

# CJIS Governing Board

Partner with Stakeholders to Drive  
Innovation and Smart Growth

# Governor Malloy

State of Connecticut

# CJIS Business Objectives / Goals

- Provide each agency the IT autonomy to achieve their business goals
- Optimize existing IT investments and infrastructure within CJIS agencies
- Develop a universal adaptor (dial tone) type service so that CJIS agencies can connect to Information Sharing (IS) system easily
- Create a security model that meets State and federal standards
- Provide services that are boringly predictable

# Data Analytics and Interpretation

## Criminal Analytics

How to assess and respond at a traffic stop  
or received 911 Call

Proactive Calculation of  
propensity toward violent  
behavior

# Doing a Lot More with a Lot Less

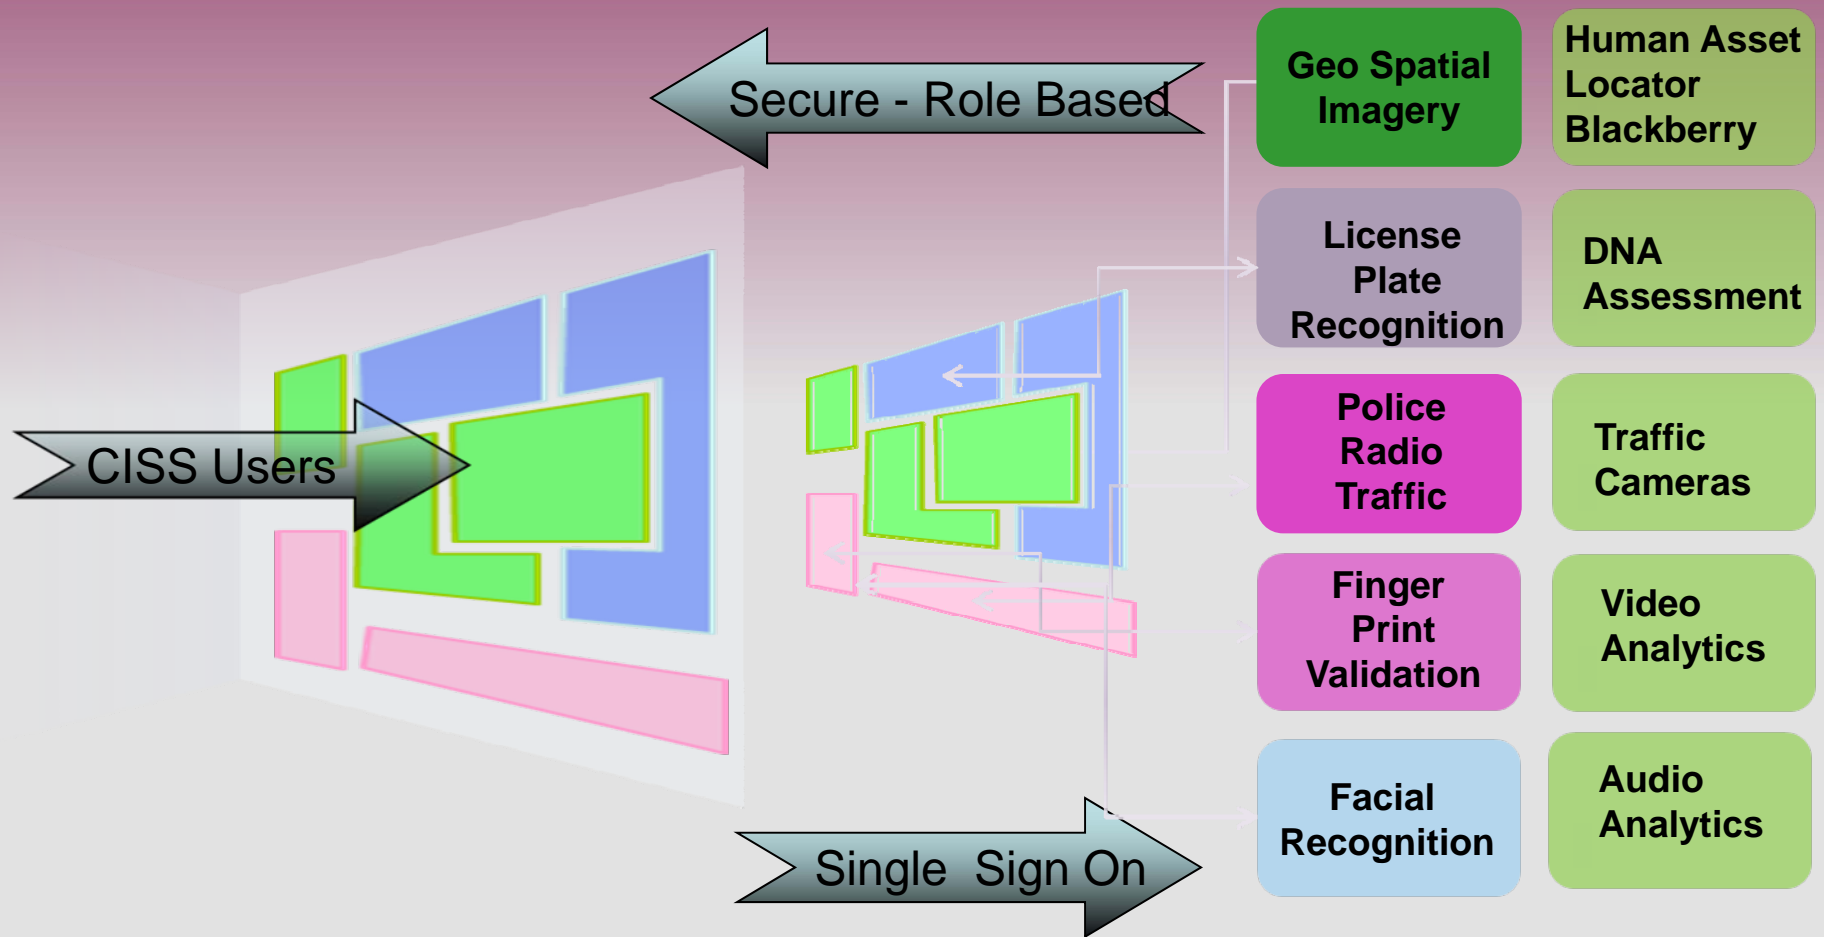

1. Demonstrate existing capabilities of State's Investment
2. Enhance enterprise-wide capabilities through technology
3. Dramatically accelerate the speed by which the CJIS Community is alerted and notified
4. Provide leadership with strategic information for improved decision making
5. Empower the CJIS Community to be the most cutting edge technology by creating new functions and insights to collect and disseminate actionable decision making

# CISS Project Status Report

State of Connecticut

# CISS 1<sup>st</sup> Quarter Accomplishments

- The Proposal review Team (PRT):
  - Completed reviews on all four proposals.
  - Provided the initial evaluation report to DoIT CPD.
  - Evaluated the cost submissions of the proposals
  - Conducted a demonstration with the highest scoring proposer.
  - Provided the final evaluation report to DoIT CPD.
- The State Bond Commission approved an \$8 Million bond for the first year of funding for CISS.

# CISS 180-Day Time Line

- Contract Negotiations through 8/3/2011.
- Begin Implementation in August 2011.
  - The first major step will be to “Gate” out of SDM Business Requirements Phase.

# CISS Contract Administrator

Recommendation - Mr. Sean Thakkar be  
appointed as the CISS Contract  
Administrator

# CISS Next Steps

- Immediately – Hire Business Manger  
Hire Program Manger
- 8/3/2011 – Contract Awarded  
Hire Technology Architect  
Hire 2 Project Managers  
Hire Business Analyst
- 10/1/2011 – Hire 2 Staff developers
- 1/1/2012 – Hire System Administrator

# OBTS Project Status Report

State of Connecticut

# OBTS in a Thumbnail

The Offender Based Tracking System (OBTS) provides a holistic view of criminal justice data, sourced by Superior Courts, Department of Corrections and the Department of Public Safety. The data is offender-centric, allowing a composite view of events and activities surrounding the charging, arrest, court cases and supervision of an offender.

OBTS provides search features to find information based on the names, state IDs, or federal ID; allowing not only drill down features but also "drill across" features.

# OBTS – Where We Are Now

- **OBTS R6.1 – Implemented**

Released and live on April 1<sup>st</sup>. This was the first phase of a long-overdue technical environment upgrade.

- **Move to Common Hardware**

This will move OBTS fully onto the common CJIS platform, shared with CIDRIS. This will result in an annual savings of a little over \$100,000. Doing lot more with lot less

- **Automated Deployment - Underway**

Implement deployment scripting to reduce the time to deploy OBTS from hours to minutes in a consistent and repeatable way.

# OBTS Source Systems

## Judicial Branch

- • Criminal Motor Vehicle System (CRMVS)
- • Centralized Infractions Bureau (CIB)
- • Paperless Re-Arrest Warrant Network (PRAWN)
- • Protection Order Registry (POR)
- Department of Corrections
  - • Offender Based Information System (OBIS)
- Department of Public Safety
  - • Master Name Index-Computerized Criminal History (MNICCH)

# Major Improvements in for OBTS R6.1 release

- Technology Refresh
  - Platform, Operating System, and application server
  - From out of support 1992 software and hardware technology to current
  - Moved from dependent technology to independent technology
  - Required for other improvements
- Improved Messaging Performance
  - From 1,800 to approximately 6,000 messages/hour
  - Requirement was 4,300 messages / hour
- Smart Name Search has been re-enabled
  - Smart Name Search was disabled to save the cost of having two licenses.
  - OBTS was modified to do all Smart Name Searches via the database to save costs.

# OBTS Key Unique Features

## Single Source Repository of Connecticut Offender-Case Data

- Contains in one system, offender data including: names/identifying data, criminal histories, court data, dispositions, restraining/protective orders, incarceration status, probation information, and parole status
- Aggregate offender data across agencies
- Repository of information from law enforcement, prosecution, courts, probation, parole, and corrections.
- Offender Centric Information
  - Integrates data about offenders and their status statewide across state agencies
  - Multiple search options including Smart Name or “sounds like” searches
  - Drill Down and Drill Across Functionality
- Current Offender Status
  - Pretrial Activities
  - Incarcerated
  - Supervised release
  - Released to community

# OBTS – Where We Are Going

- **OBTS R7.1 – Planned**

Starting with Release 7.1, releases to OBTS will be smaller, more focused and will be deployed quarterly. This is a preparatory step toward moving to a “just in time” release model.

- **“Just in Time” Release Model**

The CSG is moving to the use of Agile software development methods, which features iterative and incremental development, where requirements and solutions evolve through collaboration between cross-functional teams. Agile provides for faster development timelines, without sacrificing the necessary controls that ensure a well managed release.

# OBTS – Where We Are Going

- **Data Integrity as a Key Business Driver**

OBTS is an information delivery tool and as such, the timeliness, completeness and accuracy of data in OBTS is critical to the value of OBTS. Starting with OBTS R7.1, we'll look at the resolution of data integrity issues as an overarching priority.

- **Leverage Collaboration Tools**

Here is another example of doing lot more with lot less...we are going to leverage collaboration tools to streamline Application Support Management activities like release planning, integrate requirements and testing and to improve communications. These tools are key to supporting a “just in time” approach to software releases.

# CIDRIS Project Status Report

State of Connecticut

# CIDRIS – Where We Are Now

- Implementation - We are continuing in the Implementation Phase until all 12 DPS Troops are deployed by 6/15/11
- Rolled out DPS Troop B as pilot
- Planning roll out for the rest of the Troops
- CIDRIS Expansion Project moving forward
- Started meetings with stakeholders to go paperless for OUI arrest with DPS, DMV and Judicial

# CIDRIS – Where We Are Going

- Implementing two additional layers of security with collaboration from DoIT and Stakeholder agencies :
  - SSL certificates
  - MQ server authentication to the State's eDirectory
- Created SharePoint pilot
  - Management Report Library secured to user level
  - Quick graphical displays of Key Performance Indicators (KPIs) in customized dashboards
  - Drill down to database data capability for each KPI
  - Email alert capability to users for KPI thresholds reached

# CIDRIS – Risks & Issues

## Risk – 1

Transition to CJIS Support Group (CSG) in Post Implementation Phase is not committed.

**Mitigation:** CJIS Governing Board's Executive Director is working with the Deputy CIO on Memorandum of Understanding (MOU) to provide post implementation support.

# CIDRIS – Risks & Issues (continued)

## Risk – 2

DCJ and Judicial do not have the capability to receive electronic documents from CIDRIS, until all stakeholders can receive electronic documentation the full economic value of CIDRIS cannot be reached.

**Mitigation:** The CIDRIS team is studying solutions with DCJ and the Judiciary to find a procedure acceptable to all parties.
