanding.

Sincerely,

+ Henry J. Mansell

Re: Docket numbers 08-30167-MD-2 and 08-31202

Dear Commissioner Vogel:

I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital. I am writing this letter to you a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare.

As you probably know, the center has saved more than 2,400 hearts in the last three years. The center has consistently achieved clinical outcomes that meet or exceed national standards when treating critical care patients. Its services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

Without this crucial cardiac program, people's lives will surely be lost, and personally, I believe that every heart matters. Please register my strong support for the continuation of these services on a permanent basis.

Very truly yours,

Tom Gormley

Subject: GREATER WATERBURY HEALTH CENTER

Just a note to let you know how I feel about the possible closing of the Greater Waterbury Heart Center. I am not sure where you live or how long it would take you to get to a hospital where you would be taken care of should you suffer a Heart Attack. If I should suffer a Heart Attack and the Greater Waterbury Heart Center is no longer in existence that would mean that I would have to be sent to Bridgport or New Haven - This could take a long amt of time. In the time it would take to get there I could die, whereas if the Heart Center was still available I would get Treatment much faster and would have a better chance of surviving.

What would you want to do…. Get treatment fast or wait to be transported to another Hospital…….Please

Thanks……..Vinnie Dick

Dear Commissioner Vogel:

The Sisters of Saint Joseph of Chambéry founded Saint Mary's Hospital in 1909. For the past one hundred years, the people of Greater Waterbury have received only the highest medical services. On this, the eve of the hospital's centennial, we are dismayed to learn that the Heart Center of Greater Waterbury is in danger of being closed.

The Heart Center is one of the most vital and vibrant collaborative services available at Saint Mary's and Waterbury Hospitals. Since opening a mere three years ago, countless lives have been saved by both hospitals' dedicated teams of cardiac surgeons, cardiologists, and cardiac nurses. The emergency room staffs have played a critical role in making dramatic "saves," successfully caring for individuals so critically ill they most certainly would have perished had they been transported out of the Waterbury area.

There is no doubt that there is a great need for these services in Greater Waterbury. There is also no doubt that both Saint Mary's Hospital and Waterbury Hospital have performed admirably delivering these services to the community.

On behalf of the Sisters of Saint Joseph of Chambéry, the staff of Saint Mary's Hospital, and the entire Greater Waterbury Community, I urge you to fully approve the Heart Center of Greater Waterbury. This is truly a matter of life and death.

Sincerely,

Sister Dolores Lahr, CSJ

Dear Commisssioner Vogel,

I am writing this letter because I've never felt so strongly about a community issue before.

I am 59 years old. In 2006 I suffered a silent heart attack. Unbeknownst to me, I had a coronary artery with 100% blockage. I underwent a successful angioplasty and stent placement at the Heart Center of Greater Waterbury at Waterbury Hospital and participated in their cardiac rehab program. Today, I am feeling well due to the professional expertise and care I received during my brief stay at the hospital and the encouragement and positive atmosphere at the rehab center.

I cannot comprehend giving a community this advanced care facility to potentially save hundreds of lives in a given year and to ease the burden such illnesses can place on the patients' families, then taking it away, leaving us to take our chances in life-threatening situations.

Please consider the humanity of it first. Let us keep our Heart Center and all the outreach programs it has afforded Waterbury and the surrounding towns. Just maybe the reason the "numbers were down" was because the ancillary staff of the Heart Center did its job so well in providing cardiac education to the public??? Or...perhaps the mere proximity of the Heart Center made it possible to save lives with lesser strategies??? I feel credit must be given to the doctors and staff of the Heart Center for not jumping into open heart surgeries just to meet a quota.

The Heart Center has become an integral part of our city now. People here depend on it and its services. It's almost two-and-a -half years since my heart problem began, and I can't imagine not attending my monthly support group meeting. I know I (and my family) live more secure in the knowledge that should something happen again,I wouldn't have to be shuttled off to another city at a critical point in my medical care. This peace of mind is priceless, and you know they say

stress plays a huge part in heart health!!!

Very truly yours,

Mary Ellen Shea

After reading today's post regarding the petition about the "heart Center" I am at a loss. With all the waste and fraud the occurs in Connecticut what is the big push to keep this non-performing great expense center; and these words are not meant to be taken harshly.
Emergencies are handled by Hospitals and most are great when service occurs about the time of a heart attack. The hearth center is suppose to perform a certain number of hearth surgeries and it did not meet its goal and will not be able to meet its goals ever. It is not about the travel to Bridgeport or Danbury or Hartford; as again emergences are handled right away. Do not allow the State of Ct to be bogged down again with another non performing medical center that will request more tax dollar funds and be another sink hole of cash that every one thinks the State of Connecticut justifying its expense by stating it will hire more health care workers etc.

I appreciate the opportunity to strongly support the application for an extension of the operations deadline for the Heart Center of Greater Waterbury, a joint cardiac program operated by St. Mary's Hospital, Waterbury Hospital and the University of Connecticut Health Center.

I have long supported and worked to achieve this program for effective lifesaving cardiac care, and I pledge a continued fight for it. The time required to transport patients needing immediate hospital heart care can be literally the difference between life and death. Waterbury area residents deserve no less than the highly skilled and caring professionals and Heart Center programs provided by these hospitals. This heart care program should be made permanent under the extraordinary professional leadership team at both hospitals. If Waterbury residents become ill -- especially in a heart threatening emergency -- they should be treated in Waterbury.

In short, citizens of the Waterbury area need and deserve this vital cardiac care service, which literally saves lives. The Office of Health Care Access (OHCA) should grant the application for extension of time to carefully reach the right result.

The Heart Center of Greater Waterbury has already achieved its paramount goal -- providing residents of the 18 towns in the Greater Waterbury region with superb, world class cardiac care. Heart patients receive timely and seamless care in one facility from emergency room care to recovery. As OHCA acknowledged in its approval of the 2004 agreement, patients whose time of arrival to angioplasty exceeds two hours -- known as door to balloon time -- have a 40-60 percent increased risk of mortality.

This program's life saving benefits have been immeasurable and miraculous -- as testimony from patients as well as professionals irrefutably establishes.

The hospitals have committed over $7 million -- providing critical cardiac care to over 2400 patients, including the provision of more than 1800 angioplasty procedures and approximately 600 open heart surgeries. But the real benefits of this investment have only begun. Its results in lives saved and enhanced are rising -- not only in numbers of successful medical outcomes but quality of life.

The Heart Center's 2004 certificate of need agreement set several benchmarks, using the best available information at that time. The Heart Center has met every condition except the volume target for open heart surgeries.

- As required by the agreement, the Heart Center has established a relationship with an experienced partner in providing cardiac services -- the University of Connecticut Medical Center and John Dempsey Hospital. Cardiac surgeons and perfusionists who work at John Dempsey Hospital are provided under contract to the Heart Center. The Chief Cardiac

Surgeon at the Heart Center is the Chief of Cardiothoracic Surgery for John Dempsey Hospital. The University of Connecticut Medical Center and John Dempsey Hospital regularly perform oversight and hold case conferences with the Heart Center.

- As required under the agreement with OHCA, the Heart Center regularly submits data to the databases operated by the Society of Thoracic Surgeons Database and the American College of Cardiology. The Heart Center's outcomes meet or exceed the criteria and standards of these nationally recognized organizations.

- In each year since 2004, the Heart Center has exceeded the angioplasty target numbers -- in the past year by more than 50%.

Even if the Heart Center has not reached the overall volume targets for open heart surgery, the outcomes of its surgeries have met national standards. OHCA should consider that nationally and in Connecticut, the number of open heart surgeries has declined since 2004. The volume targets set in the 2004 agreement may have been reasonable at that time. Although there was already evidence that the number of open heart surgeries was starting to decline at some hospitals, neither OHCA nor the participating hospitals could have foreseen the dramatic 24% decline statewide in open heart surgeries since 2003. Moreover, for the past three years, the combined number of open heart surgeries at St. Mary's Hospital and Waterbury Hospital has grown steadily -- countering the statewide downward trend.

The Heart Center's request is for an extension of 6 months to provide it the opportunity to fully make the case for permanently establishing this critically important health care service. In light of the resources, funding and ongoing services already committed -- and forthcoming in the future -- OHCA should grant this extension of time. The harm of shutting down the program far outweighs any considerations to the contrary.

I urge OHCA to follow its usual prudent practice of hearing all the evidence, carefully and thoroughly assessing the issues, and making a decision that will best serve the health care needs of Waterbury's citizens.

Subject: Heart Center

Cristine,
The people in this area would appreciate very much if you would allow the Heart Center to remain opened. You don't seem to understand how much it is really needed in this area. I personally have a heart problem and I do not want to be transported miles and miles to have my surgery done. What if we were having an ice storm or a snowstorm, after all we do live in New England. I want to be able to have my surgery done the local hospital. Through my experience I have seen a few people transported and have died via the transport. That is such a loss to family. Our Heart surgeons do keep their skills up because they do surgery Waterbury, St Mary's, New Haven, Bridgeport and Hartford. So that shouldn't be the issue. My heart specialist goes all over the stat, as does everyone of his Co workers at Cardiology Associates. Please not take the Heart Center away from the Waterbury area. We service a large area. I am a grandmother and I want to live long enough to see my grandchildren grow up and I do want to dance at their weddings.
Thank you,

Nancy Norton

August 22, 2008

Dear Governor Rell,

I am an only child of an elderly couple in Waterbury. They have chosen to stay in Waterbury and because I have out of town, it is important they can access healthcare in the city.

Three years ago before the Heart Center of Greater Waterbury opened, my father needed to have open heart surgery. Due to diabetes, he had a ten week stay. My mother was not well enough to travel to New Haven to visit so did not see her husband for almost three months. As the only child I traveled daily-sometimes twice a day- because he had no visitors.

No one from Waterbury at their age was going to drive on 91.

My father's surgery was elective because my wife is a nurse and keeps an eye on them. Many do not have the luxury to have a family healthcare person.

My father in an emergency would not make it to New Haven;.The traffic in Waterbury is awful as you know. I have had friends who received care at the Heart Center of greater Waterbury and are pleased with their care.

They have had good outcomes. People can not be driving to the other side of the state. They have a wellness program and open heart surgeries are decreasing across the country but if another surgery is needed, these surgeons are well qualified and the surgery should be available in the 4th largest city in our state.

Please send your support in this matter

Subject: Waterbury

Dear Governor Rell,

I have been a citizen of Conn. and the city of Waterbury all my 67 years. I have worked , paid all my taxes, raised my children to be good responsible adults and have done everything the middle class of this state have been doing for generations. In all that time, and after never missing a chance to vote, this is my first letter to a legislator.

All that being said ,that your commissioner is trying to take our heart center away is outrageous. My 40 year old son.with a 3 year old would not be alive if not for that center. He could not have made it to New Haven or Bridgeport. After having chest pains he was in surgery and a stint was placed in his arteries in 30 minutes . Try to get to those other cities in that time. I could care less about the hospitals or Doctors of New Haven and Bridgeport loosing money or the politics involved in this decision I care only for mine. This year I was treated successfully at the Leever Cancer Center in Middlebury and hope that the people of that outlying town can now take advantage of what we have to offer with our Heart Center. Please step up and help us. Yes we have been daubed a second class town for the outrage things our politicians have done but we are good people that deserve the best just like everyone else. Thank you for allowing me to vent even though I know deep in my heart that you will never see this letter or anyone else in your office will pay one bit of attention to it.

Subject: Heart Center in Waterbury

Dear Governor Rell:

I am writing to you to seek your intervention in the decision to close the Heart Center in Waterbury. I am a person who personally had to use this center. I live in Waterbury and am handicapped. I state this because long distance travel is difficult for me. I would not be able to follow up on service rendered in another city.

I watched the Commissioner Ms. Voghel on the news one evening state that the "quota" of services was not met, and this would be the basis for the decision to be made. I hope not. "quota" what is the number of lives saved equal to the need for compassion and care of one person. I hope she and her family never have to endure the feeling of helplessness that a person feels when they give their body to health officials to save. I can tell you from experience it is not something I wish to worry about again. I know that you have had occasion for this feeling in both your husband and your own care. You live near to Danbury and did not have to travel far for your care. Please give us the same consideration to be close to our families in times of need. I urge you to tell Commissioner Voghel that people do not come in quotas and she should take all members of a family and the dynamics that each has into consideration especially when she speaks in the public forum we are not numbers but HUMANS with feelings and fears of our mortality.

Respectfully;

Phyllis M. Coviello

Re: Docket 08-30167 & 08-31202

Governor Rell,

II am in great turmoil over this issue of the possible closure of the Heart Center of Greater Waterbury.

We have met in the past, my son was a returning Marine with 1/25 Charlie Co out of Plainville Ct. At his homecoming you were there along with the other politicians of the state to welcome them back. You held my niece and I have pictures of you doing so, to think her parents grandparents in need of a cardiac procedure may not survive and be there for her. To think my son arrived home safely after a year in this war zone, being shot at and his life threatened on a daily basis, but should he need a cardiac procedure in a hurry he may not survive.

As a tax payer, resident of the greater Waterbury area, patient, family member and nurse, I am extremely distressed over the direction this has gone. Closure of the Heart Center of Greater Waterbury will only lead to unnecessary deaths and risk of death to many citizens of this community. The travel time and traffic issues do not allow for meeting the standards of care for treatment times. Patients will wait unnecessarily as their capable doctors try to locate a hospital that can accommodate them. I am quite familiar with the process and have had the misfortune of being the Nurse on board ambulances responsible for the patient for transports of this nature in years past. My family members have been in the situation of having to be transported. I have had the misfortune of taking care of patients who were too unstable to transport and who may have been saved had this service been available to them. It is ridiculous that this state of the art, Quality service, is going to be taken away from the 400,000+ citizens of this area unless you do your part to stop it. Please consider how you would feel about your family or friends being in this area and needing these services!.

Please give serious consideration to this decision as the ramifications will be too great, please do the right thing and help to continue to save lives.

Thank You for your consideration.

Dear Ms. Kennedy:

Thank you for your correspondence to Governor Rell regarding the Greater Waterbury Heart Center. The Governor truly appreciates the time you took to write to her office. Please accept this response on her behalf.

Governor Rell believes that it is extremely important for citizens to voice their opinions and comments to their elected officials. As the matter you wrote about is overseen by the Office of Health Care Access, Governor Rell has asked that I forward your concerns to Commissioner Cristine Vogel's office to review and respond to your directly. If you do not receive a response from the Office of Health Care Access within two weeks please feel free to contact the Commissioner's office directly at (860) 418-7002. Due to the need to research and investigate certain matters it is possible that you will receive a response within four weeks. Should the need arise please feel free to contact the Governor's office at (860) 566-4840 or 1-800-406-1527.

Thank you again for sharing your comments and concerns with Governor Rell. Please do not hesitate to contact our office in the future, should the need arise.

Sincerely,

Jeff Litke
Staff Assistant
Office of Governor M. Jodi Rell

[recipient address was inserted here]

Dear [recipient name was inserted here],

Dear Gov. Rell,
As a practicing Waterbury cardiologist for 36 years, I am writing in support of the continuance of the Waterbury Heart Center. I have full knowledge of what cardiac patients had to do in Waterbury before the heart center. Delays for emergency treatment were substantial ranging from 2 to 12 hours. Many lives were lost which would be saved today. It is unbelievable to me that Waterbury could be abandoned to once again become

the only major urban center in Connecticut without modern emergency cardiac care. There is no medical justification for this. The center has easily surpassed the angioplasty guidelines. Surgery guidelines are not met, but they are outmoded. The frequency of cardiac surgery has dropped severely nationwide and I am told that other fully functioning and successful cardiac centers in Connecticut also no longer meet these guidelines. What's important is patient lives and health. There is no question that the Waterbury Cardiac Center is a major boon to Waterbury and needs to be continued. Bureaucratic guidelines should not be put before patients' welfare.

Sincerely,

Joel A Sherman MD

Hartford, Conn. 06134

Dear Commissioner Vogel:

As the Town of Southbury's First Selectman, I am writing in support of the continuation for the Heart Center of Greater Waterbury on a permanent basis.

Southbury has the largest condominium complex in the state for those over the age of 65. The Town also has several assisted life care facilities providing care to a growing senior population. Currently, over twenty-six percent (26%) of Southbury's population is in the over 65 age cohort. U.S. Census Bureau projections indicate that by the year 2020, over forty percent (40%) of our population may be in this age cohort.

This segment of our population often need quick, accessible medical care, including advanced cardiac care. Interstate 84 provides easy access to hospitals in Waterbury, the destination of choice for many of our residents. Many of our seniors utilize public and private bus service to visit their physicians for chronic medical conditions. The town has been working to develop senior transportation collaboratives to reduce transportation as a barrier to quality health care. Additionally, many of our seniors have build strong patient relationships with doctors associated with Waterbury hospitals, are resistant to change and may find it very unsettling if they must go out of their "comfort zones".

During a cardiac emergency, time equals heart muscle. Even non-emergency angioplasty performed "out of existing transportation systems", can cause undue stress on the patient and other family members, who may not have easy access to alternate forms of transportation to other areas of the state.

Thank you for your consideration. If you have any questions or comments concerning this correspondence, please feel free to contact me.

Very truly yours,

Mark A.R. Cooper
First Selectman

Ms. Christine A. Vogel
Commissioner
Office of Health Care Access
410 Capitol Ave., MS #13HCA
Hartford, CT 06134

Dear Commissioner:

On behalf of the Council of Governments of the Central Naugatuck Valley (COGCNV), I am writing in support of the continuation of the Heart Center of Greater Waterbury on a permanent basis.

The Council of Governments represents the thirteen municipalities in the greater Waterbury region: Beacon Falls, Bethlehem, Cheshire, Middlebury, Naugatuck, Oxford, Prospect, Southbury, Thomaston, Waterbury, Watertown, Wolcott, and Woodbury. Our organization and its predecessor, the Central Naugatuck Valley Regional Planning Agency, have been in existence since 1960 to discuss and address municipal and regional issues of concern in transportation, land use, economic development, solid waste, water supply, open space, emergency response, and other issues related to the area's physical development.

Four years ago, when COG members learned that the two Waterbury hospitals were planning to submit a joint application to the Office of Health Care Access, COG voted unanimously to support the proposed cardiac care center, and many members testified in support of it. There was a similar response at this year's Heart Center rally in Waterbury.

As the municipal leadership representing Central Naugatuck Valley communities, we have some very strong reasons for supporting the heart center:

- The region is one of the state's major metropolitan regions.
- Waterbury is the fifth largest city in Connecticut.
- The hospitals are vital medical facilities for all thirteen municipalities of the region and beyond.
- The heart center greatly enhances the region's desirability as a place to live and to do business.
- And finally, travel times for treatment if cardiac care is not available in the region.

Given the critical importance of timely intervention with heart attacks and the region's population size, the Council members were taken aback by the distances that residents of the Greater Waterbury region were traveling for advanced cardiac treatment, prior to the establishment of the center.

If you drive on major roads in the Waterbury area with any frequency, you know that traffic delays can be severe during peak commuting hours and holiday periods. Traffic accidents and weather conditions only worsen the situation.

Transportation planning is an important function of COGCNV, and so we are very conscious of existing and projected traffic choke points: I-84 in eastern Waterbury and projected for the western half, the Route 8/I-84 interchange in Waterbury (the "mixmaster"), and bottlenecks on state highways between Waterbury and New Haven and along Route 8 in the lower Naugatuck Valley heading towards Bridgeport.

In its review of the Heart Center's request for an extension and for permanent status, we strongly encourage the Office of Health Care Access to examine the real-time travel scenarios for cardiac patients in the greater Waterbury area, if they had to be transported for cardiac care outside the region.

Sincerely,

Peter Dorpalen
Executive Director

Subject: HEART CENTER of Greater Waterbury

Before the opening of the HEART CENTER of Greater Waterbury anyone who lived in surrounding towns such as Naugatuck, Prospect, Beacon Falls, Thomaston or Watertown who needed urgent cardiology care had to endure at least a 30 minute ambulance ride to a hospital out of the area such as Bridgeport, Hartford or New Haven. This long tumultuous ride often aggravated the condition of the body and too frequently resulted in death.

The Heart Center has performed miracles on area people and saved lives that otherwise would have ended if people had to travel out of the area.

The Heart Center at Waterbury has saved people by performing

angioplasties instead of bypass surgery but has miraculously saved the lives of over 600 people by performing open heart surgery.

I was one of those 600+ people who had open heart surgery in May of 2006. I had 5 blockages, one of which was 100 per cent and the others 99 and 95 per cent. Would you say that's close to death?

Dr. Paul Preissler performed my open heart/bypass surgery followed by the best care you could ask for by the staff at the Waterbury Hospital Heart Center. They saved me. Please save the Heart Center.

HEART CENTER
of Greater Waterbury

August 2008

Dear Commissioner Vogel:

As a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare, I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital.

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that ***every heart matters!***

Sincerely,

Signature Susan Grimes

August 22, 2008

Office of the Governor
State Capitol
210 Capitol Avenue
Hartford, CT 06106

Dear Governor Rell:

I am writing to you to encourage you to support the life saving efforts of the Heart Center of Greater Waterbury.

The state's Office of Health Care Access (OHCA) is looking to close our Heart Center based on the fact that the Hospital has failed to meet all three of the requirements originally imposed. The one requirement that was not met was the fact that we have not performed as many open heart surgeries as requested and therefore, **OHCA is concerned that the staff may not be as proficient as they should be to perform these studies.** Although I applaud OHCA's concern for making sure that the staff are qualified to perform these procedures, I'm disturbed to hear that they would consider closing the center down as an alternative which would result in the deaths of many patients as valuable time would be lost transporting patients to Hartford or Bridgeport Hospitals to obtain this life-saving procedure which should be made available to them right in their own backyard. The issue here is not about the quality of care and proficiency as the Hospital has demonstrated that they are qualified, have saved thousands of lives, and these same professionals also perform these same procedures in Hartford as well. If the procedures performed at Hartford were added to the procedures performed at Waterbury Hospital (WHHC), I would imagine that we've exceeded our quota and therefore, the staff are more than proficient in performing these procedures therefore, this should alleviate OHCA's concern for proficiency.

Perhaps a better question would be "How many Greater Waterbury residents have died in route to a heart center before the Heart Center of Greater Waterbury was instituted?"

Another thing to consider is that Hospitals should be applauded for being able to save lives using less invasive procedures such as angioplastaies, whenever possible, so that 1) the patient is spared added pain and longer recovery and 2) the Hospital and State save money; sounds like a WIN, WIN situation to me. The use of angioplasties has averted the necessity for performing many open heart surgeries; this should be considered a good thing. I'm told our Hospital has exceeded the number required for performing angioplasties.

Also, every life counts. If this hospital is capable of saving even one life (even though its already proven to have saved thousands), then isn't it worth it to keep the Center open? What if that life saved was yours or a loving family member's?

This Center is near and dear to my heart because several friends of mine and most importantly, my father have been privileged to have received exceptional care at this Center first hand. I was so grateful at the speed in which my father received care. He not only went in to see whether or not he had a blockage but when that blockage was discovered, they performed his life-saving procedure right then and there and he was resting comfortably in his room shortly thereafter. He often raves to me about how wonderful the staff and doctors treated him and how grateful he was that this Center is nearby otherwise who knows if he would have been fortunate to reach the next available heart center and whether or not his life would have been spared.

I implore you, please do your best to keep this Center open. I know, through your own personal experience with breast cancer, that you know how valuable these life saving treatment centers are to us. There's no doubt about it; when time is of the essence, having these Centers close to home saves lives.

Sincerely,

Giulietta Nave

August 22, 2008

Dear Governor Rell,

I am an only child of an elderly couple in Waterbury. They have chosen to stay in Waterbury and because I have out of town, it is important they can access healthcare in the city.

Three years ago before the Heart Center of Greater Waterbury opened, my father needed to have open heart surgery. Due to diabetes, he had a ten week stay. My mother was not well enough to travel to New Haven to visit so did not see her husband for almost three months. As the only child I traveled daily-sometimes twice a day- because he had no visitors.

No one from Waterbury at their age was going to drive on 91.

My father's surgery was elective because my wife is a nurse and keeps an eye on them. Many do not have the luxury to have a family healthcare person.

My father in an emergency would not make it to New Haven;.The traffic in Waterbury is awful as you know. I have had friends who received care at the Heart Center of greater Waterbury and are pleased with their care.

They have had good outcomes. People can not be driving to the other side of the state. They have a wellness program and open heart surgeries are decreasing across the country but if another surgery is needed, these surgeons are well qualified and the surgery should be available in the 4th largest city in our state.

Please send your support in this matter

Joseph Micalizzi

Dear Governor Rell, 8-21-2008

I am a resident of Waterbury, Connecticut and have lived here all my life. I am 72 years old and my husband is 72 years old.

About 5 years ago he had a heart attack in the late evening and was taken to St. Mary's hospital. He had an angiogram the following day and then Dr. Kelly told me that he had one artery in the heart that was completely blocked and another that had an aneurysm in it. I was also told he would need to go to Bridgeport Hospital for angioplast and possibly open heart surgery.

I cannot tell you how scary and stressful this time was for me and my family. The Campion Ambulance Paramedics and EMT were a great comfort to both of us. The ride was longer than 30 minutes due to traffic and some congestion in Bridgeport itself. Then you are in a hospital that you are not familiar with, and that alone is very stressful, and may I add that I am a Registered Nurse and know how important it is to be stress free at this time. Especially right before surgery.

Please, Please do everything you can to keep the Heart Center of Greater Waterbury open. Please do not let it be closed as it has saved many lives here in Waterbury and surrounding areas and has limited the amount of stress that a family has to go thru especially during a very stressful time itself.

Thank for you consideration
Sally Murray

August 19, 2008

Commissioner Vogel
Office of Health Care Access
State of Connecticut
410 Capitol Ave.
Hartford, Ct.

Dear Commisssioner Vogel,

I am writing this letter because I've never felt so strongly about a community issue before.

I am 59 years old. In 2006 I suffered a silent heart attack. Unbeknownst to me, I had a coronary artery with 100% blockage. I underwent a successful angioplasty and stent placement at the Heart Center of Greater Waterbury at Waterbury Hospital and participated in their cardiac rehab program. Today, I am feeling well due to the professional expertise and care I received during my brief stay at the hospital and the encouragement and positive atmosphere at the rehab center.

I cannot comprehend giving a community this advanced care facility to potentially save hundreds of lives in a given year and to ease the burden such illnesses can place on the patients' families, then taking it away, leaving us to take our chances in life-threatening situations.

Please consider the humanity of it first. Let us keep our Heart Center and all the outreach programs it has afforded Waterbury and the surrounding towns. Just maybe the reason the "numbers were down" was because the ancillary staff of the Heart Center did its job so well in providing cardiac education to the public??? Or...perhaps the mere proximity of the Heart Center made it possible to save lives with lesser strategies??? I feel credit must be given to the doctors and staff of the Heart Center for not jumping into open heart surgeries just to meet a quota.

The Heart Center has become an integral part of our city now. People here depend on it and its services. It's almost two-and-a -half years since my heart problem began, and I can't imagine not attending my monthly support group meeting. I know I (and my family) live more secure in the knowledge that should something happen again,I wouldn't have to be shuttled off to another city at a critical point in my medical care. This peace of mind is priceless, and you know they say

stress plays a huge part in heart health!!!

Very truly yours,

Mary Ellen Shea

The Honorable M. Jodi Rell
Governor of Connecticut
210 Capitol Avenue
Hartford, CT 06106

Dear Governor Rell:

Dear Gov. Rell,
As a practicing Waterbury cardiologist for 36 years, I am writing in support of the continuance of the Waterbury Heart Center. I have full knowledge of what cardiac patients had to do in Waterbury before the heart center. Delays for emergency treatment were substantial ranging from 2 to 12 hours. Many lives were lost which would be saved today. It is unbelievable to me that Waterbury could be abandoned to once again become the only major urban center in Connecticut without modern emergency cardiac care. There is no medical justification for this. The center has easily surpassed the angioplasty guidelines. Surgery guidelines are not met, but they are outmoded. The frequency of cardiac surgery has dropped severely nationwide and I am told that other fully functioning and successful cardiac centers in Connecticut also no longer meet these guidelines. What's important is patient lives and health. There is no question that the Waterbury Cardiac Center is a major boon to Waterbury and needs to be continued. Bureaucratic guidelines should not be put before patients' welfare.

Sincerely,

Joel A Sherman MD

2008 AUG 7 A 11:45
CONNECTICUT OFFICE OF
HEALTH CARE ACCESS

Office of The Attorney General
State of Connecticut

TESTIMONY OF
ATTORNEY GENERAL RICHARD BLUMENTHAL
BEFORE THE OFFICE OF HEALTH CARE ACCESS
AUGUST 29, 2008

I appreciate the opportunity to strongly support the application for an extension of the operations deadline for the Heart Center of Greater Waterbury, a joint cardiac program operated by St. Mary's Hospital, Waterbury Hospital and the University of Connecticut Health Center.

I have long supported and worked to achieve this program for effective lifesaving cardiac care, and I pledge a continued fight for it. The time required to transport patients needing immediate hospital heart care can be literally the difference between life and death. Waterbury area residents deserve no less than the highly skilled and caring professionals and Heart Center programs provided by these hospitals. This heart care program should be made permanent under the extraordinary professional leadership team at both hospitals. If Waterbury residents become ill -- especially in a heart threatening emergency -- they should be treated in Waterbury.

In short, citizens of the Waterbury area need and deserve this vital cardiac care service, which literally saves lives. The Office of Health Care Access (OHCA) should grant the application for extension of time to carefully reach the right result.

The Heart Center of Greater Waterbury has already achieved its paramount goal -- providing residents of the 18 towns in the Greater Waterbury region with superb, world class cardiac care. Heart patients receive timely and seamless care in one facility from emergency room care to recovery. As OHCA acknowledged in its approval of the 2004 agreement, patients whose time of arrival to angioplasty exceeds two hours -- known as door to balloon time -- have a 40-60 percent increased risk of mortality.

This program's life saving benefits have been immeasurable and miraculous -- as testimony from patients as well as professionals irrefutably establishes.

The hospitals have committed over $7 million -- providing critical cardiac care to over 2400 patients, including the provision of more than 1800 angioplasty procedures and approximately 600 open heart surgeries. But the real benefits of this investment have only begun. Its results in lives saved and enhanced are rising -- not only in numbers of successful medical outcomes but quality of life.

The Heart Center's 2004 certificate of need agreement set several benchmarks, using the best available information at that time. The Heart Center has met every condition except the volume target for open heart surgeries.

- As required by the agreement, the Heart Center has established a relationship with an experienced partner in providing cardiac services -- the University of Connecticut Medical Center and John Dempsey Hospital. Cardiac surgeons and perfusionists who work at John Dempsey Hospital are provided under contract to the Heart Center. The Chief Cardiac

Surgeon at the Heart Center is the Chief of Cardiothoracic Surgery for John Dempsey Hospital. The University of Connecticut Medical Center and John Dempsey Hospital regularly perform oversight and hold case conferences with the Heart Center.

- As required under the agreement with OHCA, the Heart Center regularly submits data to the databases operated by the Society of Thoracic Surgeons Database and the American College of Cardiology. The Heart Center's outcomes meet or exceed the criteria and standards of these nationally recognized organizations.

- In each year since 2004, the Heart Center has exceeded the angioplasty target numbers -- in the past year by more than 50%.

Even if the Heart Center has not reached the overall volume targets for open heart surgery, the outcomes of its surgeries have met national standards. OHCA should consider that nationally and in Connecticut, the number of open heart surgeries has declined since 2004. The volume targets set in the 2004 agreement may have been reasonable at that time. Although there was already evidence that the number of open heart surgeries was starting to decline at some hospitals, neither OHCA nor the participating hospitals could have foreseen the dramatic 24% decline statewide in open heart surgeries since 2003. Moreover, for the past three years, the combined number of open heart surgeries at St. Mary's Hospital and Waterbury Hospital has grown steadily -- countering the statewide downward trend.

The Heart Center's request is for an extension of 6 months to provide it the opportunity to fully make the case for permanently establishing this critically important health care service. In light of the resources, funding and ongoing services already committed -- and forthcoming in the future -- OHCA should grant this extension of time. The harm of shutting down the program far outweighs any considerations to the contrary.

I urge OHCA to follow its usual prudent practice of hearing all the evidence, carefully and thoroughly assessing the issues, and making a decision that will best serve the health care needs of Waterbury's citizens.

COUNCIL OF GOVERNMENTS CENTRAL NAUGATUCK VALLEY

August 21, 2008

Ms. Christine A. Vogel
Commissioner
Office of Health Care Access
410 Capitol Ave., MS #13HCA
Hartford, CT 06134

Dear Commissioner:

On behalf of the Council of Governments of the Central Naugatuck Valley (COGCNV), I am writing in support of the continuation of the Heart Center of Greater Waterbury on a permanent basis.

The Council of Governments represents the thirteen municipalities in the greater Waterbury region: Beacon Falls, Bethlehem, Cheshire, Middlebury, Naugatuck, Oxford, Prospect, Southbury, Thomaston, Waterbury, Watertown, Wolcott, and Woodbury. Our organization and its predecessor, the Central Naugatuck Valley Regional Planning Agency, have been in existence since 1960 to discuss and address municipal and regional issues of concern in transportation, land use, economic development, solid waste, water supply, open space, emergency response, and other issues related to the area's physical development.

Four years ago, when COG members learned that the two Waterbury hospitals were planning to submit a joint application to the Office of Health Care Access, COG voted unanimously to support the proposed cardiac care center, and many members testified in support of it. There was a similar response at this year's Heart Center rally in Waterbury.

As the municipal leadership representing Central Naugatuck Valley communities, we have some very strong reasons for supporting the heart center:

- The region is one of the state's major metropolitan regions.
- Waterbury is the fifth largest city in Connecticut.
- The hospitals are vital medical facilities for all thirteen municipalities of the region and beyond.
- The heart center greatly enhances the region's desirability as a place to live and to do business.
- And finally, travel times for treatment if cardiac care is not available in the region.

Given the critical importance of timely intervention with heart attacks and the region's population size, the Council members were taken aback by the distances that residents of the Greater Waterbury region were traveling for advanced cardiac treatment, prior to the establishment of the center.

If you drive on major roads in the Waterbury area with any frequency, you know that traffic delays can be severe during peak commuting hours and holiday periods. Traffic accidents and weather conditions only worsen the situation.

Transportation planning is an important function of COGCNV, and so we are very conscious of existing and projected traffic choke points: I-84 in eastern Waterbury and projected for the western half, the Route 8/I-84 interchange in Waterbury (the "mixmaster"), and bottlenecks on state highways between Waterbury and New Haven and along Route 8 in the lower Naugatuck Valley heading towards Bridgeport.

In its review of the Heart Center's request for an extension and for permanent status, we strongly encourage the Office of Health Care Access to examine the real-time travel scenarios for cardiac patients in the greater Waterbury area, if they had to be transported for cardiac care outside the region.

Sincerely,

Peter Dorpalen
Executive Director

RECEIVED
2008 AUG 27 A 11:46
CONNECTICUT OFFICE OF
HEALTH CARE ACCESS

August 2008

Dear Commissioner Vogel:

As a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare, I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital.

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that every heart matters!

Sincerely,

CONNECTICUT OFFICE OF
HEALTH CARE ACCESS

August 18, 2008

Dear Commissioner Vogel:

I am a second-generation heart patient at Waterbury St. Mary's Hospital. My dad who was first generation had had a scheduled triple by pass at Hospital of St. Raphael's New Haven in 1980. Thereafter throughout the years he had scheduled and emergency angioplasty at St Vincent's Hospital in Bridgeport. Dad's last procedure was not scheduled but an emergency by pass at St Raphael but since St Mary's or Waterbury Hospital did not have the Heart Center he was transported to St Raphael's after he was stabled enough at St. Mary's. That Friday he went to St. Raphael's he was the LAST scheduled patient of day. At first, we were notified he made it through the surgery. Shortly, thereafter we were informed "wrong patient need to come down immediately." We flew down route 69 during a heavy thunderstorm that evening only to be informed he passed away when they tried to start his heart. In my heart, I have always felt if the surgery were done in Waterbury, my dad would be alive today.

Presently I am facing my second bypass surgery within the next thirty days. The first surgery was a scheduled left main artery bypass at Yale in 2002. Since then I have had angioplasty with 3 stents July of 2006 and again April 2008 with two more stents all done right here at Heart Center of Greater Waterbury. Because of the level of care I received at Waterbury, I prefer Waterbury Hospital to Yale. I hope that I will not have to schedule my upcoming surgery other then Waterbury. This would only cause more stress then necessary on my relatives and me.

In closing I want to express that if my dad's surgery in 1995 was done in Waterbury, he might be alive today. If our heart center should be closed, I would be left feeling that patients from Waterbury area would be placed at a disadvantage. Our lives are no les valuable than those living in New Haven and Hartford. Thank you for your attention and support, hopefully OHCA will do the right thing by granting 'permanent status" to the Heart Center of Greater Waterbury.

Respectfully,

Antoinette Forino

Heart Center: —

A few years ago I suffered a heart attack and was rushed to St. Mary's Hospital. I woke up with a six-way bypass.

Then, a couple of years later, my husband needed angioplasty, also here at St. Mary's.

We are both alive and kicking now thanks to the heart center. We realy needed it. Please don't take it away from Waterbury. We might need it again, and others might need it also!

Commissioner Vogel

I'm writing to ask for your support for the Greater Waterbury Heart Center. My "significant other" had bypass surgery at Waterbury Hospital in 2006. The surgery was a sucess and the whole experience for her, her family and friends went smoothly a large part due to the locality of the Heart Center.

The surgery, recovery, and follow-up therapy was first class and its reassuring to know its not 45 min away in another part of the state.

Everybody loves a winner and The Heart Center of Greater Waterbury is a proven Winner. 300,000+ people in Greater Waterbury deserve the Heart Center and your support.

For Those who experience over.

Heart Attack symptons, time and travel could be the critical factor between life and death.

Sincerely

Charles T. Noonan

Dear Ms. Donnelly:

Thank you for your correspondence to Governor Rell regarding the Greater Waterbury Health Center. The Governor truly appreciates the time you took to write to her office. Please accept this response on her behalf.

Governor Rell believes that it is extremely important for citizens to voice their opinions and comments to their elected officials. As the matter you wrote about is overseen by the Office of Health Care Access, Governor Rell has asked that I forward your concerns to Commissioner Cristine Vogel's office to review and respond to your directly. If you do not receive a response from the Office of Health Care Access within two weeks please feel free to contact the Commissioner's office directly at (860) 418-7002. Due to the need to research and investigate certain matters it is possible that you will receive a response within four weeks. Should the need arise please feel free to contact the Governor's office at (860) 566-4840 or 1-800-406-1527.

Thank you again for sharing your comments and concerns with Governor Rell. Please do not hesitate to contact our office in the future, should the need arise.

To: Governor Rell
Subject: Greater Waterbury Heart Center

Dear Governor Rell,

I wish to share with you my presentation at yesterday's Greater Waterbury Heart Center rally. As the Chairman of Emergency Medicine at Waterbury Hospital, my words express my concern should the Heart Center be closed.

Thank you for your time.

Respectfully,

Christopher J. Michos, MD, FACEP

Chairman, Emergency Medicine

Waterbury Hospital

Waterbury, CT 06721

Heart Center Presentation, August 20, 2008

I'm sure many of you have seen what an Emergency Department is like whether from personal experience or after watching the many ER TV shows. We move fast because we have to. As we say, when a heart attack hits the door of the ER, the longer we wait to treat the patient, the more the heart is damaged. In some cases, it can cost a life. With our Heart Center of Greater Waterbury, when the radio call comes to the department from our outstanding paramedics who are well trained to assess chest pain patients or for those patients who actually walk into the Emergency Department, an experienced group of Emergency Department physicians, cardiologists, nurses and techs spring into action to provide life saving treatment. It's like a well trained Olympic athlete running an sprint, if you so much as blink, you might miss seeing the patient whisked to the catherization lab for life saving treatment. This becomes our race to save a life. I have no doubt that in the three years since the Heart Center opened, we have saved the lives of many, many patients who might not have made it if they had to spend hours being transported out of Waterbury to another hospital. Many of them might not have been able to wait another five minutes.

So I ask, why would anyone want to close the Heart Center? Is it about numbers? Well it should be about quality, not quantity. If the Center closes, what am I going to say to our critical heart patients when they arrive in the Emergency Department because we are the closest hospital? Instead of providing this highest level of care, instead of rushing that patient to the catherization room, I'm going to have to tell that patient we are going to find you another hospital and delay your care. And by doing so, we are going to place that person at great risk. To me, this is a public health crisis for the city of Waterbury and the surrounding communities. The Greater Waterbury Heart Center is all about providing life saving treatment. And from someone who knows first-hand about the value of time, closing the Heart Center and sending patients elsewhere would be a step backwards for the patients we serve and I am not willing to accept that risk. Neither should the citizens of

Waterbury. Right now, we do our job well and we are saving lives. All I want is the best care for my patients, the care they deserve.

Thank you.

As a long time nurse and citizen of greater Waterbury,I ask you for your support for this program.This area is urban.Lives will be lost trying to get to Bridgeport. Elderly do not have family or their MDs close when they go to New Haven. Waterbury is a large city and deserves and needs this program. The heart center has had great outcomes and has an outreach program to encourage good heart health living The people of greater Waterbury are in support of this program and as our leader you have worked hard to have healthcare accessible for the people. Please be there for the people of greater Waterbury. Their lives depend on it.
thank you Sandra Micalizzi

Good Afternoon, please accept this message from Glendale staff, current cardiac customers and past cardiac customers. Glendale Center designed a program to specifically met the needs of the Waterbury Heart Center. Along with our Cardiology Consultant, Dr Borkwoski, we specifically trained and customized a program to help rehab cardaic patients back home. We are a preferred provider in many ways due to our staff training and competence, specific equipment we provide (EKGs, Bladder Scans, AEDs, etc), patient and family training techniques, etc. Please reconsider and NOT CLOSE the Waterbury Heart Center. The services that they provide will also be a great lose to the business they are helping us develop to retain quality RNs, up to date equipment purchased/being purchased and the outcomes obviously that are resulting with the quality care given. Do not hesitate to contact me or our Cardiac Program Manager, Judy Sul, if you need more information. 203 723 1456

Please keep the Heart Center of Greater Waterbury - open!

The HEART CENTER of Greater Waterbury serves a population of 300,000 people. It serves not just Waterbury but also surrounding towns such as Naugatuck, Beacon Falls, Prospect, Thomaston and Watertown.

Before the Heart Center opened people with urgent needs had to travel out of this area to Bridgeport, Hartford or New Haven and had to endure an ambulance ride that took 30-60 minutes before arrival and care. Some people died before they got there. More will die if the Heart Center is closed!

The Heart Center has performed over 1,800 Angioplasties and over 600 open heart surgeries.

How does one arrive at a state-assigned target for surgery volume? The numbers are ridiculous!

The Heart Center is NOT into doing unnecessary surgeries! If they were driven to achieve the state assigned target of 950 they could have done half the 1800+ angioplasties as open heart surgeries instead of the 600 open heart surgeries.

But the Heart Center aims to save lives and avoid preventable deaths.

The Heart Center of Greater Waterbury saved my life by doing open heart surgery. I had 5 blockages and one of them was 100%. I would not have had such a great recovery without the skill and care of the Heart Center.

Keep the HEART CENTER open!

Respectfully,
Virginia Donnelly

HEART CENTER
of Greater Waterbury

RECEIVED
2008 AUG 28 A 8:12
CONNECTICUT OFFICE OF
HEALTH CARE ACCESS

August 2008

Dear Commissioner Vogel:

As a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare, I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital.

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that *every heart matters!*

Sincerely,

Signature Elba T. Armstrong

In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that *every heart matters!*

Dear Commissioner Vogel:

As a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare, I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital.

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

A Request to modify a Certificate of Need issued under Docket Number 03-30167-CON, the Primary and Elective Angioplasty and Open-Heart Surgery Programs at St. Mary's Hospital and at The Waterbury Hospital

Dear Selectman Cooper:

On August 26 2008, the Office of Health Care Access ("OHCA") received your letter concerning Docket 08-30167-MD2, the petition by Saint Mary's Hospital, Waterbury Hospital, and John Dempsey Hospital of the University of Connecticut Health Center to modify a Certificate of Need issued under Docket Number 03-30167-CON, the primary and elective angioplasty and open-heart surgery programs at Saint Mary's Hospital and at The Waterbury Hospital.

OHCA appreciates your comments. Your letter has been made part of the formal record of the application. Please be advised once a decision has been rendered it will be posted and available on OHCA's website at http:// www.ct.gov/ohca.

If you have any further concerns or questions, please contact me at OHCA at (860) 418-7001.

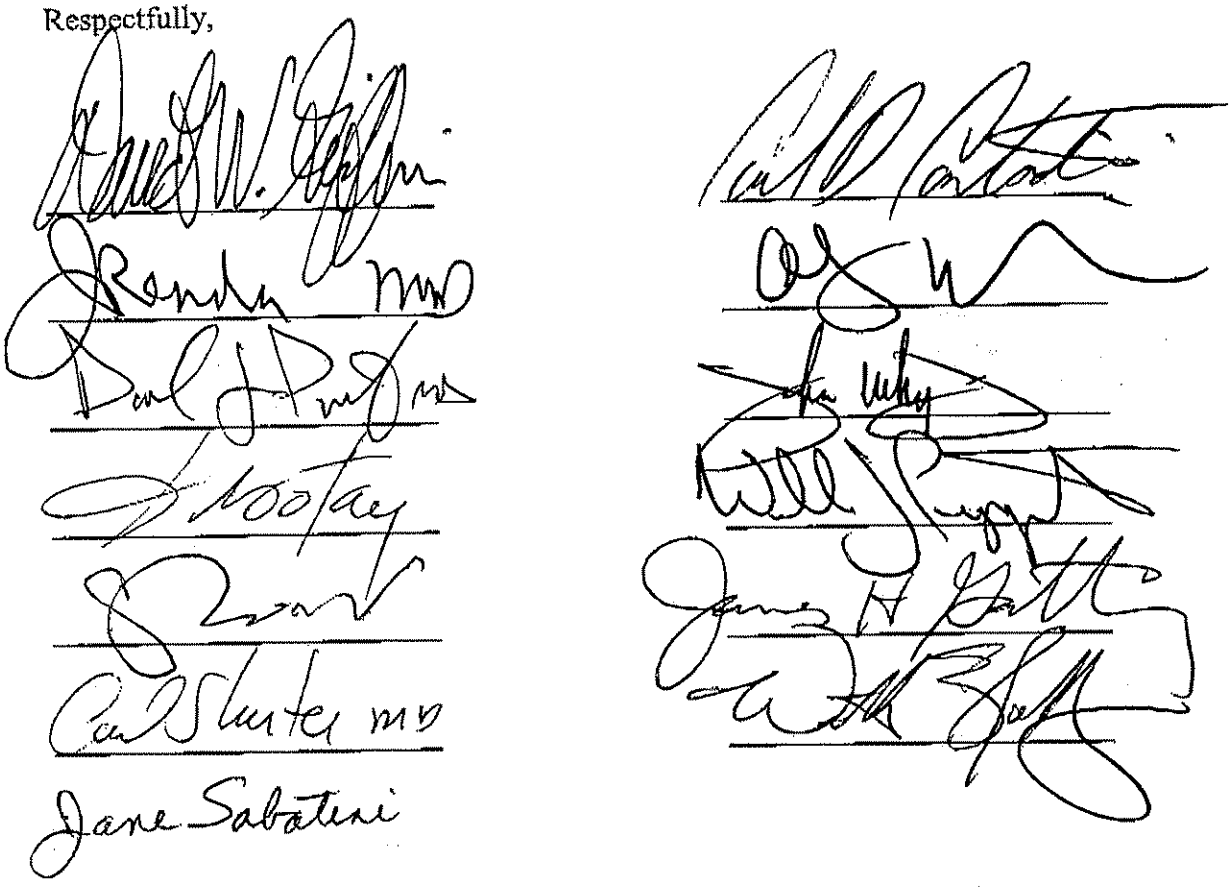
Re: Support for the continuation of all services at the Heart Center of Greater Waterbury under Docket No. 08-30167-MD.

Dear Commissioner Vogel:



We write in support of the Heart Center of Greater Waterbury's request to extend its Certificate of Need. As Trustees of Waterbury Hospital, we are among the stewards of our community's health care and we take this role very seriously.

For many years, cardiac patients—our families, our employees, our children's teachers, our first responders, our clergymen—were forced to travel to other cities at the very time when they needed to be treated immediately. Finally, in 2005, the Heart Center opened and since then thousands of patients have been treated successfully at Waterbury Hospital and Saint Mary's Hospital. We have devoted the talents of our two community hospitals and the talents of the John Dempsey Hospital to develop and provide a high quality program: excellent surgeons, cardiologists and staff; state of the art equipment and facilities; and academic medical center supervision. The Greater Waterbury community now has the high quality cardiac care that is locally available in every other community of its size in the state.

Certainly you have seen the faces of our patients in the newspaper stories and personal accounts shared with the media. These patients' lives were saved – directly affected by the availability in their own community of the high quality health care they need and deserve. Patients and their families have expressed a very high level of satisfaction with the Heart Center; it is indeed comforting to be in familiar surroundings and see familiar faces when you or a family member faces a life threatening illness.

We have developed and nurtured a high quality program for a community of nearly 300,000 people of all backgrounds. Countless lives have been saved so far; let's not take a step backward by permitting preventable deaths. As health care leaders and stewards of Greater Waterbury, we urge you to approve the Heart Center of Greater Waterbury's request to extend its Certificate of Need.

Respectfully,

Jane Sabatini

Re: Support for the continuation of all services at the Heart Center of Greater Waterbury under Docket No. 08-30167-CON

Dear Commissioner Vogel:

The board of directors of Saint Mary's Hospital and Saint Mary's Health System strongly urge you to continue the availability of high quality advanced cardiac care to the greater Waterbury Community through the Heart Center of Greater Waterbury at both Saint Mary's and Waterbury Hospital.

Since its beginnings in 2003, our board has strongly supported the development and implementation of this life saving program and has dedicated its resources to making the Heart Center a success for our community. Together with our partner hospitals, we recruited excellent surgeons and other physicians and staff, designed facilities and developed clinical protocols that save lives. We are delighted that patient and family satisfaction has been high; our community physicians are happy that their patients can now be treated within the community.

As our population ages and their needs become more medically complex, this program will become even more important. In particular, the strong case volumes for angioplasty services not only reflect the high demand for these critical services, but recognize the advancement of the standard of care and national trends for less invasive procedural techniques to treat heart diseases. The shifts in the demographics for the Waterbury area predict a population that will be older than in other communities of like size. Continuing to provide high quality cardiac care at the Heart Center will prevent deaths that could be caused by delay in treatment or worse, no treatment at all.

This is an important program for the cardiac wellbeing of the greater Waterbury community. Please ensure that these services will continue to be available to our community.

Very truly yours,

Archbishop Henry J. Mansell

AUGUST 20,2008

DEAR HEART COMMITTEE:

I AM VERY CONCERNED ABOUT LOSING OUR HEART CENTER HERE IN WATERBURY AND I AM NOT ALONE.

SO WHAT IT SEEMS TO COME DOWN TO IS PUSH OPEN HEART SURGERY ON ALL PATIENTS REGARDLESS OF THEIR NEEDS. WHY CAN'T WE HAVE ALTERNATIVES TO THIS HORRIBLE SURGERY IF WE ARE ABLE TO.

WHY SHOULD WE SETTLE FOR 2ND BEST (AND I AM NOT KNOCKING THE EXCELLENT CARE IN OTHER HOSPITALS) WE ALL DESERVE THE BEST AND BEING ABLE TO RECEIVE CARE CLOSE TO HOME IS BETTER. RECOVERING FOR THE PATIENT ALSO IS IMPORTANT TO FAMILY AND DISTANCE AND ALSO THE PROBLEMS THAT COULD ARRIVE DURING TRANSPORTATION.
IF THE CENTER AND ALL CENTERS SAY 1 LIFE THIS IS WHAT IT'S ALL ABOUT. I ALSO HEAR THAT OTHER CENTERS ARE BELOW THERE COUNTS.
THIS IS AMERICA DON'T TAKE OUR CARE FROM US.

ALSO WHAT IS BEST FOR THE PATIENT IS IMMEDIATE CARE ASAP NOT AS SOON AS YOU CAN BE TRANSPORTATED THE PATIENT IS #1.

SINCERELY,

N Anderson

HEART
CENTER
of Greater Waterbury

August 2008

Dear Commissioner Vogel:

As a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare, I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital.

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that *every heart matters!*

Sincerely,

Mr. Vogel

Why on earth would your want to put peoples lives in jeopardy by closing the Heart Center? My heart isn't that good, and I really would like to have someplace to go if I should need to have heart surgery. You will be making the biggest mistake of all by closing the heart center.

Please Keep it open.

Thank you

Sandra Garceau

HEART
CENTER
of Greater Waterbury

August 2008

Dear Commissioner Vogel:

As a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare, I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital.

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that *every heart matters!*

To Whom It May Concern:

On October 5, 2005 my husband, George, suffered a heart attack. He was visiting a friend in Prospect at the time. He told his friend he was having chest pains. His friend called for an ambulance. When he arrived at St. Mary's Hospital a cardiologist met him with his team. They quickly checked him out and he was on his way to have three stints put in. All of this took only about an hour.

If he had to endure an ambulance ride to Bridgeport or New Haven he may not have pulled through as well as he did.

The Waterbury area needs to have a heart center to care for our residents.

Sincerely and concerned,

Frances Dunn

Re: Docket Number: 08-31130-CON

Dear Commissioner Vogel:

I am writing to support the Hamden Surgery Center's Certificate of Need (CON) Application for the Sale of Membership Interests by Saint Raphael Healthcare System Hamden Surgical Center, LLC to physicians. The Surgical Center is currently owned by the Saint Raphael Healthcare System and is a multispecialty ambulatory surgery center in operation since 2000.

My specialty is podiatry and I currently practice in New Haven, CT. The majority of my cases are ambulatory. Hamden is an excellent location for many of my patients. Performing cases at the surgery center will be beneficial to both my practice and patients. Many physicians who currently operate at the surgery center are interested in ownership in the center. Ownership will maintain and improve overall efficiency, foster growth and ongoing financial stability of the facility. All these factors are critical to ensure continued access to this high quality ambulatory surgery facility.

Physician ownership in ambulatory surgery centers is commonplace throughout Connecticut and the United States. The proposed ownership for the Hamden Surgery Center represents an ideal opportunity for a health care institution to partner with its physicians. I ask you to approve Saint Raphael Healthcare System's CON Application for the sale of membership interests in the Hamden Surgery Center to physicians.

To Whom It May Concern;

Five years ago I had an Aortic Valve Replacement. I had to be rushed to St. Raphaels for immediate surgery. I felt so alone, not knowing anyone. My family came to SEE me but it was an inconvenience for them to travel from Waterbury to New Haven. I felt so alone + terribly frightened. If I was able to have this surgery in Waterbury it would have aided my recovery + Dr. Duke would not have been so stressed + my family could visit daily. Please keep these units

Dear Ms. Borduas:

Thank you for your correspondence to Governor Rell regarding the Heart Center of Greater Waterbury. The Governor truly appreciates the time you took to write to her office. Please accept this response on her behalf.

Governor Rell believes that it is extremely important for citizens to voice their opinions and comments to their elected officials. As the matter you wrote about is overseen by the Office of Health Care Access, Governor Rell has asked that I forward your concerns to Commissioner Cristine Vogel's office to review and respond to you directly. If you do not receive a response from the Office of Health Care Access within two weeks please feel free to contact the Commissioner's office directly at (860) 418-7002. Please be aware that Commissioner Vogel did grant a six-month extension of the heart center's temporary operating permit.

Thank you again for sharing your comments and concerns with Governor Rell. Please do not hesitate to contact our office in the future, should the need arise.

Sincerely,

Linda Sandiaes

RECEIVED
SEP - 2 2008
OFFICE OF
HEALTH CARE ACCESS

Dear Governor Rell,

08-30167 MD
08-31202

Having been involved with the efforts to save the Heart Center of Great Waterbury in the last several weeks, I have been touched by the support that the city and its residents have shown. Having been born and raised in Waterbury, it has always been a community to rally together in times of crisis and need. The events that have surrounded the Heart Center recently proved that theory once again. The closing of the area's Heart Center would be a health care crisis. The residents of Waterbury and surrounding areas that we serve deserve better treatment than what they may be potentially faced with.

Although the target volumes for Open Heart Surgery were missed by 350, the fact that 600 Open heart Surgeries took place in the city should not go unnoticed and should not be looked at as insignificant. In fact, as Heart Centers across the state and nation, as evidenced by postings on the OHCA website, are faced with declining numbers of Open Heart Surgery Procedures, The Heart Center has actually grown. The quality of care The Heart Center has provided it's over 3,300 patients has met or exceeded national benchmarks. The Heart Center of Greater Waterbury, through each of the participating hospitals, employs experienced Cardiovascular Surgeons who have been performing Open Heart Surgery with unquestionable experience and knowledge at other facilities in the state for approx. 30 years between them. The Interventional Cardiologists come with expertise, knowledge and the many years of experience performing angioplasties. The teams of staff that provide cardiovascular care to the patients of the Heart Center are undeniably a team of experts with caring compassion and proven quality.

In a recent Television interview, Commissioner Vogel commented on OHCA not being able to give hospitals in this state everything they want. This is NOT about giving the hospitals in Waterbury what they want, but what the community NEEDS and wants. This is about saving lives and providing the standard of care that evidence has shown to be most beneficial in patients suffering from acute Heart Attacks. How ironic that while OHCA argues the numbers is about ensuring quality of care, that OHCA is also at the same time, willing to risk that quality and risk increasing mortality to provide a *substandard* of care for the patients in Greater Waterbury by forcing them out of the city for their Cardiac needs, especially in times of emergency. What is this really about? Is OHCA willing to risk political face at the expense of lives? Commissioner Vogel also mentioned that this has become too political...for whom?

Waterbury is proud to have the backing and support of Mayor Jarjura, Attorney General Richard Blumenthal, and all the State and local officials who have pledged their support. Let's not make this a numbers game. Instead let's pledge to save lives and do what's right for the community of Greater Waterbury.

Thank you..
A Concerned Citizen

August 19, 2008

To Whom It may concern,

Because this letter is so important, not only to me, but to many others who may not be as fortunate as I am, I know you will forgive my very informal stationary. The message is too important to be overlooked by social graces.

On June 24th, 2003, having just returned from lunch on a rather warm day, I entered my office and noticed I was a bit dizzy and disoriented. In the moments that followed, I realized my condition was getting worse and called upon my colleagues for assistance. I was employed by a church, and one of our visiting parishioners happened to be a nurse. When I indicated I was beginning to feel numb, she immediately called for an ambulance.

I was transported to Waterbury Hospital. I was given nitroglycerin en route, but remained quite anxious about my condition.

As I was being wheeled into

the E.R room, I began to loose consciousness and the last words I heard were "she's going"! That 1½ hour ride seemed like hours to my family & was nothing compared to what would follow.

I regained consciousness and was told I had had a massive heart attack. I was also told that because the hospital was not authorized to perform any major heart procedures, it would be best to wait until morning, when I would be transported to Bridgeport Hospital to perform the angioplasty I needed. Bridgeport Hospital!!!

If I wasn't already nervous and scared enough, now I was being told I needed to leave the city for treatment. This made no sense to me since I was already in a hospital. I later understood why it all had to be this way, but it still didn't make sense to me, nor did it make my frightening experience any easier.

I had the angioplasty on

June 25th, and 3 stents were implanted. Since then, I have had 3 more stents implanted @ St. Mary's Hospital. It was expecting to be close to home for this subsequent procedure.

While I am certain that much time and effort goes into making important decisions regarding life, and the costs associated with the care of these lives, I hope you will consider the internal trauma that people experience when they are forced to leave the comfort of the surroundings they know and have come to expect the greatest care from, to being transported in such a fragile condition to a place many miles from their family.

On June 25, 2003 the ambulance ride to Bridgeport Hospital was more traumatic for me than learning of my condition. I was alone and terrified. It seems very cruel to have a policy that requires an individual no real choice in their own health

care. My family also traveled miles each day.

I urge you to approve permanent status of the heart center of greater Waterbury. You cannot put a quote on the lives that have been saved. Even if only one life was saved, the program was worth it.

Please ask yourself if the residents of New Haven and Bridgeport would ever condone their having to be transported to Waterbury for heart surgery. I think not, and rightfully so. The citizens of Waterbury deserve at least that much.

I apologize for the length of this letter, but I, for one, would be terribly disappointed, not to mention very concerned, if this approval is not given.

Thank you ever so much for your kind attention to my letter.

Sincerely yours,

Lorraine A. Shaw

Heart Center of Greater Waterbury:

I'm writing this letter for my husband and myself.

My husband had a slight heart attack and angio plasty, February of 2007 at St. Marys. He was also a patient at Waterbury Hospital 2005.

Time is of the essence when the heart is involved and the closeness of the center is very helpful. We were very thankful for the good care and peace of mind.

I also have heart problems and also like to see the program grated permanent status.

We cannot attend the support rally — but will be there in spirit. This is very important to this area.

Keep up the good work.

Best regards,

Robert A. Gardner Jr

Kay F. Gardner

St. Mary's Hospital and The Waterbury Hospital, d/b/a The Heart Center of Greater Waterbury, and John Dempsey Hospital

Dear Mr. San Angelo:

The Office of Health Care Access ("OHCA") is in receipt of your letter dated August 21, 2008 regarding the above referenced matters which was forwarded to us by the Governor's office. OHCA understands your concerns and appreciates your comments. Your letter has been made part of each record referenced above.

If you are interested in additional information regarding the Heart Center of Greater Waterbury, please visit OHCA's website at http://www.ohca.state.ct.us/.

Sincerely,

Cristine A. Vogel
Commissioner

Remarks:
9/3/2008 letter re: support for keeping the heart center open. Sent to OHCA to review and respond.....LS

Referred By: Linda Sandiaes

Referred To: Commissioner Cristine Vogel (860) 418-7002
Action: Please Respond Directly to Constituent
Referred: 09/03/2008 Due: 09/17/2008

Notes:
Please respond directly to the constituent, regarding the following letter, on behalf of

Governor Rell. Also, please acknowledge that the Governor referred it to your agency.

It is not necessary to send a copy of response to the Governor's Office. The constituent has been instructed to contact the Commissioner's Office directly if they do not hear from the Agency within two (2) weeks.

If you have any questions, I can be reached at 524-7352. Thank you.

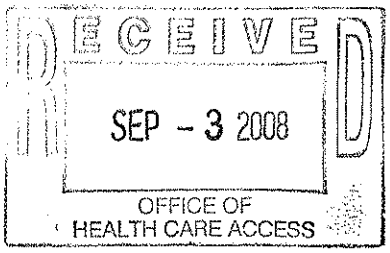
Linda Sandiaes
Staff Assistant
Office of the Governor

September 3, 2008

Mr. Frank San Angelo
88 Valley Drive
Naugatuck, CT 06770

Dear Mr. San Angelo:

Thank you for your correspondence to Governor Rell regarding the Heart Center of Greater Waterbury. The Governor truly appreciates the time you took to write to her office. Please accept this response on her behalf.



Governor Rell believes that it is extremely important for citizens to voice their opinions and comments to their elected officials. As the matter you wrote about is overseen by the Office of Health Care Access, Governor Rell has asked that I forward your concerns to Commissioner Cristine Vogel's office to review and respond to you directly. If you do not receive a response from the Office of Health Care Access within two weeks please feel free to contact the Commissioner's office directly at (860) 418-7002. Please be aware that Commissioner Vogel granted a six-month extension of the heart center's temporary operating permit.

Thank you again for sharing your comments and concerns with Governor Rell. Please do not hesitate to contact our office in the future, should the need arise.

Sincerely,

Linda Sandiaes
Staff Assistant
Office of Governor M. Jodi Rell

August 21, 2008

To Whom it May Concern:

I just want to say how much the heart center is needed in the Waterbury area.

Approximately 5 years ago I was sent to St. Mary's hospital with a heart attack and then they had to rush me to St. Raphael's Hospital in New Haven to put a stent in. This was very frustrating and scary for me having to go to New Haven as an emergency patient. Then in 2005, I was admitted to St. Mary's Hospital and had to have a six-way bypass. This was much easier for me to stay and have the operation at St. Mary's and so much easier for my family not to have to drive to New Haven. I have nothing but praise for Dr. Preissler and all the staff in the heart center.

I support "with all my heart" keeping the heart center in Waterbury.

HEART
CENTER
of Greater Waterbury

August 2008

Dear Commissioner Vogel:

As a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare, I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital.

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that *every heart matters!*

Sincerely,

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that *every heart matters!*

Sincerely,

Signature Alketa Tahirllari

Office of Health Care Access
Commission Christine Vogel
410 Capitol Avenue
MS# 13HCA
PO Box 340308
Hartford, CT 06134

Dear Commissioner Vogel,

This letter concerns The Heart Center of Waterbury.

It is my feeling as a physician that The Heart Center is essential for the City of Waterbury.

As you know, the technician for the operating room, John Woznak, explained what he went through before his surgery.

The patient essentially came to the hospital with his complaints. His angiogram that morning showed severe five vessel disease. The patient was immediately booked for the operating room.

It was my pleasure to stand with John in the CCU as he waited for his surgery. His wife could not get back to the hospital before his surgery was scheduled.

This patient was in urgent need of cardiac surgery. With the stress involved, a trip to Bridgeport, Danbury or Hartford may have changed his life significantly for the worse.

Additionally, I was called to the emergency room to help out a friend who was a young female and had signs and symptoms of a stroke. I was able to get the patient immediately to CT scan to

try and diagnose her condition. During that stressful half hour, her husband developed significant chest pain. An EKG revealed cardiac ischemia. The patient underwent cardiac catheterization and was brought to the operating room in short order.

Again, a trip to Bridgeport, Danbury or Hartford may have made a difference in this patient's life.

I understand that the three cities mentioned above benefit economically from the patients of Waterbury. However, the city of Waterbury and its citizens are not well-served by traveling a half hour to get to these facilities.

That half hour also is a misnomer. By the time the patient comes to the emergency room, is worked up and then needs cardiac surgery, it is not just a half hour, it is many hours. Because of traffic and weather conditions, it may in fact take the patient many hours to get to one of these cities.

Putting economic factors aside, this Heart Center is vital for the city of Waterbury and its residents.

Please approve the CON for the cardiac center.

Honestly, it would make more sense to have all the cardiac surgery done at one hospital. The duplication of services in these economic times makes absolutely no sense whatsoever.

Sincerely,

Stanley J. Foster, M.D.

To Whom It May Concern:

I would like to take the opportunity to voice my concern relative to the circulating rumors that the Open Heart Program in Waterbury may be discontinued. If so, this is a serious breach of concern for the physical welfare of the citizens of the City of Waterbury.

In 2003, my sister, Elizabeth Mazzella, was admitted to St. Mary's Hospital with tachycardia. It was determined that she needed coronary by-pass surgery. She had to wait two days for a bed at St. Raphael's Hospital. Prior to Elizabeth's transfer to St. Raphael's, the communication between the two hospitals left a lot to be desired. To expedite this transfer, I had to personally call St. Raphael's to see if in fact they were expecting her. They said they were, but had no bed and would not have one until 6 P.M. Furthermore, the staff at St. Mary's acknowledged that the proper transfer papers were not complete.

She was finally transferred to St. Raphael's on a Friday at 7 P.M.

in a snow storm. She had been kept fasting all day expecting to have surgery on Friday. This did not happen. She had nothing to eat or drink until Saturday morning and kept waiting for surgery until Monday. Since she arrived at St. Raphaels on Friday evening and could not be fed for any number of unknown reasons.
She spent twelve days at St. Raphaels for a triple by-pass. One day after arriving home she had to be re-admitted to St. Mary's Hospital with sodium depletion
I traveled 40 miles daily to see her in dreadful winter conditions. Due to the weather conditions, most family members were reluctant to travel.
I realize it is the Commissions expectations that certain "numbers" should be met in order to allow an institution to maintain a cardiac program. Additionally I know the pressure being exerted on the Commission by other hospitals to eliminate the program in Waterbury. Revenue is revenue.
The physical well being of the citizens of Waterbury

should take precedence over all other outside interests and concerns. We should be allowed to maintain the Open Heart Program in Waterbury.

Thank you for listening.

Sincerely yours,

Lucia Mannello

HEART
CENTER
of Greater Waterbury

August 2008

Dear Commissioner Vogel:

As a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare, I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital.

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that *every heart matters!*

Sincerely,

HEALTH CARE ACCESS

Heart Center of Greater Waterbury
PO Box 2153
Waterbury,CT 06722

Four years ago, I suffered a heart attack and was sent to Waterbury Hospital for emergency treatment. An angioplasty was done and it was decided that I should have a stent inserted in the blocked vessel.

The probe had to be removed and I was sent to Bridgeport Hospital, a trip of 40 minutes, to repeat the process of reinserting the probe with the stent. The waste of time was critical. I know of one incident of a patient who died on route to Bridgeport. The delays may have caused other fatalities that I do not know about.

The insertion of the probe from groin to heart poses the possibility of puncturing a vessel. It is unconscionable to perform the procedure twice, doubling the risk.

When Waterbury Hospital appealed for a certificate of approval to perform heart surgery, I visited Governor Roland and was sent by him to the office that certifies such licenses. I and other concerned citizens gathered names for a petition to assure that the greater Waterbury area would have proper heart facility. To cancel that service and go back to the former dangers involved in transportation (weather and traffic delays) and double probing is a danger to the patient, as it was for me.

I appeal for the continuation of heart surgery service in the Waterbury area

RE: Heart Center of Greater Waterbury
"Permanent Status"
OHCA Docket No. 08-31202

Dear Heart Center:

First, let me express my sincere thanks to Commissioner Cristine Vogel of the Office of Health Care Access for the manner in which she handled the request and then the approval granting the Heart Center a continuation extension to January 19, 2009.

However, time passes quickly and now it is time to get serious again and request "permanent status" for the Heart Center to continue providing critical heart care services at both St. Mary's Hospital and Waterbury Hospital.

We have all heard many stories from the past when emergency and critical heart patients were transferred by ambulance to St. Raphael's Hospital in New Haven, and Bridgeport Hospital in Bridgeport -- some stories with sad and tragic endings and others with a more positive result. Nevertheless, families had to spend several hours each day traveling to the hospital, visiting their loved ones, and then traveling home. Many families had to rely on other family members, relatives, and or friends for transportation.

My three siblings, two sisters and a brother, all had to be transported by ambulance, two to St. Raphael's and one to Bridgeport Hospital – all had emergency critical open heart bypass surgery. My older sister died later from another heart attack.

In March of 2005, I was transported by ambulance from St. Mary's Hospital to Bridgeport Hospital where a two stent angioplasty (ramus and circumflex arteries) was performed. Within a few months the two stents failed and formed scar tissue blocking the Aorta. The result was the need for Open Heart Bypass Surgery. Since the Heart Center of Greater Waterbury opened in July of 2005, I was fortunate to have my surgery scheduled at St. Mary's Hospital in November of 2005. It was truly gratifying that it could be performed in the City and Hospital which I knew well and where I lived most of my life. The cardio-thoracic surgeon, doctors, nurses, and staff trained to perform these life-saving procedures took excellent care of me and I thank them for saving my life. I did not have to travel to New Haven or Bridgeport and it was satisfying to know that my family, relatives, and friends, did not have to travel distances to visit me.

RE: Heart Center of Greater Waterbury
"Permanent Status"
OHCA Docket No. 08-31202

The Heart Center of Greater Waterbury at both St. Mary's Hospital and Waterbury Hospital is an excellent program and should be continued in "PERMANENT STATUS" offering all the people of Waterbury and the surrounding towns the necessary advantage of this crucial cardiac program without having to be transported out of town by ambulance to other hospitals or having families travel to visit their loved ones. I pray that the decision be made by the Office of Health Care Access to continue the Heart Center of Greater Waterbury's successful and crucial cardiac program of saving lives.

The Heart Center of Greater Waterbury has proven its quality care and effective life-saving program and should be continued in "permanent status" now, and for many, many years to come! "EVERY HEART MATTERS" --- AND SO IT SHOULD BE!!!

Best Wishes, Good Luck, and God's Blessings to All!

Sincerely,

Lena D. Napolitano

August 2008

Dear Commissioner Vogel:

As a citizen of the Greater Waterbury community who cares deeply about access to quality healthcare, I strongly urge you to allow the Heart Center of Greater Waterbury to continue providing critical heart care services at both Waterbury Hospital and Saint Mary's Hospital.

In the last three years, the center has saved more than 2,400 hearts. In treating critical care patients, the center has consistently achieved clinical outcomes that meet or exceed national standards. The center's services, which include open heart surgery as well as elective and primary angioplasty, have provided the Waterbury community with an outstanding level of care that had previously been lacking.

Having these services located close to our homes, in a community with which we are most familiar and comfortable, has made it possible for the people of Greater Waterbury to receive quality, lifesaving care when they need it most.

In any and all future proceedings, however modified, with the Office of Health Care Access, please register my strong support for the continuation of these services on a permanent basis. Without this crucial cardiac program, people's lives will surely be lost, and I believe that every heart matters!

Sincerely, Does have a heart problem

Establish a primary and elective Angioplasty and Open Heart Surgery Program at Waterbury Hospital and St. Mary's Hospital

Letters of Support

Dear Commissioner Vogel:

On behalf of the Applicants enclosed you will find over 12,000 letters received by the Heart Center of Greater Waterbury since the August 29, 2008 public hearing. These letters were received on line, through the U.S. mail and from various community centers around the greater Waterbury area. These letters are in support of continuing the Heart Center of Greater Waterbury advanced cardiac program on a permanent basis.

Sincerely,

Loraine C. Shea

RE: The scheduling of a bi-annual meeting pursuant to Docket Number 08-31202-CON
Heart Center of Greater Waterbury

Dear Ms. Shea:

Pursuant to Stipulation #7 of the Agreed Settlement under Docket Number 08-31202-CON, St. Mary's Hospital, The Waterbury Hospital and John Dempsey Hospital (the "Applicants") agreed to "*attend meetings with OHCA on a semi-annual basis for the purposes of discussion on quality monitoring, clinical team structure, and overall organization structure*". The first semi-annual meeting was held at OHCA on August 7, 2009 and on August 17, 2009, OHCA received the Applicants' year one utilization report as well as the ACC Executive Summaries for January 1, 2009 through March 31, 2009 and the STS Regional Comparisons for calendar year 2008.

On January 11, 2010, OHCA received your emailed request (see attached) for clarification as to whether a meeting will be scheduled and held for this semi-annual period. With this letter, I am notifying the Applicants that OHCA will not be scheduling a meeting regarding the CON authorized for this bi-annual period. Please contact OHCA in approximately six months regarding the scheduling of a meeting for the next bi-annual period. Please contact Karen Roberts, Principal Health Care Analyst at OHCA at 860-418-7041 if you have any questions regarding the above.

Sincerely,

Cristine A. Vogel
Deputy Commissioner

Re: **Docket Number: 08-31202 CON The Waterbury Hospital and Saint Mary's Hospital Corporation, d/b/a/ Heart Center of Greater Waterbury and University of Connecticut Health Center / John Dempsey Hospital**

Dear Karen:

Enclosed are the procedure and patient volume reports for Saint Mary's Hospital and Waterbury Hospital from July 18, 2009 through July 17, 2010.

The ACC Executive Summaries for both Saint Mary's Hospital and Waterbury Hospital are provided. The ACC Summaries represent data from July 1, 2009 through March 31, 2010. A new ACC database was instituted on July 1, 2009. Enclosed are the reports for three rolling quarters of data.

The STS Regional Outcome Comparisons are also provided for both hospitals. The STS comparison summaries represent the period from January through December 2009.

If you have any questions, please feel free to contact me at (203)-575-5572 or via email at mlamour@hcogw.org

Sincerely,

Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2010Q1

Section I: PCI Performance Measures

Endorsed by the National Quality Forum and appropriate for public reporting

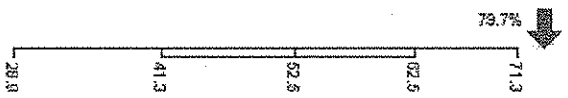
PCI Performance Measures	Distribution of Data (10th percentile — Better → — 90th percentile)
1 **PCI in-hospital risk adjusted mortality (all patients)**	

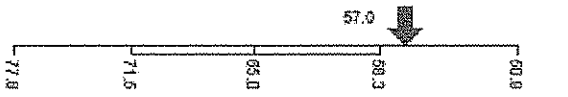
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
2.81		1.46	0.79

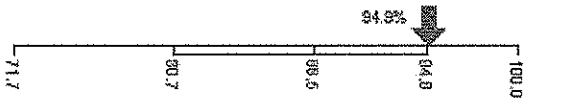
Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:1979]

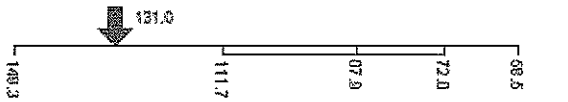
Note

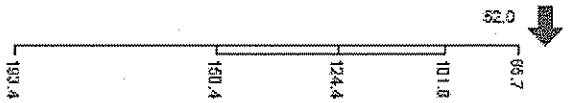
In-hospital risk adjusted mortality for PCI is the only performance measure in the CathPCI Registry® that has been endorsed by the National Quality Forum. Such performance measures meeting the requirement for approval are intended not only for clinical quality improvement, but also may be considered for purposes of public reporting.

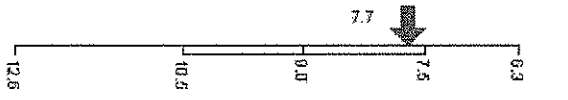


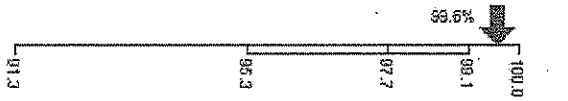


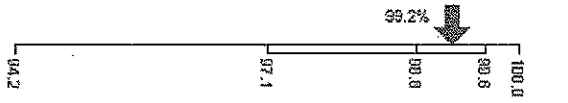












The "Registry Metrics" on the subsequent pages of this report are those measures that have been developed to support self assessment and quality improvement at the provider, hospital, and/or health care system level. While these metrics have not been formally developed by the American College of Cardiology/American Heart Association Task Force for Performance Measures Task Force, they may be identified as evolving measures worthy of consideration for further development into performance measures.

25	**Test Metric: Transfusion of whole blood or RBCs** My Hospital: 2.1% | Vol Group R4Q: 2.0% | All Hosp: 2.1% | 90th Pctl: 0.0% Proportion of patients who received a transfusion of whole blood or red blood cells after a PCI procedure. Exclusions: Patients having CABG or other major surgery during the same admission. [Detail Line:1820]	
26	**Test Data Quality Metric: Biomarkers assessed post-PCI for elective inpatients** My Hospital: 11.0% | Vol Group R4Q: 41.7% | All Hosp: 44.9% | 90th Pctl: 96.2% Proportion of elective procedures with biomarkers assessed post PCI. Inclusion criteria: LOS >= 1 day and hospital status is "not outpatient". [Detail Line:1912]	

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

***Your rate of acute kidney injury cannot be reported if you only collected creatinine pre and post procedure on <90% of your patients who were in the hospital >=1 day.

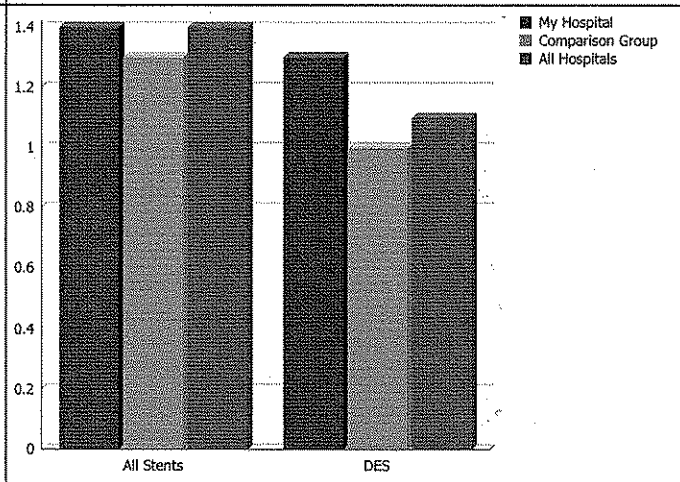
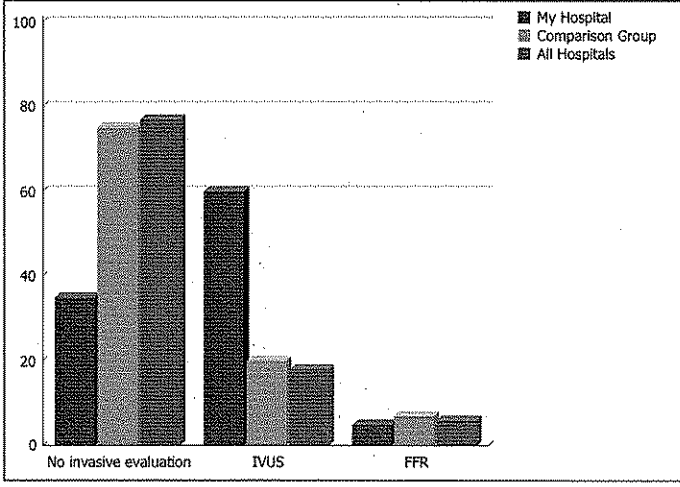
Executive Summary

CathPCI Registry®

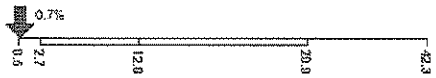


Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2010Q1

Section III: PCI Process Comparison Metrics

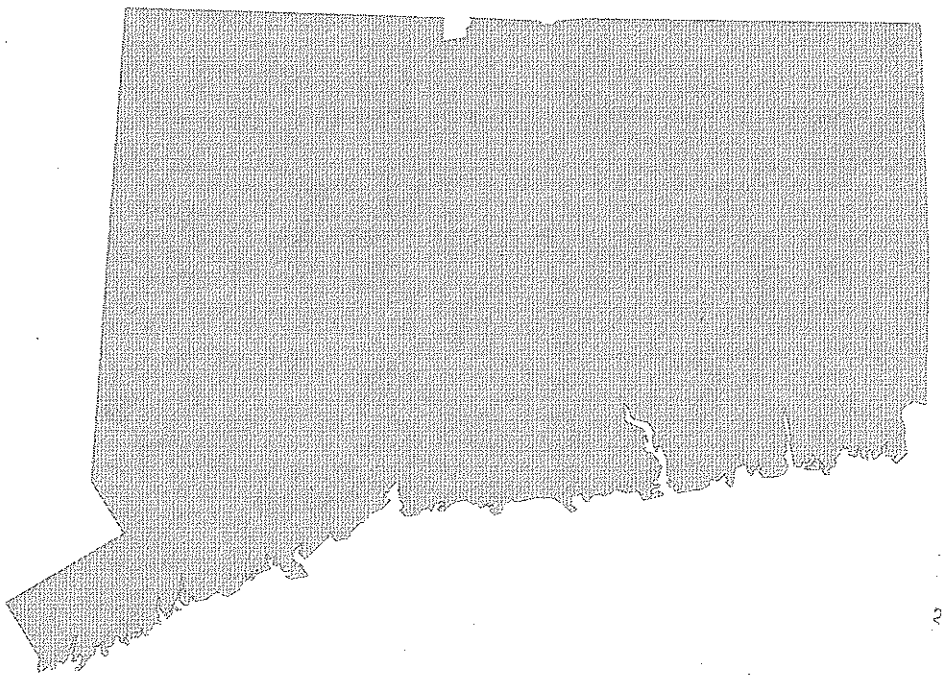


Anticoagulant Use: Low molecular weight heparin, direct thrombin inhibitors, GP IIb/IIIa inhibitor(pts with acute coronary syndrome).
[Detail Line:1579,1581,1586]



Stent Use: Average # of stents per PCI admission.
[Detail Line:1771,1772]

Intermediate stenosis lesions(40-70%): Further invasive evaluation performed (IVUS or FFR).
[Detail Line:1711,1712,1713]



Outpatients: Proportion of PCI patient admissions whose hospital status was coded as "outpatient".
[Detail Line:1390]

Executive Summary

CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2010Q1

Section I: PCI Performance Measures

Endorsed by the National Quality Forum and appropriate for public reporting

PCI Performance Measures	Distribution of Data (10th percentile — Better → — 90th percentile)

1 **PCI in-hospital risk adjusted mortality (all patients)**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
0.65		1.46	0.79

Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:1979]

Note

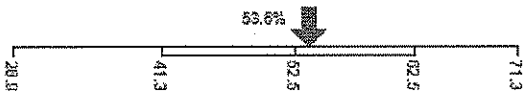
In-hospital risk adjusted mortality for PCI is the only performance measure in the CathPCI Registry® that has been endorsed by the National Quality Forum. Such performance measures meeting the requirement for approval are intended not only for clinical quality improvement, but also may be considered for purposes of public reporting.

The "Registry Metrics" on the subsequent pages of this report are those measures that have been developed to support self assessment and quality improvement at the provider, hospital, and/or health care system level. While these metrics have not been formally developed by the American College of Cardiology/American Heart Association Task Force for Performance Measures Task Force, they may be identified as evolving measures worthy of consideration for further development into performance measures.

Executive Summary

CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2010Q1

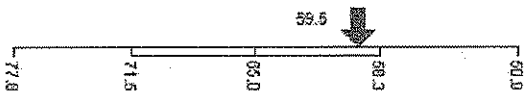


Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

PCI Process Metrics — **Distribution of Data** (10th percentile … 90th percentile; Better →)

2 **Positive stress or imaging study prior to elective PCI**

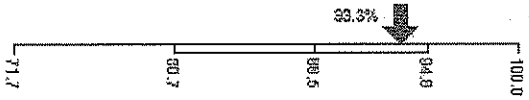
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
53.6%	52.0%	52.3%	71.3%



Proportion of elective PCI procedures (excluding patients with ACS) with an antecedent stress or imaging study with a positive result (suggestive of ischemia) or with a fractional flow reserve assessed during the procedure. [Detail Line:1515]

3 **Median time to immediate PCI for STEMI patients (in minutes)**

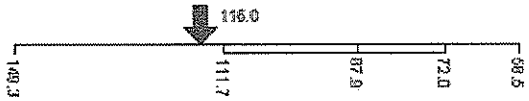
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
59.5	65.0	64.0	50.9



Your hospital's median time from hospital arrival to immediate PCI for STEMI patients in minutes. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1504]

4 **Proportion of STEMI patients receiving immediate PCI w/in 90"**

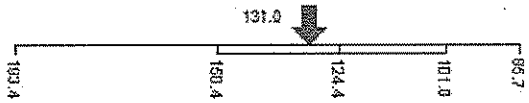
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
93.3%	86.4%	87.3%	100.0%



Proportion of STEMI patients with a time from your hospital arrival (or subsequent ECG if ST elevation first noted on subsequent ECG) to immediate PCI <=90". Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1505]

5 **Median time from ED arrival at STEMI transferring facility to ED arrival at STEMI receiving facility among transferred patients.**

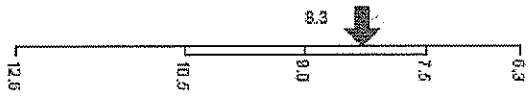
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
116.0	84.0	87.0	58.5



Your hospital's median time from arrival at transferring facility to ED arrival at STEMI receiving facility among transferred patients. [Detail Line:1507]

6 **Median time from ED arrival at STEMI transferring facility to immediate PCI at STEMI receiving facility among transferred patients (in minutes)**

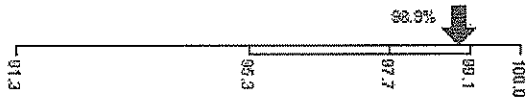
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
131.0	120.0	119.0	85.7



Your hospital's median time from arrival at referring facility to immediate PCI at STEMI receiving facility among transferred patients. Exclusions: Reasons for delay does not equal none. [Detail Line:1508]

7 **Median fluoro time (in minutes)**

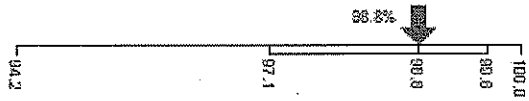
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
8.3	9.3	8.8	6.3



Inclusion criteria: PCI of one vessel/lesion. Exclusion criteria: Prior CABG, or "other" procedure during the same lab visit; PCI of >1 vessel/lesion. [Detail Line:1612]

8 **Aspirin prescribed at discharge**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
98.9%	95.7%	96.8%	100.0%



Proportion of patients (without a documented contraindication) with aspirin prescribed at discharge. [Detail Line:1941]

9 **Thienopyridine prescribed at discharge (patients with stents)**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
98.8%	97.5%	97.8%	100.0%

Proportion of patients (without a documented contraindication) with a stent implanted that had a thienopyridine prescribed at discharge. [Detail Line: 1950]

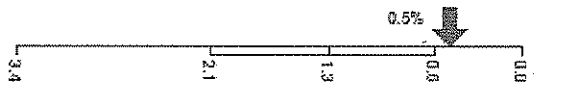
10 **Lipid lowering agent prescribed at discharge (pts with dyslipidemia)**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
100.0%	92.0%	92.2%	98.4%

Proportion of patients (without a documented contraindication) prescribed a lipid lowering agent at discharge.
Inclusions: History of dyslipidemia [Detail Line:1948]

PCI Outcome Metrics

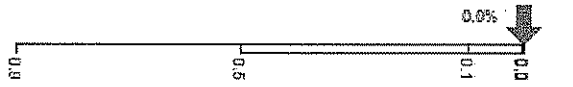


Distribution of Data

10th percentile — Better → — 90th percentile

11 **Vascular access site injury requiring treatment or major bleeding***

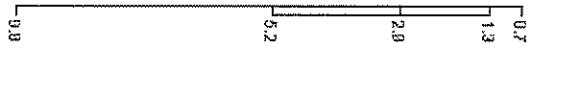
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
0.5%	1.6%	1.4%	0.0%



Your hospital's proportion of patients (excluding CABG or other surgery during same admission) with major access site related injury requiring treatment or major bleeding. [Detail Line:1818]

12 **Emergency CABG**

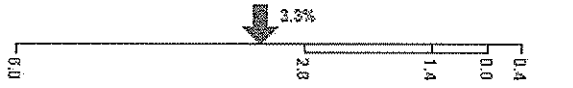
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
0.0%	0.4%	0.3%	0.0%



Your hospital's proportion of patients having emergency CABG (at your facility or transferred to another facility). [Detail Line:1923]

13 **Post procedure MI (among hospitals routinely collecting post-PCI biomarkers)****

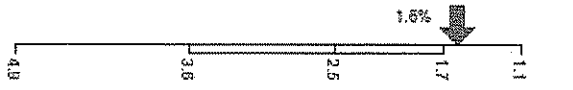
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
	2.6%	3.4%	0.7%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with >= 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1781]

14 **Post procedure MI (among hospitals who do not routinely collect post-PCI biomarkers)****

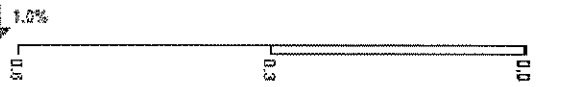
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
3.3%	1.3%	1.4%	0.4%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with < 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1782]

15 **Acute kidney injury*****

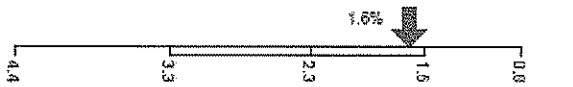
My Hospital	Vol Group R4Q	All Hosp	90th Pctl
1.6%	2.4%	2.7%	1.1%



Your hospital's proportion of patients who had a rise of serum creatinine of > 50% over the pre-procedure baseline (excluding patients on dialysis pre-procedure).
Inclusions: >= 90% of patients with a pre and post creatinine coded; LOS >=1 day. [Detail Line:1915]

16 **Post procedure stroke**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
1.0%	0.3%	0.2%	0.0%



Your hospital's proportion of patients with stroke post procedure. [Detail Line:1788]

17 **Composite: Death, emergency CABG, stroke or repeat target vessel revascularization**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
1.6%	2.7%	2.3%	0.8%

Your hospital's proportion of patients with death, emergency CABG, stroke or repeat target vessel revascularization post procedure up to hospital discharge.
Exclusions: Staged PCI during same admission. [Detail Line:1779]

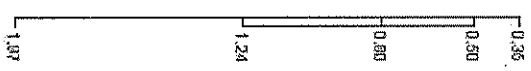
18 **PCI in-hospital risk adjusted mortality (patients with STEMI)**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
4.91		5.60	2.98



Your hospital's PCI in-hospital risk adjusted mortality rate for patients with STEMI adjusted using the NCDR® risk adjustment model. [Detail Line:1988]

19 **PCI in-hospital risk adjusted mortality (STEMI patients excluded)**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
		0.69	0.35

Your hospital's PCI in-hospital risk adjusted mortality rate for patients with other diagnoses (not STEMI) using the NCDR® risk adjustment model. [Detail Line:1997]

Diagnostic Cath Process Metrics

Distribution of Data

10th percentile — 90th percentile

Better →

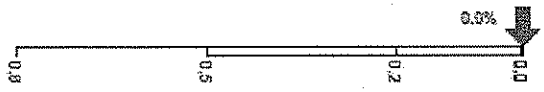
20 **Incidence of non-obstructive CAD (elective patients only)**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
46.1%	45.3%	44.2%	32.4%

Patients with an elective diagnostic cath and coronary angiography with all native coronary territories <50%
Exclusions: Patients with prior CABG, cardiac transplant evaluation; pre-op evaluation for non-cardiac surgery and diagnostic cath treatment recommendation of "other cardiac therapy without CABG or PCI". [Detail Line:1254]

Diagnostic Cath Outcomes Metrics

Distribution of Data



10th percentile — 90th percentile

Better →

21 **Vascular access site injury requiring treatment or major bleeding***

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
0.0%	0.3%	0.3%	0.0%

Your hospital's proportion of patients with major access site related injury requiring treatment or major bleeding. [Detail Line:1303]

Utilization Metrics

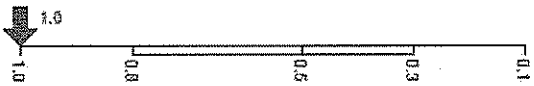
Distribution of Data

10th percentile — 90th percentile

Better →

22 **Median post-procedure length of stay (in days) for PCI patients with STEMI**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
3.0	3.0	3.0	1.7



Your hospital's median post-procedure length of stay (in days) for PCI patients with STEMI. [Detail Line:2053]

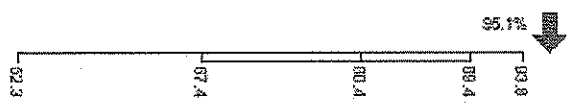
23 **Median post-procedure length of stay (in days) for PCI patients with no STEMI**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
1.0	1.0	1.0	0.1

Your hospital's median post-procedure length of stay (in days) for PCI patients with no STEMI. [Detail Line:2092]

Data Quality Metrics

Distribution of Data



10th percentile — 90th percentile

Better →

24 **Creatinine assessed pre and post PCI procedure**

My Hospital	Vol Group R4Q	All Hosp	90th Pctl
95.1%	77.3%	75.3%	93.8%

Proportion of PCI patients with creatinine assessed pre and post procedure. Inclusions: LOS >=1 day. [Detail Line:1914]

Exclusions: Patients having CABG or other major surgery during the same admission. [Detail Line:1820]	
26	**Test Data Quality Metric: Biomarkers assessed post-PCI for elective inpatients** My Hospital: 10.0% | Vol Group R4Q: 41.7% | All Hosp: 44.9% | 90th Pctl: 96.2% Proportion of elective procedures with biomarkers assessed post PCI. Inclusion criteria: LOS >= 1 day and hospital status is "not outpatient". [Detail Line:1912]	

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

***Your rate of acute kidney injury cannot be reported if you only collected creatinine pre and post procedure on <90% of your patients who were in the hospital >=1 day.

RE: The scheduling of a semi-annual meeting pursuant to Docket Number 08-31202-CON
Heart Center of Greater Waterbury

Dear Mr. Kniery:

Pursuant to Stipulation #7 of the Agreed Settlement under Docket Number 08-31202-CON, St. Mary's Hospital, The Waterbury Hospital and John Dempsey Hospital (the "Applicants") agreed to "*attend meetings with OHCA on a semi-annual basis for the purposes of discussion on quality monitoring, clinical team structure, and overall organization structure.*"

On July 27, 2011, OHCA received your phone request for clarification as to whether a meeting will be scheduled and held for this semi-annual period. With this letter, I am notifying the Applicants (St. Mary's Hospital, The Waterbury Hospital and John Dempsey Hospital) that OHCA will not be scheduling a meeting regarding the CON authorization for this semi-annual period. Please contact Karen Roberts, Principal Health Care Analyst at 860-418-7041 or Paolo Fiducia, Associate Health Care Analyst at 860-418-7035, if you have any questions regarding the above.

Sincerely,

Kimberly A. Martone
Director of Operations

Re: **Docket Number: 08-31202 CON The Waterbury Hospital and Saint Mary's Hospital Corporation, d/b/a/ Heart Center of Greater Waterbury and University of Connecticut Health Center / John Dempsey Hospital**

Dear Karen:

Enclosed are the procedure and patient volume reports for Saint Mary's Hospital and Waterbury Hospital from July 18, 2010 through July 17, 2011.

The ACC Executive Summaries from April 1, 2010 through March 31, 2011 for both Saint Mary's Hospital and Waterbury Hospital are provided.

The STS Executive Summaries are also provided for both hospitals and represent the period from January 1, 2011 through March 31, 2011

If you have any questions, please feel free to contact me at (203)-575-5560 or via email at kkniery@hcogw.org

Sincerely,

Kevin Kniery

To: Marjorie Lamour (HCGW)
Subject: annual filings to OHCA on heart center

Hi Marjorie:

Based on the phone message you'd left for me, I've rechecked the original file on Docket Number 08-31202-CON (Health Center of Greater Waterbury) and find that my fax to you on August 1, 2011 is in error. The St. Mary's information is found within the filings for both years filed and is not missing. I apologize for this oversight. Let me know if you have any further questions.

Sincerely,

Karen Roberts

Re: **Docket Number: 08-31202 CON The Waterbury Hospital and Saint Mary's Hospital Corporation, d/b/a/ Heart Center of Greater Waterbury and University of Connecticut Health Center / John Dempsey Hospital**

Dear Karen:

Enclosed are the procedure and patient volume reports for Saint Mary's Hospital and Waterbury Hospital from July 18, 2008 through July 17, 2009.

The ACC Executive Summaries for both Saint Mary's Hospital and Waterbury Hospital are provided. The ACC Summaries represent data from Jan 1, 2008 through March 31, 2009.

The STS Regional Outcome Comparisons are also provided for both hospitals. The STS comparison summaries represent the period from January 2008 – December 2008.

If you have any questions, please feel free to contact me at (203)-575-5572 or via email at mlamour@hcogw.org

Re: **Docket Number: 08-31202 CON The Waterbury Hospital and Saint Mary's Hospital Corporation, d/b/a/ Heart Center of Greater Waterbury and University of Connecticut Health Center / John Dempsey Hospital**

Dear Karen:

Enclosed are the procedure and patient volume reports for Saint Mary's Hospital and Waterbury Hospital from July 18, 2009 through July 17, 2010.

The ACC Executive Summaries for both Saint Mary's Hospital and Waterbury Hospital are provided. The ACC Summaries represent data from July 1, 2009 through March 31, 2010. A new ACC database was instituted on July 1, 2009. Enclosed are the reports for three rolling quarters of data.

The STS Regional Outcome Comparisons are also provided for both hospitals. The STS comparison summaries represent the period from January through December 2009.

If you have any questions, please feel free to contact me at (203)-575-5572 or via email at mlamour@hcogw.org

Executive Summary

CathPCI Registry®

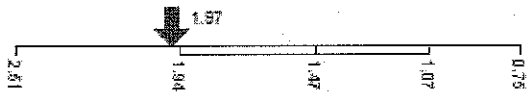
Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2011Q1

Section I: PCI Performance Measures

Endorsed by the National Quality Forum and appropriate for public reporting

PCI Performance Measures

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

1 **PCI in-hospital risk adjusted mortality (all patients)**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
1.97	1.47	0.75

Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:1997]

Note

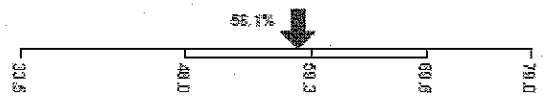
In-hospital risk adjusted mortality for PCI is the only performance measure in the CathPCI Registry® that has been endorsed by the National Quality Forum. Such performance measures meeting the requirement for approval are intended not only for clinical quality improvement, but also may be considered for purposes of public reporting.

The "Registry Metrics" on the subsequent pages of this report are those measures that have been developed to support self assessment and quality improvement at the provider, hospital, and/or health care system level. While these metrics have not been formally developed by the American College of Cardiology/American Heart Association Task Force for Performance Measures Task Force, they may be identified as evolving measures worthy of consideration for further development into performance measures.

Executive Summary

CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2011Q1

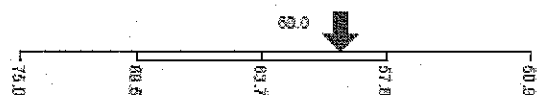


Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

PCI Process Metrics — **Distribution of Hospital Performance** (10th percentile … 90th percentile; Better →)

2 **Proportion of elective PCIs with prior positive stress or imaging study**

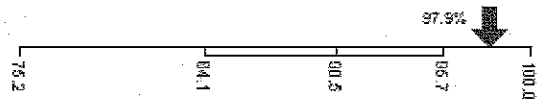
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
58.1%	59.3%	79.0%



Proportion of elective PCI procedures (excluding patients with ACS) with an antecedent stress or imaging study with a positive result (suggestive of ischemia) or with a fractional flow reserve value of <=0.8 during the PCI procedure [Detail Line:1511]

3 **Median time to immediate PCI for STEMI patients (in minutes)**

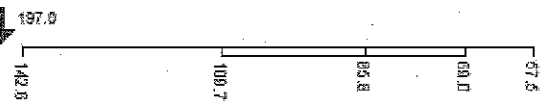
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
60.0	63.7	50.9



Your hospital's median time from hospital arrival to immediate PCI for STEMI patients in minutes. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1500]

4 **Proportion of STEMI patients receiving immediate PCI w/in 90"**

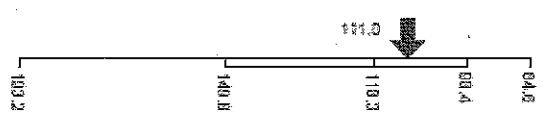
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
97.9%	90.5%	100.0%



Proportion of STEMI patients with a time from your hospital arrival (or subsequent ECG if ST elevation first noted on subsequent ECG) to immediate PCI <=90". Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1501]

5 **Median time from ED arrival at STEMI transferring facility to ED arrival at STEMI receiving facility among transferred patients.**

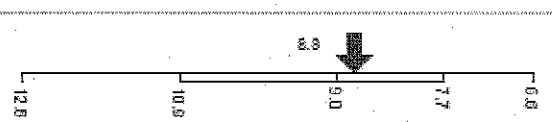
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
197.0	85.8	57.5



Your hospital's median time from arrival at transferring facility to ED arrival at STEMI receiving facility among transferred patients. [Detail Line:1503]

6 **Median time from ED arrival at STEMI transferring facility to immediate PCI at STEMI receiving facility among transferred patients (in minutes)**

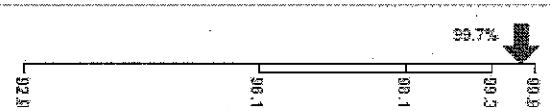
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
111.0	118.3	84.6



Your hospital's median time from arrival at referring facility to immediate PCI at STEMI receiving facility among transferred patients. Exclusions: Reasons for delay does not equal none. [Detail Line:1504]

7 **Median fluoro time (in minutes)**

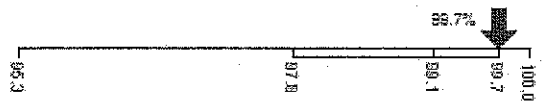
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
8.8	9.0	6.6



Inclusion criteria: PCI of one vessel/lesion. Exclusion criteria: Prior CABG, or "other" procedure during the same lab visit; PCI of >1 vessel/lesion. [Detail Line:1629]

8 **Proportion of patients with aspirin prescribed at discharge**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
99.7%	98.1%	99.9%



Proportion of patients (without a documented contraindication) with aspirin prescribed at discharge. [Detail Line:1959]

9 **Proportion of patients with thienopyridine prescribed at discharge**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
99.7%	99.1%	100.0%

Proportion of patients (without a documented contraindication) with a stent implanted that had a thienopyridine prescribed at discharge. [Detail Line: 1968]

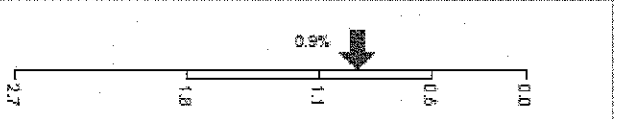
10 **Statins prescribed at discharge**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
97.4%	91.0%	96.9%

Proportion of patients (without a documented contraindication) prescribed a statin at discharge. [Detail Line:1964]

PCI Outcome Metrics

Distribution of Hospital Performance

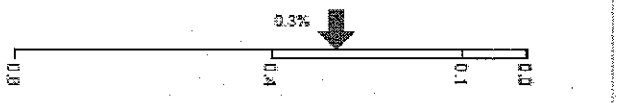


10th percentile — 90th percentile

Better →

11 **Proportion of PCI procedures with vascular access site injury requiring treatment or major bleeding***

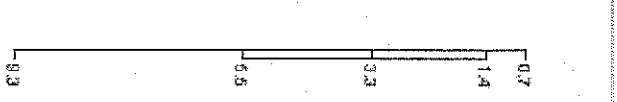
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.9%	1.1%	0.0%



Your hospital's proportion of patients (excluding CABG or other surgery during same admission) with major access site related injury requiring treatment or major bleeding. [Detail Line:1836]

12 **Proportion of PCI patients with emergency CABG**

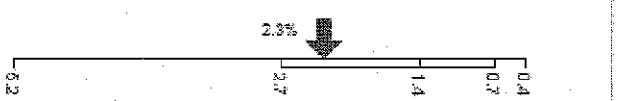
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.3%	0.1%	0.0%



Your hospital's proportion of patients having emergency CABG (at your facility or transferred to another facility). [Detail Line:1941]

13 **Proportion of PCI procedures with a post procedure MI (among hospitals routinely collecting post-PCI biomarkers)****

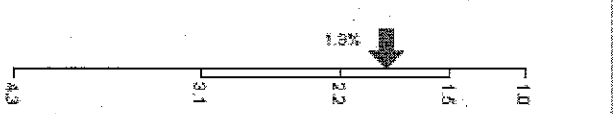
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
	3.3%	0.7%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with >= 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1799]

14 **Proportion of PCI procedures with post procedure MI (among hospitals who do not routinely collect post-PCI biomarkers)****

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
2.3%	1.4%	0.4%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with < 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1800]

15 **Proportion of PCI procedures with acute kidney injury*****

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
1.9%	2.2%	1.0%

Your hospital's proportion of patients who had a rise of serum creatinine of > 50% over the pre-procedure baseline (excluding patients on dialysis pre-procedure). Inclusions: >= 90% of patients with a pre and post creatinine coded; LOS >=1 day. [Detail Line:1933]

16 **Proportion of PCI procedures with post procedure stroke**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.0%	0.0%	0.0%

Your hospital's proportion of patients with stroke post procedure. [Detail Line:1807]

17 **Composite: Proportion of PCI patients with death, emergency CABG, stroke or repeat target vessel revascularization.**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
2.8%	2.3%	0.9%

Your hospital's proportion of patients with death, emergency CABG, stroke or repeat target vessel revascularization post procedure up to hospital discharge. Excludes patients with stroke and an elective, urgent or salvage CABG during same admission. [Detail Line:1797]

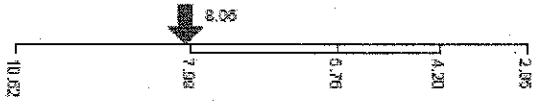
Executive Summary

CathPCI Registry®



Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2011Q1

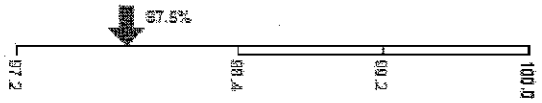
Section III: PCI Appropriate Use Criteria (AUC) Test Metrics – These data are based upon the 2009 Appropriateness Criteria for Coronary Revascularization (J Am Coll Cardiol 2009;53:530-53) document developed by the ACC, Society for Cardiovascular Angiography and Interventions, Society of Thoracic Surgeons, American Heart Association, and other national societies. These test metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level. Test metrics are not appropriate for public/external reporting.

Test Metrics: PCI Appropriate Use Criteria (AUC)	Distribution of Hospital Performance (10th percentile – 90th percentile; Better →)

30 **Test Metric: Proportion of PCI procedures not classifiable for AUC reporting**

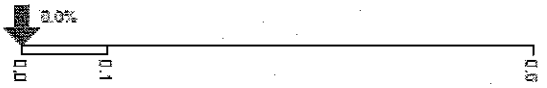
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
8.3%	13.0%	2.9%



Proportion of PCI procedures that were not classifiable/evaluated for PCI AUC reporting due to incomplete or missing data. [Detail Line:1587]

31 **Patients WITH Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were appropriate**

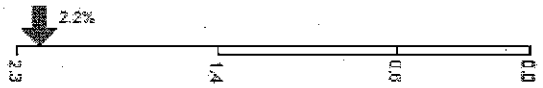
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
97.8%	99.2%	100.0%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients with ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1579]

32 **Patients WITH Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were of uncertain appropriateness**

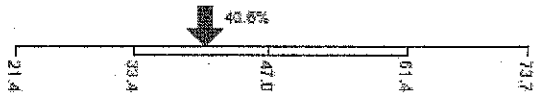
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.0%	0.0%	0.6%



Proportion of PCI procedures that were evaluated as "Uncertain", among patients with ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1580]

33 **Patients WITH Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were inappropriate**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
2.2%	0.6%	0.0%



Proportion of PCI procedures that were evaluated as "Inappropriate", among patients with ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1581]

34 **Patients WITHOUT Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were appropriate**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
40.6%	47.0%	73.7%

Proportion of PCI procedures that were evaluated as "Appropriate", among patients without ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1583]

35 **Patients WITHOUT Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
49.2%	39.7%	61.4%

Proportion of PCI procedures that were evaluated as "Uncertain", among patients without ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1585]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

***Your rate of acute kidney injury cannot be reported if you only collected creatinine pre and post procedure on <90% of your patients who were in the hospital >=1 day.

[Detail Line:1789,1790]

Intermediate stenosis lesions(40-70%): Further invasive evaluation performed (IVUS or FFR).
[Detail Line:1728,1729,1730]

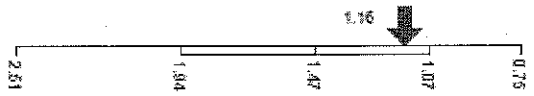
Outpatients: Proportion of PCI patient admissions whose hospital status was coded as "outpatient".
[Detail Line:1388]

Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2011Q1

Section I: PCI Performance Measures



Endorsed by the National Quality Forum and appropriate for public reporting

PCI Performance Measures	Distribution of Hospital Performance (10th percentile — 90th percentile; Better →)

1 **PCI in-hospital risk adjusted mortality (all patients)**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
1.16	1.47	0.75

Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:1997]

Note

In-hospital risk adjusted mortality for PCI is the only performance measure in the CathPCI Registry® that has been endorsed by the National Quality Forum. Such performance measures meeting the requirement for approval are intended not only for clinical quality improvement, but also may be considered for purposes of public reporting.

The "Registry Metrics" on the subsequent pages of this report are those measures that have been developed to support self assessment and quality improvement at the provider, hospital, and/or health care system level. While these metrics have not been formally developed by the American College of Cardiology/American Heart Association Task Force for Performance Measures Task Force, they may be identified as evolving measures worthy of consideration for further development into performance measures.

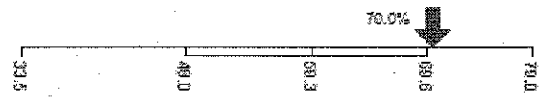
Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2011Q1

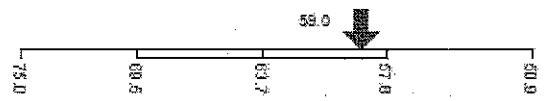


Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

PCI Process Metrics | **Distribution of Hospital Performance** (10th percentile … 90th percentile; Better →)

2 **Proportion of elective PCIs with prior positive stress or imaging study**

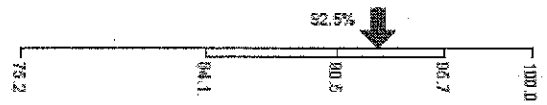
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
70.0%	59.3%	79.0%



Proportion of elective PCI procedures (excluding patients with ACS) with an antecedent stress or imaging study with a positive result (suggestive of ischemia) or with a fractional flow reserve value of <=0.8 during the PCI procedure [Detail Line:1511]

3 **Median time to immediate PCI for STEMI patients (in minutes)**

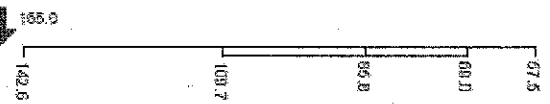
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
59.0	63.7	50.9



Your hospital's median time from hospital arrival to immediate PCI for STEMI patients in minutes. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1500]

4 **Proportion of STEMI patients receiving immediate PCI w/in 90"**

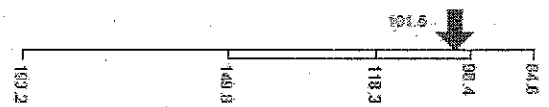
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
92.5%	90.5%	100.0%



Proportion of STEMI patients with a time from your hospital arrival (or subsequent ECG if ST elevation first noted on subsequent ECG) to immediate PCI <=90". Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1501]

5 **Median time from ED arrival at STEMI transferring facility to ED arrival at STEMI receiving facility among transferred patients.**

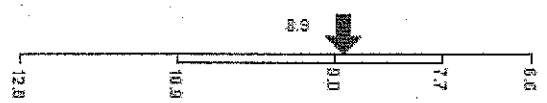
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
165.0	85.8	57.5



Your hospital's median time from arrival at transferring facility to ED arrival at STEMI receiving facility among transferred patients. [Detail Line:1503]

6 **Median time from ED arrival at STEMI transferring facility to immediate PCI at STEMI receiving facility among transferred patients (in minutes)**

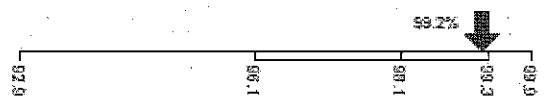
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
101.5	118.3	84.6



Your hospital's median time from arrival at referring facility to immediate PCI at STEMI receiving facility among transferred patients. Exclusions: Reasons for delay does not equal none. [Detail Line:1504]

7 **Median fluoro time (in minutes)**

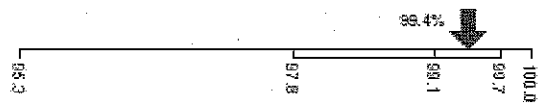
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
8.9	9.0	6.6



Inclusion criteria: PCI of one vessel/lesion. Exclusion criteria: Prior CABG, or "other" procedure during the same lab visit; PCI of >1 vessel/lesion. [Detail Line:1629]

8 **Proportion of patients with aspirin prescribed at discharge**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
99.2%	98.1%	99.9%



Proportion of patients (without a documented contraindication) with aspirin prescribed at discharge. [Detail Line:1959]

9 **Proportion of patients with thienopyridine prescribed at discharge**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
99.4%	99.1%	100.0%

Proportion of patients (without a documented contraindication) with a stent implanted that had a thienopyridine prescribed at discharge. [Detail Line: 1968]

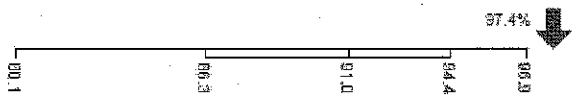
CathPCI Registry®



Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2011Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

10 **Statins prescribed at discharge**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
97.4%	91.0%	96.9%

Proportion of patients (without a documented contraindication) prescribed a statin at discharge. [Detail Line:1964]

PCI Outcome Metrics

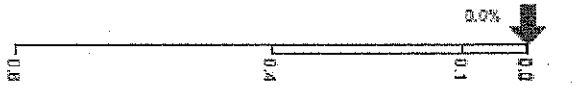
Distribution of Hospital Performance

10th percentile — 90th percentile

Better →

11 **Proportion of PCI procedures with vascular access site injury requiring treatment or major bleeding***

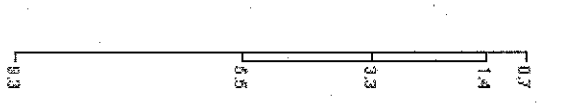
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.8%	1.1%	0.0%



Your hospital's proportion of patients (excluding CABG or other surgery during same admission) with major access site related injury requiring treatment or major bleeding. [Detail Line:1836]

12 **Proportion of PCI patients with emergency CABG**

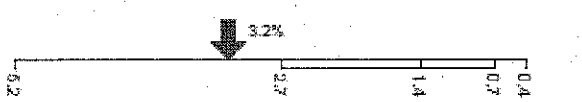
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.0%	0.1%	0.0%



Your hospital's proportion of patients having emergency CABG (at your facility or transferred to another facility). [Detail Line:1941]

13 **Proportion of PCI procedures with a post procedure MI (among hospitals routinely collecting post-PCI biomarkers)****

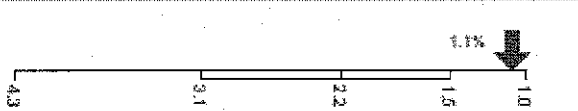
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
	3.3%	0.7%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with >= 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1799]

14 **Proportion of PCI procedures with post procedure MI (among hospitals who do not routinely collect post-PCI biomarkers)****

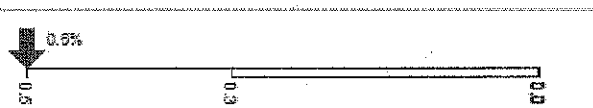
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
3.2%	1.4%	0.4%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with < 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1800]

15 **Proportion of PCI procedures with acute kidney injury*****

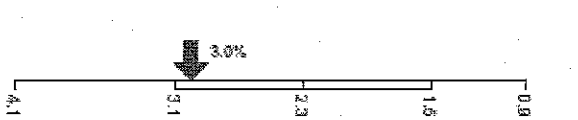
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
1.1%	2.2%	1.0%



Your hospital's proportion of patients who had a rise of serum creatinine of > 50% over the pre-procedure baseline (excluding patients on dialysis pre-procedure). Inclusions: >= 90% of patients with a pre and post creatinine coded; LOS >=1 day. [Detail Line:1933]

16 **Proportion of PCI procedures with post procedure stroke**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.5%	0.0%	0.0%



Your hospital's proportion of patients with stroke post procedure. [Detail Line:1807]

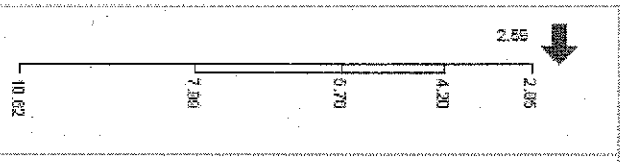
17 **Composite: Proportion of PCI patients with death, emergency CABG, stroke or repeat target vessel revascularization.**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
3.0%	2.3%	0.9%

Your hospital's proportion of patients with death, emergency CABG, stroke or repeat target vessel revascularization post procedure up to hospital discharge. Excludes patients with stroke and an elective, urgent or salvage CABG during same admission. [Detail Line:1797]

Executive Summary

CathPCI Registry®

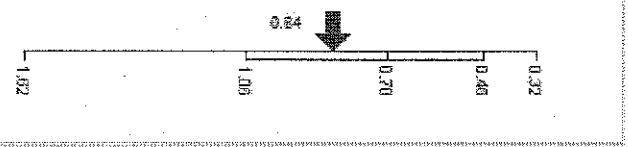


Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2011Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

18 **PCI in-hospital risk adjusted mortality (patients with STEMI)**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
2.59	5.76	2.85



Your hospital's PCI in-hospital risk adjusted mortality rate for patients with STEMI adjusted using the NCDR® risk adjustment model. [Detail Line:2006]

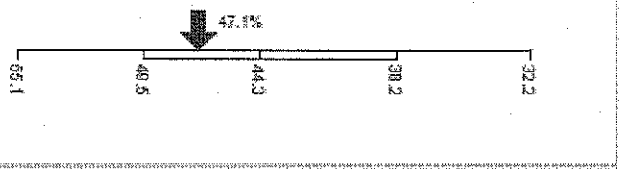
19 **PCI in-hospital risk adjusted mortality (STEMI patients excluded)**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.84	0.70	0.32

Your hospital's PCI in-hospital risk adjusted mortality rate for patients with other diagnoses (not STEMI) using the NCDR® risk adjustment model. [Detail Line:2015]

Diagnostic Cath Process Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

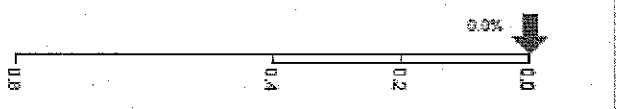
20 **Incidence of non-obstructive CAD (elective patients only)**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
47.1%	44.3%	32.2%

Patients with an elective diagnostic cath and coronary angiography with all native coronary territories <50% Exclusions: Patients with prior CABG, cardiac transplant evaluation; pre-op evaluation for non-cardiac surgery and diagnostic cath treatment recommendation of "other cardiac therapy without CABG or PCI". [Detail Line:1252]

Diagnostic Cath Outcomes Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

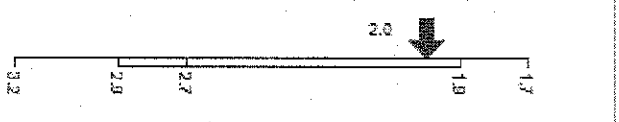
21 **Proportion of Diagnostic Catheterization procedures with vascular access site injury requiring treatment or major bleeding***

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.0%	0.2%	0.0%

Your hospital's proportion of patients with major access site related injury requiring treatment or major bleeding. [Detail Line:1301]

Utilization Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

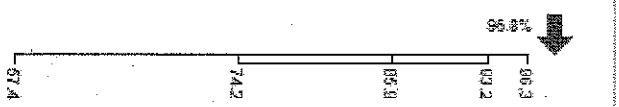
22 **Median post-procedure length of stay (in days) for PCI patients with STEMI**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
2.0	2.7	1.7

Your hospital's median post-procedure length of stay (in days) for PCI patients with STEMI. [Detail Line:2071]

Data Quality Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

24 **Proportion of PCI procedures with creatinine assessed pre and post PCI**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
96.8%	85.9%	96.3%

Proportion of PCI patients with creatinine assessed pre and post procedure. Inclusions: LOS >=1 day. [Detail Line:1932]

Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for All Hospitals ending 2011Q1

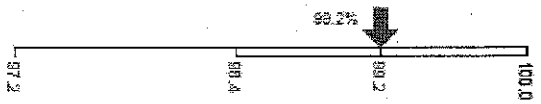
Section III: PCI Appropriate Use Criteria (AUC) Test Metrics – These data are based upon the 2009 Appropriateness Criteria for Coronary Revascularization (J Am Coll Cardiol 2009;53:530-53) document developed by the ACC, Society for Cardiovascular Angiography and Interventions, Society of Thoracic Surgeons, American Heart Association, and other national societies. These test metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level. Test metrics are not appropriate for public/external reporting.

Test Metrics: PCI Appropriate Use Criteria (AUC)	Distribution of Hospital Performance (10th percentile – 90th percentile; Better →)

30 **Test Metric: Proportion of PCI procedures not classifiable for AUC reporting**

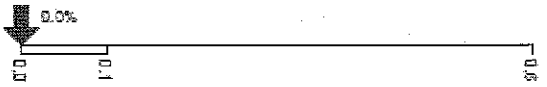
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
5.6%	13.0%	2.9%



Proportion of PCI procedures that were not classifiable/evaluated for PCI AUC reporting due to incomplete or missing data. [Detail Line:1587]

31 **Patients WITH Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were appropriate**

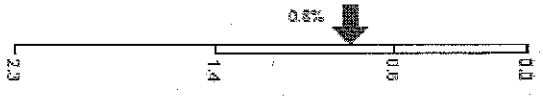
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
99.2%	99.2%	100.0%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients with ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1579]

32 **Patients WITH Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were of uncertain appropriateness**

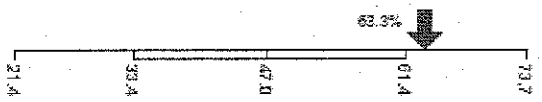
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.0%	0.0%	0.6%



Proportion of PCI procedures that were evaluated as "Uncertain", among patients with ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1580]

33 **Patients WITH Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were inappropriate**

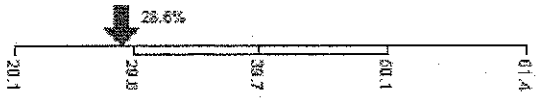
My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
0.8%	0.6%	0.0%



Proportion of PCI procedures that were evaluated as "Inappropriate", among patients with ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1581]

34 **Patients WITHOUT Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were appropriate**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
63.3%	47.0%	73.7%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients without ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1583]

35 **Patients WITHOUT Acute Coronary Syndrome (Test Metric): Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	All Hospitals 50th Pctl	All Hospitals 90th Pctl
28.6%	39.7%	61.4%

Proportion of PCI procedures that were evaluated as "Uncertain", among patients without ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. 8.2%	9.8%	0.0%

Proportion of PCI procedures that were evaluated as "Inappropriate", among patients without ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1585]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

***Your rate of acute kidney injury cannot be reported if you only collected creatinine pre and post procedure on <90% of your patients who were in the hospital >=1 day.

Subject: annual filings to OHCA on heart center

Hi Marjorie:

Based on the phone message you'd left for me, I've rechecked the original file on Docket Number 08-31202-CON (Health Center of Greater Waterbury) and find that my fax to you on August 1, 2011 is in error. The St. Mary's information is found within the filings for both years filed and is not missing. I apologize for this oversight. Let me know if you have any further questions.

Sincerely,

Karen Roberts

RE: The scheduling of a semi-annual meeting pursuant to Docket Number 08-31202-CON Heart Center of Greater Waterbury

Dear Mr. Kniery:

Pursuant to Stipulation #7 of the Agreed Settlement under Docket Number 08-31202-CON, St. Mary's Hospital, The Waterbury Hospital and John Dempsey Hospital (the "Applicants") agreed to "*attend meetings with OHCA on a semi-annual basis for the purposes of discussion on quality monitoring, clinical team structure, and overall organization structure.*"

With this letter, I am notifying you, on behalf of the Applicants (St. Mary's Hospital, The Waterbury Hospital and John Dempsey Hospital), that OHCA will not be scheduling a meeting regarding the CON authorization for this semi-annual period. Please contact Karen Roberts, Principal Health Care Analyst at 860-418-7041 or Paolo Fiducia, Associate Health Care Analyst at 860-418-7035, if you have any questions regarding the above.

Sincerely,

Kimberly R. Martone
Director of Operations

Hi Mr. Kniery

It is fine to file the material later in September and we will allow this extension of time. I've looked at the wording of the stipulation (#4) and it doesn't preclude an extension for filing this material in September. I'll have a copy of this email chain kept in the file under Docket Number 08-31202-CON to show that we've communicated on this matter. Also, please make sure that the filing includes that most recent ACC-NCDR and STS-DB reports (Stipulations #5 and #6).

Thank you for keeping OHCA informed regarding the status of this filing.

Ms. Roberts,
I am preparing the report and I am 95% done, can I get this to you by 9-14-12. I know we are suppose to report this by the end of August, but there have been some logistical challenges. Please let me know your thoughts or if you need to speak with me my cell is 203-910-2573.
Thanks Kevin

Ms. Martone,
At our recent board meeting for the heart center one of our board members stated that OCHA would not require the Heart Center of Greater Waterbury to submit the annual report of volumes, procedures and quality data. I wanted to verify this with your office. Please let me know. Thanks Kevin

Executive Summary

CathPCI Registry®

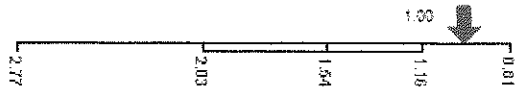
Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2012Q1

Section I: PCI Performance Measures

Endorsed by the National Quality Forum and appropriate for public reporting

PCI Performance Measures

Distribution of Hospital Performance

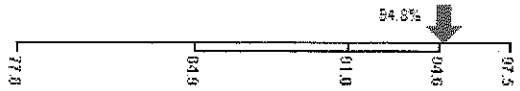


10th percentile — 90th percentile

Better →

1 **PCI in-hospital risk adjusted mortality (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.00	1.54	0.81



Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:2017]

38 **Composite: Discharge Medications in Eligible PCI Patients**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
94.8%	91.0%	97.5%

Patients with a PCI procedure who receive prescriptions for all medications (aspirin, P2Y12 inhibitor, and statin) for which they are eligible for at discharge. [Detail Line:1988]

Note

In-hospital risk adjusted mortality for PCI is the only performance measure in the CathPCI Registry® that has been endorsed by the National Quality Forum. Such performance measures meeting the requirement for approval are intended not only for clinical quality improvement, but also may be considered for purposes of public reporting.

The "Registry Metrics" on the subsequent pages of this report are those measures that have been developed to support self assessment and quality improvement at the provider, hospital, and/or health care system level. While these metrics have not been formally developed by the American College of Cardiology/American Heart Association Task Force for Performance Measures Task Force, they may be identified as evolving measures worthy of consideration for further development into performance measures.

Executive Summary

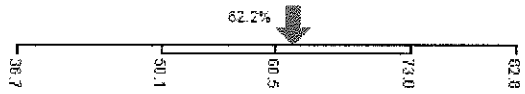
CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2012Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

PCI Process Metrics

Distribution of Hospital Performance

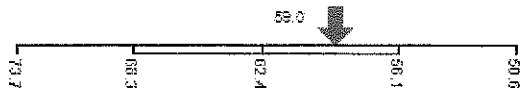


10th percentile — 90th percentile

Better →

2 **Proportion of elective PCIs with prior positive stress or imaging study**

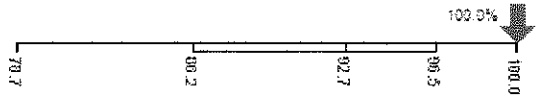
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
62.2%	60.5%	82.8%



Proportion of elective PCI procedures (excluding patients with ACS) with an antecedent stress or imaging study with a positive result (suggestive of ischemia) or with a fractional flow reserve value of <=0.8 during the PCI procedure [Detail Line:1513]

3 **Median time to immediate PCI for STEMI patients (in minutes)**

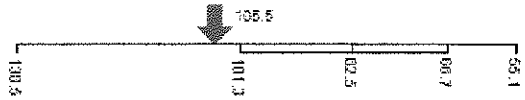
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
59.0	62.4	50.6



Your hospital's median time from hospital arrival to immediate PCI for STEMI patients in minutes. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1502]

4 **Proportion of STEMI patients receiving immediate PCI w/in 90"**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
100.0%	92.7%	100.0%



Proportion of STEMI patients with a time from your hospital arrival (or subsequent ECG if ST elevation first noted on subsequent ECG) to immediate PCI <=90". Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1503]

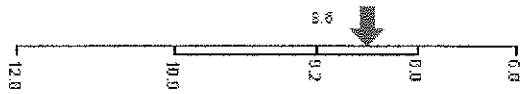
5 **Median time from ED arrival at STEMI transferring facility to ED arrival at STEMI receiving facility among transferred patients.**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
105.5	82.5	55.1

Your hospital's median time from arrival at transferring facility to ED arrival at STEMI receiving facility among transferred patients. [Detail Line:1505]

6 **Median time from ED arrival at STEMI transferring facility to immediate PCI at STEMI receiving facility among transferred patients (in minutes)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
154.5	113.2	82.6



Your hospital's median time from arrival at referring facility to immediate PCI at STEMI receiving facility among transferred patients. Exclusions: Reasons for delay does not equal none. [Detail Line:1506]

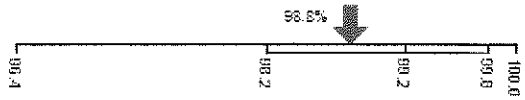
7 **Median fluoro time (in minutes)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
8.6	9.2	6.8

Inclusion criteria: PCI of one vessel/lesion. Exclusion criteria: Prior CABG, or "other" procedure during the same lab visit; PCI of >1 vessel/lesion. [Detail Line:1633]

8 **Proportion of patients with aspirin prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
99.4%	98.5%	100.0%



Proportion of patients (without a documented contraindication) with aspirin prescribed at discharge. [Detail Line:1978]

9 **Proportion of patients with a P2Y12 inhibitor prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
98.8%	99.2%	100.0%

Proportion of patients (without a documented contraindication) with a stent implanted that had a thienopyridine/P2Y12 inhibitor prescribed at discharge. [Detail Line:1987]

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2012Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

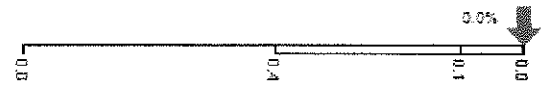
10 **Statins prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
96.1%	93.1%	98.2%

Proportion of patients (without a documented contraindication) prescribed a statin at discharge. [Detail Line:1983]

PCI Outcome Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

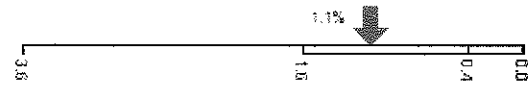
12 **Proportion of PCI patients with emergency CABG**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.0%	0.1%	0.0%

Your hospital's proportion of patients having emergency CABG (at your facility or transferred to another facility). [Detail Line:1960]

13 **Proportion of PCI procedures with a post procedure MI (among hospitals routinely collecting post-PCI biomarkers)****

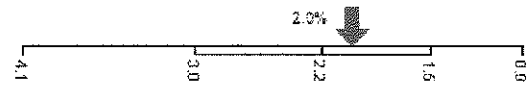
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
	1.6%	0.0%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with >= 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1803]

14 **Proportion of PCI procedures with post procedure MI (among hospitals who do not routinely collect post-PCI biomarkers)****

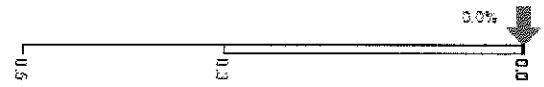
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.1%	0.4%	0.0%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with < 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1804]

15 **Proportion of PCI procedures with acute kidney injury*****

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.0%	2.2%	0.9%



Your hospital's proportion of patients who had a rise of serum creatinine of > 50% over the pre-procedure baseline (excluding patients on dialysis pre-procedure). Inclusions: >= 90% of patients with a pre and post creatinine coded; LOS >=1 day. [Detail Line:1952]

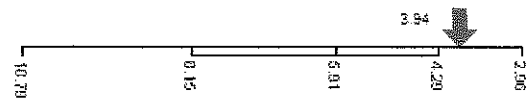
16 **Proportion of PCI procedures with post procedure stroke**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.0%	0.0%	0.0%

Your hospital's proportion of patients with stroke post procedure. [Detail Line:1811]

17 **Composite: Proportion of PCI patients with death, emergency CABG, stroke or repeat target vessel revascularization.**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.7%	2.4%	1.0%



Your hospital's proportion of patients with death, emergency CABG, stroke or repeat target vessel revascularization post procedure up to hospital discharge. Excludes patients with stroke and an elective, urgent or salvage CABG during same admission. [Detail Line:1801]

18 **PCI in-hospital risk adjusted mortality (patients with STEMI)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
3.94	5.91	2.96

Your hospital's PCI in-hospital risk adjusted mortality rate for patients with STEMI adjusted using the NCDR® risk adjustment model. [Detail Line:2026]

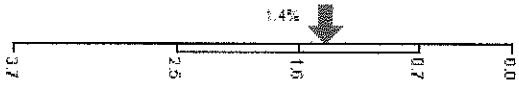
Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

19 **PCI in-hospital risk adjusted mortality (STEMI patients excluded)**

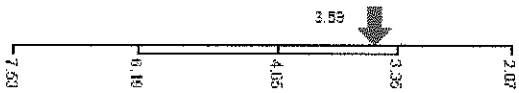
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.43	0.74	0.33



Your hospital's PCI in-hospital risk adjusted mortality rate for patients with other diagnoses (not STEMI) using the NCDR® risk adjustment model. [Detail Line:2035]

25 **Proportion of PCI procedures with transfusion of whole blood or RBCs**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.4%	1.6%	0.0%



Proportion of patients who received a transfusion of whole blood or red blood cells after a PCI procedure. Inclusion: Patients with a pre-procedure hemoglobin >8 g/dL and patients with no CABG, and no other major surgery during the same admission. [Detail Line:1853]

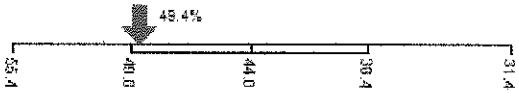
37 **PCI in-hospital risk adjusted rate of bleeding events (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
3.59	4.65	2.07

Your hospital's risk adjusted rate of bleeding events for patients with PCI procedures using the NCDR® PCI bleeding risk adjustment model. [Detail Line:1823]

Diagnostic Cath Process Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

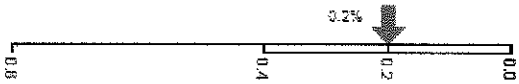
20 **Incidence of non-obstructive CAD (elective patients only)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
49.4%	44.0%	31.4%

Patients with an elective diagnostic cath and coronary angiography with all native coronary territories <50% Exclusions: Patients with prior CABG, cardiac transplant evaluation; pre-op evaluation for non-cardiac surgery and diagnostic cath treatment recommendation of "other cardiac therapy without CABG or PCI". [Detail Line:1252]

Diagnostic Cath Outcomes Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Executive Summary

CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2012Q1

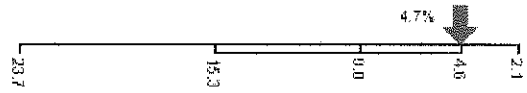
Section III: PCI Appropriate Use Criteria (AUC) Metrics – These data are based upon the 2009 Appropriateness Criteria for Coronary Revascularization (J Am Coll Cardiol 2009;53:530-53) document developed by the ACC, Society for Cardiovascular Angiography and Interventions, Society of Thoracic Surgeons, American Heart Association, and other national societies. These metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level. PCI AUC metrics are not appropriate for public/external reporting.

PCI Appropriate Use Criteria (AUC) Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

30 **Proportion of PCI procedures not classifiable for AUC reporting**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
4.7%	9.0%	2.1%

Proportion of PCI procedures that were not classifiable/evaluated for PCI AUC reporting due to incomplete or missing data. [Detail Line:1589]

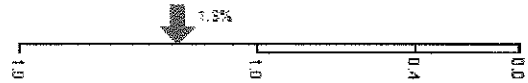
31 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
98.7%	99.5%	100.0%

Proportion of PCI procedures that were evaluated as "Appropriate", among patients with ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1581]

32 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

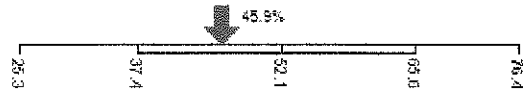
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.0%	0.0%	0.5%



Proportion of PCI procedures that were evaluated as "Uncertain", among patients with ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1582]

33 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were inappropriate**

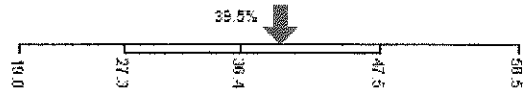
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.3%	0.4%	0.0%



Proportion of PCI procedures that were evaluated as "Inappropriate", among patients with ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1583]

34 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
45.9%	52.1%	76.4%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients without ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1585]

35 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
39.5%	36.4%	58.5%

Proportion of PCI procedures that were evaluated as "Uncertain", among patients without ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1586]

Executive Summary

CathPCI Registry®

These metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level. PCI AUC metrics are not appropriate for public/external reporting.

36 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were inappropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
14.7%	8.3%	0.0%

Proportion of PCI procedures that were evaluated as "Inappropriate", among patients without ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1587]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >= 3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

***Your rate of acute kidney injury cannot be reported if you only collected creatinine pre and post procedure on <90% of your patients who were in the hospital >=1 day.

Release Notes:

Executive Summary: Please refer to the Outcomes Report Companion Guide in the resources section of our website, https://www.ncdr.com/WebNCDR/RESOURCES/V4DOCUMENTS.ASPX#, for all measure and metric specifications.

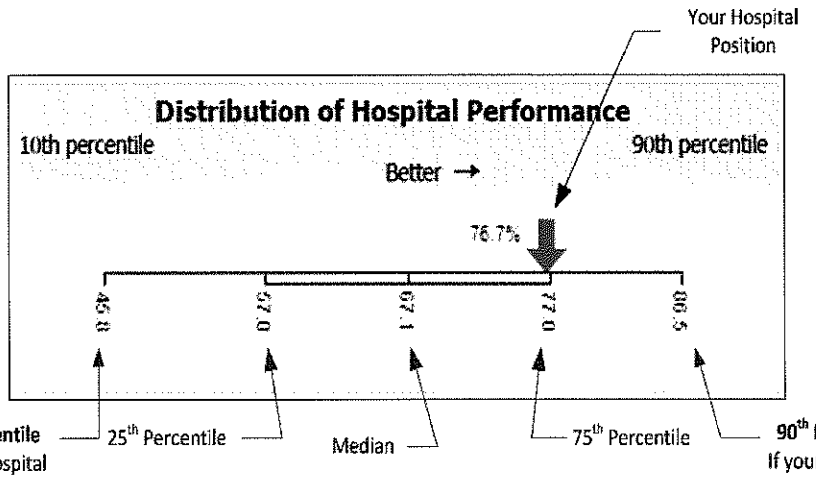
1. 'Composite: Discharge Medications in Eligible PCI Patients' (metric 38, detail line 1988) is a new, National Quality Forum endorsed performance measure. This 'all or none' performance measure reports the percentage of patients with a PCI procedure with a prescription of discharge medications (statins, aspirin and P2Y12 inhibitors) for which they were eligible. Please refer to the Outcomes Report Companion Guide in the resources section of our website, https://www.ncdr.com/WebNCDR/RESOURCES/V4DOCUMENTS.ASPX#, for measure specifications.
2. Thienopyridines prescribed at discharge (metric 9, detail line 1987) – Ticagrelor now included in the medication umbrella for this metric. The medication category was modified from Thienopyridines to P2Y12 Inhibitors/Thienopyridines to include this new medication which is a broader medication category of P2Y12 Inhibitors.
3. Myocardial infarction (metric 13 and 14, detail lines 1803, 1804). A modification was made to the programming to display 'zero' instead of a null value in the numerator for detail lines 1803 and 1804. Because zeros were not previously displayed, including the zeros (and a rate of "no post procedure MI") affects the ranking and distribution of hospital performance. Please note the display of zeros will only be reflected when on one line (not both), which is based on your sites data submission and whether you routinely collect post-PCI biomarkers or not.
4. PCI in-hospital risk adjusted rate of bleeding events (metric 37, detail line 1823): Metric 11, Vascular access site injury requiring treatment or major bleeding has been replaced with a 'PCI Risk Adjusted Rate of Bleeding Events'. The retired metric is still displayed on detail line 1849. Please refer to the "CathPCI Registry Risk -adjusted Outcomes Interpretation and Specifications" in the resources section of our website, https://www.ncdr.com/WebNCDR/RESOURCES/V4DOCUMENTS.ASPX# , for model specifications.
5. Transfusions (metric 25). An additional exclusion criterion was added to this metric to align it with the specifications of the PCI bleeding model. Patients who have a pre-PCI hemeglobin level of <= 8 g/dL are excluded in the metric.
6. PCI Appropriate Use Criteria Metrics (30-36)– The 'test' status has been removed from the metrics in this section.

Executive Summary Section IV: PCI Process Comparisons:

1. Anticoagulant Use: Low molecular weight heparin, direct thrombin inhibitors, GP IIb/IIIa inhibitor(pts with acute coronary syndrome). Low molecular weight heparin (any) and Unfractionated heparin (any) are now combined in the first bar of the graph (the graph previously reported only low molecular weight heparins in this bar). Please note: a minor adjustment is being made to the denominator of this graph, which will be reflected in the 2012q1 report.

Detail lines:

1. New line, 1988: See above information describing Measure 38.
2. New line, 1600: Reports patients with PCI procedures that received either a low molecular weight heparin (any) and/or unfractionated heparin (any). Please note: a minor adjustment is being made to the denominator to this line, and the data will be displayed in the 2012Q1 report.
3. New lines 1818-1826: Risk adjusted bleeding. Please refer to the 'CathPCI Registry Risk -adjusted Outcomes Interpretation and Specifications' in the resources section of our website, https://www.ncdr.com/WebNCDR/RESOURCES/V4DOCUMENTS.ASPX# , for model specifications.
4. New or modified lines- 1608, 1612: Ticagrelor was added to the Pre-PCI medications and is included in line 1608, and reported separately in line 1612. Ticagrelor is considered a P2Y12 inhibitor so the medication category description of line 1608 (thienopyridine) was expanded to Thienopyridine/P2Y12.
5. New or modified lines- 1986-1987: Ticagrelor was added to the medications prescribed at discharge and is included in line 1986 and 1987. Ticagrelor is considered a P2Y12 inhibitor so the medication category description of line 1986 (thienopyridine) was expanded to Thienopyridine/P2Y12.
6. Modified lines 1852-1853: RBC/Whole Blood Transfusion has an additional exclusion criterion align it with the specifications of the PCI bleeding model. Patients who have a pre-PCI hemoglobin level of <= 8 g/dL are excluded.
7. Modified lines 1803, 1804 (myocardial infarction): A modification was made to the programming to display 'zero' instead of a null value in the numerator when you had NO post procedure MI for that quarter. The display of zeros will only be reflected one line (not both), which is based on your sites data submission and whether you routinely collect post-PCI biomarkers or not.
8. New lines 1302, 1303, 1850, 1851, 1894. 1895, 1942, 1943. Vascular access site injury or bleeding by access site (comparing outcomes by femoral or radial access) have been added to the report. The data in these new sections are still undergoing testing and will be displayed in the 2012q1 report.



Frequently used terminology:

R4Q (Rolling Four Quarters)	The four (4) consecutive quarters included in this report. (Example: The 2011Q1 report includes 2010Q2, 2010Q3, 2010Q4 and 2011Q1. The "Q" in 'R4Q" indicates the last quarter of the rolling four quarters).
Benchmark Inclusion Status	Indicates whether a submission will be included in the R4Q aggregated data (benchmark) and comparison group statistics. "Green","Yellow" and "Red" stoplights denote the status. A "Green" status indicates the submission (one quarter/timeframe) is included in the benchmark and comparison group statistics. The data has successfully passed all data assessment and completeness checks. A "Yellow" status indicates the submission (one quarter/timeframe) is not included in the benchmark and comparison group statistics. Data is displayed in the quarterly column, but is not included in the "My Hospital R4Q" summary. The data has not passed the overall completeness assessment checks. A "Red" status indicates the submission (one quarter/timeframe) is not included in the benchmark or comparison group statistics. Data is not displayed in the quarterly column. A null or blank status indicates no submission has been received for that quarter/timeframe. Data is not displayed in the quarterly column.
Submission Type	Indicates the Submission Type based on the percentage of procedures performed in the submission file. A file with fewer than 50% of the procedures performed indicated as Diagnostic Catheterizations are designated as "PCI Only" submissions.
My Hospital R4Q	The values for a metric/measure (over R4Q) of data submitted by your facility with a Benchmark Inclusion Status of "Green".
US Hospital 50th Pctl	The median (or midpoint or 50th percentile) of US participant aggregated data for the metric or measure. Half of all participants will be above the median, and half will be below. This value will correspond to the midpoint of the box/whisker plot.
US Hospital 90th Pctl	The 90th percentile of US participant aggregated data for the metric or measure. 10% of all participants will be above the 90th percentile value, and 90% will be below. This value will correspond to the right-most endpoint of the box/whisker plot.
Annualized Volume	Annualized Volume is the total number of PCI procedures submitted over the R4Q period, adjusted for the number of quarters in which valid submissions were received during the R4Q period.
Volume Group Pts R4Q	The aggregated value for the metric/measure across all patients in the specified comparison group (over R4Q). Comparison Groups are based on annualized procedure volume. See the Comparison Group chart on the Inclusion Summary page of this report. To be included, data must have a Benchmark Inclusion Status of "Green".
US Registry Pts R4Q	The aggregated value for the measure/metric across US patients (over R4Q). To be included, data must have a Benchmark Inclusion Status of "Green". Only facilities in the United States and outlying territories are included.
Declared Procedure Volume	Indicates the estimated annual procedure volume as reported by the facility on the NCDR website Site Profile.
LFHS	This stands for Leapfrog Hospital Survey. This is to help identify the lines that are used for Leapfrog reporting for our participants. Please note that in the detail lines you will see "(LFHS)" to denote the lines that are to be used for Actual and Risk Adjusted Mortality Rate calculations.
Actual Mortality Rate (LFHS)	Enter your hospital's (actual) observed mortality rate (OMR) as a percentage. Using data from the My Hospital R4Q "Num" column in the current NCDR CathPCI Registry Institutional Outcomes Reports, OMR must be calculated by dividing the number for "Observed Mortality (among eligible) (LFHS)" by the number for "Eligible pts (LFHS)" to obtain the % rate for the most recent rolling four quarters where 12 consecutive months of data was submitted [i.e., Observed Mortality (among eligible) (LFHS)/Eligible pts (LFHS)].
Expected Mortality Rate (LFHS)	Enter your hospital's expected mortality rate (EMR) as a percentage. Using data from the Hospital R4Q "Num" column in the current NCDR CathPCI Registry Institutional Outcomes Reports, EMR must be calculated by dividing the number for "Expected Mortality (among eligible) (LFHS)" by the number for "Eligible pts (LFHS)" to obtain the % rate for the most recent rolling four quarters where 12 consecutive months of data was submitted [i.e., Expected Mortality (among eligible) (LFHS)/Eligible pts (LFHS)].

Box and Whisker Plots

Interpreting Box and Whisker Plots

10th percentile
If your hospital scores below the 10th percentile, the arrow will be on the left of this number.

25th Percentile — Median — 75th Percentile

90th Percentile
If your hospital scores above the 90th percentile, the arrow will be on the right of this number.

10th Percentile
90% of the hospitals achieved "better" scores than the 10th percentile.

25th Percentile or 1st Quartile
75% of the hospitals achieved "better" scores than the 25th percentile.

50th Percentile or 2nd Quartile
Middle of the distribution: Half of the hospitals data is above and half are below the median.

75th Percentile or 3rd Quartile
25% of the hospitals achieved "better" scores than the 75th percentile.

90th Percentile
10% of the hospitals achieved "better" scores than the 90th percentile.

Your Hospital Position
Your 'Hospital Position' in relation to all other hospitals' data.

Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2012Q1

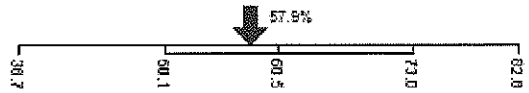
Section I: PCI Performance Measures

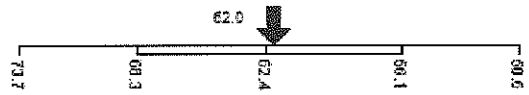
Endorsed by the National Quality Forum and appropriate for public reporting

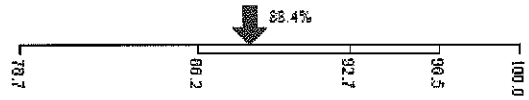
PCI Performance Measures		Distribution of Hospital Performance (10th percentile — 90th percentile; Better →)
1	**PCI in-hospital risk adjusted mortality (all patients)** My Hospital: 1.82 | US Hospitals 50th Pctl: 1.54 | US Hospitals 90th Pctl: 0.81 Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:2017]	
38	**Composite: Discharge Medications in Eligible PCI Patients** My Hospital: 94.6% | US Hospitals 50th Pctl: 91.0% | US Hospitals 90th Pctl: 97.5% Patients with a PCI procedure who receive prescriptions for all medications (aspirin, P2Y12 inhibitor, and statin) for which they are eligible for at discharge. [Detail Line:1988]	

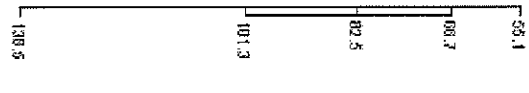
Note

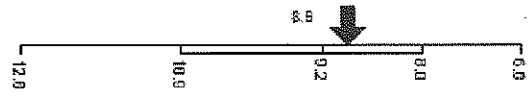
In-hospital risk adjusted mortality for PCI is the only performance measure in the CathPCI Registry® that has been endorsed by the National Quality Forum. Such performance measures meeting the requirement for approval are intended not only for clinical quality improvement, but also may be considered for purposes of public reporting.

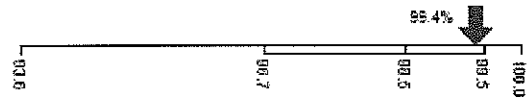


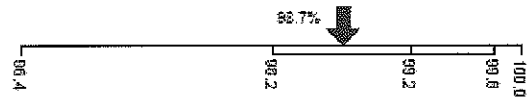












The "Registry Metrics" on the subsequent pages of this report are those measures that have been developed to support self assessment and quality improvement at the provider, hospital, and/or health care system level. While these metrics have not been formally developed by the American College of Cardiology/American Heart Association Task Force for Performance Measures Task Force, they may be identified as evolving measures worthy of consideration for further development into performance measures.

Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2012Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

	PCI Process Metrics	Distribution of Hospital Performance (10th percentile – 90th percentile; Better →)
2	**Proportion of elective PCIs with prior positive stress or imaging study** My Hospital: 57.9% | US Hospitals 50th Pctl: 60.5% | US Hospitals 90th Pctl: 82.8% Proportion of elective PCI procedures (excluding patients with ACS) with an antecedent stress or imaging study with a positive result (suggestive of ischemia) or with a fractional flow reserve value of <=0.8 during the PCI procedure [Detail Line:1513]	
3	**Median time to immediate PCI for STEMI patients (in minutes)** My Hospital: 62.0 | US Hospitals 50th Pctl: 62.4 | US Hospitals 90th Pctl: 50.6 Your hospital's median time from hospital arrival to immediate PCI for STEMI patients in minutes. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1502]	
4	**Proportion of STEMI patients receiving immediate PCI w/in 90"** My Hospital: 88.4% | US Hospitals 50th Pctl: 92.7% | US Hospitals 90th Pctl: 100.0% Proportion of STEMI patients with a time from your hospital arrival (or subsequent ECG if ST elevation first noted on subsequent ECG) to immediate PCI <=90". Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1503]	
5	**Median time from ED arrival at STEMI transferring facility to ED arrival at STEMI receiving facility among transferred patients.** My Hospital: [blank] | US Hospitals 50th Pctl: 82.5 | US Hospitals 90th Pctl: 55.1 Your hospital's median time from arrival at transferring facility to ED arrival at STEMI receiving facility among transferred patients. [Detail Line:1505]	
6	**Median time from ED arrival at STEMI transferring facility to immediate PCI at STEMI receiving facility among transferred patients (in minutes)** My Hospital: [blank] | US Hospitals 50th Pctl: 113.2 | US Hospitals 90th Pctl: 82.6 Your hospital's median time from arrival at referring facility to immediate PCI at STEMI receiving facility among transferred patients. Exclusions: Reasons for delay does not equal none. [Detail Line:1506]	
7	**Median fluoro time (in minutes)** My Hospital: 8.9 | US Hospitals 50th Pctl: 9.2 | US Hospitals 90th Pctl: 6.8 Inclusion criteria: PCI of one vessel/lesion. Exclusion criteria: Prior CABG, or "other" procedure during the same lab visit; PCI of >1 vessel/lesion. [Detail Line:1633]	
8	**Proportion of patients with aspirin prescribed at discharge** My Hospital: 99.4% | US Hospitals 50th Pctl: 98.5% | US Hospitals 90th Pctl: 100.0% Proportion of patients (without a documented contraindication) with aspirin prescribed at discharge. [Detail Line:1978]	
9	**Proportion of patients with a P2Y12 inhibitor prescribed at discharge** My Hospital: 98.7% | US Hospitals 50th Pctl: 99.2% | US Hospitals 90th Pctl: 100.0% Proportion of patients (without a documented contraindication) with a stent implanted that had a thienopyridine/P2Y12 inhibitor prescribed at discharge. [Detail Line:1987]

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2012Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

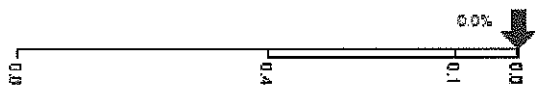
10 **Statins prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
96.3%	93.1%	98.2%

Proportion of patients (without a documented contraindication) prescribed a statin at discharge. [Detail Line:1983]

PCI Outcome Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

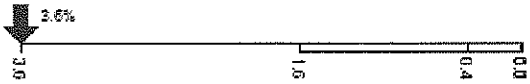
12 **Proportion of PCI patients with emergency CABG**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.0%	0.1%	0.0%

Your hospital's proportion of patients having emergency CABG (at your facility or transferred to another facility). [Detail Line:1960]

13 **Proportion of PCI procedures with a post procedure MI (among hospitals routinely collecting post-PCI biomarkers)****

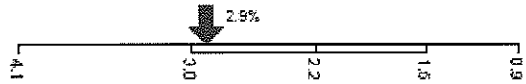
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
	1.6%	0.0%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with >= 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1803]

14 **Proportion of PCI procedures with post procedure MI (among hospitals who do not routinely collect post-PCI biomarkers)****

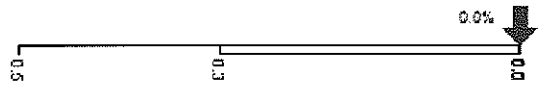
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
3.6%	0.4%	0.0%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with < 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1804]

15 **Proportion of PCI procedures with acute kidney injury*****

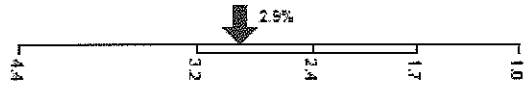
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.9%	2.2%	0.9%



Your hospital's proportion of patients who had a rise of serum creatinine of > 50% over the pre-procedure baseline (excluding patients on dialysis pre-procedure). Inclusions: >= 90% of patients with a pre and post creatinine coded; LOS >=1 day. [Detail Line:1952]

16 **Proportion of PCI procedures with post procedure stroke**

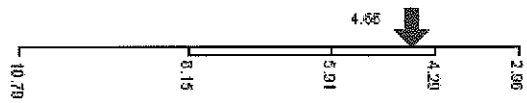
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.0%	0.0%	0.0%



Your hospital's proportion of patients with stroke post procedure. [Detail Line:1811]

17 **Composite: Proportion of PCI patients with death, emergency CABG, stroke or repeat target vessel revascularization.**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.9%	2.4%	1.0%



Your hospital's proportion of patients with death, emergency CABG, stroke or repeat target vessel revascularization post procedure up to hospital discharge. Excludes patients with stroke and an elective, urgent or salvage CABG during same admission. [Detail Line:1801]

18 **PCI in-hospital risk adjusted mortality (patients with STEMI)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
4.66	5.91	2.96

Your hospital's PCI in-hospital risk adjusted mortality rate for patients with STEMI adjusted using the NCDR® risk adjustment model. [Detail Line:2026]

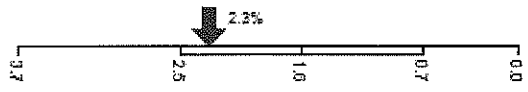
Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2012Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

19 **PCI in-hospital risk adjusted mortality (STEMI patients excluded)**

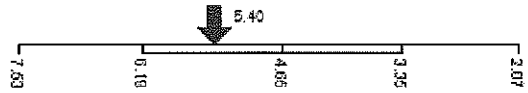
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.06	0.74	0.33



Your hospital's PCI in-hospital risk adjusted mortality rate for patients with other diagnoses (not STEMI) using the NCDR® risk adjustment model. [Detail Line:2035]

25 **Proportion of PCI procedures with transfusion of whole blood or RBCs**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.3%	1.6%	0.0%

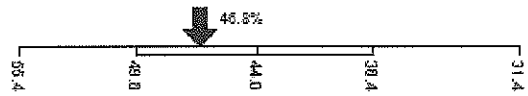


Proportion of patients who received a transfusion of whole blood or red blood cells after a PCI procedure. Inclusion: Patients with a pre-procedure hemoglobin >8 g/dL and patients with no CABG, and no other major surgery during the same admission. [Detail Line:1853]

37 **PCI in-hospital risk adjusted rate of bleeding events (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
5.40	4.65	2.07

Your hospital's risk adjusted rate of bleeding events for patients with PCI procedures using the NCDR® PCI bleeding risk adjustment model. [Detail Line:1823]

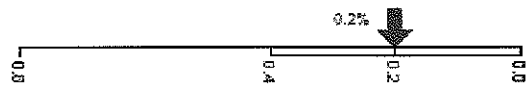


Diagnostic Cath Process Metrics

20 **Incidence of non-obstructive CAD (elective patients only)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
46.8%	44.0%	31.4%

Patients with an elective diagnostic cath and coronary angiography with all native coronary territories <50% Exclusions: Patients with prior CABG, cardiac transplant evaluation; pre-op evaluation for non-cardiac surgery and diagnostic cath treatment recommendation of "other cardiac therapy without CABG or PCI". [Detail Line:1252]

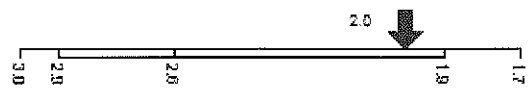


Diagnostic Cath Outcomes Metrics

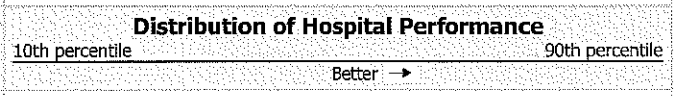
21 **Proportion of Diagnostic Catheterization procedures with vascular access site injury requiring treatment or major bleeding***

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.2%	0.2%	0.0%

Your hospital's proportion of patients with major access site related injury requiring treatment or major bleeding. [Detail Line:1301]



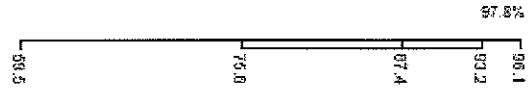
Utilization Metrics



22 **Median post-procedure length of stay (in days) for PCI patients with STEMI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.0	2.6	1.7

Your hospital's median post-procedure length of stay (in days) for PCI patients with STEMI. [Detail Line:2091]



Data Quality Metrics

24 **Proportion of PCI procedures with creatinine assessed pre and post PCI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.8%	87.4%	96.1%

Proportion of PCI patients with creatinine assessed pre and post procedure. Inclusions: LOS >=1 day. [Detail Line:1951]

Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2012Q1

Section III: PCI Appropriate Use Criteria (AUC) Metrics – These data are based upon the 2009 Appropriateness Criteria for Coronary Revascularization (J Am Coll Cardiol 2009;53:530-53) document developed by the ACC, Society for Cardiovascular Angiography and Interventions, Society of Thoracic Surgeons, American Heart Association, and other national societies. These metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level. PCI AUC metrics are not appropriate for public/external reporting.

PCI Appropriate Use Criteria (AUC) Metrics	Distribution of Hospital Performance (10th percentile – 90th percentile; Better →)

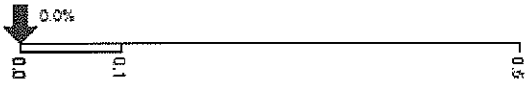
30 **Proportion of PCI procedures not classifiable for AUC reporting**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.8%	9.0%	2.1%

Proportion of PCI procedures that were not classifiable/evaluated for PCI AUC reporting due to incomplete or missing data. [Detail Line:1589]

31 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

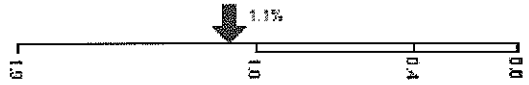
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
98.9%	99.5%	100.0%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients with ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1581]

32 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

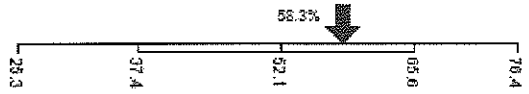
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.0%	0.0%	0.5%



Proportion of PCI procedures that were evaluated as "Uncertain", among patients with ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1582]

33 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were inappropriate**

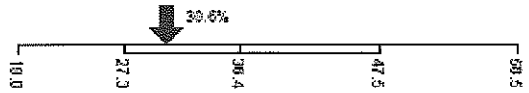
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.1%	0.4%	0.0%



Proportion of PCI procedures that were evaluated as "Inappropriate", among patients with ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1583]

34 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
58.3%	52.1%	76.4%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients without ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1585]

35 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
30.6%	36.4%	58.5%

Proportion of PCI procedures that were evaluated as "Uncertain", among patients without ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1587]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >= 3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

***Your rate of acute kidney injury cannot be reported if you only collected creatinine pre and post procedure on <90% of your patients who were in the hospital >=1 day.

Appendix A: Participant-Specific Data Quality Summary

Participant 30397
STS Period Ending 12/31/2011

Duke Clinical Research Institute

INTRODUCTION
This data in this appendix is specific to your participating organization. We provide this data quality information to help you interpret and assess the weight and reliability of your results and to help you target data review and cleanup efforts for future harvests to the warehouse. Addressing and correcting data quality issues will result in increased value and meaningfulness of future participant-specific reports.

INCLUSION TIME PERIOD (First and Last Surgery Dates)
The first and last surgery dates found in the report for Participant 30397 for any record are:

First Surgery		Last Surgery
January 5, 2009	to	December 30, 2011

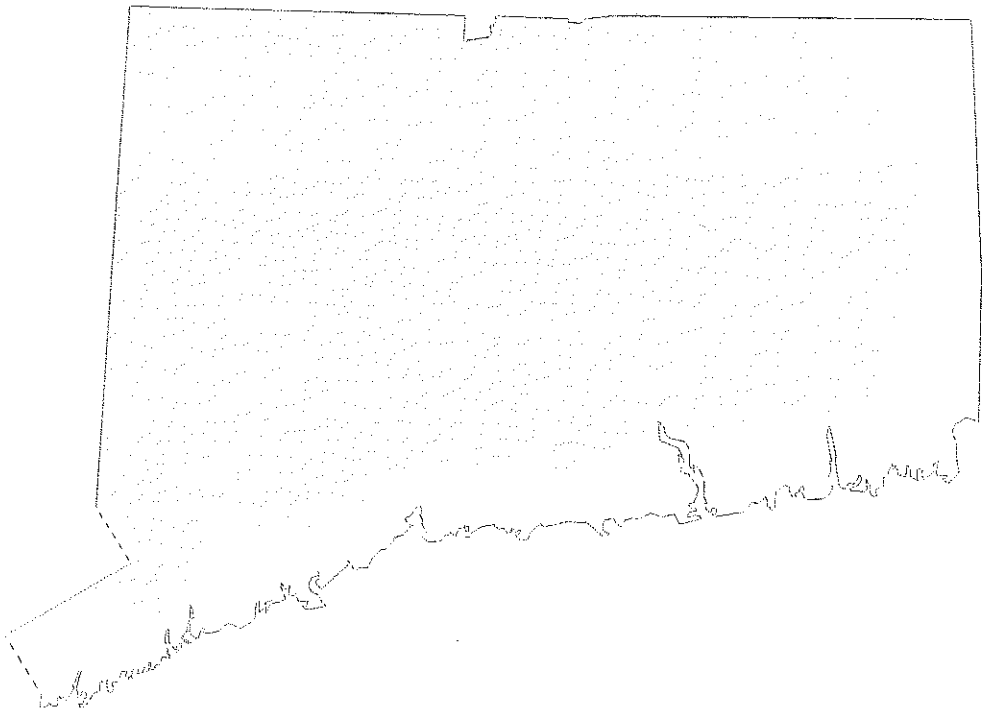
MISSING DATA
For all fields reported, the percentage of missing data is listed in the data summary table for each procedure. The graph at right displays the ten reported data fields that have a percentage missing of 0.1% or more for CAB risk model variables at your participating organization in the latest calendar year.

Data Quality: CAB Model Variables

[No records with missing data present for 2011]

MISSING DATA COLLECTION MONTHS
The table at right displays the months covered in this report for which no data from your organization is present at the warehouse. A review of this list can highlight incomplete data capture and/or data transfer problems.

Year	Months with no data
2009	[No missing months]
2010	[No missing months]
2011	[No missing months]



LIKE GROUP ASSIGNMENTS
Please refer to the Report Overview for further details about Like Group specifications.

CABG Group: Non-Residency Low Volume
Valve Group: Non-Residency Low Volume

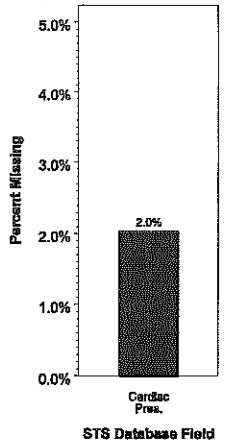
Appendix A: Participant-Specific Data Quality Summary

Participant 30398
STS Period Ending 12/31/2011

Duke Clinical Research Institute



INTRODUCTION
This data in this appendix is specific to your participating organization. We provide this data quality information to help you interpret and assess the weight and reliability of your results and to help you target data review and cleanup efforts for future harvests to the warehouse. Addressing and correcting data quality issues will result in increased value and meaningfulness of future participant-specific reports.

INCLUSION TIME PERIOD (First and Last Surgery Dates)
The first and last surgery dates found in the report for Participant 30398 for any record are:

First Surgery		Last Surgery
January 7, 2009	to	December 14, 2011

MISSING DATA
For all fields reported, the percentage of missing data is listed in the data summary table for each procedure. The graph at right displays the ten reported data fields that have a percentage missing of 0.1% or more for CAB risk model variables at your participating organization in the latest calendar year.

Data Quality: CAB Model Variables

MISSING DATA COLLECTION MONTHS
The table at right displays the months covered in this report for which no data from your organization is present at the warehouse. A review of this list can highlight incomplete data capture and/or data transfer problems.

Year	Months with no data
2009	[No missing months]
2010	[No missing months]
2011	[No missing months]

LIKE GROUP ASSIGNMENTS
Please refer to the Report Overview for further details about Like Group specifications.

CABG Group: Non-Residency Low Volume
Valve Group: Non-Residency Low Volume

OUTLIER DATA

The STS Database Committee has developed thresholds for model-related data fields in order to highlight extreme participant-level values, known as outliers. The table below shows these thresholds along with your organization's value. Outliers are bolded.

Reported variable	Low Threshold	High Threshold	Your Value
Patient age, mean	55.0	75.0	64.6
Morbid obesity (BMI 40.0+)	0.0%	10.0%	6.1%
Diabetes mellitus	15.0%	60.0%	49.0%
Hypertension	40.0%	95.0%	91.8%
Arrhythmia, afib/aflutter	0.0%	95.0%	50.0%
Chronic lung disease	4.0%	75.0%	28.6%
Cardiac presentation, unstable angina	5.0%	80.0%	28.6%
Congestive heart failure	0.0%	50.0%	16.3%
NYHA class IV	0.0%	70.0%	**0.0%**
Peripheral arterial disease	3.0%	40.0%	**0.0%**
Cerebrovascular disease	1.0%	35.0%	12.2%
Cerebrovascular accident	0.0%	20.0%	4.1%
Creatinine, mean	0.5	2.0	1.2
Renal failure, dialysis-dependent	0.0%	7.5%	2.0%
Immunosuppressive treatment	0.0%	10.0%	6.1%
First reoperation	0.0%	20.0%	6.1%
Second+ reoperation	0.0%	5.0%	**0.0%**
PCI <= 6 hours prior to surgery	0.0%	5.0%	**0.0%**
Emergent	0.0%	20.0%	**0.0%**
Emergent/Salvage	0.0%	4.0%	**0.0%**
MI	20.0%	75.0%	46.9%
Cardiogenic shock	0.0%	7.5%	**0.0%**
Resuscitation	0.0%	5.0%	**0.0%**
Triple vessel disease	40.0%	95.0%	93.9%
Left main disease (>50% stenosis)	5.0%	50.0%	40.8%
EF, mean	40.0	60.0	48.5
Preop IABP	0.0%	30.0%	12.2%
Outcome: Operative mortality	0.0%	15.0%	**0.0%**
Outcome: Combined mortality/morbidity	0.0%	40.0%	18.4%
Outcome: Any reoperation	0.0%	15.0%	2.0%
Outcome: Deep sternal wound infection	0.0%	5.0%	**0.0%**
Outcome: Permanent stroke	0.0%	6.0%	2.0%
Outcome: Prolonged ventilation	0.0%	30.0%	8.2%
Outcome: Renal failure	0.0%	15.0%	8.3%

August 8, 2013,

Re: Docket Number: 08-31202 CON The Waterbury Hospital and Saint Mary's Hospital Corporation, d/b/a Heart Center of Greater Waterbury and the University of Connecticut Health Center/ John Demsey Hospital

Dear Ms. Roberts,

Enclosed are the procedure and patient volume reports for Saint Mary's Hospital and Waterbury Hospital from July 18, 2012 through July 17, 2013.

The ACC Executive Summaries from July 14, 2013 QTR 1 report for both Saint Mary's Hospital and Waterbury Hospital are enclosed.

The STS Executive Summaries are also provided for both hospitals the latest report published, which is for period ending 12/31/12..

If you have any questions, please feel free to contact me at 203-575-5560 or email me at kkniery@leevercancercenter.org.

Sincerely,

Kevin Kniery
Executive Director
Heart Center of Greater Waterbury

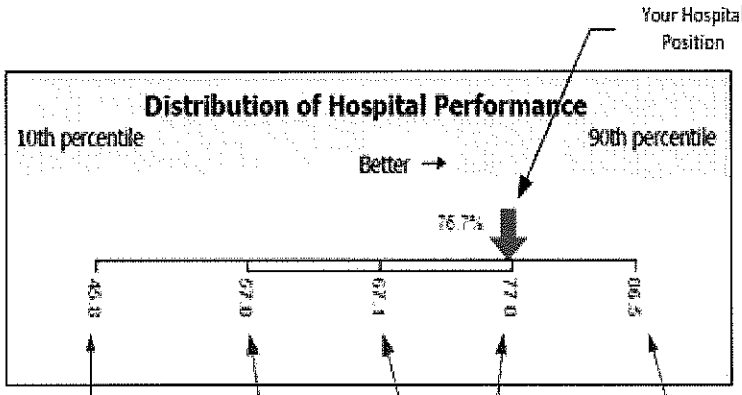
Release Notes:

CathPCI Registry® Outcomes Report Release Notes for 2013 Q1

Report Changes:

1. Risk Adjusted Acute Kidney Injury (AKI): Risk adjusted AKI is a new PCI risk model in the institutional reports. Risk adjusted AKI is reported in metric (#39) and new detail lines (1955-1963).*
2. Risk Adjusted Dialysis: Risk adjusted dialysis is a new PCI risk model in the institutional reports. Risk adjusted dialysis is reported in detail lines (1964-1972).*
3. Acute Kidney Injury (unadjusted) – Metric 15 has been retired from the executive summary but is maintained in the detail section on line 1952.



*Please refer to the "Risk Adjusted Outcomes Interpretation and Specifications" in the resources section of our website, https://www.ncdr.com/WebNCDR/RESOURCES/V4DOCUMENTS.ASPX# , for model specifications.

Frequently used terminology:

R4Q (Rolling Four Quarters)	The four (4) consecutive quarters included in this report. (Example: The 2011Q1 report includes 2010Q2, 2010Q3, 2010Q4 and 2011Q1. The "Q" in 'R4Q" indicates the last quarter of the rolling four quarters).
Benchmark Inclusion Status	Indicates whether a submission will be included in the R4Q aggregated data (benchmark) and comparison group statistics. "Green","Yellow" and "Red" stoplights denote the status. A "Green" status indicates the submission (one quarter/timeframe) is included in the benchmark and comparison group statistics. The data has successfully passed all data assessment and completeness checks. A "Yellow" status indicates the submission (one quarter/timeframe) is not included in the benchmark and comparison group statistics. Data is displayed in the quarterly column, but is not included in the "My Hospital R4Q" summary. The data has not passed the overall completeness assessment checks. A "Red" status indicates the submission (one quarter/timeframe) is not included in the benchmark or comparison group statistics. Data is not displayed in the quarterly column. A null or blank status indicates no submission has been received for that quarter/timeframe. Data is not displayed in the quarterly column.
Submission Type	Indicates the Submission Type based on the percentage of procedures performed in the submission file. A file with fewer than 50% of the procedures performed indicated as Diagnostic Catheterizations are designated as "PCI Only" submissions.
My Hospital R4Q	The values for a metric/measure (over R4Q) of data submitted by your facility with a Benchmark Inclusion Status of "Green".
US Hospital 50th Pctl	The median (or midpoint or 50th percentile) of US participant aggregated data for the metric or measure. Half of all participants will be above the median, and half will be below. This value will correspond to the midpoint of the box/whisker plot.
US Hospital 90th Pctl	The 90th percentile of US participant aggregated data for the metric or measure. 10% of all participants will be above the 90th percentile value, and 90% will be below. This value will correspond to the right-most endpoint of the box/whisker plot.
Annualized Volume	Annualized Volume is the total number of PCI procedures submitted over the R4Q period, adjusted for the number of quarters in which valid submissions were received during the R4Q period.
Volume Group Pts R4Q	The aggregated value for the metric/measure across all patients in the specified comparison group (over R4Q). Comparison Groups are based on annualized procedure volume. See the Comparison Group chart on the Inclusion Summary page of this report. To be included, data must have a Benchmark Inclusion Status of "Green".
US Registry Pts R4Q	The aggregated value for the measure/metric across US patients (over R4Q). To be included, data must have a Benchmark Inclusion Status of "Green". Only facilities in the United States and outlying territories are included.
Declared Procedure Volume	Indicates the estimated annual procedure volume as reported by the facility on the NCDR website Site Profile.
LFHS	This stands for Leapfrog Hospital Survey. This is to help identify the lines that are used for Leapfrog reporting for our participants. Please note that in the detail lines you will see "(LFHS)" to denote the lines that are to be used for Actual and Risk Adjusted Mortality Rate calculations.
Actual Mortality Rate (LFHS)	Enter your hospital's (actual) observed mortality rate (OMR) as a percentage. Using data from the My Hospital R4Q "Num" column in the current NCDR CathPCI Registry Institutional Outcomes Reports, OMR must be calculated by dividing the number for "Observed Mortality (among eligible) (LFHS)" by the number for "Eligible pts (LFHS)" to obtain the % rate for the most recent rolling four quarters where 12 consecutive months of data was submitted [i.e., Observed Mortality (among eligible) (LFHS)/Eligible pts (LFHS)].
Expected Mortality Rate (LFHS)	Enter your hospital's expected mortality rate (EMR) as a percentage. Using data from the Hospital R4Q "Num" column in the current NCDR CathPCI Registry Institutional Outcomes Reports, EMR must be calculated by dividing the number for "Expected Mortality (among eligible) (LFHS)" by the number for "Eligible pts (LFHS)" to obtain the % rate for the most recent rolling four quarters where 12 consecutive months of data was submitted [i.e., Expected Mortality (among eligible) (LFHS)/Eligible pts (LFHS)].

Box and Whisker Plots

Interpreting Box and Whisker Plots

10th percentile
If your hospital scores below the 10th percentile, the arrow will be on the left of this number.

25th Percentile

Median

75th Percentile

90th Percentile
If your hospital scores above the 90th percentile, the arrow will be on the right of this number.

10th Percentile
90% of the hospitals achieved "better" scores than the 10th percentile.

25th Percentile or 1st Quartile
75% of the hospitals achieved "better" scores than the 25th percentile.

50th Percentile or 2nd Quartile
Middle of the distribution: Half of the hospitals data is above and half are below the median.

75th Percentile or 3rd Quartile
25% of the hospitals achieved "better" scores than the 75th percentile.

90th Percentile
10% of the hospitals achieved "better" scores than the 90th percentile.

Your Hospital Position
Your 'Hospital Position' in relation to all other hospitals' data.

Executive Summary

CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2013Q1

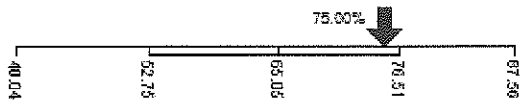
Section I: PCI Performance Measures

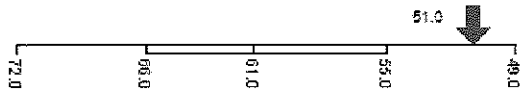
Endorsed by the National Quality Forum and appropriate for public reporting

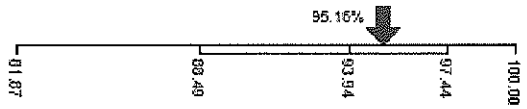
	PCI Performance Measures	Distribution of Hospital Performance (10th percentile — 90th percentile; Better →)
1	**PCI in-hospital risk adjusted mortality (all patients)** My Hospital: 1.78 | US Hospitals 50th Pctl: 1.71 | US Hospitals 90th Pctl: 0.91 Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:2035]	
38	**Composite: Discharge Medications in Eligible PCI Patients** My Hospital: 95.2% | US Hospitals 50th Pctl: 92.5% | US Hospitals 90th Pctl: 98.3% Patients with a PCI procedure who receive prescriptions for all medications (aspirin, P2Y12 inhibitor, and statin) for which they are eligible for at discharge. [Detail Line:2006]	

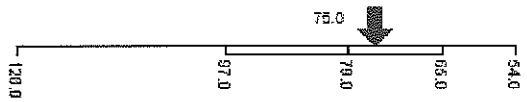
Note

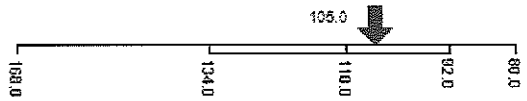
Performance measures in the CathPCI Registry® have been endorsed by the National Quality Forum. Such performance measures meeting the requirement for approval are intended not only for clinical quality improvement, but also may be considered for purposes of public reporting.

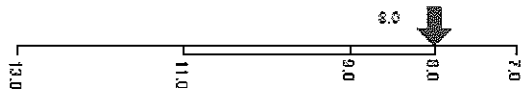


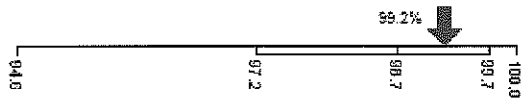


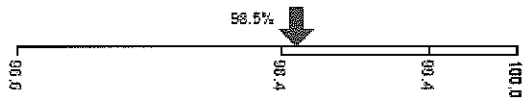












The "Registry Metrics" on the subsequent pages of this report are those measures that have been developed to support self assessment and quality improvement at the provider, hospital, and/or health care system level. While these metrics have not been formally developed by the American College of Cardiology/American Heart Association Task Force for Performance Measures Task Force, they may be identified as evolving measures worthy of consideration for further development into performance measures.

Executive Summary

CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2013Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

	PCI Process Metrics	Distribution of Hospital Performance (10th percentile … 90th percentile; Better →)
2	**Proportion of elective PCIs with prior positive stress or imaging study** My Hospital: 75.00% | US Hospitals 50th Pctl: 65.05% | US Hospitals 90th Pctl: 87.56% Proportion of elective PCI procedures (excluding patients with ACS) with an antecedent stress or imaging study with a positive result (suggestive of ischemia) or with a fractional flow reserve value of <=0.8 during the PCI procedure [Detail Line:1513]	
3	**Median time to immediate PCI for STEMI patients (in minutes)** My Hospital: 51 | US Hospitals 50th Pctl: 61 | US Hospitals 90th Pctl: 49 Your hospital's median time from hospital arrival to immediate PCI for STEMI patients in minutes. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1502]	
4	**Proportion of STEMI patients receiving immediate PCI w/in 90'** My Hospital: 95.16% | US Hospitals 50th Pctl: 93.94% | US Hospitals 90th Pctl: 100.00% Proportion of STEMI patients with a time from your hospital arrival (or subsequent ECG if ST elevation first noted on subsequent ECG) to immediate PCI <=90'. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1503]	
5	**Median time from ED arrival at STEMI transferring facility to ED arrival at STEMI receiving facility among transferred patients.** My Hospital: 75 | US Hospitals 50th Pctl: 79 | US Hospitals 90th Pctl: 54 Your hospital's median time from arrival at transferring facility to ED arrival at STEMI receiving facility among transferred patients. [Detail Line:1505]	
6	**Median time from ED arrival at STEMI transferring facility to immediate PCI at STEMI receiving facility among transferred patients (in minutes)** My Hospital: 105 | US Hospitals 50th Pctl: 110 | US Hospitals 90th Pctl: 80 Your hospital's median time from arrival at referring facility to immediate PCI at STEMI receiving facility among transferred patients. Exclusions: Reasons for delay does not equal none. [Detail Line:1506]	
7	**Median fluoro time (in minutes)** My Hospital: 8 | US Hospitals 50th Pctl: 9 | US Hospitals 90th Pctl: 7 Inclusion criteria: PCI of one vessel/lesion. Exclusion criteria: Prior CABG, or "other" procedure during the same lab visit; PCI of >1 vessel/lesion. [Detail Line:1633]	
8	**Proportion of patients with aspirin prescribed at discharge** My Hospital: 99.2% | US Hospitals 50th Pctl: 98.7% | US Hospitals 90th Pctl: 100.0% Proportion of patients (without a documented contraindication) with aspirin prescribed at discharge. [Detail Line:1996]	
9	**Proportion of patients with a P2Y12 inhibitor prescribed at discharge** My Hospital: 98.5% | US Hospitals 50th Pctl: 99.4% | US Hospitals 90th Pctl: 100.0% Proportion of patients (without a documented contraindication) with a stent implanted that had a thienopyridine/P2Y12 inhibitor prescribed at discharge. [Detail Line:2005]

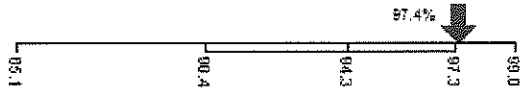
Executive Summary

CathPCI Registry®



Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2013Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

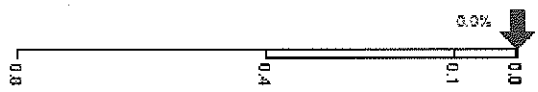
10 **Statins prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.4%	94.3%	99.0%

Proportion of patients (without a documented contraindication) prescribed a statin at discharge. [Detail Line:2001]

PCI Outcome Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

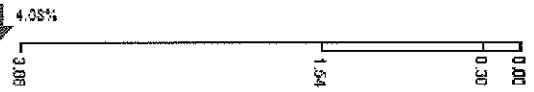
12 **Proportion of PCI patients with emergency CABG**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.0%	0.1%	0.0%

Your hospital's proportion of patients having emergency CABG (at your facility or transferred to another facility). [Detail Line:1978]

13 **Proportion of PCI procedures with a post procedure MI (among hospitals routinely collecting post-PCI biomarkers)****

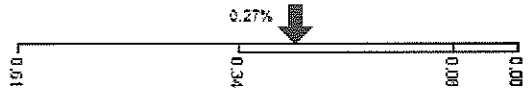
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
	1.51%	0.00%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with >= 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1803]

14 **Proportion of PCI procedures with post procedure MI (among hospitals who do not routinely collect post-PCI biomarkers)****

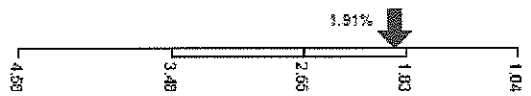
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
4.08%	0.30%	0.00%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with < 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1804]

16 **Proportion of PCI procedures with post procedure stroke**

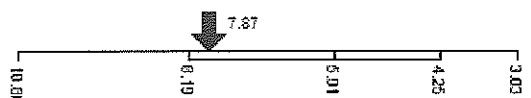
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.27%	0.08%	0.00%



Your hospital's proportion of patients with stroke post procedure. [Detail Line:1811]

17 **Composite: Proportion of PCI patients with death, emergency CABG, stroke or repeat target vessel revascularization.**

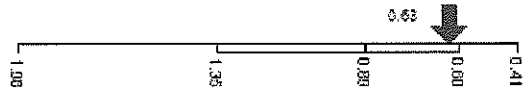
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.91%	2.55%	1.04%



Your hospital's proportion of patients with death, emergency CABG, stroke or repeat target vessel revascularization post procedure up to hospital discharge. Excludes patients with stroke and an elective, urgent or salvage CABG during same admission. [Detail Line:1801]

18 **PCI in-hospital risk adjusted mortality (patients with STEMI)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
7.87	5.91	3.03



Your hospital's PCI in-hospital risk adjusted mortality rate for patients with STEMI adjusted using the NCDR® risk adjustment model. [Detail Line:2044]

19 **PCI in-hospital risk adjusted mortality (STEMI patients excluded)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.63	0.89	0.41

Your hospital's PCI in-hospital risk adjusted mortality rate for patients with other diagnoses (not STEMI) using the NCDR® risk adjustment model. [Detail Line:2053]

Executive Summary

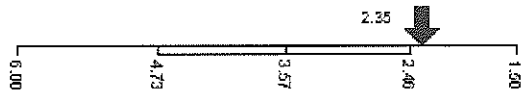
CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2013Q1

Section II: Quality Metrics -- to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

25 **Proportion of PCI procedures with transfusion of whole blood or RBCs**

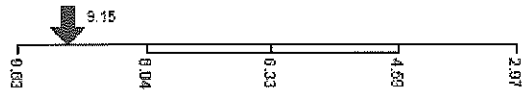
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.81%	1.27%	0.00%



Proportion of patients who received a transfusion of whole blood or red blood cells after a PCI procedure. Inclusion: Patients with a pre-procedure hemoglobin >8 g/dL and patients with no CABG, and no other major surgery during the same admission. [Detail Line:1853]

37 **PCI in-hospital risk adjusted rate of bleeding events (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.35	3.57	1.50



Your hospital's risk adjusted rate of bleeding events for patients with PCI procedures using the NCDR® PCI bleeding risk adjustment model. [Detail Line:1823]

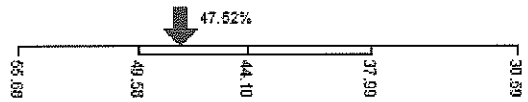
39 **PCI in-hospital risk adjusted acute kidney injury (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
9.15	6.33	2.97

Your hospital's PCI in-hospital risk adjusted AKI rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:1960]

Diagnostic Cath Process Metrics

Distribution of Hospital Performance



10th percentile 90th percentile

Better →

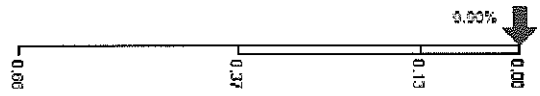
20 **Incidence of non-obstructive CAD (elective patients only)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
47.52%	44.10%	30.59%

Patients with an elective diagnostic cath and coronary angiography with all native coronary territories <50% Exclusions: Patients with prior CABG, cardiac transplant evaluation; pre-op evaluation for non-cardiac surgery and diagnostic cath treatment recommendation of "other cardiac therapy without CABG or PCI". [Detail Line:1252]

Diagnostic Cath Outcomes Metrics

Distribution of Hospital Performance



10th percentile 90th percentile

[Detail Line:1587]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >= 3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

Inclusion Summary

Quarters included in this report:

Timeframe	Benchmark Inclusion Status	Submission Type	Included in Executive Summary
2012Q2		All Patients	Yes
2012Q3		All Patients	Yes
2012Q4		All Patients	Yes
2013Q1		All Patients	Yes

Comparison group included in this report:

Volume Groups	Number of PCI Procedures per R4Q	Number of US Hospitals per Volume Group	Your Hospital's Volume Group	Your Annualized PCI Procedure Volume	Your Declared Procedure Volume
1	0-10	56			
2	11-200	359			
3	201-400	398	X	353	386
4	401-600	257			
5	601-1000	234			
6	1001-2000	129			
7	2001+	17			

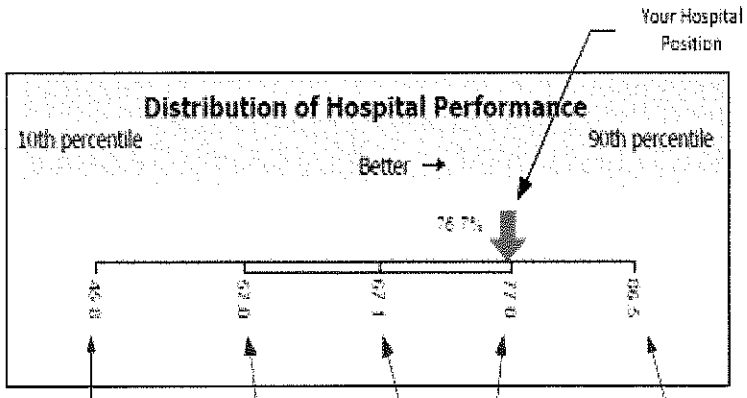
Release Notes:

CathPCI Registry® Outcomes Report Release Notes for 2013 Q1

Report Changes:

1. Risk Adjusted Acute Kidney Injury (AKI): Risk adjusted AKI is a new PCI risk model in the institutional reports. Risk adjusted AKI is reported in metric (#39) and new detail lines (1955-1963).*
2. Risk Adjusted Dialysis: Risk adjusted dialysis is a new PCI risk model in the institutional reports. Risk adjusted dialysis is reported in detail lines (1964-1972).*
3. Acute Kidney Injury (unadjusted) – Metric 15 has been retired from the executive summary but is maintained in the detail section on line 1952.

*Please refer to the "Risk Adjusted Outcomes Interpretation and Specifications" in the resources section of our website, https://www.ncdr.com/WebNCDR/RESOURCES/V4DOCUMENTS.ASPX# , for model specifications.



Frequently used terminology:

R4Q (Rolling Four Quarters)	The four (4) consecutive quarters included in this report. (Example: The 2011Q1 report includes 2010Q2, 2010Q3, 2010Q4 and 2011Q1. The "Q" in 'R4Q" indicates the last quarter of the rolling four quarters).
Benchmark Inclusion Status	Indicates whether a submission will be included in the R4Q aggregated data (benchmark) and comparison group statistics. "Green","Yellow" and "Red" stoplights denote the status. A "Green" status indicates the submission (one quarter/timeframe) is included in the benchmark and comparison group statistics. The data has successfully passed all data assessment and completeness checks. A "Yellow" status indicates the submission (one quarter/timeframe) is not included in the benchmark and comparison group statistics. Data is displayed in the quarterly column, but is not included in the "My Hospital R4Q" summary. The data has not passed the overall completeness assessment checks. A "Red" status indicates the submission (one quarter/timeframe) is not included in the benchmark or comparison group statistics. Data is not displayed in the quarterly column. A null or blank status indicates no submission has been received for that quarter/timeframe. Data is not displayed in the quarterly column.
Submission Type	Indicates the Submission Type based on the percentage of procedures performed in the submission file. A file with fewer than 50% of the procedures performed indicated as Diagnostic Catheterizations are designated as "PCI Only" submissions.
My Hospital R4Q	The values for a metric/measure (over R4Q) of data submitted by your facility with a Benchmark Inclusion Status of "Green".
US Hospital 50th Pctl	The median (or midpoint or 50th percentile) of US participant aggregated data for the metric or measure. Half of all participants will be above the median, and half will be below. This value will correspond to the midpoint of the box/whisker plot.
US Hospital 90th Pctl	The 90th percentile of US participant aggregated data for the metric or measure. 10% of all participants will be above the 90th percentile value, and 90% will be below. This value will correspond to the right-most endpoint of the box/whisker plot.
Annualized Volume	Annualized Volume is the total number of PCI procedures submitted over the R4Q period, adjusted for the number of quarters in which valid submissions were received during the R4Q period.
Volume Group Pts R4Q	The aggregated value for the metric/measure across all patients in the specified comparison group (over R4Q). Comparison Groups are based on annualized procedure volume. See the Comparison Group chart on the Inclusion Summary page of this report. To be included, data must have a Benchmark Inclusion Status of "Green".
US Registry Pts R4Q	The aggregated value for the measure/metric across US patients (over R4Q). To be included, data must have a Benchmark Inclusion Status of "Green". Only facilities in the United States and outlying territories are included.
Declared Procedure Volume	Indicates the estimated annual procedure volume as reported by the facility on the NCDR website Site Profile.
LFHS	This stands for Leapfrog Hospital Survey. This is to help identify the lines that are used for Leapfrog reporting for our participants. Please note that in the detail lines you will see "(LFHS)" to denote the lines that are to be used for Actual and Risk Adjusted Mortality Rate calculations.
Actual Mortality Rate (LFHS)	Enter your hospital's (actual) observed mortality rate (OMR) as a percentage. Using data from the My Hospital R4Q "Num" column in the current NCDR CathPCI Registry Institutional Outcomes Reports, OMR must be calculated by dividing the number for "Observed Mortality (among eligible) (LFHS)" by the number for "Eligible pts (LFHS)" to obtain the % rate for the most recent rolling four quarters where 12 consecutive months of data was submitted [i.e., Observed Mortality (among eligible) (LFHS)/Eligible pts (LFHS)].
Expected Mortality Rate (LFHS)	Enter your hospital's expected mortality rate (EMR) as a percentage. Using data from the Hospital R4Q "Num" column in the current NCDR CathPCI Registry Institutional Outcomes Reports, EMR must be calculated by dividing the number for "Expected Mortality (among eligible) (LFHS)" by the number for "Eligible pts (LFHS)" to obtain the % rate for the most recent rolling four quarters where 12 consecutive months of data was submitted [i.e., Expected Mortality (among eligible) (LFHS)/Eligible pts (LFHS)].

Box and Whisker Plots

Interpreting Box and Whisker Plots

10th percentile If your hospital scores below the 10th percentile, the arrow will be on the left of this number.

90th Percentile If your hospital scores above the 90th percentile, the arrow will be on the right of this number.

10th Percentile
90% of the hospitals achieved "better" scores than the 10th percentile.

25th Percentile or 1st Quartile
75% of the hospitals achieved "better" scores than the 25th percentile.

50th Percentile or 2nd Quartile
Middle of the distribution: Half of the hospitals data is above and half are below the median.

75th Percentile or 3rd Quartile
25% of the hospitals achieved "better" scores than the 75th percentile.

90th Percentile
10% of the hospitals achieved "better" scores than the 90th percentile.

Your Hospital Position
Your 'Hospital Position' in relation to all other hospitals' data.

Executive Summary

CathPCI Registry®

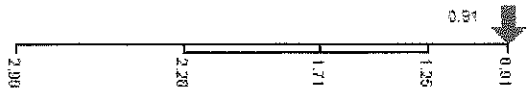
Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2013Q1

Section I: PCI Performance Measures

Endorsed by the National Quality Forum and appropriate for public reporting

PCI Performance Measures

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

1 **PCI in-hospital risk adjusted mortality (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.91	1.71	0.91

Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:2035]

38 **Composite: Discharge Medications in Eligible PCI Patients**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
93.7%	92.5%	98.3%

Patients with a PCI procedure who receive prescriptions for all medications (aspirin, P2Y12 inhibitor, and statin) for which they are eligible for at discharge. [Detail Line:2006]

Note

Performance measures in the CathPCI Registry® have been endorsed by the National Quality Forum. Such performance measures meeting the requirement for approval are intended not only for clinical quality improvement, but also may be considered for purposes of public reporting.

The "Registry Metrics" on the subsequent pages of this report are those measures that have been developed to support self assessment and quality improvement at the provider, hospital, and/or health care system level. While these metrics have not been formally developed by the American College of Cardiology/American Heart Association Task Force for Performance Measures Task Force, they may be identified as evolving measures worthy of consideration for further development into performance measures.

Executive Summary

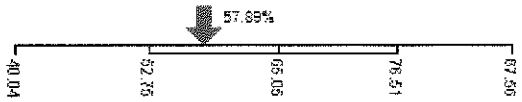
CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2013Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

PCI Process Metrics

Distribution of Hospital Performance

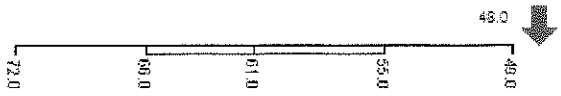


10th percentile — 90th percentile

Better →

2 **Proportion of elective PCIs with prior positive stress or imaging study**

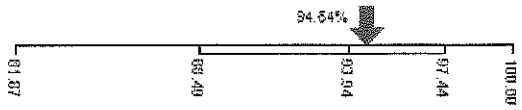
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
57.89%	65.05%	87.56%



Proportion of elective PCI procedures (excluding patients with ACS) with an antecedent stress or imaging study with a positive result (suggestive of ischemia) or with a fractional flow reserve value of <=0.8 during the PCI procedure [Detail Line:1513]

3 **Median time to immediate PCI for STEMI patients (in minutes)**

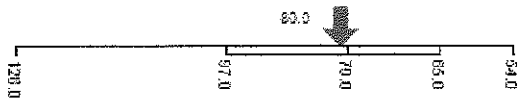
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
48	61	49



Your hospital's median time from hospital arrival to immediate PCI for STEMI patients in minutes. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1502]

4 **Proportion of STEMI patients receiving immediate PCI w/in 90'**

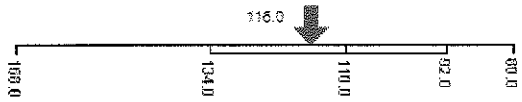
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
94.64%	93.94%	100.00%



Proportion of STEMI patients with a time from your hospital arrival (or subsequent ECG if ST elevation first noted on subsequent ECG) to immediate PCI <=90'. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1503]

5 **Median time from ED arrival at STEMI transferring facility to ED arrival at STEMI receiving facility among transferred patients.**

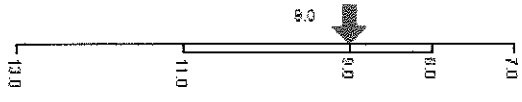
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
80	79	54



Your hospital's median time from arrival at transferring facility to ED arrival at STEMI receiving facility among transferred patients. [Detail Line:1505]

6 **Median time from ED arrival at STEMI transferring facility to immediate PCI at STEMI receiving facility among transferred patients (in minutes)**

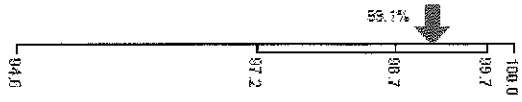
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
116	110	80



Your hospital's median time from arrival at referring facility to immediate PCI at STEMI receiving facility among transferred patients. Exclusions: Reasons for delay does not equal none. [Detail Line:1506]

7 **Median fluoro time (in minutes)**

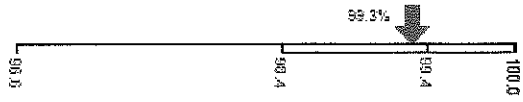
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
9	9	7



Inclusion criteria: PCI of one vessel/lesion. Exclusion criteria: Prior CABG, or "other" procedure during the same lab visit; PCI of >1 vessel/lesion. [Detail Line:1633]

8 **Proportion of patients with aspirin prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
99.1%	98.7%	100.0%



Proportion of patients (without a documented contraindication) with aspirin prescribed at discharge. [Detail Line:1996]

9 **Proportion of patients with a P2Y12 inhibitor prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
99.3%	99.4%	100.0%

Proportion of patients (without a documented contraindication) with a stent implanted that had a thienopyridine/P2Y12 inhibitor prescribed at discharge. [Detail Line:2005]

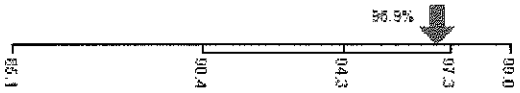
Executive Summary

CathPCI Registry®



Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2013Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

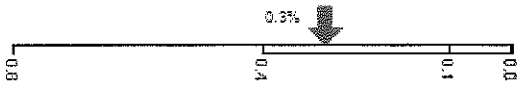
10 **Statins prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
96.9%	94.3%	99.0%

Proportion of patients (without a documented contraindication) prescribed a statin at discharge. [Detail Line:2001]

PCI Outcome Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

12 **Proportion of PCI patients with emergency CABG**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.3%	0.1%	0.0%

Your hospital's proportion of patients having emergency CABG (at your facility or transferred to another facility). [Detail Line:1978]

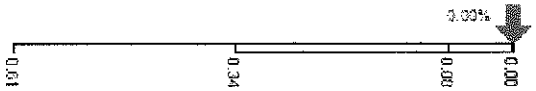
13 **Proportion of PCI procedures with a post procedure MI (among hospitals routinely collecting post-PCI biomarkers)****

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
	1.51%	0.00%

Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with >= 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1803]

14 **Proportion of PCI procedures with post procedure MI (among hospitals who do not routinely collect post-PCI biomarkers)****

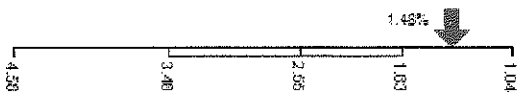
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.24%	0.30%	0.00%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with < 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1804]

16 **Proportion of PCI procedures with post procedure stroke**

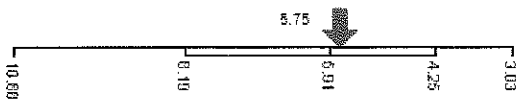
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.00%	0.08%	0.00%



Your hospital's proportion of patients with stroke post procedure. [Detail Line:1811]

17 **Composite: Proportion of PCI patients with death, emergency CABG, stroke or repeat target vessel revascularization.**

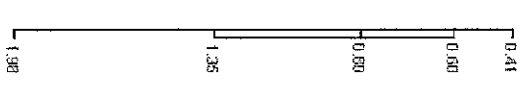
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.48%	2.55%	1.04%



Your hospital's proportion of patients with death, emergency CABG, stroke or repeat target vessel revascularization post procedure up to hospital discharge. Excludes patients with stroke and an elective, urgent or salvage CABG during same admission. [Detail Line:1801]

18 **PCI in-hospital risk adjusted mortality (patients with STEMI)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
5.75	5.91	3.03



Your hospital's PCI in-hospital risk adjusted mortality rate for patients with STEMI adjusted using the NCDR® risk adjustment model. [Detail Line:2044]

19 **PCI in-hospital risk adjusted mortality (STEMI patients excluded)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
	0.89	0.41

Your hospital's PCI in-hospital risk adjusted mortality rate for patients with other diagnoses (not STEMI) using the NCDR® risk adjustment model. [Detail Line:2053]

Executive Summary

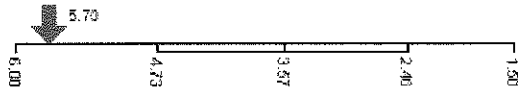
CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2013Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

25 **Proportion of PCI procedures with transfusion of whole blood or RBCs**

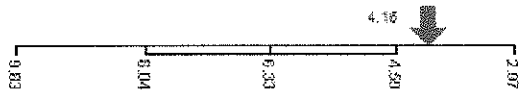
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
3.20%	1.27%	0.00%



Proportion of patients who received a transfusion of whole blood or red blood cells after a PCI procedure. Inclusion: Patients with a pre-procedure hemoglobin >8 g/dL and patients with no CABG, and no other major surgery during the same admission. [Detail Line:1853]

37 **PCI in-hospital risk adjusted rate of bleeding events (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
5.70	3.57	1.50



Your hospital's risk adjusted rate of bleeding events for patients with PCI procedures using the NCDR® PCI bleeding risk adjustment model. [Detail Line:1823]

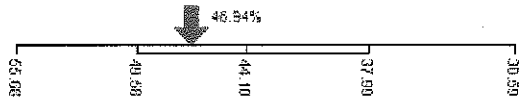
39 **PCI in-hospital risk adjusted acute kidney injury (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
4.16	6.33	2.97

Your hospital's PCI in-hospital risk adjusted AKI rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:1960]

Diagnostic Cath Process Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

20 **Incidence of non-obstructive CAD (elective patients only)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
46.94%	44.10%	30.59%

Patients with an elective diagnostic cath and coronary angiography with all native coronary territories <50% Exclusions: Patients with prior CABG, cardiac transplant evaluation; pre-op evaluation for non-cardiac surgery and diagnostic cath treatment recommendation of "other cardiac therapy without CABG or PCI". [Detail Line:1252]

Diagnostic Cath Outcomes Metrics

Distribution of Hospital Performance

10th percentile — 90th percentile

Better →

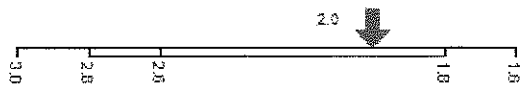
21 **Proportion of Diagnostic Catheterization procedures with vascular access site injury requiring treatment or major bleeding***

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.39%	0.13%	0.00%

Your hospital's proportion of patients with major access site related injury requiring treatment or major bleeding. [Detail Line:1301]

Utilization Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

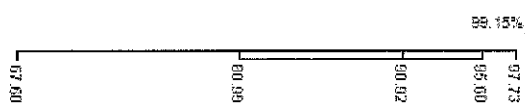
22 **Median post-procedure length of stay (in days) for PCI patients with STEMI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.0	2.6	1.6

Your hospital's median post-procedure length of stay (in days) for PCI patients with STEMI. [Detail Line:2109]

Data Quality Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

24 **Proportion of PCI procedures with creatinine assessed pre and post PCI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
99.15%	90.92%	97.73%

Proportion of PCI patients with creatinine assessed pre and post procedure. Inclusions: LOS >=1 day. [Detail Line:1951]

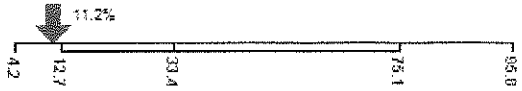
Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2013Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

Test Metrics



Distribution of Hospital Performance

10th percentile 90th percentile

Better →

26 **Test Data Quality Metric: Proportion of PCI procedures with biomarkers assessed post-PCI for elective inpatients**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
11.2%	33.4%	95.8%

Proportion of elective procedures with biomarkers assessed post PCI.
Inclusion criteria: LOS >= 1 day and hospital status is "not outpatient".
[Detail Line:1949]

Executive Summary

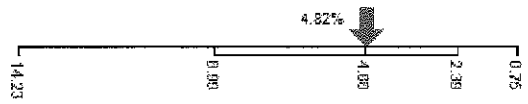
CathPCI Registry®

(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending

Section III: PCI Appropriate Use Criteria (AUC) Metrics – These data are based upon the 2012 Appropriateness Criteria for Coronary Revascularization Focused Update (J Am Coll Cardiol 2012 59: 857-881) document developed by the ACC, Society for Cardiovascular Angiography and Interventions, Society of Thoracic Surgeons, American Heart Association, and other national societies. These metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level.PCI AUC metrics are not appropriate for public/external reporting

PCI Appropriate Use Criteria (AUC) Metrics

Distribution of Hospital Performance

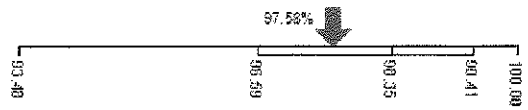


10th percentile — 90th percentile

Better →

30 **Proportion of PCI procedures not classifiable for AUC reporting**

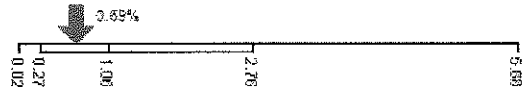
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
4.82%	4.88%	0.75%



Proportion of PCI procedures that were not classifiable/evaluated for PCI AUC reporting due to incomplete or missing data. [Detail Line:1589]

31 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

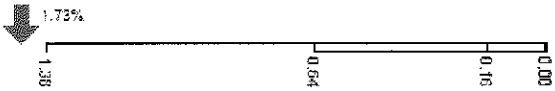
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.58%	98.35%	100.00%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients with ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1581]

32 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

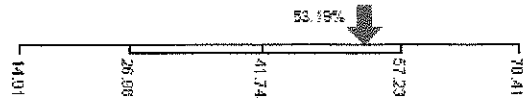
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.69%	1.06%	5.88%



Proportion of PCI procedures that were evaluated as "Uncertain", among patients with ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1582]

33 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were inappropriate**

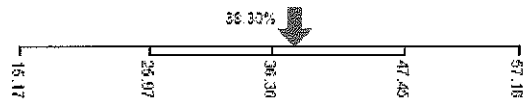
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.73%	0.16%	0.00%



Proportion of PCI procedures that were evaluated as "Inappropriate", among patients with ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1583]

34 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
53.19%	41.74%	70.41%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients without ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1585]

35 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
38.30%	36.36%	57.18%

Proportion of PCI procedures that were evaluated as "Uncertain", among patients without ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1586]

36 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were inappropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
8.51%	16.66%	0.00%

Proportion of PCI procedures that were evaluated as "Inappropriate", among patients without ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1587]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >= 3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

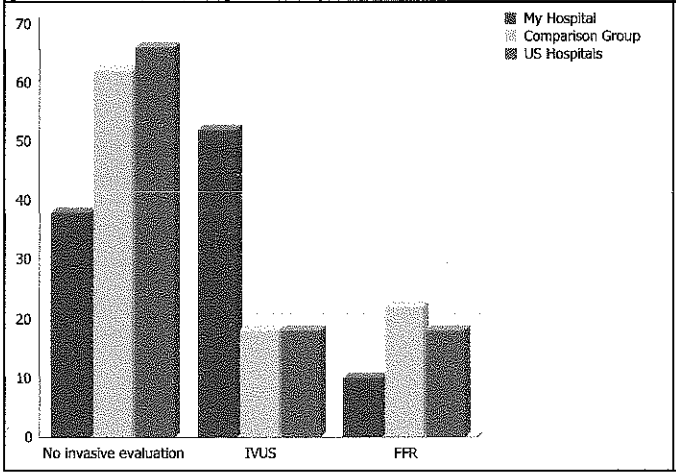
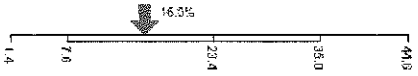
Section IV: PCI Process Comparison Metrics

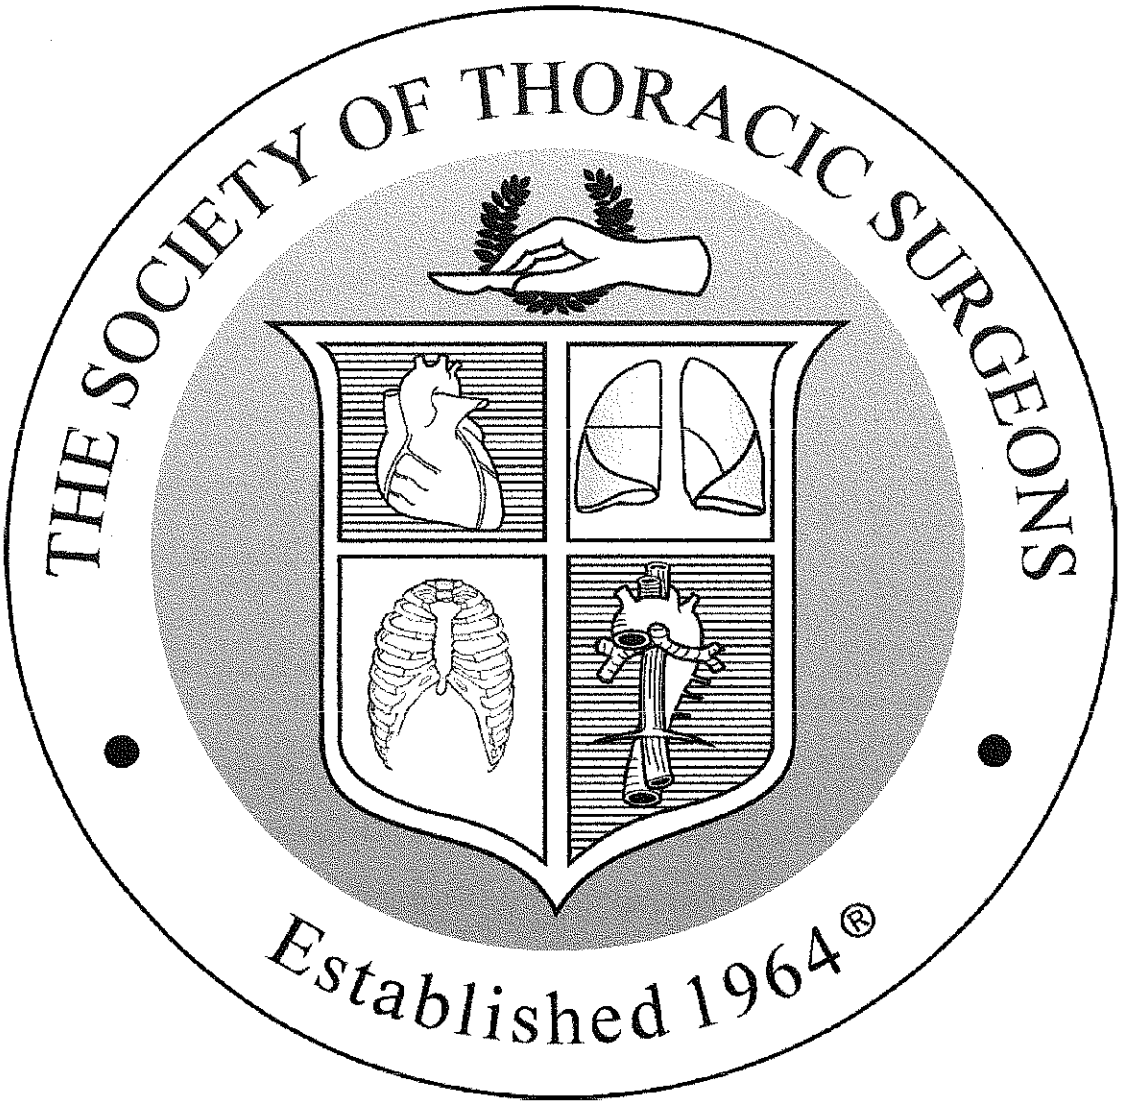


Anticoagulant Use: Any Low molecular weight/unfractionated heparin, direct thrombin inhibitors, GP IIb/IIIa inhibitor(pts with acute coronary syndrome).
[Detail Line:1600,1601,1606]



Stent Use: Average # of stents per PCI admission.
[Detail Line:1793,1794]

Intermediate stenosis lesions(40-70%): Further invasive evaluation performed (IVUS or FFR).
[Detail Line:1732,1733,1734]



Outpatients: Proportion of PCI patient admissions whose hospital status was coded as "outpatient".
[Detail Line:1390]

9-9-2014,

Re: Docket Number: 08-31202 CON The Waterbury Hospital and Saint Mary's Hospital Corporation, d/b/a Heart Center of Greater Waterbury and the University of Connecticut Health Center/ John Demsey Hospital

Dear Ms. Roberts,

Enclosed are the procedure and patient volume reports for Saint Mary's Hospital and Waterbury Hospital from July 18, 2013 through July 17, 2014.

The most recent ACC Executive Summaries from July, 2014 QTR 1 report for both Saint Mary's Hospital and Waterbury Hospital are enclosed.

The most recent STS Executive Summaries are also provided for both hospitals the latest report published, which is for period ending 7/2014.

If you have any questions, please feel free to contact me at 203-575-5560 or email me at kkniery@leevercancercenter.org.

Sincerely,

Kevin Kniery
Executive Director

Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2014Q1

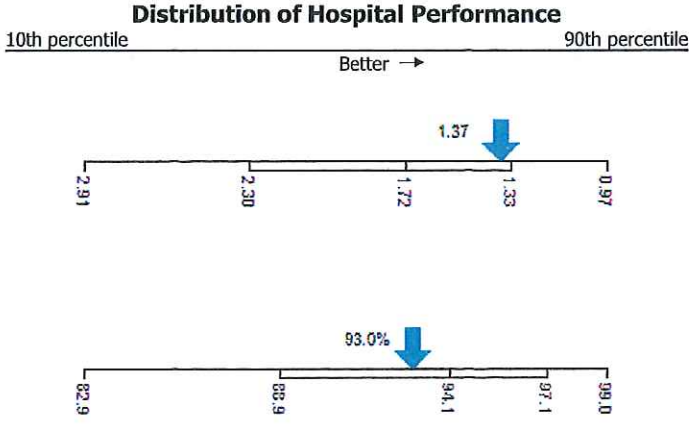
Section I: PCI Performance Measures

Endorsed by the National Quality Forum and appropriate for public reporting

PCI Performance Measures

1 **PCI in-hospital risk adjusted mortality (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.37	1.72	0.97



Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:2035]

38 **Composite: Discharge Medications in Eligible PCI Patients**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
93.0%	94.1%	99.0%

Patients with a PCI procedure who receive prescriptions for all medications (aspirin, P2Y12 inhibitor, and statin) for which they are eligible for at discharge. [Detail Line:2006]

Distribution of Hospital Performance

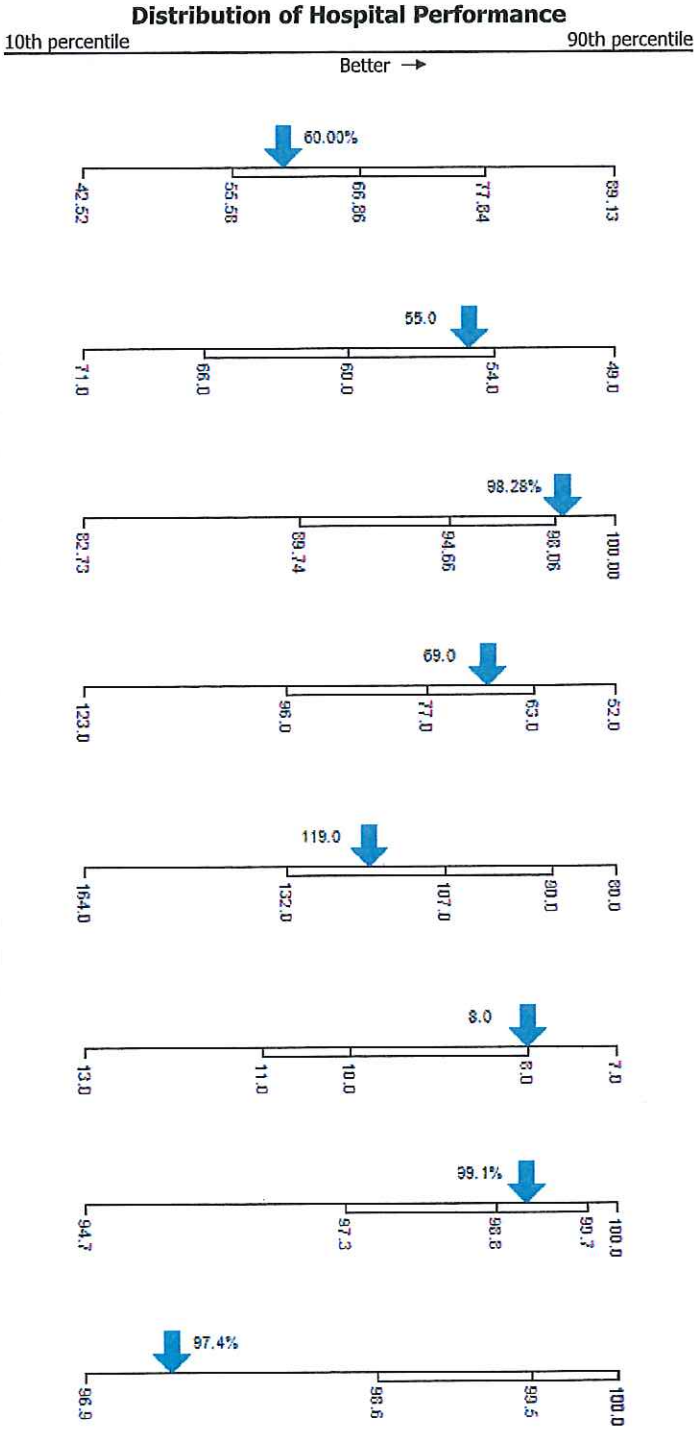
Executive Summary



CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2014Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

PCI Process Metrics

Distribution of Hospital Performance

2 **Proportion of elective PCIs with prior positive stress or imaging study**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
60.00%	66.86%	89.13%

Proportion of elective PCI procedures (excluding patients with ACS) with an antecedent stress or imaging study with a positive result (suggestive of ischemia) or with a fractional flow reserve value of <=0.8 during the PCI procedure [Detail Line:1513]

3 **Median time to immediate PCI for STEMI patients (in minutes)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
55	60	49

Your hospital's median time from hospital arrival to immediate PCI for STEMI patients in minutes. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1502]

4 **Proportion of STEMI patients receiving immediate PCI w/in 90'**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
98.28%	94.66%	100.00%

Proportion of STEMI patients with a time from your hospital arrival (or subsequent ECG if ST elevation first noted on subsequent ECG) to immediate PCI <=90'. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1503]

5 **Median time from ED arrival at STEMI transferring facility to ED arrival at STEMI receiving facility among transferred patients.**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
69	77	52

Your hospital's median time from arrival at transferring facility to ED arrival at STEMI receiving facility among transferred patients. [Detail Line:1505]

6 **Median time from ED arrival at STEMI transferring facility to immediate PCI at STEMI receiving facility among transferred patients (in minutes)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
119	107	80

Your hospital's median time from arrival at referring facility to immediate PCI at STEMI receiving facility among transferred patients. Exclusions: Reasons for delay does not equal none. [Detail Line:1506]

7 **Median fluoro time (in minutes)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
8	10	7

Inclusion criteria: PCI of one vessel/lesion. Exclusion criteria: Prior CABG, or "other" procedure during the same lab visit; PCI of >1 vessel/lesion. [Detail Line:1633]

8 **Proportion of patients with aspirin prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
99.1%	98.8%	100.0%

Proportion of patients (without a documented contraindication) with aspirin prescribed at discharge. [Detail Line:1996]

9 **Proportion of patients with a P2Y12 inhibitor prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.4%	99.5%	100.0%

Proportion of patients (without a documented contraindication) with a stent implanted that had a thienopyridine/P2Y12 inhibitor prescribed at discharge. [Detail Line:2005]

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

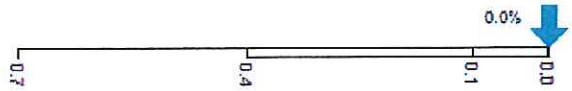
10 **Statins prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
96.6%	95.7%	99.4%

Proportion of patients (without a documented contraindication) prescribed a statin at discharge. [Detail Line:2001]

PCI Outcome Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

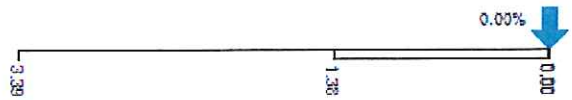
12 **Proportion of PCI patients with emergency CABG**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.0%	0.1%	0.0%

Your hospital's proportion of patients having emergency CABG (at your facility or transferred to another facility). [Detail Line:1978]

13 **Proportion of PCI procedures with a post procedure MI (among hospitals routinely collecting post-PCI biomarkers)****

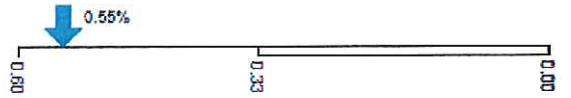
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
	1.30%	0.00%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with >= 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1803]

14 **Proportion of PCI procedures with post procedure MI (among hospitals who do not routinely collect post-PCI biomarkers)****

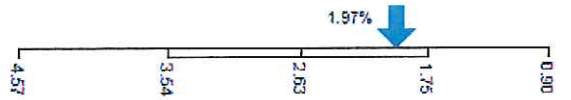
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.00%	0.00%	0.00%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with < 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1804]

16 **Proportion of PCI procedures with post procedure stroke**

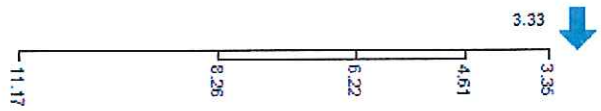
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.55%	0.00%	0.00%



Your hospital's proportion of patients with stroke post procedure. [Detail Line:1811]

17 **Composite: Proportion of PCI patients with death, emergency CABG, stroke or repeat target vessel revascularization.**

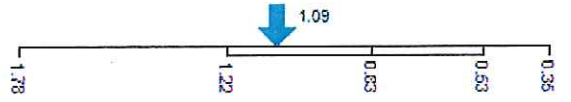
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.97%	2.63%	0.90%



Your hospital's proportion of patients with death, emergency CABG, stroke or repeat target vessel revascularization post procedure up to hospital discharge. Excludes patients with stroke and an elective, urgent or salvage CABG during same admission. [Detail Line:1801]

18 **PCI in-hospital risk adjusted mortality (patients with STEMI)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
3.33	6.22	3.35



Your hospital's PCI in-hospital risk adjusted mortality rate for patients with STEMI adjusted using the NCDR® risk adjustment model. [Detail Line:2044]

19 **PCI in-hospital risk adjusted mortality (STEMI patients excluded)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.09	0.83	0.35

Your hospital's PCI in-hospital risk adjusted mortality rate for patients with other diagnoses (not STEMI) using the NCDR® risk adjustment model. [Detail Line:2053]

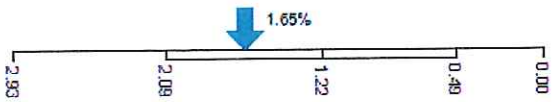
Executive Summary

CathPCI Registry®



Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2014Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

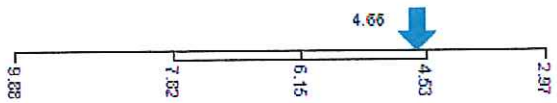
25 **Proportion of PCI procedures with transfusion of whole blood or RBCs**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.65%	1.22%	0.00%

Proportion of patients who received a transfusion of whole blood or red blood cells after a PCI procedure. Inclusion: Patients with a pre-procedure hemoglobin >8 g/dL and patients with no CABG, and no other major surgery during the same admission. [Detail Line:1853]

37 **PCI in-hospital risk adjusted rate of bleeding events (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
5.10	4.33	1.79

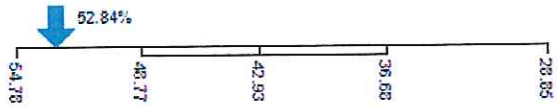


Your hospital's risk adjusted rate of bleeding events for patients with PCI procedures using the NCDR® PCI bleeding risk adjustment model. [Detail Line:1823]

39 **PCI in-hospital risk adjusted acute kidney injury (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
4.66	6.15	2.97

Your hospital's PCI in-hospital risk adjusted AKI rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:1960]

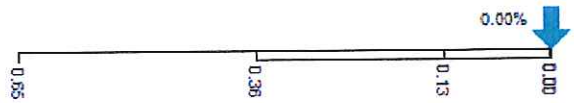


Diagnostic Cath Process Metrics

20 **Incidence of non-obstructive CAD (elective patients only)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
52.84%	42.93%	28.85%

Patients with an elective diagnostic cath and coronary angiography with all native coronary territories <50% Exclusions: Patients with prior CABG, cardiac transplant evaluation; pre-op evaluation for non-cardiac surgery and diagnostic cath treatment recommendation of "other cardiac therapy without CABG or PCI". [Detail Line:1252]

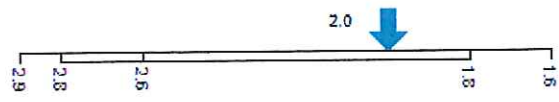


Diagnostic Cath Outcomes Metrics

21 **Proportion of Diagnostic Catheterization procedures with vascular access site injury requiring treatment or major bleeding***

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.00%	0.13%	0.00%

Your hospital's proportion of patients with major access site related injury requiring treatment or major bleeding. [Detail Line:1301]

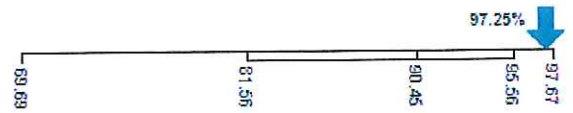


Utilization Metrics

22 **Median post-procedure length of stay (in days) for PCI patients with STEMI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.0	2.6	1.6

Your hospital's median post-procedure length of stay (in days) for PCI patients with STEMI. [Detail Line:2109]



Data Quality Metrics

24 **Proportion of PCI procedures with creatinine assessed pre and post PCI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.25%	90.45%	97.67%

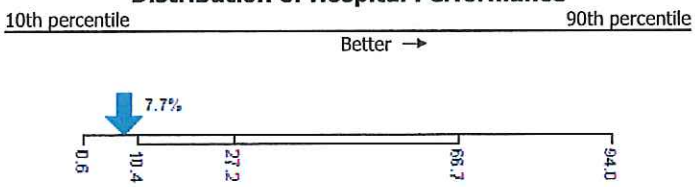
Proportion of PCI patients with creatinine assessed pre and post procedure. Inclusions: LOS >=1 day. [Detail Line:1951]

Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2014Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.



Test Metrics

26 **Test Data Quality Metric: Proportion of PCI procedures with biomarkers assessed post-PCI for elective inpatients**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
7.7%	27.2%	94.0%

Proportion of elective procedures with biomarkers assessed post PCI.
Inclusion criteria: LOS >= 1 day and hospital status is "not outpatient".
[Detail Line:1949]

Distribution of Hospital Performance

Executive Summary

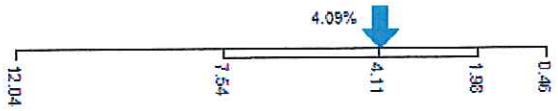
CathPCI Registry®

(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending

Section III: PCI Appropriate Use Criteria (AUC) Metrics – These data are based upon the 2012 Appropriateness Criteria for Coronary Revascularization Focused Update (J Am Coll Cardiol 2012 59: 857-881) document developed by the ACC, Society for Cardiovascular Angiography and Interventions, Society of Thoracic Surgeons, American Heart Association, and other national societies. These metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level.PCI AUC metrics are not appropriate for public/external reporting

PCI Appropriate Use Criteria (AUC) Metrics

Distribution of Hospital Performance

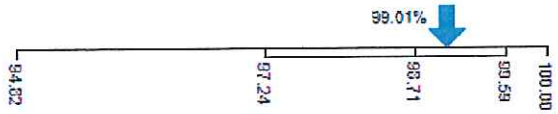


10th percentile — 90th percentile

Better →

30 **Proportion of PCI procedures not classifiable for AUC reporting**

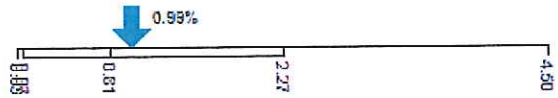
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
4.09%	4.11%	0.46%



Proportion of PCI procedures that were not classifiable/evaluated for PCI AUC reporting due to incomplete or missing data. [Detail Line:1589]

31 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

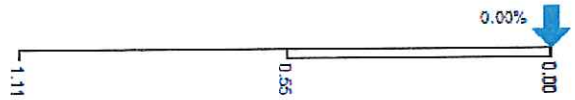
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
99.01%	98.71%	100.00%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients with ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1581]

32 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

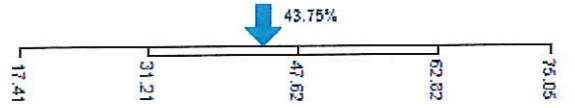
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.99%	0.81%	4.50%



Proportion of PCI procedures that were evaluated as "Uncertain", among patients with ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1582]

33 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were inappropriate**

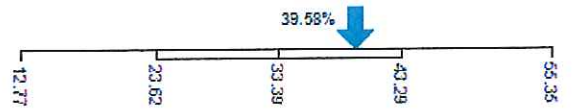
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.00%	0.00%	0.00%



Proportion of PCI procedures that were evaluated as "Inappropriate", among patients with ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1583]

34 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
43.75%	47.62%	75.05%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients without ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1585]

35 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
39.58%	33.39%	55.35%

Proportion of PCI procedures that were evaluated as "Uncertain", among patients without ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. 16.67%	14.95%	0.00%

Proportion of PCI procedures that were evaluated as "Inappropriate", among patients without ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1587]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >= 3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

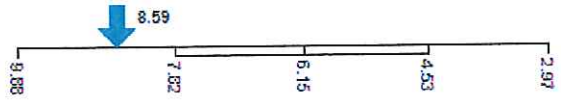
Proportion of patients who received a transfusion of whole blood or red blood cells after a PCI procedure. Inclusion: Patients with a pre-procedure hemoglobin >8 g/dL and patients with no CABG, and no other major surgery during the same admission. [Detail Line:1853]

37 **PCI in-hospital risk adjusted rate of bleeding events (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
3.28	4.33	1.79

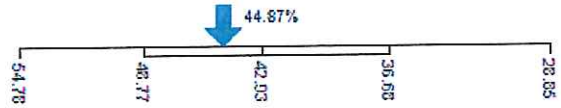


Your hospital's risk adjusted rate of bleeding events for patients with PCI procedures using the NCDR® PCI bleeding risk adjustment model. [Detail Line:1823]

39 **PCI in-hospital risk adjusted acute kidney injury (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
8.59	6.15	2.97

Your hospital's PCI in-hospital risk adjusted AKI rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:1960]

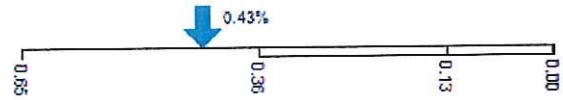


Diagnostic Cath Process Metrics

20 **Incidence of non-obstructive CAD (elective patients only)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
44.87%	42.93%	28.85%

Patients with an elective diagnostic cath and coronary angiography with all native coronary territories <50% Exclusions: Patients with prior CABG, cardiac transplant evaluation; pre-op evaluation for non-cardiac surgery and diagnostic cath treatment recommendation of "other cardiac therapy without CABG or PCI". [Detail Line:1252]



Diagnostic Cath Outcomes Metrics

21 **Proportion of Diagnostic Catheterization procedures with vascular access site injury requiring treatment or major bleeding***

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.43%	0.13%	0.00%

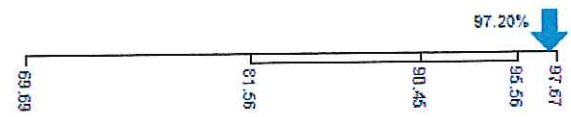
Your hospital's proportion of patients with major access site related injury requiring treatment or major bleeding. [Detail Line:1301]

Utilization Metrics

22 **Median post-procedure length of stay (in days) for PCI patients with STEMI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.0	2.6	1.6

Your hospital's median post-procedure length of stay (in days) for PCI patients with STEMI. [Detail Line:2109]



Data Quality Metrics

24 **Proportion of PCI procedures with creatinine assessed pre and post PCI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.20%	90.45%	97.67%

Proportion of PCI patients with creatinine assessed pre and post procedure. Inclusions: LOS >=1 day. [Detail Line:1951]

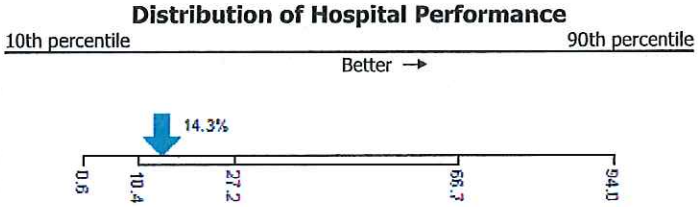
Executive Summary

CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2014Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.



Test Metrics

26 **Test Data Quality Metric: Proportion of PCI procedures with biomarkers assessed post-PCI for elective inpatients**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
14.3%	27.2%	94.0%

Proportion of elective procedures with biomarkers assessed post PCI.
Inclusion criteria: LOS >= 1 day and hospital status is "not outpatient".
[Detail Line:1949]

Distribution of Hospital Performance

Executive Summary

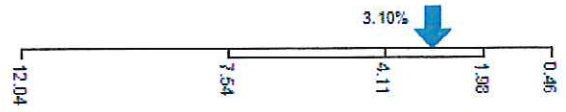
CathPCI Registry®

(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending

Section III: PCI Appropriate Use Criteria (AUC) Metrics – These data are based upon the 2012 Appropriateness Criteria for Coronary Revascularization Focused Update (J Am Coll Cardiol 2012 59: 857-881) document developed by the ACC, Society for Cardiovascular Angiography and Interventions, Society of Thoracic Surgeons, American Heart Association, and other national societies. These metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level.PCI AUC metrics are not appropriate for public/external reporting

PCI Appropriate Use Criteria (AUC) Metrics

Distribution of Hospital Performance

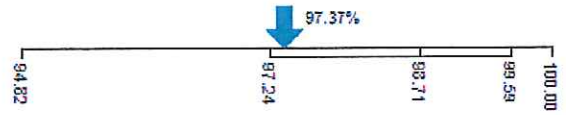


10th percentile — 90th percentile

Better →

30 **Proportion of PCI procedures not classifiable for AUC reporting**

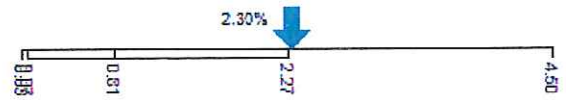
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
3.10%	4.11%	0.46%



Proportion of PCI procedures that were not classifiable/evaluated for PCI AUC reporting due to incomplete or missing data. [Detail Line:1589]

31 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

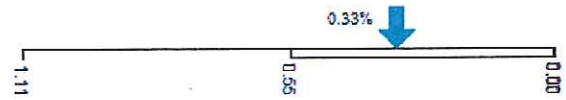
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.37%	98.71%	100.00%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients with ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1581]

32 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

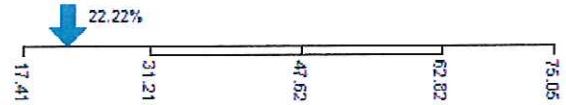
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.30%	0.81%	4.50%



Proportion of PCI procedures that were evaluated as "Uncertain", among patients with ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1582]

33 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were inappropriate**

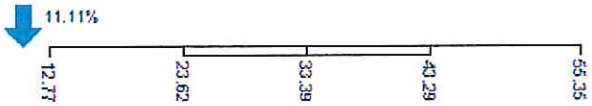
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.33%	0.00%	0.00%



Proportion of PCI procedures that were evaluated as "Inappropriate", among patients with ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1583]

34 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
22.22%	47.62%	75.05%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients without ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1585]

35 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
11.11%	33.39%	55.35%

Proportion of PCI procedures that were evaluated as "Uncertain", among patients without ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. 66.67%	14.95%	0.00%

Proportion of PCI procedures that were evaluated as "Inappropriate", among patients without ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1587]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >= 3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

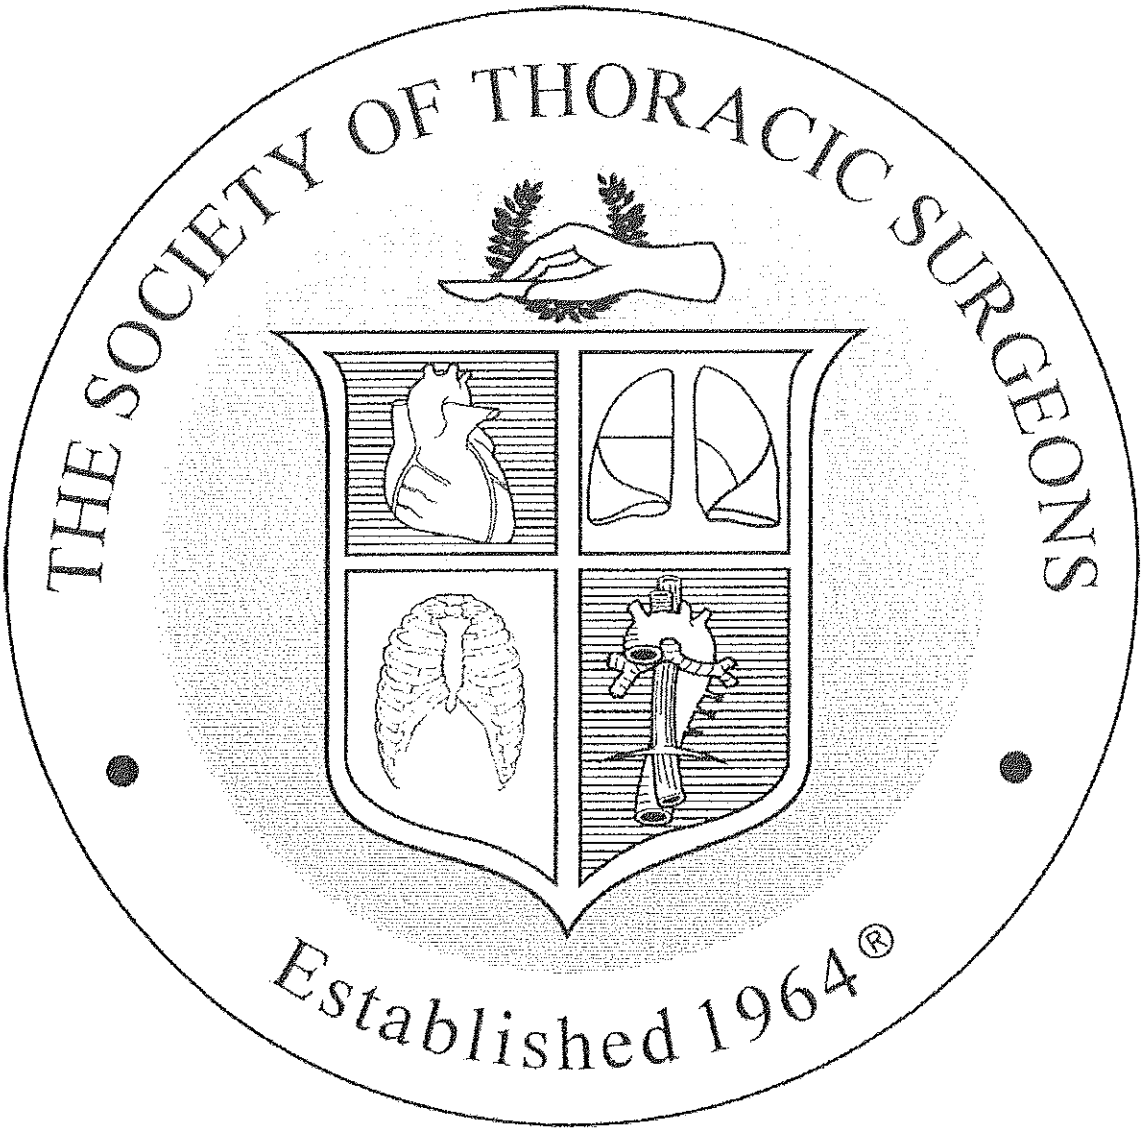
Subject: Heart Center of Greater Waterbury's September 9, 2014 Compliance Filing for DN: 08-31202



Good afternoon Mr. Kniery – By way of introduction, my name is Jack Huber. I'm a Health Care Analyst with the Connecticut Department of Public Health, Office of Health Care Access. One of my responsibilities involves the review of Certificate of Need compliance reporting. I have recently been reviewing the Heart Center's CON compliance filing dated September 9, 2014, regarding the authorization under Docket Number: 08-31202-CON. It appears that the STS Executive Summaries provided for Saint Mary's Hospital and Waterbury Hospital for the period ending July 2014 have missing information that has been cut off from the right-hand margin due to the copying process employed. Earlier versions of the STS Executive Summaries were provided in the landscape orientation. The orientation offered in the September 2014 reporting appears in the profile setting, which has unfortunately truncated information appearing in the right margin of the report copies. Kindly resend each Hospital's report so that we may include the entire version of each report in the permanent record of the authorization. Thank you for your attention to this matter. Should you have any questions relating to this correspondence you may email or reach me directly by dialing (860) 418-7069. Regards, Jack Huber

Re: Docket Number: 08-31202 CON The Waterbury Hospital and Saint Mary's Hospital Corporation, d/b/a Heart Center of Greater Waterbury and the University of Connecticut Health Center/ John Demsey Hospital

Dear Ms. Roberts,

Enclosed are the procedure and patient volume reports for Saint Mary's Hospital and Waterbury Hospital from July 18, 2014 through July 17, 2015.

The most recent ACC Executive Summaries from July, 2015 report for both Saint Mary's Hospital and Waterbury Hospital are enclosed.

The most recent STS Executive Summaries are also provided for both hospitals the latest report published.

If you have any questions, please feel free to contact me at 203-575-5560 or email me at kkniery@leevercancercenter.org.

Sincerely,

Kevin Kniery
Executive Director
Heart Center of Greater Waterbury

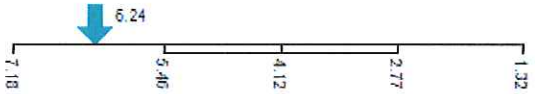
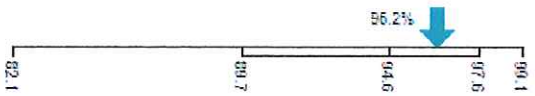
2.23	1.83	0.97



Your hospital's PCI in-hospital risk adjusted mortality rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:2036]

37 **PCI in-hospital risk adjusted rate of bleeding events (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
6.24	4.12	1.32



Your hospital's risk adjusted rate of bleeding events for patients with PCI procedures using the NCDR® PCI bleeding risk adjustment model. [Detail Line:1823]

38 **Composite: Discharge Medications in Eligible PCI Patients**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
96.2%	94.6%	99.1%

Patients with a PCI procedure who receive prescriptions for all medications (aspirin, P2Y12 inhibitor, and statin) for which they are eligible for at discharge. [Detail Line:2007]

Note

Performance measures in the CathPCI Registry® have been endorsed by the National Quality Forum. Such performance measures meeting the requirement for approval are intended not only for clinical quality improvement, but also may be considered for purposes of public reporting.

The "Registry Metrics" on the subsequent pages of this report are those measures that have been developed to support self assessment and quality improvement at the provider, hospital, and/or health care system level. While these metrics have not been formally developed by the American College of Cardiology/American Heart Association Task Force for Performance Measures Task Force, they may be identified as evolving measures worthy of consideration for further development into performance measures.

Executive Summary

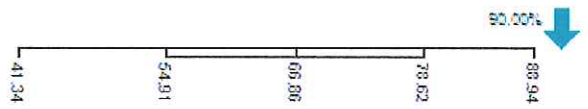
CathPCI Registry®

Saint Mary's Hospital(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2015Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

PCI Process Metrics

Distribution of Hospital Performance

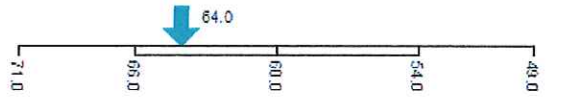


10th percentile — 90th percentile

Better →

2 **Proportion of elective PCIs with prior positive stress or imaging study**

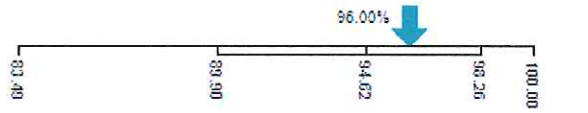
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
90.00%	66.86%	88.94%



Proportion of elective PCI procedures (excluding patients with ACS) with an antecedent stress or imaging study with a positive result (suggestive of ischemia) or with a fractional flow reserve value of <=0.8 during the PCI procedure [Detail Line:1513]

3 **Median time to immediate PCI for STEMI patients (in minutes)**

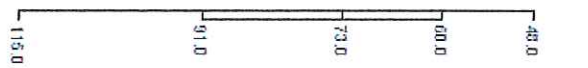
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
64	60	49



Your hospital's median time from hospital arrival to immediate PCI for STEMI patients in minutes. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1502]

4 **Proportion of STEMI patients receiving immediate PCI w/in 90'**

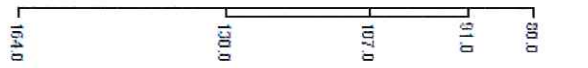
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
96.00%	94.62%	100.00%



Proportion of STEMI patients with a time from your hospital arrival (or subsequent ECG if ST elevation first noted on subsequent ECG) to immediate PCI <=90'. Exclusions: Patients transferred in from another acute care facility; Reasons for delay does not equal none. [Detail Line:1503]

5 **Median time from ED arrival at STEMI transferring facility to ED arrival at STEMI receiving facility among transferred patients.**

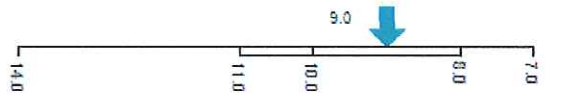
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
	73	48



Your hospital's median time from arrival at transferring facility to ED arrival at STEMI receiving facility among transferred patients. [Detail Line:1505]

6 **Median time from ED arrival at STEMI transferring facility to immediate PCI at STEMI receiving facility among transferred patients (in minutes)**

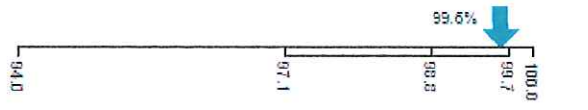
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
	107	80



Your hospital's median time from arrival at referring facility to immediate PCI at STEMI receiving facility among transferred patients. Exclusions: Reasons for delay does not equal none. [Detail Line:1506]

7 **Median fluoro time (in minutes)**

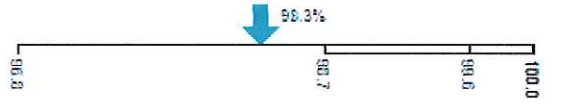
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
9	10	7



Inclusion criteria: PCI of one vessel/lesion. Exclusion criteria: Prior CABG, or "other" procedure during the same lab visit; PCI of >1 vessel/lesion. [Detail Line:1633]

8 **Proportion of patients with aspirin prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
99.6%	98.8%	100.0%



Proportion of patients (without a documented contraindication) with aspirin prescribed at discharge. [Detail Line:1997]

9 **Proportion of patients with a P2Y12 inhibitor prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
98.3%	99.6%	100.0%

Proportion of patients (without a documented contraindication) with a stent implanted that had a thienopyridine/P2Y12 inhibitor prescribed at discharge. [Detail Line:2006]

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

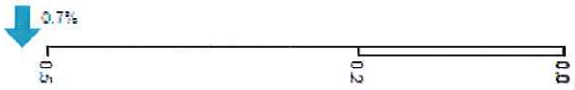
10 **Statins prescribed at discharge**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.3%	96.1%	99.5%

Proportion of patients (without a documented contraindication) prescribed a statin at discharge. [Detail Line:2002]

PCI Outcome Metrics

Distribution of Hospital Performance



10th percentile — 90th percentile

Better →

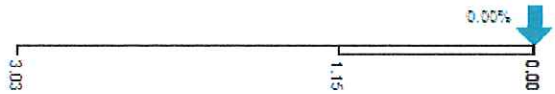
12 **Emergency CABG post PCI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.7%	0.0%	0.0%

Proportion of PCI patients with post procedure Emergency CABG. [Detail Line:1980]

13 **Proportion of PCI procedures with a post procedure MI (among hospitals routinely collecting post-PCI biomarkers)****

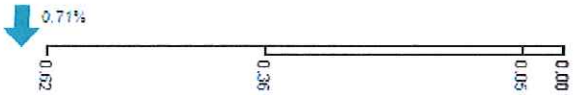
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
	1.20%	0.00%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with >= 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1803]

14 **Proportion of PCI procedures with post procedure MI (among hospitals who do not routinely collect post-PCI biomarkers)****

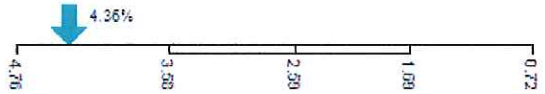
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.00%	0.00%	0.00%



Your hospital's proportion of biomarker positive, post procedure myocardial infarction. Inclusions: Submissions with < 90% of pts with biomarkers coded; LOS>=1; Elective patients [Detail Line:1804]

16 **Proportion of PCI procedures with post procedure stroke**

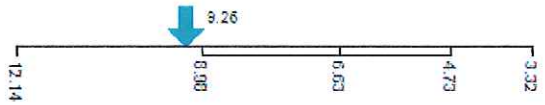
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.71%	0.05%	0.00%



Your hospital's proportion of patients with stroke post procedure. [Detail Line:1811]

17 **Composite: Proportion of PCI patients with death, emergency CABG, stroke or repeat target vessel revascularization.**

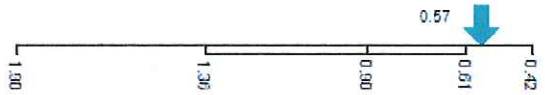
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
4.36%	2.59%	0.72%



Your hospital's proportion of patients with death, emergency CABG, stroke or repeat target vessel revascularization post procedure up to hospital discharge. Excludes patients with stroke and an elective, urgent or salvage CABG during same admission. [Detail Line:1801]

18 **PCI in-hospital risk adjusted mortality (patients with STEMI)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
9.26	6.63	3.32



Your hospital's PCI in-hospital risk adjusted mortality rate for patients with STEMI adjusted using the NCDR® risk adjustment model. [Detail Line:2045]

19 **PCI in-hospital risk adjusted mortality (STEMI patients excluded)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.57	0.90	0.42

Your hospital's PCI in-hospital risk adjusted mortality rate for patients with other diagnoses (not STEMI) using the NCDR® risk adjustment model. [Detail Line:2054]

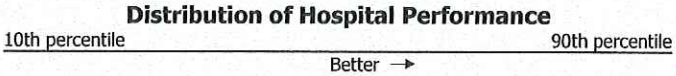
Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

25 **Proportion of PCI procedures with transfusion of whole blood or RBCs**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
3.23%	1.06%	0.00%

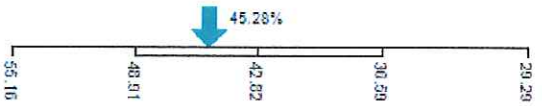
Proportion of patients who received a transfusion of whole blood or red blood cells after a PCI procedure. Inclusion: Patients with a pre-procedure hemoglobin >8 g/dL and patients with no CABG, and no other major surgery during the same admission. [Detail Line:1853]



39 **PCI in-hospital risk adjusted acute kidney injury (all patients)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
5.78	6.39	3.05

Your hospital's PCI in-hospital risk adjusted AKI rate for all patients adjusted using the NCDR® risk adjustment model. [Detail Line:1960]

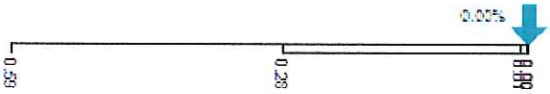


Diagnostic Cath Process Metrics

20 **Incidence of non-obstructive CAD (elective patients only)**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
45.28%	42.82%	29.29%

Patients with an elective diagnostic cath and coronary angiography with all native coronary territories <50% Exclusions: Patients with prior CABG, cardiac transplant evaluation; pre-op evaluation for non-cardiac surgery and diagnostic cath treatment recommendation of "other cardiac therapy without CABG or PCI". [Detail Line:1252]

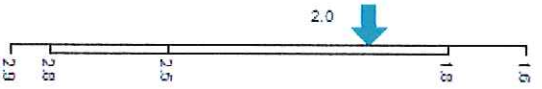


Diagnostic Cath Outcomes Metrics

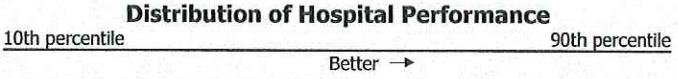
21 **Proportion of Diagnostic Catheterization procedures with vascular access site injury requiring treatment or major bleeding***

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.00%	0.01%	0.00%

Your hospital's proportion of patients with major access site related injury requiring treatment or major bleeding. [Detail Line:1301]



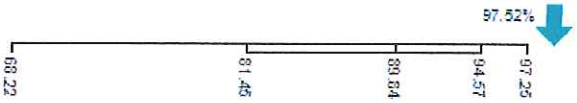
Utilization Metrics



22 **Median post-procedure length of stay (in days) for PCI patients with STEMI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
2.0	2.5	1.6

Your hospital's median post-procedure length of stay (in days) for PCI patients with STEMI. [Detail Line:2110]



Data Quality Metrics

24 **Proportion of PCI procedures with creatinine assessed pre and post PCI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.52%	89.84%	97.25%

Proportion of PCI patients with creatinine assessed pre and post procedure. Exclusions: LOS<1 day and death in lab. [Detail Line:1951]

26 **Proportion of PCI procedures with biomarkers assessed post-PCI for elective inpatients**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
11.5%	24.0%	90.1%

Proportion of elective procedures with biomarkers assessed post PCI. Exclusions: LOS<1 day, or hospital status=outpatient, or death in lab. [Detail

(881416) compared to Rolling Four Quarters (R4Q) for US Hospitals ending

Section III: PCI Appropriate Use Criteria (AUC) Metrics – These data are based upon the 2012 Appropriateness Criteria for Coronary Revascularization Focused Update (J Am Coll Cardiol 2012 59: 857-881) document developed by the ACC, Society for Cardiovascular Angiography and Interventions, Society of Thoracic Surgeons, American Heart Association, and other national societies. These metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level.PCI AUC metrics are not appropriate for public/external reporting

PCI Appropriate Use Criteria (AUC) Metrics

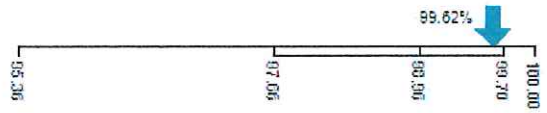
Distribution of Hospital Performance

10th percentile — 90th percentile

Better →

30 **Proportion of PCI procedures not classifiable for AUC reporting**

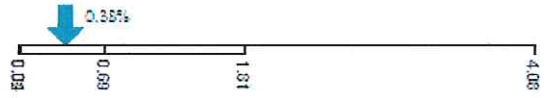
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
5.57%	3.58%	0.25%



Proportion of PCI procedures that were not classifiable/evaluated for PCI AUC reporting due to incomplete or missing data. [Detail Line:1589]

31 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

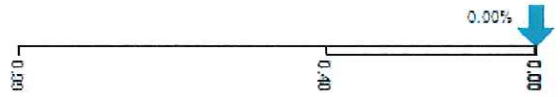
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
99.62%	98.96%	100.00%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients with ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1581]

32 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.38%	0.69%	4.08%



Proportion of PCI procedures that were evaluated as "Uncertain", among patients with ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1582]

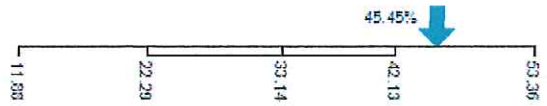
33 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were inappropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.00%	0.00%	0.00%

Proportion of PCI procedures that were evaluated as "Inappropriate", among patients with ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1583]

34 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
54.55%	50.53%	78.13%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients without ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1585]

35 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
45.45%	33.14%	53.36%

Proportion of PCI procedures that were evaluated as "Uncertain", among patients without ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1587]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >= 3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.

2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

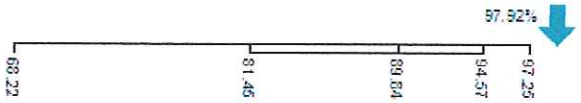
2.0	2.5	1.6

Your hospital's median post-procedure length of stay (in days) for PCI patients with STEMI. [Detail Line:2110]



Data Quality Metrics

24 **Proportion of PCI procedures with creatinine assessed pre and post PCI**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
97.92%	89.84%	97.25%

Proportion of PCI patients with creatinine assessed pre and post procedure. Exclusions: LOS<1 day and death in lab. [Detail Line:1951]

26 **Proportion of PCI procedures with biomarkers assessed post-PCI for elective inpatients**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
22.2%	24.0%	90.1%

Proportion of elective procedures with biomarkers assessed post PCI. Exclusions: LOS<1 day, or hospital status=outpatient, or death in lab. [Detail

Executive Summary

CathPCI Registry®

Waterbury Hospital(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending 2015Q1

Section II: Quality Metrics – to support self assessment and quality improvement at the provider, hospital, and/or health care system level.

Line:1949]	

Executive Summary

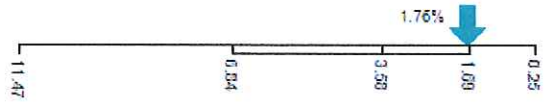
CathPCI Registry®

(841765) compared to Rolling Four Quarters (R4Q) for US Hospitals ending

Section III: PCI Appropriate Use Criteria (AUC) Metrics – These data are based upon the 2012 Appropriateness Criteria for Coronary Revascularization Focused Update (J Am Coll Cardiol 2012 59: 857-881) document developed by the ACC, Society for Cardiovascular Angiography and Interventions, Society of Thoracic Surgeons, American Heart Association, and other national societies. These metrics are designed to provide sites feedback on the appropriateness of percutaneous coronary intervention procedures at the hospital level.PCI AUC metrics are not appropriate for public/external reporting

PCI Appropriate Use Criteria (AUC) Metrics

Distribution of Hospital Performance

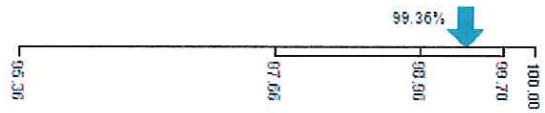


10th percentile — 90th percentile

Better →

30 **Proportion of PCI procedures not classifiable for AUC reporting**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
1.76%	3.58%	0.25%



Proportion of PCI procedures that were not classifiable/evaluated for PCI AUC reporting due to incomplete or missing data. [Detail Line:1589]

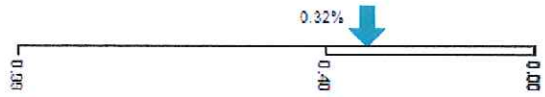
31 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
99.36%	98.96%	100.00%

Proportion of PCI procedures that were evaluated as "Appropriate", among patients with ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1581]

32 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

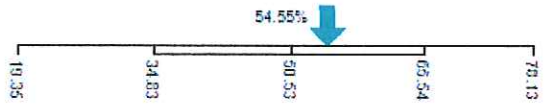
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.32%	0.69%	4.08%



Proportion of PCI procedures that were evaluated as "Uncertain", among patients with ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. [Detail Line:1582]

33 **Patients WITH Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were inappropriate**

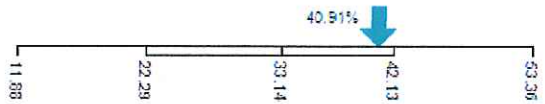
My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
0.32%	0.00%	0.00%



Proportion of PCI procedures that were evaluated as "Inappropriate", among patients with ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1583]

34 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were appropriate**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
54.55%	50.53%	78.13%



Proportion of PCI procedures that were evaluated as "Appropriate", among patients without ACS, meaning coronary revascularization is generally acceptable and is a reasonable approach for the indication and is likely to improve the patients' health outcomes or survival. [Detail Line:1585]

35 **Patients WITHOUT Acute Coronary Syndrome: Proportion of evaluated PCI procedures that were of uncertain appropriateness**

My Hospital	US Hospitals 50th Pctl	US Hospitals 90th Pctl
40.91%	33.14%	53.36%

Proportion of PCI procedures that were evaluated as "Uncertain", among patients without ACS, meaning coronary revascularization may be acceptable and may be a reasonable approach for the indication. However, some degree of uncertainty exists, implying that more research and/or patient information is needed to determine whether the procedure would improve patients' health outcomes or survival. 4.55%	12.49%	0.00%

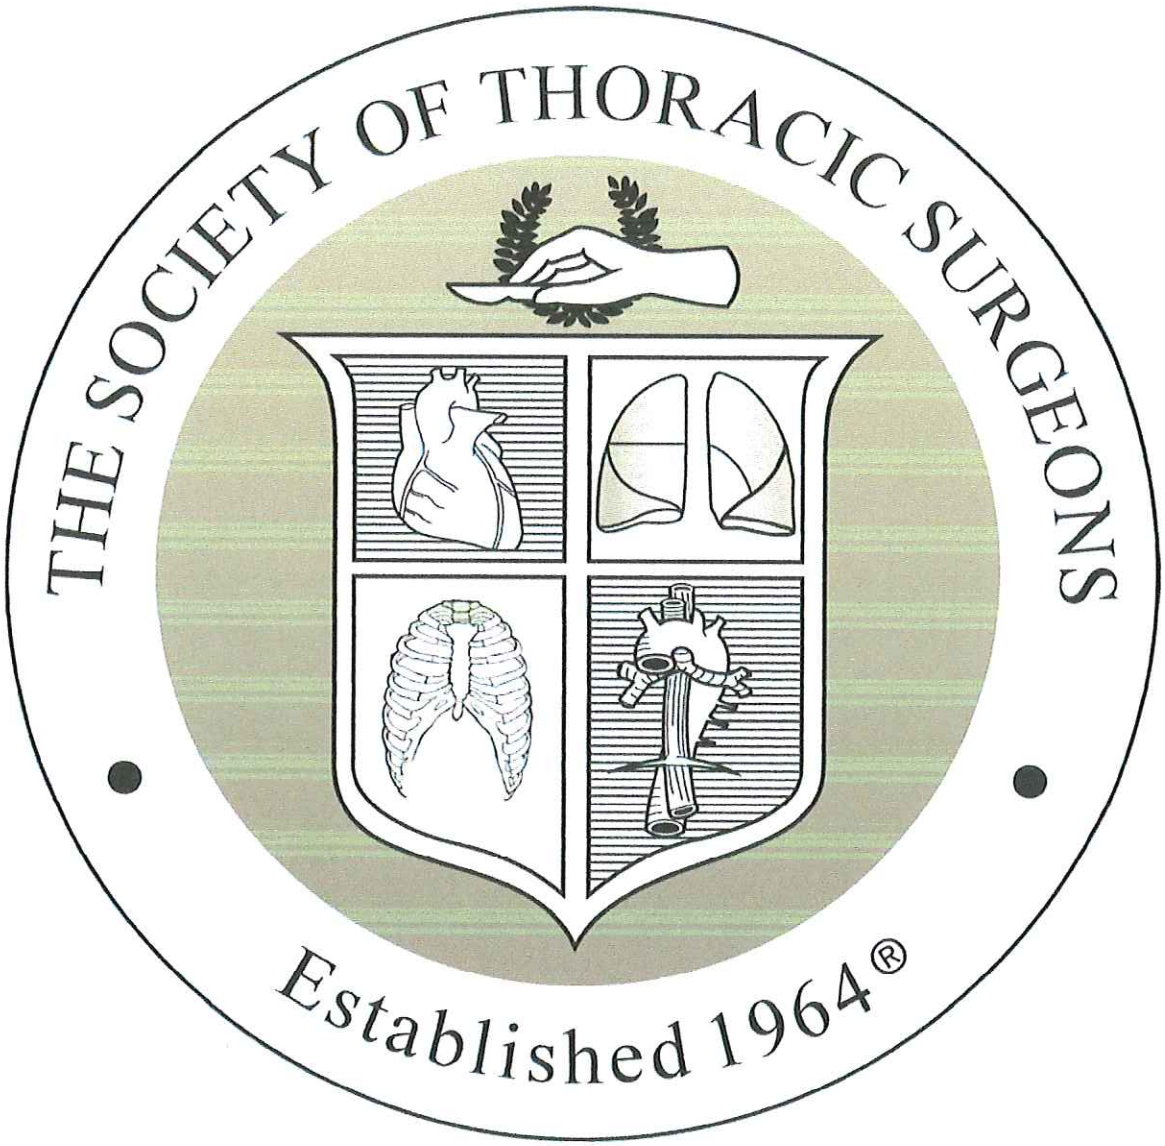
Proportion of PCI procedures that were evaluated as "Inappropriate", among patients without ACS, meaning coronary revascularization is not generally acceptable and is not a reasonable approach for the indication and is unlikely to improve the patients' health outcomes or survival. [Detail Line:1587]

Executive Summary Footnotes

*Vascular access site injury requiring treatment or major bleeding is defined as:

1.Bleeding at access site, hematoma at access site, or retroperitoneal bleed that occur within 72 hours of the procedure. To qualify, the event must be associated with a hemoglobin drop of >= 3 g/dL; transfusion of whole or packed red blood cells, or a procedural intervention/surgery at the bleeding site to reverse/stop or correct the bleeding. This excludes "GI", "GU" and "Other" bleeds.



2.Major access site related injury requiring treatment includes access site occlusion, peripheral embolization, dissection, pseudoaneurysm, AV fistula requiring treatment anytime from the procedure until discharge.

**Your rate of post procedure MI cannot be reported if you only collected cardiac biomarkers on <90% of your patients who were in the hospital >=1 day.

John Dempsey Hospital
Certificate of Need Modification Request – Heart Center of Greater Waterbury Inc.

Dear Ms. Martone:

I enclose for filing a Certificate of Need Modification Request concerning OHCA Docket No. 08-31202-CON, *Establish Permanent Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and Saint Mary's Hospital.*

Please feel free to contact me with any questions. Thank you for your attention to this matter.

Very truly yours,

David S. Hardy

SECTION II. GENERAL PROPOSAL INFORMATION

a. Title of Previously Authorized Project and Associated Docket Number(s):

OHCA Docket No. 08-31202-CON: Establish Permanent Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and Saint Mary's Hospital

b. Location of proposal (Town including street address):

The Waterbury Hospital, 64 Robbins Street, Waterbury, CT
Saint Mary's Hospital, 56 Franklin Street, Waterbury, CT

c. Type of Modification Request:

☐ Change in the Scope of the Authorized Certificate of Need Project

☐ Extension of CON Expiration Date

☒ Change in a CON Order Condition *(other than to extend expiration date)*

☐ Other – Describe: _____

SECTION III. IF REQUESTING A CHANGE IN THE SCOPE OF AUTHORIZED PROJECT:

a. Provide a one page description of the requested change in the scope of a previously authorized Certificate of Need project and provide a detailed rationale for such change:

SECTION IV. IF REQUESTING AN EXTENSION OF THE CON EXPIRATION DATE:

a. Certificate of Need expiration date per CON Final Decision: _____

b. Requested revised CON expiration date: _____

c. Rationale for increased time to fully complete and implement the authorized project:

_____

_____

_____

_____

_____

SECTION V. IF REQUESTING A CHANGE IN A CON FINAL DECISION CONDITION *(other than extension of the CON expiration date)*

a. Identify the CON Condition that you are requesting to be revised or vacated.

(i) We request that OHCA vacate Condition 2(b) of the Order. Condition 2 provides the following:

> *"The scope of this CON authorization is being approved as was specifically presented in the Applicants' proposal, which consists of two full-service inpatient cardiac programs, one at [Saint Mary's Hospital] and one at [The Waterbury Hospital], but both served by the same clinical team. The Applicants agree that this CON authorization will become invalid and therefore null and void, if either of the following occurs in the future:*
>
> *(a) Any change to the structure of the single clinical team model serving both [Saint Mary's Hospital] and [The Waterbury Hospital] (not including individual personnel changes), as highlighted in Finding of Facts numbers 17, 29, 30 7 31; or*
> *(b) Any changes in the ownership or control of one or both of the legal entities, [Saint Mary's Hospital] and [The Waterbury Hospital]."*

(ii) We request that OHCA permit The Waterbury Hospital and Saint Mary's Hospital to dissolve the entity known as "Heart Center of Greater Waterbury, Inc.," which is referred to in Conditions 4, 5, 6 and 8 of the Order, as well as throughout OHCA's Heart Center CON final decision. Following this change, the residents of the existing The Waterbury Hospital and Saint Mary's Hospital service area towns, Beacon Falls, Bethlehem, Cheshire, Middlebury, Naugatuck, Prospect, Southbury, Thomaston, Waterbury, Watertown, Wolcott and Woodbury, will continue to be served as they are today by each of the hospitals.

b. Provide the rationale for such requested change:

(i) Condition 2(b) provides that the Heart Center's CON authorization will become invalid and therefore null and void if, "[a]ny changes in the ownership or control of one or both of the legal entities, [Saint Mary's Hospital or The Waterbury Hospital]" occur. Because both The Waterbury Hospital and Saint Mary's Hospital are planning to enter into transactions that will change their ownership and control, we request that OHCA vacate Condition 2(b) to allow the CON authorization to remain valid even if changes to the ownership or control of one or both of the legal entities occur. The Waterbury Hospital and its sole member, Greater Waterbury Health Network, Inc., have entered into a Letter of Intent to sell substantially all of its assets to Prospect Medical Holdings, Inc. ("Prospect"), and Saint Mary's Hospital and its sole member, Saint Mary's Health System, Inc., have entered in a Transfer Agreement to join Trinity Health.

The Waterbury Hospital and Saint Mary's Hospital would each like the ability to change their ownership and control without rendering the Heart Center's CON authorization invalid, as each hospital considers its cardiac program assets vital elements of its operations and each would need to contribute its cardiac program assets as part of its respective transactions. The Waterbury Hospital

would contribute its cardiac program assets to Prospect and Saint Mary's Hospital would do the same in its transaction. If The Waterbury Hospital and Saint Mary's Hospital cannot contribute their cardiac programs as part of their respective transactions, which are intended to strengthen their financial circumstances and ensure the residents of the greater Waterbury area have access to superior health care, without forfeiting OHCA's CON authorization, then their respective transactions will be significantly hindered.

(iii) We request that OHCA permit The Waterbury Hospital and Saint Mary's Hospital to dissolve the corporation known as "Heart Center of Greater Waterbury, Inc." which is referred to in Conditions 4, 5, 6 and 8 of the Order, as well as throughout OHCA's CON final decision, because the Heart Center entity has served its purpose and is no longer necessary. The Waterbury Hospital and Saint Mary's Hospital are committed to preserving their collaborative cardiac programs, and continuing to make positive contributions to the greater Waterbury community through those collaborative programs, but are now capable of doing so without the Heart Center entity.

In Agreed Settlement, Docket No. 03-30167-CON, OHCA authorized John Dempsey Hospital, The Waterbury Hospital, and Saint Mary's Hospital to establish "Waterbury Area Heart Center, Inc.," which later changed its name to "Heart Center of Greater Waterbury, Inc." to serve as a management services organization in support of the cardiac programs of both The Waterbury Hospital and Saint Mary's Hospital. (see Agreed Settlement, Docket No. 03-30167-CON, Findings of Facts Section 8, pg. 4). The management services organization was to be responsible for "program coordination, quality/training coordination, marketing coordination, and community wellness outreach." Id.

The Heart Center entity, which originally provided those services in order to get the hospitals' cardiac programs started and working efficiently, is no longer necessary. The cardiac programs of both The Waterbury Hospital and Saint Mary's Hospital have proven themselves capable of running collaboratively, efficiently and effectively without support from the Heart Center. This is evidenced by the fact that the cardiac programs are currently operating well despite negligible support from the Heart Center, which has a single employee. That employee focuses exclusively on community wellness outreach, and does not support program coordination, quality/training coordination, or marketing coordination at all. The two Hospitals, not the Heart Center, provide those vital coordination services to the cardiac programs, which have performed over 1,845 open heart surgical procedures and over 6,753 angioplasties since 2009 without experiencing coordination problems.

The Waterbury Hospital and Saint Mary's Hospital are fully capable of performing program coordination, quality/training coordination, marketing coordination, and community wellness outreach, both in concert and independently, without assistance from the Heart Center entity. The Waterbury Hospital will, following the dissolution of the Heart Center, employ the Heart Center's one remaining employee to continue to perform community wellness outreach and heart health education. Dissolving the Heart Center entity will reduce the administrative burden on The Waterbury Hospital and Saint Mary's Hospital, as well as their accounting and legal fees, as they will only be responsible for their own operations, rather than for the Heart Center as well.

SECTION VI. OTHER

a. Submit a completed CON Modification Affidavit.

Please see the attached Affidavits.

b. Identify any other pertinent changes to the findings of facts upon which the original CON authorization was based as a result of this requested modification.

(i) No findings of facts apply to the ownership and control of The Waterbury Hospital or Saint Mary's Hospital, so no changes to the findings of facts are necessary in conjunction with our request that OHCA vacate Condition 2(b).

(ii) In conjunction with our request that OHCA permit The Waterbury Hospital and Saint Mary's Hospital to dissolve the Heart Center of Greater Waterbury, Inc. entity, all references to "Heart Center of Greater Waterbury, Inc." in Conditions 4, 5, 6 and 8 and all references to the Heart Center team in findings of facts Sections 29, 30 and 3 must be removed, because while the single clinical team will exist post-dissolution, it will no longer use the Heart Center name.

c. Identify what has been accomplished to date in terms of full project implementation.

Since obtaining permanent status in 2009, the Heart Center at The Waterbury Hospital and Saint Mary's Hospital (the "Program") has provided necessary lifesaving services to the greater Waterbury community through its two campuses, one program model, and has performed over 1,845 open heart surgical procedures and over 6,753 angioplasties. The Waterbury Hospital and Saint Mary's Hospital have provided those lifesaving services in a collaborative manner, and look forward to continuing to provide those services in a collaborative manner in the future.

The Program serves Waterbury and the surrounding municipalities through its community education programs. Each year, the Program offers over 200 free programs related to cardiac health and wellness, heart disease prevention, and reduction of risk factors. The Program was instrumental in Waterbury earning recognition as a HEARTSafe Community from the Connecticut Department of Public Health in collaboration with the American Heart Association.

The Program continues to meet all of its OHCA reporting requirements, including the submission of data to the American College of Cardiologists National Cardiac Data Registry (ACC-NCDR) and to the Society of Thoracic Surgeons (STS) Adult Cardiac Surgery Database. Interdisciplinary members of the cardiac team from The Waterbury Hospital and Saint Mary's Hospital continue to meet regularly with cardiologists and cardiac surgeons to review individual cases as well as aggregate date. The cardiac teams share best practices, discuss clinical operations and review any shared areas of improvement. Quarterly data review suggests that The Waterbury Hospital and Saint Mary's Hospital continue to demonstrate exceptional "Door to Balloon Time." Both hospitals exceed the benchmark by providing emergency angioplasty within 90 minutes of arrival time to the Emergency Department. Additionally for open heart surgery procedures both hospitals continue to compare favorably to the STS database quality measures. See data previously submitted to OHCA.

CON MODIFICATION AFFIDAVIT

Applicant: The Waterbury Hospital

Project Title: OHCA Docket No. 08-31202: Establish Permanent Primary and Elective Angioplasty and Open Heart Surgery Programs at The Waterbury Hospital and Saint Mary's Hospital, Inc.

I, Darlene Stromstad, President and Chief Executive Officer of The Waterbury Hospital being duly sworn, depose and state that the information provided in this CON Modification form is true and accurate to the best of my knowledge.

Final Decision

Modification of a Previously Authorized Certificate of Need

Applicant:

The Waterbury Hospital
64 Robbins Street, Waterbury CT 06708

Saint Mary's Hospital, Inc.
56 Franklin Street, Waterbury, CT 06706

John Dempsey Hospital
263 Farmington Avenue, MC 3801
Farmington, CT 06030

Docket Number: **16-31202-MDF**

Project Description: **Modification of Previous Certificates of Need Authorization Nos. 08-31202-CON**

Procedural History: On April 20, 2004, the Office of Health Care Access ("OHCA") granted a Certificate of Need ("CON") to The Waterbury Hospital ("TWH") and St Mary's Hospital Corporation d/b/a Waterbury Area Heart Center, Inc. ("SMH") and University of Connecticut Health Center/John Dempsey Hospital ("JDH"), by way of an Agreed Settlement issued under Docket Number 03-30167-CON, to establish primary and elective angioplasty and open heart surgery programs at SMH and TWH.

On January 21, 2009, OHCA granted a CON to TWH, SMH and JDH, by way of an Agreed Settlement issued under Docket Number 08-31202-CON, to establish *permanent* primary and elective angioplasty and open heart surgery programs at SMH and TWH, with no associated capital expenditure. (Emphasis Added.)

On July 20, 2016, OHCA received a Request for Modification from the Applicants seeking to vacate and modify certain facts and conditions arising from both CONS. Deputy Commissioner Addo has reviewed the entire record in this matter.

Findings of Fact

1. On April 20, 2004, OHCA granted a CON to TWH, SMH and JDH (herein referred to as "Applicants") to establish *initial* primary and elective angioplasty and open heart surgery programs at SMH and TWH. (Emphasis Added.) The Applicants agreed to establish the Waterbury Heart Center, Inc. ("WAHC") to manage and coordinate both programs.

2. WAHC subsequently changed its name to the Heart Center of Greater Waterbury ("HCGW"). The HCGW provided initial support to the Applicants to ensure that both programs worked collaboratively, efficiently and effectively.

3. On January 21, 2009, OHCA issued a second CON to the Applicants under Docket No. 08-31202-CON. That CON permitted the Applicants to establish *permanent* primary and elective angioplasty and open heart surgery programs at SMH and TWH. (Emphasis Added.)

4. Pursuant to Condition 2(b) of the January 21, 2009 CON Agreed Settlement Order, changes in ownership and control of either, or both, SMH and TWH will nullify and void CON authorization.

5. TWH has entered into a Letter of Intent to sell substantially all of its assets to Prospect Medical Holdings, Inc.

6. SMH has entered into a Transfer Agreement to join Trinity Health.

7. The Applicants' programs currently operate with negligible support from HCGW. HCGW employs one employee who performs community wellness outreach and does not engage in program coordination, quality/training coordination or marketing coordination.

8. The Applicants seek to vacate Condition 2(b) of the Agreed Settlement Order in 08-31202-CON which voids and nullifies CON authorization if changes in ownership or control of SMH and TWH occur.

9. The Applicants further request that OHCA permit TWH and SMH to dissolve the entity known as the "Heart Center of Greater Waterbury, Inc." Upon dissolution of HCGW, TWH will employ HCGW's sole employee to perform community outreach.

10. The Applicants further request that all references to HCGW be removed from findings of fact Section No. 17, 29, 30 and 31 of the CON issued under Docket Number 08-31202-CON.

Discussion

Connecticut General Statutes § 4-181a (b) provides in relevant part: "On a showing of changed conditions, the agency may reverse or modify the final decision, at any time, at the request of any person or on the agency's own motion." The Applicants have established a change in conditions resulting from the impending transfers of ownership of TWH and SMH and the ability for both cardiac programs to operate with only negligible support from HCGW. Furthermore, based upon the Applicants' representation that TWH will continue to employ HCGW's one remaining employee, community wellness outreach and heart health education will continue.

Order

Based upon the foregoing, the request to vacate Condition 2(b) of the CON issued under Docket Number 08-31202-CON is hereby **APPROVED**. All other conditions remain in full force and effect.

The request to modify the Findings of Fact included in the CON issued under Docket Number 08-31202-CON to remove references to HCGW and to dissolve HCGW is hereby **APPROVED.**

TWH shall continue to employ an individual to perform community wellness outreach and heart health education.
